

GX 623

QUALIFICATIONS

1. My name is Ravi Dhar. I am the George Rogers Clark Professor of Management and Marketing at the Yale School of Management. I am also the Director of the Yale Center for Customer Insights at the School of Management at Yale University, New Haven, Connecticut. I also have an affiliated appointment as a Professor of Psychology at the Department of Psychology, Yale University.
2. I hold a Ph.D. and M.S. in Business Administration from the University of California at Berkeley. My doctoral dissertation (“Consumer Preference for a No-Choice Option”) was in the area of consumer decision-making. I have published more than fifty papers in journals, proceedings, and as book chapters. Several of my publications were also considered for research awards such as the Paul E. Green Award (“The Effect of Forced Choice on Choice,” Finalist in 2004) and the William O’Dell Award (“Consumer Choice between Hedonic and Utilitarian Goods,” Winner in 2005 and “Making complementary choices in consumption episodes: Highlighting versus Balancing,” Finalist in 2004 and “The Effect of Forced Choice on Choice,” Finalist in 2008). The William O’Dell Award is presented to the best Journal of Marketing Research article that has made the most significant, long-term contribution to marketing theory, methodology, and/or practice. The Paul E. Green Award is presented to the Journal of Marketing Research article that shows or demonstrates the most potential to contribute significantly to the practice of marketing research and research in marketing. I also earned an undergraduate degree in engineering from the Indian Institute of Technology, and a master’s degree in business administration from the Indian Institute of Management. A detailed listing of my educational background and publications is set forth in the curriculum vitae, which is attached to the end of this report as Exhibit A.
3. My field of expertise is consumer behavior and consumer psychology, branding, marketing management, and marketing strategy. In my work as a marketing professor and as a consultant to major corporations, I have conducted, supervised, or evaluated more than a hundred surveys as well as analyzed questions relating to different aspects of consumer behavior. Most of my research focuses on consumers’ decision-making, the

manner in which consumers acquire and process information when forming product perception and preferences, the effect of product attributes (including trademarks) and information presentation on consumer purchase decisions, and the effect of different marketing mix activities (such as promotions and advertising) on consumer buying decisions.

4. My research has been published in the leading marketing, psychology, and management journals, such as the Harvard Business Review, Journal of Behavioral Decision Making, Journal of Business, Journal of Consumer Psychology, Journal of Consumer Research, Journal of Marketing Research, Journal of Personality and Social Psychology, Management Science, Marketing Science, Organizational Behavior and Human Decision Processes, Sloan Management Review and other journals. I also serve on the editorial board of leading consumer research journals such as Journal of Consumer Psychology, Journal of Marketing, and Marketing Letters. I am also the past Area Editor of Marketing Science, current Associate Editor of Journal of Consumer Research, and current Associate Editor of Journal of Marketing Research. As a member of the editorial board as well as the current and past Associate Editor of the best academic journals in marketing, I critically evaluate survey and experimental based papers annually that contain hundreds of studies collectively. The criteria for evaluation include an assessment of the contribution of the paper, the soundness of the conceptual ideas, as well as the appropriateness of the survey or experimental methodology and the analysis techniques. I annually review more than seventy-five papers that contain more than one hundred surveys or experiments.
5. My teaching responsibilities at Yale University's School of Management include two doctoral courses that examine advanced research topics in the area of consumer behavior, judgment and decision-making. I also teach or have taught several different courses for graduate students who are enrolled in the MBA program at Yale; Consumer Behavior, E-Business and Marketing, Marketing Strategy, Marketing Management, and Marketing of Financial Services. I have also taught and given seminars to mid-level and senior level executives in more than a dozen countries in North and South America, Asia, and Europe. I have also worked as a consultant or adviser to companies on marketing related

issues in different types of industries (*e.g.*, consumer products, high technology, medical devices and financial services.)

6. I have served as an expert witness on marketing research issues in a variety of litigation matters. A list of cases in which I have testified as an expert, at trial or by deposition in the preceding four years or more, is attached as Exhibit B.
7. I am being compensated for my work on this matter at \$700 per hour. My compensation is not contingent upon the conclusions I reach or on the outcome of this matter.

