UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF COLUMBIA

UNITED STATES OF AMERICA, Plaintiff, and TOBACCO-FREE KIDS ACTION FUND, AMERICAN CANCER SOCIETY, AMERICAN HEART ASSOCIATION, AMERICAN LUNG ASSOCIATION, AMERICANS FOR NONSMOKERS' RIGHTS, and NATIONAL AFRICAN AMERICAN TOBACCO PREVENTION NETWORK Intervenors, v. PHILIP MORRIS INCORPORATED, et al. Defendants.	Civil Action No. 99-CV-02496 (GK) Next scheduled court appearance: (none scheduled) **REDACTED FOR PUBLIC FILING**[1]

UNITED STATES' FINAL PROPOSED FINDINGS OF FACT
(Incorporating Errata of August 16, 2005)

[1]Information designated by Defendants as "Confidential" pursuant to Order #7, Order #36, and Order #638 in the above-captioned action has been redacted. Order #7 allows each Defendant to designate as "Confidential" such information, document or material that it in good faith believes "derives independent economic value, actual or potential, from not being generally known to the public or to other persons who can obtain economic value from its disclosure and use; and is the subject of efforts that are reasonable under the circumstances to maintain its secrecy;" or information otherwise entitled to protection under Rule 26(c) of the Federal Rules of Civil Procedure. Order #36 allows each Defendant to designate as "Confidential" information that is entitled to protection pursuant to Order #7 and meets the further requirement that it is "so proprietary or competitively sensitive that its disclosure to a competitor would cause irreparable competitive injury." Order #638 supplements and adds to the provisions of Orders #7 and #36 and sets forth procedures for "any party wishing to make confidentiality designations for Information and/or Designated Prior Testimony."

Exhibit Offered During Trial	(O)

EXECUTIVE SUMMARY

In the course of trial that began in September 2004 and lasted nearly nine months, the United States established facts that prove that each of the Defendants in this action has committed violations of Sections 1962(c) and 1962(d) of the Racketeer Influenced and Corrupt Organizations Act ("RICO"), 18 U.S.C. §§ 1961-1968, as alleged in Counts 3 and 4 of the United States' First Amended Complaint. The evidence introduced by the United States – presented through 58 live witnesses, over 10,000 documents, and testimony of 120 witnesses appearing by prior designation – proves that Defendants have engaged in a massive 50-year scheme to defraud the American public, including consumers of cigarettes, and that Defendants' past and ongoing conduct establishes a reasonable likelihood of future violations. Accordingly, the totality of the evidence compels a finding that Defendants have violated RICO and warrants imposition of equitable relief to prevent and restrain Defendants from committing ongoing and future violations. The evidence supporting these findings is set forth in the United States' Post-Trial Proposed Findings of Fact.

In the course of the trial, the Court had the opportunity to observe the many witnesses proffered by both sides, and to assess their credibility in its role as finder of fact. The experts proffered by the United States were all highly qualified to assist the Court in the areas in which they testified. The United States' experts testified on topics that extended naturally from their own professional work, reached conclusions that find widespread support in the relevant fields or disciplines and that rested on the broadest range of relevant evidence; therefore, the United States' experts were highly credible. Many of these witnesses – Dr. Jonathan Samet, Dr. Allan Brandt, Dr. Neal Benowitz, Dr. Jack Henningfield, Dr. Jeffrey Harris, Dr. Paul Slovic, Dr. Neil Weinstein, Dr. David Burns, Dr. Frank Chaloupka, Dr. Michael Fiore, Dr. Michael Eriksen, Dr.

Anthony Biglan, and Dr. Max Bazerman – are widely recognized as among the world's preeminent experts on the precise subjects on which they offered testimony. Thus, their testimony rested – in addition to materials reviewed for this particular case – upon years of education, training, and personal research and experience on the matters on which they were called to testfy. Many had dozens, in some cases hundreds, of peer-review publications on smoking and health issues in their respective field of expertise, and several have been selected as editors or senior editors on Reports of the Surgeon General or other consensus-based reports of scientific and public health bodies on smoking and health topics.

By contrast, Defendants' experts – and their scientific experts in particular – were markedly less credentialed and accomplished in the particular areas for which they were called to testify. In contrast to the United States' experts, many of Defendants' experts – including Edwin Bradley, Peter Rowell, James Langenfeld, Richard Semenik, James Heckman, Donald Rubin, Daniel Fischel, William Wecker, Roman Weil, and Dennis Carlton – have few or no peer-reviewed publications on smoking and health issues. In addition, some of these experts, including Langenfeld and Semenik, offered opinions about Defendants' conduct without reviewing tobacco company documents directly relevant to the subject matter of their testimony. While many had expertise in a particular field, that field was tangential or marginally related to the actual subjects on which they testified to this Court. For most of these witnesses, their involvement with the subject matter of their testimony began when they were recruited by Defense counsel for consulting or expert witness work, and their work in the area has been confined to lucrative service as expert witnesses or consultants for these Defendants in smoking and health litigation.

Additionally, Defendants' fact witnesses – including adverse fact witnesses called by the

United States during its case-in-chief – were handsomely paid current and former employees who repeatedly offered or embraced strained readings of documents, often basing testimony on single documents that were not representative of the weight of the evidence on a particular topic. In other instances, Defendants' witnesses offered post hoc explanations for conduct that were directly contradicted and impeached by documents created contemporaneously with the events. Thus, the testimony of Defendants' witnesses, on the main, was less well grounded in documentary support, more effectively impeached during cross-examination, and thus less credible.

Cigarette Smoking, Disease and Death

Cigarette smoking and exposure to secondhand smoke kills nearly 440,000 Americans every year. The annual number of deaths due to cigarette smoking is substantially greater than the annual number of deaths due to illegal drug use, alcohol consumption, automobile accidents, fires, homicides, suicides and AIDS combined. Approximately one out of every five deaths that occur in the United States is caused by cigarette smoking, which adversely effects almost every organ in the body. Among the major diseases caused by smoking are lung cancer, atherosclerosis, cerebrovascular disease, chronic obstructive pulmonary disease, cardiovascular disease, including myocardial infarction and coronary heart disease, esophageal cancer, kidney cancer, laryngeal cancer, and oral cancer. The Reports on Smoking and Health prepared by the Office of the Surgeon General since 1964 have detailed smoking's role in causing death and disease. The 2004 Surgeon's General Report offers an effective compilation of the consensus conclusions of the scientific and medical communities as to the list of diseases caused by smoking.

As cogently explained at trial through the testimony of Dr. Samet, Chair of the

Epidemiology Department at Johns Hopkins Bloomberg School of Public Health, and Dr. Brandt, who occupies an endowed chair as a Professor of the History of Medicine at Harvard Medical School and is Chairman of the Department of the History of Science at Harvard University, the focus on smoking as a possible cause of disease began in the middle of the twentieth century. Physicians and public health officials in the United States had widely noted an alarming increase in numbers of cases of lung cancer. Virtually unknown as a cause of death in 1900, by 1935 there were an estimated 4,000 deaths annually. A decade later, the annual death toll from lung cancer had nearly tripled. The meteoric rise in lung cancers followed the dramatic increase in cigarette consumption that had begun early in the twentieth century. Annual per capita consumption of cigarettes in 1900 stood at approximately forty-nine cigarettes; by 1930, annual per capita consumption was over 1,300; by 1950, it was over 3,000. Population studies showed that the increases in lung cancer cases and deaths, though they lagged in time behind this increase in cigarette use, closely tracked the spike in cigarette smoking. This apparent association led to considerable speculation about the relationship between cigarette smoking and ill health. The initial speculation was confirmed by scientific study.

By late 1953, there had been at least five published epidemiologic investigations, as well as others identifying and examining carcinogenic components in tobacco smoke and their effects. The researchers conducting these studies had come to a categorical understanding of the link between smoking and lung cancer. This understanding was both broader and deeper than that obtained from the case studies and preliminary statistical findings earlier in the century. While some of the epidemiological methods were innovative, the scientists using them were careful to approach them in a thorough manner; these methods were completely consistent with established scientific procedure and process. Epidemiology was not just based on statistics, but also was an

interdisciplinary, applied field. The studies substantially transformed the scientific knowledge base concerning the harms of cigarette use. Unlike earlier anecdotal and clinical assessments, these studies offered new and pathbreaking approaches to investigating and resolving causal relationships.

The Formation of the Enterprise and the Launch of the Scheme to Defraud

In response to this growing body of evidence that smoking caused lung cancer, Defendants and their agents joined together and launched their coordinated scheme in the early 1950s. Defendants developed and implemented a unified strategy that sought to reassure the public that there was no evidence that smoking causes disease. At the end of 1953, at the urging of the chief executive of the leading cigarette manufacturer at the time, American Tobacco, the chief executives of the five major cigarette manufacturers in the United States – Philip Morris, R.J. Reynolds, Brown & Williamson, Lorillard, and American – met at the Plaza Hotel in New York City with representatives of the public relations firm Hill & Knowlton and agreed to jointly conduct a long term public relations campaign to counter the growing evidence linking smoking as a cause of serious diseases. The series of meetings at the Plaza Hotel spawned an association-in-fact enterprise ("Enterprise") to execute a fraudulent scheme in furtherance of their overriding common objective – to preserve and enhance the tobacco industry's profits by maximizing the numbers of smokers and number of cigarettes smoked and to avoid adverse liability judgments and adverse publicity. The fraudulent scheme would continue for the next five decades.

As a result of the Plaza Hotel meetings, the companies launched their public relations campaign by issuing the "Frank Statement to Cigarette Smokers," a full page announcement published in 448 newspapers across the United States in January 1954. The Frank Statement included two statements that lay at the heart of Defendants' fraudulent scheme – first, that there

was "no proof" that smoking was a cause of any disease; and second, that the industry would jointly sponsor and disclose the results of "independent" research aimed at uncovering the health effects of smoking through the new industry-funded Tobacco Industry Research Committee ("TIRC"), later renamed the Council for Tobacco Research ("CTR"). At the same time that Defendants told the public that "we accept an interest in people's health as a basic responsibility, paramount to every other consideration in our business," they established a sophisticated public relations apparatus in the form of TIRC – based on the "cover" of conducting research – to deny the harms of smoking or to claim that the issue of whether smoking causes disease remained an "open controversy." Defendants' two pronged approach was designed both to reassure smokers that they could keep smoking because proof of smoking's harms was lacking, and to reassure the public that they were responsible companies that were most interested in discovering the answers.

As Dr. Brandt concluded after extensive historical study of both the developing body of scientific evidence and Defendants' conduct, the "controversy" over the question of smoking and health did not exist in the scientific world. Defendants' contention that through the 1950s and 1960s eminent scientists equally and independently lined up on both sides of a "controversy" about the harms of smoking, is not supported by evidence. Instead, Defendants developed and effectuated **public relations** strategies to attempt to maintain and foment controversy in the face of new research, ever-mounting evidence, and emerging scientific consensus. And once they had organized and set in motion the essential strategy of generating "controversy" surrounding the scientific findings linking smoking to disease, Defendants stuck to this essential approach, without wavering, for the next half-century.

Over time, other entities joined and actively participated in the affairs of the ongoing

Enterprise and conspiracy, including Defendants Liggett and BATCo, Brown & Williamson's affiliate. Much of the evidence proving the existence of the Enterprise – and each Defendants' association with it and participation in its affairs – exists in documents and prior designated testimony submitted to the Court record. In 1958, the members of TIRC formed Defendant The Tobacco Institute, Inc. ("Tobacco Institute"), to assume many of TIRC's public relations functions. After its incorporation in 1985, Philip Morris Companies joined the Enterprise, becoming a direct parent to Philip Morris as well as to Philip Morris International, which had previously been a division of Philip Morris.[1] The Enterprise operated through both formal structures, including jointly funded and directed entities such as TIRC/CTR and the Tobacco Institute, and other less formal means, including scientific and legal committees, and direct contacts among and between Defendants, to communicate, advance, and maintain a united front, and to ensure lockstep adherence to achieve their shared aims. Defendants developed and used this extensive and interlocking web because they recognized that any departure from the industry-wide approach to the content of public statements made anywhere in the world, or the nature of research would have severe adverse consequences for the entire industry. To coordinate and further their fraudulent scheme, Defendants made, and caused to be made and received, innumerable mail and electronic transmissions from the 1950s through present.

Evidence introduced by the United States through witnesses and documents proves that Defendants' fraudulent scheme to publicly deny that smoking was a proven cause of disease occurred on the massive scale and for the duration that it did only because individuals both

[1] In January 2003, Defendant Philip Morris Inc. changed its name to Philip Morris USA Inc., and Defendant Philip Morris Companies Inc. changed its name to Altria Group, Inc. These Post-Trial Findings of Fact refer to Philip Morris USA as "Philip Morris" and "Philip Morris USA" interchangeably, and refer to Altria as "Philip Morris Companies" and "Altria" interchangeably.

employed by and associated with Defendants acted intentionally and specifically in furtherance of that scheme. The same is true for all other components of the overarching scheme to defraud as well. The record is replete with documented instances of Defendants' employees choosing courses of conduct with explicit acknowledgment that the conduct was motivated not by the "merits," but by the commitment to protect and further Defendants' scheme. In addition to express evidence of Defendants' fraudulent intent in the Court record, the evidence in the case offers powerful circumstantial evidence of Defendants' intent to defraud the American public.

The Role of TIRC/CTR and the Tobacco Institute in Defendants' Decades-Long Campaign to Deny and Distort the Health Effects of Smoking

From the outset, the dual functions of TIRC/CTR, public relations and scientific research, were intertwined. Rather than carefully and critically assessing the emerging scientific data concerning the harms of smoking, TIRC/CTR focused its energies and resources in two areas. First, in its public relations capacity, it repeatedly attacked scientific studies that demonstrated the harms of cigarette smoke and worked to reassure smokers about cigarettes. Defendants' control of CTR meant it could never and would never conclude that smoking causes any disease, and in its 46 years of existence ending in 2000, it never did. Second, it developed and funded a research program that concentrated on basic processes of disease and that was distant from, if not completely irrelevant to, evaluating the immediate and fundamental questions of the risks and harms associated with smoking. Dr. Brandt testified that CTR "never developed an approach to carcinogenesis and tobacco that could resolve the question of the harms induced by cigarette smoking."

From its establishment in 1958, the Tobacco Institute became the main public voice of Defendants. The Tobacco Institute employed numerous means of communication – issue statements, advertisements, pamphlets, testimony, and television spokespersons – to advance

Defendants' jointly formulated positions on smoking and health issues, including denying that smoking cigarettes causes diseases, and supporting the false claim that the link between smoking cigarettes (and exposure to secondhand smoke) and adverse health effects remained a legitimate "open question." In this way, the functions (public relations and research) of these two entities were integrally related – by Defendants' intentional design, both organizations were fully committed to Defendants' goals of denying and discrediting the substantial scientific evidence of smoking's harms and convincing the public (especially smokers and potential smokers) that smoking was not harmful to health.

Defendants repeatedly represented to the public that they were sponsoring independent research aimed at discovering the health effects of smoking. Indeed, Defendants told the public that they created TIRC/CTR to administer this effort. These statements were misleading and deceptive half-truths, because in fact, as shown through the testimony of numerous documents and witnesses – both those appearing live and by prior designation – the Cigarette Company Defendants[2] used TIRC/CTR to serve as a "front" organization to advance their public relations and litigation defense objectives. Through CTR, the Cigarette Company Defendants funded "Special Projects" – research projects conceived and directed by committees of industry representatives, including lawyers, to support scientists who had shown a willingness and ability to generate information and provide testimony that could bolster the industry's litigation defenses before courts and governmental bodies and cast doubt on the scientific evidence that smoking caused cancer and other diseases. Similarly, Defendants also sponsored jointly funded research

[2]As used here and throughout the United States' Post-Trial Findings of Fact, "Cigarette Company Defendants" refers to Defendants American Tobacco, British American Tobacco (Investments) Limited ("BATCo"), Brown & Williamson, Liggett, Lorillard, Philip Morris, and R.J. Reynolds.

through lawyer-administered "Special Accounts" – to recruit and support industry-friendly researchers to serve as expert witnesses in litigation and to represent the industry's scientific position in legislative and regulatory proceedings.

Within the individual Cigarette Company Defendants, high-ranking scientists and executives recognized the legitimacy of the scientific consensus, and the limited amount of internal research that their scientists did perform was wholly consistent with the results of mainstream scientific study. The Court heard unchallenged testimony from Dr. William Farone, a physical chemist who Philip Morris hired in 1976 to oversee its development of potentially less hazardous cigarettes, that it was "well accepted" within Philip Morris during his eight years there that smoking causes disease. Dr. Farone's testimony was buttressed by similar testimony from Jerry Whidby, a scientist for 26 years at Philip Morris, who admitted that when he began at Philip Morris in 1972, he already believed smoking to be a cause of disease.

Yet Defendants' executives and lawyers, as well as outside lawyers representing the companies, also recognized that any public disclosure or acknowledgment of this internal understanding that cigarettes cause disease would jeopardize their unified public relations position, would threaten industry profits, and would expose not just individual companies, but the entire industry, to legal liability and product regulation. Thus, numerous exhibits discuss and explain a particular Defendant's conduct by overt references to what is good for the "industry" as a whole, and the need to maintain "industry cooperation" or "coordination."

The starting point for evaluating whether Defendants' public statements on the health effects of smoking were fraudulent is the statements themselves, and what Defendants intended the public to take away from those statements. It is clear that the actual public statements issued by organizations like TIRC/CTR, the Tobacco Institute, and Cigarette Company Defendants

themselves, were flatly inconsistent with Defendants' actual understanding of the causal link between smoking and disease. For example, when Defendants assured the public through their "Frank Statement" that "there is **no proof** that cigarette smoking is one of the causes [of cancer]" (emphasis added), citing approvingly to unnamed "authorities," that was not true at the time, and Defendants knew it. Defendants' internal documents acknowledge that their public denial that smoking cigarettes causes disease both was contrary to the overwhelming medical and scientific consensus – established through extensive epidemiological and other scientific investigation by the early 1950s – and was intended to convince smokers and potential smokers that there remained genuine scientific "controversy" about whether smoking caused disease. Indeed, some internal documents state explicitly that Defendants' public statements were false, contrary to the overwhelming weight of scientific evidence, and not scientifically defensible.

In short, the evidence before the Court demonstrates that Defendants' public statements denying that smoking causes adverse health effects were knowingly false, deceptive, misleading, or otherwise fraudulent when made.

The Agreement Not to Compete on Health Claims or to Perform Certain Biological Research

Defendants' joint commitment to publicly deny that any marketed cigarettes were a proven cause of disease had profound effects on all aspects of their business, including their marketing and research activities. For example, documentary evidence as selected and explained at trial by Dr. Jeffrey Harris, an economist from M.I.T., proves that Defendants recognized that there was a substantial market for a cigarette that could be marketed as potentially less hazardous, but that they collectively agreed not to do anything in the marketing and development of cigarettes that would jeopardize the public relations position at the core of the scheme to defraud: the denial that any commercially sold cigarettes were a proven cause of disease. In his

trial testimony, Dr. Farone confirmed that he personally learned of these agreed-upon limitations on marketing and research conduct while at Philip Morris, and that the agreement imposed actual restrictions on the type of research Philip Morris would conduct on cigarettes in their United States' laboratories. And Dr. Harris's testimony explained the basis for his conclusion that Defendants' behavior in this area has evidenced overt economic collusion among Defendants rather than vigorous competition.

Defendants made public statements proclaiming their commitment – and ability – to develop potentially less hazardous cigarettes, but always with the caveat that such actions were unnecessary unless and until cigarettes were proven to cause disease. For example:

- In 1964, Bowman Gray, Chairman of the Board of R.J. Reynolds, stated publicly on behalf of R.J. Reynolds, Philip Morris, Brown & Williamson, Lorillard, Liggett, and American, that "[i]f it is proven that cigarettes are harmful, we want to do something about it regardless of what somebody else tells us to do. And we would do our level best. This is just being human."

- In the January 24, 1972 issue of the *Wall Street Journal*, Philip Morris Senior Vice President James Bowling declared that "[i]f our product is harmful . . . we'll stop making it. We now know enough that we can take anything out of our product, but we don't know what ingredients to take out." Bowling further stated that "[w]e don't know if smoking is harmful to health, and we think somebody ought to find out."

- In June 1978, a Tobacco Institute Vice President, in the magazine *Business Horizons*, reflected the industry's public stance that cigarettes need not be made safer because they were already safe: "A question often asked of the tobacco industry is whether researchers are developing a 'safe' cigarette. . . . The tobacco industry is convinced that no cigarette has been proved unsafe. Therefore, they regard any suggestion of a 'safe' or 'safer' cigarette as tortured logic."

As explained by Dr. Farone and supported by documentary evidence going back to the Plaza Hotel meetings in December 1953, this restriction on their business activity had two related components. First, Defendants agreed not to compete on smoking and health issues in the

marketing of cigarettes, because any suggestion that one brand was less harmful than another begged the implicit recognition that others were more hazardous – an implication that contradicted Defendants' public stance that no cigarettes were unsafe.

Accordingly, when a Defendant designed a cigarette – or developed a cigarette component – intended to potentially reduce the delivery of harmful smoke constituents to the smoker, the Defendant intentionally chose not to provide such information to the consumer, even if they believed it to be truthful scientific information. As an RJR lawyer told officials at the Food and Drug Administration and other federal health agencies in 1987, when discussing the "Premier" cigarette that RJR believed to be less hazardous, Reynolds would not make health-related marketing claims about Premier because the tobacco industry maintained that "conventional cigarettes are not unsafe, and that it would never reverse this position." Promoting one cigarette as "safer" than others "would be an indictment of the tobacco industry and its long standing position that conventional cigarettes are not unsafe."

In another instance, Defendant Liggett spent twelve years and $15 million developing a cigarette – the XA – that its research showed to be significantly less carcinogenic than its conventional cigarettes. However, Liggett killed the entire project before marketing the cigarette to consumers after B&W threatened Liggett's "very existence" if it marketed the cigarette. B&W also threatened to freeze Liggett out of joint defense agreements and exclude Liggett from the Tobacco Institute. Delivered through B&W's representative on the Tobacco Institute's Committee of Counsel, the threat was based on B&W's view that selling XA would be an admission against the interest of all Cigarette Company Defendants.

The second part of this agreement, the so-called "Gentleman's Agreement," was a joint commitment not to perform certain types of biological tests using commercially sold cigarettes in

their domestic research facilities. This research restriction was intended to prevent Defendants from generating internal evidence that could, if ever disclosed, suggest that the companies believed there was any need to examine whether a causative link existed between smoking and disease, let alone generate scientific information that confirmed such a link. While Defendants did undertake product development research in their labs, the evidence shows it was of a defensive nature, to be prepared should the agreement not to compete break down.

At trial, Defendants proffered an expert, Dr. Langenfeld, to suggest another reason for Defendants' failure to compete in this area – the threat of FTC regulation or enforcement actions. However, this expert did not look at Defendants' internal documents, and thus was unable to opine credibly about Defendants' state of mind. In fact, as Dr. Harris and Dr. Farone explained, supported by internal contemporaneous documents, it was the joint commitment to the fraud – not the FTC – that motivated Defendants' actions.

Secondhand Smoke

Evidence indicting passive smoking (also called secondhand smoke, environmental tobacco smoke, or "ETS") as a health hazard grew in the 1970s and 1980s. In 1986, the volume and strength of that scientific evidence prompted the Surgeon General, the National Research Council, and the International Agency for Research on Cancer to conclude that passive smoking causes lung cancer. In addition, passive exposure of infants and children adversely affects respiratory health, increasing the risk for severe lower respiratory infections, middle ear disease (otitis media), chronic respiratory symptoms, asthma, and sudden infant death syndrome, as well as reducing the rate of lung function growth during childhood. At trial, the testimony of United States' experts Dr. Jonathan Samet, who has contributed to several of the major consensus reports by public health bodies evaluating the evidence on secondhand smoke, and Dr. David Burns,

who has been a senior scientific editors of multiple Surgeon General's Reports, was consistent with this scientific consensus.

The consensus scientific conclusion that secondhand smoke causes disease and other adverse health effects rests on several grounds, including knowledge of the health risks of active smoking, the carcinogenicity and toxicity of components of mainstream and sidestream smoke, the evidence of the absorption by nonsmokers of disease-causing components of tobacco smoke, the absence of a threshold level for carcinogenic effects, and epidemiological studies that have assessed the association of passive exposure with disease outcomes.

During the 1970s, as the scientific evidence suggesting that passive exposure was hazardous began to grow and public health authorities began to warn of a potential health risks, Defendants recognized a major threat to their profits through smoking restrictions a general decrease in the social acceptability of smoking. In 1974, Tobacco Institute Chairman Horace Kornegay warned that smoking restrictions not only impacted sales but also "could lead to the virtual elimination of cigarette smoking." Reynolds CEO Ed Horrigan wrote Lorillard executives in 1982: "We all know that probably the biggest threat to our industry is the issue of passive smoking." A 1986 BATCo document recorded: "The world tobacco industry sees the ETS issue as the most serious threat to our whole business." Philip Morris Companies Vice Chairman Bill Murray was advised in 1987: "The situation can't get any worse. Sales are down, can't be attributed to taxes or price increases. ETS is the link between smokers and non-smokers and is, thus, the anti's silver bullet."

In response, Defendants crafted and implemented a broad-based "open question" strategy that echoed the fraudulent approach Defendants had taken with respect to what referred to as the "primary issue" – the adverse health effects for smokers themselves. The heart of Defendants'

strategy lay in their sustained, coordinated efforts to attack and distort the evidence indicting passive smoking as a health hazard. Defendants' objective was to deceive the public, government officials, and scientists into believing that an independent "controversy" existed as to the health risks of passive smoking.

As the testimony and documentary evidence established at trial, Defendants' initiatives went far beyond making false and deceptive public statements denying and distorting ETS's known health risks. Defendants have covertly funded favorable research through front organizations, secretly recruiting and training a network of consultants to parrot the industry's position worldwide. While John Rupp, a longtime industry counsel personally involved in these efforts, attempted to portray these activities in a benign light, his testimony was directly undermined and impeached by the contemporaneous documentary evidence. The Court also heard, during the examination of Reynolds scientist Michael Ogden, how Defendants' scientists and lawyers ghostwrote scientific articles published under the names of consultants, and directed "symposia" to get the consultants' industry-favorable papers and opinions into the scientific literature. Similarly, the trial testimony of Rupp and Reynolds' lawyer Mary Ward, and prior designations of Shook Hardy & Bacon's Donald Hoel, revealed the intense management of ETS scientific projects by lawyers – including these three witnesses – to maximize the use of the data and conclusions they generated. All of these initiatives were carried out as Defendants, including Tobacco Institute spokesperson Brennan Dawson, told the public that they would seek the truth and conduct objective research, and in spite of internal research confirming that secondhand smoke was a health hazard.

As part of Defendant's strategy, Philip Morris, Lorillard, and Reynolds created the Center for Indoor Air Research ("CIAR") in 1988. B&W formally joined CIAR in 1995, and BATCo

participated in the funding and management of certain CIAR "sponsored" projects. In the words of Philip Morris's Tom Osdene, CIAR's main purpose was intended to provide the industry with "ammunition" on the ETS "battlefield." CIAR took over the research responsibilities of the industry committee that had previously operated under the direction of Defendants' law firms Shook, Hardy & Bacon and Covington & Burling. Through the trial testimony of Max Eisenberg, who was hired to administer CIAR, the United States established that Defendants controlled CIAR and sought to conceal that control and instead portray CIAR as an "independent" research funding organization. BATCO's Chris Proctor viewed CIAR as a "buffer" that would give the industry's ETS projects legitimacy while still allowing "strong control of the projects." CIAR counsel John Rupp wrote in March 1993: "In sum, while one might wish it otherwise, the value of CIAR depends on the industry's playing an active role (1) in identifying research projects likely to be of value and (2) working to make sure that the findings of funded research are brought to the attention of decision makers in an appropriate and timely manner."

CIAR funded over $21 million in "Applied Projects" around the world to undermine the scientific consensus that ETS was a health hazard, while Defendants hid their management of scientific projects behind a facade of scientific independence. The CIAR Board of Directors, composed of executives and top scientists from the cigarette manufacturer members, had exclusive funding authority. Applied Projects were funded with no review by the organization's Scientific Advisory Board for scientific merit. Once funded, Applied Projects were closely managed by Board members and industry attorneys. The data and conclusions from the Applied Studies were then used by Defendants with the media, public health authorities, and government officials to dispute the known health risks of ETS. Thus, CIAR allowed Defendants a means to

create the perception of an independent "scientific controversy" surrounding the health effects of ETS exposure, for the purpose of opposing smoking restrictions and make smoking more publicly acceptable.

Similarly, as acknowledged by BATCo's Sharon Blackie at trial, Defendants developed an ETS Consultancy Program as an extension and amplification of domestic initiatives by industry law firms to counter ever-mounting evidence of secondhand smoke's harms. Through this global program, Defendants worked to covertly identify, "educate," and pay scientists in every world market to make public statements, author scientific papers, pen letters to scientific journals, and plan and attend scientific conferences. Defendants' explicit intent was to influence three particular audiences: "the scientific community, regulatory authorities, and the general public." BATCo's Blackie wrote: "If independent scientists back up our position, it becomes more credible, not only to the general public and the media, but to politicians and other decision-makers." For this reason, Defendants created a facade of independence by making contact with consultants only through the lawyers, having the consultants bill the law firms instead of the companies for their work, founding new organizations that consultants could point to publicly as their source, and omitting attribution to the companies in their public statements. Like CIAR, the overarching goal of the consultancy program was to create the false impression of a legitimate scientific controversy in order to forestall smoking restrictions and make smoking more publicly acceptable. B&W attorney Kendrick Wells called the consultancy program a "public relations program, not a scientific research operation." And, in the words of John Rupp, using the law firm "buffer" had the added benefit of protecting documents behind privilege.

Defendants' conduct with respect to passive smoking continues to this day. Currently, no Defendant publicly accepts the overwhelming scientific consensus that passive exposure to

cigarette smoke causes disease and other adverse health effects.

Addiction and the Manipulation of Nicotine Levels in Cigarettes

Cigarette smoking is an addictive behavior, a drug dependency characterized by compulsive use, psychoactive effects, and drug-reinforced behavior. Underlying the smoking behavior and its remarkable intractability to cessation is the drug nicotine. Nicotine is the primary component of cigarettes that creates and sustains addiction to cigarettes. This was established through the testimony of the United States' addiction experts – Dr. Neal Benowitz and Dr. Jack Henningfield, among the world's leading experts in their particular fields – and bolstered by the admissions of Defendants' sole nicotine expert, Dr. Peter Rowell.

At trial, Defendants offered little to no evidence to counter the documentary evidence and witness testimony demonstrating that the specific public statements that Defendants have made on the subject of addiction were intentionally false, misleading, or otherwise fraudulent when made.

Defendants have studied nicotine and its effects intensively since the 1950s. The trial record is replete with documents describing Defendants' examination and knowledge of nicotine's pharmacological effects on smokers, whether they characterized that effect as "addictive," "dependence-producing" or "habituating." The testimony of numerous witnesses, including former Philip Morris scientists Drs. Farone, Victor DeNoble, and Paul Mele, former Brown & Williamson Vice President Jeffrey Wigand, and Dr. Henningfield, demonstrates unequivocally that this focus on nicotine stemmed from Defendants' understanding of the central role nicotine plays in keeping smokers smoking, and thus its critical importance to the continued profitability, and very existence, of their industry. Indeed, witness testimony and trial exhibits show that Defendants purposefully designed and sold products that delivered a

pharmacologically effective dose of nicotine in order to create and sustain nicotine addiction in smokers. For example, an internal document drafted by high-level Philip Morris scientist Helmut Wakeham in 1969 recognized:

> We share the conviction with others that it is the pharmacological effect of inhaled smoke which mediates the smoking habit. . . .
>
> We have then as our first premise, that the primary motivation for smoking is to obtain the pharmacological effect of nicotine.
>
> In the past we at R & D have said that we're not in the cigarette business, we're in the smoke business. It might be more pointed to observe that the cigarette is the vehicle of smoke, smoke is the vehicle of nicotine, and nicotine is the agent of a pleasurable body response.
>
> This primary incentive to smoking gets obscured by the overlay secondary incentives, which have been superimposed upon the habit. Psychoanalysts have speculated about the importance of the sucking behavior, describing it as oral regression. Psychologists have proposed that the smoker is projecting and ego-image with puffing and his halo of smoke. One frequently hears "I have to have something to do with my hands" as a reason. All are perhaps operative motives, but we hold that none are adequate to sustain the habit in the absence of nicotine.
>
> We are not suggesting that the effect of nicotine is responsible for the initiation of the habit. To the contrary. The first cigarette is a noxious experience to the noviate. To account for the fact that the beginning smoker will tolerate the unpleasantness, we must invoke a psychosocial motive. Smoking for the beginner is a symbolic act. The smoker is telling the world, "This is the kind of person I am. . . ."
>
> As the force from the psychosocial symbolism subsides, the pharmacological effect takes over to sustain the habit . . . .

Similarly, R. J. Reynolds researcher Claude Teague acknowledged in an internal 1972 report, "Thus a tobacco product is, in essence, a vehicle for delivery of nicotine, designed to deliver the nicotine in a generally acceptable and attractive form. Our industry is then based upon design, manufacture and sale of attractive dosage forms of nicotine."

In March 1982, the National Institute on Drug Abuse noted that "five major national and

international reviews of this question, which have involved the most knowledgeable and experienced authorities in the area, have all reached the same conclusion: cigarette smoking is an addiction." Dr. Henningfield explained that in 1988, the Surgeon General's Report on "The Health Consequences of Smoking: Nicotine Addiction" affirmed this existing scientific and medical consensus. Dr. Rowell, Defendants' expert, agreed with the definition of "drug dependence" in that report, and agreed that nicotine is a drug of dependence.

Yet beginning in 1982, Defendants made numerous public statements that:

- Smoking cigarettes is not addictive because some smokers can, and have, quit smoking on their own;
- Smoking cigarettes is not addictive because it does not lead to physical "dependence";
- Smoking cigarettes is not addictive because it does not lead to "intoxication"; and
- Smoking cigarettes is not addictive because cigarettes are not like other addictive drugs, but rather smoking cigarettes is merely a "habit" like playing tennis, jogging, eating candy or listening to rock music.

At trial, not a single Defense witness – including Brennan Dawson, a former Tobacco Institute spokesperson who made many such statements on Defendants' behalf, and Dr. Rowell, Defendants' expert on nicotine – could provide any support for the proposition that any drug-taking behavior, including smoking, is not addictive if users can quit. Similarly, Dr. Rowell also readily testified that it is wrong as a matter of science to say that a drug is not addictive because it does not cause intoxication or physical dependence (as marked by withdrawal), and agreed that some addictive drugs, like cocaine and metamphetamine, have withdrawal of a severity comparable to nicotine; moreover, Dr. Rowell testified that at the time Defendants made these

statements, there was evidence that smoking cigarettes does in fact cause physical dependence. Dr. Rowell also agreed with the United States' experts that, as an addiction, smoking cigarettes involves a drug and is **not** comparable to non-drug "habits" like nailbiting, jogging, or playing tennis; and that nicotine the drug plays an essential role in cigarette use. Under questioning from his own counsel, Dr. Rowell testified to similarities between cigarette use and "hard" drug use, and he stated unambiguously, "there is clearly addiction for cigarette smoking."

To this day, Defendant cigarette manufacturers omit material information by failing to inform smokers about the addictiveness of the drug nicotine in cigarettes. At trial, Defendants' witnesses – including Philip Morris's current General Counsel and Senior Vice President, Denise Keane – admitted that the fact that nicotine is a drug and primarily responsible for addiction is important, material information for a smoker. Yet no Defendant has publicly admitted that nicotine delivered by cigarettes is addictive. Defendants' current public statements on addiction – including statements on their respective corporate Internet websites that acknowledge, to varying degrees, that smoking is addictive – avoid any mention of nicotine, let alone its role in addiction. Dr. Henningfield and Dr. Michael Eriksen, former director of the CDC's Office on Smoking and Health, both testified that Defendants' current statements about addiction omit material information by failing to inform smokers that smoking is addictive because cigarettes deliver the addictive drug nicotine.

Defendants have intentionally maintained and coordinated their fraudulent position on addiction and nicotine as an important part of their overall efforts to influence public opinion and persuade people that smoking was not dangerous. In this way, Defendants have kept more smokers smoking, recruited more new smokers, and maintained or increased profits. Additionally, Defendants have sought to discredit proof of addiction in order to preserve their

"smoking is a free choice" arguments in smoking and health litigation.

As part of Defendants' focused study of nicotine and its effects on the smoker, Defendants dedicated substantial resources to devise techniques to modify and manipulate the amount of nicotine that their products deliver. Dr. Farone, testifying from his personal experience and as an undisputed expert in cigarette design, and Dr. Henningfield, based on extensive review of Defendants' documents, testified that Defendants have studied extensively how every characteristic of every component of cigarettes – including the tobacco blend, the paper, the filter, and the manufacturing process – impacts nicotine delivery, and have utilized that understanding in designing their cigarettes on the market. In light of Defendants' recognition that "no one has ever become a cigarette smoker by smoking cigarettes without nicotine," Cigarette Company Defendants have designed their cigarettes with a central overriding objective – to ensure that smokers can obtain enough nicotine to create and sustain addiction.

As a necessary corollary to Defendants' fraudulent denial that smoking and nicotine are addictive, Defendants have publicly and fraudulently denied that they manipulate nicotine. The evidence shows that Defendants' particular statements denying manipulation of nicotine have been intentionally deceptive, misleading, or otherwise fraudulent when made. Through these and other false statements, Defendants have furthered their common efforts to deceive the public and carry out their fraudulent scheme.

Light and Low Tar Cigarettes

The Cigarette Company Defendants have designed and marketed so-called "low tar/low nicotine" in a manner intentionally designed to serve and further the fraudulent objectives of the Enterprise by keeping people smoking. As explained by several of the United States' experts, particularly Dr. David Burns, Dr. Benowitz, Dr. Henningfield, and Dr. Farone, and supported by

a extensive documentary record, Defendants developed cigarettes that would register lower yields on the standardized machine-smoking test whose results were reported by the FTC beginning in 1967 ("FTC test"), but that allow human smokers to obtain higher doses of nicotine needed to sustain their addiction. Defendants engaged in massive, sustained, and highly sophisticated marketing and promotional campaigns intended to portray these "health reassurance" brands – cigarettes with low FTC tar and nicotine ratings – as less harmful than regular cigarettes, and thus an acceptable alternative to quitting, while at the same time carefully avoiding any admission that any negative health impacts from smoking had been proven. However, Defendants knew that because the cigarette design itself influenced how people would smoke, their "low tar" or "light" cigarettes were unlikely to present any meaningful harm reduction over cigarettes with higher FTC tar yields.

As awareness and concern about the adverse health risks associated with smoking began to grow in the early 1950s, Defendants began developing cigarettes they internally referred to as "health reassurance" brands in an effort to keep smokers in the market. Initially, Defendants explicitly marketed and promoted these brands as safer as the result of an added filter which purportedly protected smokers from the harmful tar in cigarette smoke. Having established the link in the minds of consumers between low tar/filtration and reduced harm through use of explicit – but baseless – health claims, Defendants' later advertisements contained implied health claims that built on their earlier advertisements, but avoided alerting consumers explicitly to the adverse health effects of smoking. As Dr. Robert Dolan testified, for several decades Defendants have marketed and promoted their so-called "low tar/nicotine" cigarettes using brand descriptors like "Light," "Ultralight," "Mild" and "Medium" and claims of "low tar and nicotine" to suggest to consumers that these products are safer than regular, higher tar cigarettes.

Defendants made, and continue to make, implied health benefit claims regarding filtered and low tar cigarettes when they either lacked evidence to substantiate the claims or knew that they were false. Internal industry research documents show that Defendants never had adequate support for their claims of reduced health risk from low tar cigarettes, but rather confirm Defendants' awareness by the late 1960s–early 1970s that low tar cigarettes were unlikely to provide any health benefit to smokers compared to full flavor cigarettes. Drs. Samet, Benowitz, and Burns testified that it was not until 2001 that the public health and scientific communities generally recognized what Defendants have long known internally: there is no meaningful reduction in disease risk in smoking low tar cigarettes as opposed to smoking regular cigarettes.

Defendants' longtime internal understanding stemmed from their knowledge that their low tar cigarettes, as designed, do not actually deliver to human smokers the low FTC test tar and nicotine yields reported by the FTC and exploited by Defendants in their product labeling and marketing. Defendants have long known that to obtain an amount of nicotine sufficient to satisfy their addiction, smokers of low tar cigarettes modify their smoking behavior, or "compensate," for the reduced yields by inhaling smoke more deeply, holding smoke in their lungs longer, covering cigarette ventilation holes with fingers or lips, and/or smoking more cigarettes. As a result of this nicotine-driven smoker behavior, smokers of light cigarettes concurrently boost their intake of tar, thus negating what Defendants have long promoted as a primary health-related benefit of light cigarettes: lower tar intake.

As Dr. Farone, Dr. Burns, Dr. Henningfield, and Dr. Wigand testified, Defendants have affirmatively exploited their understanding of nicotine-driven compensation by deliberately designing "low tar" cigarettes that facilitate a smoker's ability to compensate to ensure adequate delivery of nicotine to create and sustain addiction. Even as they did this, and despite having

evidence that low tar cigarettes provide no health benefits and may in fact deter people from quitting, Defendants have withheld and suppressed such evidence from public dissemination. Indeed, in the late 1980s Philip Morris even referred internally to ex-smokers and potential quitters as a "textbook marketing opportunity."

Extensive evidence shows that Defendants used terms such as "Light" and "Low Tar" intentionally to convey their false "health reassurance" message rather than just a "taste" message, because their research showed that people smoked low tar products despite, not because of, the taste. Accordingly, Defendants' marketing themes repeatedly tried to convince smokers that their brands could provide the main claimed benefit of light cigarettes – increased safety – without sacrificing "taste." Further, Defendants used both verbal and non-verbal communications to convey their health reassurance message, employing colors and imagery that their research indicated people associated with healthier products. And Defendants conducted and sponsored market research that showed, again and again, that their use of descriptors and other marketing approaches has worked – substantial percentages of smokers interpreted Defendants' brand descriptors as communicating messages of relative safety. Dr. Neil Weinstein presented expert testimony on this topic, testifying based on his own research and the relevant published scientific literature that a significant percentage of smokers believe that "low tar" cigarettes are safer than full tar cigarettes.

Defendants' campaign of deception has impacted Americans' decisions to smoke. As a result of Defendants' conduct, health concerned smokers have switched from regular cigarettes to those with lower reported tar yields rather than quitting smoking altogether. Smokers of "light" and "ultra light" cigarettes are less likely to quit smoking than are smokers of regular cigarettes. Additionally, as a result of Defendants' fraudulent marketing and deceptive design of "light" and

"ultra light" cigarettes, many smokers of these cigarettes consume more cigarettes than do smokers of regular cigarettes. Defendants' conduct relating to low tar cigarettes furthers the aims of the Enterprise and the scheme to defraud by providing a false sense of reassurance to smokers that weakens their resolve to quit smoking, and serves to draw ex-smokers back into the market. In short, Defendants' concerted campaign of deception regarding low tar cigarettes has been a calculated – and extremely successful – scheme to increase their profits at the expense of the health of the American public.

Defendants claim that they have "come clean" on compensation and "light" cigarettes in the last few years, because some Defendants have included a line in advertisements telling smokers that the amount of tar and nicotine they receive depends upon how they smoke the cigarette, and Defendants' Internet websites contain certain information about "light" cigarettes and brand descriptors. These tepid disclosures fail to meaningfully inform consumers of what Defendants themselves have long known, and exploited: that as a result of smokers' addiction to **nicotine**, and the compensatory smoking behaviors undertaken to satisfy the need for nicotine, smokers generally receive doses that far exceed the FTC ratings.

Youth Marketing

Cigarette smoking, particularly that begun by young people, continues to be the leading cause of preventable disease and premature mortality in the United States. Of children and adolescents who are regular smokers, one out of three will die of smoking-related disease. As part of the scheme to defraud, Defendants have intentionally marketed cigarettes to youth while falsely denying that they have done and continue to do so. Defendants' own documents in the trial record demonstrate that Defendants have long recognized that the continued profitability of the industry depends upon new smokers entering the "franchise" as current smokers die from

smoking-related diseases or quit. Defendants have similarly known that an overwhelming majority of regular smokers begin smoking before age eighteen and remain loyal to their initial brand choice of cigarettes.

In 1964, under public pressure for their marketing practices, Defendants adopted a voluntary advertising code, and publicly promised that under the advertising code they would not market to young people. Just as Defendants publicly promoted their joint support for allegedly "independent" smoking and health research to show that they were concerned about the welfare of smokers and to support their (false) claim that they were not selling a product they knew to be harmful, so Defendants touted the voluntary advertising code to reassure the public – also falsely – that they were not corporate exploiters preying on America's youth for profit.

After establishing the voluntary advertising code as a collective umbrella to defuse public concern about their marketing activities, Defendants continued unabated their efforts to capture as much of the youth market as possible, effectively ignoring the code's provisions and eliminating its enforcement mechanisms entirely within a few years of the code's adoption.

And just as Defendants enlisted the Tobacco Institute to be their lead public voice denying that cigarettes were harmful and proclaiming their commitment to "independent" research, they enlisted the Tobacco Institute to tell the public that they did not market to youth, that their marketing was only aimed at adult smokers, and that their marketing had no impact on youth smoking. Individual Defendants made these public statements as well. These public statements were false and misleading. Dr. Robert Dolan, a marketing expert and Dean of the University of Michigan Business School, testified after reviewing Defendants' internal marketing plans and documents that, contrary to Defendants' public statements, the Defendant Cigarette Companies' marketing practices were intended to impact the number of people who began

smoking (as well as to decrease the likelihood that people would quit smoking and to increase consumption).

The Court received evidence from many sources that established that Defendants have long known that the majority of smokers begin smoking as youth and develop brand loyalty as youths. The evidence further proved that cigarette marketing particularly attracts young people, and that persons who begin smoking when they are teenagers are very likely to become addicted and remain lifetime smokers. For example:

- A March 31, 1981 report conducted by the Philip Morris Research Center entitled "Young Smokers Prevalence, Trends, Implications, and Related Demographic Trends" stated that "Today's teenager is tomorrow's potential regular customer, and the overwhelming majority of smokers first begin to smoke while still in their teens . . . it is during the teenage years that the initial brand choice is made."

- A September 22, 1989 report prepared for Philip Morris by its main advertising agency, Leo Burnett U.S.A., described Philip Morris's marketing's target audience as a "moving target in transition from adolescence to young adulthood."

- An August 30, 1978 Lorillard memorandum stated: "The success of NEWPORT has been fantastic during the past few years. . . . [T]he base of our business is the high school student. Newport in the 1970s is turning into the Marlboro of the 1960s and 1970s."

- A July 9, 1984 report circulated to the heads of B&W's Marketing and Research Development departments stated "[o]ur future business depends on the size of [the] starter population."

- In a November 26, 1974 memorandum entitled "R.J. Reynolds Tobacco Company Domestic Operating Goals, R.J. Reynolds stated its "[p]rimary goal in 1975 and ensuing years is to reestablish R.J. Reynolds's share of growth in the domestic cigarette industry," by targeting the "14-24 age group" who, "[a]s they mature, will account for key share of cigarette volume for next 25 years. Winston has 14% of this franchise, while Marlboro has 33%. - SALEM has 9%--Kool has 17%." The memorandum indicated that R.J. Reynolds "will direct advertising appeal to this young adult group without alienating the brand's current franchise."

- A September 27, 1982 memorandum written by Diane Burrows, R.J.

> Reynolds Market Research Department, and circulated to L.W. Hall, Jr. Vice President of R.J. Reynolds Marketing Department, stated: "The loss of younger adult males and teenagers is more important to the long term, drying up the supply of new smokers to replace the old. This is not a fixed loss to the industry: its importance increases with time. In ten years, increased rate per day would have been expected to raise this group's consumption by more than 50%."

Defendants targeted young people with their marketing efforts and allocated substantial resources researching the habits and preferences of the youth market to inform that marketing. For instance, a 1976 Brown & Williamson document containing information drawn from a study of smokers stated that "[t]he 16-25 age group has consistently accounted for the highest level of starters." In 1980, the R.J. Reynolds Marketing Development Department issued a series of internal reports entitled "Teenage Smokers (14-17) and New Adult Smokers and Quitters" which surveyed the smoking habits of fourteen to seventeen year olds.

Knowing that advertising and promotion stimulated the demand for cigarettes, the Cigarette Company Defendants used their knowledge of young people's vulnerabilities gained in this research in order to create marketing campaigns (including advertising and promotion) that would and did appeal to youth, in order to foster youth smoking initiation and ensure that young smokers would choose their brands. As presented in the extensive testimony of United States' experts Dr. Anthony Biglan, an expert in adolescent psychology at the Oregon Research Institute and a preeminent prevention science expert, and Dr. Dean Krugman, a mass communication and marketing communications expert from the University of Georgia, and through the cross-examination of Defendants' witnesses, including Lorillard marketing executive Victor Lindsley and former B&W CEO Susan Ivey, Defendants designed marketing campaigns and promotional activities that appeal to the psychological needs of adolescents. These campaigns have intentionally exploited adolescents' vulnerability to imagery utilizing themes that are, to this day,

the same as they have been for decades: masculinity, independence, attractiveness, adventurousness, glamour, athleticism, social inclusion, sexual attractiveness, thinness, popularity, rebelliousness, and being "cool." Dr. Paul Slovic, one of the world's leading experts on risk perception and decision making, explained that young people's decision-making is driven by emotion rather than reason, and that Defendants' communications downplayed the perceived health risks associated with smoking; and Dr. Slovic and Dr. Neil Weinstein, another leading researcher in the field of risk perception, testified that people – and smokers in particular – underestimate the adverse health effects they are likely to personally face from smoking. The testimony of Defendants' expert on this topic, Kip Viscusi, was less credible than that of Drs. Slovic and Weinstein because Viscusi's opinions rested on the results of three questions asked in four surveys, three of which were funded by the tobacco industry and conducted for use in litigation, and the fourth of which was a small survey conducted by Viscusi after he began his long term consulting affiliation with Defendants and their lawyers.

At trial, the United States called Dr. Frank Chaloupka, a health economist who is a preeminent expert on the relationship between cigarette price and smoking initiation and continuation. Dr. Chaloupka offered well supported testimony, not disputed by any of Defendants' own expert witnesses, that teenage smoking behavior is two to three times more sensitive to price than smoking among adults and that Defendants know that smoking behavior among teenagers is particularly price sensitive. Dr. Chaloupka further explained that teenage smoking behavior is specifically sensitive to changes in the price of Marlboro, Newport and Camel, that Defendants understand the impact of changes in cigarette prices of these brands on youth smoking, and that Defendants use their knowledge in developing and implementing their price-related marketing strategies. Drs. Chaloupka, Dolan, Krugman, and Biglan testified that

Cigarette Company Defendants continue to advertise in youth-oriented publications; employ imagery and messages that they know are appealing to teenagers; increasingly concentrate their marketing in places where they know youths will frequent such as convenience stores; engage in strategic pricing to attract youths; increase their marketing at point-of-sale locations with promotions, self-service displays, and other materials; sponsor sporting and entertainment events, many of which are televised or otherwise broadcast and draw large youth audiences; and engage in a host of other activities which are designed to attract youth to begin and continue smoking. Defendants continue to spend more than 12 billion dollars a year on cigarette brand marketing. As Dr. Krugman concluded, "the tobacco companies' cigarette advertising and promotion expenditures, historically and currently, remain high on an absolute basis and relative to other industries."

Notwithstanding the magnitude of Defendants' efforts to appeal to the youth market, Defendants even throughout this trial publicly deny their efforts to appeal to the youth market. The Court also saw extensive evidence that Defendants continue to falsely claim that their cigarette marketing does not affect youth smoking initiation and continuation. Yet, independent scientific studies published in reputable scientific journals and in official government reports, have confirmed that Defendants' marketing contributes to the primary demand for and continuing use of cigarettes. Defendants' internal documents in the trial record indicate that their understanding of marketing's impact underlay and has informed Defendants's marketing strategies. Over the past ten years, there have been a number of comprehensive reviews of the scientific evidence concerning the effects of cigarette marketing, including advertising and promotion, on smoking decisions by young people. As the Court heard from Dr. Eriksen, a foremost expert in public health, the weight of all available evidence, including survey data,

scientific studies and experiments, behavioral studies, and econometric studies, supports the conclusion that cigarette marketing is a causal factor that substantially contributes to the decision of young people to begin smoking and the decision to continue smoking.

Concealment and Suppression of Information

From at least 1954 to the present, Defendants engaged in parallel efforts to destroy and conceal documents and information in furtherance of the Enterprise's goals of (1) preventing the public from learning the truth about smoking's adverse impact on health; (2) preventing the public from learning the truth about the addictiveness of nicotine; (3) avoiding or, at a minimum, limiting liability for smoking and health related claims in litigation; and (4) avoiding statutory and regulatory limitations on the cigarette industry, including limitations on advertising. These activities occurred despite the promises of Defendants that (a) they did not conceal, suppress or destroy evidence, and that (b) they shared with the American people all pertinent information regarding the true health effects of smoking, including research findings related to smoking and health.

Indeed, even in this case the Court has found certain Defendants to have flouted their document preservation obligations. For example, this Court found Philip Morris to have engaged in spoliation of evidence, because high-level scientists and executives failed to preserve emails in violation of the Court's document preservation order and Philip Morris's own document retention requirements.

Indeed, as recently as 1996, Martin Broughton, Chief Executive of BAT Industries, the then ultimate parent company of BATCo and Brown & Williamson, made a statement to the *Wall Street Journal* denying that BAT Industries and its subsidiaries had concealed research linking smoking and disease. Broughton stated: "We haven't concealed, we do not conceal and

we will never conceal. We have no internal research which proves that smoking causes lung cancer or other diseases or, indeed, that smoking is addictive." However, at trial, the United States introduced testimonial and documentary evidence, such as through Dr. Wigand, establishing that BAT and its subsidiaries, including BATCo and (until very recently) B&W, have undertaken extensive, systematic efforts intended to conceal potentially damaging documents and information from disclosure or discovery by the public and litigation adversaries.

