Subject: corporate control of food and agriculture

I understand that there is a public comment period on this topic. I am greatly concerned about corporations controlling our food supply. In particular, I believe that Monsanto has too much control over agriculture, not just in the US, but world-wide.

One of the functions of government is to protect individuals against forces that are larger than those individuals. Corporations are one such force, and I would hope that our government will act to protect our citizens from the voracious actions of amoral corporations.

Thank you.