ASSIGNMENT

8. The U.S. Department of Justice, asked me to provide a professional evaluation of certain questions relating to H&R Block's proposed acquisition of 2nd Story Software, Inc., makers of TaxACT. Specifically, I have been asked to review a survey conducted by Directions Research, Inc. in April 2011 ("2011 Survey"). This report contains my conclusions regarding the validity of the 2011 Survey.
9. In forming my opinions, I have reviewed materials provided to me by the Department of Justice listed in Exhibit C to this report, including the expert report of Dr. Christine Siegwarth Meyer and existing academic research on the principles of marketing, survey methodology, and consumer-decision making.
10. I reserve the right to update my analyses and to supplement my report to incorporate additional relevant information that may be presented by the parties, and/or in light of additional documents or testimony brought forth through the ongoing discovery in this case, at trial, or otherwise, which may be brought to my attention after the date of my signature below.

THE EXPERT REPORT OF DR. CHRISTINE SIEGWARTH MEYER

11. The expert report of Dr. Christine Siegwarth Meyer relies on the 2011 Survey. Dr. Meyer contends that the 2011 survey “sheds light on the question at issue, namely, the likely consumer response to a price increase or similar change in non-price attributes.”¹

SUMMARY OF MY CONCLUSIONS

12. Based upon my education, background, and professional experience, it is my opinion that Dr. Meyer relies on a survey that is severely flawed in multiple respects and fails to meet the basic premises of good survey design.² My critiques of this survey can be summarized as follows:
 - a) The 2011 Survey uses a severely flawed question that fails to serve the main purpose for which Dr. Meyer relies on the survey (i.e., to measure the likely “diversion”—consumer response to a price increase or similar change in non-price attributes—from TaxACT);
 - b) The 2011 Survey does not ask specifically about customer responses to any change in the product or price;
 - c) The 2011 Survey uses ambiguous language in the wording of the question that fails to isolate the effect of respondents’ hypothetical dissatisfaction with the product they bought or the price they paid on potential switching behavior;
 - d) The 2011 Survey uses a closed-ended question and provides an incomplete list of response options and does not provide a “Don’t Know” or a “No Opinion” option, with the likely result of guessing by the respondents;
 - e) The 2011 Survey fails to follow widely accepted principles of survey design because it fails to account for a high degree of non-response bias and it seems to fail to rotate the response options provided in the closed-ended question across respondents, thereby leading to inaccurate and biased results.
13. As a consequence of these serious flaws in the 2011 Survey, the conclusions Dr. Meyer draws from it are unreliable. Each flaw identified, by itself, contributes substantial concern that Dr. Meyer's interpretation of the 2011 Survey is unreliable. The cumulative effect of all these flaws is so egregious that the 2011 Survey, in my opinion, sheds no

¹ Expert Report of Dr. Christine Siegwarth Meyer, 20 n.85.

light on the likely consumer response to a price increase or similar change in non-price attributes.

THE 2011 SURVEY FAILS TO ASK THE APPROPRIATE QUESTION TO ASSESS DIVERSION FROM TAXACT

14. A survey should be designed to answer the precise question or questions relevant to the issues. A survey that fails to ask the proper question can provide little, if any, insight into the question of interest. According to my understanding, one of the key questions in this case is: “Where would TaxACT customers go if TaxACT raised its price or reduced its quality?” The 2011 Survey fails to test for this specific issue. The main question in the 2011 survey stated: “If you had become dissatisfied with TaxACT’s price, functionality or quality, which of these products or services would you have considered using to prepare your federal taxes? (Please select all that apply).”³ This question completely fails to provide a basis to measure likely diversion from TaxACT to H&R Block and other products *as a result of any change in the price or quality of TaxAct products*, which is the question that I understand is relevant for this case. Instead, this question simply asks for response regarding dissatisfaction, which may arise from causes other than a change in price or quality. For example, a respondent’s dissatisfaction with TaxACT’s price, functionality, or quality could be entirely attributable to the changing needs of the tax filer and have little or nothing to do with any response to a *change* in price or quality of the TaxACT product. Indeed, such a scenario does not contemplate any change to the TaxACT price or product at all, but rather implies a change in the respondent’s needs.
15. The question asked states “If you had become dissatisfied...” and makes no explicit mention of any increase in price or decrease in quality. Without an explicit assumption on the part of the respondent as to the cause(s) of his or her dissatisfaction, this question provides little, if any, useful information relating to how respondents would switch, if at all, in response to information that TaxACT has raised its price (or reduced its quality). On the contrary, the question, as phrased, most likely communicated to respondents to consider how they might respond if they were dissatisfied with the price (or quality) of

³ PX604 (attached as Exhibit D).

the TaxACT product that they actually purchased. A respondent's dissatisfaction with a product can occur for many unspecified reasons, such as changes in one's personal circumstances that necessitate additional features (e.g., new tax complexity), wanting a product that is easier to use (e.g., desire for a different interface), or a change in financial circumstances, necessitating a product that is cheaper than TaxACT.

