Subject: Save Our Food

I'm a concerned citizen and parent who tries to buy good, healthy food for myself and my family. Food that is organic and not genetically altered can be hard to find and is considerably more expensive, but I still go out of my way and pay more to feed my family natural organic food. Locally grown produce has also become harder and harder to find because the local farms can't compete with the large industrial farms.

Thank you for the opportunity to share my concerns on this matter. I hope the investigation will result in the eventual improvement of the quality of the food and the ability for small farms to produce and compete in our country.
