Subject: end corporate control over our food

I am a citizen concerned about corporate control over our food supply. I have noticed the price of healthy foods increase while unhealthy foods remain more affordable. I am concerned over the lack of grocery stores in low income areas, the loss of family farms, and the safety of the foods we eat.

No corporation should exert so much control over something so necessary and so essential to human life and health as companies like Monsanto and Archer Daniels Midland have in recent years.

I urge the Department of Justice to take action and put an end to these anti-competitive practices. The health of the American people, and even much of the world, is depending on you to take courageous action.

Thank you,
Tabitha Metreger
