I do my best to buy organic as the food companies seem to have it in for consumers.

They genetically bind a pesticide with wheat and think it's a wonderful thing. Forgetting, of course, that people are somehow expected to ingest this joke.

Then I try to dodge genetically modified food – GMO's. What an irresponsible manner of trying to eliminate the very people who buy those products.

Clearly, the inmates have taken over the asylum.

I think the FDA has sold out America and the American people.

It should be overhauled removing all who are currently employed there.
