Subject: Seeds

It is a shame that this Country has allowed a companies not only to genetically modify produce but allow them to patent the seeds by witch there is no way to controlling the contamination that these crops are doing to the non GMO foods. Also the fact that they are suing farmers for infringement on their patent is ridiculous.

Would controls the seeds control the people? No one is entitled to do so.

GMO foods need to be labeled and the people need to be properly informed. That includes schools, restaurants, hospitals, etc.

People have the right to choose. It is our constitutional right. It should not be forced down people's mouth.

We the people are as healthy as the environment (Soil). If the soil is lased with toxic chemicals, our bodies will also be. We are never separated from the environment. We must develop healthy highly mineral enrich organic soil.

Healthy Soil = Healthy Produce = Healthy Life.

It is that simple.

The current agricultural system is designed to create sickness and codependency on the chemical industry.

It's time we all wake up and change for the betterment of the whole.

Peace,

Rafael
