Executive Summary

Header Bidding is a growing phenomenon in the industry and Google has developed DFL and EBDA for its full stack partners which allows them to grasp this opportunity in an efficient and effective manner. However, Google has a share of wallet of 97% globally which realised a \$300M ARR for DFL.

Google could pursue 3 models to improve high value AdX access in a third party ad server which could unlock a \$103M revenue opportunity for Google.

- DRX tag with DFL & high floor added at the top of the adserver stack;
- Header Bidding-enabled DRX tag with DFL and high floor with prebid passing price to adserver;
- Leveraging 3P adserver mediation capabilities to place a tag on the page dynamically.

The third method has already been implemented on one partner, LeBonCoin (Schibsted), which generated a **\$2.3M** annual revenue uplift.

Google can fully support Non-DFP partners in the market with one of these three solutions, which will result into:

- More high value inventory for AdWords buyers;
- Increased yield for Global Partnerships.

To capture this full opportunity there are a few key asks.

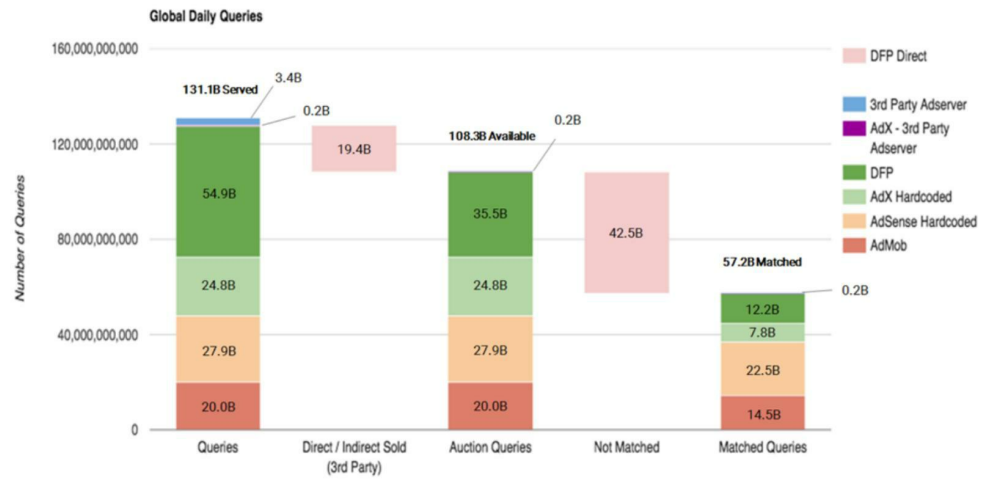

- Explore adding CPM values in the DRX ad response;
- Further open up the EBDA feature to pilot partners;
- Commercialise implementation to Sales & gTech.

With these efforts, DRX can open up an additional revenue opportunity of \$103M per annum while creating meaningful relationships with partners we previously haven't had a partnership with.

Our Google stack today serves ~97% of the global queries

We consider 4 scenarios where either DFL or a high-CPM DRX tag could grow overall AdX access

Daily Impressions

The opportunity outside DFP (Focus of this document) is \$103M

Scenario	Opportunity Type	Recommended Action	Opportunity Size
1 Partner has DFP with or without AdX	Enable DFL and optimize	Already in progress in global DFL rollout. Not included in scope of this document	(20B impressions, \$400m - not in scope)
2 Partner has 3rd party adserver & is not using AdX	Introduce AdX by implementing DRX DFL tag	Pitch AdX as a high value, low fill demand source in high priority position	0.6B impressions \$19M
3 Partner has 3rd party adserver & is using AdX	Grow AdX with DRX DFL as replacement or complement to existing AdX	Pitch high-value AdX or DRX tag to increase AdX priority within adserver chain	2.9B impressions \$84M
4 Partner has AdX as a direct tag on the page	Likely optimal, but potentially expand to more units on the site	Potentially revisit at a later date. → In most cases, AdX already seeing 100% of inventory.	24.8B impressions Fragmented and already owning FL

Business Case

AdX - No DFP - Get details from Pauline

No AdX - DFP - Get details from Pauline

No AdX - No DFP - Check Momars SOW exercise

Compare with LPS pipeline - Get details from Lutz

We are currently pursuing 3 models to improve AdX access in a third party ad server

Three main models under consideration

1. DRX tag with DFL & high floor added at the top of the adserver stack

- Variation: transfer HB line items from main adserver to DFP to reduce passbacks

Possible today

Variation: eliminate HB tags completely and enable in Exchange Bidding

Needs Jedi GA

Option: pay the publisher for the 3P ad serving cost of passbacks

Needs PBSX approval

(Any DFP fees are waived)

2. Header Bidding-enabled DRX tag with DFL and high floor with prebid passing price to adserver

- In top position of adserver
- Only gets called when able to fill at high price
- Avoids passback cost

Needs PM development and strategic approval

3. Leveraging 3P adserver mediation capabilities to place a tag on the page dynamically

[OAS method with Schibsted FR]

- Ad server generates a mediation script on the page
- DRX is called in 1st position and passes back if unable to fill
- Script manages waterfall, avoiding passback charges

Implemented and live on 1 partner

Partners with 3P adserver and no AdX: Value Proposition

Value Prop Hypothesis

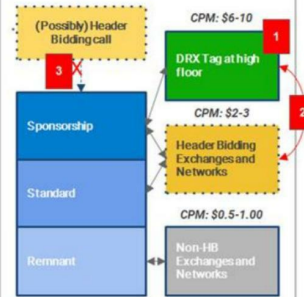

Large non-DFP Partners not using AdX are doing so because of perception of low eCPM / high fill demand

Most would accept a high-CPM, low fill AdX tag (eg. \$6-10 at 1-2% fill) in top priority position. Could be either retargeting only or all demand.