The Court also received additional evidence of Philip Morris's suppression-related conduct, ranging from directives to limit direct contact between Philip Morris and its overseas labs doing sensitive smoking and health research, to repeated steps to successfully prevent publication of research conducted by Drs. DeNoble and Mele in the early 1980s that confirmed intravenous self-administration of nicotine by rats, a hallmark of addiction.

There Is a Reasonable Likelihood of Ongoing and Future Violations

The evidence presented in the United States' Post-Trial Findings of Fact compels the conclusion that, absent relief, there is a reasonable likelihood that Defendants will continue to engage in conduct unlawful under RICO. Defendants' unlawful conduct has not occurred in isolated events, but rather has been part of a far-reaching, decades-long coordinated and intentional scheme to defraud. Philip Morris, Reynolds, Lorillard, Liggett, and BATCo continue to exist and to manufacture and market cigarettes. Contrary to Defendants' claims at trial, Defendants have not fundamentally changed in recent years; Philip Morris Companies, Philip Morris, Reynolds, and Lorillard continue to be led by people who have worked at the companies for an average of 24, 15-20, 24, and 22 years, respectively, and some of the senior leadership of these Defendants have been personally involved in Defendants' fraud.

There is no evidence in the record that any Defendant has affirmatively withdrawn from

the RICO Enterprise or conspiracy. Moreover, while there is less evidence proving explicit coordination among Defendants currently and in the recent past – because Defendants have made concerted efforts to limit written documentation of certain matters – there is still considerable evidence demonstrating that Defendants continue to approach certain smoking and health issues in ways that are fully consistent with past approaches that evidence established was done in coordinated fashion.

As but a few examples, Defendants generally claim that they are aligned with the public health community on the issue of addiction, but to this day not a single Joint Defendant publicly recognizes a critical component of that public health consensus on addiction: smoking is a **drug** addiction primarily caused by nicotine; and not a single Defendant publicly agrees that nicotine delivered by cigarettes is addictive. In the area of cigarette marketing, Defendants continue to market certain cigarettes with brand descriptors like "light" and "low tar/low nicotine." Defendants know that a substantial percentage of smokers believe that "light" cigarettes are less harmful, because Defendants have spent decades fostering and encouraged that belief, even though Defendants themselves have long been aware that such cigarettes are not likely to be any less hazardous than their full tar counterparts.

Even on the issue of causation, no Defendant admitted directly that smoking causes disease until the punitive damage phase of the Engle case in 2000, well after this case was underway. On the stand in this case, Andrew Schindler, Reynolds's former CEO and current Chairman of its new parent Reynolds American, would not admit directly that smoking causes disease. Reynolds's current website continues to hedge on the same point, stating that smoking can only cause disease in some individuals "in combination with other factors."

In the area of ETS, even during the course of this litigation, Defendants have continued to

refuse to agree with the overwhelming medical and scientific consensus that secondhand smoke causes disease and other adverse health effects, and have continued to support research designed to undermine that conclusion.

And Defendants continue to market their cigarettes in ways they know and intend to appeal to adolescents and teenagers.

Remedies Sought by the United States Will Prevent and Restrain Future Unlawful Conduct by Defendants

In short, Defendants' scheme to defraud permeated and influenced all facets of Defendants' conduct – research, product development, advertising, marketing, legal, public relations, and communications – in a manner that has resulted in extraordinary profits for the past half-century, but has had devastating consequences for the public's health.

As the United States' Post-Tiral Findings of Fact demonstrate, the United States is entitled to the equitable relief sought under RICO. The United States has produced substantial evidence that the Defendants' scheme to defraud had damaging and wide-ranging implications, including influence on initiation and continued smoking for people of all ages. All of Defendants' sales of cigarettes to all consumers from 1954 to 2001 were inextricably intertwined with this massive scheme to defraud the public.

The equitable relief sought by the United States is necessary and appropriate to prevent and restrain Defendants from continuing to engage in conduct unlawful under RICO.[3] The evidence – particularly the testimony and documents introduced through Surgeon General Carmona, Dr. Jonathan Gruber, Dr. Timothy Wyant, Dr. Max Bazerman, Dr. Michael Eriksen,

[3] On July 18, 2005, the United States filed a petition for certiorari with the United States Supreme Court, seeking review and reversal of the D.C. Circuit's February 2005 decision on the availability of disgorgement under RICO's civil provisions, 18 U.S.C. § 1964.

Dr. Michael Fiore, Dr. Cheryl Healton, and Matthew Myers – supports the imposition of the following interdependent, integrated set of remedies as described more specifically in the body of the document: a comprehensive, well-promoted smoking cessation program funded but not controlled or administered by Defendants; a counter-marketing campaign funded but not controlled or administered by Defendants; a results-oriented Youth Smoking Reduction Remedy that establishes target youth smoking rates for Defendants to reach will therefore restrain Defendants from marketing in ways that appeal to youth; the requirement that Defendants issue corrective communications on smoking and health issues in the same fora they have made fraudulent public statements on such issues, with the content of such communications to be ordered or approved by the Court; disclosure of documents, disaggregated marketing data, and health and safety risks; independent review and oversight of Defendants' business practices through the use of Court-appointed monitors; prohibiting distortions and misrepresentations about smoking and health issues; restrictions on the use of brand descriptors; and restrictions on Defendants's ability to use youth-appealing techniques and imagery in marketing.

I

DEFENDANTS ESTABLISHED AN ENTERPRISE

A. Introduction

1. The United States has established by a preponderance of the evidence the existence of an "enterprise" as defined in 18 U.S.C. § 1961(4) and as alleged in the First Amended Complaint.

2. The members of the enterprise are Defendants – Philip Morris USA Inc. ("Philip Morris"), R.J. Reynolds Tobacco Company ("Reynolds" or "RJR"), Brown & Williamson Tobacco Corporation ("Brown & Williamson" or "B&W"), Lorillard Tobacco Company, Inc. ("Lorillard"), Liggett Group, Inc. ("Liggett"), American Tobacco Company ("American"), Altria Group, Inc. f/k/a Philip Morris Companies Inc. ("Philip Morris Companies"), British American Tobacco (Investments) Ltd. ("BATCo"), Council for Tobacco Research - U.S.A., Inc. ("CTR"), The Tobacco Institute, Inc. ("Tobacco Institute") – and their agents, employees, successors, and assigns along with other entities and individuals (the "Enterprise").

3. At all relevant times each Defendant has been a legal entity distinct from each other Defendant and from the Enterprise, which consists of a group of business entities, including Defendants, and individuals associated in fact. It is clear that the group of entities and individuals that constitutes the Enterprise is broader than each corporate Defendant that is a member of the Enterprise.

4. The Enterprise, including its leaders, members, and associates, constituted an association-in-fact enterprise, that is, a group of individuals and entities associated in fact. The Enterprise constituted an ongoing organization whose members functioned as a continuing unit for more than fifty years for a common purpose of achieving the objectives of the Enterprise.

These objectives included defrauding the public of money and enhancing the Defendants' profits by preserving and expanding the market for cigarettes through a variety of means and avoiding adverse liability verdicts in litigation in the face of the growing body of scientific and medical evidence about the health effects and addictiveness of smoking.

5. At all relevant times, the Enterprise has existed separate and apart from Defendants' racketeering acts and their RICO conspiracy to commit such acts. The Enterprise has an ascertainable structure and purpose beyond the scope and commission of Defendants' predicate racketeering acts. The Enterprise has a consensual decision making structure that, among other things, is used to coordinate strategy, manipulate scientific data, suppress the truth about the consequences of smoking, and otherwise further the goals of the Enterprise and Defendants' scheme to defraud. See US FF § III, infra.

6. This Enterprise was engaged in, and its activities affected, interstate and foreign commerce. See US FF § II, infra.

7. The Enterprise developed and executed a scheme to defraud the public in the following manner, among other means: (1) to conceal the adverse health effects caused by smoking cigarettes and exposure to cigarette smoke, by maintaining that there was an "open question" as to whether smoking cigarettes causes disease and other adverse effects, despite the fact that Defendants knew otherwise, and by ensuring that their research, development, and marketing of cigarettes (including potentially less hazardous products) remained consistent with these core public relations positions; (2) to deceive consumers into starting and continuing to smoke cigarettes by undertaking an obligation to take actions, including funding independent research, in order to determine if smoking cigarettes causes cancer or other diseases, while pre-selecting researchers and directing funds to irrelevant research and research that supported

Defendants' positions on smoking and health issues; (3) to deceive consumers into becoming or staying addicted to cigarettes by maintaining that nicotine is not addictive, despite the fact that Defendants knew that nicotine is addictive; (4) to deceive consumers into becoming or staying addicted to cigarettes by manipulating nicotine levels in cigarettes, the design of cigarettes, and the delivery of nicotine to smokers, while at the same time denying that they engaged in such manipulation; and (5) to deceive consumers, including youth, by claiming that they did not market to youth, while engaging in marketing with the intent of addicting youth into becoming lifetime smokers; (6) to deceive consumers through deceptive marketing to exploit smokers' desire for less hazardous and "low tar" cigarettes; and (7) to conceal and suppress information and/or to destroy records which may have been detrimental to the interests of the members of the Enterprise, including information which could be discoverable in smoking and health liability cases against Defendants or in congressional and other governmental proceedings and information that could constitute, or lead to, evidence of the link between smoking cigarettes and adverse health consequences and addictiveness. See US FF § III, infra.

8. The evidence overwhelmingly proves that, at all relevant times, each Defendant has been associated with the Enterprise.

9. At all relevant times, each Defendant has conducted and participated, directly and indirectly, in the conduct of the affairs of the Enterprise through a pattern of racketeering activity.

10. At all relevant times, each Defendant participated in the operation and management of the Enterprise.

11. Each Defendant engaged in a pattern of racketeering in the conduct of the affairs of the Enterprise and committed and/or aided and abetted the racketeering acts as alleged in the Amended Complaint, in furtherance of conducting the affairs of the Enterprise. The racketeering

acts committed and/or aided and abetted by each Defendant constitute a pattern. See US FF § IV, infra.

12. The racketeering acts committed and/or aided and abetted by each Defendant are "related" in that they: (a) have the same or similar purposes, results, participants, victims and methods of commission; (b) have furthered the objectives of the Enterprise, especially one of the Enterprise's primary objectives to maximize members' profits through a scheme to defraud the public; (c) benefitted the interests of the Enterprise; and (d) the Defendants' control of, and participation with others in, the Enterprise facilitated their commission of racketeering acts.

13. The racketeering acts committed and/or aided and abetted by each Defendant establish the requisite "continuity" because: (a) the Defendants committed the racketeering acts over a substantial period of time; (b) the predicate acts themselves involve a distinct threat of long-term racketeering activity, by including a specific threat of repetition extending indefinitely into the future; (c) the racketeering acts are a regular way of conducting the Defendants' ongoing businesses; (d) the Defendants' cigarette company businesses are ongoing and they continue to be in a position to continue their unlawful fraudulent activity; and (e) the totality of the evidence establishes that the Defendants and others acting in concert with them have participated in extensive fraudulent activity for more than fifty years, and have committed literally hundreds of acts of mail and wire fraud in addition to the 145 racketeering acts specifically alleged.

14. The racketeering acts committed and/or aided and abetted by each Defendant have a nexus, or meaningful connection, to the Enterprise.

15. Each Defendant knowingly conspired to conduct and participate, directly and indirectly, in the affairs of the Enterprise through a pattern of racketeering activity, as that term is defined by 18 U.S.C. §§ 1961(1) and (5).

16. Each Defendant knew the general nature of the conspiracy and that the conspiracy extends beyond each Defendant's individual role in the conspiracy. In that respect, each Defendant has known about, and has participated in, the Enterprise, and has well known that the primary objective of the Enterprise is to preserve and enhance Defendants' profits by, among other means, devising and executing a scheme to defraud the public, and to avoid adverse liability verdicts in the face of the growing body of scientific and medical evidence about the adverse health effects and addictiveness of smoking cigarettes. See US FF § III, infra.

17. Each Defendant agreed to violate RICO in that each Defendant agreed to conduct the affairs of the Enterprise through the pattern of racketeering activity set forth in the Amended Complaint, in the United States' Response to Interrogatory 35, and in US FF §§ I, III, IV, infra. Each Defendant, over a period of years, committed and/or aided and abetted several racketeering acts in furtherance of the affairs of the Enterprise. From such evidence the Court may, and does, infer an agreement to violate RICO.

18. Each Defendant agreed to violate RICO in that each Defendant agreed to facilitate the commission of a substantive RICO violation with the knowledge that other Defendants were also conspiring to participate in the same Enterprise through racketeering activity.

19. Each Defendant agreed that a conspirator would commit at least two acts of racketeering activity in the conduct of the affairs of the Enterprise.

20. Each Defendant directed and coordinated various activities in furtherance of the affairs of the Enterprise and RICO conspiracy through correspondence and other communications between and among Defendants and Defendants' participation meetings, committees, and other organizations. See US FF §§ I and III, infra.

21. In furtherance of the objectives of the Enterprise and the RICO conspiracy, the

Defendants: (a) developed and executed a scheme to defraud the public that was designed to preserve and enhance the market for cigarettes through a variety of means; (b) caused the public dissemination of numerous false, deceptive, and misleading statements; and (c) endeavored to conceal or suppress information and documents and/or to destroy records which may have been detrimental to the interests of the members of the Enterprise, including information which could be discoverable in smoking and health liability cases or in other proceedings that could constitute, or lead to, evidence of the link between smoking cigarettes ad adverse health consequences and addictiveness of smoking. See US FF § III, infra.

22. The Defendants have engaged in an extensive pattern of intentional, unlawful, fraudulent activity more than fifty years.

23. There is a reasonable likelihood of Defendants' committing future unlawful activity because: (a) Defendants' unlawful violations have been part of an extensive pattern extending more than fifty years, and have not been isolated; (b) Defendants' violations have been flagrant and deliberate, and not merely technical in nature; and (c) Defendants remain in the business of selling and marketing cigarettes and hence they will have countless opportunities and temptations to violate the law in the future.

24. The United States is entitled to equitable relief without any need to establish any Defendant's continuing unlawful conduct.

25. In any event, Defendants have continued to engage in misconduct in furtherance of the objectives of the Enterprise and RICO conspiracy and Defendants' scheme to defraud the public, as set forth below, which further supports that there is a reasonable likelihood that Defendants will engage in unlawful conduct in the future.

B. Tobacco Industry Research Committee/Council for Tobacco Research

(1) The Link Between Smoking and Lung Cancer Was Scientifically Established By the Early 1950s

26. By late 1953, researchers had published at least five epidemiologic investigations, as well as other research studying carcinogenic components in tobacco smoke and its impacts. See, e.g., VXA2510109-0116 (US 63605) (A); VXA2510106-0108 (US 63606) (A); TIMN0145510-5519 (US 62855) (A); VXA2510127-0142 (US 63603) (A); HK0755117-5131 (US 58868). These researchers had recognized the link between smoking and lung cancer. Brandt WD, 46:21-47:3. See US FF § III.A., infra (for discussion of research in first half of the 20th century).

27. The importance of such findings had attracted considerable interest among physicians, scientists, public health officials, and, of course, the public. Newspapers and magazines widely reviewed these investigations, heightening both public concern about the cigarette and industry concern about its future. The public reporting of these new findings in national magazines such as *Time* and *Reader's Digest*, as well as declines in sales and stock prices, forced tobacco executives to assess strategies for responding to growing medical and public concerns about smoking. Brandt WD, 48:1-18; VXA2511185-1186 (US 63548) (A); VXA2511184 (US 63549) (A).

28. The scientific studies identifying the causal connection between smoking and lung cancer - and the reporting of the studies in the public media - shook the industry. In this respect, the actions of tobacco company executives reflected an understanding that these new findings were substantially different from the health concerns raised about their product in the past and constituted an unprecedented critical threat to the industry. Brandt WD, 48:19-49:22.

(2) The Enterprise Begins

29. The Enterprise came into being not later than December 1953 when, to respond to the growing body of evidence that smoking caused lung cancer, Defendants and their agents developed and implemented a unified strategy that sought to reassure the public that there was no evidence that smoking causes disease.

30. In December 1953, Paul M. Hahn, President of Defendant American, sent telegrams to the presidents of the seven other major tobacco companies and one tobacco growers organization, inviting them to meet and develop an industry response to counter the negative publicity generated by the studies linking cigarette smoking and lung cancer. The telegrams were sent to: Edward A. Darr, President of Defendant Reynolds; Benjamin F. Few, President of Defendant Liggett; William J. Halley, President of Defendant Lorillard; Timothy V. Hartnett, President of Defendant B&W; O. Parker McComas, President of Defendant Philip Morris; Joseph F. Cullman, Jr., President of Benson & Hedges; J.B. Hutson, President of Tobacco Associates, Inc.; and J. Whitney Peterson, President of United States Tobacco Co. 508775416-5416 (JD-041939) (A); HT0072119-2125 (US 21175) (O), (US 54357) (O); CTRBYL000001-0014 (US 21138) (O); MNAT00609882-9886 (US 59809) (A).

31. Executives from every tobacco company listed above, with the exception of Liggett, met in New York City at the Plaza Hotel on December 14, 1953. The executives discussed (i) the negative publicity from the recent articles in the media, (ii) responding to the problem by jointly engaging a public relations counsel, and (iii) removing health themes from advertising. They also discussed Liggett's decision not to attend the meeting because "in the course of time the whole thing would blow over." The executives also authorized the five members of the committee who had their offices in New York to engage the services of Hill & Knowlton on behalf of the whole committee; to meet with John Hill at the Plaza Hotel the next

day, December 15th, to discuss the negative publicity problem; and to request that Hill & Knowlton, if it accepted the assignment, submit a recommendation to the full committee at a subsequent meeting. 680262226-2228 (US 88165) (A); HT0072119-2125 (US 21175) (O), (US 54357) (O); CTRBYL000001-0014 (US 21138) (O); Brandt WD, 50:21-51:23.

32. At the December 14, 1953 meeting, Paul Hahn of American and Timothy Hartnett of B&W told the other company presidents that "they had taken definite steps to remove the health themes from the advertising programs on Pall Mall and Viceroy. Darr [of Reynolds] made the point that he could not concur in sponsoring an industry paid advertising campaign (if this is the course recommended by the Public Relations Counsel) as long as the health theme continued to be featured by any one of the companies represented on the committee." J. Whitney Peterson of United States Tobacco and Hartnett "expressed their agreement with Mr. Darr's views in this matter." Hill & Knowlton wanted to develop some understanding with the Defendants that "none is going to seek a competitive advantage by inferring to its public that <u>its</u> product is less risky than others. No claims that special filters or toasting, or expert selection of tobacco, or extra length in the butt, of anything else, makes a given brand less likely to cause you-know-what. No 'Play-Safe-with-Luckies'." TLT0900422-0430 at 0423 (US 88169) (A); TLT0901564-1572 at 1565 (US 88194) (A); TLT0901541-1545 at 1543 (US 87225) (A); 2048375960-5964 (US 85819) (A); 680262226-2228 (US 88165) (A); TLT0901532-1540 at 1539-1540 (US 87224) (A); JH000493-0501 at 0500-0501 (US 21179) (O).

33. At the December 15, 1953 meeting, the participants were Paul Hahn of American, O. Parker McComas of Philip Morris, Joseph Cullman, Jr. of Benson & Hedges, J. Whitney Peterson of United States Tobacco, and representatives from Hill & Knowlton, including John Hill and Bert Goss. Hill & Knowlton was told that the industry viewed the "problem [posed by

the scientific studies] as being extremely serious and worthy of drastic action." JH000502-0506 at 0504 (US 20191) (A); TLT0901541-1545 at 1543 (US 87225) (A). According to a Hill & Knowlton memo dated December 22, 1953, the public relations firm was asked to "develop suggestions for dealing with the public relations problem confronting the industry as a result of widely publicized assertions by a few medical research men regarding the link between cigarette smoking and lung cancer." TLT0901552-1552 (US 88192) (A).

34. In an internal planning memoranda, Hill & Knowlton assessed their tobacco clients' problems in the following manner:

> There is only one problem -- confidence, and how to establish it; public assurance, and how to create it -- in a perhaps long interim when scientific doubts must remain. And, most important, how to free millions of Americans from the guilty fear that is going to arise deep in their biological depths -- regardless of any pooh-poohing logic -- every time they light a cigarette. No resort to mere logic ever cured panic yet, whether on Madison Avenue, Main Street, or in a psychologist's office. And no mere recitation of arguments pro, or ignoring of arguments con, or careful balancing of the two together, is going to deal with such fear now. That, gentlemen, is the nature of the unexampled challenge to this office.

JH000493-0501 (US 21408) (A), (US 21179) (O); TLT0901532-1540 at 1534 (US 87224) (A); Brandt WD, 53:16-54:10.

35. Ten days later, on December 24, 1953, Hill & Knowlton submitted a proposal regarding the tobacco industry's public relations campaign, recommending that the companies form a joint industry research committee that would sponsor independent scientific research on the health effects of smoking and announce the formation of the research committee nationwide as news and in advertisements. 01138856-8864 (JE-20036) (O); TLT0900422-0430 (US 88169) (A); TLT0901564-1572 (US 88194) (A); see also TLT0901546-1549 (US 88191) (A); TLT0901552 (US 88192) (A).

36. In its proposal, Hill & Knowlton expressed its concern about the "health" claims being made in the Defendants' advertising: "[I]t is impossible to overlook the fact that some of the industry's advertising has come in for serious public criticism because of emphasis on health aspects of smoking . . . it must be recognized that some of the advertising may have created a degree of skepticism in the public mind which at the start at least could affect the believability of any public relations effort." In fact, one of the questions posed by Hill & Knowlton to the Defendants was "whether the companies considere[d] that their own advertising and competitive practices have been a principal factor in creating a health problem? The companies voluntarily admitted this to be the case even before the question was asked. They have informally talked over the problem and will try to do something about it." TLT0900422-0430 at 0423 (US 88169) (A); TLT0901564-1572 at 1565 (US 88194) (A); TLT0901541-1545 at 1543 (US 87225) (A); 2048375960-5964 (US 85819) (A); 680262226-2228 (US 88165) (A).

37. Four days later, on December 28, 1953, another meeting was held at the Plaza Hotel and was attended by Paul Hahn of American; Edward Darr of Reynolds; Herbert A. Kent, Chairman of Lorillard; Timothy Hartnett of B&W; O. Parker McComas of Philip Morris; Joseph Cullman of Benson & Hedges; J.B. Hutson, President of Tobacco Associates, Inc.; J. Whitney Peterson of United States Tobacco; and three people from the public relations firm of Hill & Knowlton, John Hill, Bert Goss, and Richard Darrow. The attendees agreed on Tobacco Industry Research Committee ("TIRC") as the official name of the research committee; chose Paul Hahn as temporary chairman of the committee; agreed that the search should begin immediately for a qualified director who, together with the companies' research directors, would recommend members for the research advisory board; and reviewed and accepted the Hill & Knowlton proposal regarding the tobacco industry's public relations campaign. TLT0901411-1414 (US

88188) (A); 01138856-8864 (JE-20036) (O).

38. Although Defendant Liggett did subsequently participate in Enterprise activities, Liggett did not participate in the December meetings because, at the time, the company believed that "the proper procedure is to ignore the whole controversy." JH000502-0506 at 0502 (US 20191) (A); TLT0901541-1545 at 1541 (US 87225) (A).

39. Following Hill & Knowlton's advice, the formation and purpose of TIRC was announced on January 4, 1954, in a full-page advertisement called "A Frank Statement to Cigarette Smokers" published in 448 newspapers throughout the United States. McAllister PD, United States v. Philip Morris, 5/23/02, 112:14-114:13; McAllister WD, 9:10-22; 11309817-9817 (US 20277) (A); 86017454-7454 (US 21418) (A); USX6390001-0400 at 0004 (US 89555) (O) (CTR Response to Request for Admission No. 88); TLT0900465-0465 (US 88171) (A); see also TLT0900478-0480 (US 88440) (A); TLT0900481-0483 (US 88441) (A).

40. The Frank Statement was subscribed to by the following domestic cigarette and tobacco product manufacturers, organizations of leaf tobacco growers, and tobacco warehouse associations that made up TIRC: Defendant American by Paul Hahn, President; Defendant B&W by Timothy Hartnett, President; Defendant Lorillard by Herbert Kent, Chairman; Defendant Philip Morris by O. Parker McComas, President; Defendant Reynolds by Edward A. Darr, President; Benson & Hedges by Joseph Cullman, Jr., President; Bright Belt Warehouse Association by F.S. Royster, President; Burley Auction Warehouse Association by Albert Clay, President; Burley Tobacco Growers Cooperative Association by John Jones, President; Larus & Brother Company, Inc. by W.T. Reed, Jr., President; Maryland Tobacco Growers Association by Samuel Linton, General Manager; Stephano Brothers, Inc. by C.S. Stephano, Director of Research; Tobacco Associates, Inc. by J.B. Hutson, President; and United States Tobacco by J.

Whitney Peterson, President. 11309817-9817 (US 20277) (A); 86017454-7454 (US 21418) (A); HT0072119-2125 (US 21175) (O), (US 54357) (O); CTRBYL000001-0014 (US 21138) (O).

41. The Frank Statement set forth the industry's "open question" position that it would maintain for more than forty years - that cigarette smoking was not a proven cause of lung cancer; that cigarettes were not injurious to health; and that more research on smoking and health issues was needed. In the Frank Statement, the participating companies accepted "an interest in people's health as a basic responsibility, paramount to every other consideration in our business" and pledged "aid and assistance to the research effort into all phases of tobacco use and health." The companies promised that they would fulfill the obligations they had undertaken in the Frank Statement by funding independent research through TIRC, free from any industry influence. 11309817-9817 (US 20277) (A); 86017454-7454 (US 21418) (A).

42. The "Frank Statement" in its entirety stated as follows:

> RECENT REPORTS on experiments with mice have given wide publicity to a theory that cigarette smoking is in some way linked with lung cancer in human beings.
>
> Although conducted by doctors of professional standing, these experiments are not regarded as conclusive in the field of cancer research. However, we do not believe that any serious medical research, even though its results are inconclusive should be disregarded or lightly dismissed.
>
> At the same time, we feel it is in the public interest to call attention to the fact that eminent doctors and research scientists have publicly questioned the claimed significance of these experiments.
>
> Distinguished authorities point out:
>
> 1. That medical research of recent years indicates many possible causes of lung cancer.
>
> 2. That there is no agreement among the authorities regarding what the cause is.

3. That there is no proof that cigarette smoking is one of the causes.

4. That statistics purporting to link cigarette smoking with the disease could apply with equal force to any one of many other aspects of modern life. Indeed the validity of the statistics themselves is questioned by numerous scientists.

We accept an interest in people's health as a basic responsibility, paramount to every other consideration in our business.

We believe the products we make are not injurious to health.

We always have and always will cooperate closely with those whose task it is to safeguard the public health.

For more than 300 years tobacco has given solace, relaxation, and enjoyment to mankind. At one time or another during these years critics have held it responsible for practically every disease of the human body. One by one these charges have been abandoned for lack of evidence.

Regardless of the record of the past, the fact that cigarette smoking today should even be suspected as a cause of disease is a matter of deep concern to us.

Many people have asked us what are we going to do to meet the public's concern aroused by the recent reports. Here is the answer:

1. We are pledging aid and assistance to the research effort into all phases of tobacco use and health. This joint financial aid will of course be in addition to what is already being contributed by individual companies.

2. For this purpose we are establishing a joint industry group consisting initially of the undersigned. This group will be known as TOBACCO INDUSTRY RESEARCH COMMITTEE.

3. In charge of the research activities of the Committee will be a scientist of unimpeachable integrity and national repute. In addition there will be an Advisory Board of scientists disinterested in the cigarette industry. A group of distinguished men from medicine, science, and education will be invited to serve on this

> Board. These scientists will advise the Committee on its research activities.
>
> This statement is being issued because we believe the people are entitled to know where we stand on this matter and what we intend to do about it.

11309817-9817 (US 20277) (A); 86017454-7454 (US 21418) (A); TLT0901611-1611 (US 88196) (A); Brandt WD, 55:8-21.

43. The issuance of the "Frank Statement to Cigarette Smokers," as an act of public relations, was an effective preemptive strategy. By promising the public that the industry was absolutely committed to their good health, the Frank Statement allayed the public's concerns about smoking and health, reassured smokers, and provided them with an effective rationale for continuing to smoke. Brandt WD, 54:20-55:7; JH000493-0501 (US 21179) (O), (US 21408) (A); TLT0901532-1540 at 1534 (US 87224) (A).

44. In TIRC/CTR, the Defendants had established a sophisticated public relations apparatus – based on the cover of conducting research – to deny the harms of smoking and reassure the public. Once that essential strategy was organized and implemented in 1953-54, Defendants' approach was unwavering. Brandt WD, 61:23-62:7.

45. Stanley Barnes, Assistant Attorney General, United States Department of Justice, "read with interest the statement of the Tobacco Industry Research Committee which appeared in the newspapers on January 4, 1954, regarding the Committee's pledge of aid and assistance to the research effort into all phases use and health" and sent a letter to TIRC on January 21, 1954, requesting "as many details on the Committee's plans as you may care to disclose at this time." 508775382-5382 (JD-090191) (A). In response, TIRC Chairman Paul Hahn sent a letter to Barnes dated January 26, 1954, enclosing a statement of the origin, purpose, and proposed functions of TIRC. The purposes and objectives of TIRC as recorded in the Statement

Concerning the Origin and Purpose of TIRC were "to aid and assist research into tobacco use and health, and particularly into the alleged relationship between the use of tobacco and lung cancer, and to make available to the public factual information on this subject." 70103754-3761 (JD-000294) (A); MTD0030448-0455 (US 21218) (O); 70103755-3761 (JD-043064) (A); HT0072119-2125 (US 21175) (O), (US 54357) (O); TIMN0116378-6384 (US 21277) (O); TLT0901026-1035 (US 88181) (A); McAllister WD, 28:14-29:1 (confirming dual purpose); Zahn PD, Cipollone v. Liggett, 12/16/86, 51:24-52:6, 53:9-12 (confirming dual purpose); USX6390001-0400 at 0005-0007 (US 89555) (O) (CTR Response to Request for Admission No. 89, 91).

46. The statement of origin and purpose was signed in the name of TIRC by Chairman Paul Hahn, was ratified and adopted by TIRC, and attached as Exhibit A to the Bylaws of the Tobacco Industry Research Committee. CW00787817-7842 (US 21420) (A); CTRBYL000001-0014 (US 21138) (O); 70103754-3761 (JD-000294) (A); MTD0030448-0455 (US 21218) (O); 70103755-3761 (JD-043064) (A); HT0072119-2125 (US 21175) (O), (US 54357) (O); TIMN0116378-6384 (US 21277) (O); TLT0901026-1035 (US 88181) (A).

47. The TIRC bylaws (subscribed and adopted by the signatory members effective January 1, 1954) stated that the "purposes and objectives of the Committee are to aid and assist research into tobacco use and health, and particularly into the alleged relationship between the use of tobacco and lung cancer and to make available to the public factual information on this subject." All of the bylaws could be altered and repealed by a majority vote of TIRC's corporate members, except "Article I. Purposes and Objectives" that could only be altered with the unanimous consent of all the corporate members. CW00787817-7842 at 7817, 7822 (US 21420) (A); CTRBYL000001-0014 at 0001, 0006 (US 21138) (O).

48. The statement of origin and purpose stated that TIRC had engaged the public relations firm of Hill & Knowlton to assist TIRC in effectuating its purpose. CW00787817-7842 (US 21420) (A); CTRBYL000001-0014 (US 21138) (O); 70103754-3761 (JD-000294) (A); MTD0030448-0455 (US 21218) (O); 70103755-3761 (JD-043064) (A); HT0072119-2125 (US 21175) (O), (US 54357) (O); TIMN0116378-6384 (US 21277) (O); TLT0901026-1035 (US 88181) (A); TLT0900723-0728 (US 88179) (A); see also USX6390001-0400 at 0012 (US 89555) (O) (CTR Response to Request for Admission No. 113).

49. The TIRC bylaws stated that each corporate member of the TIRC "shall from time to time appoint an individual to serve as the personal member of the Committee representing such corporate member" and that a majority of the personal members of TIRC would select such officers, agents, and employees as they deemed necessary, including a Chairman to serve for a term of one year and until his successor is elected and qualified. CW00787817-7842 (US 21420) (A); CTRBYL000001-0014 (US 21138) (O).

50. The first officers selected by TIRC members were: Paul Hahn of American as temporary Chairman; J. Whitney Peterson of United States Tobacco as Vice Chairman; Joseph Cullman of Benson & Hedges as Treasurer; and Wilson Thomas ("W.T.") Hoyt of Hill & Knowlton as Secretary. CW00787817-7842 (US 21420) (A); CTRBYL000001-0014 (US 21138) (O); 70103754-3761 (JD-000294) (A); MTD0030448-0455 (US 21218) (O); 70103755-3761 (JD-043064) (A); HT0072119-2125 (US 21175) (O), (US 54357) (O); TIMN0116378-6384 (US 21277) (O); TLT0901026-1035 (US 88181) (A).

51. TIRC bylaws described the method of funding TIRC as follows: "Each of the cigarette manufacturing corporate members has pledged to the Committee for payment before or during 1954 an amount equal to 1/4 of a cent for each one thousand of tax-paid cigarettes

produced by such company in 1953 as estimated by Harry M. Wootten and published under the date of January 15, 1954, and has pledged to the Committee for payment during 1954 an additional amount equal to one-half of the amount originally pledged." CW00787817-7842 at 7819 (US 21420) (A); CTRBYL000001-0014 at 0003 (US 21138) (O).

52. At their January 29, 1964 meeting, the TIRC Executive Committee agreed to change the name of the organization to the Council for Tobacco Research-U.S.A. ("CTR"). 93218985-8986 (US 21116) (A). The organization bylaws were amended February 1, 1964, to reflect the name change. Although the name changed, the purposes, objectives, and functions of the organization did not. According to the amended bylaws, the purposes and objectives of CTR remained the same, i.e., "to aid and assist research into tobacco use and health, and particularly into the alleged relationship between the use of tobacco and lung cancer and to make available to the public factual information on this subject." 682631364-1368 (US 21024) (O); CW00787817-7842 at 7831-7835 (US 21420) (A); see also USX6390001-0400 at 0002 (CTR Response to Request for Admission No. 82). Timothy Hartnett announced the organization name change in a March 1964 press release. 508775085-5088 (US 20815) (O); HK1865014-5017 (US 77847) (O).

53. Robert Heimann, Chairman and Chief Executive Officer of American, commented upon the TIRC's name change in a December 6, 1977 letter to Addison Yeaman, CTR's Chairman and President and formerly the General Counsel of B&W: "[W]e decided some years ago to rename T.I.R.C. 'The Council for Tobacco Research' because 'Tobacco Industry Research Committee' sounded too much like industry-directed, as distinct from independent, research." 2022200158-0160 at 0160 (US 87532) (O).

54. In 1971, CTR changed from an unincorporated association to a corporation pursuant to the laws of the State of New York. CTR's Certificate of Incorporation was filed with

the Department of State of the State of New York on January 8, 1971. The bylaws of the newly-formed corporation were adopted at the first meeting of CTR's Board of Directors on January 13, 1971. CTRMIN-BD000001-0303 at 0002 (JD-093208) (A); CTRINC000001-0019 (JD-090053) (A); McAllister WD, 10:7-14.

55. Following incorporation, CTR was divided into two classes of members, Class A and Class B. Class A members were: (i) designated by the Board of Directors; (ii) domestic persons who sold cigarettes in the United States; and (iii) manufacturers of their own brand of cigarettes. Class A members included American Tobacco, B&W, Lorillard, Philip Morris, Reynolds, and United States Tobacco. Class B members were: (i) designated by the Board of Directors; and (ii) a person, corporation, association, or partnership not eligible for Class A membership but involved in the production, manufacturing, and distribution of cigarettes. Class B members included Bright Belt Warehouse Association, Burley Auction Warehouse Association, Burley Tobacco Growers, Imperial Tobacco, Tobacco Associates, and United States Tobacco. CTRBYL000031-0049 (JD-090055) (A); CTRMIN-BD000001-0303 at 0003 (JD-093208) (A); 512678857-8863 (US 30046) (O).

56. In 1963, Clarence Cook Little and W.T. Hoyt invited Liggett to join TIRC in order to secure complete industry cooperation in dealing with the 1963 Surgeon General's Advisory Committee. Liggett declined the invitation but, in its response, assured its cooperation: "[T]he aims of all of us are the same and the path that we [Liggett] have followed has been similar to that of the Committee in may respects." RC6007182-7183 (LI-142) (A).

57. Liggett became a member of CTR in 1964, resigned in 1968, but continued to participate in CTR activities for decades. In its January 1968 resignation letter, Liggett's President stated "we will continue to participate in defraying the cost of [CTR] Special Projects

sponsored by the Council after evaluation of each Project on an individual basis." CTR-TIRC MIN000238-0244 at 0241 (US 33023) (O). Liggett made contributions to CTR's Special Projects fund from 1966 through 1975 and to CTR's Literature Retrieval Division from 1971 through 1983. DXA0630917-1033 at 1024-1025 (US 75927) (A) (CTR Response to First Set of Interrogatories, Schedule C). Liggett was also asked to attend scientific meetings at CTR. 044227839-7842 (US 20066) (O); LWDOJ9055586-5587 (US 26007) (Confidential) (O).

58. Representatives of Liggett attended CTR meetings at which CTR Class A members, CTR Class B members, CTR officers, CTR public relations counsel, tobacco industry attorneys, and other representatives of cigarette manufacturers and the Tobacco Institute were present. CTRMIN-MOM000001-0015 (US 21145) (O); CTRMIN-MOM000053-0069 (US 32617) (O).

59. Although Defendant BATCo was not a member of TIRC or CTR, communication and contact between high level smoking and health research scientists at BATCo and scientists at TIRC/CTR was frequent and direct. BATCo scientists, including David G. Felton, Lionel C.F. Blackman, and R.E. Thornton, visited TIRC/CTR several times over the years. TINY0003106-3116 (US 21369) (A); 105408490-8499 (US 21135) (A), (US 76169) (A); 517002090-2091 (US 66527) (O).

60. In 1958, three British scientists, D.G.I. (David) Felton of BATCo, W.W. Reid of BATCo-Australia, and H.R. (Herbert) Bentley of Imperial Tobacco, visited the United States for four weeks and met with members of TIRC's Scientific Advisory Board, as well as with representatives of Defendants TIRC/CTR, American, Liggett, and Philip Morris. TINY0003106-3116 (US 21369) (A); 105408490-8499 (US 21135) (A), (US 76169) (A); Brandt WD, 94:8-95:3.

61. In October 1979, David Felton of BATCo went on a month-long "fact-finding mission to a number of laboratories engaged on research relating to smoking and health" in the United States. Felton was accompanied by two lawyers for most of his visits, either Patrick Sirridge of Shook, Hardy & Bacon or Timothy Finnegan of Jacob & Medinger. Near the end of the trip, Felton met with CTR executives and employees, including Addison Yeaman, CTR President; William Gardner, CTR Scientific Director; W.T. Hoyt, CTR Executive Vice President; Robert Hockett, CTR Research Director; Vincent Lisanti, CTR Associate Research Director; and David Stone and Donald Ford, members of CTR's scientific staff. Discussions included CTR contract research, nitrosamines, smoking and stress, and nicotine research. During his visit, Felton also met with Tobacco Institute representatives Horace Kornegay, President, and Marvin Kastenbaum, Director of Statistics. 109879229-9295 (US 34923) (O); 109879296-9308 (US 86063) (O).

62. Defendants met frequently to discuss issues facing the Enterprise. Beginning in 1954 and until 1970, representatives of member companies met regularly with TIRC/CTR staff. After CTR's incorporation, in 1971and until 1999, the Enterprise met annually at CTR's meetings of members. At these meetings, representatives of the Enterprise discussed activities of CTR which furthered their goals such as Special Projects, the Literature Retrieval Division, contract research, public relations, the TIRC/CTR Scientific Advisory Board, and scientific conferences. CTR-TIRC-MIN000001-0252 (JD-093292) (A); CTR-TIRC-MIN000033-0052 (US 33006) (A); CTR-TIRC-MIN000174-0186 (US 33016) (O); CTR-TIRC-MIN000224-0231 (US 33021) (O); CTR-TIRC-MIN00023-0244 (US 33023) (O); CTR-TIRC-MIN000245-0255 (US 33024) (O); 1002608337-8339 (US 85989) (O); MM0010053-0056 (US 85990) (O); CTRMIN-MOM000001-000015 (US 21145) (O); CTRMIN-MOM000016-0034 (US 21170)

(O); CTRMIN-MOM000035-0052 (US 32616) (O); CTRMIN-MOM000053-0069 (US 32617) (O); CTRMIN-MOM000070-0087 (US 32618) (O); CTRMIN-MOM000088-0089 (US 32619) (O); CTRMIN-MOM000090-0104 (US 32620) (O); CTRMIN-MOM000105-0117 (US 32621) (O); CTRMIN-MOM000129-0142 (US 32623) (O); CTRMIN-MOM000143-0154 (US 32624) (O); CTRMIN-MOM000155-0167 (US 32625) (O); CTRMIN-MOM000168-0181 (US 32626) (A); CTRMIN-MOM000182-0195 (US 32627) (O); CTRMIN-MOM000210-0221 (US 32629) (A); CTRMIN-MOM000222-0233 (US 32630) (A); CTRMIN-MOM000234-0244 (US 32631) (A); CTRMIN-MOM000245-0255 (US 32632) (A); CTRMIN-MOM000256-0268 (US 32633) (A); CTRMIN-MOM000269-0280 (US 32634) (A); CTRMIN-MOM000281-0294 (US 32635) (A); CTRMIN-MOM000295-0306 (US 32636) (A); CTRMIN-MOM000307-0318 (US 32637) (A); CTRMIN-MOM000319-0331 (US 32638) (A); CTRMIN-MOM000332-0334 (Ex. 32639) (A); 70000261–0274 (US 31078) (O); 70005388-5408 (US 31104) (O), (US 31105) (O); CW00800809-0811 (US 31368) (O); TLT0901390-1393 (US 88186) (A); TLT0901400-1410 (US 88187) (A); JH000395-0400 (US 21178) (O); TLT0901411-1414 (US 88188) (A).

63. Members of the Enterprise also convened regularly between 1971 and 1998 at CTR's Board of Directors meetings. CTR's Board of Directors was made up of representatives from the member companies. At these meetings the CTR Board of Directors discussed and passed resolutions regarding issues such as CTR's budget, the status of grants and contract research, the election of officers, payment of dues, and amendments to the bylaws. In addition to Board members, attendees at the meetings included other corporate offices and executives from the tobacco companies, Defendants legal counsel and public relations counsel, and representatives from the Tobacco Institute. CTRMIN-BD000017-0020 (US 32572) (O); CTRMIN-BD000021-0025 (US 32573) (O); CTRMIN-BD000026-0029 (US 32574) (O);

CTRMIN-BD000030-0034 (US 32575) (O); CTRMIN-BD000035-0038 (US 32576)(A); CTRMIN-BD000039-0044 (US 32577) (O); CTRMIN-BD000045-0049 (US 32578) (O); CTRMIN-BD000050-0054 (US 32579) (O); CTRMIN-BD000055-0059 (US 32580) (O); CTRMIN-BD000060-0109 (US 32581) (O); CTRMIN-BD000110-0115 (US 32582) (O); CTRMIN-BD000116-0121 (US 32583) (O); CTRMIN-BD000122-0125 (US 32584) (O); CTRMIN-BD000126-0129 (US 32585) (O); CTRMIN-BD000135-0135 (US 32586) (A); CTRMIN-BD000136-0140 (US 32587) (A); CTRMIN-BD000141-0144 (US 32588) (O); CTRMIN-BD000145-0146 (US 32589) (O); CTRMIN-BD000147-0152 (US 32590) (A); CTRMIN-BD000153-0157 (US 32591) (O); CTRMIN-BD000158-0162 (US 32592) (A); CTRMIN-BD000163-0165 (US 32593) (O); CTRMIN-BD000172-0178 (US 32595) (O); CTRMIN-BD000179-0182 (US 32596) (O); CTRMIN-BD000187-0191 (US 32597) (A); CTRMIN-BD000192-0194 (US 32598) (O); CTRMIN-BD000200-0229 (US 32600) (A); CTRMIN-BD000230-0235 (US 32601) (A); CTRMIN-BD000236-0237 (US 32602) (A); CTRMIN-BD000238-0245 (US 32603) (A); CTRMIN-BD000246-0247 (US 32604) (A); CTRMIN-BD000248-0251 (US 32605) (A); CTRMIN-BD000252-0255 (US 32606) (A); CTRMIN-BD000256-0260 (US 32607) (A); CTRMIN-BD000261-0262 (US 32608) (A); CTRMIN-BD000263-0267 (US 32609) (A); CTRMIN-BD000268-0270 (US 32610) (A); CTRMIN-BD000271-0275 (US 32611) (A); CTRMIN-BD000276-0277 (US 32612) (A); CTRMIN-BD000278-0283 (US 32613) (A); CTRMIN-BD000284-0285 (US 32614) (A); CTRMIN-BD000286-0291 (US 32615) (A); 70000636–0638 (JE-31084) (A); 70000275-0279 (US 31080) (O); 70001297-1298 (US 31095) (O); 70005382-5387 (JE-31103) (A); 70005409-5416 (JE-31106) (O); CTRMIN-BD000001-000303 (JD-093208) (A); ARU1130828-0904 (US 86773) (A) (CTR Response to Interrogatory No. 5, at 28-33); Kornegay PD, Cipollone

v. Liggett, 8/17/84, 195:21-196:7.

64. While Philip Morris Companies was not a Class A member of CTR, Philip Morris Companies executives attended and participated in meetings of the CTR Board of Directors from 1985 to 1992. These executives included Thomas Ahrensfeld, Senior Vice President and General Counsel; Murray Bring, Senior Vice President and General Counsel; Hugh Cullman, Vice Chairman of the Board; Alexander Holtzman, Vice President and Associate General Counsel; John Murphy, President and CEO; and R. William Murray, President, CEO, and Vice Chairman of the Board. CTRMIN-BD000001-000303 at 0187, 0192, 0195, 0200, 0230, 0236, 0238, 0246, 0248, 0252, 0256, 0261, 0263, 0268 (JD-093208) (A).

65. Lorraine Pollice, CTR Corporate Secretary and Treasurer for over twenty years, testified that she attended CTR Board of Directors Meetings and CTR Annual Member Meetings, and personally prepared minutes of those meetings. Pollice WD, 6:14-7:22; 7:23-12:12. The minutes of meeting after meeting show participation by Altria representatives. See, e.g., CTRMIN-BD000187-0191 (US 32597) (A); CTRMIN-BD000200-0229 (US 32600) (A); CTRMIN-BD000230-0235 (US 32601) (A); CTRMIN-BD000236-0237 (US 32602) (A); CTRMIN-BD000238-0245 (US 32603) (A); CTRMIN-BD000246-0247 (US 32604) (A); CTRMIN-BD000248-0251 (US 32605) (A); CTRMIN-BD000252-0255 (US 32606) (A); CTRMIN-BD000256-0260 (US 32607) (A); CTRMIN-BD000261-0262 (US 32608) (A); CTRMIN-BD000263-0267 (US 32609) (A); CTRMIN-BD000268-0270 (US 32610) (A); CTRMIN-MOM000222-0233 (US 32630) (A); CTRMIN-MOM000234-0244 (US 32631) (A); CTRMIN-MOM000245-0255 (US 32632) (A); CTRMIN-MOM000256-0268 (US 32633) (A); CTRMIN-MOM000269-0280 (US 32634) (A); CTRMIN-MOM000281-0294 (US 32635) (A); CTRMIN-MOM000295-0306 (US 32636) (A); CTRMIN-MOM000307-0318 (US 32637) (A).

However, on the stand, Pollice suddenly expressed confusion about the precise corporate affiliation of particular participants, and her testimony on that score is simply not credible. Pollice TT, 1004/04, 01528:19-01529:1. The testimony is directly contrary to the documents themselves, documents which were never corrected at the time by Pollice or by former CTR Presidents or outside counsel for CTR who reviewed and finalized the minutes. Pollice WD, 6:1-25; Pollice TT, 10/04/04, 01526:22-01527:14.

66. From 1954 through October 31, 1999, payments to CTR's General Fund from Defendants totaled $473,369,512.22: $31,928,239.26 from American; $67,666,080.25 from B&W; $40,747,457.89 from Lorillard; $189,506,678.86 from Philip Morris; $141,890,169.04 from Reynolds; and $721,868.85 from Liggett. DXA0630917-1033 at 1017-1023 (US 75927) (A) (CTR Response to First Set of Interrogatories, Schedule C); USX6390001-0400 at 0008 (US 89555) (O) (CTR Response to Request for Admission No. 94).

67. From 1966 through October 31, 1990, payments to CTR's Special Projects fund (discussed at US FF § I.D(2), infra) totaled $18,270,623.65, which included: $29,665.00 from American; $2,571,345.40 from B&W; $144,254.75 from Liggett; $1,638,490.68 from Lorillard; $5,837,923.49 from Philip Morris; and $6,029,255.33 from Reynolds. DXA0630917-1033 at 1024 (US 75927) (A) (CTR Response to First Set of Interrogatories, Schedule C).

68. From 1971 through April 15, 1983, payments to CTR's Literature Retrieval Division (discussed at US FF § I.F., infra) totaled $16,870,480.00, which included: $2,214,135.00 from American; $2,681,358.00 from B&W; $606,043.50 from Liggett; $811,840.50 from Lorillard; $4,813,415.50 from Philip Morris; and $5,743,687.50 from Reynolds. DXA0630917-1033 at 1025 (US 75927) (A) (CTR Response to First Set of Interrogatories, Schedule C).

(3) Defendants' Selection and Approval of TIRC Scientific Advisory Board Members and the Scientific Director

69. The first formal meeting of TIRC was held on January 18, 1954. At this first formal meeting, a budget of $1,200,000 was approved; an agreement between TIRC and Hill & Knowlton was approved; the research program, calling for a Scientific Director and a Scientific Advisory Board ("SAB") was approved; a Law Committee was appointed; and the research directors of TIRC member companies were designated as the Industry Technical Committee ("ITC") (discussed further at US FF § I.E(2), infra). CTR-TIRC-MIN000001-000252 at 0001-0004, 0018-0032 (JD-093292) (A); ARU1130828-0904 (US 86773) (A) (CTR Response to Interrogatory No. 12, at 57-63); TLT0901400-1410 (US 88187) (A); JH000395-0400 (US 21178) (O).

70. The Law Committee was composed of Chairman George Whiteside of Chadbourne, Parke, Whiteside, Wolf & Brophy; John Vance Hewitt of Conboy, Hewitt, O'Brien & Boardman; Leighton Coleman of Davis, Polk, Wardwell, Sunderland & Kiendl; F.R. Wadlinger of Foulk, Porter & Wadlinger; and Freeman Daniels of Perkins, Daniels & Perkins. This committee drafted the TIRC bylaws. CTR-TIRC-MIN000001-000252 at 0001, 0006, 0021 (JD-093292) (A); CTRMN039046-9106 at 9069 (JD-092825) (A).

71. On January 7, 1954, the ITC held an informal meeting at which they discussed qualifications for a Scientific Research Director for TIRC and their efforts to find and retain a suitable scientist. The research directors were H.R. Hanmer of American; Irwin W. Tucker of B&W; H.B. Parmele of Lorillard; Robert N. DuPuis of Philip Morris; Grant Clarke of Reynolds; Hugh Cullman of Benson & Hedges; Clinton Baber of Larus & Brother; C.S. Stephano of Stephano Brothers; and Ward B. Bennett of United States Tobacco. CTRMN039046-9106 at 9070, 9076 (JD-092825) (A); TLT0901400-1410 (US 88187) (A); CTRMIN-ITC000009-0011

(JD-095519) (A); JH000395-0400 (US 21178) (O).

72. At the January 7, 1954 meeting, the ITC members agreed that the TIRC Research Director should be a medical doctor, recognized in cancer research, and with experience in chemistry. The ITC nominated persons for the position of TIRC Research Director, and a subcommittee of the ITC, headed by Grant Clarke, Research Director for Reynolds, was appointed to process and screen the list of nominees. TLT0901400-1410 at 1404 (US 88187) (A); JH000395-0400 at 0399 (US 21178) (O).

73. The task of selecting a Scientific Director prior to getting a Scientific Advisory Board proved difficult. TLT0902041-2064 at 2043 (US 88360) (A), (US 88364) (A). At the March 15, 1954 meeting of TIRC, Chairman Paul Hahn of American, outlined the situation and problems encountered in obtaining a Scientific Research Director, and suggested, as an alternative to obtaining the Research Director first, the appointment of SAB members who could then assist in obtaining a Research Director. The ITC was directed to work up a suggested list of names for the SAB with the assistance of Hill & Knowlton. The TIRC appointed a subcommittee to select scientists to be invited to become members of SAB. CTR-TIRC-MIN000001-000252 at 0005-0006 (JD-093292) (A); TLT0903093-3094 (US 88363) (A); USX6390001-0400 at 0011-0012 (US 89555) (O) (CTR Response to Request for Admission No. 111); ARU1130828-0904 at 0884-0890 (US 86773) (A) (CTR Response to Interrogatory No. 12).

74. The ITC, public relations counsel Hill & Knowlton, and the Law Committee were actively involved in searching for, interviewing, and selecting the scientists appointed to the first SAB. TLT0902041-2064 at 2043 (US 88360) (A), (US 88364) (A); TLT0903093-3094 (US 88363) (A). The ITC screened the candidates being considered for membership on the SAB.

681879254-9715 at 9649 (US 21020) (A).

75. Letters were sent to nine scientists inviting them to become members of the SAB, and acceptances were obtained from seven; the two who did not accept were scientists connected with the National Cancer Institute. CTR-TIRC-MIN000001-0252 at 0021 (JD-093292) (A); CTRMN039046-9106 at 9051-9052 (JD-092825) (A); 508775311-5311 (JD-093893) (A); ARU1130828-0904 (US 86773) (A) (CTR Response to Interrogatory No. 12, at 57-63).

