### ACTIVE PLATFORM SUPPORT REQUIREMENTS

The goal of these requirements is to make the content providers Active Channels and existing web site(s) demonstrably superior examples of Active Platform technology. The developers will follow the guidelines below, although specific design and content issues are at the discretion of the content provider.

#### *Channel Requirements*

- 1) Support for IE presentation
  - Logo to fit on Channel bar button
  - Full screen view (theatrical view)
  - Support for screen saver functions
- 2) Create a CDF (Channel Definition Format file) to categorize content for download and offline reading
- 3) Update CDF and support notification for new Content
- 4) Optimize the Channel for download:
  - Author content to meet reasonable download size guidelines (TBD)
  - Go beyond that limit only after notifying user
  - Offer personalization to select relevant content
- 5) Content must be updated at least 5 times per week
- 6) Use of Dynamic HTML should be maximized. At a minimum, a Channel must support at least 3 of the following 5 capabilities supported by Dynamic HTML on the top page of the channel, and at least 1 of the 5 following capabilities on at least 50% of the remaining pages in the channel:
  - **Dynamic Content**  
Ability to change elements on HTML page on the fly based on user interaction, without round trip to the server. This allows for better user interactivity, with faster performance.
  - **2D Positioning**  
This capability allows site authors to easily and accurately position elements on a page without being forced to resort to ActiveX controls, Java applets, or games with tables. Dynamic HTML supports X,Y and Z plane positioning. Combined with multimedia/animation effects, this capability can dramatically improve the look of your site.
  - **Multimedia Effects – Filters, Transitions, Animations, Alpha Channel, etc**  
Dynamic HTML also includes a set of high performance multimedia effects that interact with the HTML page.
  - **Data Awareness**  
The ability to link data from a database and dynamically update your HTML page based on changes in the database automatically. Also, this capability allows for the user to interact with the data without roundtrips to the server.
  - **Dynamic HTML Object Model**  
This is not a new tag, but a way to control existing HTML tags. For example, existing elements such as <img> tag, will receive a click event if the user clicks on the picture.
- 7) Support for 2 of the following 4 technologies within the Channel:
  - **HTML Mail**  
Specify a page for email notification in the CDF
  - **“Desktop Components”**

Create at least 1 "Desktop Component" that will be updated at least 5 times per week

- Ratings  
Ratings are a mechanism to inform users of the appropriateness of web site content. Support for ratings is a simple process of going to the official ratings site ([www.rsac.org](http://www.rsac.org)) and registering the web site.
- 8) Deliver multimedia Content in the ASF format (NetShow).
  - 9) Microsoft's standard IEAK product must be able to administer all Channel behavior. The intent is to provide effective central administration such that MIS departments not disable Channel by default with the IEAK. *See note below regarding this requirement.*
  - 10) Introductory Content must (and downloaded content should) optimize for performant operation in standard system configurations
    - Use standard system services wherever possible (channel installation, cache management, data transfer, web event logging, channel selection, screen saver). Any duplication must be noted and approved in advance of submission of Introductory Content to Microsoft.
    - Do not instantiate any processes that increase the static working set (e.g. static memory requirements) or that run when Company's Channel is not visible on screen via the Browser or the Active Desktop screen saver.
    - *See note below regarding this requirement.*

*Note regarding requirements 9 and 10 above*

Content will automatically meet these provisions if it is webcast via standard IE4 system services and does not require installation of custom Active X controls and/or add-on client software. If content does require separate software to be used or displayed, it must be verified to meet requirements 9 and 10.

*Differentiated Content Area Requirements (if separate from channel)*

Creation of "Differentiated Content": Partners shall define easily described and highly visible components of their web site that will exhibit substantially superior features or usability when used with Internet Explorer, making the site a premier example of the added-value differentiation enabled by Microsoft Internet Technology. Some differentiated content may be available only to IE users, some may simply be "best when used with IE", with acceptable degradation when used with other browsers.

- 1) Create a CDF to categorize content for download and offline reading
- 2) Update CDF and support notification for new Content
- 3) Support for six (6) of the following Microsoft technologies (as defined below):
  - Inclusion of COM objects
  - Use of Scripting (VB Script or Jscript)
  - HTML 3.2
  - NetShow
  - HTML Mail
  - Dynamic Content
  - 2D Positioning
  - Multimedia Effects – Filters, Transitions, Animations (IHammer controls)
  - Data Awareness
  - Dynamic HTML Object Model

*Existing Web Site Requirements*

On the home page of the Web Site and at least 15 other most visited Web Site pages:

- 1) Logo as "Best viewed with IE 4" or other equivalent as may be agreed by the parties
- 2) Track browser market share based on appropriate user agent strings and report to Microsoft on a monthly basis
- 3) Create a CDF to categorize content for download and offline reading
- 4) Update CDF and support notification for new Content
- 5) Support four (4) of the following Microsoft technologies:
  - Inclusion of COM objects
  - Use of Scripting (VB Script or Jscript)
  - HTML 3.2
  - NetShow
  - HTML Mail
  - Ratings
  - Dynamic Styles
  - Positioning
  - Dynamic Content
  - Multimedia Effects – Filters, Transitions, Animations
  - Data Awareness

In the spirit of being a Platinum Internet Explorer site, Company will use all reasonable efforts to promptly take advantage of new Internet Explorer extensions as they become available in beta and final updates for Internet Explorer, including subsequent versions of Internet Explorer, during the term of this agreement.

