I am writing because I am concerned about the lack of competition in agricultural markets. A large corporation can put farmers that have grown agriculture for several generations out of business because of corp monopoly. Producing a GMO Soy bean and now trying to go in with Dole to do the same with corn, is only poisoning soils, the health of individuals and putting out hard working farmers out of business. We need this to be stopped and the lobbyist helping Monsanto should even be allowed in the White House.

If we are talking about becoming a green country then our soils and our foods need to be the best quality and not the worse. Food Inc has done a wonderful documentary on how our livestock is getting fed and the chain effect on individuals health. If we are talking healthcare we should also look in to our food sources and make sure we subsidize ORGANIC and not GMO... I know the White House has an Organic garden..

We use to have the best beef in the world and now we are at risk buying it at the market , especially when it say s " Corn fed" Monsanto should pay the government and the farmers

and the health care industry for all the unjust they have done.

Then their GMO is sent out of country and spreads world wide. How can we let this happen to our good old farmers that want to grown Organic Soy beans. Why did Monsanto put the farmer that went and cleaned seeds out of business because of law suits. Monsanto should reverse and go organic to make things right otherwise they are outrageously producing food that is not suitable for consumption.

Thank you for giving me the opportunity to comment.

Sincerely,

Elizabeth Lee