76. The first meeting of the SAB was held on April 26, 1954. The SAB members chose Clarence Cook Little as their Chairman. At the second meeting of the SAB, Little was selected as Scientific Director on a part-time basis with an assistant who would serve on a full-time basis. In November 1954, Robert Hockett filled the assistant post as Associate Scientific Director. Little served as SAB Chairman from 1954 to 1957 and as TIRC/CTR Scientific Director from 1954 to 1971. Little PD, Lartigue v. Reynolds, 10/5/60, 2713:20-21, 2715:4-12, 2721:9-11; Little PT, Zagurski v. American, 6/7/67, 652:21-653:2, 676:6-18. Following Little, the Scientific Directors were William Gardner (1973-1981), Sheldon Sommers (1981-1987), James Glenn (1988-1990), and Harmon McAllister (1991-1999). CTR-TIRC-MIN000001-0252 at 0022 (JD-093292) (A); TLT0902041-2064 (US 88360) (A), (US 88364) (A); TLT0903105-3108 at 3105 (US 88366) (A); ARU1130828-0904 (US 86773) (A) (CTR Response to Interrogatory No. 12, at 57-63); CTRMN004928-4929 (US 85995) (A); 11310050-0053 (JD-090066) (A).

77. In a November 27, 1963 memorandum, Clarence Cook Little described the Enterprise's strategy in selecting the SAB members. Little wrote:

> In the selection of a Scientific Advisory Board and in the acceptance of the nomination by that Board of a Scientific Director, it was clearly shown that the attitude of the TIRC was to pick scientists interested broadly in the origin and nature of disease

> implicated and in the evaluation of smoking as a possible factor, not as a proven one.

70003601-3602 at 2601 (US 85993) (A) (emphasis in original).

78. Clarence Cook Little's personal commitments and assumptions about cancer causality made him an ideal proponent of the industry's goal of maintaining a "controversy" rather than scientifically resolving the questions regarding smoking and health. Brandt WD, 86:10-18. Little explained at the press conference announcing his appointment that: "I am an ultraconservative about cause and effect relationships." CW01054843-4879 at 4877 (US 20278) (A). Little had no compunction, however, about offering unsubstantiated claims about the health benefits of cigarette use at that same press conference: "It is very well-known, for example, that tobacco has relaxed a great many people. It is a very good therapy for a great many nervous people." CW01054843-4879 at 4845 (US 20278) (A).

79. Little repeatedly centered attention on the so-called "constitutional hypothesis"; other environmental risks; and the need for more research into the basic etiology of the diseases associated with smoking. Brandt WD, 86:19-22; McAllister WD, 123:18-22; Little PT, Zagurski v. American, 6/7/67,661:9-663:9, 665:7-666:20. He believed that "the causation of lung cancer was not known," that it was a complicated and unsolved problem with many factors involved, such as nutrition, heredity, the mental type of the individual, present or former or existing infection, air pollution, and radiation. Little PD, Lartigue v. Reynolds, 10/5/60, 2729:1-2730:15, 2735:11-2736:2; CTRMN005534-5541 (US 21156) (A); (US 21224) (A); (US 21233) (A); (US 21834) (A) . He argued that "no positive evidence has been advanced by anybody who believes in the **tobacco guilt theory** that has made me change my mind." Id., 2782:10-16 (emphasis added). Under Little's leadership, the SAB funded studies on vitamins, influenza, twins, and viruses, but not on carcinogenic agents in tobacco smoke because "we believe that no such agents

have been found which are carcinogenic to men," id. at 2755:6-18; "We don't believe they are there and a will-of-the-wisp hunt for something that hasn't yet been show is a waste of money," id. at 2761:14-22; "There are no carcinogenic agents in tobacco tar that have been proven to cause cancer in man . . . And I say again that to transfer from the skin of a mouse to the lung of a man is not science." Id. at 2762:23-2763:13.

80. The SAB met regularly from 1954 until at least 1997 to review, approve, and renew grant applications and contracts. In addition to SAB members, the ITC Chairman, TIRC/CTR staff members, public relations counsel for TIRC/CTR, and (at times) Defendants' attorneys and scientific guests attended the SAB meetings. Zahn PD, Cipollone v. Liggett, 12/16/1986, 106:3-107:1; Zahn PD, Massachusetts v. Philip Morris, 5/28/98, 78:3-79:5, 80:2-21; Zahn PD, Richardson v. Philip Morris, 12/1/1998, 96:10-16; CTRMIN-SAB000001-1061, 70011735-1757 (JD-090960) (A); CTRMIN-SAB000001-1061 (US 21146) (O); CTRMIN-SAB000070-0074 (US 80382) (A); CTRMIN-SAB000320-0325 (US 80429) (A); CTRMIN-SAB000326-0330 (US 80430) (A); CTRMIN-SAB000337-0341 (US 80432) (A); CTRMIN-SAB000342-0350 (US 80433) (A); CTRMN004320-4323 (US 21148) (O); CTRMN004539-4544 (US 21151) (O); CTRMIN048368-8369 (US 85996) (O); ZN7912-7921 (US 64789) (O); SM0120005-0009 (US 65442) (A); 955011516-1520 (US 32362) (O); TLT0903247-3251 (US 87521) (O); TLT0903189-3193 (US 87522) (O); TLT0903145-3148 (US 87523) (O); TLT0903132-3135 (US 87524) (O); TLT0903116-3117 (US 87525) (O); TLT0903181-3185 (US 87526) (O); TLT0903177-3180 (US 87527) (O); TLT0903166-3169 (US 87528) (O); TLT0903208-3211 (US 88367) (A); TLT0903202-3207 (US 88368) (O); TLT0903197-3201 (US 88369) (O).

81. Many meetings of the SAB had no written record. According to a confidential

report on the December 9, 1981 meeting of the SAB, the following policy regarding meetings was reaffirmed: "to conduct informal 'in house' conferences on specific subjects 'off the record' held without minutes or publication, but not to sponsor open meetings with a resultant publication." This policy was in effect at least ten years prior to the 1981 meeting and continued into the late 1990s. CTRMIN-SAB 000611-0612 (US 80480) (O); Lisanti PD, Richardson v. Philip Morris, 12/8/98, 112:16-21, 114:1-116:18.

82. Contrary to Defendants' assertions that the members of the SAB were disinterested parties who received no monetary compensation from the tobacco companies or from TIRC/CTR, members of the SAB awarded sixteen (out of forty-three) of their fellows on the SAB - over $5 million in grants-in-aid funding between 1954 and 1991. Sommers PD, Cipollone v. Liggett, 10/2/86, 130:4-131:1, 132:16-19; McAllister PD, United States v. Philip Morris, 5/23/02, 250:15-253:11; Zahn PD, Cipollone v. Liggett, 12/18/1986, 388:3-7; Lisanti PD, Engle v. Reynolds, 8/13/97, 111:23-112:3; McAllister WD, 76:16-18.

83. Defendants, through the CTR's Board of Directors, exercised control over the CTR research grant program throughout its existence by approving the amount of funding for the grant program and, after the first few years, by selecting the CTR Scientific Directors and their staff. Zahn PD, Richardson v. Philip Morris, 12/16/98, 459:13-460:9; McAllister PD, United States v. Philip Morris, 5/23/02, 56:5-57:18; USX6390001-0400 at 0012 (US 89555) (O) (CTR Response to Request for Admission No. 112); CTRMN003816-3835 (US 21147) (O). In fact, Helmut Wakeham of Philip Morris complained to David Felton, a BATCo scientist, that finding a Scientific Director to succeed Little after he resigned "was in the hands of the lawyers committee" and the Tobacco Institute without consultation with CTR or company scientists. 10315968-5971 (US 26378) (A), (US 26379) (O), (US 63573) (O).

(4) TIRC/CTR and Research

84. TIRC focused its energies and resources in two areas - public relations and scientific research. First, it served as a sophisticated public relations unit for Defendants, especially in relation to growing public concern about the risks of smoking, by repeatedly attacking scientific studies that demonstrated the harms of cigarette smoke and insisting on the notion of an "open question" regarding cigarette smoking and health. Second, it developed a scientific research program that focused on basic processes of disease and that was distant from, if not completely irrelevant to, evaluating the risks and harms associated with smoking – the very subject that the industry had pledged to pursue through TIRC. Zahn PD, Richardson v. Philip Morris, 12/16/98, 318:16-319:1, 319:3, 325:3-12, 325:20-328:6, 336:15-337:11, 561:21-562:7; Brandt WD, 57:13-23; 82:21-83:8, 127:17-19; Sommers PD, Cipollone v. Liggett, 10/2/86, 73:12-16, 73:20-22, 74:2, 74:8-15.

85. TIRC deftly exploited scientific research for the purposes of public relations. From the outset, the dual functions of TIRC were intertwined, with the scientific program of TIRC always subservient to the goals of public relations. Id., 57:8-11. The dual functions of TIRC were integrally related; both were fully committed to the goals of denying, distorting, and discrediting the substantial scientific evidence of smoking's harms and of reassuring smokers and future smokers. Id., 58:1-4, 124:11-125:1.

86. Defendants' denials kept away many excellent researchers. In an October 1969 memorandum to Ross R. Millhiser of Philip Morris, Helmut Wakeham, Vice President and Director of Research for Philip Morris, expressed concern that "the efforts of the tobacco industry through CTR and the American Medical Association have failed to involve the best investigators. At the beginning of our support of smoking and health research, this failure may

have been connected with our consistent denial of the statistics and our continued assertion that there is nothing to the cigarette causation hypothesis." 1001609594-9595 (US 21437) (O), (US 76162) (O).

87. A year later, Wakeham again discussed CTR's strategy of frequent and public denials, in a December 1970 memorandum to Joseph Cullman, Chairman of Philip Morris and Chairman of the Executive Committee of the Tobacco Institute: "It has been stated that CTR is a program to find out the 'truth about smoking and health.' What is truth to one is false to another. CTR and the Industry have publicly and frequently denied what others find as 'truth.' Let's face it. We are interested in evidence which we believe denies the allegation that cigarette smoking causes cancer." 1000255938-5940 (US 20085) (O).

88. Defendants, through TIRC/CTR and its public relations strategy, were especially effective in identifying and supporting skeptics of the link between smoking and disease. Skeptics were invited to join the Scientific Advisory Board of the TIRC; they and their home institutions were provided with research grants from the TIRC. Their views were effectively solicited and broadcast widely by TIRC and the Tobacco Institute. Brandt WD, 80:12-18.

89. TIRC/CTR funded research through a variety of mechanisms: grants, contracts, CTR Special Staff Services, and CTR Special Projects. ARU1130828-0904 (US 86773) (A) (CTR Response to Interrogatory No. 10, at 43-57). See US FF § I.D(2), infra (for detailed discussion of CTR Special Projects).

90. Virtually none of the research funded by TIRC/CTR centered on immediate questions relating to carcinogenesis and tobacco that could resolve the question of the harms brought about by cigarette smoking. Although some TIRC/CTR-funded researchers explored alternative hypotheses, TIRC/CTR did not typically pursue direct research on cigarettes and

disease. Rather than addressing the constituents in tobacco smoke and their demonstrated effect on the human body, TIRC/CTR directed the predominance of its resources to alternative theories of the origins of cancer centering on genetic factors and environmental risks. At the same time, TIRC/CTR used truisms such as the "need for more research" in order to deflect attention away from what was known. The major thrust of TIRC/CTR was to emphasize that human cancers were complex processes, difficult to study and difficult to understand. Brandt WD, 82:10-12, 85:12-86:3, 120:20-121:11. Most research funded by the SAB was irrelevant to the immediate questions associated with tobacco smoking and health, but it did "create the appearance of [Defendants] devoting substantial resources to the problem without the risk of funding further 'contrary evidence.'" Harris WD, 104:23-105:7.

91. Two of CTR's Scientific Directors, Harmon McAllister and Sheldon Sommers, testified that the basic research funded by CTR was not immediately relevant to smoking and health. McAllister confirmed that the types of research grants funded were "basic medical research on the etiology of diseases that have been epidemiologically linked to smoking. That's our global [sic] - that's the way we operate. Those are the sorts of applications we entertain." McAllister PD, Broin v. Philip Morris, 12/6/93, 46:2-16. Sommers stated that a CTR grant application's relevance to cigarette smoking and health was not the primary factor the SAB used in rating grant applications, but that "[s]cientific merit was of equal or of greater importance than relevance." Sommers PD, Cipollone v. Liggett, 10/2/86, 134:10-22, 135:4-6. Sommers was an SAB member from 1967 to 1989, SAB Chairman from 1970 to 1980, CTR Research Director from 1969 to 1972, and CTR Scientific Director from 1981 to 1987. Sommers PD, Galbraith v. Reynolds, 9/4/85, 10:12-25, 22:7-12, 23:22-24:16; Sommers PD, Rogers v. Reynolds, 12/17/85, 9:11-12, 13:14-18, 14:15-22; Sommers PD, Arch v. American, 7/14/97, 10:21-24, 11:9-24, 13:9-

13, 16:14-21, 95:14-22; Sommers PD, Arch v. American, 7/15/97, 164:18-22.

92. During a four-week visit to the United States in 1958, three British scientists met with representatives of TIRC and TIRC's SAB, as well as representatives of American, Liggett, and Philip Morris. The British scientists reported that "Liggett & Meyers stayed out of TIRC originally because they doubted the sincerity of TIRC's motives and believed that the organization was too unwieldy to work efficiently. They remain convinced that their misgivings were justified. In their opinion TIRC has done little if anything constructive, the constantly reiterated 'not proven' statements in the face of mounting contrary evidence has thoroughly discredited TIRC, and the **SAB of TIRC is supporting almost without exception projects which are not related directly to smoking and lung cancer**." TINY0003106-3116 (US 21369) (A); 105408490-8499 at 8495 (US 21135) (A) (emphasis added), (US 76169) (A); Brandt WD, 94:8-95:17.

93. After another visit to the United States in the fall of 1964, two British scientists wrote in their report: "As we know, CTR supports only fundamental research of little relevance to present day problems." 1003119099-9135 (US 20152) (A).

94. The Defendants understood that TIRC/CTR was funding research concerning cancer as a general issue, rather than the relationship of smoking to cancer. Brandt WD, 121:6-122:14. In January 1968, Addison Yeaman, B&W Vice President and General Counsel, wrote, "Review of SAB's current grants indicates that a very sizable number of them are for projects in what might be called 'basic research' without specific orientation to the problem of the relationship of the use of tobacco to human health." 00552837-2839 at 2837 (US 22968) (A).

95. In addition, Defendants appreciated the delays associated with the basic research approach. Janet Brown, outside counsel for American, explained CTR's strategy of undertaking

only basic research funding, as opposed to funding questions directly related to tobacco and health to Cy Hetsko, Vice President and General Counsel for American, and Addison Yeaman, Vice President and General Counsel for B&W, at a January 1968 meeting. The rationale was that basic research kept alive the Enterprise's open question argument on causation. Yeaman summarized Brown's position as:

> First, we maintain the position that the existing evidence of a relationship between the use of tobacco and health is inadequate to justify research more closely related to tobacco, and
> Secondly, that the study of the disease keeps constantly alive the argument that, until basic knowledge of the disease itself is further advanced, it is scientifically inappropriate to devote the major effort to tobacco.

68-262155-2157 (US 63527) (A).

96. Geoffrey F. Todd, Executive Director of the Tobacco Research Council, an organization in the United Kingdom equivalent to CTR (discussed further at US FF § I.H(2), infra) made several visits to the United States, during which time he met with Defendants' representatives, attorneys, and scientists. After his 1973 trip, Todd wrote: "It was difficult to avoid the sad conclusion that C.T.R. has become a backwater of little significance in the world of smoking and health." 100226995-7033 (US 21134) (O).

97. Throughout the existence of TIRC/CTR, representatives of the member companies and their attorneys were influential in the activities and research undertaken by TIRC/CTR. Beginning in November 1971, CTR staff met semiannually with representatives of the member companies, usually the research directors and general counsel. The all-day meetings were designed to keep members of the Enterprise aware of the status of research funded by Defendants through TIRC/CTR. CTRMIN-MOM000016-0034 at 0018, 0022 (US 21170) (O).

98. The Enterprise, through TIRC/CTR, sought out certain researchers and/or areas of

research and solicited grant applications. Clarence Cook Little admitted that, seeing a line of work that showed promise, TIRC/CTR approached researchers and asked them, "Are any of you willing to try this if we provide your institution with money and you with help?" Little PD, Lartigue v. Reynolds, 10/5-6/60, 2721:21-2722:9, 2800:12-25; Lisanti PD, Small v. Lorillard, 3/31/98, 478:11-480:25.

99. Sheldon Sommers, CTR Scientific Director, testified that CTR frequently initiated research. When asked if CTR suggested particular research for which it would make available grants, Sommers responded, "Yes. I go out all the time looking for opportunities and new ideas and investigators in various fields of biomedicine." Sommers PD, Rogers v. R.J. Reynolds, 12/17/85, 50:19-52:15, 52:22-53:2, 53:7-18; Sommers PD, Cipollone v. Liggett, 10/3/86, 181:15-23, 182:12-183:10; Sommers PD, Small v. R.J. Reynolds, 10/8/97, 176:18-177:11; 85760397-0397 (US 85998) (O).

100. One of the reasons that Paul Kotin decided to resign from the SAB was that he was disturbed by "the going out and requesting the submission of grants, of applications for grants. And I felt this circumvented the original foundation for the SAB, at least for my membership in the SAB." Kotin PD, Falise v. American , 7/6/00, 67:10-69:24. Kotin had served on the TIRC SAB from 1954 to 1965. Kotin PD, Falise v. American , 7/6/00, 9:9-15. Another reason for Kotin's resignation was reported by visitors from the United Kingdom's Tobacco Research Council in October 1964: "The recent [CTR] Annual Report by Dr. Little was severely criticised by the U.S. Surgeon General at a Washington press conference. Dr. Kotin was also highly critical of it and talks privately of resigning from the S.A.B. if another report of the same nature is going to be published next year." 512678484-8499 (US 51653) (O); 1003119099-9135 (US 20152) (A), (US 35649*) (O); 105407261-7329 (JE-34739) (A); see also Kotin PD, Falise v.

American , 7/6/00, 72:19-73:14; Kotin PD, Falise v. American , 7/7/00 190:2-192:17, 197:13-198:2.

101. Similarly, John Craighead, who was an SAB member for approximately one year, was also disturbed by the nature of the CTR research program. Craighead resigned from the SAB in part because he felt that the research did not address the fundamental issues related to tobacco and because of the involvement of CTR Chairman Addison Yeaman into the direction of the CTR research program. Craighead PD, Butler v. Philip Morris, 11/13/96, 47:8-17, 84:13-86:3, 87:10-21, 88:6-10, 93:8-17, 107:19-25; Sommers PD, Small v. R.J. Reynolds, 10/7/97, 10:24-11:12, 12:2-13:19.

102. Sheldon Sommers acknowledged the influence and control wielded by CTR Chairmen and Presidents over the TIRC/CTR research program. All TIRC/CTR Presidents were from tobacco companies, Sommers PT, Cipollone v. Liggett, 4/19/88, 8736:7-12; and, until 1991, each and every TIRC/CTR Chairman was a retired tobacco company executive. McAllister WD, 18:15-16. In a September 1981, Sommers wrote that "new Chairman Hobbs [from RJR] is more interested in basic research so relevance to smoking and health no longer crucial." 85760397 (US 85998) (O); Sommers PD, Cipollone v. Liggett, 10/2/86, 136:8-14. Sommers also testified that, after Addison Yeaman (from B&W) became CTR President and CEO, CTR began initiating more contracts because Yeaman believed that "the program was too diffuse and should be 'targeted'." Sommers PD, Cipollone v. Liggett, 10/3/86, 297:16-298:2.

103. Following CTR's January 1975 annual meeting, the CTR staff was given more control over the grant and contract application process. According to the meeting minutes: "The Chairman stated that in the continued effort to bring maximum information to the Scientific Advisory Board preliminary investigation is being made by the Council's staff. . . . . Following

this, the proposals are then submitted for study by a subcommittee of the Board [SAB]. . . ." CTRMIN-MOM000070-0087 at 0071 (US 32618) (O).

(5) TIRC/CTR and Public Relations

104. In December 1953, Timothy Hartnett, President of B&W, had summarized the crisis of the industry in the following terms:

> But cancer research, while certainly getting our support, can be only half an answer. . . . **The other side of the coin is public relations . . . [which] is basically a selling tool and the most astute selling may well be needed to get the industry out of this hole.** . . . It isn't exaggeration that no public relations expert has ever been handed so real and yet so delicate a multi-million dollar problem. . . . Finally, one of the roughest hurdles which must be anticipated is how to handle significantly negative research results, if, as, and when they develop.

1005039779-9783 (US 20190) (A) (emphasis added); Brandt WD, 55:22-56:11.

105. From the outset, the dual functions of TIRC – public relations and scientific research – were intertwined. Ernest Pepples, in an internal B&W letter dated April 4, 1978, acknowledged:

> Originally, CTR was organized as a public relations effort. The industry told the world CTR would look at the diseases which were being associated with smoking. There was even a suggestion by our political spokesmen that if a harmful element turned up the industry would try to root it out.

680212421-2423 at 2422 (US 54024) (A); 682338651-8653 (US 22899) (O).

106. One name initially proposed for TIRC/CTR, the "Tobacco Industry Committee for Public Information," reflected its public relations purpose. However, John Hill of the public relations firm Hill & Knowlton expressed skepticism that a public relations strategy that simply argued that the harms of cigarette smoking were "unproven" would succeed. Such a campaign might appear self-interested in the face of the serious health concerns being raised. Brandt WD,

54:11-19. As a result, Hill suggested that the industry should sponsor new research and use "[t]he word 'research' . . . in the name of the Committee to establish the fact that the group will carry on or sponsor fundamental scientific research and will not be solely an information agency." TLT0900422-0430 at 0424 (US 88169) (A); TLT0901541-1545 at 1542 (US 87225) (A); TLT0901546-1549 (US 88191) (A).

107. A white paper titled "A Scientific Perspective on the Cigarette Controversy" was one of the first public relations projects undertaken by Hill & Knowlton on behalf of its new client, TIRC. TLT0901688-1707 (US 88386) (A). Hill & Knowlton/TIRC undertook the project because Defendants felt it necessary and urgent "to present to leaders of public opinion the fact that there was no unanimity among scientists regarding the charges against cigarettes." TLT0902041-2064 at 2054 (US 88360) (A), (US 88364) (A). The twenty-page booklet consisted of published quotations from some three dozen scientists and researchers who denied that there was any proof that linked smoking and lung cancer or who questioned the validity of statistical methods and the conclusions drawn from recent laboratory experiments with mice. TLT0901688-1707 (US 88386) (A); TLT0902041-2064 at 2054 (US 88360) (A), (US 88364) (A); CTRMN004924-4927 (US 21152) (A).

108. "A Scientific Perspective on the Cigarette Controversy" was released April 14, 1954, with 205,000 copies being printed. CTRMN004924-4927 (US 21152) (A). The booklet was sent to 176,800 doctors, as well as to deans of medical and dental colleges. TLT0902954-2955 (US 88388) (A). The booklet with a press release went to a press distribution of 15,000, including: editors of daily and weekly newspapers, consumer magazines, veterans magazines, and medical and dental journals; news syndicate managers; business editors; editorial and science writers; radio and television commentators; news columnists; and Members of Congress. Id.;

CTR-TIRC-MIN000001-0252 at 0006, 0007, 0010 (JD-093292) (A); TLT0900159-0161 (US 87720) (O).

109. In the June 1954 "Public Relations Report and Recommendations for Tobacco Industry Research Committee," Hill & Knowlton boasted about the success of its public relations efforts for TIRC: "Committee headquarters is steadily gaining recognition as a source of authoritative information on the subject of tobacco and health. The result is that news and magazine writers, columnists and commentators are turning to the Committee and its public relations counsel for more and more information." TLT0901558-1563 at 1559 (US 88394) (A); 514806129-6131 (US 20860) (O).

110. Timothy Hartnett became the full-time chairman of TIRC on July 1, 1954, the day after his retirement as President of B&W, and continued to advance the Defendants' "open question" position in that role. In the press release generated by Hill & Knowlton announcing his appointment, Hartnett repeated the two commitments that TIRC had made in its Statement of Purpose and in its bylaws, i.e., (1) to carry "comprehensive and objective scientific and statistical research to establish the facts," and (2) "report them to the public." After stating that the "tobacco industry is determined to find the answers to the public's questions about smoking and health," Hartnett continued:

> It is an obligation of the Tobacco Industry Research Committee at this time to remind the public of [some] essential points: (1) There is no conclusive scientific proof of a link between smoking and cancer; (2) Medical research points to many possible causes of cancer; . . . (5) The millions of people who derive pleasure and satisfaction from smoking can be reassured that every scientific means will be used to get all the facts as soon as possible.

Brandt WD, 56:12-23; TLT0901831-1832 (US 88398) (A), (US 88043) (A).

111. Wilson Hoyt, who was initially a Hill & Knowlton employee and who had no

scientific background whatsoever, held positions as TIRC/CTR Executive Secretary, Executive Director, Executive Vice President, and President in his three decades with TIRC/CTR. Brandt WD, 58:23-59:2. In his 1955 administrative reports as TIRC Executive Secretary and Hill & Knowlton executive, Hoyt affirmed the relationship of public relations and research in TIRC's program. In his April 1955 report, he wrote, "Essentially, the major purposes of the TIRC are Research and Public Relations. Our job is to maintain a balance between the two, and to continue to build soundly so that at all times Research and Public Relations complement each other. In that way we intend to assume the mantle of leadership and, ultimately, to create a condition where the public will look to the TIRC for answers rather than to others." CTR-TIRC-MIN000033-0052 (US 33006) (A); Brandt WD, 83:9-23. In his January 1955 report, he wrote, "Within this framework we have furthered and coordinated the two major purposes for which the Committee was organized namely, the public relations phase and the research program." CTR-TIRC-MIN000001-0252 at 0018-0032 (JD-093292) (A); CTRMN003816-3835 at 3826 (US 21147) (O).

112. Despite Defendants' assertion that TIRC/CTR was solely an organization that funded independent research for the purpose of finding answers to smoking and health question, it served principally as an effect public relations tool and information conduit. In a July 1963 memorandum, Addison Yeaman, General Counsel for B&W, wrote: "The TIRC cannot, in my opinion, provide the vehicle for such research. It was conceived as a public relations gesture and (however undefiled the Scientific Advisory Board and its grants may be) it has functioned as a public relations operation." 689033412-3416 (US 22034) (A); Brandt WD, 116:17-117:22; VXA2510190-0194 (US 63599) (A); 2046754905-4909 (US 20477) (O); Duffin PD, Cipollone v. Liggett, 1/23/86, 118: 14-17.

113. A document detailing discussions held among CTR executives between November 10 and 15, 1971, noted the likelihood that CTR would continue public relations activities:

> [T]here was confidence that CTR would not be primarily a public relations tool, tacitly admitting that this was what it had been previously. On the other hand, there was equal confidence in future CTR research would be steered clear of any embarrassing connection with smoking as a cause of disease. The second objective seems more likely to be achieved than the first.

100249579-9627 at 9589 (US 34628) (O).

114. TIRC's research program never escaped its public relations origins. As Alexander Spears, Lorillard's Director of Research, explained in 1974:

> Historically, the joint industry funded smoking and health research programs have not been selected against specific scientific goals, but rather for various purposes such as public relations, political relations, position for litigation, etc. Thus, it seems obvious that reviews of such programs for scientific relevance and merit in the smoking and health field are not likely to produce high ratings. In general, these programs have provided some buffer to the public and political attack of the industry, as well as background for litigious strategy.

01421596-1600 (US 20049) (A); 83910516-0520 (US 55955) (A); Brandt WD, 123:14-124:1.

115. In a 1975 speech to CTR members, Addison Yeaman gave his observations on the Council, among them he noted, "It is my sober judgement that CTR, as it now operates is the greatest public relations asset you have in the problem of tobacco and health." 11303014-3020 at 3017 (US 86005) (A) (emphasis in original). See US FF § I.B(6) and I.C(3), infra (for more discussion of public relations activities).

(6) TIRC/CTR Publications and Public Statements

(a) TIRC/CTR Newsletters

116. From October 1957 to at least 1968, first TIRC and then the Tobacco Institute

published a newsletter variously named *Tobacco and Health*, *Research Reports on Tobacco and Health*, and *Reports on Tobacco and Health Research*. The newsletter was published two or three times a year; contained articles that disputed the relationship between smoking and disease; criticized research supporting such a relationship; and emphasized that differing opinions existed regarding tobacco use and health. Brandt WD, 84:10-85:9; TIMN0000713-0714 (US 21264) (O); TIKU000006665-6668 (US 86007) (O); TIMN0000719-0722 (US 86011) (O); TIMN0000723-0726 (US 86012) (O); TIMN0000727-0728 (US 86013) (O); TIMN0000733-0734 (US 86014*) (O); TIMN0000736-0738 (US 86015*) (O); TIMN0000739-0744 (US 86016) (O); TIMN0000745-0747 (US 86017) (O); TIMN0000748-0750 (US 86045) (O); TIMN0000751-0756 (US 86018) (A); TIMN0000757-0762 (US 86019) (O); TIMN0000763-0774 (US 86020) (O); TIMN0000775-0780 (US 86021) (O); TIMN0000781-0784 (US 86022) (O); TIMN0000785-0788 (US 86023) (O); TIMN0000789-0792 (US 86024) (O); TIMN0000793-0796 (US 86025) (O); TIMN0000797-0800 (US 86026) (O); TIMN0000801-0804 (US 86027) (O); TIMN0000805-0808 (US 86028) (O); TIMN0000809-0812 (US 86029) (O); TIMN0123324-3327 (US 21282) (O); TIMN0130693-0696 (US 62844) (O); TIMN0130707-0710 (US 62845) (O); TIMN0130728-0731 (US 62847) (O); TIMN0130802-0803 (US 62849) (O); TIMN0130816-0817 (US 62851) (O); TIMN0000713-0714 (US 21264) (O); TIMN0123276-3279 (US 77059) (O); TIMN0123304-3307 (US 77060) (O); TIMN0130687-0690 (US 77068) (O); TIMN0130742-0745 (US 77069) (O); TIMN0130749-0752 (US 77070) (O); TIMN0130778-0781 (US 77071) (O); TITX0006679-6682 (US 77111) (O); 502367882-7887 (US 49132) (O); TIMN0123314-3317

(US 21345) (O); TITX0006691-6694 (US 86044) (O); TIMN0000748-0750 (US 86045) (O); TIMN0130810-0811 (US 62850) (O); TIMN0130735-0738 (US 62848) (O); TIKU000006559-6562 (US 86048) (O); TIKU000006545-6548 (US 86050) (O); TIMN0130756-0761 (US 86051) (O); TIMN0130714-0717 (US 62 846) (O); TIKU000006538-6541 (US 86052) (O); 511018410-8413 (US 22459) (A); MNAT00515648-5651 (US 72185) (A).

117. Initially, TIRC was to publish the *Tobacco and Health* newsletter. This provoked a strong reaction from members of the Scientific Advisory Board who received advance copies of the first issue. In a letter to SAB Chairman Clarence Little, SAB member McKeen Cattell classified the new publication as "obviously propaganda material" and expressed serious concern about the effect it would have on the SAB's program. 701235030-5030 (US 31474) (A). Julius Comroe, another SAB member, advised that the SAB and TIRC should not be identified with the *Tobacco and Health* publication. 70123533-3533 (JD-093608) (A); 70123536-3536 (JD-093610) (A).

118. In response to these concerns, the Tobacco Information Committee, a subcommittee of TIRC, was formed in late 1957, from what was previously known as the TIRC Public Relations Committee. The committee was comprised of public relations employees from the companies and public relations counsel representing the companies, and one of its principal functions was to publish the *Tobacco and Health* newsletter. The first two issues of the *Tobacco and Health* newsletter were issued under the name of the Tobacco Information Committee and financed from the TIRC budget. 70123534-3534 (JD-093609) (A); CTR-TIRC-MIN000001-0252 at 0125-0127 (JD-093292) (A); CTRMN039046-9106 at 9056 (JD-092825) (A).

119. In 1958, after the first two issues were published, the Tobacco Institute (discussed further at US FF § I.C., infra) assumed responsibility for publishing the *Tobacco and Health* newsletter on behalf of Defendants. Even when published by the Tobacco Institute, there was close coordination with TIRC, and most editorial material derived from TIRC annual reports, the TIRC library, and other materials available through TIRC. CTR-TIRC-MIN000001-0252 at 0154, 0162 (JD-093292) (A). One issue of the *Tobacco and Health* newsletter, "reaching all doctors and dentists in the country," was devoted to a review of the 1958 TIRC Report of the Scientific Director, and, as a result, "requests into the hundreds have been received asking for complete copies of the [report]." CTR-TIRC-MIN000001-0252 at 0162 (JD-093292) (A).

120. A 1968 *Tobacco and Health Research* procedural memorandum from Hill & Knowlton to William Kloepfer, Tobacco Institute Vice President, stated: "Most papers used in TH&R come from the Council for Tobacco Research Library through advance distribution of Ken Austin of CTR." In addition, the Tobacco Institute sent three sets of tentative layout, headlines, and copy for each issue to CTR's Wilson Hoyt requesting that he ask Drs. Little and Hockett for their comments and suggestions. T13890-3893 (US 21614) (A). Moreover, Leonard Zahn, who worked for TIRC/CTR's public relations counsel Hill & Knowlton, was in charge of preparing and compiling the issues of *Tobacco and Health*. Zahn PD, Cipollone v. Liggett, 12/18/1986, 344:9-22.

121. The *Tobacco and Health* newsletter was a public relations vehicle used to influence health professionals. Its primary purpose was to present directly to the medical and scientific communities research material related to tobacco and health – material that frequently did not deal with tobacco but suggested other causes of cancer, such as viruses, air pollution, and previous chest ailments. Its secondary purpose was to attract the attention of the lay press to

studies that challenged the validity of research linking cancer to cigarette use. A news release with each issue attracted press attention; one or both of the major wire services usually carried stories. In order to combat the effects of the *Tobacco and Health* newsletter, four non-governmental health agencies began issuing a *Medical Bulletin on Tobacco* in 1962. TIMN0081443-1457 at 1443-1444 (US 21307) (O); Brandt WD, 84:10-85:9.

122. In 1962, circulation of the newsletter reached 520,000, with about 315,000 copies going to doctors, dentists, and medical schools, and the rest going to writers and editors, public opinion leaders, all members of Congress, brokerage houses, tobacco groups, farm and supplier groups, industry groups, and member companies. Publication of research results helped make news and was coordinated with other publicity efforts. TIMN0070640-0656 at 0643 (US 21299) (O); TIMN0070657-0674 at 0661 (US 22983) (O); CTRMN015416-5435 at 5416-5417, 5421 (US 79889) (O); CTRMN015485-5502 at 5489 (US 79893) (O); CTRMN015412-5415 at 5415 (US 79888) (O).

123. In a procedural memorandum, Hill & Knowlton delineated specific criteria for selecting reports to be included in *Tobacco and Health*. The memorandum stated that research did not have to always deal specifically with tobacco; for example, research which suggested that other factors may cause diseases associated with smoking should be included; "[t]he most important type of story is that which casts doubt on the cause and effect theory of disease and smoking." Brandt WD, 119:7-21; TIMN00721488-1491 (US 63575) (A), (US 21302) (A), (US 21614) (A); CTRPUBLICSTMT001270-1281 (US 32646) (O).

124. The *Tobacco and Health* newsletters often contained public statements reaffirming promises the Defendants had made about TIRC: "[TIRC's] purpose is solely to obtain new information and to advance human knowledge in every possible phase of the tobacco and

health relationship." 511018410-8413 (US 22459) (A).

(b) TIRC/CTR Annual Reports

125. TIRC/CTR published and issued Annual Reports from 1956 through 1997. McAllister WD, 20:10-11. Copies of the TIRC/CTR Annual Reports were sent to libraries, colleges and universities, deans of medical schools, science and medical editors and writers for the popular press, CTR grant recipients, and members of professional medical societies. McAllister WD, 20:14-24; Glenn PD, Sontag v. U.S. Tobacco, 10/16/96, 34:4-23; Sommers PD, Rogers v. R.J. Reynolds, 12/17/1985, 18:8-19.

126. The TIRC/CTR Annual Reports routinely included, in varying formats: abstracts of articles published by researchers funded by TIRC/CTR grants; brief statements regarding organization and policy; lists of SAB members and their affiliations; lists of current and former grantees; lists of ongoing and completed projects; and research summaries, commentaries, rationales, and observations. Zahn PD, Cipollone v. Liggett, 12/16/1986, 79:4-13, 81:1-9; CTRAR000001-0013 (JD-090000) (A); CTRAR000015-0040 (JD-090001) (A); CTRAR000041-0073 (JD-090002) (A); CTRAR000074-0109 (JD-090003) (A); CTRAR000110-0147 (JD-090004) (A); CTRAR000148-0185 (JD-090005) (A); CTRAR000186-0216 (JD-090006) (A); CTRAR000217-0253 (JD-090007) (A); CTRAR000254-0293 (JD-090008) (A); CTRAR000294-0334 (JD-090009) (A); CTRAR000335- 0376 (JD-090010) (A); CTRAR000377-0433 (JD-090011) (A); CTRAR000434-0477 (JD-090012) (A); CTRAR000478-0526 (JD-090013) (A); CTRAR000527-0580 (JD-090014) (A); CTRAR000581- 0629 (JD-090015) (A); CTRAR000630-0675 (JD-090016) (A); CTRAR000676-0717 (JD-090017) (A); CTRAR000719-0763 (JD-090018) (A); CTRAR000764-0807 (JD-090019) (A);

CTRAR000808-0861 (JD-090020) (A); CTRAR000862-0916 (JD-090021) (A); CTRAR000917-0974 (JD-090022) (A); CTRAR000975-1036 (JD-090023) (A); CTRAR001037-1097 (JD-090024) (A); CTRAR001098-1172 (JD-090025) (A); CTRAR001173-1246 (JD-090026) (A); CTRAR001247-1355 (JD-090027) (A); CTRAR001356-1451 (JD-090028) (A); CTRAR001452-1547 (JD-090029) (A); CTRAR001548-1649 (JD-090030) (A); CTRAR001650-1767 (JD-090031) (A); CTRAR001768-1880 (JD-090032) (A); CTRAR001881-2003 (JD-090033) (A); CTRAR002004-2149 (JD-090034) (A); CTRAR002150-2287 (JD-090035) (A); CTRAR002288-2465 (JD-090036) (A); CTRAR002466-2619 (JD-090037) (A); CTRAR002620-2784 (JD-090038) (A); 70000302-0618 (JD-090039) (A); 85865669-5692 (US 22954) (A); 85865742-5804 (US 21082) (A); 85865805-5873 (US 21083) (A); 85865874-5946 (US 21084) (A); 01141473-1541 (US 20039) (A); 85866020-6080 (US 21085) (A); 1002315412-5483 (US 20125) (A); 1002315484-5561 (US 20126) (A); 1002315562-5640 (US 20010) (A); 1002315641-5722 (US 20011) (A); 1002315723-5834 (US 20127) (A); 501773418-3466 (US 20686) (A); 1002315835-5920 (US 21800) (A); 85865693-5741 (US 22237) (O); 1005082487-2584 (US 20202) (O); 1005082585-2690 (US 20203) (O); 1005082691-2788 (US 20012) (O); 2028556086-6177 (US 20428) (O); 1002316312-6397 (US 20128) (O); 1002316398-6485 (US 20129) (O); 1002316486-6571 (US 20130) (O); 1002316572-6677 (US 20131) (O); 1002316678-6780 (US 20132) (O).

127. From 1956 until 1993, TIRC/CTR public relations counsel Leonard Zahn was in charge of preparing and compiling the Annual Reports, making distribution recommendations, and drafting the Introduction section for some of them. Zahn PD, Cipollone v. Liggett, 12/18/1986, 368:23-369:4, 369:10-370:14, 371:5-9, 371:11-372:8, 379:16-381:24, 382:17-21;

Zahn PD, Massachusetts v. Philip Morris, 5/28/98, 41:22-45:12, 48:2-7, 49:6-17, 49:22-51:1, 51:14-21, 52:8-23; CTRMN015594-015613 (US 79903) (O). In a December 1972 memo attached to his proposed outline for the next report, Zahn acknowledged that "[t]he research section of the CTR [Annual] Report is based on published articles by grantees and, unfortunately, not much directly related to tobacco appeared in the last 18 months." CTRMN015614-015616 (US 79904) (O).

128. The commentary in the Annual Reports uniformly challenged the hypothesis that smoking was linked to lung cancer and emphasized that data regarding smoking and health were controversial, contradictory, and inconclusive. For example:

- 1957 Report of the Scientific Director ("sound medical and experimental knowledge of tobacco use is relatively limited, at times contradictory, and often conjectural rather than factual. . . . There is not known today any simple or quick way to answer the question of whether any one factor has a role in causing human lung cancer . . . no one has established that cigarette smoke, or any one of its known constituents, is cancer causing to man. . . . Members of the [TIRC SAB] Board take the general position that definitive conclusions or predictions of individual risks are unwarranted by the present imperfect state of knowledge in the complex field of lung cancer causation," and describing cancer as "this so-called constitutional disease");

- 1958 Report of the Scientific Director ("a problem may well be obscured, and its solution delayed, by the soothing acceptance of an oversimplified and immature [tobacco theory] hypothesis. . . . The proponents of the tobacco theory have generated increasingly intensive and extensive propaganda. . . . As a result, a non-scientific atmosphere, conducive to prematurity, unbalance, and inadequacy of public judgement, has pervaded the whole field. . . . The prohibition concept discounts or ignores all considerations of smoking benefits in terms of pleasure, relaxation, relief of tension or other functions.");

- 1961 Report of the Scientific Director ("[T]hose who most actively promote this [smoking-lung cancer] hypothesis have consistently ignored or, at best, have minimized the fact that numerous directly relevant experiments either have failed to support the hypothesis or have provided only weak or uncertain data.");

- 1963-64 Report of the Scientific Director ("After 10 years the fact remains that knowledge is insufficient either to provide adequate proof of any hypothesis or to define the basic mechanisms of health and disease with which we are

concerned.");

- 1964-65 Report of the Scientific Director ("[E]vidence to support the thesis that cigarettes exercise a direct carcinogenic effect on man has not been forthcoming.");

- 1978 Report of the Council for Tobacco Research-U.S.A., Inc. ("[T]he complex etiology of these constitutional diseases [cancer, heart disease, chronic pulmonary ailments] remains unraveled. These diseases have been associated statistically with smoking, but such associations are not proof of cause and effect.").

CTRAR000015-0040 (JD-090001) (A); 501773418-3466 (US 20686) (A); Brandt WD, 86:19-87:20; 85865693-5741 (US 22237) (O); CTRAR000041-0073 (JD-090002) (A); 85865742-5804 (US 21082) (A); CTRAR000148-0185 (JD-090005) (A); 01141473-1541 (US 20039) (A); CTRAR000217-0253 (JD-090007) (A); 1002315412-5483 (US 20125) (A); CTRAR000254-0293 (JD-090008) (A); 1002315484-5561 (US 20126) (A); CTRAR000808-0861 (JD-090020) (A); 1002316572-6677 (US 20131) (O).

129. For more than two decades, the commentaries in the Annual Reports also discounted the conclusions reached by the public health community and the Surgeon General linking smoking and disease and presented a view parroting the "open question" position of the tobacco industry. 515709297-9340 (US 20866) (O). One firm that evaluated the content of the Annual Reports for the industry wrote: "The aim of [Little's] summations, much too apparently, seems to be to protect smoking." MNAT00515749-5762 at 5752 (US 63570) (A); Brandt WD, 122:15-123:13; Lisanti PD, Small v. Lorillard, 3/31/98, 454:5-14.

130. A June 20, 1984 memorandum from Wendell Stone, attorney at Shook, Hardy & Bacon, during the Cipollone litigation, acknowledged the bias of CTR/TIRC's annual reports. Stone commented that the reports, especially the early ones, "contained lengthy commentary . . . which read much like industry position papers." Stone also concluded:

The TIRC/CTR commentary on research did not always seem to

> conform fully to the positions taken or implied in the abstract. For example, with respect to the Leuchtenberger inhalation research, the abstracts in the annual reports tend to give the impression that these researchers did in fact have a good animal model of lung cancer production by smoke inhalation. However, commentary on this research in the front material to the reports tended to argue away the relevance of the results.

515709297-515709340 (US 20866) (O).

(c) TIRC/CTR Press Releases and Other Public Statements

131. TIRC/CTR, with the assistance of public relations counsel Hill & Knowlton, and later Leonard Zahn, was quite effective in making certain that the Defendants' position of "no proof" and the need for "more research" reached the national media, and thus the public. Typically news accounts of new medical findings would be accompanied by a press release or statement from TIRC/CTR insisting that "nothing new" had been found and the studies were "merely" statistical. Brandt WD, 78:18-79:2, 119:22-120:15. Moreover, TIRC/CTR was effective in mobilizing a relatively small group of skeptics and amplifying their views as if they were equal in number and significance to the scientific consensus about the harms of smoking (discussed in detail at US FF §§ III.A., infra). Brandt WD, 79:6-8, 90:20-92:5; see, e.g., 500518759-8761 (US 20636) (A) (1958 year-end Hill & Knowlton/TIRC press release in which TIRC Chairman Timothy Hartnett asserts that "scientists of high professional standing have produced additional evidence and opinions that challenge the validity of broad charges against tobacco use"); 503283464-3467 (US 22981) (A) (TIRC's Clarence Cook Little's November 1959 response to Surgeon General Burney' statement that begins, "Today, more than ever before, scientific evidence is accumulating that conflicts with or fails to support the tobacco-smoking theories of lung cancer."); 500518873-8875 (US 63601) (A) (1960 Hill & Knowlton/TIRC press release quoting Little and titled "New Evidence Shows Complexities of Lung Cancer, Scientist

[Little] Says"); 00552685-2690 (US 47724) (O) (1970 Leonard Zahn/CTR press release quoting Little that begins, "A considerable number of studies by independent scientists raise questions as to whether smoking has actually been shown to be a health hazard"), 60028206-8210 (US 53301) (O); 670307882-7891 (US 21867) (A), 670307882-7883 (US 63574 (A) (1969 CTR press release quoting Little that begins, "The scientist [Little] who has been associated with more research in tobacco and health than any other person declared today that 'there is no demonstrated causal relationship between smoking and any disease. The gaps in knowledge are so great'[.]"); CTRPUBLICSTMT001241-1545 at 1265 (JD-043276) (A) (1970 Leonard Zahn/CTR press release quoting Little on genetic and environmental factor theories); 500518873-8875 (US 20635) (A); 500015901-5905 (US 47778) (A).

132. The Enterprise directed public attention to TIRC/CTR's research and based public statements and press releases upon it in order to have the public believe that the tobacco industry was objectively researching the relationship between smoking and disease and to perpetuate the Defendants' open controversy position. TIRC/CTR news releases selectively used TIRC/CTR-funded research results to challenge the charges of health risks from smoking.

133. The relationship between TIRC/CTR and Hill & Knowlton remained close for many years. Because TIRC had no headquarters and no staff upon its formation, Hill & Knowlton provided a working staff and temporary office space and assigned one of its experienced executives, Wilson Hoyt, to serve as Executive Secretary for the TIRC. In early 1956, the TIRC Executive Committee approved the relocation of TIRC's offices to the building where Hill & Knowlton's offices were located. At their January 29, 1964 meeting, the TIRC Executive Committee agreed to immediately transfer seven Hill & Knowlton employees, including Hoyt, to TIRC. TLT0902041-2064 (US 88364) (A); 93218985-8986 (US 21116) (A);

TLT0900114-0115 (US 88402) (A); CTRMN003816-3835 at 3825 (US 21147) (O).

134. Even after the Tobacco Institute (discussed further at US FF § I.C., infra) was created in 1958, TIRC/CTR continued its public relations activities with the assistance of public relations counsel Hill & Knowlton, and later Leonard Zahn. 93218985-8986 (US 21116) (A); 70057072-7073 (US 21983) (O); 512678484-8499 (US 51653) (O).

135. Hill & Knowlton provided public relations services for TIRC/CTR from 1954 until 1964 and for the Tobacco Institute from 1958 until 1968, and also provided consulting services to the Tobacco Institute in 1979 and again in 1987 through 1991. USX6390001-0400 at 0012 (US 89555) (O) (CTR Response to Request for Admission No. 113). See also William Adams PD, United States v. Philip Morris, 6/19/02, 495:5-17. Leonard Zahn was an integral part of TIRC/CTR's public relations program - first as an employee of Hill & Knowlton assigned to the TIRC account, and later, on his own, as primary public relations counsel for CTR. Leonard Zahn was hired by Hill & Knowlton in 1955 to work on the TIRC account. In 1969, Zahn resigned from Hill & Knowlton; formed his own company, Leonard Zahn & Associates; and was appointed CTR's public relations counsel. Zahn PD, Cipollone v. Liggett, 12/16/86, 9:19-21, 10:4-8, 43:17-20, 44:12-20, 45:15-18, 46:5-7, 16-17; Zahn PD, Massachusetts v. Philip Morris, 5/28/98, 48:15-22, 58:8-17, 59:9-17; Zahn PD, Richardson v. Philip Morris, 12/1/98, 16:9-17:8, 21:21-22:6, 25:13-26:16; Zahn PD, Richardson v. Philip Morris, 12/16/98, 308:7-14. Zahn & Associates served as CTR public relations counsel through 1993 and was paid $127,053 by CTR that last year. CTRMIN-BD 000001-0303 at 0277, 0283 (JD-093208) (A). During his decades with TIRC/CTR, Zahn attended and reported on scientific conferences, attended SAB meetings, organized press conferences, served as liaison between CTR and the Tobacco Institute, prepared articles, and drafted press releases and public statements as well as the annual reports for CTR.

Zahn PD, Richardson v. Philip Morris, 12/16/98, 308:7-14; McAllister WD, 188:20-189:5; Kornegay PD, Cipollone v. Liggett, 12/5/84, 529:4-530:10; 70124410-4414 (US 31512) (O); CTR98CONG00070-0070 (US 25897) (O); CTRMN015360-5360 (US 79868) (O); CTRMN015361-5361 (US 79869) (O); CTRMN015362-5365 (US 79870) (O); CTRMN015370-5371 (US 79873) (O); CTRMN015380-5381 (U. S. Ex. 79877) (O); CTRMNZN475-477 (US 21160) (O).

C. Tobacco Institute

(1) Formation of the Tobacco Institute

136. By mid-1956, TIRC's dual functions, public relations and research, had caused growing disquiet and resentment on several fronts. Some SAB members had always wanted a more distinct separation between the SAB and TIRC. As early as October 1954, the SAB "recognized the need for a more affirmative informational approach by the TIRC, and expressed the feeling that it would be in order for the Committee [TIRC] to take more positive action on its own through Mr. Hartnett as chairman without, at the same time, drawing the Advisory Board or the research program into such utterances." CTRMN004227-4232 at 4230 (US 86073) (A).

137. Concern and dissent had grown about TIRC making partisan arguments on behalf of the industry while at the same time sponsoring research that the industry wanted to be perceived as objective. Brandt WD, 90:4-9; Zahn PD, Massachusetts v. Philip Morris, 5/28/98, 98:25-99:16; BWX0011174-1187 at 1176 (US 21773) (O). In February 1958, a member of the SAB, who had been unable to attend the February SAB meeting, had written a letter which was read at the meeting. The SAB member objected to public statements which had been made by Clarence Cook Little, contending that when Little spoke as Scientific Director of the TIRC, the inference was that Little was also speaking for the SAB. CTRMN039046-9106 at 9055 (JD-

092825) (A). The dissenting SAB member indicated that, unless a more distinct divorce could be established between the SAB and TIRC, he felt he could not continue to serve on the SAB. He was joined in this by two other SAB members. CTR-TIRC-MIN000001-0252 at 0142 (JD-093292) (A); 681879254-9715 at 9391 (US 21020) (A). According to SAB member Paul Kotin, members of the TIRC SAB made quite clear "the inadvisability and downright unacceptability" of the SAB or its members being quoted in TIRC press releases and public statements concerning the smoking and health controversy. Kotin PD, Falise v. American Tobacco, 10/31/00, 348:25-352:14.

138. On the other hand, some members of the Enterprise wanted an organization that would take a much more aggressive public relations stance to counter arguments linking smoking and disease and to oppose proposed labeling legislation facing the industry. BBAT030581-0582 (US 22058) (O); MNAT00724279-4280 (US 22996) (O); TLT0900385-0389 (US 88209) (A).

139. In order to protect the public relations capital invested in TIRC, Defendants created a separate non-profit corporation, the Tobacco Institute, for more aggressive public relations and political lobbying. 93481139-1140 (US 21117) (A). With regulatory initiatives on the horizon, especially proposals to label cigarettes as hazardous, John Hill had advised the creation of a trade association that would not have the limitations associated with TIRC. Brandt WD, 88:20-90:3.

140. The creation of a separate organization was "hit upon as a way of keeping Little inviolate and untainted in his ivory tower while giving a new group a little more freedom of action in the public relations field . . . [T]he legal people were especially interested in this argument because they thought of Dr. Little as a potential witness and were not anxious to have him making public statements which could compromise his usefulness to them in court." Brandt

WD, 90:4-19; BWX0011174-1187 at 1176 (US 21773) (O).

141. In January 1958, twelve manufacturers of cigarettes, smoking and chewing tobacco, and snuff jointly announced the formation of the Tobacco Institute. The companies forming the Tobacco Institute included Defendants American, B&W, Liggett, Lorillard, Philip Morris, and Reynolds. 93481139-1140 (US 21117) (A).

142. The Tobacco Institute was incorporated in New York State, TIMN0010606-0609 (US 21291) (A), TIMN0011255-1260 (US 22250) (O), and the Tobacco Institute bylaws were adopted at the meeting of the incorporators and members held on January 29, 1958. TIMN0005705-5712 at 5706 (US 21290) (A); 1005136918-6933 (US 20223) (O).

143. The Tobacco Institute had a Board of Directors "composed in a fashion similar to that of the Council for Tobacco Research" and an Executive Committee consisting of the chief executive officers of the major tobacco companies, but was "run by a committee of [] lawyers, one from each of the major member tobacco companies." 044227839-7844 (US 20066) (O).