*Definitions of Microsoft Technologies (not defined above)*

- 1 CDF: A Channel Definition Format file that describes the site. The CDF spec is included with the developer materials for IE 4.
- 2 COM Objects: Inclusion of COM Objects (ActiveX Controls, or Java Applets) - COM objects are self-contained pieces of code that bring unique interactivity to sites not possible with HTML-only pages. COM objects can be written in many languages, such as C/C++ or Java. Web Site must use at least one such control on at least one of its top 5 most visited pages.
- 3 Scripting: Use of Scripting (VB Script, or Jscript) - Scripts are pieces of code written inline within HTML to automate general purpose COM objects, or to make objects interact with one another, in a web page. Scripts can be written in many languages, such as VB Script or Jscript. Web Site must use at least some such scripting to automate one or more controls.
- 4 HTML 3.2: Utilization of at least 2 of the following three IE3 and HTML 3.2 standard capabilities:
  - Style Sheets - A style sheet is a description of the layout of a document. Style sheets allow page authors to cleanly split structure and Content away from a page's form and appearance. Just as HTML is the language to describe structure and Content, so form and appearance will be described by a style sheet language such as Cascading Style Sheets - a W3C standard spec supported first by IE 3.0.
  - Frame Sets - Frames allow you to divide a Web page into separate regions that can display Content independently. A side benefit of frames is that clicking a link can now launch a new window. Borderless frames give you all the power of frames pages with the added benefit of a seamless look. Borderless frames can be

also separated with a custom color or background picture. Floating frames are a revolutionary new feature in IE 3.0. Anywhere you can put an image in IE 2.0 or Netscape, you can put an arbitrary box of HTML (with or without a scrollbar and a 3-D border) in IE 3.0

- Other Key HTML Extensions - IE 3.0 supports several HTML 3.0 table features, including selectable rules and borders, row and column grouping, and aligning text in adjacent cells by baseline. It also supports the ability to put background images in individual table cells. IE 3.0 also supports .BMP and animated .GIF formats. There are additional HTML extensions supported by IE 3.0 that can also be implemented.

Hollywood Online expects to make "Outlook Express" a major component of it's marketing and sales activity going into the future.*

## EXHIBIT C

### SET UP & INSTALLATION

The following materials should be provided to Microsoft prior to the final release of Internet Explorer 4.0. Exact dates will be provided to Company at least 10 days prior to the first deadline. These requirements are subject to change prior to the final release of Internet Explorer 4.0.

#### A) Imagcs

##### Branded Logo

Size: 80 x 32 (wxh) pixels

Palette: Windows half-tone palette, 256-colors

Format: GIF

Important Notes:

- The Channel Bar will display the exact 80x32 logo that provided by the Company. Therefore, the publisher's brand name will appear only if it is included in the bitmap itself.
- Users can adjust the width of the Channel Pane beyond 80 pixels. When this happens, the Channel Bar fills in the background with the same color as the top left pixel in the bitmap.

##### Large Icon

Size: 32x32 pixels

Palette: Windows 16 color halftone palette, 16 color

Format: ICO format

#### B) URL for Introduction/Setup Page (see below)

The URL for the channel introduction Web page to be included in the channel package with the logos.

#### C) Channel Name

Company should include a "friendly" name that the Desktop Channel Bar will use in the icon views and the Windows name space. This name must match the name of the actual channel.

### Deliverables Mounted on Publisher's Server

#### A) Channel Introduction / Setup Page

Description: Company must have one Web page mounted on a externally accessible server that introduces the Channel. This is the Channel Introduction/Setup Page to which users are taken to when they click on the publisher's icon in the default Channel Bar or subscribing from a Web page.

URL: As specified in the deliverables above.

Size: The page should be designed to look good at all standard PC screen resolutions: 640x480, 800x600, and 1024x768. The page should be optimized for a width of 640 pixels.

Content: The page must include:

- a description or preview of the channel's content once subscribed
- a Subscribe button which links to the channel's CDF so the user can begin the setup process (see SDK for details). Graphic for Subscribe Button is TBD.

This Introduction Page can refer to additional pages which more full describe the channel's offerings, ask for demographic information from the user, or offer personalization. Each supplemental page, however, must link back to the standard Introductory Page, from which users can subscribe to the channel

#### B) Channel Definition Format File

The CDF must be prepared as described in the SDK.

#### C) Channel Home Page

The Channel described by the CDF should have at least one page, the Channel's Home Page, mounted on an externally accessible server.

**Operational Channel Site Mounted on Publisher's Server**

The Microsoft Internet Explorer testing group will verify that it is possible to subscribe to the Channel, and that the Channel's Introduction Page and Channel Home Page are viewable in IE4.0. This means all content for all URLs referenced in the channel's CDF should be available on an externally accessible server. This includes:

- (a) Pages to be displayed in Full Screen View
- (b) Pages to be displayed in the Internet Explorer Screen Saver
- (c) Pages to be displayed within Desktop Components on the Active Desktop.

At this time, content must conform to the standards established in Exhibit A

**Pre-Cached Web Pages**

Company agrees that the Pre-cached Web Site will adhere to the following criteria:

- (a) All cached pages and links to other cached pages must use Short File Names (8.3)
- (b) All Links must be functional (ie no broken links)
- (c) No external HTTP links, but if there are external links to the pre-cached pages, they must be blocked out with a message saying "You can only access this site if you are actually connected to the Internet - this is a demo only..."
- (d) No CGI Scripting
- (e) No Server-side Scripting
- (f) No Server-side Image Maps
- (g) Should not exceed a resolution greater than 800x600