16. Causes of dissatisfaction are qualitatively different and may have little to do with how a current customer who uses TaxACT would respond to *changes* in its price or quality (e.g., an increase in price or reduction in quality). Thus, the wording of the survey question is fatally flawed to the extent that it seeks to measure where current TaxACT customers would go if TaxACT raised its price or reduced its quality. Due to this flaw and the other flaws discussed below, the results of the 2011 Survey simply offer no insight into the fraction of unit sales lost by TaxACT due to an *increase* in price that would be diverted to other products.

THE WORDING OF THE QUESTION IS NOT PRECISE

17. In addition to the fact that the question asked does not help to answer how a user would respond to any price increase (or quality reduction) of a TaxACT product, the wording of the question as phrased is also imprecise even for addressing the question of how customers would behave if they were dissatisfied with the purchased product (or its price). A cornerstone of good survey design is the use of clear, unambiguous, and precise language. If the survey questions are unclear, they threaten the validity of the survey by introducing error in the responses due to respondents' guessing and misunderstanding of the questions.⁴ Specifically, it is impossible to determine from the responses to the question whether respondents are referring to an outcome that is based on their dissatisfaction with price, functionality or with quality. Indeed, this kind of question is inherently ambiguous. This is especially important because the switching in response to dissatisfaction with quality could be very different from switching in response to dissatisfaction with price. For example, in being told to think about their dissatisfaction

⁴ Fowler, F.J. Jr., "How Unclear Terms Affect Survey Data," Public Opinion Quarterly, Vol. 56, 1992.

with functionality, respondents might use it as a cue to consider products with better or more features. In contrast, if they focus on dissatisfaction with price, they would use it as a cue to consider lower priced alternatives. There is no way of knowing whether respondents are basing their answers by focusing on dissatisfaction with price, functionality, or quality.

THE 2011 SURVEY HAS ONLY CLOSED-ENDED QUESTIONS AND LIMITED RESPONSE OPTIONS

18. Survey design principles dictate that great care be taken in designing questions and response options that are not leading, i.e., they do not direct respondents to a particular response or responses. Because open-ended questions require the respondent to formulate and express an answer in his or her own words, almost all surveys in the context of litigation start with an open-ended question. For example, in the current situation, respondents could be asked what, if anything, they would do in response to a particular price increase on the product they currently use. Because closed-ended questions may remind respondents of options that they would not consider or which simply do not come to mind easily,⁵ it is best to commence a survey with an open-ended question.
19. The 2011 Survey relies only on closed-ended questions. The responses to a closed-ended question are only meaningful if the list of choices is exhaustive, that is, if the choices cover all possible options a respondent might choose in response to the question. If a question presents respondents with an incomplete set of response options, the distribution of their responses is likely to be different in the survey than if the set of the responses encompassed an exhaustive set of choices.⁶ The main question in the 2011 Survey focuses respondents' attention on specific response options. The survey presents ten response options (an eleventh option presented was "other"). In addition to providing an incomplete list of response options, the option of staying with a TaxACT product was not provided. It is well known that current customers may stay with the status quo brand even

⁵ Diamond, S., "Reference Guide on Survey Research," *Reference Manual on Scientific Evidence*, 2nd edition, Federal Judicial Center, 2000, p. 246.

⁶ Diamond, S., "Reference Guide on Survey Research," *Reference Manual on Scientific Evidence*, 2nd edition, Federal Judicial Center, 2000, p. 247.

if they are not completely satisfied. The exclusion of any TaxACT branded products would fail to reflect switching patterns by dissatisfied customers obtained under marketplace conditions, where staying with the current product is always an option.

20. The 2011 Survey covered four categories of TaxACT customers: (1) customers who purchased a paid federal product and a state product; (2) customers who purchased a paid federal product but not a state product; (3) customers who used a free federal product and purchased a state product; and (4) customers who used a free federal product and did not purchase a state product. The response options provided were different across the four customer categories (and thus did not include a full set of options for any category). Inherent in crafting response options based on the customer category are assumptions about likely choices based on the product used in the prior year and hence they are highly leading. For example, the options provided to customers who used a free federal product and did not purchase a state product were almost exclusively free options. This is highly leading and likely to suggest to the respondent that they are supposed be price sensitive and may make them more likely to select the option of preparing the returns themselves.