144. The Tobacco Institute Board of Directors held its first meeting on January 30, 1958. Former Congressman James Richards of South Carolina was elected President and Executive Director; Joseph F. Cullman, III, President of Philip Morris, was elected Treasurer; and Chandler Kibbe, Vice President of Philip Morris, was elected Assistant Treasurer. Among those elected to membership at this meeting were American, Liggett, Lorillard, Philip Morris, and Reynolds. An Executive Committee was set up, and appointed as members were Cullman; Benjamin Few, President of Liggett; Bowman Gray, Chairman of Reynolds; Lewis Gruber, President and Chairman of Lorillard; and J. Whitney Peterson, President of United States Tobacco. TIMN0005705-5712 at 5705, 5707-5711 (US 21290) (A).

145. At that first meeting of the Board of Directors, Hill & Knowlton was appointed

Tobacco Institute public relations counsel, and Covington & Burling was appointed Tobacco Institute legal counsel. Id.; USX6390001-0400 at 0012 (US 89555) (O) (CTR Response to Request for Admission No. 113). In addition to Covington & Burling, the Tobacco Institute also had a relationship with Shook, Hardy & Bacon. A May 1982 letter from William Shinn, Shook, Hardy & Bacon, to Robert Sachs, Counsel for B&W, and Arthur Stevens, General Counsel for Lorillard, described this relationship. Shinn divided the law firm's activities into four categories: Tobacco Institute Clearance Procedures, Tobacco Institute Committees, Science and Research, and General. Clearance procedures were defined as a number of standard operating procedures in examining Tobacco Institute materials with potential smoking and health overtones. Tobacco Institute Committee work involved attending Committee of Counsel, Communications Committee, and Executive Committee meetings. See US FF § I.C(4), infra (for detailed discussion of Tobacco Institute Committees). Science and Research work primarily concerned the development of special projects and industry witnesses. General work was a catchall category with activities ranging from literature review, for the purposes of isolating possible expert witnesses, to appearances at the Tobacco Institute's College of Tobacco Knowledge (discussed in detail at US FF § I.C(5), infra). 521043046-3050 (US 20891) (O); 2015035387-5391 (US 36651) (A).

146. Members of the Enterprise convened regularly between 1958 and 1998 at these Tobacco Institute's Board of Directors meetings. At these meetings, representatives from the Enterprise discussed and passed resolutions regarding the Tobacco Institute's budget, programs and projects of the various divisions, election of officers, payment of dues, and amendments to the bylaws. TIMN0005705-5712 (US 21290) (A); LG2000457-0461 (US 21876) (O); 2025856215-6225 (US 23769) (O); TIMN0006140-6146 (US 62658) (O); TIMN0006405-6411

(US 62663) (O); TIMN0012917-2923 (US 62779) (O); TIOK0004462-4466 (US 63020) (O); TIMN0017710-7711 (US 87550) (O); TIMN0012893-2900 (US 88241) (O); TIMN0006140-6146 (US 88243) (O); TIMN0012951-2955 (US 88244) (O); TIMN0012974-2980 (US 88245) (O); TIMN0012995-3000 (US 88246) (O); TIMN0013001-3010 (US 88247) (O); TIMN0006405-6411 (US 88248) (O); TIMN0013203-3213 (US 88249) (O); TIMN0014400-4410 (US 88250) (O); TIMN0012963-2973 (US 88321) (O); Stevens WD, 3:21-4:2, 4:14-23, 8:4-14, 17:14-19; see also Kornegay PD, Small v. Lorillard, 11/18/97, 36:11-19.

147. Although the membership fluctuated during the existence of the Tobacco Institute, all Defendants (except BATCo, CTR, and the Tobacco Institute itself) created, agreed to fund, and/or did jointly fund the Tobacco Institute over the years. TIFL0020285-0311 at 0297-0305 (JD-080429) (O). From 1958 through 1999, payments to the Tobacco Institute from Defendants amounted to more than $618,432,000, including: $161,505,876 from Philip Morris; $1,848,530 from Liggett; $110,298,387 from Reynolds; $29,195,668 from Lorillard; $15,933,769 from B&W; and $19,146,216 from American. ARG0333104-3192 at 3175-3176 (US 75555) (A); ARU5856402-6406 at 6403-6406 (US 75925) (A); USX6400001-0527 at 0134-0135, 0223-0225, 0344-0346 (US 89561) (O) (Defendants' Responses to Interrogatory No. 25).

148. Lorillard was not a member of the Tobacco Institute from 1968 to 1971. TIFL0020285-0311 at 0299-0305 (JD-080429) (O). However, even when Lorillard was not a member of the Tobacco Institute, it continued to "receive the releases and other information issued by the Institute," attended meetings of the lawyers of all the major companies at the Institute's offices, and was "kept apprised of the Institute's activities." 044227839-7844 (US 20066) (O).

149. Executives of Defendant Philip Morris Companies attended and participated in

meetings of the Tobacco Institute Board of Directors and the Executive Committee of the Board of Directors. These executives included Thomas Ahrensfeld, Senior Vice President and General Counsel; David Greenberg, Vice President; Kathleen Linehan, Vice President Government Affairs; Howard Liebengood, Vice President; and Steve Parrish, Senior Vice President. 2025856215-6225 (US 23769) (O); 2021266946-6951 (US 26055) (O); 87718289-8294 (US 32068) (A); 980166160-6167 (US 32464) (O); 521500132-0136 (US 52769) (O); TI16760371-0372 (US 62461) (A); TIMN0014390-4393 (US 62782) (A); TIMN0014955-4960 (US 62784) (A); 2025856068-6073 (US 86509) (O); 2023723951-3955 (US 86510) (O); TIMN0017710-7711 (US 87550) (O); TIMN0013651-3655 (US 88302) (O); TIMN0013656-3659 (US 88303) (O); TIMN0014418-4425 (US 88304) (O); TIMN0017720-7722 (US 88305) (O); TIMN0017725-7729 (US 88306) (O); TIMN0017731-7736 (US 88307) (O); TIMN0018436-8439 (US 88308) (A); TIMN0018451-8455 (US 88309) (A); TIMN0018462-8466 (US 88310) (A); TIMN0018590-8593 (US 88311) (A); TIMN0019234-9239 (US 88312) (A); TIMN0013203-3213 (US 88249) (O); TIMN0014400-4410 (US 88250) (O); TIMN0010629-0629 (US 88252) (A).

150. The Tobacco Institute's amended bylaws created two classes of membership. Class A members were the cigarette manufacturers (those members who as of the date of any election of directors would be subject to additional dues assessment per Article III, Section 1 of the bylaws). Class A members would be entitled to elect twice the number of directors as there were Class A members. Members not subject to such assessment would be entitled to elect the same number of directors as there were Class B members. In addition, the members determined that the chief executive of each member company would be designated to serve on the Tobacco Institute Executive Committee. LG20000457-0461 (US 86081) (O), (US 21876) (O);

TIMN451429-1435 (US 87551) (O); 2021266019-6028 at 6019 (US 26736) (A).

151. The primary functions of the Tobacco Institute included: advancing – through press releases, advertisements, publications, and other public statements – the Enterprise's primary position that there were scientific and medical doubts concerning the relationship between smoking and disease; disputing statements from health organizations about smoking and disease, and later about second hand smoke and disease; selectively using the results of TIRC/CTR research projects and other industry-sponsored research projects to question the charges against smoking, to emphasize the complexities of those diseases with which smoking has been statistically associated, and to reassure the public that the industry was actively investigating the issues; denying that cigarette smoking was addictive; minimizing the difficulties of quitting smoking; and denying that the industry marketed to youth. USX6390001-0400 (US 89555) (O) (TI Response to Request for Admission Nos. 154, 159, 162).

152. In an April 1968 memorandum to Earle Clements, President of the Tobacco Institute, William Kloepfer, Vice President of the Tobacco Institute, expressed concern that the industry's strategy of constant and consistent denial of smoking's harm was untenable. He wrote: "Our basic position in the cigarette controversy is subject to the charge, and maybe subject to a finding, that we are making false and misleading statements to promote the sale of cigarettes." VXA2511046-1048 (US 63576) (A); Brandt WD, 117:23-119:6; 1005112459-2461 (US 20213) (O).

153. A 1966 document titled "The 'Mission' of the President of the Tobacco Institute" explained that, to meet the Enterprise's objectives, "the full resources of the Institute must be directed toward a consistent and positive program to gain public exposure to research results and scientific opinions that question the charges against smoking and that point up the complexities

of those diseases with which smoking has been statistically associated." 502645038S-5038Z (US 23053) (O).

154. In a January 1968 memorandum to Earle Clements, President of the Tobacco Institute, William Kloepfer, Tobacco Institute Vice President for Public Affairs, set forth the public relations policy for the Tobacco Institute: "to attempt to increase substantially public awareness of the cigarette controversy; putting it another way, to make a greater portion of the public aware that widespread indictment of cigarettes as a cause of poor health does not amount to conviction." CTRMN015575-5593 (US 79902) (O).

155. According to Horace Kornegay, President of the Tobacco Institute, the public relations purpose of the Tobacco Institute was "to have a full, free and frank discussion by the public of the smoking and health controversy . . . [whereby] an informed public will come to a proper conclusion." Kornegay PD, Nickloff v. Liggett, 4/16/73, 38-40; TITL0002850-2851 (US 63024 (O).

156. In 1958, when the Tobacco Institute was created, Hill & Knowlton secured the account to handle its public relations. Brandt WD, 52:8-9. Two of the Hill & Knowlton employees assigned to work the new Tobacco Institute account were Leonard Zahn and Carl Thompson, who were also working the TIRC account. Zahn PD, Cipollone v. Liggett, 12/16/86, 85:16-86:20. One of four public relations objectives in Hill & Knowlton's March 1958 Recommendations to the Tobacco Institute was: "To create a better public understanding of facts regarding tobacco use and health, and of the contribution the industry is making to efforts of science to find the answers to health questions." CTRMN015402-5408 at 5402-5403 (US 79886) (O).

(2) Cooperation Between the Tobacco Institute and TIRC/CTR

157. The creation of the Tobacco Institute did not result in the end of TIRC/CTR's public relations activities. It marked the beginning of a joint public relations effort, between CTR, the Tobacco Institute, and their shared Defendant-members in which the scientific and information functions of TIRC/CTR were used by the Tobacco Institute in its public relations activities. In fact, the division of labor between TIRC/CTR and the Tobacco Institute was never precise. Brandt WD, 89:23-90:3.

158. Hill & Knowlton immediately prepared an exhibit for the cigarette company executives reflecting (i) activities carried out by TIRC and (ii) additional proposed activities that might be carried out by the Tobacco Institute. John Hill reminded the executives that, "The problem to be decided, of course, is what activities the industry want to pursue and how they are to be divided between TIRC and the Tobacco Institute." TLT0920037 (US 88253) (A); CTRMN015402-5408 (US 79886) (O).

159. During the SAB's February 14-15, 1958 meeting, SAB Chairman Little asked TIRC Chairman Timothy Hartnett about the newly-formed Tobacco Institute, its purposes, and its relationship, if any, to TIRC. Hartnett explained that the Tobacco Institute was a separate entity and that its formation did not change or alter in any respect TIRC, its objectives, or its functions. He told the SAB members that it had become apparent, during the 1957 Congressional hearings before the Blatnik Committee which had addressed the disclosure of tar and nicotine yields in advertising, that the tobacco industry needed to have one spokesman, rather than someone from each tobacco company, represent it at various times and places. CTRMIN-SAB000001-1061 at 0114 (JD-090960) (A); 681879254-9715 at 9391 (US 21020) (A); see also Chilcote PD, Minnesota v. Philip Morris, 9/18/97, 27:5-28:6, 30:16-20.

160. At the February 1958 SAB meeting, TIRC Chairman Hartnett also told the

members that Hill & Knowlton was acting as public relations counsel for both TIRC and the Tobacco Institute and "pointed out the desirability of this from both organizations' standpoint." CTRMIN-SAB000001-1061, 70011735-1757 at 0114 (JD-090960) (A); see also Zahn PD, Cipollone v. Liggett, 12/16/86, 85:16-86:20.

161. After reporting at the July 1958 meeting of the Tobacco Institute Executive Committee that the respective functions to be performed by the Tobacco Institute and TIRC had been discussed at length, Chairman Bowman Gray of Reynolds announced "a tentative decision to let the matter of the respective functions of the two organizations (the Tobacco Institute and the TIRC) be decided on a case by case basis under the guidance of public relations counsel" Hill & Knowlton. 04209323-9326 at 9323 (US 47370) (O); 681879254-9715 at 9391-9392 (US 21020) (A).

162. Defendants expected the Tobacco Institute and TIRC/CTR to act in coordination when taking a position on specific news stories involving tobacco and health. In a February 1958 letter to John Hill of Hill & Knowlton, Paul Hahn, President of American, wrote, "In the present state of evidence, the position of the Institute should be compatible with that of TIRC and SAB." TLT0900385-0389 at 0387 (US 88209) (A).

163. Hill & Knowlton understood that "[c]omment from TIRC for the press remains an effective way to meet anti-tobacco publicity efforts and emphasizes the multiple factors that should be considered. This, of course, is complemented with a continuing program of supplying information to give editors and writers a balanced perspective on questions of tobacco and health." HT0145148-5150 (US 21177) (A).

164. On behalf of TIRC and the Tobacco Institute, Hill & Knowlton worked aggressively to influence the media and ensure that the position and interests of the industry

regarding smoking and health were well represented to journalists, broadcast reporters and magazine writers. Hill & Knowlton staff carefully documented their interventions, and their many successes. Brandt WD, 59:4-7, 131:18-132:1.

165. For example, Hill & Knowlton, having anticipated the appearance of an article by United States Surgeon General Leroy E. Burney in the November 1959 *Journal of the American Medical Association*, VXA2150046-0054 (US 63608) (A), learned of its contents in advance of publication and provided the press with statements from both TIRC and Tobacco Institute representatives attacking the Surgeon General's assessment of the scientific evidence linking cigarettes to lung cancer. Brandt WD, 92:17-94:7; TIOK0000477-0477 (US 22720) (A) (Tobacco Institute President James Richards); 503283464-3467 (US 22981) (A) (TIRC Scientific Director Clarence Cook Little); HT0145148-5150 (US 21177) (A); TIMN0110091-0091 (US 21319) (A).

166. TIRC Chairman Timothy Hartnett reported to TIRC members in 1960 that: "The staff of TIRC is constantly in touch with Hill & Knowlton, and consults on every phase of activity relating to health matters. For example, it provides speakers for platforms, helps analyze both scientific papers and charges against smoking which appear in the public press, and consults on statements which are issued to inform the public." CTR-TIRC-MIN000174-0186 at 0184 (US 33016) (O); CTR-TIRC-MIN000001-000252 at 0184 (JD-093292) (A); 681879254-9715 at 9393 (US 21020) (A).

167. In addition to Hill & Knowlton's public relations efforts for the industry, the Tobacco Institute worked in tandem with TIRC/CTR to carry out the fraudulent purposes of the Enterprise. The Tobacco Institute served as the mouthpiece for the industry, and TIRC/CTR served as a source of scientific data for the Tobacco Institute. TIMN0070657-0674 (US 22983)

(O); TIMN0070640-0656 (US 21299) (O).

168. In the 1970s, Defendants discussed the need for even closer cooperation between CTR and the Tobacco Institute. William Kloepfer and Fred Panzer, Tobacco Institute Vice Presidents, proposed specific guidelines to assist CTR Chairman Henry Ramm select a new Scientific Director for CTR. TIMN0004138-4141 (US 87588) (O). The Tobacco Institute Executive Committee directed Tobacco Institute President Horace Kornegay to meet with Henry Ramm to discuss "closer cooperation between the Institute and the Council for Tobacco Research." Kornegay reported, at the April 2, 1973 meeting of the Tobacco Institute membership and Board of Directors, that "CTR did desire closer cooperation with the Institute and that the scientific personnel of the Institute would be invited to attend the May 15, 1973 CTR meeting in New York." LG2000457-0461 at 0459 (US 21876) (O).

169. After four months as CTR President, Addison Yeaman chairing his first meeting of the CTR membership on December 10, 1975, called for even closer cooperation between CTR and the Tobacco Institute. Speaking to the members for the first time as president, Yeaman told the members that "all the resources [of CTR], all the knowledge [of CTR], all the help that CTR can give, should be available to the lawyers, to the Tobacco Institute, and to any other of the troops in the field," and that CTR should be independent but "independent within the policies set down by the membership." 11303014-3020 (US 86005) (A); 682631405-1421 (US 21025) (O).

170. Defendants wanted close cooperation between CTR and the Tobacco Institute. Guidelines from the mid-1970s discussing a review of the industry's independent scientific research effort were just one of many statements emphasizing the importance of effective communication between the Tobacco Institute and CTR. 2015057145-7150 (US 86384) (O); CTRMM015322-5327 (US 79854) (O).

171. In its press releases, advertisements, brochures, and other materials, the Tobacco Institute publicized TIRC/CTR funded research and the aggregate amount of the funds to influence the public's perception of the tobacco industry and its alleged concern about cigarette smoking and health. Duffin PD, Cipollone v. Liggett, 1/23/86, 108:15-20; see, e.g., 502644592-4616 at 4615-4616 (US 20703) (A); 2015046793-6839 at 6828 (US 25526) (A).

172. A 1970 Tobacco Institute ad run in the *Washington Post* discussed CTR grants totaling over $17 million under the heading "After millions of dollars and over 20 years of research: The question about smoking and health is still a question." TIMN0081352 (US 21305) (A); 500004807-4809 (US 20608) (O). A 1975 Tobacco Institute press release promoting its booklet "The Cigarette Controversy" (an outline of doubts about the health risks of smoking) noted the industry's commitment of "$50 million to help support researchers who are seeking the truth." TIMN0120638-0639 (US 21698) (O). In 1981, 1982, and 1984, Tobacco Institute brochures providing publicity for CTR funding of research were titled respectively "Tobacco Industry Research on Smoking and Health: A $104 Million Commitment," 2046754709-4719 (US 20474) (O); "Tobacco Industry Research on Smoking and Health: A $111 Million Commitment," 670500617-0620 (US 20968) (O); and "Tobacco Industry Research on Smoking and Health: A $120 Million Commitment," 2045377870-7876 (US 20460) (O).

173. One Tobacco Institute advertisement that ran in major newspapers and magazines throughout the country consisted of a photocopy of a February 1969 CTR press release, 779023398-3400 (US 36484) (A), quoting CTR's Scientific Director, Clarence Cook Little, with a headline declaring "How Much is Known about Smoking and Health." TIMN0000560-0561 (US 21874) (A) (ad in *Broadcasting*); 1005132848-2849 (US 20222) (A) (ad in *New York Times*); TIMN0081695-1696 (US 21308) (A) (ad in February through April 1969 magazines and

newspapers). The General Counsel of Philip Morris, Reynolds, B&W, Lorillard, and Liggett were asked to, and did, approve the running of the advertisement. 1005153098-3099 (US 20227) (A); TIMN0081698-1698 (US 21309) (O).

174. In a November 1962 interview on a Mutual Broadcasting System radio show discussing "Cigarette Smoking and Lung Cancer," Tobacco Institute President George Allen explained that the Tobacco Institute supported smoking and health research "through a sister organization, the Tobacco [Industry] Research Committee, which has done more investigation in the eight years since it was established than any other private scientific organization or medical organization in the specific subject of lung cancer . . . over 100 individual grants . . . over five million dollars." When asked about statistical studies which seemed to implicated smoking and disease, Allen replied with the Defendants' position that "[t]hese statistical studies add up to the need for further intensive scientific work on the subject . . . nobody knows what causes cancer . . . this is a matter that remains to be found by thorough and energetic scientific investigation." 500052010-2018 at 2010-2011 (US 63600) (A); Brandt WD at 114:7-115:7.

175. As noted before, the Tobacco Institute sent preview copies of each issue of the Tobacco Institute's *Tobacco & Health* newsletter to TIRC/CTR for review and comment by Hoyt, Little, and Hockett before publication. TIMN0071488-1491 at 1490 (US 21614) (A).

176. Leonard Zahn, TIRC/CTR's public relations counsel, maintained close ties with the Tobacco Institute and served as a liaison between the two organizations. He kept in close touch with William Kloepfer, Tobacco Institute Public Relations Division, "advising [Kloepfer] in advance about meeting and other situations that might create a problem," such as an article or meeting "dealing with an adverse report on smokers." Zahn PD, Cipollone v. Liggett, 12/18/86, 408:5-409:19. Zahn sent carbon copies of his CTR reports to the Tobacco Institute; spoke at

sessions of the Tobacco Institute College of Tobacco Knowledge; and was a member of the Tobacco Institute Communications Committee. Duffin PD, Cipollone v. Liggett, 1/23/86, 87:12-88:2; Zahn PD, Massachusetts v. Philip Morris, 5/28/98, 145:14-146:11, 149:25-150:10; TI04962331-2334 (US 86167) (O); TI04962389-2389 (US 62201) (O); TI04962390-2398 (US 62202) (O); TIFL0068387-8387 (US 77028) (O); Zahn PD, Cipollone v. Liggett, 12/16/86, 129:13-15, 18, 21-23, 130:1-3, 12-19, 130:22-131:2, 188:24-189:6; Zahn PD, Cipollone v. Liggett, 12/17/86, 274:2-8, 275:5-21; Zahn PD, Richardson v. Philip Morris, 12/1/98, 52:9-55:3, 275:17-276:6; Zahn PD, Richardson v. Philip Morris, 12/16/98, 308:7-14; Zahn PD, Richardson v. Philip Morris, 1/13/99, 837:6-21.

177. According to a 1969 letter, Robert Hockett was asked to review Tobacco Institute publications, such as "The Cigarette Controversy" and "Eight Questions and Answers," and make observations. HK0108004 (US 21171) (O).

178. Members of CTR's supposedly independent SAB, like Arthur Furst and Sheldon Sommers, appeared at Tobacco Institute press conferences to discredit mainstream scientific research. In an April 1970 briefing and update "on industry public relations in the field of smoking and health," Jim Bowling of Philip Morris reported to Robert Heimann, President of American, about Tobacco Institute plans to hold a press conference on April 30, 1970, to discredit the Auerbach-Hammond beagle study (discussed further at US FF § III.A(3), infra). The spokesmen for the industry were to be CTR's Arthur Furst and Sheldon Sommers who would "take a stand against the ACS [American Cancer Society] propaganda approach to 'science.'" 966000976-0977 (US 86084) (O).

179. The Tobacco Institute invited Sheldon Sommers to testify before Congress on behalf of the industry. Sommers PD, Galbraith v. Reynolds, 9/4/85, 58:25-59:10. Leonard Zahn

edited the testimony that Sommers gave before Congress into a magazine article for *American Druggist*. Zahn PD, Cipollone v. Liggett, 12/17/1986, 223:12-224:11, 224:16-224:16, 225:7-225:12; Sommers PD, Cipollone v. Liggett, 10/3/86, 276:11-18; Sommers PT, Cipollone v. Liggett, 4/20/88, 8890:18-8890:25. The article titled "Smoking and Health: Many Unanswered Questions" was published in the September 1970 issue of *American Druggist*. The editor's noted identified author Sheldon Sommers as Chairman of the SAB. ZN16062-6065 (US 21161) (O); CTRMN015361 (US 79869) (O); CTRMN015362-5365 (US 79870) (O); CTRMN015384-5387 (US 79879) (O); CTRMN015389 (US 79881) (O).

180. In 1974, William Kloepfer, Tobacco Institute Vice President for Public Affairs, conducted filmed interviews with several CTR-affiliated persons on issues related to smoking and health. The opinions of the CTR-affiliated persons were unanimously supportive of the Enterprise's positions on smoking and health issues. Sheldon Sommers, CTR's Associate Scientific Director, stated that "there is no sound evidence that smoking is harmful to the health of the nonsmoker." Domingo Aviado, CTR Special Project funding recipient, stated that "on the basis of existing scientific evidence, tobacco smoke, I think, constitutes no health hazard to normal nonsmokers in public places." Robert Hockett, CTR's Scientific Director, stated that "it just seems to me that there is no justification for any general laws with respect to the protecting of nonsmokers from smoke." TITX0001450-1455 (US 77110) (O).

181. In its press releases and other publications, the Tobacco Institute incorporated statements and conclusions from supposedly independent researchers or research results without identifying the scientists as recipients of CTR Special Project funding and/or Lawyers Special Accounts funding (discussed further at US FF § I.D(2) & (3), infra). TIMN0120737-0738 (US 87601) (O) (1982 press release challenging cigarette package warning, quoting Sterling);

TI12431636-1650 (US 62384) (O) (1984 review of medical/scientific testimony presented to Congress titled "The Cigarette Controversy: Why More Research Is Needed," quoting Aviado, Bick, Bing, Blau, Eysenck, Fisher, Furst, Hickey, Rao, Salvaggio, Seltzer, Sterling); MNAT00224317-4354 (US 21223) (A) (1978 brochure titled "The Smoking Controversy: A Perspective," quoting Seltzer, Feinstein, Aviado, Sterling, Huber); TNWL0019638-9640 (US 21703) (O) (1983 press release opposing cigarette package warnings, quoting Blau, Fisher, Eysenck, and CTR's Scientific Director Sommers), TIMN0138444-8446 (US 85362) (O), TIMN0120772-0773 (US 85363) (O), (US 87625) (O); TIMN0125189-5189 (US 77065) (A) (1988 press release disputing Surgeon General Koop's statement that cigarette smoking was addictive and quoting Blau).

(3) Tobacco Institute Press Releases, Public Statements, Advertisements, Brochures, and Other Publications

182. During its existence, the Tobacco Institute was the leading joint public voice of the Defendants. Chilcote PD, Minnesota v. Philip Morris Inc., 9/18/97, 27:5-28:6, 30:16-20; Merryman PD, Richardson v. Philip Morris Inc., 56:17-57:5; 60:1-15. To further the Enterprise's goals, the Tobacco Institute created, issued, and disseminated press releases, public statements, advertisements, brochures, pamphlets, and other written materials on behalf of Defendants (1) denying that there was any link between smoking and disease; that nicotine was addictive; that cigarette companies marketed to youth; and that environmental tobacco smoke ("ETS") posed a health risk; and (2) discrediting scientists and public health officials (discussed further at US FF § III, infra). Dawson TT, 1/12/05, 9927:11-9928:18; Dawson WD, 34:5-7, 36:8-13, 37:4-9, 64:20-23, 65:1-7, 71:12-16, 80:17-23, 81:1-7, 81:13-16, 84:18-19; 87:6-11, 89:1-5, 89:14-19; Chilcote PD, Broin, 11/19/93, 25:8-26:17, 27:15-28:15; Merryman PD, Broin, 11/18/93, 27:18-22; USX6390001-0400 (US 89555) (O) (TI Response to Request for Admission Nos. 154, 159);

TIMN0081352-1352 (US 21305) (A), (US 63572) (A); TIMN0081695-1696 (US 21308) (A); TIMN0053170-3176 (US 65600) (O); TIMN333361-3363 (US 78730) (O); MNAT00276115-6117 (US 87665) (A); TIMN0120725-0726 (US 87596) (O); TIMN0120727-0728 (US 87597) (O); TIOK0034156-4181 (US 63019) (O); TIMN0120729-0730 (US 65625) (O); TIMN0120731-0732 (US 87598) (O); TIMN0120733-0734 (US 87599) (O); TIMN0120735-0736 (US 87600) (O); TIMN0120737-0738 (US 87601) (O); TIMN0120742-0742 (US 87603) (O); TIMN0120743-0743 (US 87604) (O); TIMN0120745-0745 (US 87606) (O); TIMN012046-0746 (US 87607) (O); TIMN0120747-0747 (US 87608) (O); TIMN0120748-0748 (US 87609) (O); TIMN0120750-0750 (US 87610) (O); TIMN0120751-0751 (US 87611) (O); TIMN0120752-0752 (US 87612) (O); TIMN0120753-0753 (US 87613) (O); TIMN0120754-0754 (US 87614) (O); TIMN0120755-0755 (US 87615) (O); TIMN0120756-0757 (US 87616) (O); TIMN0120758-0759 (US 87617) (O); TIMN0120760-0760 (US 87618) (O); TIMN0120763-0764 (US 87621) (O); TIMN0120768-0769 (US 87623) (O); TIMN0120770-0771 (US 87624) (O); TIMN0120772-0773 (US 87625) (O); TIMN0131860-1861 (US 21744) (O); TIMN0081712-1713 (US 87629) (O); TIMN0081714-1714 (US 87630) (O); TIMN0000471-0495 (US 87631) (O); TIMN0133954-3960 (US 62653) (O); TIMN0133707-3711 (US 87634) (O); TIMN0076952-6961 (US 87635) (O); TIMN0122571-2573 (US 87637) (O); TIMN0122574-2576 (US 87638) (O); TIMN0122577-2578 (US 87639) (O); TIMN0120706-0708 (US 87640) (O); TIMN0131847-1847 (US 87641) (O); TIMN0120619-0619 (US 87642) (O); TIMN0120618-0618 (US 87643) (O); TIMN0109576-9576 (US 87644) (O); TIMN0004099-4099 (US 87646) (O); MNAT00275488-5498 (US 87667) (O); TIMN0120792-0793 (US 87668) (O); (US 21239) (A); 2025422955-2958 (US 89306) (A); TI 1016-1258 (US 89307) (A); TI1016-1261 (US 89308) (A); TI 1016-1297-1298 (US 89309) (A);

507789709-9710 (US 89310) (A); TIDN 0012098-2099 (US 89311) (A); TIDN 0005825-5826 (US 89312) (A); 506649098-9099 (89313) (A); 507610852-0853 (US 89314) (A); TIMN334986-4988 (US 89315) (A); 507793570-3571 (US 89316) (A); 877161722-1723 (US 89317) (A); TIMN354292-4294 (US 89318) (A); (no bates) (US 89319) (A); (no bates) (US 89320) (A); (no bates) (US 89289) (A); (no bates) (US 89290) (A); (no bates) (US 89291) (A); (no bates) (US 89292) (A); (no bates) (US 89293) (A); (no bates) (US 89294) (A); (no bates) (US 89295) (A); (no bates) (US 89296) (A); (no bates) (US 89298) (A); (no bates) (US 89299) (A); (no bates) (US 89300) (A); (no bates) (US 89301) (A); (no bates) (US 89302) (A); (no bates) (US 89321) (A); (no bates) (US 21286) (A); (no bates) (US 21363) (A); (no bates) (US 87735) (A); (no bates) (US 85150) (A); TI0720452-0464 (US 87155*) (A).

183. The Tobacco Institute intended the public to rely on the public statements the organization made on behalf of its tobacco manufacturer members. Dawson TT, 1/12/05, 9930:2-18; Merryman PD, Minnesota v. Philip Morris, 7/15/97, 36:11-24, 38:15-17; 70:24-71:4. The Tobacco Institute's public spokespersons appeared on various television shows broadcasted on all major networks in all fifty U.S. states. Merryman PT, Minnesota v. Philip Morris, 2/6/98, 2717:22-2718:21; USX6390001-0400 (US 89555) (O) (TI Response to Request for Admission No. 162). When pressed for a straight-forward response at trial, Brennan Dawson, Vice President of Public Relations for TI, testified that she, on behalf of her employer, the Tobacco Institute, intended the public to rely on the public statements she made on television, regardless of whether the statements she made were in response to questions posed by the media or were spontaneous statements she volunteered to the media. Walker Merryman, another long-time Tobacco Institute spokesperson, similarly testified that the Tobacco Institute intended the public to believe its public statements. Dawson TT, 1/12/05, 10110:1-6; Merryman PD, Minnesota v.

Philip Morris, 7/15/97, 113:5-8, 113:15-114:11, 114:15-16, 125:11-19, 153:9-19, 155:6-11, 186:2-25, 189:14-20, 193:22-194:1, 202:19-23; 2025422955-2958 (US 89306) (A); TI 1016-1258 (US 89307) (A); TI1016-1261 (US 89308) (A); TI 1016-1297-1298 (US 89309) (A); 507789709-9710 (US 89310) (A); TIDN 0012098-2099 (US 89311) (A); TIDN 0005825-5826 (US 89312) (A); 506649098-9099 (89313) (A); 507610852-0853 (US 89314) (A); TIMN334986-4988 (US 89315) (A); 507793570-3571 (US 89316) (A); 877161722-1723 (US 89317) (A); TIMN354292-4294 (US 89318) (A); 502823717-3718 (US 50255) (O); TIMN347391-7398 (US 65675) (O); (no bates) (US 89319) (A); (no bates) (US 89320) (A); (no bates) (US 89289) (A); (no bates) (US 89290) (A); (no bates) (US 89291) (A); (no bates) (US 89292) (A); (no bates) (US 89293) (A); (no bates) (US 89294) (A); (no bates) (US 89295) (A); (no bates) (US 89296) (A); (no bates) (US 89298) (A); (no bates) (US 89299) (A); (no bates) (US 89300) (A); (no bates) (US 89301) (A); (no bates) (US 89302) (A); (no bates) (US 89321) (A); (no bates) (US 21286) (A); (no bates) (US 21363) (A); (no bates) (US 87735) (A); (no bates) (US (US 85150) (A); TI0720452-0464 (US 87155*) (A).

184. The function of the Public Relations Division of the Tobacco Institute was "to represent our member companies with the press, general public, anyone who had a question about tobacco, specifically the smoking and health issue, but also economics, history. We represented all the companies, so that no one of them had to answer questions from a press person or stock analyst." Duffin PD, Munn v. Philip Morris, 1/7/87, 93:21-94:5; Chilcote PD, Minnesota v. Philip Morris, 9/18/97, 27:5-28:6, 30:16-30:20. In other words, according to Tobacco Institute Vice President Brennan Dawson, the objectives of the Public Relations Division were "to make public statements and to provide the tobacco industry's point of view, not just one company's, but an industry-wide point of view on matters relating to tobacco." Dawson

WD, 34:4-7; 34:13-15.

185. A May 1, 1972 memorandum from Fred Panzer, a public relations specialist with the Tobacco Institute, to Tobacco Institute President Horace Kornegay began by describing past industry action:

> For nearly twenty years, this industry has employed a single strategy to defend itself . . . it has always been a holding strategy, consisting of creating doubt about the health charge without actually denying it, advocating the public's right to smoke without actually urging them to take up the practice . . . encouraging objective scientific research as the only way to resolve the question of health hazard.

Panzer went on to discuss a proposed public relations campaign – The Roper Proposal – designed to persuade the public that "cigarette smoking may not be the health hazard that the anti-smoking people say it is because other alternatives are at least as probable" (emphasis omitted). The proposed campaign would suggest two such possible alternatives: (1) the constitutional hypothesis, i.e., smokers differ importantly from nonsmokers in terms of heredity, constitutional makeup, lifestyle, and stress; and (2) the multi-factorial hypothesis, i.e., other factors such as air pollution, viruses, food additives, and occupational hazards contribute to diseases for which smoking is considered a cause. TIMN0077551-7554 at 7551-7553 (US 63585) (A); 87657703-7706 (US 21098) (A), (US 79218) (A); Brandt TT, 125:2-127:10; Panzer PD, Small v. Lorillard, 10/22/97, 206:16-207:20; Panzer PD, Iron Workers v. Philip Morris, 12/18/98, 18:22-21:12; USX6390001-0400 (US 89555) (O) (TI Response to Request for Admission Nos. 242, 243).

186. In order to issue public statements regarding smoking and health, the Tobacco Institute contracted numerous scientists to conduct research on related issues. Such consultants included Salvatore DiNardi, Gio Gori, Larry Holcomb, Alan Katzentein, Peter Lee, Maurice

LeVois, Mark Reasor, Sorell Schwartz, Murray Senkus, David Weeks, Lawrence Wexler, Philip Witorsch, and Ray Witorsch. WAX001 1075-1127 at 1084 (US 64758) (A) (TI Response to Interrogatory No. 8).

187. However, the tobacco company members of the Tobacco Institute did not share any internal company research that was contrary to any of the public statements made by the Tobacco Institute. Dawson TT, 1/12/05, 9958:1-11; Dawson WD, 53:9-12, 54:8-12; 55:10-14, 80: 11-16; Merryman PT, Minnesota v. Philip Morris, 2/9/98, 2920:19-2921:11, 2926:20-23, 2927:1-11, 2969:16-22; 2978:22-2980:2; 2984:14-2985:19; 3007:5-2008:10; Merryman PT, Minnesota v. Philip Morris 2/6/98, 2704:21-2705:5; Merryman PD, Minnesota v. Philip Morris, 7/16/97, 456:10-15.

188. And, when asked about public scientific support for the public statements she was making on behalf of the Tobacco Institute, Brennan Dawson could not name a single public health organization that asserted, as did the Tobacco Institute, that it had not been proven that smoking caused disease during the time she was a spokesperson on behalf of the Tobacco Institute. Dawson WD, 76:8-11. Nor could Ms. Dawson name a single medical doctor, not associated with the tobacco industry, who took the position that it was not proven that smoking caused disease. Dawson WD, 76:12-15. Similarly, Walker Merryman, also a Tobacco Institute spokesperson for over twenty years, could not name a single medical doctor not affiliated with the tobacco industry who publicly took the position that there was some medical doubt as to whether smoking caused disease. Merryman PD, Broin, 28:6-29:2.

189. During the twenty-one years that Anne Duffin, and the twenty-two years that Walker Merryman, worked for the Tobacco Institute's Public Affairs Division, they prepared many of the Tobacco Institute publications that disputed that there was any link between smoking

and disease; that nicotine was addictive; that cigarette companies marketed to youth; and that ETS posed a health risk. Titles of such publications include, but are not limited to: Cigarette Smoking and Heart Disease; Cigarette Smoking and Cancer: A Scientific Perspective: Smoking and Health, The Continuing Controversy 1964-1979; On Tobacco: 21 Questions and Answers; The Cigarette Controversy, Eight Questions and Answers; About Tobacco Smoking: Smoking and Women; and Vital Statistics - How Accurate Are They? Duffin PD, Munn v. Philip Morris, 1/7/87, 64:22-65:6, 95:11-97:1, 100:10-102:8, 102:14-103:1, 113:8-21, 114:1-15, 20-24, 121:1-122:24, 123:3-15, 126:3-127:19, 133:21-135:12, 136:15-19, 139:5-140:3, 141:2-10; Duffin PD, Cipollone v. Liggett, 1/23/86, 63:10-64:16; Merryman PD, Minnesota v. Philip Morris, 7/16/97, 317:13-22; 519838352-8517 (US 87707) (O); 519838518-8621 (US 87708) (O); 519838622-8674 (US 87709) (O); TI01071639 (US 62099) (O); 2501112047-2098 (US 20561) (O); 2025431644-1748 (US 20417) (O); TIMN0121541-1558 (US 65632) (O); TIMN0055304-5330 (US 62816) (A); TIOK0027221-7226 (US 77109) (O); 1005152849-2896 (US 20226) (O); TIMN300233-0257 (US 65670) (O); TIMN0121622-1646 (US 65626) (O).

190. One brochure published by the Tobacco Institute and drafted by Anne Duffin in the late 1970s was titled "Fact or Fancy." TIMN0133740-3798 (US 21280) (A); 03731785-1838 (US 21466) (O) (1978 draft). "Fact or Fancy" posed and answered hypothetical questions about women and the smoking and health controversy. Duffin PD, Cipollone v. Liggett, 1/23/86, 121:13-123:5; Duffin PD, Munn v. Philip Morris, 1/7/87, 174:11-19. Among the many perverse assertions in the brochure was the statement that, although the babies of women who smoke while they are pregnant tend to weigh less than the babies of mothers who do not smoke, "almost all the research on the subject has shown that the low-weight babies of women who smoke in pregnancy are healthier than the low-weight infants of women who have not smoked."

80554946-5010 at 4953, 4956 (US 31965) (O) (emphasis in original). Duffin sent copies of the brochure "Fact or Fancy" with cover letters to "Broadcasters," 04326898-6898 (US 21467) (O); to "Writers on Women's or Health Subjects," 04326897-6897 (US 21468) (O); to "Editors," 04326900-6900 (US 21469) (O); and to "Officers of Women's Associations & Organizations," 04326901-6901 (US 21470) (O).

191. Over the years, the Tobacco Institute attempted to discredit many of the Surgeon General's Reports through its public statements, press conferences and other publications. Merryman PD, Kueper v. R.J. Reynolds, 6/26/92, 19:12-21:2; Kornegay PD, Cipollone v. Liggett, 12/6/94, 683:4-687:6; Duffin PD, Munn, 1/7/87, 100:10-102:8, 102:14-103:1, 111:10-112:9, 117:6-25; TIMN0125189 (US 67277) (O); TLT0390022-0024 (US 76770) (O). A "personal and confidential" Lorillard memorandum dated January 8, 1979 from Curtis H. Judge to J. Robert Ave and Arthur J. Stevens related a January 5, 1979 conversation that Judge had with Alexander Spears of Lorillard and another conversation with Bill Kloepfer of the Tobacco Institute:

> Dr. Spears surmises that this carbon monoxide information may be the new 'bombshell' part of the Surgeon General's report and the part of the report which is new and likely to attract the media. At 4:30 on Friday afternoon I talked with Bill Kloepfer at the Tobacco Institute and he had just learned of this information a few hours ago (about the same time we did) on what he described as an 'intercept.' He agrees with our conclusions as to how it will be used in the Surgeon General's report and the Institute will work on counteracting it. I promised that we would get the information to him should we receive it before he does.

85158126-8127 at 8126-8127 (US 56009) (A).

192. The Enterprise's concern over the 1983 Surgeon General's Report pervaded the Tobacco Institute's documents for months before the report was ever published. On October 12, 1982, William Kloepfer, detailed those plans to "meet" the 1983 Surgeon General's Report.

Before the Surgeon General's Report was even made public, "Sam Chilcote . . . asked that [the Tobacco Institute] take certain steps to blunt the impact of the 1983 Surgeon General's report on the ground that, as in the past, it will lack objectivity. We expect the subject to be smoking and heart diseases." Specifically, the plans directed the Scientific Division "to prepare a relatively brief logical paper covering selected areas of inadequate knowledge and contradictions in the case for smoking as a cause of or risk factor in heart diseases." The true nature of the clearance process was also detailed in the memorandum: "Shook, Hardy will provide clearance of the paper and of its final format which will be developed by the Public Relations Division. At the same time the PR staff and PR counsel will prepare a list of media people who may be expected to cover the Surgeon General's Report." Even more explicitly, the following directive was issued by Kloepfer: "When the Surgeon General's Report is issued, the PR staff will stick to the TI position rather than commenting directly on the report." TI03961860-1861 (US 62156) (O).

193. A document dated October 18, 1982, titled "Memorandum for the Record - Subject: Planning TI's Response or Planning to Meet the 1983 Surgeon General's Report" detailed the entire chronology of this Tobacco Institute effort. As early as July 1, 1982, "the Scientific Affairs Division was in the process of devising strategies to counter the 1983 Surgeon General's Report." TI0396-1863-1866 at 1863 (US 62157) (O).

194. At the December 9, 1982 Tobacco Institute Board of Directors meeting, Samuel D. Chilcote, Jr., discussed the Tobacco Institute's approach to the upcoming 1983 Surgeon General's Report. The Tobacco Institute's plans included personally passing out summaries of its document on "Smoking and Cardiovascular Disease" to several dozen reporters; having George Schafer, Tobacco Institute Medical Director, on hand to answer the reporters' questions and lend credibility; holding its "own press conference challenging the contention that smoking causes

cardiovascular disease" a day or so before the Surgeon General's press conference, with Shook, Hardy & Bacon providing assistance; and attempting to "encourage a non-tobacco state congressman to launch an investigation into MRFIT [Multiple Risk Factor Intervention Trials] shortly before the Surgeon General's conference," alleging that is was a waste of $115 million tax payers' dollars, "thereby putting the Surgeon General on the defensive." TIMN0017276-7303 (US 86118) (O).

195. A January 11, 1983 memorandum detailing the monthly overview of the Tobacco Institute's Scientific Affairs Division listed as its first "key" item the "[p]reparation and refinement of Institute's response to the 1983 Surgeon General's forthcoming report on heart disease." TI03962431-2432 at 2431 (US 62160) (O).

196. Similarly, the Tobacco Institute was very active in planning a response for the Enterprise regarding the release of the 1987 Surgeon General's Report which discussed the addictive nature of smoking. Dawson WD, 21:21-22:7. Suggested strategies for the Tobacco Institute response and the public's potential reaction were carefully considered. TIMN34639-9639 (US 62752) (A); TIMN349632-9633 (US 62751) (O). Tobacco Institute President Samuel Chilcote authored informational memoranda about the Surgeon General's Reports for distribution to the Tobacco Institute Executive Committee. See, e.g., TINY 0009385-9387 (US 58830) (A) (1992 Surgeon General's Report). Brennan Dawson, Vice President of Public Relations for the Tobacco Institute, also made a presentation at a 1988 Tobacco Institute Communications Committee meeting, about her plans to distribute editorials favorable to the industry about the 1987 Surgeon General's Reports to editorial writers. Dawson also invited additional distribution suggestions from Communications Committee members. Dawson WD, 21:21-22:7. See US FF § I.C(4)(c), infra (for detailed discussion of the Tobacco Institute Communications Committee).

197. In anticipation of the 1989 Surgeon General's Report, the Tobacco Institute launched its "Enough is Enough" campaign which included "national advertising efforts in 19 newspapers, a new public opinion poll, a comprehensive tobacco issues brief, and a video with smokers and nonsmokers expressing their opinion on the anti-smoking effort." TI09911581-1615 at 1601 (US 62252) (A); 507635309-5348 (US 66484) (A); Dawson WD, 66:14-69:22. The Tobacco Institute launched a major media campaign, distributing materials and information to some 2,500 reporters, conducting private briefing for the Washington, D.C. press corps, and distributing both television and radio satellite press releases, all with the aim of publicly discrediting the forthcoming Surgeon General Report. Id.; TI0991 1581-1615 at 1601 (US 62252) (A). Tobacco Institute documents indicate that the Tobacco Institute opined its efforts were worthwhile as its "Enough is Enough" campaign was the basis for the first question the Surgeon General received at his press conferences releasing the 1989 Surgeon General's Report. TI0991 1581-1615 at 1601 (US 62252) (A); Dawson WD, 66:14-69:22.

198. Attorneys representing Defendants closely collaborated with members of the Enterprise in their efforts to mislead and defraud the public. Attorneys meticulously edited and rewrote drafts of Tobacco Institute advertisements, articles, and public statements. Lawyers additionally recommended ideas for articles and provided materials to the Tobacco Institute for consideration. 1005134430-4432 (US 36107) (O); 508089329-9329 (US 86089) (O).

199. In a July 6, 1977 memorandum to William Kloepfer of the Tobacco Institute, attorney Donald Hoel of Shook, Hardy & Bacon significantly changed the draft of an article titled "Why the Case Against Smoking is Not Closed" and recommended a "major rewriting effort." Hoel also expressed dissatisfaction that attorneys had not previously had the chance to review the article. He wrote that "it would be beneficial and time-saving if the content of such material as

the proposed article could be first 'cleared' with the appropriate persons at the Tobacco Institute before an 'approved' draft is sent here for legal clearance." Hoel went on to recommend that the lawyers be given advance notice of such articles so they could "make suggestions and provide materials for consideration." TIMN262629-2629 (US 62734) (O).

200. The Tobacco Institute also worked with its public relations counsel and its member companies to anonymously disseminate deceptive and misleading public statements, such as the *True* magazine article, to promote the sale of cigarettes. CTR MN 015575-15593 (US 79902) (O); Zahn PD, Cipollone v. Liggett, 12/18/86, 349:1-4, 20-23, 351:4-14, 357:22-25, 361:3-8, 17-22. Joseph Fields, a public relations agent for B&W, arranged for Stanley Frank to write a smoking and health article, and, in January 1968, Frank's article entitled "To Smoke or Not to Smoke - That Is Still The Question" appeared in *True* magazine. In the article, Frank stated that he had reviewed the evidence and found it contradictory and inconclusive; he concluded that the hazards of cigarette smoking were not so real as the public had been led to believe. TIMN462375-2380 (US 21660) (O). Frank did not disclose that he had been paid $500 by the Defendants for his time and expenses in writing the article and had been guaranteed another $1250 in the event that it was not published; that tobacco industry representatives including Ed Jacob of Jacob & Medinger, attorneys for TIRC, had reviewed the article prior to publication; or that he worked for Hill & Knowlton. 690012994-2993 (US 54322) (O); Zahn PD, Cipollone, 12/18/86, 349:1-4, 20-23, 351:4-14, 357:22-25, 361:3-8, 17-22.

201. Furthermore, one of the Tobacco Institute's public relations agencies, The Tiderock Corp., had arranged to run a one-half-page advertisement promoting the *True* article entitled "Are Cigarettes Really Harmful to Your Health?" The advertisement ran in the top seventy-two markets in the United States at an estimated cost of $69,000 paid for by Defendants

Philip Morris, Reynolds, B&W, American, and Lorillard. Not until this information was revealed in a series of investigations by the *Wall Street Journal*, *Consumer Reports*, and Senator Warren Magnuson did the public become aware of the deception. Zahn PD, Cipollone, 12/18/86, 349:1-4, 20-23, 351:4-14, 357:22-25, 361:3-8, 17-22; TIMN462375-2380 (US 21660) (O); TIMN0123336-3336 (US 21628) (O).

202. In addition to its press releases and publications, the Tobacco Institute regularly published various newsletters to further publicize its fraudulent messages on behalf of the Enterprise. TIMN339121-9128 at 9121 (US 86127) (O); TINY 0009385-9387 (US 62964) (O); 947089976-9979 (US 32332) (A); TI16300337-0345 (JE-062448) (A). In May 1976, the Tobacco Institute published its first issue of its most widely distributed newsletter, *The Tobacco Observer*. The public purpose of the newsletter, as stated in the first issue, was to "enable 'thousands' whose livelihoods are associated with tobacco 'to be well informed about the problems facing tobacco.'" *The Tobacco Observer* was published bi-monthly from 1976 until December 1988, under the supervision of the Tobacco Institute's Special Projects. 690018786-8786 (US 86119) (O); TIOK0015372-5378 at 5373 (US 86126) (O); TIMN366674-6895 at 6864 (US 86120) (A).

203. The Tobacco Institute circulated *The Tobacco Observer* free of charge to company employees, broadcasters, newspapers, and individuals. At the early stages of publication, the Tobacco Institute requested and received lists of names and addresses of potential subscribers from the tobacco companies. In 1978, the Tobacco Institute calculated circulation to have reached 80,000 and by 1988 circulation had almost doubled to 145,000. Most subscriptions, however, were unsolicited. According to a June 1, 1987 memorandum from Anne Duffin to Peter Sparber, "TTO [*The Tobacco Observer*] subscribers, some dating back 11 years, have never

been asked if they want copies. Most were added to the subscription list by Institute staff through personal contact or tobacco group rosters[.]" 670059500-9506 at 9503 (US 86121) (O); 690019767-9767 (US 86122) (O); 680549177-9182 at 9179 (US 86123) (O); TIOK0015372-5378 at 5372 (US 86126) (O).

204. Articles in *The Tobacco Observer* perpetuated the Enterprise's denials of causation and harm from smoking. Headlines announced, "Smoke not harmful to average non-smoker" (October 1978). In the May 1976 issue, one headline read "No Simple Answers; Research Disputes UPI;" this article followed another that stated, "no cause and effect relationship between cigarette smoking and pulmonary emphysema has been established." In a June 1, 1987 memorandum, Anne Duffin wrote candidly about *The Tobacco Observer*, "Historically TTO [*The Tobacco Observer*] has related good news only, presenting the bad only in its most optimistic context . . . TTO's purpose was to inform, to cast favorable light upon tobacco's many controversies." 03048388-8399 at 8388 (US 86124) (O); TIMN0127465-7475 at 7467 (US 86125) (O); TIOK0015372-5378 at 5373 (US 86126) (O).

(4) Tobacco Institute Committees

205. The Tobacco Institute was run by a variety of committees, comprised of representatives and agents from Defendants Philip Morris, Lorillard, Liggett, Reynolds, and B&W, and employees from Defendant Tobacco Institute. The most influential and powerful Tobacco Institute committees were the Tobacco Institute Committee of Counsel, the Tobacco Institute Executive Committee, and the Tobacco Institute Communications Committee.

(a) Committee of Counsel and Outside Counsel

206. The Tobacco Institute Committee of Counsel was comprised of the general counsels of the sponsoring companies of the Tobacco Institute – Philip Morris, Reynolds,

Lorillard, Liggett, and B&W – as well as counsel for American. 85686131-6131 (US 87589) (A) (Lorillard); 1005147807-7807 (US 36119) (A) (Philip Morris); 03654362-4362 (US 29296) (A) (Reynolds); 517004087-4090 (US 20874) (A) (B&W); LG2014927-4931 (US 86090) (A) (Liggett); 681725305-5307 (US 21019) (O) (American); Stevens WD, 2:18-22, 5:1-11, 5:12-23; Juchatz TT, 11/18/04, 06545:11-06546:2; Kornegay PD, Small v. Lorillard, 11/18/97, 34:11-18. Representatives from Philip Morris Companies also were members of the Committee of Counsel, and some Committee of Counsel meetings were held at Philip Morris Companies headquarters in New York. Northrip WD, 8:14-8:5; 2023033745-3745 (US 87590) (A); 2023033795-3795 (US 87591) (A). Members of the Committee of Counsel also included attorneys from the outside law firms of Covington & Burling, Jacob Medinger & Finnegan, and Shook, Hardy & Bacon. WAX0011075-1127 at 1088-1093 (US 64758) (A) (TI Response to Interrogatory No. 13); Donald Hoel PD, United States v. Philip Morris, 6/27/02, 71:17-22; 521043046-3050 (US 20891) (O); 680038350-8352 (US 20980) (A); Stevens WD, 5:1-11; Stevens TT, 01278:10-01280:1.

207. The purpose of the Committee of Counsel meetings was to discuss legal issues related to the tobacco industry and to provide legal advice on any matter that member companies would bring before it. Northrip WD, 8:11-13.

