Subject: Watch "Food, Inc." and "The Future of Food"

I am a consumer and I watched two documentaries that I would like everyone who eats food in the US to watch. The two documentaries are: "Food, Inc", and "The Future of Food". Watch these documentaries and do everything possible, quickly, to remedy this perilous situation!

I desire to buy unadulterated, organic, high density foods.

CAFOs, GMO food and cloned foods are ruining our health, and leaving the smaller family farmer helpless against Monsanto, etc. We have to stand up to these corporations and stand up for the health and safety of our citizens. Stop permitting GMO crops from contaminating non-GMO fields. The horrendous legislation that holds the innocent non-GMO neighboring farm responsible for being contaminated with GMO seeds is an abomination and must end.
