---

I am writing because I am concerned about the lack of competition in agricultural markets.

My grandmother-in-law makes me traditional mexican food with corn and it pains me that I'm eating pesticides. Each cell from BT corn is producing its own pesticide, and 90% of corn (if not more) in North-America is BT corn from Monsanto. I can always tell my grandmother that the corn she buys is dangerous and to try organic ones, but what would be better is that the government tells everyone. The customer should be informed that genetically modified food is in our plates so they can choose. Right now we are at a state that we have no choice within standard agriculture and buying any non-organic corn almost excessively means it comes from Monsanto seeds.

What is really bad is that Monsanto sue farmers that don't buy their seeds because they are supposedly contaminated by Monsanto seeds... and they win! This is terrible and exposes a flaw, whatever it is.

The second thing that is bad is labeling. OGM should be labeled.

If these two things are resolved, freedom will find its way.

Thank you for giving me the opportunity to comment.

Sincerely,

Francois Oligny-Lemieux