208. The importance of the Committee of Counsel was described in an October 1964 trip report written by visitors from Britain's Tobacco Research Council:

> The leadership in the U.S. smoking and health situation therefore lies with the powerful Policy Committee of senior lawyers advising the industry, and their policy, very understandably, in effect, is "don't take any chances." It is a situation that does not encourage constructive or bold approaches to smoking and health problems, and it also means that the Policy Committee of lawyers exercise close control over all aspects of the problems.

1003119099-9135 (US 20152) (A).

209. The primary function of the Committee of Counsel within the Enterprise was described in a document prepared by Ernest Pepples, General Counsel for B&W: "[T]he primary function of this Committee of Counsel has been to circle the wagons, to coordinate not only the defense of active cases, but also to coordinate the advice which the General Counsels give to ongoing operations of their companies pertaining to products liability risks." 517004087-4090 (US 20874) (A).

210. The Committee of Counsel met frequently over the years and the agenda of the Committee of Counsel meetings covered a wide range of topics that were of concern to the Defendants. Typical items discussed included various smoking and health related issues including addiction, industry witness development (especially in the area of ETS), Special Projects, Special Accounts, CTR's Literature Retrieval Division, review of the Tobacco Institute's ads, institutional research, and smoking and health litigation generally. Stevens WD, 6:10-12, 6:13-21; Northrip WD, 8:11-13; 680239427-9429 (US 30835) (A); 03654134-4134 (US 29291) (A); 85686132-6132 (US 87592) (A); 85686235-6236 (US 87593) (A); 85685497-5497 (US 32030) (A); 03654220-4220 (US 29293) (A); 03654179-4180 (US 87594) (A); 503762768-2768 (US 86093) (A); 03654341-4342 (US 29295) (A); 03654327-4328 (US 29294) (A); 85685745-5745 (US 86094) (A); 503689705-9705 (US 86095) (A); 85682380-2381 (US 32023) (A); 1005085870-5870 (US 35994) (A); LG2005471-5473 (US 88096) (A); 03654160-4160 (US 86097) (A); 03746187-6190 (US 86098) (A); LG2008241-8242 (US 21206) (A); 03638986-8987 (US 86815) (A); 03746184-6185 (US 20600) (A); 2024671248-1255 (US 21584) (A); 1005121522-1526 (US 23046) (A); LDOJ2607427-7434 (US 86099) (A); BWX0004268-4274 (US 36225) (A); 03601453-1453 (US 86102) (A); 01333625-3625 (US 26468) (A); 03654139-

4147 (US 86103) (A); XBW0011405-1416 (US 86104) (A); BWX0004264-4267 (US 36224) (A); 680542504-2505 (US 86105) (A); TIFL0407411-7411 (US 22044) (A); TIFL0407410-7410 (US 22041) (A); 681000290-0293 (US 21015) (A).

211. Even upon Liggett's decision to cease participation in the Tobacco Institute as a Class A member, it confirmed its commitment to the Tobacco Institute's goals by participating in the Committee of Counsel. In a September 21, 1993 letter from Liggett's in-house counsel Josiah Murray to the Tobacco Institute's President and Counsel, Liggett sought to reduce its payments to the Tobacco Institute, but at the same time sought Tobacco Institute approval for Liggett to continue participating in the Tobacco Institute's Committee of Counsel, and for Liggett to have continued access to Tobacco Institute information and data, including reports and memoranda from Covington & Burling to the Committee of Counsel. In seeking these materials, Murray assured the letter's recipients that Liggett would continue to conform its conduct in accordance with the Enterprise's strategies, writing:

> It is not the intent of Liggett to conduct its business in a manner adverse to the interest of the industry as a whole with respect to those legal and political issues as to which, by applicable law, the several competitor companies have a right to act in concert and in collaboration one with another, and attaining this objective is enhanced, of course by [Liggett] being adequately informed.

LWDOJ00023390-00023392 (US 25910) (A).

212. The role of outside counsel, including Shook, Hardy & Bacon, Jacob, Medinger & Finnegan and Covington & Burling, was to assist the Committee of Counsel. 03638986-8987 (US 86815) (A); Rupp WD, 38:21-39:19; Northrip WD, 6:12-16; 6:22-6-1:25; Dawson WD, 15:15-21.

213. Covington & Burling was counsel for the Tobacco Institute and also described as counsel for the "industry." 682150942-0942 (US 86491) (A); Rupp WD, 38:21-39:19. An

attorney from Covington & Burling attended every meeting of the Committee of Counsel and Covington & Burling attorneys first reviewed agenda proposals for the Committee of Counsel meetings before they were sent to member companies. Blixt PD, United States v. Philip Morris, 10/31/02, 159:20-161:13, 169:13-170:1. Covington & Burling also cleared press releases issued by the Tobacco Institute. Merryman PD, Minnesota v. Philip Morris, 7/16/97, 414:21-415:2, 416:10-22.

214. Shook, Hardy & Bacon was counsel for Defendants Philip Morris, Philip Morris Companies, Lorillard, Reynolds, and B&W, and benefitted from a close association with Defendant the Tobacco Institute. 521043046-3050 (US 20891) (O); TIMN0245637-5638 (US 62723) (O); 2015007199-7207 (US 20311) (A); Northrip TT, 9/30/04, 01334:19-01335:5; Kornegay PD, Cipollone v. Liggett, 8/17/84, 177:23-178:3, 179:5-21, 185:20-186:3. In fact, Robert Northrip, following his attendance of a Committee of Counsel Meeting, would normally bill either three or four tobacco companies (including Phillip Morris, Lorillard, B&W and possibly Reynolds) for his time. Northrip TT, 9/30/04, 01346:12- 22; Northrip WD, 5:17-5-1:11.

215. During an April 1968 meeting between members of the Committee of Counsel and CTR's Scientific Director Clarence Cook, Little advocated that "closer liaison [sic] should be established and more frequent meetings held between the industry (represented by General Counsel) and both the SAB and CTR staff." BWX0003853-3866 at 3854 (36213) (O).

216. In a May 18, 1982 memorandum addressed to Robert Sachs, Assistant General Counsel for B&W, and Arthur Stevens, Senior Vice President and General Counsel for Lorillard, and copied to Thomas Ahrensfeld, Senior Vice President and General Counsel for Philip Morris; Alexander Holtzman, Assistant General Counsel for Philip Morris; Ernest Pepples, General

Counsel for B&W; and Samuel Witt, General Counsel for Reynolds, William Shinn of Shook, Hardy & Bacon described Shook, Hardy & Bacon's activities related to the Tobacco Institute. Shook, Hardy & Bacon examined "most material emanating from the Tobacco Institute which has potential smoking and health overtones." This review involved a great deal of give and take and sometimes Shook, Hardy & Bacon "prepar[ed] the final version" of the product. Shook, Hardy & Bacon also assisted the Tobacco Institute in setting strategy, preparing witnesses on smoking and health issues, briefings, reviewing press releases, advertisements, and other public statements, and orchestrating follow-up activities. Shinn remarked: "While we are asked occasionally to do something that we believe T.I. should do itself, we have always reserved the right to decline unless directed by the Committee of Counsel." 521043046-3050 (US 20891) (O).

217. Shook, Hardy & Bacon's role was further explained in a June 28, 1988 memorandum from Donald Hoel of Shook, Hardy & Bacon to Todd Sollis, Associate General Counsel for Philip Morris Management Corporation. Hoel explained that "[b]ecause SHB represents several of those [cigarette] manufacturers and enjoys a close association with the TI, the firm is able to move freely among industry members, facilitating cooperation and open communication. In this way, SHB helps eliminate potential difficulties within the tobacco industry that could reduce PM's ability to address effectively smoking and health issues and impair its defense of lawsuits." 2015007199-7207 (US 20311) (A); Northrip TT, 9/30/04, 01334:19-01335:5.

218. Jacob, Medinger & Finnegan was counsel for Reynolds, B&W, and CTR. Edwin Jacob attended and gave presentations at Committee of Counsel meetings; he was also involved in the administration of CTR Special Projects (discussed further at US FF § I.D(2), infra).

680038350-8352 (US 20980) (A); 1005121522-1526 (US 23046) (A).

(b) Tobacco Institute Executive Committee

219. The Tobacco Institute Executive Committee had the "final voice on TI matters" and Tobacco Institute statements; included two representatives of each of the cigarette manufacturer member companies of the Tobacco Institute; and had a rotating chairmanship. Chilcote PD, Richardson v. Philip Morris, 9/21/98, 92:21-97:2; Kornegay PD, Small v. Lorillard, 11/18/97, 25:13-29:1. The Executive Committee also set Tobacco Institute policy and determined resource allocation within the organization. Dawson WD, 10:13-11:2.

220. The Tobacco Institute Executive Committee met frequently to keep abreast of issues of common concern within the Enterprise. In addition to having final approval authority on all Tobacco Institute matters, the Executive Committee often discussed issues of joint industry research on smoking and health, research funded through CTR, and funding of Tobacco Institute advertising. Dawson WD, 11:3-6; Northrip WD, 8:11-13; Chilcote PD, Broin, 11/19/93, 34:5-35:5; 03677101-7103 (US 29313) (A); TIMN0013425-3428 (US 88258) (O); TIMN0013471-3476 (US 88259) (O); TIMN0013429-3431 (US 88261) (O); TIMN0013432-3435 (US 88262) (O); TIMN0013460-3464 (US 88264) (O); TIMN0013471-3476 (US 88265) (O); TIMN0013508-3513 (US 88266) (O); TIMN0013514-3517 (US 88267) (O); TIMN0013518-3251 (US 88268) (O); TIMN0013526-13530 (US 88269) (O); TIMN0013554-3557 (US 88270) (O); TIMN13450-3454 (US 88276) (O); TIMN0013441-3445 (US 88289) (O); TIMN0013455-3456 (US 88291) (O); TIMN0013477-3484 (US 88293) (O); TIMN0013485-3489 (US 88294) (O); TIMN0013490-3495 (US 88295) (O); TIMN0013496-3499 (US 88296) (O); TIMN0013500-3507 (US 88297) (O); TIMN0013550-3553 (US 88298) (O); TIMN0013558-3563 (US 88299) (O); TIMN0013583-3589 (US 88300) (O); TIMN0013628-3632 (US 88301)

(O); TIMN0013651-3655 (US 88302) (O); TIMN0013656-3659 (US 88303) (O); TIMN0014418-4425 (US 88304) (O); TIMN0017720-7722 (US 88305) (O); TIMN0017725-7729 (US 88306) (O); TIMN0017731-7736 (US 88307) (O); TIMN0018436-8439 (US 88308) (A); TIMN0018451-8455 (US 88309) (A); TIMN0018462-8466 (US 88310) (A); TIMN0018590-8593 (US 88311) (A); TIMN0019234-9239 (US 88312) (A); LG0237151-7159 at 7154 (US 21194) (A).

221. For example, the Tobacco Institute Executive Committee met on January 12, 1964, to discuss the implications of the 1964 Surgeon General's Report on Smoking and Health. The Executive Committee agreed that it was "considered to be of prime importance that the industry maintain a united front and that if one or more companies were to conduct themselves as a matter of self interest, particularly in advertising, obvious vulnerability would be the result." LG2008203-8210 (US 22682) (A).

222. A 1974 Tobacco Institute report entitled "Defending Tobacco" stated that the Tobacco Institute Board of Governors' adoption, in January 1971, of the Guidelines for Authority and Responsibility of the Tobacco Institute, had greatly improved the Tobacco Institute's overall efficiency. The report established authority and responsibility of the Tobacco Institute's staff and committees, placing more authority in its President, and requiring more frequent meetings of the Executive Committee to create and review Tobacco Institute policies, programs and objectives within the Enterprise. The Guidelines eliminated much undue delay occasioned in the past in obtaining approval and authority from the Tobacco Institute Executive Committee or its Board members for Tobacco Institute action and improved the overall efficiency of the Enterprise. TIMN217628-7639 (US 21263) (O).

(c) Tobacco Institute Communications Committee

223. The Tobacco Institute Communications Committee reviewed and approved Tobacco Institute advertisements, media plans, and public relations campaigns carried out by the Tobacco Institute on behalf of the Enterprise. Chilcote PD, Richardson v. Philip Morris, 9/21/98, 263:5-14.

224. Each Tobacco Institute member company designated its public relations people to attend meetings of the Communication Committee and to inform their respective companies about the activities of the Committee. Dawson WD, 17:9-23; Dawson TT, 1/12/05, 9899:20-9900:10; Duffin PD, Barnes v. American Tobacco, 10/6/97, 118:4-119:3, 119:7-121:2. Membership of the Communications Committee consisted of representatives of Reynolds, B&W, Phillip Morris, Lorillard, Liggett, and American, as well as outside lawyers from Shook, Hardy & Bacon and Covington & Burling, Tobacco Institute public relations staff and CTR public relations counsel Leonard Zahn. Dawson TT, 1/12/05, 9899:20-9900:10; Zahn PD, Richardson v. Philip Morris, 12/1/98, 52:9-55:3; Zahn PD, Cipollone, 12/17/86, 274:2-8; 275:5-21; 794003131-3132 (US 86107) (O); TIMN0081843-1864 (US 86108) (O); 03678709-8711 (US 88313) (O); 680241704-1705 (US 54034) (O); ZN21992-1995 (US 21375) (O); 690014846-4848 (US 86111) (O); TIMN0124674-4674 (US 88323) (O); TIMN0124717-4718 (US 86113) (O); 680570007-0008 (US 86114) (A); 87716615-6618 (US 86117) (A); TI16470337-0338 (US 62449) (O); TI09911543-1580 (US 62251) (A); TI09911581-1615 (US 62252) (A); TI09911885-1920 (US 62255) (A); TI09912151-2191 (US (62256) (A); TIMN345630-5665 (US 77092) (A); TIMN345741-5777 (US 77093) (A).

225. Members of the Communication Committee considered CTR a public relations benefit for the Enterprise. According to minutes from the September 17, 1971 Communication Committee meeting, William Kloepfer, Vice President of the Tobacco Institute, briefed the

committee on the status of industry-financed research, including research funded by CTR. Kloepfer called this research, "the best basis for affirmative public relations." Leonard Zahn, public relations counsel to CTR from 1955 until 1993, was even a member of the Tobacco Institute Communications Committee and attended committee meetings at the behest of Kloepfer of the Tobacco Institute. TIMN0003978-3980 (US 87595) (O); Zahn PD, Cipollone, 12/16/86, 129:13-15, 18, 21-23; 130:1-3, 12-19, 130:22-131:2; Zahn PD, Richardson, 12/1/98, 52:9-55:3; Zahn PD, Cipollone, 12/17/86, 274:2-8, 275:5-21.

226. A 1974 Tobacco Institute report entitled "Defending Tobacco" stated that, prior to 1967, much of the communications between member companies was through the Tobacco Institute Committee of Counsel, or by informational memoranda. In 1969, one change that greatly facilitated the internal information flow within the Enterprise was the creation of the Communications Committee, which was made up of representatives of each major company and of the Tobacco Institute's legal counsel and who met frequently to advise on the Tobacco Institute's public relations strategy. TIMN217628-7639 (US 21263) (O).

227. Through these Tobacco Institute committees, the Defendants, through their executives, employees, agents, and attorneys, controlled the Tobacco Institute and set its policy, including approving and authorizing the misleading and fraudulent statements about material matters made by Tobacco Institute. Over time, this structure changed somewhat, but Defendants always maintained control over the Tobacco Institute's activities. Thus, the Tobacco Institute's many committees carried out the objectives of the Enterprise.

(5) Tobacco Institute College of Tobacco Knowledge

228. Coordination of information and careful instruction on how information should be presented to the public was a central theme of the Enterprise. Following the party line so as not

to leave any member vulnerable to attack in litigation or to subject the industry to further regulation was considered vital. One extremely useful method employed by the Enterprise to ensure that industry representatives understood and were able to publicly transmit consistent statements regarding smoking and health and other issues of common concern to the Defendants was the operation of training seminars through the Tobacco Institute's College of Tobacco Knowledge, which began in 1975 and lasted over a decade. Dawson WD, 26:7-21, 27:2-6, 28:6-8; Dawson TT, 1/12/05, 9920:19-21; 2025864882-4895 (US 86140) (O).

229. Consistent with the goal of achieving a unified public message for the industry, Walker Merryman, self-proclaimed "Dean of the College of Knowledge" and also Vice President of Public Relations for the Tobacco Institute, testified that during presentations he gave at the College, he would "roam the room with a microphone and ask people questions [about what they had heard and learned over the two days] and see how they answered them." Merryman PD, Florida v. American, 7/25/97, 151:12-152:18; Merryman PD, Richardson v. Philip Morris, 4/9/98, 87:15-88:7; TI16740590-0593 (US 86148) (A). For example, he might ask a student if he believed that there was a relationship between smoking and disease, and suggest that the better response was that "there is a statistical relationship between smoking and disease" rather than that "smoking causes disease." Merryman PD, Florida v. American, 7/25/97, 153:16-156:10.

230. The purpose of the Tobacco Institute College of Knowledge was to "improve working relations with all major segments of the tobacco industry." Dawson WD, 28:6-8. For example, Dawson participated in a mock segment of "The Phil Donahue Show" entitled "Should Smoking Be Restricted in the Workplace?" during the 1988 College of Knowledge, playing the role of Tobacco Institute spokesperson while James Savarese played Donahue and they acted out

a reaction to a Surgeon General's Report on the subject of ETS on behalf of the tobacco industry. As demonstrated by the skit, the intended purpose of the College was to rehearse a unified public view on smoking and health issues. Dawson WD, 29:6-30:1.

231. The College of Tobacco Knowledge consisted of a general briefing on the major issues facing the tobacco industry and was a "seminar that gave attendees an overview of a number of issues that the tobacco industry faces or faced at the time." Merryman PD, Florida v. American, 7/25/97, 147:16-148:2; Chilcote PD, Richardson v. Philip Morris, 9/21/98, 259:8-261:10; Duffin PD, Munn, 1/7/87, 187:3-190:25. The Tobacco Institute not only funded and operated the College of Tobacco Knowledge, it also developed the College's curriculum. Dawson WD, 26:16-21; Zahn PD, Massachusetts v. Philip Morris, 5/28/98, 147:14-18. The Tobacco Institute staff "taught the sessions of the Tobacco College of Knowledge." Chilcote PD, Richardson v. Philip Morris, 9/21/98, 261:11-15; Duffin PD, Munn, 1/7/87, 187:3-190:25.

232. Representatives of all of the Defendants, including BATCo and Philip Morris Companies, Inc., as well as representatives of several international organizations (including TAC, INFOTAB, and ICOSI) attended the College that existed for over a decade, beginning in 1970 and lasting through 1988. 1000019640-9647 (US 86149*) (O); 1000019649-9651 (US 86150) (O); 2501290388-0396 (US 86156) (A); TI16740660-0663 (US 72403) (O); 503908538-8538 (US 29737) (O); TI16740660-0663 (US 72403) (O); 503908538-8538 (US 29737) (O); TI04962210-2211 (US 67250) (O); TI16740652-0659 (US 86168) (O); TI16740741-0749 (US 86169) (O); TI04962337-2341 (US 86170) (O); (US 65473) (O); TIFL0071151-1151 (US 86176) (O); TIFL0071174-1174 (US 86142) (O); TIFL0071152-1154 (US 86177) (O); TIFL0071200-1202 (US 86178) (O); TIFL0072275-2277 (US 86180) (O); TI16740614-0616 (US 86181) (O); TI11961414-1414 (US 86182) (O); TIFL0072290-2303 (US 86183) (A);

87645518-5522 (US 86184) (A); TIFL0068394-8402 (US 86185) (A); TI11961377-1377 (US 86186) (O); TIFL0071027 (US 77029) (O); Merryman PD, Florida v. American Tobacco, 7/25/97, 148:9-13.

233. Students who attended the College sessions were "people from the tobacco industry;" people whose responsibilities included public affairs, public relations, government relations; "[p]eople from all facets of the industry from seed bed to sales counter;" and industry lobbyists. Merryman PD, Florida v. American, 7/25/97, 148:17-149:8; Zahn PD, Massachusetts v. Philip Morris, 5/28/98, 145:2-13.

234. After Tobacco Institute executives Merryman, Kloepfer, and Chilcote approved the curriculum, the Tobacco Institute mailed announcements to its Communications Committee, INFOTAB, its senior staff, and other interested parties. TIFL0071011-1012 (US 86141) (O); TIFL0071174-1174 (US 86142) (O). In preparing for a College session, the Tobacco Institute would make its "senior vice presidents aware of the fact that one of these seminars was scheduled. And if they had new employees that they wanted to have invited or if they thought there was a contract lobbyist who might benefit, they could invite that individual. We also would let our member companies know that another seminar was scheduled, and if they had people in mind whom they thought would benefit from such a seminar, they could be invited." Merryman PD, Florida v. American, 7/25/97, 149:9-150:3; 85701033-1033 (US 86143) (O), 85701041-1042 (US 86144) (O); TIFL0069155-9155 (US 86145) (O); TIFL0069161-9161 (US 86146) (O).

235. A number of speakers generally spoke on a "half dozen or more different issues." Merryman PD, Florida v. American, 7/25/97, 157:24-158:2. Speakers at the College sessions included Tobacco Institute employees whose specialities might be communications; public relations; and federal and state regulation; lawyers for the industry; medical consultants; state

senators or representatives; economists; and statisticians. Merryman PD, Florida v. American, 7/25/97, 158:5-159:5; John Rupp WD, 39:20-40:3.

236. The Enterprise wanted to achieve consistent public statements concerning various smoking and health related subject areas through its control of the curriculum of the College. For example, the issue the health hazards of smoking and of causation generally and how, according to the Industry, causation had not yet been proven was a topic frequently discussed. Merryman PD, Florida v. American, 7/25/97, 159:13-160:4; 1000019640-9647 (US 86149*) (O); TIFL0068950-8955 (US 86163) (O).

237. The curriculum of the College also included the topic of industry sponsored research and the function of CTR generally. For example, presentations by Leonard Zahn, CTR public relations counsel, would describe the activities of CTR and its research program "so that all the mid and perhaps slightly above mid-level employees from the various companies would have an idea, more exact knowledge, of what the Council was and how it worked." Zahn PD, Massachusetts v. Philip Morris, 5/28/98, 145:14-146:11, 149:25-150:10; TI04962331-2334 (US 86167) (O); TI04962389-2389 (US 62201) (O); TI04962390-2398 (US 62202) (O); TIFL0068387-8387 (US 77028) (O). In addition, Zahn distributed, or made available, to the participants CTR materials including the Annual Report. Zahn PD, Massachusetts v. Philip Morris, 5/28/98, 148:8-20.

238. Similarly, Addison Yeaman, CTR Chairman and President, spoke on the topic of sponsoring science, described in the syllabus as follows: "For 25 years, tobacco manufacturers, growers and warehouse operators have funded independent scientific research into tobacco use and health. How it is done and what is being learned." 1000019640-9647 (US 86149*) (O).

239. In addition to discussing the function of CTR, the College provided another

opportunity for the Tobacco Institute and CTR to coordinate Enterprise activities. In a letter dated October 27, 1981, William Hobbs, CTR Chairman, wrote that CTR representatives "Tom Hoyt and Bob Gertenbach will attend T.I.'s College of Tobacco Knowledge November 16 and 17" providing an opportunity for the Tobacco Institute's Horace Kornegay to brief the CTR President and Executive Vice President on "T.I.'s advertising and research plans" because "it might be beneficial to CTR management." 503908538-8538 (US 29737) (O).

240. Also frequently discussed at the College was the topic of secondhand smoke or ETS and how the true health effects of smoke on nonsmokers had not yet been determined. 1000019640-9647 (US 86149*) (O); TIFL0068913-8926 (US 86159) (A); TIFL0068913-8926 (US 86159) (A); TIFL0068939-8939 (US 86161) (O). Industry ETS consultants like Nancy Balter, John Graham and "Gray" Robertson also spoke about public smoking restrictions. TIFL0071152-1154 (US 86177) (O); TIFL0071200-1202 (US 86178) (O).

241. In addition, the College curriculum also included an "international perspective" on smoking and health related issues. For example, Mary Covington, Secretary General of INFOTAB spoke at the November 1981 College about international perspectives related to ETS, explaining that the College "seminars offer an opportunity to learn a lot about smoking issues and industry programs in a very short time...Without a concerted effort by the tobacco industry [initiatives to eliminate smoking in public places] will make gradual headway in changing attitudes towards smoking as a socially acceptable custom." 2501029891-9901 (US 20557) (O).

242. Finally, the topic of Public Relations was woven into each of the subject areas discussed above, as achieving a consistent public message was the Enterprise's goal of the College of Knowledge. For example, at both 1983 sessions of the College, William Kloepfer of the Tobacco Institute spoke to the students on public relations issues. In addressing the issue of

the "effectiveness and unity" of the tobacco industry, Kloepfer contended that because "**what affects one affects all**," the Tobacco Institute used many strategies "**to keep us together, to keep us all aware**" (emphasis added). According to Kloepfer, the Tobacco Institute Public Relations Division was primarily responsible for four strategies: the Tobacco Institute *Tobacco Observer* newspaper reaching 150,000 readers six times a year; advertising in tobacco trade publications; appearing as speakers before trade and industry groups; and the Tobacco Institute College of Tobacco Knowledge that has helped "educate" and "orient hundreds of key family members . . . **a united industry is our most potent public relations and legislative tool**" (emphasis added). TI04962436-2454 (US 86172) (O); TIFL0526112-6125 (US 62625) (O).

243. In addressing the issue of public smoking restrictions, Kloepfer maintained that "through our spokesmen, our literature, and our advertising, we broadcast two messages: (1) ambient smoke has not been proven dangerous to non-smokers, and (2) smoking restrictions cause unnecessary expense, inconvenience, and discrimination." TI04962436-2454 (US 86172) (O); TIFL0526112-6125 (US 62625) (O). In addressing "our oldest, most frustrating issue," Kloepfer noted, "We call it the primary issue. It is the smoking and health controversy. We think of it as controversy . . . a subject far from decided . . . and through our spokesmen and literature we make that point." TI04962436-2454 (US 86172) (O); TIFL0526112-6125 (US 62625) (O).

244. Finally, all indications from past College attendees were that the Enterprise, via the Tobacco College of Knowledge, was achieving its goal of uniting the industry and promoting a common public response to issues related to smoking and health. For example, Arthur Stevens, General Counsel for Lorillard, sent comments from the Lorillard attendees at one session to the Tobacco Institute. 03022004-2008 (US 86157) (A); 85676573-6577 (US 86158) (A). One

employee wrote, "The information presented gave me a better view of the defensive position in which our industry finds itself." 03022004-2008 (US 86157) (A); 85676573-6577 (US 86158) (A). Similarly, in feedback after the September 1980 session regarding whether or not the College of Tobacco Knowledge was worthwhile, one Lorillard attendee wrote: "Definitely - The opportunity to meet with the pros, who fight in the trenches, was an experience which expanded my knowledge and commitment to **our mutual goals**." 85700954-0955 (US 86162) (O) (emphasis added). Further commentary by Lorillard attendees on the Seventh College included: "[A]fter the program was completed, I definitely have a better understanding of the **industries [sic] position** in certain areas . . . past attendees should be updated whenever the **industries [sic] stand** on a position changes or new information is available, especially in the overall smoking and health controversy." 85180845-0846 (US 86164) (O); 85700895-0895 (US 86166) (O).

245. In addition to the formal training received by Defendants' employees on the industry position in smoking and health matters at the Tobacco Institute's College of Tobacco Knowledge, industry lawyers also personally instructed tobacco company employees on the industry's smoking and health positions. For example, Jeffrey Wigand, former Vice President of Research and Development of B&W, shortly after starting to work for B&W, was sent to the law offices of Shook, Hardy & Bacon in Kansas City, Missouri, for an orientation. Shook, Hardy & Bacon attorneys William Shinn, Robert Northrip (who testified in this case) and Charles Wall (who later went to work for Philip Morris) instructed Wigand on the tobacco industry position on causation and addiction. Scott Appleton, a B&W toxicologist and witness in this case, also attended a session at Shook, Hardy & Bacon. Wigand WD, 29:26-30:10.

(6) Tobacco Institute Testing Laboratory

246. In June 1966, the Federal Trade Commission ("FTC") announced that it was

establishing a laboratory to measure by machine the tar and nicotine content of cigarette smoke. That same year, the tobacco industry decided to establish its own laboratory, the Tobacco Institute Testing Laboratory ("TITL"), which would be a separate division of the Tobacco Institute. The TITL was established so that Defendants could conduct tests to determine the accuracy and reliability of the FTC laboratory's tests. The TITL was also used by Defendants for different testing purposes, and it was acknowledged that TITL was a "Mechanism for Mutual Cooperation" within the Tobacco Institute. 500500320-0323 (US 20633) (O); TITL0003363-3374 (US 21931) (O); TIMN267142-7143 (US 21353) (O); TIMN267120-7121 (US 21351) (A); TITL0003108-3111 (US 21597) (O); 01246525-6537 (US 34516) (O).

247. Defendants clearly used TITL for their own commercial purposes. For example, the industry collectively used TITL in its testing of the chemical Chemosol in the late 1960s and early 1970s. 500500320-0323 (US 20633) (O); TIMN267142-7143 (US 21353) (O); TIMN267120-7121 (US 21351) (A).

248. Representatives from Defendants American, B&W, Liggett, Lorillard, Philip Morris, and Reynolds, offered to engage in a testing project with American Chemosol in 1967. ATX110006462-6464 (US 87221) (O). It was acknowledged that this offer represented industry cooperation on the issue. For example, at the February 14-16, 1968 meeting of the company research directors, there was a discussion about the need for a cooperative effort with respect to controlling the composition of smoke and the need for "an industry-wide consideration of some of the additives and filtering devices . . . as in the case of Chemosol." 500500320-0323 (US 20633) (O).

249. Defendants agreed that Hazleton Laboratories in the United Kingdom would conduct the testing based upon a protocol developed by the research directors of each of the nine

participants, and that the companies would be billed by the Tobacco Institute. At a September 10, 1969 meeting of the ITC held at the offices of CTR, the ITC agreed, based upon questions from industry counsel, that "the group preferred to keep the test to just 85 mm. cigarettes **to protect against the possibility of one or more lengths appearing to be a 'safer design**." 100186855-6859 at 6859 (US 20119) (O) (emphasis added).

D. Defendants' Joint Research Activity

(1) Witness Development

250. Defendants Philip Morris, Reynolds, Lorillard, Liggett, B&W, American, CTR, and the Tobacco Institute orchestrated a variety of joint research projects that they dubbed Special Projects. These projects took numerous forms, including CTR Special Projects, Lawyers Special Projects (projects paid through Lawyers Special Accounts), and special projects conducted through the Tobacco Institute. These projects were almost all exclusively funded by these Defendants and the main purpose of the lawyer-directed and orchestrated research was the procurement and development of witnesses favorable to Defendants for testimony before Congress, other regulatory bodies, for use in litigation, and for support of industry public statements.

251. TIRC/CTR through its "Special Projects" allocated funding on a non-peer reviewed basis for research projects associated with litigation and witness preparation. Brandt WD, 127:20-22. Clearly, "Special Projects" were not designed to address smoking and health issues in a way that would be helpful to the public. For example, an undated Lorillard document lists as one of the recommendations for industry research support: "Be prepared to increase industry funding of special projects to resolve scientific problems and develop witnesses." 80419203-9203 (US 21062) (O).

252. Special Projects were overseen by the main members of the Committee of Counsel, the General Counsels of Defendants – Philip Morris, Reynolds, Lorillard, Liggett, B&W, and American. Stevens WD, 6:13-21; 2045752106-2110 at 2107 (US 20467) (A); 1003718428-8432 at 8429 (US 35902) (A); 01124376-4421 (US 26394) (A); 01124445-4445 (US 26400) (A).

253. The Committee of Counsel received frequent updates on Special Projects. 1005061626-1626 (US 35960) (A); 1005061615-1615 (US 35958) (A); 1005061616-6125 (US 35959) (O); 1005061626-1626 (US 35960) (A); 680305856-5858 (US 30887) (A); 2501190758-0759 (US 20562) (O).

254. Special Projects were often managed by an Ad Hoc Committee. The Ad Hoc Committee was a group consisting of in-house counsel, litigating lawyers, and other agents such as public relations and research representatives of Defendants tasked to do long range policy planning with respect to research and witness development. 2045752106-2110 (US 20467) (A); 1003718428-8432 at 8429 (US 35902) (A).

255. The focus on witness development is clearly illustrated in a letter dated October 28, 1966, where attorney Francis Decker advised David Hardy of Shook, Hardy & Bacon on the status of certain Ad Hoc matters. He stated, "Dr. Pratt is presently only available on a limited basis. However, we intend to try to develop him as a possible witness. . . . Dr. Soloff made the remark about the finding that the non-smoker and ex-smoker have the same incidence of heart disease. Nonetheless, I think he could be an excellent witness. To begin with, I think he might he persuaded that the validity of the above statement is questionable." 1005105988-5990 (US 36020) (O).

256. In January 1967, the Ad Hoc Committee was comprised of: (1) Janet C. Brown,

Chadbourne & Parke, counsel to American and CTR; (2) Kevin L. Carroll, White & Case, counsel to B&W; (3) Donald J. Cohen, Webster, Sheffield, Fleischmann, Hitchcock & Chrystie, counsel to Liggett; (4) Edward J. Cooke, Jr., Davis, Polk & Wardell, counsel to Reynolds; (5) Francis Decker, Webster, Sheffield, Fleischmann, Hitchcock & Chrystie, counsel to Liggett; (6) Alexander Holtzman, Conboy, Hewitt, O'Brien & Boardman, counsel to Philip Morris; (7) Edwin J. Jacob, Jacob, Medinger & Finnegan, counsel to CTR, B&W, and Reynolds; and (8) William W. Shinn, Shook, Hardy, Ottman, Mitchell & Bacon, counsel to Philip Morris, Lorillard, B&W, and Reynolds. 2015059690-9697 (US 20309) (O).

257. At times, members of the Ad Hoc Committee and the Committee of Counsel held joint meetings to keep Defendants informed as to the status of joint research matters related to the Enterprise. BWX0000007-0007 (US 59828) (A).

258. On December 17, 1965, at a meeting of the "Committee of Six [i.e., the Committee of Counsel]," representatives of at least CTR, B&W, and Reynolds, and outside counsel met to discuss CTR and Ad Hoc special projects in relation to the need for industry witness development. 95522182-2185 (US 56821) (A); RC6033491-3496 (US 86225) (O); 01124441-4444 (US 20034) (O).

259. A follow-up letter dated January 4, 1966, attorney John Russell of Perkins, Daniels & McCormack informed J.E. Bennett, President of Lorillard: "As you are aware, the lawyers have, together with the staff of Council for Tobacco Research, been reviewing our industry's research program with a view toward developing some sort of a master plan." Russell advised that there were three categories of research: "A. Adversary needs (Congress, litigation, etc.); B. Defensive needs; and C. Basic research." He further advised that some projects would be paid through Lawyers' Special Accounts and some out of CTR. 01124445-4445 (US 26400)

(A).

260. An April 12, 1966 Reynolds document describing the mission of the Tobacco Institute discussed Defendants' goals including witness development in upcoming health litigation. The document stated that the authorization and purpose of CTR Special Projects and Ad Hoc Committee lawyer projects was to assure efficient handling of medical evidence and to provide the industry with witnesses for health litigation. 502645038.S-5038.Z (US 23053) (O).

261. David Hardy, partner at Shook, Hardy & Bacon, played a major involvement in Defendants' witness development plans to perpetuate the Enterprise's "open question" position. Hardy worked to round up possible witnesses for future litigation throughout the 1960s. For example, in a January 12, 1967 letter to the Ad Hoc Committee, David Hardy requested evaluations of potential industry witnesses. In the same letter, Hardy asked Ad Hoc Committee members to analyze the value of various CTR and Ad Hoc projects in an effort to get practical use out of them in time for expected Congressional hearings. 2015059690-9697 (US 20309) (O).

262. A February 8, 1967 letter to Hardy from Donald Cohen and Francis Decker, attorneys with Webster, Sheffield, Fleischmann, Hitchcock & Chrystie, responded to Hardy's request for comments and evaluations of potential industry witnesses. It addressed many areas of possible testimony in great detail and provided names of doctors and scientists, many of whom were CTR Special Projects recipients and funded by various Defendants in later years. Cohen and Decker stated that Defendants' witnesses "should describe the unexplained paradoxes in the cigarette smoke theory of disease causation. [They] should present the idea that the statistics are as consistent, if not more so, with the constitutional theory as with the cigarette smoking theory." Cohen and Decker also recommended that doctors and scientists who had received CTR grants-in-aid and CTR Special Project funding be used as potential witnesses. 1005154422-4435 at

4425 (US 20228) (O).

263. William Shinn of Shook, Hardy & Bacon also drafted a letter in response to Hardy's request, which was copied to members of the Ad Hoc Committee, regarding potential witnesses for Defendants in upcoming congressional hearings. 1005154472-4479 (US 20229) (O); 2015059690-9697 (US 20309) (O).

264. Similarly, on March 31, 1967, Robert Hockett, on behalf of CTR, sent a memorandum to Hardy describing Adolphe D. Jonas, a psychiatrist who had worked on the psychology of smoking. In this memorandum, Hockett mentioned Jonas as a potential industry witness. 2015034120-4121 (US 20319) (O).

265. Scientists' work was often funded by CTR Special Projects solely because of a scientist's willingness to act as a witness in litigation or before congressional hearings on behalf of the Enterprise. For example, on October 3, 1968, in an attempt to funnel names to Hardy as potential witnesses before awarding scientists industry funding, Alexander Holtzman of Philip Morris wrote a letter proposing CTR Special Project funding for Richard Hickey. Hickey's application to CTR had previously been turned down, but Holtzman stated that "Dr. Hickey is willing to prepare a statement for Congress provided that he is put in a position to complete the analysis of data which he has in-hand and he would, in my opinion, make an excellent witness." 1005084784-4786 at 4784 (US 22988) (O).

266. Similarly, a November 17, 1978 Philip Morris memorandum noted that "CTR has supplied spokesmen for the industry at Congressional hearings. The monies spent at CTR provides a base for introduction of witnesses." 2045752106-2110 at 2107 (US 20467) (A); 1003718428-8432 at 8429 (US 35902) (A).

267. An industry document that described the minutes of a General Counsel meeting at

the offices of Philip Morris on January 4, 1978, at which representatives from B&W, Liggett, Reynolds, the Tobacco Institute, and Philip Morris were present, demonstrated the development of Special Account No. 4 (a specific type of Lawyers Special Projects) to address Defendants' need for witnesses. The Enterprise used Special Account No. 4, discussed further below, to fund researchers and scientists and to pay fees to consultants who could offer expert knowledge to Defendants and act as witnesses on their behalf. Recipients of such funding were sought out by Defendants' attorneys based on how helpful they would be in future litigation and congressional hearings. Funds were allocated accordingly. Discussions and details of the lawyers' special projects were to be kept confidential. In this document, attendees of this meeting were advised to not discuss the details of Special Account No. 4 in writing, and instead questions on the matter would require a phone call. No response to a letter within a given date was assumed to mean that "the matter [was] agreeable." BWX0004364-4375 (US 36228) (A); 03658901-8901 (US 20061) (A); LG2024193-4196 at 4196 (US 21212) (O).

268. In a February 9, 1978 letter to Thomas F. Ahrensfeld, General Counsel for Philip Morris; Max H. Crohn, Jr., General Counsel for Reynolds; Joseph Greer, General Counsel for Liggett; Arnold Henson, an attorney with Chadbourne & Parke; Ernest Pepples, General Counsel for B&W; and Arthur J. Stevens, General Counsel for Lorillard, William Shinn of Shook, Hardy & Bacon wrote of the "need for special areas of research with due regard for the politics of science, the importance of developing witnesses and the need for a responsive mechanism to meet unfounded claims made about tobacco." In this document, Shinn recommended approval for Hans Eysenck funding through Special Account No. 4 and the Franklin Institute request through a CTR Special Project. Once again, recipients of this letter were reminded to not retain notes on matters of witness development. 503655086-5088 at 5087 (US 20720) (A);

503655086-5088 (US 75190) (A).

269. By at least the late 1970s, the Tobacco Institute and its agents became coordinators in Defendants' efforts to develop a group of witnesses for future litigations and hearings. An August 30, 1978 letter from Ernest Pepples of B&W to Richard Maddox of BATCo discussed the request of Horace Kornegay, President of the Tobacco Institute, that the Committee of Counsel be involved in selecting and providing scientific witnesses and documentary testimony for use in hearings before Congress and elsewhere. During its years as an active trade association, the Tobacco Institute prepared or provided over 100 witnesses for testimony before Congress, courts or state legislatures. 681725305-5307 (US 21019) (O); USX6390001-0400 at 0335 (US 89555) (O) (TI Response to Request for Admission No. 161).

270. A March 11, 1980 document drafted by Max Crohn of Reynolds acknowledged that longtime CTR Special Project and Special Account No. 4 recipient Theodor Sterling was "one of our industry's most valuable outside assets." In addition to numerous publications and studies, Crohn noted that "[Sterling] has continued to be one of the primary scientists available for consultation with Shook Hardy & Bacon in Kansas City." 503645463-5463 (US 29696) (A).

271. A 1983 letter from Ernest Pepples of B&W to Jim Bowling of Philip Morris and Alexander Spears of Lorillard attached "a paper proposing recommendations which we might make to the [Tobacco Institute] Executive Committee." 80419202-9202 (US 21061) (O). The attached paper titled "Industry Research Support – Recommendations" listed the following among its considerations for upcoming scientific funding:

> Be prepared to increase scientific funding of special projects to resolve scientific problems and develop witnesses. . . .
> Maintain company cooperation – philosophies about research may differ at times, but goals should be the same. . . .
> Improve cooperation between industry mechanisms such as CTR and TI.

80419203-9203 (US 21062) (O).

272. In a February 2, 1984 memorandum written by Arthur Stevens, General Counsel for Lorillard, to Alexander Holtzman, General Counsel for Philip Morris; Ernest Pepples, General Counsel for B&W; Josiah Murray, General Counsel for Liggett; and Samuel Witt, General Counsel for Reynolds, Stevens discussed the intent of the Ad Hoc Committee to "propose a witness development plan" to assist the litigious and regulatory efforts of the member companies. 85687269-7270 at 7269 (US 21081) (A).

273. An April 7, 1986 letter from Patrick Sirridge, Shook, Hardy & Bacon, to Alexander Holtzman, General Counsel for Philip Morris; Wayne W. Juchatz, General Counsel for Reynolds; Josiah J. Murray, III, General Counsel for Liggett; Ernest Pepples, General Counsel for B&W; Paul A. Randour, General Counsel for American; and Arthur J. Stevens, General Counsel for Lorillard, informed the CTR Board members that Shook, Hardy & Bacon would take over both the administration of Special Account No 4 from Jacob, Medinger & Finnegan and the submission of research proposals for CTR Special Projects. According to this letter, Shook, Hardy & Bacon anticipated higher funding requests for "certain witness development expenses incurred by national litigation counsel." 507877173-7174 at 7173 (US 20800) (A).

274. An April 28, 1992 Wachtell Lipton memorandum from attorney David Murphy to attorneys Herbert Wachtell, Paul Vizcarrondo, Jr., and John Savarese described an issue that had come up at Lorillard. Arthur Stevens and William Allinder of Lorillard wanted to know if Lorillard could "participate in funding through a Shook, Hardy special account the work of a Georgetown pathologist, Bennett Jensen." Murphy reported that he had been advised that Jensen had received CTR Special Project funding in 1988, and now faced problems at Georgetown

because of his ties to the tobacco industry. Shook, Hardy & Bacon proposed to "'give him' $40,000 – not for specific research . . . or with an eye to publication but solely in order to maintain a good relationship with him and secure his continued help in making contact with other scientists." Murphy also reported that "Allinder admits that Shook, Hardy wants to give Jensen money to keep him happy and that there is no immediate value to his research." Jensen, however, was a potential witness in the Haines litigation and his contacts "could lead to legislative witnesses." 87715635-5636 (US 21101) (A). Indeed, Robert Northrip, attorney with Shook, Hardy & Bacon, acknowledged that one of the benefits of Special Projects was preserving the good will of former witnesses. Northrip WD, 10:6-11:2; Northrip TT, 9/30/04, 01366:7-01367:25; ATX9275490271-0280 at 0273 (US 36231) (A).

(2) CTR Special Projects

(a) Nature of CTR Special Projects

275. CTR Special Projects were a separate category of research projects funded by CTR. Unlike the grant-in-aid category of research, CTR Special Projects were not vetted by the CTR Scientific Advisory Board ("SAB"); instead the process was led by the General Counsels of Philip Morris, Reynolds, Lorillard, Liggett, B&W, and American, as well as attorneys at outside law firms including Jacob, Medinger & Finnegan, and Shook, Hardy & Bacon. The work was commissioned for possible use in litigation. Stevens WD, 13:22-16:16, 17:20-18:8; Juchatz TT, 11/22/04, 06736:17-06748:17, 06754:8-06782:3; (US 87024) (A); McAllister WD, 159:12-14, 161:23-162:25; McAllister TT, 3/21/05, 16171:22-16175:13; Sommers PD, Arch v. American, 7/14/97, 49:7-9; see also Rupp WD, 38:1-8; Northrip TT, 9/30/04, 01369:25-01374:16, 01374:17-01375:3; Lisanti PD, Engle v. Reynolds, 8/13/97, 86:8-21; USX6390001-0400 (US 89555) (O) (CTR Response to Requests for Admission No. 131, 135).

276. Although Liggett withdrew from the CTR in 1968, it continued to participate in CTR Special Projects. Stevens, WD, 17:14-19. Indeed, in its January 8, 1968 resignation letter, Liggett's President stated "we will continue to participate in defraying the cost of [CTR] Special Projects sponsored by the Council after evaluation of each Project on an individual basis." CTR-TIRC MIN000238-0244 at 0241 (US 33023) (O).

277. Like CTR grants-in-aid, CTR Special Projects involved research into epidemiology, laboratory work, and animal experimentation. However, they were regarded by at least one prior Scientific Director of CTR as "soft science," which would not appeal to the CTR SAB. Sommers PD, Arch v. American Tobacco, 7/14/97, 49:7-24; 7/15/97, 215:22-24, 216:2-6.

278. The lawyers who coordinated, requested and monitored CTR Special Projects were not scientists and did not have scientific backgrounds. The lawyers needed to circumvent the CTR SAB method of funding because the SAB evaluated its project-funding requests in part for scientific legitimacy, while the lawyers had litigation and liability objectives foremost in mind for CTR Special Projects. Donald Hoel PD, United States v. Philip Morris, 6/27/02, 58:20-59:19.

279. Indeed, starting in the mid-1960s, Shook, Hardy & Bacon developed smoking and health literature retrieval system within the firm to help the lawyers identify scientists friendly to the tobacco industry's liability positions so that these scientists could receive CTR funding through the CTR Special Projects program. Donald Hoel PD, United States v. Philip Morris, 6/27/02, 61:10-62:7, 62:11, 63:11-20.

280. An April 14, 1967 memorandum from Addison Yeaman, Vice President and General Counsel of B&W, addressed to Frederick Haas, General Counsel for Liggett; Cyril Hetsko, General Counsel for American; Henry Ramm, General Counsel for Reynolds; Paul

Smith, Associate General Counsel for Philip Morris; and Earle Clements, President of the Tobacco Institute, confirmed that many of CTR's research activities were not independent and did not investigate the link between smoking and disease as publicly claimed by the industry: "We have deliberately isolated the SAB from those areas of research which they might consider were of a controversial or adversary nature and I see no reason why that isolation cannot and should not be maintained to the fullest preservation of the scientific integrity and dignity of the SAB, but with the release of funds from the SAB portion of CTR's budget to both research directly related to tobacco and the so-called Special Projects." 670307892-7894 (US 20967) (O).

281. A February 24, 1969 Lorillard memorandum also described the origin of CTR Special Projects: "For a number of years, certain representatives of the industry have felt that the work of the Council [for Tobacco Research] has not been as pertinent to our problems as it might be. . . . In an effort to meet this objection, in 1965 the Council embarked on a program of guided research. . . . In order to finance this phase of their activity, a special projects budget was developed." 044227839-7844 (US 20066) (O).

282. Because of the lawyer involvement and the lack of review by the SAB, CTR Special Projects were not, as had been promised in the Frank Statement, independent research. Janet Brown, in a letter to David Hardy dated June 13, 1974, addressed the issue of CTR's "independence" and the problem with CTR's Special Projects:

> Where the industry is itself the arbiter of the amount and nature of research to be done, however, argument that the research is self-serving – that is, is too little, too late, does not bear reasonable relation to the nature and scope of the problems nor to the industry's market position, sales, profits, advertising expenditures – gain in force and acceptance. Moreover, the industry may have little, if any leeway to disassociate itself from any results of such research with which it does not agree.

03659023-9025 at 9025 (US 87177) (A).

283. A November 17, 1978 memorandum written by Robert Seligman, Vice President of Research and Development of Philip Morris, described a November 15, 1978 meeting attended by Ernest Pepples, General Counsel for B&W; Charles Tucker, General Counsel for Reynolds; Timothy Finnegan, attorney with Jacob, Medinger & Finnegan; William Shinn, attorney with Shook, Hardy & Bacon; Arnold Henson, General Counsel for American; Janet Brown, attorney with Chadbourne & Parke described as retained counsel for CTR; Ivor Wallace Hughes, Vice President of B&W; Alexander Spears, Vice President of Lorillard; James Bowling, Senior Vice President of Philip Morris; Robert Seligman, Vice President of Philip Morris Research and Development; and Thomas Osdene, Director of Research for Philip Morris. At the meeting, Shinn described the history of CTR and CTR Special Projects. Seligman also reported that it was Shinn's feeling that "'[CTR] special projects' are the best way that monies are spent. On these projects, CTR has acted as a 'front'." 2045752106-2110 at 2107 (US 20467) (A); 1003718428-8432 at 8429 (US 35902) (A).

284. An April 18, 1980 memorandum to file by Arthur Stevens stated: "I concluded that this work [CTR Special Project recipients Kuper and Janis] is potentially useful from a litigation point of view." 01336290-6290 (US 88436) (A).

285. A September 18 1981 letter from Francis Decker, an attorney with Webster & Sheffield, to Joseph Greer, Vice President and General Counsel for Liggett, enclosed his notes from a September 10, 1981 meeting of the Committee of Counsel. Decker's notes described a discussion between Arthur Stevens, General Counsel for Lorillard, and Edwin Jacob, CTR attorney with Jacob, Medinger & Finnegan, noting the differences between CTR Special Projects and Lawyers Special Projects:

> Stevens: "I need to know what the historical reasons were for the difference between the criteria for lawyers' special projects and

> CTR special projects."
> . . .
> Jacob: "When we started the CTR Special Projects, the idea was that the scientific director of CTR would review a project. If he liked it, it was a CTR Special Project. If he did not like it, then it became a lawyers' special project."
> Stevens: "He took offense re scientific embarrassment to us, but not to CTR."
> Jacob: "With Spielberger, we were afraid of discovery for FTC and with Aviado, we wanted to protect it under the lawyers. We did not want it out in the open."

LG2000741-0750 at 0745-0746 (US 36269) (A).

286. A 1984 document prepared by Lee Stanford of Shook, Hardy & Bacon to David Hardy of Shook, Hardy & Bacon, concerning the briefing of Alex Spears of Lorillard for a deposition, discussed CTR Special Projects. The document acknowledged that "[t]hese are initiated and developed through outside counsel (SHB and J&M)." 92456261-6268 (US 21658) (O), (US 75420) (A).

287. A document prepared in or about 1992 titled "Funding Sources of Tobacco Industry Research" noted that CTR Special Projects were "-Research directed at industry problem -Witness development objective -Approved by general counsel -Funded through CTR." 01334642-4655 (US 34528) (O).

288. An April 28, 1992 Wachtell Lipton memorandum from attorney David Murphy to attorneys Herbert Wachtell, Paul Vizcarrondo, Jr., and John Savarese opined about the nature of CTR Special Projects:

> In my overcautious view, the Jensen issue raises a larger question – whether "CTR Special Projects" funds (and after such activities were moved out of CTR, joint industry funds administered through Shook, Hardy) were used to purchase favorable judicial or legislative testimony, thereby perpetrating a fraud on the public. Admittedly, this notion of fraud was unknown to the common law, but if we assume the other side of the looking glass . . . perhaps it is cause for concern.

87715635-5636 (US 21101) (A).

(b) Lawyers' Involvement with CTR Special Projects

289. Attorneys at Jacob, Medinger & Finnegan and Shook, Hardy & Bacon kept the Committee of Counsel apprised of the status of CTR Special Projects and also made recommendations to Defendants' General Counsel and to each other as to whether projects should be conducted through CTR Special Projects. TIMN261386-1387 (US 21288) (A); 1005048374-8374 (US 35939) (A). See also Lisanti PD, Arch v. American Tobacco, 6/10/97, 80:9-81:19, 82:10-19.

290. For example, on May 19, 1967, William Shinn of Shook, Hardy & Bacon, sent a letter to Alexander Holtzman, Philip Morris General Counsel, regarding CTR Special Projects, outlining a proposal to support and publicize research advancing the theory of smoking as beneficial to health as a stress reducer, even for "coronary prone" persons; representing that stress (rather than nicotine addiction) explains why smoking clinics fail; and proposing to publicize the "image of smoking as 'right' for many people . . . as a scientifically approved 'diversion' to avoid disease causing stress." 1005083882-3882 (US 20204) (O).

291. On February 5, 1974, Shinn sent a letter to the following General Counsel: Thomas Ahrensfeld of Philip Morris; DeBaun Bryant of B&W; Frederick Haas of Liggett; Cyril Hetsko of American; Henry Roemer of Reynolds; and Arthur Stevens of Lorillard, stating that "Dave Hardy and I strongly recommend approval of the $50,000 grant for Dr. Carl D. Seltzer's work as a CTR special project" at Harvard University, citing his valuable work underway and published works relating to smoking and health, which were helpful to the industry. 1005108380-8381 at 8381 (US 20209) (A).

292. On June 3, 1986, Patrick Sirridge of Shook, Hardy & Bacon sent a letter to the

following General Counsel: Alexander Holtzman of Philip Morris; Wayne Juchatz of Reynolds; Josiah Murray of Liggett; Ernest Pepples of B&W; Paul Randour of American; and Arthur Stevens of Lorillard, recommending approval for additional funding of Henry Rothschild through CTR Special Projects. 507878840-8840 (US 20802) (A).

