Please do not allow us to suffer from political GM science agendas...it would be a crime to not only us but to you and your families as well...do what is right by your conscience, not politically...we are on bended knee begging to be heard as we learn the risks/insignificant faulty studies pushing it forward...there is substantial evidence against Monsanto...7 lobbyists to each senator, 24/7 team of lawyers to push their bad science down the world's throats...and we let them get away with whatever they want because why? The American public is not so naïve...just hopeful our elected officials might see our pain and the deplorable nature of Monsanto...please allow no more harm than what we have already suffered. Doctors are telling patients to steer from GMOs for many reasons they have witnessed. The chemicals Monsanto uses are harsher and they have to use often double doses, should we be eating plants that have a trait to kill insects (meaning the plant itself becomes the poison, you can't wash off this toxin, it is ingested! How on earth can that be 'ok'?) There are a plethora of concerns...please investigate further, do not blindly believe what a company that has no moral code will feed you to believe, they have on agenda, 100% domination of GMs (check out Monsanto's history since the 1900s). Their terminator seed was decided against since it would kill everything, no profit in that, but sickness is ok... big pharma thinks its ok too. Interesting how the White House's cafeteria turned organic since June this year. We are paying for that, but we do not have the right to know what is or is not GM.

The email below reveals one of many substantially significant proof that GMOs are indeed toxic to humans and animals. Monsanto's 90 day study that ignored tissue sampling/dissecting for changes is merely a scarecrow tactic for political gain...just enough info to claim 'substantially equivalent' without further study to prove it is nowhere near equivalent. In fact, blatantly destructive...and the DNA from GMOs are dominant, meaning in 10 years there will be NO organic or conventional foods, our varieties will diminish to one...cross pollination is inevitable as there are NO safeguards protecting GMs pollen from infecting conventional plants, changing them forever. GMs are NOT sustainable...they must be organized with Monsanto's monopoly of products, patents, etc. (check out Bayer and their testimony that GM is out of control just this past week)

I could go on, but certainly you must know this information already. As do we. Will you do what is right. Put a long overdue and urgent moratorium on GMs? That's all we are hoping and praying for. Let's prove the safety and not wait for further devastation that is being ignored by the powers that can help us.

Thank you for listening and please take time to consider the unintended consequences, it is not worth it and it is obvious the consequences are going to be devastating both for the land/animals/humans...there has been no indication that GMs improve 'anything' only diminish everything. Our cornfields are a waste of tax payer money and health. Fuel to subsidize this monstrosity is enormous. Cattle are being fed gm corn when they were designed to eat hay/grass and now e-coli is mutating from gut problems digesting this GM corn...what are we allowing Monsanto to do at mass levels without controls, without consideration to anyone/thing, it is unthinkable that this could happen...but it is. Worldwide. Historically, tyrannical oppressors always self-destruct.

Study Proves Three Monsanto Corn Varieties' Noxiousness to the Organism

Friday 11 December 2009

A new European study "clearly reveals ... new side effects linked with GM maize consumption" affected the liver and kidneys, but also other organs for three Monsanto GMO corn varieties. (Photo: [DawnOne](#))

A study published in the [International Journal of Biological Sciences](#) demonstrates the toxicity of three genetically modified corn varieties from the American seed company Monsanto, the Committee for Independent Research and Information on Genetic Engineering (Criigen, based in Caen), which participated in that study, announced Friday, December 11.

"For the first time in the world, we've proven that GMO are neither sufficiently healthy nor proper to be commercialized. [...] Each time, for all three GMOs, the kidneys and liver, which are the main organs that react to a chemical food poisoning, had problems," indicated Gilles-Eric Séralini, an expert member of the Commission for Biotechnology Reevaluation, created by the EU in 2008.

Caen and Rouen University researchers, as well as Criigen researchers, based their analyses on the data supplied by Monsanto to health authorities to obtain the green light for commercialization, but they draw different conclusions after new statistical calculations. According to Professor Séralini, the health authorities based themselves on a reading of the conclusions Monsanto has presented and not on conclusions drawn from the totality of the data. The researchers were able to obtain complete documentation following a legal decision.

"Monsanto's tests, effected over 90 days, are obviously not of sufficient duration to be able to say whether chronic illnesses are caused. That's why we ask for tests over a period of at least two years," explained one researcher. Consequently, the scientists demand a "firm prohibition" on the importation and cultivation of these GMOs.

These three GMOs (MON810, MON863 and NK603) "are approved for human and animal consumption in the EU and especially the United States," notes Professor Séralini. "MON810 is the only one of the three grown in certain EU countries (especially Spain); the others are imported," he adds. A meeting of EU ministers over MON810 and NK603 is scheduled Monday
