Subject: Comments

I am writing because I am concerned about food security, the environment and the health of our nation, all of which are threatened by the practices of Monsanto. Pushing food products laden with pesticides and GMO,s on unwitting consumers is unethical and should be illegal. At the very least we need clear labeling of food products that give us the option of avoiding these threats to our health and the environment.

Thank you for giving me the opportunity to comment.

Sincerely,

Stephanie Lucas