293. Such industry attorney recommendations continued from the 1960s through the 1990s. LG2000429 -0430 (US 34067) (A); 1005083560-3561 (US 35991) (A); LG2002513-2514 (US 34076) (A); 1005070386-0387 (US 35981) (A); 1005108380-8381 (US 20209) (A); MNATPRIV00012777-2778 (US 86233) (O); 503655086-5088 (US 20720) (A); 03638976-8979 (US 20060) (A); 03638976-8979 (US 46483) (A); 01335398-5398 (US 26488) (A); 507731976-1976 (US 86273) (A); 521032586-2588 (US 85746) (A); 01335965-5966 (US 26516) (A); 01335571-5571 (US 26498) (A); 03754226-4227 (US 29343) (A); 01338391-8392 (US 26567) (A); 01337575-7576 (US 26552) (A); 1005125797-5798 (US 36097) (O); 505741621-1622 (US 86245) (O); BWX0003772-3773 (US 36199) (O); 503645740-5741 (US 29699) (O); 504339396-9397 (US 29751) (O); BWX0002772-2773 (US 36171) (O); 521030035-0036 (US 30458) (O); 1005125390-5391 (US 36091) (O); BWX0002884-2885 (US 36182) (O); 1005125300-5301 (US 36089) (O); 03747448-7449 (US 29327) (A); ATX9277370208-0209 (US 36233) (O); 503645752-5753 (US 29700) (O); 1005064666-4667 (US 35973) (A); LG2002762-2763 (US 34086) (A); BWX0004202-4202 (US 36222) (O); 507731371-1371 (US 86250) (O); 1005064678-4679 (US 35975) (A); 521032115-2116 (US 30470) (O); 503645128-5129 (US 86251) (O); 1005064711-4712 (US 35977) (A); BWX0003460-3461 (US 36192) (O); 1005064646-4647 (US 35972) (A); 503566273-6274 (US 86253) (O); 521031847-1848 (US 30466) (O); 1005064594-4595 (US 35969) (A); BWX0002886-2887 (US 36183) (O); 503655382-5383 (US 86254) (O); 503655216-5217 (US 86255) (O); BWX0002866-2867 (US

36180) (O); 1005064627-4628 (US 35971) (A); BWX0002893-2894 (US 36185) (O); 503653937-3938 (US 86256) (O); 507731344-1344 (US 29862) (O); 521029712-9713 (US 30451) (O); 1005064547-4548 (US 35967) (A); 503645684-5685 (US 86257) (O); BWX0002888-2889 (US 36184) (O); 521030984-0985 (US 86259) (O); 507734475-4476 (US 86261) (O); 507732105-2106 (US 86262) (O); 507734379-4380 (US 29905) (O); 507731548-1549 (US 86266) (O); 507734458-4458 (US 86267) (O); 507731658-1659 (US 86269) (O); 507731764-1765 (US 86270) (O); 507731469-1470 (US 86271) (A); 507731758-1758 (US 29896) (A); 507731648-1648 (US 29888) (O); 507731575-1576 (US 86275) (A); 507731487-1487 (US 86276) (A); 507731973-1973 (US 86278) (A); 507875993-5993 (US 22692) (A); ATX300010994-0995 (US 22694) (A); 521031106-1107 (US 22696) (A); 01336194-6195 (US 22697) (A); 01338089-8089 (US 22701) (A); LG2000678-0679 (US 22703) (A); 1005064682-4683 (US 35976) (A); 03751975-1976 (US 29340) (A); 03747528-7528 (US 29328) (A); 01336110-6113 (US 26519) (A); 1005064561-4561 (US 35968) (A); 01335579-5579 (US 26499) (A); 2015029385-9385 (US 36639) (O); 01336499-6500 (US 26535) (O); 507877111-7112 (US 88438) (O); 86003017-3018 (US 56084) (A); 01335472-5472 (US 26493) (A); 01338515-8517 (US 26570) (A); 01334899-4899 (US 26474) (A); 01331881-1881 (US 26467) (A); 503655440-5441 (US 29711) (O); 01336191-6192 (US 26522) (A); TLT0270555-0555 (US 85619) (A); 03751370-1372 (US 29331) (A); 01335959-5959 (US 26514) (A); 01335967-5968 (US 26517) (A); 521032312-2314 (US 30472) (O); 1000781727-1727 (US 35321) (A); 1005125129-5130 (US 36084) (O).

294. In-house counsel also made recommendations for CTR Special Projects. On October 3, 1968, Alexander Holtzman of Philip Morris sent a letter to David Hardy of Shook, Hardy & Bacon proposing that Richard Hickey, who had previously applied for funding through

CTR but was denied, receive Special Project funding. On October 21, 1968, Hardy endorsed that recommendation by sending a letter to Frederick Haas of Liggett; Cyril Hetsko of American; Henry Ramm, General Counsel for Reynolds; Paul Smith, General Counsel for Philip Morris; and Addison Yeaman, General Counsel for B&W, by also recommending approval for Hickey as a CTR Special Project. 1005084784-4786 (US 22988) (O); 1005084799-4800 (US 20206) (O).

295. In 1981, Arthur Stevens of Lorillard engaged in extensive correspondence with Patrick Sirridge of Shook, Hardy & Bacon regarding the possibility of establishing an industry relationship with Henry Shotwell. 01349577-9577 (US 86281) (A); 01349576-9576 (US 86282) (A); 01349575-9575 (US 86283) (A); 01349574-9574 (US 86284) (A); 01349557-9557 (US 86285) (A).

296. Similarly, on November 28, 1983, Arthur Stevens, Senior Vice President and General Counsel of Lorillard, sent a letter to Patrick Sirridge of Shook, Hardy & Bacon, inquiring: "Is Binstock someone who might be appropriate for a special project?" 03746232-6232 (US 29322) (A).

297. CTR personnel also recommended that certain projects be funded as CTR Special Projects. For example, on December 24, 1969, Arthur Furst, CTR consultant, sent a letter to David Hardy recommending Special Project funding for Hans J. Eysenck to test the hypothesis of a relationship between the emotional make-up of people and cancer by conducting a pilot study of carcinogenesis in rats bred for differences characteristics. 1005070515-0515 (US 20201) (O).

298. By letter dated May 28, 1970, William Shinn of Shook, Hardy & Bacon advised Holtzman that he now had approval from Philip Morris, Reynolds, and Liggett "with respect to the Hickey Special Project" and that he intended "to call the other General Counsel, if I have not heard from them by then, early next week." 2015031514-1514 (US 20316) (A).

299. According to CTR's Harmon McAllister, after lawyers had initiated a Special Project proposal, "a description of the proposed project and its cost [were] presented to CTR . . . for appraisal by the Scientific Director." McAllister WD, 161:4-18; CTRSP-FILES026162 (JD-090143) (A). Individuals who presented the proposed project description and cost to the CTR Scientific Director included company attorneys, attorneys from Shook, Hardy & Bacon, and attorneys from Jacob & Medinger. McAllister TT, 3/21/05, 16171:22-16172:22. The CTR Scientific Director would then review the Special Project proposal and either approve or reject it. McAllister TT, 3/21/05, 16178:16-24; McAllister WD, 19-25 (discussing "Procedure for Special Projects); CTRSP-FILES012009 (JD-093897) (A). Sheldon Sommers reviewed and approved dozens of Special Project proposals during his tenure as CTR Scientific Director. See, e.g., 01335398-5398 (US 26488) (A); 521032586-2588 (US 85746) (A); 507731976-1976 (US 86273) (A); 804122847-2848 (US 26525) (A); 282002535-2536 (US 28076) (O); 507731658-1659 (US 86269) (O); 521028862-8863 (US 52693*) (A); 804122847-2848 (US 23586) (O); BWX0003460-3461 (US 36192) (O); BWX0003808-3809 (US 36204) (O); see also 503565787-5787 (US 29683) (O); CTR98CONG00067 (US 32516) (O); LWODJ9055269-5270 (US 26015) (O).

300. If approved by the CTR Scientific Director, the proposal was presented to the General Counsels of Defendants Philip Morris, Reynolds, Lorillard, Liggett, B&W, and American who would decide whether to fund it. McAllister WD, 162:8-18; McAllister TT, 3/21/05, 16179:7-16182:2. See also Lisanti PD, Arch v. American Tobacco, 6/10/97, 86:17-87:2. Sometimes, general counsel would advise CTR directly if a project was approved for CTR Special Project funding. For example, on July 22, 1970, Henry Ramm, Senior Vice President and General Counsel of Reynolds, advised Robert Hockett, Associate Scientific Director of CTR,

regarding the "proposed Conference to be held in the West Indies in January 1972, counsel representing Philip Morris, B&W, American Brands, Liggett & Myers and Lorillard which companies together with Reynolds participate in Special Projects have advised that if the Scientific Advisory Board does not approve this project the same can be treated as an approved Special Project." CTRSP-FILES009810-9810 (US 21696) (O); BWX0010831-0840 (US 36244) (O).

301. The proposed conference was approved as a CTR Special Project in October 1970; was held on St. Martin Island on January 12-15, 1972; and was called the Conference on the Motivational Mechanisms of Cigarette Smoking. Among the attendees were A.K. Armitage from Britain's Tobacco Research Council; Robert Hockett, CTR Associate Scientific Director; Henry Ramm, CTR Chairman and President; Gilbert Huebner, Tobacco Institute Medical Director; Marvin Kastenbaum, Tobacco Institute Director of Statistics; and several of the Defendants' research directors, including William Bates of Liggett, I.W. Hughes of B&W, Murray Senkus of Reynolds, Alexander Spears of Lorillard, and Helmut Wakeham of Philip Morris; and several CTR Special Project funding recipients, including Hans Eysenck, Richard Hickey, Hans Selye, and Carl Seltzer. 503654881-4885 (US 88413)(A); 105394371-4388 (US 88414) (O); See US FF § III.E., infra (for additional discussion of the Conference and the subsequent publication of proceedings).

302. In general, however, Defendants' General Counsels would advise attorneys at Jacob, Medinger & Finnegan or Shook, Hardy & Bacon whether or not their companies would agree to fund the recommended CTR Special Projects. The following are but a few examples: American: TLT0960501-0501 (US 87682) (O); ATX300000157-0157 (US 21130) (O). B&W: 521031038-1038 (US 20889) (O); 521028861-8861 (US 52692*) (O); 2050987576-7576 (US

27065) (O); 521031875-1875 (US 30467) (O); 521031322-1325 (US 30463) (O); 521031846-1846 (US 30465) (O); 521029712-9713 (US 30451) (O). Liggett: 2015031514-1514 (US 20316)(A); LG2002533-2533 (US 21198) (O). Philip Morris: 1005053953-3953 (US 20198) (O); 1005053931-3931 (US 86298) (O). Philip Morris Companies: 2015047160-7160 (US 20326) (O); 2015006925-6925 (US 20310) (O); 2015006923-6923 (US 23047) (O).

303. Once the General Counsels had approved a CTR Special Project, attorneys from Jacob, Medinger & Finnegan or Shook, Hardy & Bacon would advise CTR that the CTR Special Project had been approved. CTR would assign each CTR Special Project a number and the CTR staff would administer and distribute the funds for the CTR Special Project to the recipient or his or her affiliated research institution from a separate bank account maintained solely by CTR to fund CTR Special Projects. For example, on June 27, 1968, Ed Jacob of Jacob, Medinger & Finnegan sent a letter to W.T. Hoyt, Executive Director of CTR, with respect to funding for A. Clifford Barger that had been approved for CTR Special Project funding, and requested: "[W]ould you please assign a CTR SP Number to the project and let me know what that number is." McAllister PD, United States v. Philip Morris, 5/24/02, 92:19-95:3, 136:2-136:7; Donald Hoel PD, United States v. Philip Morris, 6/27/02, 56:9-20, 57:13-18; 515772203-2211 (US 87024) (A); see also McAllister WD, 162:4-18.

304. CTR Special Projects were not part of CTR's general fund budget; CTR's members provided the funding for CTR Special Projects in separate transactions. Each company

– Philip Morris, Reynolds, Lorillard, Liggett, B&W, and American – could decide whether or not to contribute to a particular project. The division of costs, however, were usually based upon the companies' respective market shares and the companies sent their share of a project's cost directly to CTR. CTR personnel often sent letters to the General Counsels of the six companies requesting payments for the CTR "Special Projects Fund." Donald Hoel PD, United States v. Philip Morris, 6/27/02, 66:10-67:10; McAllister WD, 161:14-16; 680305856-5858 (US 30887) (A); CTRSP-FILES026615-6615 (86302) (O); 81616878-6882 (31968) (O).

305. From 1966 to 1990, Defendants contributed the following amounts to CTR Special Projects: American - $2,049,354; B&W - $2,571,354; Lorillard - $1,638,490; Philip Morris - $5,837,923; and Reynolds - $6,029,255. From 1966 to 1975, Liggett contributed approximately $144,000. DXA0630917-1033 at 1024 (US 75927) (A) (CTR Response to First Set of Interrogatories, Schedule C).

306. Letters advising of the funding of a CTR Special Project were sent directly from CTR to the CTR Special Project recipient. CTRSP-FILES010602-0603 (US 32710) (O); CTRSP-FILES011331-1331 (US 32718) (O); CTRSP-FILES011338-1338 (US 32720) (O); CTRSP-FILES007790-7790 (US 32683) (O); McAllister WD, 162:14-15.

307. CTR Special Project recipients were instructed to use an acknowledgment line in publications resulting from CTR Special Project funding different from the acknowledgment line used in publications resulting from CTR grant recipient funding. The ever-so-slightly different acknowledgment line, however, did not disclose that the CTR Special Project research program was undertaken at the specific request of Defendants for predominantly litigation purposes and not vetted by the CTR SAB. McAllister PD, United States v. Philip Morris, 5/24/02, 145:23-149:18.

308. CTR did not include information about CTR Special Project research in its Annual Reports, which were widely distributed to medical editors at newspapers, medical editors for television programs, deans of colleges and universities in the United States, libraries at colleges and universities, college and university grant offices, the CTR board of directors, members of the CTR Scientific Advisory Board, CTR grantees, CTR Class A and B members, and the Tobacco Institute, and contained information about current and terminated grants-in-aid, grantees and their institutions. CTR also did not include information about CTR Special Projects in press releases. McAllister WD, 164:17-24; McAllister TT, 3/21/05,16167:18-16168:12, 16182:3-11; Zahn PD, Massachusetts v. Philip Morris, 5/28/98, 55:1-9, 177:14-17.

309. CTR Special Project funding ended sometime around 1990. USX6390001-0400 at 0017 (US 89555) (O) (CTR Response to Request for Admission No. 137). Thereafter, Philip Morris, Reynolds, Lorillard, Liggett, B&W, and American continued to jointly fund self-serving research projects on behalf of the Enterprise through Lawyers Special Accounts, discussed further below. For example, on March 2, 1990, Stevens sent a letter to Patrick Sirridge of Shook, Hardy & Bacon, enclosing a check for $46,461, which represented Lorillard's share of joint funding for Theodor Sterling. Stevens noted "that this is no longer a CTR project, but is now being funded directly by the Companies and administered as a Special Research Project through your firm." 87598486-8486 (US 21096) (A).

310. On March 7, 1990, Wayne Juchatz of Reynolds sent a letter to Sirridge enclosing Reynolds's portion for the continued funding of Sterling. On March 19, 1990, Paul Randour of American also sent a letter to Sirridge indicating approval of the joint funding of Sterling. On July 23, 1990, Ernest Pepples of B&W sent a letter to Sirridge enclosing a check for $65,579, which represented B&W's share of funding for Sterling. Pepples sent another contribution for

Sterling's work in 1991. 87598486-8486 (US 21096) (A); 507731678-1678 (US 29892) (A); ATX300004011-4011 (US 21131) (O); 521100040-0040 (US 20893) (O); 91765001-5001 (US 32125) (A).

311. On September 26, 1990, Patrick Sirridge of Shook, Hardy & Bacon sent a letter to Wayne Juchatz of Reynolds, Josiah Murray of Liggett, Ernest Pepples of B&W, Paul Randour of American, Arthur Stevens of Lorillard, and Charles Wall of Philip Morris concerning funding for Rodger Bick. Sirridge noted that "[f]or over 10 years, Dr. Rodger Bick's research on lung cancer has been supported under a CTR Special Project. Dr. Bick has requested that his support be renewed so that he can continue the work. We recommend that this project be approved in the amount of $40,404.32 and be funded directly by the companies." Philip Morris, Reynolds, B&W, Lorillard, and American all agreed to jointly fund the continued research. 86002659-2661 (US 32046) (A); 507731850-1851 (US 86308) (A); 680712948-2948 (US 30912) (A); 512678317-8317 (US 30044) (A); 2015002794-2794 (US 20307) (A); 507731849-1849 (US 76279) (A); 86002653-2653 (US 32045) (A); 87688005-8005 (US 32060) (A); 91768262-8262 (US 32126) (A).

312. In 1990, the companies continued to fund jointly the work of Alvan Feinstein that had previously been funded as a CTR Special Project on behalf of the Enterprise. ATX300004098-4098 (US 58613) (O); 507731403-1403 (US 29870) (A).

313. By letter dated February 26, 1991, Sirridge requested continued funding from Randour of American and Juchatz of Reynolds for Carl Seltzer, a long-time CTR Special Project recipient. Sirridge advised that B&W, Lorillard, and Philip Morris had already agreed to the continued funding. BWX0003847-3848 (US 36212) (A).

314. In March 1992, Bernard O'Neill of Shook, Hardy & Bacon sent a letter to Wayne

Juchatz of Reynolds, Ernest Pepples of B&W, Paul Randour of American, Arthur Stevens of Lorillard, and Charles Wall of Philip Morris, and copied Steven Parrish of Philip Morris, recommending another extension of joint industry funding of Theodor Sterling, a long-time CTR Special Projects grantee. 2015002947-2955 at 2947-2948 (US 20308)(A).

315. On May 18, 1992, Charles Wall, Vice President and Associate General Counsel of Philip Morris Companies, sent a letter to O'Neill of Shook, Hardy & Bacon enclosing a check representing Philip Morris Companies' contribution to Sterling's research efforts. 2023230770-0770 (US 20384) (A).

(c) Scientists Funded Through CTR Special Projects

316. Documents reflect that the following scientists were funded through the CTR Special Project program: William H. Alban; Austin; Domingo M. Aviado; Roberto Bachi; Claus B. Bahnson; William J. Bair; Clifford A. Barger; Bevilacqua; Cesare Biancifiori; Rodger L. Bick; Herman V. Boenig; Brian Bozelka; Lyman A. Brewer, III; Geoffrey L. Brinkman; Barbara B. Brown; Brunner; Victor B. Buhler; John Robert Carter; Jeffrey N. Clark; Richard C. Clelland; Irven DeVore; Salvatore R. DiNardi; William L. Dunn (Philip Morris); Kurt Enslein; Hans J. Eysenck; Alvan R. Feinstein; T.N. Finley; G.H. Friedell; H. Hugh Fudenberg; Arthur Furst (CTR); Arvin S. Glicksman; Victor Gould; John G. Gruhn; Michael R. Guerin; William H. Gutstein; Frederick Hecht; Norman W. Heimstra; Doris L. Herman; Katherine M. Herrold; Richard J. Hickey; Robert C. Hockett (CTR); Ebbe Curtis Hoff; Freddy Homburger; E. Lee Husting; Duncan Hutcheon; Joseph M. Janis; Alfred Bennett Jenson; William V. Judy; Marvin A. Kastenbaum (Tobacco Institute); Leo Katz; David M. Kissen; Jerome Kleinerman; Suzanne Knoebel; Lawrence L. Kuper; Hiram T. Langston; Mariano LaVia; Leonard A. Lee; Samuel B. Lehrer; Eleanor J. MacDonald; Thomas F. Mancuso; J.H. Manhold; Marcus M. Mason; Neal L.

McNiven; Aldo Misefari; Kenneth M. Moser; Harry Ness; S. O'Shea; Joseph M. Ogura; Ingram Olkin; Oser; Harold Perry; Charles D. Puglia; L.G.S. Rao; Herbert L. Ratcliffe; Vernon Riley; J.B. Roberts; Jay Roberts; Gray Robertson; Lisa Rosenblatt; Henry Rothschild; Linda Russek; Henry I. Russek; John Salvaggio; G.N. Schrauzer; Segi; Carl C. Seltzer; Hans Selye; Lucio Severi; James F. Smith; Louis A. Soloff; Darrel H. Spackman; Douglas H. Sprunt; R. Stankus; Frederick J. Stare; Russell Stedman; Theodor D. Sterling; David A. Sterling; Harold L. Stewart; Guiseppe Teti; Thomas; J.R. Trinidad; James A. Wakefield; John S. Waugh; John Vivian Wells; Carolyn K.Wells; Travis Winsor; George Wolf; Wough; and J. Yerushalmy. 92613920-4198 (US 32132) (O); 2048925665-5704 (US 38726) (O); 503654113-4113 (86310) (O); 503654114-4153 (86311) (O).

(3) Lawyers Special Accounts

317. In addition to CTR Special Projects, Philip Morris, Reynolds, Lorillard, Liggett, B&W, and American also conducted special research projects on behalf of the Enterprise, often referred to as Lawyers Special Accounts, under the guidance of industry lawyers, including the Ad Hoc Committee. Stevens WD, 16:17-17:19, 18:19-19:4; 2045752106-2110 at 2107 (US 20467) (A); 1003718428-8432 at 8429 (US 35902) (A).

318. Defendants would often fund the same scientist through both CTR Special Projects and through Lawyers Special Accounts. For example, on September 26, 1977, Edwin Jacob sent a letter to Shinn, which enclosed a proposal from L.G.S. Rao. Jacob noted that "it now appears that this research is not appropriate for consideration as a CTR Special Project. Nevertheless, the work is of obvious value. . . . Dr. Rao should be a most effective proponent of some of his views and, under appropriate circumstances, might well be able to provide useful information to a Congressional Committee or other body inquiring into certain aspects of

smoking and health. . . . For these, reasons, I would recommend that we fund Dr. Rao as a special project through Special Account No. 4." 503673274-3275 (US 29716) (O).

319. On September 4, 1986, Patrick Sirridge of Shook, Hardy & Bacon sent a letter to General Counsel Alexander Holtzman of Philip Morris, Wayne Juchatz of Reynolds, Josiah Murray of Liggett, Ernest Pepples of B&W, Paul Randour of Reynolds, and Arthur Stevens of Lorillard, recommending that Richard Hickey receive continued funding: "Because Dr. Hickey no longer has an official university position, we believe it is an appropriate time for his CTR Special Project support to end. However . . . Dr. Hickey [should be paid] for one year, $12,000. The consultancy would be paid from Shook Hardy & Bacon Special Account." 507875961-5962 at 5961 (US 20796) (A).

320. Another example is the multiple source funding for Hans Eysenck, professor at the University of London. Eysenck received CTR Special Project funding after initially applying – and being turned down – for a CTR SAB grant in 1969. Eysenck continued to receive CTR Special Project funding for a number of projects through 1986. Eysenck also received CTR SAB grant funding from 1973 through 1976. And Jacob also recommended to Thomas Ahrensfeld of Philip Morris, Max Crohn of Reynolds, Joseph Greer of Liggett, Arnold Henson of American, Ernest Pepples of B&W, and Arthur Stevens of Lorillard that Eysenck receive funding through Special Account No. 4 in 1978 and 1979. CTRSP-FILES008806-8806 (US 21168) (O); CTRSP-FILES008804-8804 (US 21167) (O); CTRSP-FILES 08799-8799 (US 21165) (O); HK1698002-8002 (US 21473) (O); 507731385-1385 (US 20784) (A); 03747024-7205 (US 21538) (A); 507731387-1388 (US 29868) (A).

321. Lawyers Special Accounts were primarily handled through Special Account No. 3, Special Account No. 4, Special Account No. 5, and separate institutional grants, discussed

below.

(a) Special Account No. 3

322. Special Account No. 3 was not used to fund research, but to coordinate smoking and health databases for use by the members of the Enterprise, especially litigating counsel. Contributors to Special Account No. 3 included: American, B&W, Liggett, Lorillard, Philip Morris, and Reynolds. 682150942-0942 (US 86491) (A); Stevens WD, 20:3-7.

(b) Special Account No. 4

323. From 1969 through at least 1989, American, Philip Morris, Reynolds, B&W, Liggett, and Lorillard contributed to Special Account No. 4, which was used on behalf of the Enterprise for lawyers' special project funding, consultancy fees, and witness expenses. Stevens WD, 16:17-17:19, 18:9-19:4; 80680301-0303 (US 21066) (A); 80680283-0285 (US 21065) (A); 2015028333-8336 (US 20314) (A); 1005122219-2222 (US 20214) (A); 1005122237-2240 (US 20215) (A); 1005122246-2249 (US 20216) (A); 1005122257-2260 (US 20217) (A); 1005122262-2265 (US 20218) (A); 1005122267-2271 (US 20219) (A); 03638929-8931 (US 20059) (A); 2015042056-2059 (US 21862) (A); 2015042069-2072 (US 22949) (A); 507875857-5859 (US 20795) (O); 507876993-6994 (US 20799) (O); 507875832-5834 (US 20794) (O); 507876986-6987 (US 20798) (O); 507875698-5700 (US 22953) (A); ATX140000938-0939 (US 21122) (A).

324. A May 18, 1971 document prepared by Arthur Stevens of Lorillard noted the nature of "Special Account No. 4, which is used for Congressional and regulatory matters." 80680229-0229 (US 31967) (A).

325. A September 19, 1973 document prepared by DeBaun Bryant of B&W stated that Special Account No. 4 "is used to maintain expenses incurred for certain research work such as

that done by Arthur D. Little on multivariate analysis; work performed by witnesses in preparation for Congressional or federal agencies hearings. The following companies contribute equal amounts to this account: American Brands, B&W, Liggett & Myers, P. Lorillard, Philip Morris, Reynolds." 682150942-0942 (US 86491) (A).

326. A December 9, 1977 document prepared by Max Crohn, Assistant General Counsel for Reynolds, further described Special Account No. 4: "Special Account No. 4 has been used to pay expenses and fees connected with expert consultancies and statement preparation." 03638986-8987 (US 86815) (A).

327. A document titled "Special Account No. 4 - funding of Crohn Subcommittee Expenses and General Review" indicated that during a "General Counsel meeting" on January 4, 1978, it was agreed that "Special Account No. 4 could be used for paying fees and expenses of expert witnesses willing to prepare statements or consult." 03658901-8901 (US 20061) (A).

328. A January 27, 1978 memorandum to the file prepared by Arthur Stevens of Lorillard noted that:

> At a Committee of Counsel meeting on January 4, 1978 the future handling of Special Account No. 4 was discussed. Each project to be funded out of Special Account No. 4 will be the subject of specific prior approval by the Committee of Counsel. However, blanket approval was given by the Committee of Counsel for expenditures out of the account not to exceed $10,000 per year, without the need for prior approval. L&M noted that it will participate in the funding of Special Account No. 4 during 1978 only to the extent that it did in 1977 (approximately $40 - $45,000?).

85675219-5219 (US 32009) (A).

329. A February 9, 1978 memorandum from Shinn of Shook, Hardy & Bacon to Thomas Ahrensfeld, General Counsel for Philip Morris; Max Crohn, Assistant General Counsel for Reynolds; Joseph Greer, Vice President and General Counsel for Liggett; Arnold Henson,

General Counsel for American; Ernest Pepples, Vice President and General Counsel for B&W; and Arthur Stevens, General Counsel for Lorillard, stated in part:

> Some of you have asked for additional information concerning funding through Special Account No. 4. This account is administered by Jacob & Medinger and Ed Jacob and I have reviewed the enclosed report. I also enclose a memorandum with regard to funding of projects and would appreciate your advice if you find this to be incorrect in any way. There is probably no need for you to retain those notes once you have satisfied yourself of the current situation.

330. Another 1978 document described the present and future commitments of Special Account No. 4 funds and the procedure for the approval of emergency matters. The list of industry witnesses included: Aviado, Brown, Eysenck, Spielberger, Hine, Ridgon, Seltzer, Rao, Booker, E. Fisher, Valentin, Heimstra, Dunlap, Farris, F. Fisher, Hickey, Moser, Okun, Sterling, Weil, Jones, Bick, Soloff, Kuper, Harvard Medical School (Huber), Stanford Research Institute, Franklin Institute, and the Industry Research Liaison Committee. LG2024193-4196 at 4195 (US 21212) (O); 89694310-4312 (US 32089) (O); 89694319-4325 (US 32091) (O); 89694313-4318 (US 32090) (O).

331. In the 1980s, Defendants Philip Morris, Reynolds, B&W, American, Lorillard, and Liggett, through the law firm of Shook, Hardy & Bacon, contracted with Battelle Laboratories of Columbus, Ohio to conduct studies on tobacco smoke and nicotine in the environment. Special Account No. 4 was used to fund the project. 01348599-8599 (US 87689) (O); 01348503-8503 (US 86316) (O); 01348490-8490 (US 86317) (O); 01348473-8473 (US 86318) (O); 01348483-8488 (US 86319) (O); 01348489-8489 (US 86320) (O); 01348465-8465 (US 86321) (O); 01348315-8315 (US 26580) (O); 502667789-7790 (US 29584) (O); 503673514-3515 (US 29720) (O); 521028996-8997 (US 30443) (O); 01348441-8441 (US

34535) (A); 01348727-8727 (US 86322) (O); 521028981-8982 (US 30442) (O); 503673416-3417 (US 29719) (O); 2010045875-5876 (US 36519) (O); 01346204-6205 (US 34532) (A); 01346206-6208 (US 34533) (O).

332. A February 22, 1980 letter from Arthur Stevens, Senior Vice President-General Counsel of Lorillard, to Timothy Finnegan of Jacob & Medinger and copied to Thomas F. Ahrensfeld, Alexander Holtzman, Max H. Crohn, Joseph H. Greer, Arnold Henson, Ernest Pepples, William W. Shinn, Ed Jacob, and Janet C. Brown acknowledged the reasons for why Special Account No. 4 was used to fund scientists. Stevens stated:

> I am mindful of the continuing mandate with which your office, Shook, Hardy and others have been charged by your respective clients on behalf of the Industry: that is, to find witnesses and researchers – and, if necessary in order to determine the feasibility of developing a relationship with them, engage them as consultants, or as researchers on initially modest projects. . . . [T]his [is an] important aspect of the Industry's work, that is, to attempt to posture ourselves to defend product liability litigation and related attacks on our products.

BWX0004097-4099 (US 36218) (A); 85676690-6692 (US 32012) (A); 1005146510-6512 (US 36118) (A); 01110668-0670 (US 87679) (A); 01335053-5055 (US 26480) (A); 85676690-6692 (US 32012) (A).

333. As with CTR Special Projects, progress and status reports of Lawyers Special Accounts projects were sent to Committee of Counsel members. For example, on March 27, 1980, Edwin Jacob sent a letter to Thomas Ahrensfeld, Max Crohn, Joseph Greer, Arnold Henson, Ernest Pepples, and Art Stevens, enclosing research papers "in part supported by the consultation research funds you have provided to Professor Eysenck through Special Account #4." 521029758-9788 (US 30452) (A).

334. On March 28, 1980, Jacob sent a letter to Thomas Ahrensfeld, Max Crohn, Joseph

Greer, Arnold Henson, Ernest Pepples, and Art Stevens enclosing a progress report from Professor Spielberger, a recipient of Special Account No. 4 funding. 521032463-2496 (US 30476) (A); 500515939-5939 (US 29465) (A); 502822004-2004 (US 29586) (A); 01355540-5540 (US 26583) (A); BWX0002848-2848 (US 36175) (A).

335. On September 10, 1981, a report was prepared on "Meeting of Company Counsel and Ad Hoc Committee Members" which discussed special projects and the Literature Retrieval Division. In it, the following comments were attributed to Edwin Jacob: "These 'special projects' are litigation and hearing oriented," and "Difference between C.T.R. and Special Four (lawyers' projects). Director of C.T.R. reviews special projects – if project was problem for C.T.R., use Special Four. Also, if there are work product claims, need the lawyers' protection . . . done through Special Four because of possibility that C.T.R. would be subpoenaed." The comments, "Concerned that science has become diluted and secondary to lawyers' advocacy interests," were attributed to Stevens of Lorillard. Thomas Bezanson of Chadbourne & Parke also prepared a memorandum regarding the September 10, 1981 meeting. 2023918181-8185 at 8181(US 20397) (A); 2045752086-2093 (US 20466) (A); ATX9275490271-0280 (US 36231) (A).

336. A January 10, 1983 chart demonstrates that Defendants jointly funded through Special Account No. 4 both consultancies (listed were Domingo Aviado, Theodore Blau, Walter Booker, Marc Micossi, Ragner Rylander, Carl Seltzer, and Murray Senkus of Reynolds) and research projects (listed were Battelle Columbus Laboratories, Melvin First, Arthur Furst, Nancy Mello and Jack Mendelson, L.G.S. Rao, and Charles Spielberger). This chart was sent on January 11, 1983, by Patrick Sirridge of Shook, Hardy & Bacon to Joseph Greer, General Counsel for Liggett; Arnold Henson, General Counsel for American; Alexander Holtzman, General Counsel for Philip Morris; Ernest Pepples, General Counsel for B&W; Arthur Stevens,

General Counsel for Lorillard; and Samuel Witt, General Counsel for Reynolds. LG2002618-2626 (US 21200) (A); LG2002617-2617 (US 21199) (A); 1005061636-1636 (US 35962) (A); 1005061637-1645 (US 35963) (A).

337. Special Account No. 4 was first administered by Jacob & Medinger and then by Shook, Hardy & Bacon starting in 1986. Attorneys from both firms would periodically request contributions from Philip Morris, Reynolds, American, B&W, Lorillard, and Liggett. The companies were also sent accountant's reports regarding the activity in the account. 507877173-7174 (US 20800) (A); 507877176-7176 (US 29925) (A); 680302487-2487 (US 30885) (A); 86002376-2377 (US 32044) (A).

338. In 1986, Shook, Hardy & Bacon reminded Committee of Counsel members that "[y]ou will recall that Special Fund 4 also is used to cover certain witness development expenses incurred by national litigation counsel." 507877173-7174 at 7173 (US 20800) (A).

339. General Counsel from Philip Morris, Reynolds, Lorillard, Liggett, B&W, and American and lawyers from Jacob, Medinger & Finnegan and Shook, Hardy & Bacon made recommendations with respect to the funding of Special Account No. 4 projects. For example, on February 9, 1978, William Shinn of Shook, Hardy & Bacon sent a letter to Thomas Ahrensfeld, General Counsel of Philip Morris; Max Crohn, General Counsel of Reynolds; Joseph Greer, General Counsel of Liggett; Arnold Henson, General Counsel of American; Ernest Pepples, General Counsel of B&W; and Arthur Stevens, General Counsel of Lorillard, recommending the approval of funding for Hans Eysenck through Special Account No. 4. 03638976-8979 (US 46483) (A).

340. On February 12, 1982, Pepples sent a letter to Patrick Sirridge of Shook, Hardy & Bacon, recommending the renewal of an annual grant to Arthur Furst be paid from Special

Account No. 4. 521029995-0008 (US 20887) (A).

341. Such industry attorney recommendations lasted from at least the 1960s through at least the 1980s. 01335056-5057 (US 26481) (A); 01347171-7172 (US 26579) (A); 01346134-6135 (US 26577) (A); 1005125796-5796 (US 36096) (A); 1005125153-5154 (US 36085) (A); 1005047922-7923 (US 35938) (A); 1005064674-4674 (US 35974) (A); 1005064613-4613 (US 35970) (A); 03751441-1442 (US 29333) (A); 80411597-1598 (US 31961) (A); 86002656-2656 (US 56082) (A); 86002593-2594 (US 56081) (A).

342. General Counsel from Philip Morris, Reynolds, Lorillard, Liggett, B&W, and American advised Jacob & Medinger and/or Shook, Hardy & Bacon whether or not their companies would contribute to the Special Account No. 4 project as the following examples confirm. American: ATX30 0011154-1154 (US 21132) (O). B&W: 521029215-9222 (US 30445) (O); 521029280-9285 (US 30446) (O). Lorillard: 85674693-4693 (US 23013) (A); 01331861-1861 (US 26464) (A); 85678849-8849 (US 32022) (A); 86002657-2658 (US 56083) (A); 01335102-5102 (US 26483) (A); 01335447-5447 (US 26489) (A); 01346076-6076 (US 26574) (A); 01338970-8970 (US 26573) (A); 01335086-5086 (US 26482) (A). Reynolds: 502499420-9420 (US 21720) (O). Liggett: 507875702-5702 (US 21648) (A). Philip Morris: 2010047953-7953 (US 21483) (O); 503688635-8635 (US 86344) (A).

343. Documents reflect that, at a minimum, the following individuals and organizations received funding through Special Account No. 4 beginning in the 1960s and ending in the 1990s: Able-Lands, Inc.; Lauren Ackerman; ACVA Atlantic Inc.; George Albee; Aleph Foundation; Arthur D. Little, Inc.; Aspen Conference; Atmospheric Health Sciences; Domingo Aviado; James Ballenger; Alvan L Barach; Walter Barker; Broda O. Barnes; Battelle Columbus Laboratories; Battelle Memorial Institute; Walter Becker; Peter Berger; Rodger L.

Bick; Billings & Gussman, Inc.; Richard Bing; BioResearch Laboratories; Theodore Blau; Irvin Blose; Walter Booker; Evelyn J. Bowers; Thomas H. Brem; Lyman A. 20794) (O); 507875857-5859 (US 20795) (O); 507876993-6994 (US 20799) (O); 1005122219-2222 (US 20214) (A); 1005122237-2240 (US 20215) (A); 1005122262-2265 (US 20218) (A); 1005122267-2271 (US 20219) (A); 2015028333-8336 (US 20314) (A); 1005122246-2249 (US 20216) (A); 1005122257-2260 (US 20217) (A); 2010047954-7955 (US 86358) (O); 2015041994-1997 (US 36654) (A); 2015042056-2059 (US 21862) (A); 2015042069-2072 (US 22949) (O); 507876986-6987 (US 20798) (O); 80680283-0285 (US 21065) (A); 80680301-0303 (US 21066) (A); 86002393-2396 (US 86359) (A).

(c) Special Account No. 5

344. Another avenue for joint research activity undertaken by the Enterprise was the research supported through Lawyers Special Account No. 5. In a memorandum dated November 8, 1978 to Thomas Ahrensfeld of Philip Morris; Joseph Greer, Liggett; Arnold Henson, American; Ernest Pepples, B&W; Henry Roemer, Reynolds; and Arthur Stevens, Lorillard, and copied to Janet Brown of Chadbourne & Parke; DeBaun Bryant, B&W; Max Crohn, Reynolds; Alexander Holtzman, Philip Morris; Lester Pollack, Lorillard; and William Shinn of Shook, Hardy & Bacon, Edwin Jacob of Jacob & Medinger enclosed a two-year, $400,000 research proposal from Alfred M. Freedman and Richard Brotman. Jacob advised, "Janet Brown, Bill Shinn and I have discussed this proposal with [Brotman and Freedman]. We recommend its approval." The Brotman/Freedman project, related to defining risks and "unhealthy" behavior, was designated by counsel as Special Account No. 5. 521029470-9485 (US 30450) (A); 03639217-9217 (US 29290) (A); 682070027-0027 (US 36145) (A); 03746884-6884 (US 29324) (A).

345. The Brotman/Freedman project was also discussed at the June 1982 Committee of Counsel meeting. By memorandum dated July 15, 1982 addressed to Joseph Greer, Arnold

Henson, Alexander Holtzman, Ernest Pepples, Arthur Stevens, and Samuel Witt and copied to Janet Brown and William Shinn, Chester Wrobleski of Jacob, Medinger & Finnegan provided an updated proposal of the Brotman/Freedman project. LG2006022-6023 (US 34087) (A); 521029470-9485 (US 30450) (A); 511083098-3099 (US 86360) (A); 1005125293-5294 (US 36088) (A).

346. In July 1982, Arthur Stevens of Lorillard sent the updated Brotman/Freedman proposal to Lorillard scientist Alexander W. Spears for review. In his assessment, Spears opined that the Brotman/Freedman proposals were of "little potential value to this Industry," but acknowledged that there would be value "in the area of Brotman's and Freedman's value as witnesses in legislative proceedings." Lorillard participated in the joint funding of the first phase of the project, but did not participate in the second phase. Stevens WD, 16:17-17:3; 01335523-5523 (US 26496) (A); 01335522-5522 (US 26495) (A); 521029470-9485 (US 30450) (A); 01335521-5521 (US 26494) (A).

347. The Brotman/Freedman project was approved in 1982 by four of the Defendants: American, Reynolds, Philip Morris and B&W and ran through the mid-1980s. 521029470-9485 (US 30450) (A); 86002376-2377 (US 32044) (A).

(d) Institutional Grants

348. Lawyers Special Accounts were also used to pay for the institutional grants funded by Philip Morris, Reynolds, Lorillard, Liggett, B&W, and American. Defendants funded projects at Harvard University, University of California Los Angeles ("UCLA"), and Washington University. Stevens WD, 19:7-15.

349. Defendants used institutional grants to promote self-serving research. This was described in a November 17, 1978 memorandum prepared by Robert Seligman, Vice President of

R&D of Philip Morris. Seligman reported that at the meeting Shook, Hardy & Bacon attorney William Shinn had stated: "CTR began to lose their luster in the mid-60's and the tobacco industry looked around for more beneficial ways to spend their research dollars on smoking and health. It was at this time that special projects were instituted at Washington University, Harvard University, and UCLA. . . . [T]he industry received a major public relation 'plus' when monies were given to Harvard Medical School." 2045752106-2110 at 2107 (US 20467) (A); 1003718428-8432 at 8429 (US 35902) (A).

350. The institutional grants given to Harvard, UCLA, and Washington University were also discussed at an August 8, 1974 meeting of the Industry's Research Support Planning Committee (also known as the Research Liaison Committee), which was attended by Cyril Hetsko, General Counsel for American; Curtis Judge, President of Lorillard; William Bates, Assistant Director of Research for Liggett; Clifford Goldsmith of Philip Morris; Henry Roemer, General Counsel for Reynolds; William Kloepfer, Senior Vice President of the Tobacco Institute; Horace Kornegay, President of the Tobacco Institute; William Gardner, CTR's Scientific Director; Leonard Zahn, CTR's public relations counsel; and David Hardy, attorney with Shook, Hardy & Bacon. The minutes stated: "The breadth of coverage of these grants exceeds the areas covered by the CTR-SAB in at least two instances. The duration of support and the flexibility of budgeting and of program are greater than with the CTR program. The staff of CTR has offered to exchange information with two of the institutional grants and has done so with one through several contacts." CTR98CONG01187-1189 at 1188-1189 (US 21137) (O).

351. Defendants' institutional grant at Washington University in St. Louis was to research the immunologic aspects of cancer. 2045752106-2110 at 2107 (US 20467) (A); 1003718428-8432 at 8429 (US 35902) (A); 01338888-8888 (US 26572) (A); 521033382-3383

(US 30478) (O); 521033485-3486 (US 30479) (O).

352. Defendants' institutional grant at Harvard University was under the direction of Gary Huber. Funding began in 1972, and the participating companies were Defendants American, B&W, Liggett, Lorillard, Philip Morris, Reynolds, along with Larus & Brother, Tobacco Associates, and United States Tobacco. Arnold Henson of American acknowledged that one of the main reasons for the Harvard project was "the PR value of the Harvard name." ZN25950-5956 (US 64794) (O); 955030735-0737 (US 86365) (O); BWX0004364-4375 (US 36228) (A); 968003136-3137 (US 25857) (A); 961016507-6508 (US 25854) (O); 1000207774-7775 (US 26078) (O); 2015057132-7132 (US 86366) (O); 980076941-6942 (US 86367) (A); BWX0004364-4375 (US 36228) (A); 1005053856-3856 (US 20197) (O); 86001059-1071 (US 86369) (O); 968003658-3666 (US 25860) (O); 961017594-7594 (US 86370) (O); 968003658-3666 at 3665 (US 25860) (O); 502026481-6487 (US 29549)(O); 2010048605-8606 (US 36525) (O); 100371866-8669 (US 35905) (O); 2010048831-8834 (US 36526) (O); 961017379-7379 (US 86371) (O); 680260639-0642 (US 30860) (O); 961000834-0834 (US 32366) (Confidential) (O); 01335777-5778 (US 26508) (O); 01335779-5779 (US 26509) (O); 01335794-5794 (US 86374) (O); 01335789-5789 (US 26510) (O); 01347161-7161 (US 86375) (O); 503646200-6200 (US 29701) (O); 01335767-5772 (US 26506) (O); 01335774-5774 (US 26507) (O); 01335761-5764 (US 26505) (O); 980078407-8411 (US 25865) (O). See US FF § III.A(1), infra (for discussion of the Harvard/Huber research).

353. Joint funding at UCLA began in 1974, and the participating companies were Defendants Philip Morris, Reynolds, and B&W, along with United States Tobacco and Tobacco Associates. ZN25950-5956 (US 64794) (O); TIMN217740-7743 (US 62720) (O); TIMN217738-7739 (US 62719) (O).

E. Committees

(1) Research Review Committee, Research Liaison Committee, and Industry Research Committee

354. In February 1974, a consensus had developed among Enterprise members that an industry committee should be established to review Defendants' support of medical research and to make recommendations as to the future course Defendants' support should take. In fact, at a CTR meeting, Lorillard, through its President Curtis Judge, only agreed to participate in an increased budget for CTR on the condition that there be a review of industry research. BWX0007549-7588 (US 86832) (A); ARU1130828-0904 (US 86773) (A) (CTR Response to Interrogatory No. 23, at 72-75).

355. One set of suggested guidelines from the mid-1970s for an Industry Committee for the Review of Industry's Overall Independent Scientific Research Effort was: (1) to reconsider the CTR research program, both SAB grants and Special Projects; (2) to reconsider non-CTR research projects undertaken by one or more individual tobacco companies; and (3) to consider the establishment of a means of coordinating the research undertaken in (1) and (2). 2015040937-0938 (US 20322) (O); 2015040955-0955 (US 20323) (O); TIOK0032723-2724 (US 63004) (O); 2015057143-7144 (US 87693) (O); 03659038-9039 (US 29304) (A); 2015057135-7136 (US 86379) (O); 2015057134-7134 (US 86380) (O); 2010070308-0308 (US 86381) (O); 2015040955-0955 (US 20323) (O); 2015057145-7150 (US 86384) (O); CTRMM015322-5327 (US 79854) (O).

356. William Smith, Chairman of the Tobacco Institute's Executive Committee, wrote in April 1974, that agreement had been reached with each of the major manufacturers as to their representative on the "committee to study the research programs funded by our industry, both through CTR and independent projects." Smith reported that David Hardy of Shook, Hardy &

Bacon would chair the committee; Horace Kornegay and William Kloepfer would represent the Tobacco Institute; and William Gardner and Leonard Zahn would represent CTR. Smith stated that the members of the committee were charged with the responsibility for studying industry research programs and research projects funded outside of CTR, such as those at Harvard, Washington University, and UCLA, and reporting their recommendations to the chief executives of the six major cigarette companies - American, B&W, Liggett, Lorillard, Philip Morris, and Reynolds. Meetings of the Industry Research Committee were held beginning on May 7, 1974. After meeting several times in 1974, the committee recommended that a Research Liaison Committee be appointed to serve indefinitely to achieve "a coordinated and informed overview of all industry research." CTRMN015328-5329 (US 21600) (A); ZN22613-2614 (US 64796) (O); 03659035-9036 (US 29303) (A); LWODJ9055585-5585 (US 26006) (Confidential) (O); LWODJ9055586-5587 (US 26007) (Confidential) (O); LWODJ9055585-5585 (US 26006) (Confidential) (O); LWODJ9055586-5587 (US 26007) (Confidential) (O); BWX0007549-7588 (US 86832) (A); 03659013-9016 (US 29300) (A); LWODJ9055779-5781 (US 26008) (Confidential) (O); LWODJ9055531-5532 (US 26009) (Confidential) (O); 2015040862-0863 (US 36652) (O); ZN22408-2408 (US 86391) (O); CTR98CONG01187-1189 (US 21137) (O); 03540217-0225 (US 22294) (A); LWODJ9055501-5505 (US 25957) (Confidential) (O); 03659013-9016 (US 29300) (A).

357. The Research Liaison Committee was approved at a meeting of the Tobacco Institute on October 3, 1974, as a successor to the Research Review Committee which had been established in April 1974. The newly formed Research Liaison Committee existed through early 1978. The aims and functions of the Research Liaison Committee were to devise and implement fiscal and peer review for institutional grants, and to consider and make recommendations with

respect to proposals for institutional and other research projects in light of total industry and other research effort. Members of the Research Liaison Committee were encouraged to attend meetings with CTR in order to keep informed of CTR plans and projects. Stevens WD, 29:8-19; Zahn PD, Cipollone v. Liggett, 12/16/86, 138:2-139:24, 148:12-16; Zahn PD, Cipollone v. Liggett, 12/17/86, 208:20-209:1; Zahn PD, Massachusetts v. Philip Morris, 5/28/98, 106:11-22, 114:14-115:4; Zahn PD, Richardson v. Philip Morris, 12/16/98, 375:3-10; Kornegay PD, Cipollone v. Liggett, 8/17/94, 196:25-201:2, 208:10-212:18, 213:8-217:8; LWODJ9055332-5332 (US 25953) (Confidential) (O); BWX0007549-7588 (US 86832) (A); BWX0002609-2611 (US 36165) (O); ARU113 0828-0904 (US 86773) (A) (CTR Response to Interrogatory No. 23, at 72-75); 2015057125-7125 (US 86400) (O); 955002251-2251 (US 32354) (A); 01404441-4441 (US 86401) (A); 70124410-4414 (US 31512) (O); 1003719192-9192 (US 35906) (O); 503673145-3146 (US 86405) (A); 1003719175-9179 (US 86406) (O); PM010430-0437 (US 86408) (O); 1003712682-2688 (US 86409) (O); 1000255997-6001 (US 20086) (O).

358. At its January 1975 meeting, the Research Liaison Committee decided that the expenses of considering the feasibility of research projects and proposals would be funded through the CTR Special Project fund and funded by those companies agreeing to the research study. The Committee also decided that participating companies would pay for the auditing expenses for the institutional projects at Harvard, UCLA, and Washington University, and discussed problems created by Henry Meadows, attorney for Harvard Medical School, regarding funding obligations for the Harvard/Huber research project. BWX0002613-2614 (US 36166) (O); BWX0007549-7588 (US 86832) (A).

359. A report dated November 19, 1977, written by Janet Brown, attorney for American from Chadbourne & Parke, summarized the activity of the Research Liaison

Committee from its inception as the Research Review Committee in April 1974 through 1977. Brown advised that American might wish to maintain a representative on the Research Liaison Committee after the departure of American's representative on the committee, Cyril Hetsko. BWX0007549-7588 (US 20286) (A).

360. In 1978, the budget and direction of the CTR was again an area of concern for Defendants. Accordingly, Defendants proposed that a new committee be convened again "to take up the general question of what kind of research the industry should be into through CTR or elsewhere." A Lorillard document dated April 21, 1978, also articulated the need for a new committee: "We have again 'abdicated' the scientific research directional management of the Industry to the 'Lawyers' with virtually no involvement on the part of scientific or business management side of the business." Industry representatives held meetings and reported to the companies' General Counsel. The name of this new committee was the Industry Research Committee, which essentially performed the same functions as the prior Research Liaison Committee. 01346204-6205 (US 34532) (A) (emphasis in original); Stevens WD, 29:20-38:15; 95539849-9850 (US 56829) (A); TIOK0032721-2722 (US 63003) (A); 03537201-7201 (US 86411) (O); 680252124-2125 (US 30859) (O); 03638976-8979 (US 20060) (A); BWX0007531-7548 (US 36238) (O).

361. An internal B&W letter from Ernest Pepples, Vice President and General Counsel, to Joseph E. Edens, Charles I. McCarty, I.W. Hughes and DeBaun Bryant dated April 4, 1978, discussed the new committee. Pepples reported: "That Committee, as you know, has a number of disciplines and attitudes represented including research and development, public relations, legal and one EEO (Curt Judge). It is the proper place to take up the general question of what kind of research the industry should be into through CTR or elsewhere. It can also deal

with the issue of contract research versus grant research." 680212421-2423 (US 54024) (A); 682338651-8653 (US 22899) (O).

362. The Industry Research Committee held a meeting on November 6, 1978. In attendance were: Ernest Pepples, B&W; Charles Tucker, Reynolds; Arnold Henson, American; Janet Brown, attorney with Chadbourne & Park; James Bowling, Philip Morris; Edwin Jacob, attorney for CTR; and Donald Hoel, attorney with Shook, Hardy & Bacon. An even larger meeting was held on December 13, 1978, and meetings continued throughout 1979, 1980 and 1981 which were attended by Defendants' representatives and industry attorneys. With respect to the direction and role of CTR, "[i]t was agreed that the CTR role would be one of basic research into the disease areas that have been statistically associated with smoking. CTR would not, however, engage in research designed to test the effects of tobacco smoke or tobacco products in animal or human systems." Clearly, the coordination of oversight and the direction of industry research was a constant and consistent concern for members of the Enterprise for decades. Stevens WD, 29:20-36:9; 2075318262-8268 (US 43667) (A); 1000041870-1876 (US 35102) (O); 03677101-7103 (US 29313) (A); 03754196-4198 (US 29342) (A); 521032356-2357 (US 31474) (A); 01346193-6196 (US 20046) (A); 01346186-6186 (US 26578) (O); 01346656-6656 (US 86416) (O); 80419203-9203 (US 21062) (O).

(2) Industry Technical Committee

363. TIRC designated the research directors of its tobacco company members as the Industry Technical Committee ("ITC") in January 1954. The research directors on the first ITC included representatives from American, B&W, Lorillard, Philip Morris, and Reynolds. JH000395-0400 (US 21178) (O); TLT0901400-1410 (US 88187) (A); see also USX6390001-0400 at 0011 (US 89555) (O) (CTR Response to Request for Admission No. 109).

