US Department of Justice

Dear US Department of Justice:

Thank you for the opportunity to submit comments in advance of the Department of Justice's workshops on "Agriculture and Antitrust Enforcement Issues in Our 21st Century Economy."

As an organic consumer, I am particularly concerned about Monsanto's control over the seed supply.

By buying seed companies and aggressively patenting life, Monsanto has gained control over as much as 90 percent of seed genetics. This is anti-competitive behavior that skews markets and subjects farmers and consumers to the unchecked power of a company that can raise prices at will.

But, my main concern is that, while Monsanto has acquired a diverse store of seed genetics, they are only making available a few seeds that are genetically modified to be dependent on their chemicals.

The vast bounty of food crops that farmers have cultivated and improved upon over the last 10,000 or so years should not be allowed to be bought up and put out of commission by a company bent on whittling down food varieties to a few pesticide-dependent genetically modified crops.

The most devious part of Monsanto's business model is that their Frankenseeds can cross-pollinate with organic and traditional varieties, destroying their unique characteristics and infecting them with genetically engineered chemical dependence or even "Terminator" or "Traitor" technology that renders seeds sterile, a literal death sentence for seeds maintained through conventional breeding.

The same way we protect animal species from extinction, we should protect plant species, especially the tens of thousands of food varieties, from companies like Monsanto that are consciously eliminating them.

I urge you to please include in your investigation a consideration of the importance of keeping seeds, the foundation of human life, at least in the marketplace, if not in the public domain where they truly belong.

Mother Nature knows best! Nature created everything in balance. Minerals and vitamins in our fruits and vegetables that should not be tampered with. Seeds that have evolved over time specific to the climate and soil conditions of a given area. So on and so forth. I am not a scientist but a lover of organic, wholesome foods. I fear and loath large, greedy, destructive corporations like Monsanto.

Only Justice can stop this destructive plan that is already in motion. It isn't just about the current generations ..... it is also very much about future generations that have NOT EVEN BEEN BORN YET.

PLEASE Stand up for nature and the future of our planet earth and humanity.

Sincerely,

Rebecca Mendible
