Subject: corporations and food

Dear Justice Department,

I understand you will be reviewing corporate management of our food system. I want to let you know that my family no longer trusts the safety and nutrition of food in this country. We have had to learn how to garden, grow chickens and fruit trees so that we can safely feed ourselves. With big business in charge of most of the food supply in this country, we have no faith that our food will nourish us without unnecessary chemicals, preservatives, herbicides and pesticides. Food is created as cheaply as possible at the expense of our soil, water and air. We must change the system and take it back so that people and the environment can live in harmony. More local control with appropriate incentives to jump start this and less corporate involvement would be the place to start.

Thank you, Lee Ann Warner, 55 Montague Road, Leverett MA 01054