THE 2011 SURVEY DID NOT PROVIDE INSTRUCTIONS TO MINIMIZE GUESSING

21. In addition to the response options not being exhaustive, there was also no information provided to choose among them other than price and brand name. It is extremely unlikely that consumers were familiar with the differences among the set of options that were provided. Such results are highly unlikely to represent actual switching behavior in response to dissatisfaction in the marketplace and are likely to be based on guessing, as discussed below.
22. The survey does not seem to have exercised any care to minimize the likelihood that some respondents may be guessing. It is standard survey practice to explicitly mention to the respondents that it is appropriate not to have an opinion on a question.⁷ As stated earlier, there was very little information provided on the features of each of the provided

⁷ Diamond, S., "Reference Guide on Survey Research," *Reference Manual on Scientific Evidence*, 2nd edition, Federal Judicial Center, 2000, pp.250-51.

response options. Thus, many survey respondents may not have had an opinion on the question either because they had not thought about the issue or because the question assumes familiarity with the different products. The respondents are likely to provide their guesses that do not reflect what their actual behavior would be. It is, therefore, important to provide a “Don’t Know” or “No Opinion” option to all closed ended questions, so that respondents are not forced to choose an answer when they either do not know or do not have an opinion.”⁸ Studies have found that presentation of an explicit “Don’t Know” or “No Opinion” option can lead to an increase in that category of responses of about 20 percent to 25 percent compared with when those options are not explicitly provided.⁹ The 2011 Survey did not provide explicit instructions not to guess (something I see in almost all surveys done for litigation) nor an explicit “Don’t Know” or a “No Opinion” option and hence the obtained estimates of switching by dissatisfied customers may not reflect actual marketplace conditions.

23. Finally, survey responses can also be influenced by the order in which response options to closed-ended questions are provided. It is therefore important to rotate response options across respondents so that any order effects are mitigated.¹⁰ If the survey did not rotate the response options, the results from the survey would be potentially biased.

SURVEY RESULTS ARE LIKELY BIASED BECAUSE THE RESPONSE RATE WAS VERY LOW

24. To further examine the reliability of the survey data that was collected, it is important to look at nonresponse rates. The survey was mailed to a sample of 46,899 TaxACT clients of online e-file accepted returns. Of the 46,899 emails sent, 46,129 were received and 770 emails bounced.¹¹ A second mail was sent to 24,898 TaxACT clients who purchased a

¹¹ Adding across the four groups results in 47,836 emails that is different from 46,899 and 46,129.

paid federal and did not purchase a state product. The response rates in each of the four groups were 1.7% (Free Federal / No State), 2.08% (Free Federal / Paid State), 0.6% (Paid Federal / No State), and 2.45% (Paid Federal / Paid State).

25. The level of nonresponse in the 2011 Survey is extremely high (more than 98%).¹² Even when a sample is drawn from an appropriate target population, because nonresponse is not random, such a low response rate does not allow one to make valid inferences about the population. For example, people who are busy are potentially less likely to respond to the survey and also more likely to switch to alternatives that are not time intensive. In other words, non-respondents (e.g., for reasons of time) will have preferences that differ from those who do respond. The extremely low response rates makes it difficult to determine whether the results were impacted by a certain segment who were systematically more likely to respond to the survey (e.g., those who were price sensitive or time insensitive) in relation to those who did not respond.

CONCLUSION

26. Given all the serious flaws with the survey methodology, I have concluded that the 2011 Survey results have no validity in answering the question of diversion from TaxACT or switching due to dissatisfaction with the price, functionality, or quality of the TaxACT products.

¹² I have not seen the background data to determine if some of the nonresponse computed above is due to a failure to qualify in the screening question (i.e., respondents were terminated because they were not appropriate). I am assuming this number is relatively small as the invitations were sent exclusively to TaxACT clients.

Directions Research, Inc. Survey Results & Questionnaire

April 29, 2011

April 29, 2011

Re: TaxAct Study -- Privileged

Below you will find the results of the survey performed on behalf of H&R Block and TaxAct as discussed with legal counsel.

