I keep thinking about the history of "revolutions" through out the world, the French, Russian and others. They were basically about food. And, now the United States Federal Government plays with food, at the level of seeds. First, a coercive monopoly of health care - our government hands over a mass of people to a fraudulent health care system, and now a coercive monopoly of food. I guess my children's children will have to immigrate out of this country, just to eat real food.
