Subject: Monsanto's Control Over The Seed Supply

US Department of Justice

Dear US Department of Justice:

Thank you for the opportunity to submit comments in advance of the Department of Justice's workshops on "Agriculture and Antitrust Enforcement Issues in Our 21st Century Economy."

As an organic consumer, I was shocked to find out about Monsanto's control over the seed supply.

By buying seed companies and aggressively patenting life, Monsanto has gained control over as much as 90 percent of seed genetics. This is anti-competitive behavior that skews markets and subjects farmers and consumers to the unchecked power of a company that can raise prices at will.

But, my main concern is that, while Monsanto has acquired a diverse store of seed genetics, they are only making available a few seeds that are genetically modified to be dependent on their chemicals. This is frightening to me.

The vast bounty of food crops that farmers have cultivated and improved upon over the last 10,000 or so years should "never" be allowed to be bought up and put out of commission by a company bent on whittling down food varieties to a few pesticide-dependent genetically modified crops.

The most devious part of Monsanto's business model is that their Frankenseeds can cross-pollinate with organic and traditional varieties, destroying their unique characteristics and infecting them with genetically engineered chemical dependence or even "Terminator" or "Traitor" technology that renders seeds sterile, a literal death sentence for seeds maintained through conventional breeding. This seems criminal to me.

The same way we protect animal species from extinction, we should protect plant species, especially the tens of thousands of food varieties, from companies like Monsanto that are consciously eliminating them.

I urge you to please include in your investigation a consideration of the importance of keeping seeds, the foundation of human life, at least in the

marketplace, if not in the public domain where they truly belong and restricting corporations from dominating the seed supply with their own genetically modified seeds. I also urge you to ensure that any product that has used a genetically modified seed be identified as such so that consumers are aware of what they are purchasing and eating.

Sincerely,

Robin Ogden