364. After the TIRC SAB was in place, the ITC provided technical information to the SAB concerning tobacco, its constituents, and other matters. The chairman of the ITC was invited to sit in on all SAB meetings in order to ensure coordination between the SAB and ITC. Members of the ITC attended SAB meetings and answered questions from the SAB. Zahn PD, Cipollone v. Liggett, 12/16/86, 107:2-11, 107:20-108:23, 113:6-8, 114:6-9; Zahn PD, Massachusetts v. Philip Morris, 5/28/98, 77:4-18; CTRMIN-SAB000001-1061 at 0002 (US 21146) (O); CTRMIN-SAB000001-1061, 70011735-1757 (JD-090960) (A); CTRMIN-ITC000009-0011 (JD-95519) (A); ATX300000015-0017 (US 21129) (O); CTRMN039046-9106 (JD-092825) (A); 500500320-0323 (US 20633) (O); 955036231-6240 (US 32364) (O); 950148087-8088 (US 32347) (O); 507079688-9689 (US 29831) (A).

365. At a 1967 ITC meeting held at CTR, with representatives present from CTR, Chadbourne & Parke, Liggett, American, B&W, Reynolds, Lorillard and Philip Morris, Osdene of Philip Morris reported that "Dr. Hockett stated that CTR is moving into an era of active collaboration with the industry and they wish to make the technical committee more effective by including biologists. . . . Programs will be developed in which Hockett wishes to use the industry technical committee people to give advice which will go into the development of plans for submission to the SAB. C.C. Little would like to meet with this committee either before or after the SAB meeting. He feels that this would be an opportunity to build a creative future and that CTR would move with more speed." 682011463-1466 (US 86418) (O); 1001609316-9320 (US 86419) (O).

366. A subsequent 1967 meeting was called to "organize the Industry Technical Committee." Present again at the meeting were representatives from CTR, American, B&W, Reynolds, Lorillard, Philip Morris, and Chadbourne & Parke. "It was stated that the Scientific

Advisory Board and the C.T.R. staff [were] desirous of obtaining the regular and organized assistance of the industry technical group. Functions of the ITC [were]: 1. To bring its technical know-how to bear on problems in which it is desired. 2. To assist the staff. 3. Make suggestions. . . . While the makeup of the I.T.C. has usually consisted of the Research Directors of the various participating companies, it was recognized that any company could designate whomever it wished as I.T.C. member." ATX300008549-8551 (US 58614) (O).

367. In 1967, there was also some discussion about

LWDOJ8020110-0114 (US 34120) (Confidential) (O).

368. A meeting of the ITC was held on April 26, 1968, at the CTR office in New York and was called specifically by W.T. Hoyt of CTR on behalf of the CTR staff. Representatives from CTR, B&W, Lorillard, Philip Morris, Reynolds, and American attended the meeting. The meeting was called "to hear presentations by the CTR-staff of the contract research program being proposed by Mason Research Institute," which was to involve large-scale, long-term mouse inhalation experiments. 955033996-4012 (US 32363) (O). It was noted that "a) the contract status as proposed represents a significant change of 'tact'. b) the proposed program represents very considerable increase in costs and outlay. c) and therefore, this entire program may represent a significant 'departure from CTR plans and policy.'" 955033996-4012 (US 32363) (O).

369. In describing the background for the Mason contract, Arthur W. Burke of

American reported that the CTR staff had taken an interest in inhalation toxicology ten years prior:

> About this time the CTR-staff began to visit the various grantees to learn what was forthcoming from their studies, and on a visit to the Leuchtenbergers' laboratory learned that evidence was accumulating that adenocarcinomas of mouse lung were occurring with smoke inhalations. . . . 'Since foes of Industry might snatch-up such preliminary findings and misuse the information, the CTR-staff entertained a limited project at Mason Research Institute, the purpose of which would be to set-up and compare the operation of several animal exposure-smoking machines in one place and at one time, using the same mouse strain, etc. – in short to study the smoking machines per se. This work was initiated at Mason about one year ago.' In the course of these machine evaluations, Mason noted some deficiencies in some of these machines, and the 'CTR recognized that they were piddling in some dangerous areas.'

955033996-4012 (US 32363) (O) (emphasis in original).

370. At an October 25, 1968 ITC meeting, there was also a discussion of the relationship between the ITC and the CTR Scientific Advisory Board. "Hoyt voiced the opinion that the SAB is considering 'more targeted research with closer CTR staff monitoring which would be in a) academia by grants, and b) other places by contract - where necessary'." 955036231-6240 (US 32364) (O).

371. In a 1970 report, the Defendants' research directors – Helmut Wakeham of Philip Morris; Preston Leake of American; Alexander Spears of Lorillard; Murray Senkus of Reynolds; William W. Bates of Liggett; and I.W. Hughes of B&W – expressed their displeasure with CTR's research program, its focus on studies of diseases that were associated with smoking, its defensive posture, and its lack of guidance for future strategy of the tobacco industry in the area of smoking and health. The report offered opinions as to how CTR might become more effective as an instrument for the good of the tobacco industry. 1002636362-6365 (US 22998) (A).

372. In the 1960s, the ITC did assist the Tobacco Institute, and ITC members were

encouraged to attend meetings at the Tobacco Institute. An ITC meeting at the Tobacco Institute was called "to discuss the possible implications of a $50,000 grant from National Institutes of Health to the F.T.C. laboratory to develop a smoking machine capable of carbon monoxide analysis." Present at the meeting were representatives of Liggett, American, Reynolds, Lorillard, Philip Morris, B&W, Covington & Burling, and the Tobacco Institute. There was much concern over the possibility that the FTC intended to publish brand carbon monoxide levels. The attendees suggested that Defendants be ready to demand public hearings on methodology and be prepared to "counteract the increasingly irrational public image being drawn by anti-smoking forces" on carbon monoxide hazard. TIMN0134876-4877 (US 65574) (O); 950148089-8091 (US 32348) (O).

(3) Tobacco Working Group

373. Although representatives from Defendants Philip Morris, Reynolds, Lorillard, B&W, and Liggett were members of the Tobacco Working Group ("TWG"), a federally-appointed group within the National Cancer Institute ("NCI"), their participation was far from altruistic. Their participation allowed the Enterprise to keep abreast of what the United States Government was doing with respect to smoking and health issues and provided a mechanism by which Defendants could try to influence the United States Government's activities in the smoking and health arena. Thus, far from being a "partnership," Defendants' participation was vital to their continued individual and collective livelihood and the Enterprise. See US FF § III.A(3), infra (for a more detailed discussion of the TWG and Defendants' activities and involvement).

374. The TWG in various forms existed from 1968 through 1977, when it was dissolved – along with three other NCI advisory groups – as a cost cutting measure. Funding for TWG projects, however, continued until 1980. 680142974-2974 (US 22254) (O); 680142966-

2966 (US 30817) (O); 680142967-2967 (US 54018) (O); TLT1022905-2912 (US 86842) (O); TIMN0102540-2560 (US 86843) (O).

375. The TWG and its Defendant participants were not actually conducting the research or testing potentially less hazardous cigarette products. Rather, the TWG functioned solely as an advisory group to the NCI's Smoking and Health Program staff and its director who, for most of TWG's duration, was Gio B. Gori. 87754028-4373 (US 22259) (O).

376. Initial Defendant membership included Murray Senkus, Director of Research for Reynolds; Alexander Spears, Director of R&D for Lorillard; and Helmut Wakeham, Vice President of Corporate R & D for Philip Morris. Charles Kensler was also an initial member. Kensler, who worked for Arthur D. Little, Inc., had strong ties to and performed research for Liggett. By 1969, William Bates of Liggett attended TWG meetings, and, by 1974, Bates had accepted membership on the TWG. By 1971, I.W. Hughes of B&W had accepted membership on the TWG. HHA6060033-0036 (US 86422) (O); 501555964-5966 (US 22284) (O); LDOJ3002797-2803 (US 86423) (O); LG0267405-7405 (US 59094*) (O); 680231778-1778 (US 86424) (O); Stevens WD, 43:23-46:9.

377. An undated B&W document, discussing United States Department of Health, Education and Welfare activity in the 1960s, clearly articulated the reasons for Defendants' participation on the TWG:

> Of these four actions [taken by the United States Department of Health, Education and Welfare with respect to smoking and health issues], the first three [developing epidemiological evidence linking smoking and certain diseases; launching a program to alert the public about the dangers of smoking; and pushing for legislation which would reduce cigarette consumption] have been of such immediate concern that they have received most of the attention of the tobacco industry. **However, the later [initiating a research program designed to produce a "less hazardous cigarette"] is probably as important, or perhaps more**

> **important for the long-term future of the industry**. Although work in this area is in its initial stages, the direction of this work seems clearly indicated and should be evaluated.
> . . .
> One can logically expect that any reluctance on the part of industry to voluntarily produce commercial cigarettes on the basis of positive results from this program would result in legislation to force adoption. In all probability, little attention is likely to be given to the commercial acceptability of the [unreadable] from this program.
> . . .
> **Since industry has representatives on this committee, it should be possible to remain completely aware of all actions taken and to have at least some influence on these actions**. If one assumes complete and frank interchange of information arising from within this committee among all companies, the companies should then operate from a common base.
>
> HHS1330992-0998 (US 76082) (O) (emphasis added).

378. Similarly, a March 9, 1972 document drafted by Alexander W. Spears of Lorillard recognized: "If I were to withdraw [from the TWG], Lorillard would lose considerable insight into the workings of the National Cancer Institute program with respect to cigarettes. There is a very real possibility that this program is going to have a profound effect on the cigarette industry, and I believe that we should be aware of these effects as soon as they become clear. **We also have some significant influence on the course of the detailed activities and, therefore, some effect on ultimate results.**" 01240178-0178 (US 22282) (A) (emphasis added).

379. Defendants' conduct in connection with the TWG demonstrates the extraordinary extent to which Defendants coordinated their actions in the area of smoking and health, and in particular, coordinated their approach to the issue of less hazardous cigarette design, development, and marketing. Defendants' approach to the TWG and all Defendants' related activities were jointly formulated and closely monitored by committees of industry lawyers and executives to ensure that such "participation" in the TWG did not threaten – and indeed served –

Defendants' common purposes. Defendants' representatives to the TWG regularly reported to their counsel, who kept company executives, CTR, the Tobacco Institute, and one another abreast of TWG activities. 501556259-6263 (US 22283) (O); 501555964-5966 (US 22284) (O); 500502060-2063 (US 22286) (O); 501990370-0374 (US 22287) (O); 1005070117-0121 (US 22288) (O); 1005070122-0122 (US 22903) (O); 680142648-2648 (US 22374) (O); 2015040862-0863 (US 36652) (O); 680143084-3084 (US 22293) (O); 03540217-0225 (US 22294) (A); BWX0003934-3938 (US 86425) (O); 03753993-3994 (US 22295) (A); 03646227-6228 (US 22296) (A); LG0208389-8389 (US 59040) (O).

380. Information gathering was a critical aspect of Defendants' involvement with the TWG. Defendants' scientific representatives on the TWG reported directly to their respective company counsel and activities of the TWG were discussed at Committee of Counsel meetings. The Tobacco Institute and CTR were also kept informed of the activities of the TWG. 501556259-6263 (US 22283) (O); 501555964-5966 (US 22284), (O); 500502060-2063 (US 22286) (O); 501990370-0374 (US 22287) (O); 1005070117-0121 (US 22288) (O); 1005070122-0122 (US 22903) (A); 680143026-3027 (US 22902) (A); 680142648-2648 (US 22374) (O); 2015040862-0863 (US 36652) (O).

381. The Enterprise engaged in a concerted effort to prevent, curtail, and ultimately to neutralize the TWG's efforts to evaluate cigarettes' effects using an animal inhalation bioassay developed by researcher Oscar Auerbach. 1000298389-8392 (US 26082) (O); 1005086254-6254 (US 86426) (O); 1002906624-6625 (US 86427) (O); 1000298389-8392 (US 26082) (O); 1005086254-6254 (US 86426) (O); 1002906624-6625 (US 86427) (O); 500006051-6051 (US 86428) (O); CTRMN015382-5383 (US79878) (O). See also Kornegay PD, Cipollone v. Liggett, 12/6/94, 588:11-589:4, 590:2-8, 592:23-594:6, 598:20-604:7.

382. The Tobacco Institute carefully researched Auerbach and his past research projects and shared information gleaned with its member companies on behalf of the Enterprise. 2015047506-7506 (US 86431) (O); 508775596-5596 (US 86432) (O); 500006028-6028 (US 86433) (O); 1005086194-6194 (US 86434) (O); 1005086196-6196 (US 86435) (O); 1005086198-6198 (US 86436) (O); 03758481-8482 (US 86437) (O); 1005086201-6201 (US 86438) (O); 2024991017-1017 (US 86439) (O); TIMN221636-1636 (US 86440) (O).

383. Despite the findings of Defendants' scientists, which affirmed the significance of the Auerbach study, the Tobacco Institute publically questioned the results on behalf of the Enterprise. A 1970 Tobacco Institute press release stated, "We have good reason to question whether lung cancer experts in this review group were able to confirm any finding of lung cancer[.]" TIMN0109556-9560 (US 87698) (O); see also CTRMN015379-5379 (US 79876) (O).

384. Members of the Enterprise also decided to try to block the TWG from replicating Auerbach's research. Edwin Jacob, counsel to CTR and Reynolds, instructed Reynolds's scientists Murray Senkus and Alan Rodgman, as well as other Defendants' scientists, to prevent the TWG from performing dog inhalation studies such as those deemed necessary to develop new products. Jacob argued against such studies on the grounds that would be an admission by Defendants that existing cigarette products were harmful. Moreover, Jacob – an attorney, not a scientist – feared that these experiments might show proof of nicotine habituation. 515872408-2456 at 2424-2429 (US 22261) (A).

385. In his report to the Tobacco Institute Annual Meeting on January 28, 1971, William Kloepfer boasted that "[o]ur constant pressure on Hammond's and Auerbach's shaggy – or shabby – dog story has put that work as reported so far into a permanent file marked controversy – especially among scientists. It did more than that. It demonstrated our

counterattack capability as a team. During the rest of the year we missed no event worth talking about in which our comment wasn't issued – and printed and broadcast – the same day." TIMN0081403-1405 (US 77050) (O).

386. In addition to trying to shape the path of research undertaken by the TWG, Defendants' lawyers and executives determined that their scientist representatives on the TWG would not offer suggestions to the TWG about the experiments to conduct or projects to pursue in the search for a less hazardous cigarette. 1005056343-6343 at 6343 (US 22272*) (O).

387. Defendants also utilized the connections made with certain government scientists through the TWG and retained two members of the TWG, Gio Gori from NCI and T.C. Tso from USDA, as consultants. Gori has been a spokesperson and consultant for the industry since leaving the NCI in the 1980s and Philip Morris secured the services of Tso upon his retirement from USDA in 1983. Bloch PD, United States v. Philip Morris, 2/14/02, 1815:20-1819:20; Tso PD, United States v. Philip Morris, 6/5/02, 178:1-181:12, 182:19-183:2, 183:16-184:23; HHS1091046-1048 (US 88738) (O); 680900035-0045 (US 21013) (A); 1005082903-2903 (US 21529) (O); TIMN435245-5245 (US 22487) (O); 2050986280-6281 (US 27064) (O); 2023799642-9642 (US 87701) (O); 2000511301-1302 (US 87703) (O); 2000596045-6045 (US 87704) (O); 2001202319-2319 (US 87705) (O).

F. Coordinated Smoking and Health Literature Collection and Retrieval

388. A shared objective of the members of the Enterprise has been to avoid liability findings that could result both in large damage awards and in increased public recognition of the harmful effects of smoking. Defendants collectively gathered, organized, stored, and eventually automated medical and scientific literature related to smoking and health research for this common purpose.

389. According to a February 1969 Lorillard memorandum, Defendants' "Central File" was started in the late 1950s, was supported financially by all members of the industry and was supervised by the Ad Hoc Committee. It was eventually consolidated and put under the direct supervision of Defendants' attorney Edwin Jacob. The "Central File" was a collection of every document which could be found relating to the smoking and health controversy. Beginning in or about 1967, the major tobacco companies with the exception of Lorillard also joined together and established an "Information Center" for the collection, summarizing, and computerization of all information and documents concerning smoking and health. The purpose of the Information Center was to have information readily available to the industry for litigation and congressional hearings. 044227839-7844 (US 20066) (O); 044227839-7844 (US 20066) (O); 500289915-9918 (US 29454) (O); 01422304-2304 (US 20288) (O); 85649920-9920 (US 21080) (A); 80680229-0229 (US 31967) (A).

390. By 1964, indices of scientific literature were being compiled by Defendants and their agents for litigation purposes. Edwin Jacob, attorney for CTR, Reynolds, and B&W, employed a supervisor and three other employees to abstract and catalogue current medical and scientific literature by subject and author for litigation purposes. Henry Ramm, attorney for Reynolds, kept a similar but larger index, containing over 20,000 documents in eight volumes. In addition, Kenneth Austin and three other CTR staff members compiled indices of scientific literature for litigation purposes. Litigation indices were also kept by Janet Brown, attorney for American, and Alexander Holtzman, attorney for Philip Morris. Liggett also hired a person to gather literature and advocated using space at an outside law firm of one of the companies to do the task, so that future literature could be collected "under the wing" of counsel. 1003119099-9135 (US 20152) (A); LG2017032-7034 (US 34100) (O).

391. In a mid-1960s report, Lorillard stated, "Because of the continued attacks on the industry . . . it is in the best interests of Lorillard to join forces with all other members of the industry concerning the health controversy." Although each cigarette company handled its own litigation through various trial attorneys, "there is a high degree of cooperation between the companies through . . . the 'Ad Hoc Committee' which finds medical witnesses and prepares testimony. Lorillard's representative on this Committee is Mr. David Hardy. The Committee supervises the Central File which is a collection of every document which can be found relating to the smoking and health controversy. This cooperation must be continued. An adverse decision against any member of the industry would be disastrous to all." 80684691-4695 (US 21067) (A).

392. Defendants shared the expense of bibliographic services and analysis performed for the Central File. 85649920-9920 (US 21080) (A); 80680229-0229 (US 31967) (A).

393. In 1971, the services supported under the Central File and the services performed by the Information Center were transferred to CTR. At the first meeting of CTR's Board of Directors after CTR had incorporated in 1971, the Board gave approval to CTR to take over and operate, as a CTR Special Project, an information and retrieval system and to computerize medical literature, articles, and other published documents relating to tobacco and health, the expenses to be borne by the participating companies. At the first annual meeting of CTR members after incorporation, the members approved the name Information Systems for this special project. Information Systems became a division of CTR performing the function of analyzing, summarizing, indexing, and retrieving scientific and medical literature at the direction of Defendants' attorneys. Defendants relied on this division of CTR to review the medical literature relating to smoking and health even though they continued to monitor literature in-

house. CTRMIN-BD000001-0303 at 0007-0008 (JD-093208) (A); CTRMIN-MOM000001-0015 (US 21145) (O); Zahn PD, Massachusetts v. Philip Morris, 5/28/98, 143:8-23; Lisanti PD, Arch v. American Tobacco, 6/10/97, 101:10-102:15.

394. The Report of the Chairman to the Second Annual Meeting of CTR Members held on January 28, 1972, revealed that the name of the operation had been changed to Information Retrieval Division. The division was staffed by a group of twenty-six people and financed separately from the general budget; its name was eventually changed to the Literature Retrieval Division. CTRMIN-MOM000016-0034 (US 21170) (O); McAllister TT, 3/21/05, 16161:16-16162:6; Duffin PD, Munn, 1/7/87, 161:17-25, 164:23-167:10, 171:7-15; DXA0630917-1033 at 0964-0965 (US 75927) (A) (CTR Response to Interrogatory No. 26, at 48-49); WAX001 0698-0786 at 0771-0772 (US 75555) (A) (PM Response to Interrogatory No. 26, at 73-74); USX6400001-0527 at 0347-0350 (US 89561) (O) (B&W Response to Interrogatory No. 26); USX6400001-0527 at 0225-0227 (US 89561) (O) (Lorillard Response to Interrogatory No. 26); USX6400001-0527 at 0136-0138 (US 89561) (O) (Reynolds Response to Interrogatory No. 26).

395. CTR maintained a separate checking account called CTR Special Account No. 1 for the Literature Retrieval Division. CTR requested, received, and deposited monies from its sponsor companies for the Literature Retrieval Division. Pollice WD, 3:3-5:1.

396. In addition to the CTR Literature Retrieval Division, Defendants American, B&W, Liggett, Lorillard, Philip Morris, and Reynolds also continued to fund Special Account No. 3 through Edwin Jacob's firm. The account was designated as a "File for Litigation" and was "used to maintain an office where several doctors work on an analysis of medical literature." 682150942-0942 (US 86491) (A).

397. Yearly expenditures for the Literature Retrieval Division continued to be shared

by Defendants from 1970 until the Literature Retrieval Division ceased to exist in 1983. 70124547-4547, CTRLRD004193-4193 (US 31557) (A); 70124546-4546, CTRLRD004192-4192 (US 31556) (A); 70124548-4548, CTRLRD004233-4233 (US 31558) (A); 70124544-4544, CTRLRD004190-4190 (US 31554) (A); 70124545-4545, CTRLRD004191-4191 (US 31555) (A); 11275453-5453, CTRLRD004232-4232 (US 26402) (A).

398. During her tenure in the Public Affairs Division of the Tobacco Institute, Anne Duffin obtained source material from the Literature Retrieval Division to assist her in writing articles, pamphlets, handouts, and other publications. Examples include "Smoking and Health 1964-1979, The Continuing Controversy," "Cigarette Smoking and Cancer: A Scientific Perspective, 1982," and "Cigarette Smoking and Heart Disease, 1983." Duffin PD, Munn v. Philip Morris, 1/7/87, 161:17-162:3; 162:20-163:15; 164:23-168:5; 169:4-16; 171:7-15; 173:2-174:3; 174:11-19; 176:18-22; 519838352-8517 (US 87707) (O); 519838518-8621 (US 87708) (O); 519838622-8674 (US 87709) (O).

399. Alexander Spears' informal review report described the Literature Retrieval Division operation as "nearly complete coverage of the world medical literature on tobacco and health available at each user location with essentially state of art information search and retrieval capability." According to Spears, the Literature Retrieval Division system served relatively little purpose to Lorillard "except in the area of tobacco and health related to litigation and governmental regulatory proceedings;" therefore Spears supported the decision by Lorillard to fund the Literature Retrieval Division "since it seems an integral part of defending the industry and this company in the defined area." Lorillard eventually did fund the Literature Retrieval Division from 1980 through 1983. 01422327-2328 (US 20050) (A); Stevens WD, 42:19-43:22; DXA0630917-1033 at 1025 (US 75927) (A) (CTR Response to First Set of Interrogatories,

Schedule C).

400. In September 1981, the Ad Hoc Committee, including William Shinn and Robert Northrip from Shook, Hardy & Bacon, met and discussed a proposal to sever the Literature Retrieval Division from CTR and reorganize it, along with the Central File (sometimes referred to as the Tobacco Litigation File), as a corporation providing litigation support services to counsel defending smoking and health actions. In order to provide work product protection for the Literature Retrieval Division's microfilmed, computerized database and abstracts on smoking and health information, the proposal recommended that: 1) the Literature Retrieval Division be removed to the custody of defense counsel into a new business corporation to be formed called LS, Inc., the stock of which would be owned by the four law firms; 2) payments to LS, Inc. by the law firms would be on a per client market share basis for all functions; 3) the only users of the system would be the four law firms plus Covington & Burling, representing the Tobacco Institute; 4) the only use of the system would be for litigation, which would be defined to include administrative proceedings and legislative hearings, at which proceedings and hearings the law firms were representing their clients; and 5) Fred Giller, then-Director of CTR's Literature Retrieval Division, would be President and CEO of LS, Inc. Stevens WD, 42:19-43:22; DXA0630917-1033 at 0964-0965 (US 75927) (A) (CTR Response to Interrogatory No. 26); USX6400001-0527 at 0225-0227 (US 89561) (O) (Lorillard Response to Interrogatory No. 26); USX6400001-0527 at 0136-0138 (US 89561) (O) (Reynolds Response to Interrogatory No. 26); USX6400001-0527 at 0347-0350 (US 89561) (O) (B&W Response to Interrogatory No. 26); ATX9275490271-0280 (US 36231) (A); LG2000741-0750 (US 36269) (A); 515848825-8830 (US 21583) (O); 2015020054-0054 (US 36628) (A); 2015020046-0046 (US 36627) (A); 2015020038-0038 (US 36626) (A); 2015020032-0032 (US 36625) (A); 2015020021-0021 (US

36624) (A).

401. In March 1983, the Committee of Counsel approved the implementation and incorporation of LS, Inc. LG2000823-0832 (US 21544) (O); 2047663658-3695 (US 20481) (A); 2047663658-3695 (US 20481) (A).

G. Defendants' Organizations Focused on ETS Issues

402. From the 1970s forward, members of the Enterprise, specifically Philip Morris, Reynolds, Lorillard, B&W, BATCo, and the Tobacco Institute on behalf of its member companies, pooled their resources and coordinated their activities with respect to passive smoking, or environmental tobacco smoke ("ETS"), issues through a variety of committees and organizations (discussed in detail at US FF § III.A(2), infra). The aims of the various industry ETS organizations were to coordinate an industry position on passive smoking and to fund projects that would generate data supporting the industry's position that tobacco smoke was not a proven health risk to nonsmokers.

403. The first industry committee dedicated specifically to addressing ETS concerns was formed as early as 1975. The committee, chaired by Shook, Hardy & Bacon counsel Don Hoel, met under the direction of the Research Liaison Committee to address ETS-specific projects that, at the time, were funded via Special Account 4. 1003293761-3763 (US 86502) (O); 1003293752-3753 (US 20169) (O), (US 75204) (O); 500294698-4698 (US 24145) (O); 504126505-6507 (US 24216) (O); 03638976-8979 (US 46483) (A); 01337388-7388 (US 86504) (O). Regular members of this committee, sometimes referred to as the Public Smoking Committee or Advisory Group, included company scientists from Reynolds, Philip Morris, B&W, and Lorillard. 1000125386-5386 (US 86505) (O); 504339411-9412 (US 86506) (O).

404. Defendants reestablished this committee in 1984 under the name of the Tobacco

Institute ETS Advisory Committee, or TI-ETSAG. The ETSAG met almost monthly to propose, review, and manage scientific projects that the Committee of Counsel approved for funding. Regular members of the ETSAG also included company scientists from Reynolds, Philip Morris, B&W, and Lorillard, in addition to Tobacco Institute representatives, Don Hoel, and Covington & Burling attorney John Rupp. 2021004058-4064 (US 20339) (A). While neither Liggett nor American directly participated in ETSAG, both participated with the funding of approved projects. Id., 4058; see also William Adams PD, United States v. Philip Morris, 6/18/02, 226:15-235:20, 236:2-237:24, 255:24-256:18, 257:8-20, 262:13-263:5, 266:7-268:18, 284:1-24, 285:5-289:6.

405. The Center for Indoor Air Research ("CIAR") was formally established in 1988 to carry out industry-funded research related to passive smoking; the original charter members were Defendants Philip Morris, Reynolds, and Lorillard. 506300804-0814 at 0804 (US 20756) (A); 506647151-7156 at 7151 (US 20761) (A); 321141105-1144 at 1142 (US 20588) (A); TIMN0014390-4393 (US 62782) (A); 2071412978-3143 at 3082-3096 (US 23061*) (A); 506662315-2316 (US 75277) (O). See also William Adams PD, United States v. Philip Morris, 6/19/02, 302:4-15, 304:5-306:11. Although CIAR had a Scientific Advisory Board to review the merit of project proposals, only the CIAR Board of Directors had authority to approve a project for funding, and a large number of industry-favorable CIAR projects were approved directly by the CIAR Board of Directors with no SAB review at all. 517577761-7761 (US 20867) (A).

406. These committees and organizations furthered the unlawful goals of the Enterprise by: (1) coordinating and funding Defendants' efforts to generate evidence to support its position that there remained an "open controversy" as to the health implications of exposure to ETS; (2) leading the attack on United States efforts to act on evidence linking ETS to disease; and, (3)

and, in the case of CIAR, appearing to be an independent research funding organization when it was really a "front" organization for concealing industry participation in certain studies.

H. International Organizations, Committees, and Groups

407. Defendants believed that global coordination, action and reaction were critical to protecting and enhancing their positions in their respective countries and that their economic interests would best be served by pursuing a united front on smoking and health issues. To further the shared objectives of the Enterprise, the alleged conspiracy and the scheme to defraud, Defendants worked together over a period of time to form, control, use, and participate in overseas entities, including but not limited to, the Tobacco Manufacturers' Standing Committee ("TMSC"), which became the Tobacco Research Council ("TRC") and then the Tobacco Advisory Council ("TAC"); the International Committee on Smoking Issues ("ICOSI"), which became the International Tobacco Information Inc. ("INFOTAB") and then the International Tobacco Documentation Center ("TDC"); and Centre for Cooperation in Scientific Research Relative to Tobacco/Centre de Coopération pour les Recherches Scientifiques Relatives au Tabac ("CORESTA").

408. Defendants coordinated the Enterprise and conspiracy through multiple meetings around the globe. These meetings, held between the 1950s and at least 2000, were scheduled by correspondence and memoranda that were sent via facsimile and by mail. 536202391-2391 (US 86553) (A); 2025495788-5788 (US 22856) (A); 2025495795-5795 (US 26848) (A); 2065260331-0331 (US 86555) (O); 2024771391-1391 (US 86556) (O); 2025477955-7955 (US 26834) (O); 700533941-3941 (US 86558) (A); 503089421-9433 (US 86573) (A); 2078348038-8038 (US 86906) (O); 700533921-3921 (US 88565) (O); 300543355-3356 (US 88506) (A).

409. Defendants often transmitted agendas in advance of these meetings and

corresponded as to which of their industry representatives would and should attend those meetings. 2023244315-4315 (US 86585) (A); 2023244363-4363 (US 86586) (A); 2028454705-4705 (US 22852) (A); 2028360079-0079 (US 86587) (A); 2023897308-7308 (US 37062) (A); 2024210630-0631 (US 22868) (A); 2051810327-0327 (US 86588) (A); 2065260325-0325 (US 86589) (A); 700533917-3917 (US 86590) (O); 2065260328-0328 (US 66825) (O); 300543980-3980 (US 87574) (A); 300543954-3954 (US 87575) (A); 300543357-3358 (US 87576) (A); 300512229-2232 (US 88507) (A); 300543968-3968 (US 67755) (A); 300543811-3813 (US 88508) (A); 2025495656-5656 (US 88509) (A); 2078742951-2951 (US 27724) (A); 2078742952-2952 (US 27725) (A); 2078742954-2954 (US 27727) (A); 2078742955-2955 (US 27728) (A); 2502250184-0185 (US 45981) (A); 2047315966-5966 (US 88512) (O); 300543817-3817 (US 88513) (A); 2065260344-0344 (US 88514) (O); 2072424257-4257 (US 88516) (O); 2072424213-4214A (US 88517) (O); 2046546145-6145 (US 88524) (A); 2072417268-7269 (US 88528) (A); 321569333-9336 (US 88536) (A); see also Blackie WD, 101:13-104:21 (IEMC agenda), 127:3-140:3 (CECCM agenda).

410. Many of these meetings were summarized by meeting participants who recorded the nature of the discussions and identified the company representatives in attendance. 507973108-3109 (US 86598) (O); 536202400-2404 (US 86599) (A); 507974116-4116 (US 51286) (A); 2025493306A-3307 (US 86600) (A); 2023897315-7318 (US 86601) (A); 2051809368-9369 (US 86603) (A); 2028363540-3549 at 3541 (US 86604) (A); 2028372583-2596 at 2594 (US 22926) (A); 517002090-2091 (US 66527) (O); 300512244-2245 (US 67752) (A); 300543979-3979 (US 87578) (A); 300545676-5680 (US 87579) (A); 300545701-5704 (US 87581) (A); 300543440-3454 (US 87582) (A); 300544202-4208 (US 87583) (A); 2047315978-5978 (US 88636) (A); 2078742947-2948 (US 27721) (A);

2078742962-2963 (US 45192) (A); 2078742949-2949 (US 27722) (A); 300543360-3366 (US 88545) (A); 300543940-3942 (US 88546) (A); see also Blackie WD, 104:22-113:20 (IEMC summaries); 128:7-132:18 (CECCM summaries).

411. Defendants used international meetings to identify and coordinate the respective responsibilities of the many international organizations affiliated with the tobacco industry such as the International ETS Management Committee ("IEMC"), Confederation of European Community Cigarette Manufacturers Limited ("CECCM"), TAC, INFOTAB, and others. Scores of documents demonstrate the sophisticated planning and coordination, as well as the division of labor, between the industry's international organizations. Blackie WD, 101:13-104:21, 104:22-113:20.

412. For instance, W. David Rowland of Rothman's International summarized the"end product" of a July 25, 1995 IEMC meeting by stating: "[i]t doesn't look much but at least it was agreed to by all companies present. It was a difficult meeting, particularly initially when we were trying to 'converge' the IEMC responsibilities and CECCM responsibilities. . . . However, it was eventually resolved: **IEMC will develop the messages (globally), CECCM will deliver these messages (in Europe).**" 900006204-6204 (US 88482) (A) (emphasis added). Similarly, correspondence from Sharon Boyse (Blackie) to Matt Winokur, Philip Morris International Director of Corporate Affairs, Richard Marcotullio, RJR Vice President of Corporate Affairs, and others, concerning an upcoming April 28, 1992 IEMC meeting, noted that "in theory . . . CECCM no longer has any excuse for not accepting the IEMC version and that TAC also should be able to use it as a basis should it require." 300543968-3968 (US 67755) (A).

413. A myriad of Defendants' memoranda, agendas, and meeting minutes used to coordinate Defendants' meetings throughout the world, is summarized at United States Summary

Exhibit 17361 (A). As United States Summary Exhibit 17361 demonstrates, high-level decision-makers, including corporate officers, legal counsel, and experienced public relations and scientific personnel attended Defendants' international meetings. The following individuals appear frequently in United States Summary Exhibit 17361: Sharon Blackie; John Rupp, Covington & Burling attorney; Charles Green, RJR Principal Scientist; Helmut Reif, Principal Scientist at a Philip Morris subsidiary and member of CIAR Board of Directors; Richard Carchman, Philip Morris Director of Scientific Affairs; J. Kendrick Wells III, B&W General Counsel; and Christopher Proctor, BATCo Head of Scientific & Regulatory Affairs at Chadbourne & Parke in United States between 1989 and 1993. 401033458-3463 (US 85530) (A); 507973108-3109 (US 86598) (O); 507974116-4116 (US 51286) (A); 507782317-2318 (US 20788) (A); 2078742962-2963 (US 45192) (A); 2023053733-3733 (US 86513) (A); 2023897315-7318 (US 86601) (A); 2072424257-4257 (US 88516) (O); 2047315978-5978 (US 88636) (A); 202502102-2134 (US 20346) (A); 506617595-7596 (US 20760) (A); 507782317-2318 (US 20788) (A); 681000290-0293 (US 21015) (A); 2024270524-0527 (US 75083) (A); 505347172-7174 (US 20739) (A); 2024210630-0631 (US 22868) (A); 681000290-0293 (US 21015) (A); 321569333-9336 (US 88536) (A).

414. Blackie, who is often identified in documents by her former name, Boyse, served as BATCo's Senior Scientific Advisor between 1986 and 1991. During that time, Blackie was a member of various tobacco-related committees. She sat on one or two groups of the TAC, which was the manufacturer's association in the United Kingdom. She participated in one group that dealt with external research funding and admitted that she attended "a couple of odd meetings of the industry," that she would not necessarily "classify" as "committees." "There were a couple of groups that met more regularly; for example, we had an International ETS Group at one stage,

and we had an International Ingredients Group at one stage that looked at ingredients." She also participated with the IEMC, the CECCM, the ETS Consultancy Program, and an ETS Intercompany Task Force. Blackie WD, 2:11-12, 12:1-13.

415. Defendants used their many international meetings as opportunities to meet, coordinate and cooperate in identifying "threats" to the Enterprise and to develop responses to these perceived "threats" as they evolved over time. For example, Sharon Blackie, John Rupp, Matt Winokur, J. Kendrick Wells, Chadbourne & Parke attorney Thomas Bezanson, and Christopher Proctor met on several occasions to discuss the activity of the EPA and the IARC, including the status and timing of the impending EPA risk assessment and IARC study and Defendants' potential responses thereto. Similarly, Defendants used INFOTAB to prepare a response to the perceived threats to the tobacco industry posed by the World Health Organization. 2021595753-5910 at 5769, 5897, 5903 (US 85541) (O); 300543979-3979 (US 87578) (A); 300543954-3954 (US 87575) (A); 2065260328-0328 (US 66825) (O); 2072417681-7682 (US 89132) (A); Blackie WD, 94:6-95:5 (CECCM response to "threats" to public and workplace smoking); Blackie WD, 143:18-144:4 (IEMC, CECCM and TAC used to coordinate the industry's position with respect to anticipated and existing regulatory and public policy issues affecting the industry, including anticipate "threats" from the EPA).

416. Defendants closely tracked regulatory "threats" to the industry in the United States; For example, the minutes of an August 26, 1996 CECCM meeting in Amsterdam read: "[N]ational Developments. USA. President Clinton has taken the decision to put tobacco under FDA jurisdiction. This decision will be challenged by the cigarette manufacturers. Since this decision has reactivated the debate on children and smoking, the Chairman will raise the issues again at the next Board meeting." 800123779-3782 at 3781 (US 89137) (A).

417. ICOSI, one of the organizations that afforded Defendants an opportunity to meet regularly, explicitly recognized the international nature of the "threat" to Defendants' business. An April 1979 ICOSI document noted: "The problems and attacks proposing restrictions of smoking and normal commercial activities like advertising and publicity have become highly international. . . . No one industry in one country nor any one company can wage and win the battle against this sort of organised world-wide attack. . . . The whole Industry, companies and Trade Associations alike must unite with common targets and common approaches." 1003717317-7330 at 7318 (US 86518) (O) (emphasis in original).

418. Defendants' international cooperative conduct is directly tied to the United States because it involved meetings on United States soil; involved representatives of United States companies and organizations; was tailored to account for the impact of United States litigation overseas and the impact of overseas activity upon litigation in the United States; and constituted express cooperation and coordination with the United States tobacco industry. For instance, in 1973, the Tobacco Institute's Committee of Counsel discussed expanding the Tobacco Institute's central role in the Enterprise to offshore activities, including combating foreign anti-cigarette activity. The purpose of expanding the Tobacco Institute's role was to preserve Defendants' position on smoking and health abroad and prevent erosion of public industry positions that had been adopted and publicized in the United States by the actions of non-domestic companies.

> It is preferable for the domestic industry to act together to combat foreign activity than for individual companies to act. On the subject of smoking and health the domestic industry has acted in concert through the Institute in the past, as it is legally permitted to do and presumably intends to continue to do. Thus, the policy with respect to combating anti-cigarette activity abroad would be but an extension of the domestic policy.

502429369-9373 (US 29556) (O); TI16740660-0663 (US 72403) (O); 2501029891-9901 (US

20557) (O); TI04962210-2211 (US 67250) (O); see also 1002610069-0069 (US 86541) (O).

419. Additional examples of the nexus between Defendants' international organizations and the United States include a May 1997 International Counsel Meeting, held in New York, regarding "[i]mpact of US litigation resolution discussions on other countries," as well as British and Australian matters, 321569333-9336 (US 88536) (A); a September 1983 INFOTAB meeting, held in Washington, D.C., concerning "[h]ow to use a tobacco network-U.S. Hearings," 2501021486-1489 (US 25366) (O); a January 1993 CECCM meeting in Bonn, Germany, considering "E.P.A. report on risk assessment of ETS" and "[r]eview of the published literature on smoking and work performance prepared by Covington & Burling," 300543360-3366 (US 88545) (A); a February 1997 Meeting Concerning IARC Action, scheduled to "[r]eview status of study release . . . expectations re: timing, risk number, U.S. vs. European release" and "U.S.-based Scientific Assessment Team (on call in event of publication in U.S.-based journal)," 2072417268-7269 (US 88528) (A); a December 1978 memorandum asserting that the effectiveness of ICOSI required coordination with and input from the Tobacco Institute and Shook, Hardy & Bacon, 2501018326-8327 (US 21505) (O); and INFOTAB's 1991 retention of Lovell, White & Durrant to provide legal clearance for all documents related to smoking and health, and of Chadbourne & Parke to review the documents with an eye toward making sure that "due consideration is given to the legal position in the United States." 2023237649-7650 (US 87025) (O).

420. BATCo participated in many industry meetings related to ETS issues. US 18325, a demonstrative presented during the United States' closing argument, highlights a sampling of the many meetings that included direct contact with one or more representatives of BATCo. 300543979-3979 (US 87578) (A); 517002090-2091 (US 66527) (O); 300512229-2232 (US

88507) (A); 507974116-4116 (US 51286) (A); 300543968-3968 (US 67755) (A); 300545701-5704 (US 87581) (A); 2025495795-5795 (US 26848) (A); 503089421-9433 (US 86573) (A); 2051810327-0327 (US 86588) (A); 2065260328-0328 (US 66825) (O); 321569333-9336 (US 88536) (A).

(1) TMSC - Tobacco Manufacturers' Standing Committee

421. On February 12, 1954, the British Minister of Health made a statement before the House of Parliament regarding the report of a special committee appointed by the British Health Ministry that had found a strong presumption for a causal relationship between smoking and lung cancer. The British tobacco manufacturers in the United Kingdom approached the Minister of Health, and, on his advice, agreed to donate £250,000, to be spread over seven years, to the Medical Research Council for research into smoking and lung cancer. Brant WD, 76:1-12; 110070785-0842 at 0788 (US 20270) (A); 321310317-0342 (JD-031027) (O); (no bates) (JD-011382) (A).

422. In March 1954, John Hill of Hill & Knowlton, TIRC's public relations counsel, and Alan Campbell-Johnson, the London associate of Hill & Knowlton, met with D.M. Oppenheim, BATCo Chairman; Robert Sinclair, Imperial Tobacco Chairman; and E.P. Partridge, Imperial Tobacco Director and Secretary, to discuss the newly-formed TIRC and a possible relationship between TIRC and the tobacco manufacturers in the United Kingdom. Hill outlined proposed plans, policies, functions, and responsibilities for TIRC, the TIRC SAB, and the TIRC Research Director, and showed the group the proofs of the about-to-be published white paper (detailed discussion of Hill & Knowlton/TIRC white paper at US FF § I.B(3), supra). The British executives offered suggestions for changes to the white paper because "[q]uite naturally the British Tobacco group is vitally interested in what we do because the repercussions of what

happens in the United States will affect Great Britain and vice versa." Timothy Hartnett, President of B&W, and other members of the TIRC Board "had asked [Hill] to discuss with [the BATCo and Imperial Tobacco executives] the possibility of some form of liaison between the two groups" and to suggest "that this could be worked through Hill & Knowlton, Inc. and our London Associate Campbell-Johnson, or in any other way they might suggest. The reaction to the idea of liaison was most favourable." TLT0900159-0161 (US 87720) (O). The arrangement by which Campbell-Johnson would "act as liaison through which the British industry could clear information regarding developments which it desired to communicate to TIRC" was confirmed by Timothy Hartnett when he was in London later in the spring of 1954. TLT0902041-2064 at 2060 (US 88360) (O).

423. In June 1956, the Tobacco Manufacturers' Standing Committee ("TMSC") was formed by BATCo and other United Kingdom tobacco manufacturers, giving "formal status to the co-operation in research of the group of manufacturers who in 1954 made a donation of £250,000 to the Medical Research Council for investigation into the causes of lung cancer." Its stated purpose was "to assist research into questions concerned with the relationship between smoking and health, to keep in touch with scientists and others working on this subject in the United Kingdom and abroad, and to make information available to scientific workers and the public." Geoffrey F. Todd was appointed Director of TMSC. Alan Campbell-Johnson, Hill & Knowlton's London associate, was appointed public relations consultant to the TMSC. TSMC occupied a position in the United Kingdom analogous to the position of TIRC in the United States. 110070785-0842 at 0788-0789 (US 20270) (A); TLT0900822-0825 (87725) (O); (no bates) (JD-011382) (A); Read TT, 3/21/05, 16327:25-16328:14.

424. Shortly after the formation of TSMC, the Medical Research Council in England

issued a statement in June 1957, which was supplemented by a statement by the Minister of Health, condemning tobacco as a major cause of lung cancer and calling for a program by local health authorities and their education departments that would inform the general public of the risks of smoking. CTR-TIRC-MIN000001-0252 at 0130 (JD-093292) (A).

425. TMSC member companies in the United Kingdom and TIRC member companies in the United States coordinated their efforts to promote the open question on the relationship between smoking and disease and to deny causation. After Timothy Hartnett, TIRC Chairman, traveled to England to meet with TMSC members in June 1956, Campbell-Johnson wrote to John Hill that Hartnett's "presence at that particular moment should do much materially to help to get relations between TIRC and the new committee [TMSC] off to a good start." Campbell-Johnson ended the letter by counseling that:

> [C]lose thought is needed on the relationship between TIRC and TMSC and the public relations implications of this are clearly left to our discretion to consider. While it is fully appreciated that the operations are, in fact, and should appear to be entirely separate, there clearly will be occasions when pronouncements emanating from one or other side of the Atlantic, from our respective authorities, can be usefully promoted at both ends. There now exists a potential interest in TIRC dicta on this side of the Atlantic and perhaps in TMSC statements on your side.

TLT0900822-0825 (US 87725) (O).

426. Minutes of a November 15, 1960 TIRC meeting state, in part: "A close working relationship is maintained with the Tobacco Manufacturers' Standing Committee in England, which organization parallels the TIRC. Although methods of operation are considerably different, our cooperation, both in research and public relations, has proven very valuable." CTR-TIRC-MIN000001-0252 at 0183 (JD-093292) (A).

427. Representatives from the TMSC, which included BATCo representatives, came to

the United States in 1958 and met with representatives from TIRC, American, Liggett, and Philip Morris, among others. Clarence Cook Little, the first scientific director of the TIRC, was among the individuals interviewed. A memorandum, drafted by BAT representatives and titled "Report on Visit to U.S.A. and Canada, 17th April -12th May 1958," demonstrated that although "Defendant manufacturers continued to assert publicly that there was no proof that cigarette smoking caused any disease," these public positions clearly "did not accord with the private views of their own scientists." 105408490-8499 at 8492 (US 21135) (A); Harris WD, 99:15-100:9.

428. G.F. Todd, Director of TMSC, attended a number of TIRC SAB meetings in the 1960s. CTRMIN-SAB000001-1061 at 0187, 0190, 0206, 0207, 0230 (JD-090960) (A).

429. In 1963, TMSC decided to conduct and be directly involved in its own smoking and health research program. To reflect that fact, TMSC was renamed the Tobacco Research Council in January, but maintained the same purpose and mission as its predecessor. 321310317-0342 (JD-031027) (O); Read TT, 3/21/05, 16327:25-16328:14.

(2) TRC - Tobacco Research Council

430. When TMSC changed its name to the Tobacco Research Council ("TRC") in 1963, TRC continued to be funded by BATCo and other United Kingdom tobacco manufacturers. The TRC built the Harrogate Labs in England. BATCo sat on the board at the Harrogate Laboratories and was one of the entities that directed the research at Harrogate. Research was conducted at the TRC laboratories in Harrogate from 1962 through 1974, when Harrogate was sold, and included mouse skin painting, inhalation studies, other biological assays, and nicotine pharmacology. Harris TT, 10/18/04, 2752:11-14; Henningfield TT, 11/29/04, 7204:14-19; 321310317-0342 (JD-031027) (O); Read TT, 3/21/05, 16329:5-9.

431. An October 1964 TRC trip report confirmed that Sir Philip J. Rogers, TRC Chairman, and Geoffrey F. Todd, TRC Director, had visited the United States and met with representatives of Defendants RJR, American, B&W, Philip Morris, Liggett, Lorillard, CTR, and the Tobacco Institute, as well as Hill & Knowlton executives and attorney Edwin Jacob, in a series of meetings. The United States manufacturers' main criticism of TRC's bio-assay research at Harrogate was that the research was an "implied admission that cigarettes are harmful." B&W considered TRC's research policy "particularly prejudicial to them through their association with B.A.T." The TRC representatives agreed that Harrogate bio-assay research might be seen as an implied admission, but pointed out that "TRC constantly bore in mind the possible repercussions of its actions in U.S.A. and that T.R.C. research was based on the needs of the situation in the U.K., including a need from the legal point of view to give no grounds for an accusation of negligence against the manufacturers." At one of the meetings with Philip Morris, "[t]he informal agreement between TRC members not to make health claims was explained." 1003119099-9135 at 9106, 9108, 9115 (US 20152) (A); Read TT, 3/21/05, 16335:11-14.

432. Correspondence from Addison Yeaman, B&W General Counsel, to Anthony D. McCormick, BATCo's company secretary, in February 1966 sought to reiterate comments at a prior "meeting of General Counsel" and to arrange for "a closer liaison between Harrogate, Hamburg and our C.T.R." It noted that "the cigarette companies in the U.S. have given the prime responsibility in the health area to their lawyers" and suggested that the lawyers, who direct "day-by-day decision and policy directions . . . in the first instance" could facilitate this communication, in lieu of the "executive heads" of the respective tobacco companies. The letter noted that Ed Finch, as Chairman of the Executive Committee of the Tobacco Institute and President of B&W, could head the group and that Ed Jacob of Jacob & Medinger, counsel to

CTR, should be included as he "is on retainer from RJR as well as B&W." This letter further indicated that Yeaman was "troubled" that a prospective Harrogate research report might "concede a significant causal relation between the use of tobacco and cancer of the lung . . . . [W]e would hope to be afforded the opportunity of consulting with the people on your side concerning the way Harrogate's work is presented, admittedly with the hope of 'slanting' the report." 680204115-4117 (US 20990) (O); Read TT, 3/21/05, 16335:1-10, 16335:17-16336:5.

433. On February 14, 1967, A.W.H. Stewart-Moore, a member of the TRC Executive Committee, sent a letter to Virgil D. Heger, Executive Vice President of American Tobacco, notifying him that TRC would be sending a delegation of scientists to the United States in March to discuss nicotine with scientists designated by CTR. Despite the scientific nature of the meetings, Stewart-Moore indicated that the meetings would include "the lawyers from the major American tobacco manufacturers." 0060293378-3378 (US 85326) (O).

(3) TAC - Tobacco Advisory Council

434. The TRC was re-named the Tobacco Advisory Council ("TAC") on August 31, 1978. 109840381-0383 at 0383 (US 20261) (O); Read TT, 3/22/05, 16354:12-20, 16407:6-11.

435. Various members of the Enterprise participated in the TAC, including BATCo, RJR, and Philip Morris, John Rupp of Covington & Burling and Don Hoel of Shook, Hardy & Bacon. The United States has introduced evidence of TAC meetings that took place as recently as May 11, 1999. (no bates) US 17361 (A) (summary exhibit); 505347172-7174 (US 20739) (A); 508226799-6804 (US 75279) (A); 2025025510-5512 (US 37221) (O); Henningfield TT, 11/29/04, 7277:18-23; see also 300545676-5680 (US 87579) (A) (TAC representatives Swan and Bullock attended CECCM meetings)300543360-3366 (US 88545) (A); 800123779-3782 (US 89137) (A).

436. Meeting notes, dated October 3, 1983 and titled: "TAC Meeting,"/"Smoking and Health," written by BATCo counsel, Alex Marine, stated in part:

> [I]n BAT's view, the biggest single threat facing the industry, in both this country and elsewhere, is the issue of smoking and health. Because of this, we believe that the industry must be united in its universal stand on this issue and that no member company should seek to exploit the smoking and health issue for its own commercial advantage. . . . The industry is acutely aware of the possible impact on our business of the Product Liability laws around the world, and in particular those in the U.S.A. . . . I need not remind you that over the past 20 years, no less than 100 civil suits in the U.S.A. have been successfully defended by our Industry. **Continuous success has not been coincidental. On the contrary, it has very largely been achieved by a co-ordinated and consistently applied self-discipline on the subject of smoking and health within the Industry.**

301043570-3571 (US 93210) (A) (emphasis added); Read TT, 3/22/05, 16406:24-16408:24.

437. At a November 16-17, 1983 meeting, the TAC member company tobacco research directors agreed to modify a TAC publication, "Review of Research Activities," in response to "the eleventh hour intervention by BAT lawyers on many aspects of the galley proof of the publication [because of] the extreme sensitivity of many of the issues, and of the vital need to be safe rather than sorry." The participants agreed to replace summaries of the results of grantees' research – which the researchers had written – with "much shorter statements of results prepared by TAC and agreed by the grantees." 109840381-0383 at 0383 (US 20261) (O).

438. In 1983 and 1984, TAC research directors met to discuss "the industry response" to the Third Report of the Independent Scientific Committee on Smoking and Health ("ISC"). They decided not to inform the ISC that there was "little scientific opportunity to identify and then selectively eliminate any specific components [of 'other noxa' found in the vapor phase of smoke] that could be unequivocally linked with the alleged smoking associated diseases." This decision was made in part because "the Committee might press industry to undertake or fund

research on 'the quality of tar,' ie [sic] on the specific biological activity of tobacco types and commercial products" – a "possibilit[y not] welcome to the industry." Each TAC member company prepared and exchanged draft position papers on one of "the six main areas of 'other noxa' identified by the ISC. . . . We agreed that the draft position papers should not be revealed to the ISC but that individual Research Directors would be responsible for introducing any discussion that arose on a particular subject." 101003866-3870 at 3866-3867 (US 20232) (O).

439. TAC continued the British tobacco industry's relationship with public relations and research entities in the United States with respect to ETS issues. A February 24, 1986 RJR interoffice memorandum from Charles Green, RJR scientist, to his superior, Alan Rodgman, concerning the International ETS Working Committee stated: "A proposal has been made to Mr. Don Hoel, an attorney for Shook, Hardy & Bacon and chairman of the TI-ETS Working Committee, that more formal cooperation be established between the scientific committees concerned with ETS." The memorandum further pointed out that members of the TAC were "prepared to meet with representatives of the U.S. Tobacco Institute ETS Working Committee in London on April 8th. Mr. Hoel has requested that Dr. Tom Osdene of Philip Morris and I accompany him to this meeting. It is expected that this will be the first of two or three meetings per year where the various committees will exchange scientific information and coordinate proposed studies." Green requested permission from RJR to attend the meetings as "the value of our participation in these meetings should be obvious." Handwritten comments on the typed memorandum read: "Bob: Neither legal nor I have a problem with this. In fact, Mary Ward thinks it's a great idea. May we have your approval for Dr. Green to participate? -Alan 2/24/86; Approved! Bob 2/26/86." 508192982-2982 (US 86533) (A). In 1986, Mary Ward served as Assistant Counsel in RJR's R&D Department. Ward WD, 2:13-19.

