Executive Summary

Header Bidding is a growing phenomenon in the industry and Google has developed DFL and EBDA for its full stack partners which allows them to grasp this opportunity in an efficient and effective manner. However, Google has a share of wallet of 97% globally which realised a \$300M ARR for DFL.

Google could pursue 3 models to improve high value AdX access in a third party ad server which could unlock a \$103M revenue opportunity for Google.

The third method has already been implemented on one partner, LeBonCoin (Schibsted), which generated a \$2.3M annual revenue uplift.

- DRX tag with DFL & high floor added at the top of the adserver stack; Header Bidding-enabled DRX tag with DFL and high floor with prebid passing price to adserver; Leveraging 3P adserver mediation capabilities to place a tag on the page dynamically.

Google can fully support Non-DFP partners in the market with one of these three solutions, which will result into:

More high value inventory for AdWords buyers;

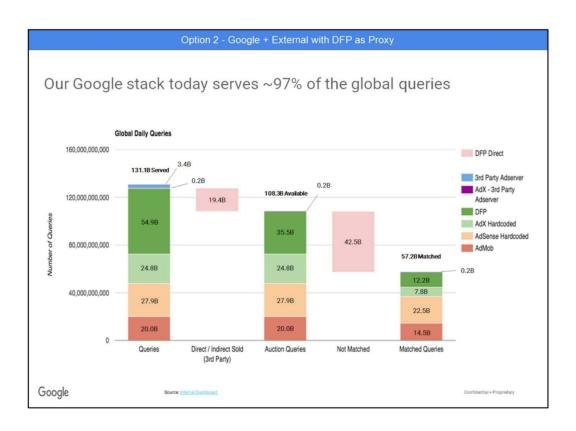

- More high value inventory for Advisors
 Increased yield for Global Partnerships.

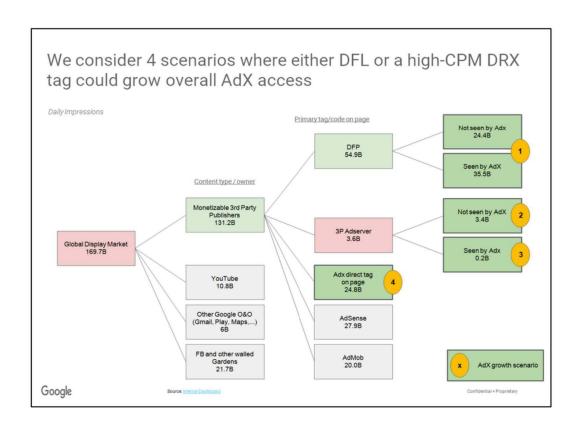

To capture this full opportunity there are a few key asks.

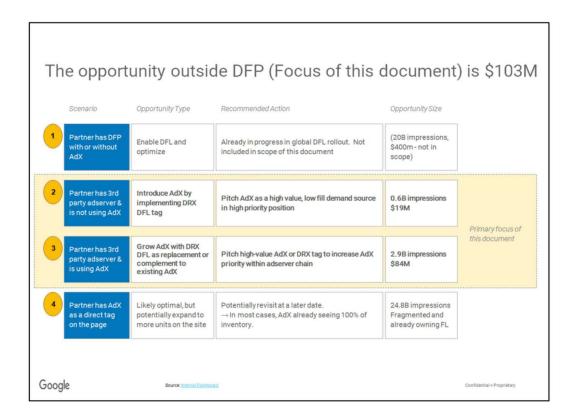

- Explore adding CPM values in the DRX ad response;
 Further open up the EBDA feature to pilot partners;
 Commercialise implementation to Sales & gTech.

With these efforts, DRX can open up an additional revenue opportunity of \$103M per annum while creating meaningful relationships with partners we previously haven't had a partnership with.

1	11/21/2016 14:17:55	We are not going to pitch 797 domains. What is the 80/20 split?
1	11/21/2016 14:17:55	Focussed here on the top 100 domains. This covers 74% of the opportunity.
2	11/21/2016 14:21:01	where is the appendix?
2	11/21/2016 14:21:01	Not referring to the appendix anymore but to the opportunity trix. Let me know if you believe it is needed to be added in the appendix.

3	11/10/2016 10:24:48	We need to revise this. A second call will be penalised by GDN. We need to move the existing tag up the chain

Lead list can be found here.

ld	Date	Text
4	11/23/2016 12:00:44	What is the pareto split on these 92?
3	11/23/2016 12:00:44	Added the split. 20 domains represent 83% of the opportunity.
5	11/23/2016 12:51:15	Is this opportunity net of the existing AdX revenue? (i.e. purely incremental)
4	11/23/2016 12:51:15	This opportunity is based on the PBS Coverage dashboard. https://origami.googleplex.com/page?menu=pbs_coverage_insights&menuGroup=domain_insights#tab My gut would actually say that this data would be including AdX. As I would assume the domain dashboard would show the total amount of pageviews of a domain (incl. potential AdX filled page views). When looking at these 92 partner and their annual revenue (based on the past 7 days) this would be \$26M. Something we would need to deduct from this opportunity. We can also make it a range eg. \$60-\$86M annually.

ld	Date	Text
6	11/29/2016 15:13:56	We need to have an action plan and timing for the project
5	11/29/2016 15:13:56	Made a small project plan. Do let me know if you have any items which you think we should add.

	Date	Text
7	11/23/2016 14:39:10	Who are we asking to commercialise this? We should be commercialising. Need to frame the ask specifically towards those stakeholders that will help this be a success
6	11/23/2016 14:39:10	I've changed the ask around a bit and highlighted the different teams that are included in the commercialisation. PSI, GSL and PM should be leading this as a combined and holistic effort.
		PSI, GSL and PM should be leading this as a combined and holistic effort.

Summary

To fully support all partners and potential partners in the market with the high-CPM value demand of DRX we will need to commit to a few actions:

- Explore adding CPM values in the DRX ad response;
 Further open up the EBDA feature to pilot partners;
 Commercialise implementation to Sales & gTech.

With these efforts, DRX can open up an additional revenue opportunity of \$103M per annum while creating meaningful relationships with partners we previously haven't had a partnership with.
