## Recommendation to the Attorney General Documentation, Case Record and Report Contents

---

<b>Subcommittee</b>
Reporting and Testimony
<b>Status</b>
Initial Draft

<b>Date of Current Version</b>	5/23/16
<b>Approved by Subcommittee</b>	5/11/16
<b>Approved by Commission</b>	
<b>Action by Attorney General</b>	

### Overview

The National Commission on Forensic Science (NCFS) having previously expressed its views on standards for documentation, case records and report contents for forensic testing, now recommends that the Attorney General adopt the views of the NCFS by taking the actions below.

### Recommendations

The National Commission on Forensic Science recommends that the Attorney General have Department of Justice Forensic Science Service Providers (FSSPs) develop and maintain written policies for documenting the examination, testing, and interpretation of evidence and for reporting results, interpretations, and conclusions that are consistent with the following requirements:

1. Records should be created during the examination of evidence and the technical review that allow another analyst or scientist, with proper training and experience, to understand and evaluate all the work performed, and independently analyze and interpret the data and draw conclusions.
2. Providing all of the documentation described above in a single report in every case is impractical. Instead, if not in the report, the documentation described herein must be maintained in a case record.<sup>1</sup> Generic documentation such as Standard Operating Procedures and definitions must either be a part of the case record or be easily accessible (e.g., posted on a website, available on request).

---

<sup>1</sup> A case record is all administrative records, examination records, any other applicable technical records or communications, whether electronic or hard copy, generated or received by a FSSP or FMSP, pertaining to a particular case.

3. Reports should clearly state: the purpose of the examination or testing; the method and materials used; a description or summary of the data or results; any conclusions derived from those data or results; any discordant results or conclusions; the estimated uncertainty or variability; and possible sources of error and limitations in the method, data, or conclusions.
4. Every report should state that the report does not contain all of the documentation associated with the work performed and that to understand and evaluate all the work performed, and independently analyze and interpret the data and draw conclusions requires a review of the case record.
5. The case record should be organized and made available in a manner consistent with the discovery recommendations of the National Commission on Forensic Science.
