Subject: Comments

I am writing because I am concerned about the lack of competition in agricultural markets. Farming has become a monopoly and the companies are too big to have decent quality control. We are overusing pesticides and Genetically Modified Food. The result is that we are a human experiment. People should be able to choose healthy foods at an affordable price. We should be able to choose non-GMO foods. I firmly believe that labels should contain GMO information. Past history has shown links to pesticides and health problems. They can cause hormone disruptors which can wreak havoc on your health and cause reproductive problems. Please hear our voice and allow smaller, organic,- non-GMO farms to have a chance!! It's good for our planet and our health!

Thank you for giving me the opportunity to comment.

Sincerely,

Kirsten Fure