Research Method

A quantitative internet based study was conducted between April 20-April 29, 2011 among respondents who were responsible for the preparation of their taxes in 2011 (for income earned in 2010). In the first mail out, 46, 899¹ email invitations were sent to TaxAct clients based on a random sample pull among all online efile accepted returns and the groups were as follows:

Tape 1

Free Fed/No State	13,881
Paid Fed/No State	4,990
Free Fed/Paid State	11,770
Paid Fed/Paid State	17,195

A second mail out was sent on April 27, 2011 in an effort to increase the quantity for Paid Fed/No State. The second Tape was a random pull for online efile accepted returns of Paid Fed/No State of 24,898 records.

The respondents were classified into four independent groups based on how they filed and how they paid in 2011:

1. Free Federal and no State filing through TaxAct
2. Free Federal and paid State filing through TaxAct
3. Paid Federal and no State filing through TaxAct
4. Paid Federal and paid State filing through TaxAct.

After determining their filing status in 2011, respondents were asked the following 2 questions:

- A. *If you had become dissatisfied with TaxACT's price, functionality or quality, which of these products or services would you have considered using to prepare your federal taxes? (Please select all that apply)*
- B. *Below is the list of choices that you selected from the preceding question. Which one of these would you be most likely to select to prepare your taxes if you had become dissatisfied with TaxACT's price, functionality or quality? (Select one answer)²*

The options that were given reflected the filing status and payments they had made for their 2011 tax preparation.

¹ Of the 46,899 emails sent, 46,129 emails were received and 770 emails bounced.

² The full text of the survey is appended to this document.

6590713.1

Findings**1. Free Federal/No State**

Free Fed/No State	PRICE	All Options	One Most Likely
I would prepare myself without help		44%	34%
TurboTax Free Edition	\$ -	38%	30%
H&R Block at Home Free Edition	\$ -	17%	10%
Free TaxUSA Free Edition	\$ -	13%	8%
Complete Tax Free Basic	\$ -	11%	5%
An Accountant	\$ -	4%	2%
I would use a product on FFA		3%	2%
TaxSlayer Free Edition	\$ -	5%	1%
Jackson Hewitt free Basic	\$ -	4%	1%
Tax\$imple Free Basic	\$ -	2%	0%
Other		7%	6%
Total Respondents		240	240

2. Free Federal/Paid State.

Free Fed/Paid State	PRICE	All Options	One Most Likely
I would prepare myself without help		40%	33%
TurboTax Free Edition	\$27.95	31%	24%
Free TaxUSA Free Edition	\$9.95	24%	20%
H&R Block at Home Free Edition	\$27.95	8%	5%
An Accountant		4%	4%
TaxSlayer Free Edition	\$14.90	6%	3%
I would use a product on FFA		3%	1%
Complete Tax Free Basic	\$34.95	1%	1%
Jackson Hewitt free Basic	\$29.95	1%	0%
Tax\$imple Free Basic	\$24.95	0%	0%
Other		9%	8%
Total Respondents		245	245

6590713.1

3. Paid Federal/No State.

Paid Fed/No State	PRICE	All Options	One Most Likely
TurboTax Basic	\$19.95	35%	29%
I would prepare myself without help		34%	27%
Free TaxUSA Deluxe	\$5.95	14%	13%
An Accountant		10%	9%
H&R Block at Home Basic	\$19.95	9%	4%
TaxSlayer Classic	\$9.95	5%	4%
I would use a product on FFA		3%	2%
complete Tax Deluxe	\$34.95	2%	1%
Jackson Hewitt Deluxe	\$27.95	3%	1%
Tax\$imple Deluxe	\$24.95	0%	0%
Other		11%	10%
Total Respondents		182	182

4. Paid Federal/Paid State.

Paid Fed/Paid State	PRICE	All Options	One Most Likely
I would prepare myself without help		36%	33%
TurboTax Basic	\$56.90	27%	22%
Free TaxUSA Deluxe	\$15.90	20%	16%
TaxSlayer Classic	\$14.90	12%	7%
An Accountant		6%	5%
H&R Block at Home Basic	\$54.90	9%	5%
complete Tax Deluxe	\$69.90	1%	1%
Jackson Hewitt Deluxe	\$57.90	2%	1%
Tax\$imple Deluxe	\$49.90	0%	0%
I would use a product on FFA		2%	1%
Other		9%	8%
Total Respondents		422	422
