nand
I think this is the most important issue that came up during the VC
meetings. They were concerned how this will affect us when they do ship. At
a high level I think we know the answer is that we will work with ADS. But
we need to be totally in bed with them as over the long run people like
Enteva (who are focused only on MSFT) may be our real competition. Also as
we chalk out our product plans we need to be aware what MSFT is up to. Try
to be as much in touch as possible and try to get us into any/all programs
that will keep us plugged.

Sandeep