Current Setup - No AdX (typical)

Target Setup and evolution

Step 1: Add high-floor DRX tag in top position in adserver (with or without DFL)
 Step 2: Move header bidding Line Items into DFP
 Step 3: Remove Header bidding call and implement direct integration with HB exchanges using EBDA

Partners with 3P adserver and AdX: Value Proposition

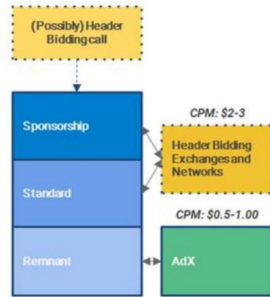

3

Value Prop Hypothesis

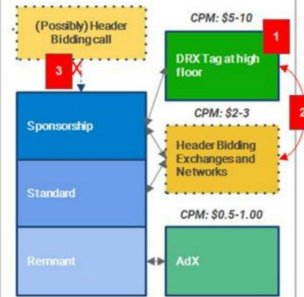

Large non-DFP Partners using AdX usually put it in last remnant position because of low eCPM / high fill, to complete the chain

Many would accept an additional call to AdX from a high-CPM, low fill AdX tag (eg. \$6-10 at 1-2% fill) in top priority. Could be either retargeting or all demand

Current Setup - AdX in last position (typical)

Target Setup and evolution

Step 1: Add secondary high-floor DRX tag in top position in adserver (with or without DFL)
 Step 2: Move header bidding Line Items into DFP
 Step 3: Remove Header Bidding call and implement direct integration with HB exchanges using EBDA

4	11/23/2016 12:00:44	What is the pareto split on these 92?
3	11/23/2016 12:00:44	Added the split. 20 domains represent 83% of the opportunity.
5	11/23/2016 12:51:15	Is this opportunity net of the existing AdX revenue? (i.e. purely incremental)
4	11/23/2016 12:51:15	<p>This opportunity is based on the PBS Coverage dashboard.</p> <p>https://origami.googleplex.com/page?menu=pbs_coverage_insights&menuGroup=domain_insights#tab</p> <p>My gut would actually say that this data would be including AdX. As I would assume the domain dashboard would show the total amount of pageviews of a domain (incl. potential AdX filled page views).</p> <p>When looking at these 92 partner and their annual revenue (based on the past 7 days) this would be \$26M. Something we would need to deduct from this opportunity.</p> <p>We can also make it a range eg. \$60-\$86M annually.</p>

What is needed to support this?

A part of this opportunity can be tapped into with our current technology and by repositioning it as a high value exchange which could be optimised across their current Header Bidding solutions.

For the other part of this opportunity we will need to position DRX as a Header Bidding solution which will require some development efforts.

	Our findings	Ask
Product asks	<p>EBDA is one of the pillars for this implementation, by enabling DRX to call header bidding via a server side integration this should limit the latency.</p> <p>6 Our product limitation limit us from working with non-full stack partners in the high-CPM space. The product gap for this opportunity is around the fact that DRX does not share the CPM in their ad response.</p>	<p>Continue development on EBDA with relative urgency to decrease the time spend via a potential (tag based) work around.</p> <p>Commit development resources to add CPM to the DRX ad response. By developing this, DRX is able to be optimised across different demand sources in the primary adserver.</p>
Commercialisation ask	<p>Commercialisation effort (PSI, GSL & PM) is required in order for sales and gTech to understand the implications of these type of implementations and advise the client properly.</p>	<p>Commit commercialisation efforts from GSL, PSI and PM to ensure proper documentation is in place for all teams.</p>

Id	Date	Text
7	11/23/2016 14:39:10	Who are we asking to commercialise this? We should be commercialising. Need to frame the ask specifically towards those stakeholders that will help this be a success
6	11/23/2016 14:39:10	I've changed the ask around a bit and highlighted the different teams that are included in the commercialisation. PSI, GSL and PM should be leading this as a combined and holistic effort.
<div data-bbox="293 850 378 888">Google</div> <div data-bbox="1159 863 1261 877">Confidential • Proprietary</div>		

Summary

To fully support all partners and potential partners in the market with the high-CPM value demand of DRX we will need to commit to a few actions:

- Explore adding CPM values in the DRX ad response;
- Further open up the EBDA feature to pilot partners;
- Commercialise implementation to Sales & gTech.

With these efforts, DRX can open up an additional revenue opportunity of **\$103M per annum** while creating meaningful relationships with partners we previously haven't had a partnership with.
