US Department of Justice

Dear US Department of Justice:

Thank you for the opportunity to submit comments in advance of the Department of Justice's workshops on "Agriculture and Antitrust Enforcement Issues in Our 21st Century Economy."

As an organic consumer, I am particularly concerned about Monsanto's control over the seed supply.

By buying seed companies and aggressively patenting life, Monsanto has gained control over as much as 90 percent of seed genetics. This is anti-competitive behavior that skews markets and subjects farmers and consumers to the unchecked power of a company that can raise prices at will.

But, my main concern is that, while Monsanto has acquired a diverse store of seed genetics, they are only making available a few seeds that are genetically modified to be dependent on their chemicals.

The vast bounty of food crops that farmers have cultivated and improved upon over the last 10,000 or so years should not be allowed to be bought up and put out of commission by a company bent on whittling down food varieties to a few pesticide-dependent genetically modified crops.

The most devious part of Monsanto's business model is that their Frankenseeds can cross-pollinate with organic and traditional varieties, destroying their unique characteristics and infecting them with genetically engineered chemical dependence or even "Terminator" or "Traitor" technology that renders seeds sterile, a literal death sentence for seeds maintained through conventional breeding.

The same way we protect animal species from extinction, we should protect plant species, especially the tens of thousands of food varieties, from companies like Monsanto that are consciously eliminating them.

We are told that genetic engineering isn't different from what farmers have been doing since the dawn of agriculture. That is a complete lie. Genes from species that could never interbreed with plants are being inserted willy nilly. Monsanto's behavior in releasing these modified

organisms into the natural environment is absolutely unconscionable.

And have you ever seen anyone with Parkinson's disease? Have you watched their suffering increase over years and years of degenerative illness? The link to herbicides and pesticides is now well established, and yet our own FDA raised the amount of Roundup residue in sugar beets so Monsanto could sell their vile Roundup Ready sugar beets to unsuspecting consumers. How has Monsanto corrupted our watchdog organizations?

I urge you to please include in your investigation a consideration of the importance keeping seeds, the foundation of human life, in the public domain where they truly belong. Monsanto has no right to take over control of the world's food supply.

Sincerely,

Mary Hicklin
