I'm emailing to express my concern about how our food situation is handled. I'm worried about the soaring prices and that the large food corporations are making record profits off of us (they really should lower their prices). Also, small farmers can't compete with them, so many are losing their own livelihoods because of this.

Many big food companies aren't safe enough with the handling of food. I've never seen so many recalls in my life! Also, they tend to use chemicals and genetically-modified organisms, which lead to the destruction of our planet, wildlife, and, eventually, US! All these businesses care about is the almighty dollar, not about our nutrition and safety (even choosing a good pet food is like walking a tight rope).

I may be only 29 years old without children, but I'm concerned about the health and welfare of my family and other people. Things need to change so people can afford to eat healthy, organic food and not have to live on unhealthy fast food and junk.

I thank you for your time and kind attention.

Sincerely,
Denise Lytle
