US Department of Justice

Dear US Department of Justice:

The following is a letter which lists several of my concerns, I have reviewed it and find it to fit completely within my own personal concerns.

But first I would like to comment as a gardener. I have my own little corner garden but I would like to expand to large more varied gardening, including some grains. The problem with this is that heirloom quality grain seeds are becoming very hard to find. Personally I have only seen them online, and only a few websites at that. It is sad that I have to search for my seeds at a site called "rareseeds.com" This ends my personal note, but please continue to read the form letter as it is very concise with articulating my concerns.

Thank you for the opportunity to submit comments in advance of the Department of Justice's workshops on "Agriculture and Antitrust Enforcement Issues in Our 21st Century Economy."

As an organic consumer, I am particularly concerned about Monsanto's control over the seed supply.

By buying seed companies and aggressively patenting life, Monsanto has gained control over as much as 90 percent of seed genetics. This is anti-competitive behavior that skews markets and subjects farmers and consumers to the unchecked power of a company that can raise prices at will.

But, my main concern is that, while Monsanto has acquired a diverse store of seed genetics, they are only making available a few seeds that are genetically modified to be dependent on their chemicals.

The vast bounty of food crops that farmers have cultivated and improved upon over the last 10,000 or so years should not be allowed to be bought up and put out of commission by a company bent on whittling down food varieties to a few pesticide-dependent genetically modified crops.

The most devious part of Monsanto's business model is that their Frankenseeds can cross-pollinate with organic and traditional varieties, destroying their unique characteristics and infecting them with genetically engineered chemical dependence or even "Terminator" or

"Traitor" technology that renders seeds sterile, a literal death sentence for seeds maintained through conventional breeding.

The same way we protect animal species from extinction, we should protect plant species, especially the tens of thousands of food varieties, from companies like Monsanto that are consciously eliminating them.

I urge you to please include in your investigation a consideration of the importance keeping seeds, the foundation of human life, at least in the marketplace, if not in the public domain where they truly belong.

Sincerely,

Bradley J. Schmidt, OTS
