Clean air/water and healthy nutritious food are essential to sustain life on this planetI We all know this. Why then is our government allowing Corporations to pollute our air/water beyond healthy conditions and alter our food for control and profit? The decisions of this department now , will destroy life as we know it for future generations, if we continue down the path of unbridled nano & genetic alteration. Please act now to set regulations and controls over these technologies. Protect our streams, our air and the local farmer from the greed that is leading the corporatations like Monsanto, Bayer Ag and their ilk on their quest to own our God given resources.

Thank you for giving me the opportunity to comment.

Sincerely,  
Cathleen Branich