440. According to the trial testimony of Mary Ward and an April 15, 1986 RJR memorandum from Charles Green to Alan Rodgman, a "joint meeting of the ETS advisory groups from West Germany, the United Kingdom, and the United States as well as the INFOTAB Board of Directors" was in fact held on April 8, 1986 at the TAC's London office to discuss "scientific and public relations problems related to environmental tobacco smoke." The meeting included representatives from Defendants Philip Morris, BATCo, RJR, and the Tobacco Institute, as well as "the entire Tobacco Advisory Research Committee," and the law firm of Shook, Hardy & Bacon. The attendees discussed various research projects which could be used to address proposed regulations with respect to ETS, including projects and programs sponsored by the Tobacco Institute and the "cooperative [United States] industry study to measure carbon monoxide, nicotine, and particulate matter in restaurants." 505347172-7174 at 7172-7173 (US 20739) (A); 2022932502-2506 (US 22828) (A); Ward WD, 70:21-71:16.

441. Representatives of TAC also met with the Tobacco Institute, Germany's Verband der Cigarettenindustrie ("Verband"), and Japan Tobacco International in Washington, D.C. on March 18-19, 1987, to address the need for increased cooperation among the participating countries and on an international level. The meeting was designed to be a show-and-tell, with specific emphasis on the current status of ETS scientific research, public affairs, and political nuances in each of the countries. The Verband functioned as the German Tobacco Institute. Philip Morris, BATCo, and other cigarette manufacturers are affiliated with the Verband. TI00682162-2163 (US 21240) (O); 2501458142-8148 (US 27951) (O); Parrish TT, 1/26/05, 11163:21-11164:4; Ogden TT, 3/16/05, 15831:19-22.

442. An April 6, 1987 RJR Interoffice Memorandum from Charles Green to Alan Rodgman, and copied to several individuals, including Mary Ward, discussed the joint meeting

held in Washington D.C. in March 1987. This April 1987 memorandum described the meeting discussions on "Industry-Sponsored Research on ETS," "Non-Industry Sponsored Research," "Current Public Affairs/Political Concerns," and "Future Research Needs" and stated:

> The first session of the second day included presentations by Trevor King, Gerhardt Scherer, Y. Shimitzu, Bill Kloepfer, and John Rupp. There were many similarities among all the presentations and **the need for close cooperation between scientist and public relations professionals was expressed repeatedly.** R.J. Reynolds was praised by several speakers as an example of an effective research and public relations relationship.

This memorandum further stated that:

> Dr. Spears stated that **the Industry** has only a short time (5 years) to solve the ETS problem. Vigorous denial is not a satisfactory defensive strategy. All agreed that the most significant ETS problem facing the Industry is the result of epidemiological studies which indicate a low risk related to ETS exposure. **More industry sponsored research** is needed to address this issue . . . . All of the attendees left this meeting with a better appreciation of the international ETS problem. **Concerted action is needed to improve the Industry's position.**

A proposed follow-up meeting "with the purpose of generating a world-wide ETS action plan" is further described. 508226799-6804 (US 75279) (A) (emphasis added); Ward WD, 71:17-72:6, 72:10-73:17.

443. Sharon Blackie, formerly of BATCo and B&W, acknowledged that she collaborated with representatives of other tobacco companies in fashioning consistent ETS public statements. Defendants who cooperated in this way included BAT, Philip Morris and RJR. Blackie WD, 17:3-14.

444. Defendants circulated revised versions of TAC publications. According to a March 10, 1987 internal memorandum, Philip Morris planned to distribute the TAC publication "Tobacco Smoke and the Non-Smoker" to industrial organizations on behalf of the Enterprise

once the document had met industry attorneys' approval. 2501009269-9269 (US 27917) (O).

445. According to a March 17, 1987 letter to Hans Verkerk of INFOTAB, William Kloepfer of the Tobacco Institute planned to "compare notes on the ETS issue" with his colleagues at TAC before attending a steering committee meeting in connection with the Sixth World Conference on Smoking and Health. TI12261173-1173 (US 62338) (O).

446. In a May 27, 1987 memorandum, Tobacco Institute Vice President William Kloepfer reported to Samuel Chilcote, Tobacco Institute President, about his meetings with TAC in London. According to Kloepfer's memorandum, he gave the TAC public relations committee an overview of Tobacco Institute issues and management. According to Kloepfer, TAC recognized ETS as its primary issue and wanted to adapt Tobacco Institute consultant Gray Robertson's video for TAC's use. TI05261937-1938 (US 62213) (O); TIDN0012090-2091 (US 77023) (O).

447. TAC and the Tobacco Institute continued to share information on how to confront the ETS issue publically. On August 23, 1989, Clive Turner, TAC Deputy Chief Executive, wrote to Sam Chilcote, Tobacco Institute President, requesting an ETS publication kit prepared by the Tobacco Institute. TI12240317-0317 (US 86537) (O).

448. In January 1994, TAC changed its name to the Tobacco Manufacturers Association ("TMA") because "the name TAC did not clearly reflect the change of focus in its role to that of a trade association for the UK companies." TMA members included Defendants BATCo and RJR. The United States introduced evidence of TMA meetings as recently as 2000, the date of the discovery deadline issued in United States v. Philip Morris. 321103764-3771 at 3764 (US 67807) (O); 321103761-3761 (US 28286) (O); 321310317-0342 (JD-031027) (O); (no bates) (US 17361) (A) (summary exhibit).

(4) ICOSI - International Committee on Smoking Issues

449. On December 3, 1976, Hugh Cullman, Executive Vice President of Philip Morris, memorialized a phone call from R.A. (Tony) Garrett, Chairman of Imperial Tobacco, during which Garrett explained that he had been exploring, with a number of major tobacco companies, including Defendants BATCo and RJR, as well as Rothmans International and Reemtsma (Germany), whether company heads might be prepared **"to meet discreetly to develop a defensive smoking and health strategy, to avoid our countries and/or companies being picked off one by one, with a resultant domino effect."** The initial objective of this group would be "to develop a smoking and health strategy which would include **a voluntary agreement** that no concessions beyond a certain point would be voluntarily made by the members [to their governments] and, if further concessions were required by respective governments, that these not be agreed to and that governments be forced to legislate." The proposed agenda for the meeting included **"Consideration of the international dimension to smoking and health**. This might include such matters as . . . how do developments in one country affect others." Defendants' effort was ultimately termed "Operation Berkshire" (discussed further at US FF § III.A(2)). 2025025347-5348 (US 75149) (O) (emphasis added); 2025025286-5286 (US 20407) (A); 2025025290-5291 (US 22980) (A); 2025025347-5348 (US 20410) (O).

450. On March 24, 1977, R.A. Garrett of Imperial Tobacco wrote to Alexander Holtzman, Associate General Counsel for Philip Morris, regarding "Operation Berkshire," an upcoming meeting between the executives of certain tobacco companies. Participants included representatives from Defendants BATCo, Philip Morris, and RJR, as well as Reemstma, Rothmans International, and Imperial Tobacco. The purpose of the meeting was to form a group

to develop a common international position on smoking and health issues. The group formed was called the International Committee on Smoking Issues ("ICOSI"). The resulting position paper was reviewed and edited by the law firm of Jacob & Medinger, which represented RJR, B&W, and CTR. 2025025288-5289 (US 20408) (O); 2025025313-5318 (US 23741) (O); 2025025341-5343 (US 20409) (A); 2025025347-5348 (US 20410) (O); 2025025347-5348 (US 75149) (O); 2025025369-5369 (US 20411) (O); 500269225-9228 (US 20622) (O); 2025024797-4803 (US 20406) (O); 2501020298-0308 (US 21903) (O); 2501024103-4107 (US 21909) (O); 2501024103-4107 (US 75181) (O); 2501024571-4575 (US 21904) (A); 502948580-8591 (US 21908) (O).

451. The purpose and objectives of ICOSI, as set forth in its charter, were:

> the establishment of a forum for exchange of views and information on international smoking issues (to include tobacco and health) by the coordination of data and information in economic, scientific, and technical areas. The general objectives are to broaden the knowledge of its members, of consumers, and of appropriate authorities. In large part accomplishment of these objectives will be sought by providing information to various national and other tobacco trade associations and by serving as a resource of expertise, data analysis and opinion on these subjects of interest to the industry and its publics. The dissemination of the generality of this information will be made in the form of bulletins, reports, articles, surveys, pamphlets, and other analogous means.

2025048998-9014 at 8999 (US 20412) (O); see also 503143820-4106 at 3909 (US 75974) (A) (one page only admitted with witness Sharon Blackie).

452. According to notes in BATCo's files from a March 1978 meeting in Australia, however, the objective of ICOSI was "defensive research aimed at throwing up a smoke screen and to throw doubts on smoking research findings which show smoke causes deceases [sic]." 321588692-8692 (US 28544) (O).

453. Attendees at the November 1981 Tobacco Institute College of Tobacco

Knowledge were told that the organization (first named ICOSI and later named INFOTAB) was founded to perform internationally the functions that the Tobacco Institute performed for the domestic industry in the United States: "From the outset, the members recognized that the social acceptability of smoking, including the public smoking issue was a subject on which attention should be focused (sic)." 2501029891-9901 at 9896 (US 20557) (O); see also TI04962210-2210 (US 67250) (O); Blackie TT, 10/26/04, 3846:18-22.

454. ICOSI's key officers included the chairmen and other principals of the member companies who attended the Operation Berkshire meeting: Patrick Sheehy, BATCo Chairman; Kit Stuart Lockhart, BATCo Deputy Chairman; William Hobbs, RJR Chairman; William Murray, President of Philip Morris Europe; Alexander Holtzman, Associate General Counsel for Philip Morris; and Andrew Whist, Director Corporate Affairs of Philip Morris (Australia) Ltd. 2025025341-5343 (US 20409) (A); 2025025369-5369 (US 20411) (O).

455. There were two governing groups of ICOSI. The Board of Governors was responsible for establishing policy, included one principal from each member company, and met at least annually. The Executive Committee was responsible for implementing the policies of ICOSI in those areas where decision-making powers had been delegated to the Committee by the Board of Governors. 2501020298-0308 (US 21903) (O).

456. Representatives of the participating Defendants attended ICOSI meetings of several working groups and task forces, including the Social Acceptability Working Group, which dealt with ETS issues, the Medical and Behavioral Research Group, the EEC Task Force, the Product Liability Task Force, and the Swiss Referendum Task Force. 2501020298-0308 (US 21903) (O); 321588692-8692 (US 28544) (O); 2025025295-5300 at 5295 (US 75146) (A).

457. ICOSI's inaugural meeting, held in June 1977, at Shockerwick House served as

the beginning of Operation Berkshire. United States' expert Jeffrey Harris identified Operation Berkshire as one of the most probative examples of Defendants' collusion. This meeting, which was called by BAT CEO Tony Garrett, was attended by representatives of the major United States tobacco manufacturing companies. The meeting participants jointly agreed to "hold the line on admissions concerning what they would admit to their individual governments concerning smoking and health, among other things." Harris TT, 10/14/04, 2576:10-24, 2577:11-18; see also 2025025295-5300 (US 75146) (A).

458. ICOSI representatives met six times between June 1977 and February 1979, to agree upon "the fundamentals of ICOSI's policy, form, organization, financing and work-programmes." 1003717317-7330 at 7319 (US 86518) (O).

459. ICOSI member companies agreed to act together via the Enterprise to respond to smoking and health risk challenges worldwide by promoting the "open question" controversy and the myth of independent research. On October 14, 1977, Dennis Durden, Vice President of RJR and then-Chairman of ICOSI's Working Party on the Social Acceptability of Smoking, forwarded a report to the members of ICOSI regarding the research and analysis activities that would be conducted by the working party. Members of the working party listed in the summary included representatives of Defendants RJR (Durden and James Hind, RJR Vice President of Planning), BATCo (Richard Haddon, Public Relations Manager), and Philip Morris (John T. Landry, Senior Vice President). 501472756-2794 at 2758, 2759, 2762 (US 66342) (O).

460. On April 21, 1978, P. Isenring distributed a letter to Alexander Holtzman, Philip Morris Vice President and General Counsel, and others about the ICOSI EEC Task Force on Consumerism. Isenring urged cooperation and coordination between Philip Morris and RJR concerning the involvement of the law firms of Jacob & Medinger and Shook, Hardy & Bacon,

both of which represented several Defendants. Specifically, Isenring discussed the fact that the ICOSI EEC Task Force on Consumerism had to prepare an industry response to the EEC Consumer Consultative Committee's anti-smoking paper "Tobacco and the Health of the Consumer" and suggested that ICOSI members and their respective law firms work together on a common approach to the response, given their exposure to the situation in Europe over the years. 2501025098-5099 (US 86515) (O); 2501025100-5100 (US 86516) (O); 2501025108-5108 (US 86517) (O).

461. ICOSI was registered as a non-profit association in Geneva, Switzerland, on December 1, 1978. The seven founding members of ICOSI were Defendants BATCo, Philip Morris, and RJR, as well as Gallahers, Imperial Tobacco, Reemstma, and Rothmans International. TIMN257288-7303 (US 21343) (O); 321588692-8692 (US 28544) (O); 1003717317-7330 at 7318 (US 86518) (O); 301079919-9998 (US 87411*) (O).

462. In advance of the June 1979 Fourth World Conference on Smoking and Health, ICOSI formed a Task Force to "monitor and combat on the spot the strong propaganda expected to be generated at this Conference" which is "sponsored by the World Health Organisation and the Swedish Health Authorities." In furtherance of this effort, the ICOSI Task Force met in Kansas City, Missouri on November 20-21, 1978, scheduled two task force meetings for early 1979, and another meeting just prior to the conference. Attendees of the Kansas City meeting included: Gwynn Hargrove of BATCo; Murray Senkus of RJR; William Kloepfer of Tobacco Institute; Leonard Zahn, public relations counsel for CTR; Tim Finnegan of CTR's lawyers Jacob & Medinger; Hugh Grice of TAC; and Donald Hoel of Shook, Hardy & Bacon. ICOSI engaged a Stockholm-based public relations agency to "monitor the Conference organizers' activities and to assess with press room activities at the Conference." Additionally, the Task Force was charged

with preparing a post-conference report covering several matters, including "contradictions," "Conference recommendations to governments," an evaluation of the possible impact of the Conference, and "industry positions as they relate to the Conference." 2501015475-5480 at 5475-5476 (US 27921) (A); 2501015328-5331 at 5328, 5329, 5331 (US 86519) (O); 1003717317-7330 at 7328 (US 86518) (O); Zahn PD, Richardson, 12/16/98, 309:12-17, 505:6-505:17, 506:6-14, 512:8-10, 517:2-518:10, 525:12-526:3, 537:1-538:18, 581:10-582:5; see also 680241699-1701 (US 30846) (O).

463. In March 1980, the Executive Committee of ICOSI was disbanded. Instead, the Board of Governors consisting of two named representatives of each member company were to meet at least twice a year. Each member company was to have one vote at the meetings of the Board of Governors. Chairmanship was held in rotation by each member company. William D. Hobbs, Chairman of RJR, was Chairman of the Board of Governors between 1979 and March 31, 1980. 2501020298-0308 (US 21903) (O).

(5) INFOTAB - International Tobacco Information Center

464. ICOSI was renamed the International Tobacco Information Center/Centre International d'Information Du Tabac ("INFOTAB") and registered in Geneva, Switzerland, on December 8, 1980. 504934906-4953 (US 20737) (O); Ward TT,11/3/04, 4950:10-12. INFOTAB's charter, filed with the Swiss Government on November 2, 1982, was substantially the same as ICOSI's charter. Cf. 2025048998-9014 at 8999 (US 20412) (O).

465. The six founding members of INFOTAB were Defendants BATCo, Philip Morris, and RJR, as well as Imperial Tobacco, Reemtsma, and Rothmans International. 504934906-4953 (US 20737) (O); Tully PD, United States v. Philip Morris, 6/13/02, 33:7-14.

466. Defendant BATCo belonged to INFOTAB from 1981 or 1982 to about May 1990.

Proctor PD, United States v. Philip Morris, 6/12/02, 16:8-18.

467. INFOTAB had three categories of membership: Founding Members, Associate Members, and Allied Members. Defendants Liggett and Lorillard were Associate Members, while Defendant Tobacco Institute was an Allied Member, as was Britain's TAC. 504934906-4953 (US 20737) (O). Lorillard later withdrew from participation in INFOTAB because if felt that its contribution and participation in the Tobacco Institute provided adequate support for INFOTAB. Stevens WD, 4:3-13; 85174260-4260 (US 56011) (A).

468. In the mid-1980s, Hugh Cullman of Philip Morris and Chairman of the INFOTAB Board of Governors, R.L.O. Ely of BATCo, Andrew Whist of Philip Morris, and Richard J Marcotullio of RJR were on the INFOTAB Board of Governors, which was later re-named the Board of Directors. 504934906-4953 at 4948 (US 20737) (O); 2025013308-3308 (US 21585) (O).

469. Tobacco Institute representatives, Peter Sparber and Bill Kloepfer (Senior Vice President, Public Relations), participated in an October 7-10, 1985 INFOTAB workshop in Copenhagen. Thereafter, INFOTAB's Secretary General wrote to Tobacco Institute President Samuel Chilcote to thank him for the Tobacco Institute's participation. According to the conference program, the workshop included discussions about "the Social Acceptance of Smoking," "The Health Controversy - Some Aspects Old and New," and "Ambient Tobacco Smoke, Defense - Medical, Defense - Political, and Relation with Indoor Pollution." According to the conference program, Hugh Cullman (then Vice Chairman, Philip Morris Companies and 1985/86 INFOTAB Chairman), John Tollison (then Institute Director of the Tobacco Institute of Australia Ltd.), and Hugh Grice (then Executive Director of the TAC) were also among the speakers, discussion group leaders and moderators scheduled to attend the workshop.

TI12263348-3361 (US 62369*) (O).

470. A November 30, 1989 INFOTAB document identified INFOTAB's "most important" roles, including: "'Think tank' for industry cooperation worldwide, in association with member companies," "Preparation of positions agreed by the industry," "Preparation of published materials and kit sets for use by NMA's and lead companies," and "Promulgation of strategies agreed by the industry." 300528729-8731 (US 46572) (O).

471. INFOTAB prepared various materials on smoking and health issues including research-related materials, public relations campaign materials, and argumentation papers. For example, in 1986, INFOTAB produced an Issues Binder which provided "members with reference materials and quotations in response to the major allegations in the smoking and health area. The binder [was] organized around nine issues – 'addiction', advertising and sponsorship, developing countries, the public smoking issue, legislation, smoking and health, social costs, taxation and warning labels." 504934906-4953 (US 20737) (O).

472. J. Kendrick Wells of B&W sent a memorandum to Ernest Pepples of B&W dated October 27, 1981, concerning his recent discussion with L.C.F. Blackman, Director of the Group Research and Development Center of BATCo in Southampton, England, about Blackman's slide presentation titled "Basic Approach to Government and Medical Authorities." Wells voiced his concern with Blackman that the initial document "admit[ted], despite a disclaimer, that cigarettes are harmful to health in proportion to delivery." Wells further noted that the document "runs against important argument the U.S. industry is making in response to the FTC Staff Report and may need to make in response to charges that cigarettes are addictive." Blackman agreed to change the document and send it to the other INFOTAB members. 680585063-5064 (US 21007) (A); 680585041-5042 (US 21006) (A).

473. BATCo relied on position papers developed for the industry by INFOTAB. An internal BATCo memorandum, distributed to all No. 1's and Public Relations Managers of Operating Companies, transmitted an updated INFOTAB paper on "Advertising Argumentation.," which provided arguments against advertising restrictions. The transmittal memo urged its recipients to "ensure that no mention is made of its source." 100439233-9233 (US 34655) (O).

474. BATCo and other Defendants used INFOTAB to monitor research that suggested smoking caused cancer. 2021594539-4540 (US 36773) (O).

475. A June 28, 1988 memorandum addressed to Todd Sollis, Assistant General Counsel of Philip Morris, from Donald Hoel, attorney with Shook, Hardy & Bacon, described Shook, Hardy & Bacon's role with respect to INFOTAB. Hoel stated:

> SHB, as counsel to PM and other international manufacturers, was instrumental in the founding of INFOTAB to help strengthen and coordinate the activities of the various national manufacturers associations. The firm remains active in the operation of INFOTAB. It monitors the meetings and clears the draft minutes of the INFOTAB Board of Directors and the Global Issues Working Party, as well as INFOTAB workshops. All materials prepared by INFOTAB on smoking and health issues, including briefing documents sent to national manufacturers associations and presentations by the INFOTAB staff, are cleared by SHB in order to protect the member association and member companies. SHB also approves all public relations campaigns, tactics and strategies which address smoking and health issues.

2015007199-7207 at 7204-7205 (US 20311) (A).

476. A 1989 INFOTAB document outlined how to attack the WHO [World Health Organization]. The tactics it suggested included the following: "Criticize budget management, Address health priorities, Expose resource blackmail, Highlight regional failures, Attack 'behaviourism', Counter on public issues, Discredit activists' credentials, Engage in statistical

warfare, Invest in press relations, Show impact of 'cuckoo' organisations." The document also suggested the industry should attack IOCU [the International Organization of Consumer Unions] with the following program goals: "Relieve NGO pressure on WHO, Expose activists' 'credentials', Counter 'behaviourist' regulation, correct anti-business slant." 2021595753-5910 at 5769, 5897, 5903 (US 85541) (O).

477. In 1990, INFOTAB also issued an INFOTAB publication titled "Children & Smoking – The Balanced View" that addressed various World Health Organization claims. It stated that tobacco is not addictive, and that there were inconsistent findings as to whether smoking causes low birth weight, birth defects, and delayed mental and physical development in infancy. 2070052572-2578 (US 87151) (A); 2501342105-2110 (US 20565) (A).

478. On January 19, 1990, Ron Loader, INFOTAB Director of Information Services, confirmed the first meeting of a worldwide industry working group at the offices of the Tobacco Institute in Washington, D.C. for the purpose of planning a Global Argumentation Project. The Global Argumentation Project was an effort to develop a standardized and comprehensive collection of argumentation papers on smoking and health issues, including ETS and youth marketing, which could be used by local management and NMAs for lobbying, public information campaigns, or as base documents for responding to public health advocates. Representatives from INFOTAB, the Tobacco Institute, Shook, Hardy & Bacon, and several European and United States cigarette manufacturers attended the meeting, including Kay Comer of BATCo, Cynthia von Maerestetten of Philip Morris, Jim Goold of RJR; Donald Hoel and Jim Newsome of Shook, Hardy & Bacon, and Charles Powers and Fred Panzer of the Tobacco Institute. It had been decided that for several reasons "it would be sensible to hold this first meeting in Washington" because "we need to involve the US TI at an early stage in order to take

advantage of their detailed information / argumentation / lobbying materials developed over years in practical situations and needing personal discussion;" "most members of the Working Group are already in, or need to be in, the States (i.e. 8 out of 11);" and "it provides the opportunity for INFOTAB coordinators to review other information sources (e.g. RJR) at first hand." TIMN362946-2949 (US 62874) (O); TIMN362950-2952 (US 62872) (O); TIMN362918-2922 (US 62919) (O).

479. INFOTAB also collaborated with the IEMC. 507782317-2318 (US 20788) (A).

(6) TDC - Tobacco Documentation Centre

480. On December 4, 1991, the Tobacco Documentation Centre ("TDC"), a successor entity to INFOTAB, was established. BATCo joined the TDC at its inception. Its charter stated:

> The Association has as its purpose the establishment of a forum for exchange of views and information on international tobacco issues by the coordination of data and information in economic, social, scientific and technical areas. The general objectives are to broaden the knowledge of its members. In large part accomplishment of these objectives will be sought by providing information to various national and other tobacco trade associations and by serving as a resource of expertise and data analysis on these subjects of interest to the industry.

301159092-9101 (JD-031017) (O); 301159136-9151 (JD-031018) (O); 700495549-5561 at 5550 (JD-031478) (O); Proctor PD, United States, 6/12/02, 16:8-18, 113:7-11; Tully PD; United States, 6/13/02, 38:9-24.

481. The Founding Members of the TDC and subscription levels for each were as follows: Philip Morris International, Inc., 20%; RJR Tobacco International, Inc., 20%; BATCo, 20%; Gallahers, 10%; Reemtsma, 10%; and Rothmans International, 20%. Subscription levels of membership categories were based on annual production. On the unanimous proposal from Charter members, the following persons were unanimously elected to the Board of Directors for

1992: D.J. Bacon of BATCo, L.E. Birks of Gallahers, Richard J. Marcotullio of RJR International, F.J. Moreno of Philip Morris, C.J. Walther of Reemtsma, and A.A. Woods of Rothmans International. 301159092-9101 (JD-031017) (O); 301159136-9151 (JD-031018) (O).

482. The TDC was formed "to act as a central information resource for the tobacco industry worldwide. [Predecessor] INFOTAB had an extensive information collection and database, which was considered valuable and worth maintaining." 502601564-1567 at 1565 (US 29570) (O).

483. The IEMC and CECCM scheduled meetings from time to time at TDC's offices. 700494467-4471 (US 89139) (A); 2024210630-0631 (US 22868) (A); 2028363540-3549 (US 86604) (A); 2078742951-2951 (US 27724) (A); 2078742947-2948 (US 27721) (A); 2078742962-2963 (US 45192) (A); 900006204-6204 (US 88482) (A); 2051809368-9369 (US 86603) (A).

484. On April 28, 1992, the International ETS Management Committee ("IEMC"), which was comprised of representatives from Defendants BATCo, Philip Morris, and RJR, prepared comments for distribution by the TDC regarding the draft EPA Risk Assessment on the health hazards of ETS. All NMAs were to use these comments in responding to inquiries regarding the draft Risk Assessment. The document was also provided to TDC member companies. 515622547-2547 (US 20865) (A).

485. TDC distributed the IEMC ETS position papers, dated May 6, 1992, to the NMAs and lead companies, stating that the documents had been cleared for use by Defendants BATCo, Philip Morris, and RJR. TI13040345-0424 (US 86522) (A).

486. On June 19, 1992, Matt Winokur, Director of Corporate Affairs at Philip Morris International, informed Geoffrey Bible, President of Philip Morris, and other Philip Morris

employees, that the EPA talking points prepared by Covington & Burling were "also being used by our international competitors and by National Manufacturers Association via the TDC. This coordinated approach to communications is highly desirable. It enables the entire global industry to espouse a common position immediately, an essential element in quickly responding to local government and media." 2021173016-3016 (US 20342) (O).

(7) CORESTA - Centre for Cooperation in Scientific Research Relative to Tobacco/Centre de Coopération

487. The Centre for Cooperation in Scientific Research Relative to Tobacco/Centre de Coopération pour les Recherches Scientifiques Relatives au Tabac ("CORESTA") was created following the resolutions approved by the First International Scientific Tobacco Congress held in Paris, France, on September 10, 1955. It was created "[i]n order to operate a permanent Secretariat for international co-operation in scientific studies relative to tobacco." Its registered offices are located in Paris, and every world-wide major tobacco company and tobacco industry organization is a member. Meetings have been held every two years and, as of 1992, CORESTA had approximately 190 members, including Defendants BATCo, Philip Morris, Lorillard, B&W, Liggett, and RJR. 401349241-9242 (US 47550) (O); 401349243-9248 at 9243 (US 21788) (O); 401349330-9333 (US 47575) (O); Stevens WD, 4:3-5.

488. A March 31, 1992 BATCo document described CORESTA's value to the tobacco industry: "It is perceived as being objective, technical and independent. It is this perception which makes CORESTA unique and very valuable. Unlike other organizations, e.g., CECCM[,] it is not regarded as a lobbying organisation of the tobacco industry." 401349243-9248 at 9243 (US 21788) (O) .

489. BATCo opined in 1992 that the structure of CORESTA was "very restricted" and that "there is no doubt that it needs restructuring to meet the future demands of the Industry."

401349243-9248 at 9243 (US 21788) (O).

490. In June 2001, representatives from Defendants Lorillard, Philip Morris, and RJR, along with other delegates from the industry, convened at CORESTA's ETS Sub Group meeting, where they discussed trends in ETS research. In November 2001, the CORESTA Sidestream Task Force, which included representatives from Defendants BATCo, RJR, and Philip Morris, among others, met to review research conducted on sidestream tar and nicotine. 525302822-2823 (US 86526) (O); 525302728-2729 (US 86527) (O); 525776902-6936 (US 86528) (O); 325260347-0362 at 0348 (US 29146) (O); 524596882-6890 at 6883 (US 66571) (O).

(8) Tobacco Institute Interaction with Overseas and International Groups

491. As discussed above, the Tobacco Institute worked closely with overseas and international tobacco organizations to present a unified front; to influence public opinion; to pressure government officials to adopt the public positions of the United States tobacco industry; to maintain the Defendants' open question position on the relationship between smoking and adverse health effects; to preserve and enhance Defendants' profits; and to avoid adverse liability verdicts in lawsuits brought around the world.

492. In a document dated October 1, 1973, and titled "International Activities of the Tobacco Institute, Inc.," J.C.B. Ehringhaus, Jr., Tobacco Institute General Counsel, advocated that the Tobacco Institute have an increased role internationally. Ehringhaus noted that "any success of the anti-smoking group in another country 'diminishes' us. I think we have to do something about it, to be aware and to participate in order to protect the interests of the American companies." He further suggested: "We would keep aware of what's going on around the world and be able to advise our industry people in one country of these happenings so that they may be guided in dealing with their own local situations." 2010030234-0235 (US 88447) (O).

493. The Tobacco Institute's role in international matters was then discussed at the October 4, 1973 meeting of the Tobacco Institute Executive Committee, and it was agreed that "the Committee of Counsel should continue consideration of this area." TIMN0013425-3428 at 3427 (US 88448) (A).

494. One way in which the Tobacco Institute coordinated worldwide industry positions was by publishing brochures, pamphlets, "backgrounders," industry position papers, and other materials on the Enterprise's stance on controversial smoking and health issues and making them available for overseas distribution, often through INFOTAB. USX6400001-0527 at 0506-0507 (US 89561) (O) (TI Interrogatory Answer No. 15).

495. The Tobacco Institute developed a Tobacco Institute backgrounder titled "Tobacco in the Developing Nations" and announced its availability in a Tobacco Institute newsletter on January 14, 1980. Copies were to be forwarded to international public relations personnel of member companies, overseas NMAs and other trade associations, and international organizations such as INFOTAB and ICOSI. TIMN0241954-1971 (US 21545) (O); TI16740349-0366 (US 86538) (O).

496. On October 15, 1981, Donald Hoel of Shook, Hardy & Bacon, sent a letter to Horace Kornegay, President of the Tobacco Institute, transmitting a draft of a "Public Smoking Paper" for use by INFOTAB. TIMN0144678-4678 (US 23015) (O).

497. In anticipation of the 1983 Surgeon General's Report on heart disease, the Tobacco Institute issued a report "Cigarette smoking and heart disease." The report was distributed to Tobacco Institute member companies who were requested not to distribute it widely, but only to use it for internal purposes until the Surgeon General's report on heart disease was released when additional copies would be made available. INFOTAB distributed the report

as well, advising its members that the Tobacco Institute would acquaint news reporters with its views about smoking and heart disease before the 1983 Surgeon General's report. 2501023645-3645 (US 20556) (O).

498. In anticipation of the 1985 Surgeon General's Report on smoking and the workplace, the Tobacco Institute staff gathered prior publications on similar subjects by the prospective authors of the report chapters in order to forecast the conclusions of the report with some degree of accuracy and develop "shadow" papers among scientists who would dispute such conclusions. TIMN0061572-1572 (US 88450) (O). Thereafter, INFOTAB informed NMAs throughout the world, including Britain's TMA, of which BATCo was a member, that the Tobacco Institute had assembled material for use in framing answers to possible specific questions from the media regarding the 1985 Surgeon General Report. INFOTAB forwarded a copy of this material for use as a basic reference by Defendants and spokespersons from the NMAs. 2501444186-4187 (US 27948) (O).

499. The Tobacco Institute's William Kloepfer was given six draft briefing papers in June 1987 that were to be presented at the Sixth World Conference on Smoking and Health. The papers discussed ETS and Indoor Air Quality; the Science of ETS; ETS Legislation; Tobacco and Developing Countries; Smoking and Young People; and Smoking and Women. Kloepfer was asked to, and did, rewrite all papers except the one on Smoking and Women. TIMN0269920-9944 (US 86540) (O).

500. In a 1990 memorandum listing "Allies to Be Notified of Industry Youth Initiatives," the Tobacco Institute directed that, prior to public announcement of any new industry initiatives in the area of youth smoking, the Tobacco Institute staff would provide organizations within the tobacco family, groups, and allies of the new program with advance copies of press

and program materials and a cover letter to be signed by the Tobacco Institute President or other appropriate staff. Among the international organizations to be kept abreast of the Tobacco Institute's activities on behalf of the industry were INFOTAB and TMA. TIMS00026152-6153 (US 88451) (O).

501. A letter dated March 6, 1992, from William Kloepfer, Tobacco Institute Senior Vice President, to Ron Tully of INFOTAB, and others, provided information about the Surgeon General's Report titled "Smoking and Health in the Americas" which was released on March 12, 1992. The letter explained that the Tobacco Institute would comment on the Surgeon General's Report, if asked, to United States media and Latin America media; that the Pan American Health Organization would be issuing a country-by-country status report on tobacco prevention and control measures; and that Kloepfer would bring briefing session materials prepared by Don Hoel of Shook, Hardy & Bacon and others. 2500121043-1043 (US 20552) (O).

502. The Tobacco Institute furnished advice, assistance, and even financial support to international industry-related groups and organizations as these groups worked on projects, publications, videos, conferences, briefing papers, and lobbying materials. USX6400001-0527 at 0506-0507 (US 89561) (O) (TI Response to Interrogatory No. 15).

503. In a January 17, 1983 form letter to its members, TAC informed each of its member companies, one of which was Defendant BATCo, that the Tobacco Institute had provided TAC with a copy of a Tobacco Institute videotape compilation showing their spokespersons team in action: "It shows extracts of the four members of the team being interviewed on television and speaking to live audiences. Two points are of particular interest. The first, the way in which they publicly face and handle health issues. The second that all the team are first and foremost media trained and therefore utterly familiar with, and relaxed in,

dealing with hostile interviews and audiences: their knowledge of tobacco matters, while vitally important, is a secondary consideration in the selection and training process." 2024919702-9702 (US 26821) (O).

504. The Tobacco Institute provided facilities at its offices for an INFOTAB Workshop for NMAs held on September 19-22, 1983. William Kloepfer, Tobacco Institute, Vice President, and Tony St. Aubyn, TAC Assistant Director, were among the presenters. TI13161263-1266 (US 88499) (O); 100294426-4429 (US 88500) (O); 2501021530-1532 (US 27924) (O); 2501021486-1489 (US 25366) (O); USX6400001-0527 at 0506-0507 (US 89561) (O) (TI Response to Interrogatory No. 15).

505. During 1984, the Tobacco Institute provided $70,000 (half the cost) to INFOTAB for a monograph commissioned by INFOTAB, edited by Robert Tollison, Professor of Economics at Virginia's George Mason University, and titled "Smoking in Society." TIMN371669-1669 (US 65655) (O); USX6400001-0527 at 0506-0507 (US 89561) (O) (TI Response to Interrogatory No. 15).

506. In November 1990, Samuel Chilcote, Tobacco Institute President, sent Martin Oldman of INFOTAB a list of "messages and sub-messages [that] could be helpful as a starting point for any global and/or NMA ETS campaign." TI12200663-0663 (US 62313) (O).

507. The Tobacco Institute provided guidance, advice, strategies, and tactics to overseas organizations and groups for setting up tobacco alliances outside the United States.

508. On November 16, 1981, Mary Covington, Secretary General of INFOTAB, speaking on an "International Perspective on Smoking Issues and Related Activities of the Tobacco Industry," acknowledged that INFOTAB had received outstanding help from the Tobacco Institute, "a valuable source of information and ideas." 2501029891-9901 (US 20557)

(O).

509. In a March 5, 1986 letter to Bryan Simpson, INFOTAB Secretary General, Arthur Stevens, Lorillard Senior Vice President and General Counsel, stated that:

> Lorillard will not be renewing its INFOTAB membership subscription for 1986. Please understand that our action in no way reflects any disagreement or dissatisfaction with either the mission or the achievements of INFOTAB, all of which are credible and significant. You and your colleagues are performing valuable services for the tobacco industry worldwide, and we applaud INFOTAB's accomplishments. Although we are not engaged in the international sale of tobacco products, we recognize that restrictions and punitive measures directed against tobacco outside the U.S. are sometimes precursors to impacts felt here. However, as active and significant contributors to the program of the U.S. Tobacco Institute, whose assistance is generously and frequently afforded to INFOTAB, we believe we are already supporting INFOTAB's efforts to a very significant degree.

91820409-0410 (US 57120) (A).

510. Simpson wrote back to Stevens on March 21, 1986, confirming Lorillard's withdrawal as a member of INFOTAB and acknowledging that "we are aware of your major contribution to TI, and the benefits that we receive indirectly." 85174260-4260 (US 56011) (A).

511. According to an October 2, 1981 BATCo document, the Tobacco Institute, commented on the importance of INFOTAB to Defendants and the Enterprise as follows, "INFOTAB has without any doubt at all made an immense change in the general atmosphere in the industry and this has led to an enormous increase in cooperation." This document further stated that the Institute had been

> looking for 15 years for an international umbrella to enable them to deal with other NMAs and to improve the strength of the industry as a whole; -the back-wash from events and attacks affecting the industry in smaller countries comes back powerfully to the USA; . . . INFOTAB helps the industry to unite in trying to combat the attacks; -for years it had been hoped that there would be some sort of organization of international trade associations, which never

happened.

321796064-6067 at 6067 (US 28685) (O).

512. In remarks on September 20, 1983, at an INFOTAB workshop in Washington, D.C. on "How to Set Up a Tobacco Alliance," the Assistant Director of Britain's TAC, stated that the tobacco industry in the United Kingdom initially turned to the Tobacco Institute for guidance on setting up a tobacco alliance in early summer 1982. "[T]hanks to the unstinting help they gave us, we were able to draw much of our conceptual thinking from their experience with the Tobacco Action Network . . . T.I.'s experience, and especially their warnings of some of the problems and pitfalls we had to avoid, was invaluable." 2501021530-1532 at 1530 (US 27924) (O); 2024919702-9702 (US 26821) (O).

513. Tobacco Institute representatives served on international teams, committees, and boards, along with industry representatives from outside the United States, in which strategies were developed for a coordinated approach to scientific research studies and public relations campaigns. USX6400001-0527 at 0506-0507 (US 89561) (O) (TI Response to Interrogatory No. 15); TI12431630-1630 (US 62383) (O); TI13111755-1755 (US 62412) (O); TI13110904-0904 (US 62410) (O); TI12200663-0663 (US 62313) (O); TI12432168-2168 (US 62385) (O); William Adams PD, United States v. Philip Morris, 6/18/02, 17:16-20.

514. In order to coordinate the Defendants' positions for the Fifth World Conference on Smoking and Health organized by the World Health Organization ("WHO") and held in Winnipeg, Canada, Hans Verkerk of INFOTAB, invited William Kloepfer, Tobacco Institute Senior Vice President for Public Relations, to a meeting of "an industry 'steering team'" in Montreal on November 22, 1982. Other members of the industry steering team included Donald Hoel of Shook, Hardy & Bacon, Bob Ely of BATCo, and Gwynn Hargrove, a retired BATCo

executive who was still active in international public affairs. TIMN270254-0254 (US 72405) (O); TIMN270252-0252 (US 86542) (O); TIMN270250-0251 (US 86543) (O); TIMN270253-0253 (US 86545) (O).

515. The Tobacco Institute made countless presentations for INFOTAB and other international group workshops, seminars, symposia, and conferences outlining Defendants' strategies for attacking what Defendants deemed "anti-smoking" research and programs linking smoking and health and ETS and health. USX6400001-0527 at 0506-0507 (US 89561) (O) (TI Response to Interrogatory No. 15).

516. For example, on March 29, 1984, William Kloepfer, Tobacco Institute Vice President, participated in a meeting of the Passive Smoking Project Group, an INFOTAB committee, in Lausanne, Switzerland. TI12431630-1630 (US 62383) (O); TI12432168-2168 (US 62385) (O); USX6400001-0527 at 0506-0507 (US 89561) (O) (TI Response to Interrogatory No. 15).

517. On June 4, 1984, William Kloepfer attended the meeting of the INFOTAB ETS Committee in Brussels, Belgium. Scientists from Defendants Philip Morris and RJR also attended. TI13111755-1755 (US 62412) (O); USX6400001-0527 at 0506-0507 (US 89561) (O) (TI Response to Interrogatory No. 15).

518. On October 10, 1985, Tobacco Institute President Samuel Chilcote spoke at an INFOTAB International Workshop on the credibility gap between the tobacco industry and the public. TIMN371764-1795 (US 77095) (O); TIMN350605-0605 (US 88498) (O).

519. On October 14-16, 1986, William Kloepfer spoke on Smoking in the Workplace, calling ambient smoke a political issue rather than a health issue, at an INFOTAB International Workshop in Brussels. R.L.O. Ely, head of BATCo Public Affairs, addressed WHO Initiatives.

Tom Osdene, Philip Morris Director of Research, Charles Green, RJR scientist, and Donald Hoel, lawyer at Shook, Hardy & Bacon, took part in a panel discussion on ETS. 2021594646-4648 (US 26059) (O); TIOK0029712-9712 (US 86546) (O); TIOK0029713-9723 (US 86547) (O); TIOK0029724-9734 (US 86548) (O); 86024168-4172 (US 21089) (A); TI12820001-0004 (US 62398) (O); TI12820005-0290 (US 62399) (O).

520. On October 18, 1988, Walker Merryman, Tobacco Institute Vice President, spoke at an INFOTAB Workshop in Malaga, Spain, on anti-smoking activists. TI12261398-1399 (US 62348) (O).

521. The Tobacco Institute arranged visits and briefing sessions for domestic and foreign industry representatives to discuss current and emerging issues that the Tobacco Institute believed threatened the industry. For example, after attending a luncheon in Washington, D.C., hosted by the Tobacco Institute's Horace Kornegay, members of Japan Tobacco, Inc. ("JTI") were invited to attend a Tobacco Institute ETS Advisory Group meeting in Washington, D.C. In his July 15, 1986 letter to JTI's S. Takeda, Donald Hoel, Chairman of the ETS Advisory Group, wrote, "One of the purposes and benefits from the proposed joint meeting would be to exchange detailed information as to current research projects . . . . The second day would include identification of research needs and perceived problems." TI00610156-0156 (US 86549) (O); TI00610153-0154 (US 62064) (O).

522. In 1990, Charles H. Powers, Tobacco Institute Senior Vice President, arranged a visit and briefing session between the Tobacco Institute and the Canadian Tobacco Manufacturers' Council on current emerging issues in the two countries, particularly those issues with characteristics indicating potential spill over effects from the United States to Canada and/or vice versa. TI12910068-0069 (US 86550) (O).

523. Tobacco industry representatives from around the world attended the Tobacco Institute's College of Tobacco Knowledge, a seminar put held to bring industry managers and other employees up to speed on smoking and health related issues (discussed in detail at US FF § I.C(5), supra). At the October 1982 session, seventeen of the forty-nine students were from foreign countries, e.g., Paraguay, Canada, United Kingdom, Australia, Brazil, Switzerland, Holland, Venezuela, and Guatemala. 04163285-3285 (US 74872) (O); 04235250-5251 (US 75000) (O); TI04962210-2211 (US 67250) (O); TI04962207-2207 (US 88501) (O).

524. Employees from INFOTAB were invited to, and did attend, sessions of the Tobacco Institute College of Tobacco Knowledge. TIFL0067876-7877 (US 88633) (O); TIFL0071174-1174 (US 86142) (O); TIFL0071332-1332 (US 88634) (O); TI11961377-1377 (US 86186) (O); TI16740660-0663 (US 72403) (O); USX6400001-0527 at 0506-0507 (US 89561) (O) (TI Response to Interrogatory No. 15). Five members of INFOTAB attended the November 1981 session of the College. 501029891-9901 (US 20557) (O).

I. Dissolution of CTR and the Tobacco Institute

525. Prior to CTR and the Tobacco Institute's voluntary dissolutions and contemporaneous with liability actions against them, the New York Attorney General sought the dissolution of CTR and the Tobacco Institute on several independent statutory grounds including that each entity had transacted its business in a persistently fraudulent or illegal manner with respect to smoking and health issues. ARU6170234-0259 (US 87584) (A); TI16980952-0969 (US 86608) (O).

526. In November 1998, most of the State Attorneys General entered into a settlement agreement, referred to as the Master Settlement Agreement ("MSA"), with Philip Morris, R.J. Reynolds, B&W, Lorillard, Liggett, and Commonwealth Brands, Inc., to resolve all pending

Medicaid recoupment litigation. The State Attorneys General for Florida, Mississippi, Minnesota, and Texas already had entered into settlements with tobacco defendants prior to November 1998. The MSA required that CTR and the Tobacco Institute cease all operations and dissolve. In addition, the tobacco products manufacturers signing the MSA were prohibited from reconstituting CTR or its function in any form. JDX4100001-0328 (JD-045158) (A).

(1) CTR

527. On May 8, 1998, in connection with Minnesota v. Philip Morris, B&W, Lorillard, Philip Morris, and R.J. Reynolds (the four Class A members of CTR) entered into a Settlement Agreement and Stipulation for Entry of a Consent Judgment with the State of Minnesota ("Minnesota Settlement Agreement"), in which, among other things, the companies agreed to dissolve CTR and agreed to the entry of a consent judgment ("Minnesota Consent Judgment"). Section VI of the Minnesota Consent Judgment, entered on May 19, 1998, provided that, within ninety days of May 8, 1998, CTR would cease all operations except as necessary to comply with existing grants or contracts and to continue its defense of other lawsuits and that CTR would be disbanded and dissolved within a reasonable time period thereafter. 2060571342-1361 at 1342 (US 86853) (A).

528. The members of CTR held a special meeting on October 19, 1998, at CTR's offices in New York City at which the Plan of Corporate Dissolution and Distribution of Assets of The Council for Tobacco Research-U.S.A., Inc. was submitted to the members for consideration and approved by a unanimous vote of the members present. The Class A members present were B&W, represented by Senior Vice President Ernest Pepples; Philip Morris, represented by Senior Vice President of Operations John Nelson; Lorillard, represented by Chairman and CEO Alexander Spears; and R.J. Reynolds, represented by President and CEO

Andrew Schindler. The Class B members present were Bright Belt Warehouse Association, Tobacco Association, Inc., Burley Auction Warehouse Association, Burley Tobacco Growers Cooperative Association, Inc., and United States Tobacco. 2060571342-1361 at 1359-1361 (US 86853) (A). The Plan of Corporate Dissolution allowed CTR to continue to defend itself and to protect its interest in litigation, and to assist in the defense of Defendants and CTR's other members in litigation, pursuant to joint defense agreements or arrangements. 2060571342-1361 at 1344, 1348-1349 (US 86853) (A).

529. CTR and the Attorney General of New York agreed to the terms of the dissolution, and the New York court entered an Order Approving CTR's Plan of Corporate Dissolution and Certificate of Dissolution on or about October 21, 1998. 70005153-5362 at 5153-5186 (JE-021048) (A).

530. In March 1998, James Glenn, CTR President, sent a memorandum to the members of the Scientific Advisory Board requesting that the members send him a letter indicating their willingness to serve as a consultant or as a participant in any future activities of CTR or any successor organization. Glenn received mixed results to his request. Some members, such as Carlo Croce, replied affirmatively expressing their willingness to continue CTR's activities. Others such as Judith Swain, declined any further relationship with CTR, stating, "because of the information that has come out of the tobacco litigation process, I do not feel that I can continue as a member of the Council of Tobacco Research . . . the information from previous years indicates that the Council may not have been totally independent of the tobacco industry." TLT0270372-0372 (US 76330) (O); TLT027 0370-0370 (US 76328) (O).

(2) Tobacco Institute

531. Pursuant to a plan of dissolution that was to be negotiated by the Attorney General

of the State of New York and the Original Participating Manufacturers, B&W, Lorillard, Philip Morris, and R.J. Reynolds, in accordance with Exhibit G of the MSA, the Tobacco Institute was to cease all operations and be dissolved in accordance with the laws of the State of New York and under the authority of the Attorney General of the State of New York, with the preservation of all applicable privileges held by any member company of the Tobacco Institute. (no bates) (JD-045158) (A).

532. The Tobacco Institute's Plan of Corporate Dissolution and Distribution of Assets was approved on August 7, 2000, by its Class A members: Ernest Pepples, Senior Vice President of B&W; Michael Szymanczyk, CEO of Philip Morris, Inc.; Alexander Spears, Chairman of Lorillard; and Charles Blixt, Executive Vice President and General Counsel of R.J. Reynolds. TI31113058-3165 (US 21261) (O). The Plan of Corporate Dissolution allowed the Tobacco Institute to continue to defend itself and to protect its interest in litigation, and to assist in the defense of its members in litigation, pursuant to joint defense agreements or arrangements. Id., 3060, 3065.

533. The Tobacco Institute's Dissolution Plan was adopted by the Tobacco Institute Board of Directors. The members of the Board of Directors at the time were Nicholas Brookes and Ernest Pepples for B&W, Ronald Milstein and Alexander Spears for Lorillard, Tommy Payne and Andrew Schindler for R.J. Reynolds, Michael Szymanczyk for Philip Morris, Inc., and Howard Liebengood for Philip Morris Companies. TI31113205-3207 (JD-053521) (O).

534. The Supreme Court of the New York County entered an Order Approving the Tobacco Institute's Plan of Corporate Dissolution and Certificate of Dissolution on or about September 1, 2000. TI31113204-3214 at 3208-3213 (JD-080768) (O).

J. Gentlemen's Agreement

535. Defendants also used less formal mechanisms to organize the affairs of the Enterprise. As a means to further the aims of the Enterprise, and contrary to their repeated promises to protect the public health by conducting unbiased research related to smoking and health, the Defendants adhered to a "gentlemen's agreement" -- so-called by Defendants themselves -- not to commission or perform in-house biological research on smoking and health. The two components of this gentlemen's agreement were: (1) any company discovering an innovation permitting the manufacture of an essentially "safe" cigarette would share the discovery with others in the industry; and (2) no domestic company would use intact animals for in-house biomedical research. 501543470-3517 at 3504 (US 21737) (A).

536. Although Defendants recognized that research and testing were essential to evaluating the health risk posed by their products, in-house scientists who urged their companies to develop safer products and compete on health grounds were often ignored or silenced.

537. Defendants' mutual commitment to share discovery of a "safe" cigarette with each other – the gentlemen's agreement – substantially reduced, by design, the financial incentive any cigarette company might otherwise have had to develop and market a safer product. See US FF § III.A(3), infra (for a detailed discussion of the Gentlemen's Agreement).

K. Suppression and Concealment of Documents and Information

538. From at least 1954 to the present, Defendants engaged in efforts to suppress and conceal documents and information in order to further the goals of the Enterprise: (1) preventing the public from learning the truth about the adverse health impacts of smoking and ETS and about the addictiveness of nicotine; (2) avoiding or, at a minimum, limiting liability for smoking and health related claims in litigation; and (3) avoiding statutory and regulatory limitations on the cigarette industry (detailed discussion at US FF § III.F., infra). These activities occurred despite

Defendants' promises that they did not conceal, suppress or destroy evidence, and that they shared all pertinent research findings with the American people.

539. Methods used by the Defendants to suppress and conceal documents and information, especially scientific research, included:

(a) establishing and implementing company policies for document destruction;

(b) destroying documents and evidence;

(c) limiting the number of copies of memoranda in contemplation of eventual document destruction or concealment;

(d) shipping and secreting documents outside the United States and/or at foreign affiliates;

(e) establishing company policies of avoidance and delay of production of documents;

(f) using their lawyers to assert improper claims of attorney-client privilege and work product protection for non-privileged documents through various means, including routing documents through lawyers, maintaining scientific materials in lawyer's files, and indiscriminately marking documents as privileged, confidential, or other such designations; and

(g) using their lawyers, instead of scientists, to direct as well as suppress the scientific research and other scientific matters of the industry.

L. Conclusion

540. The foregoing evidence in the Court record, together with the evidence of Defendants' fraudulent scheme adduced at trial and presented at US FF § III, infra, proves that Defendants established and have each participated in an association-in-fact Enterprise that has functioned continuously for over fifty years to achieve shared unlawful objectives.

II

THE ENTERPRISE IS ENGAGED IN AND AFFECTS INTERSTATE AND FOREIGN COMMERCE

1. The RICO Enterprise established in this case at all relevant times has been and is engaged in interstate and foreign commerce and its activities have affected, and continue to affect, interstate and foreign commerce within the meaning of 18 U.S.C. § 1962(c) and (d). Regarding Defendant-members of this RICO enterprise, the Court finds the following facts.

A. Philip Morris Companies

2. Defendant Philip Morris Companies has engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from July 1, 1985 to December 10, 2002. Order #280, United States v. Philip Morris, at ¶7, filed December 11, 2002; Mem. Opinion to Order #538, United States v. Philip Morris, at 7-8, filed May 6, 2004.

B. Philip Morris

3. Defendant Philip Morris has engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from 1953 to December 10, 2002. Order #280, United States v. Philip Morris, at ¶1, filed December 11, 2002; Mem. Opinion to Order #538, United States v. Philip Morris, at 7-8, filed May 6, 2004.

C. R.J. Reynolds

4. Defendant RJR has engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from 1953 to December 10, 2002. Order #280, United States v. Philip Morris, at ¶2, filed December 11, 2002; Mem. Opinion to Order #538, United States v. Philip Morris, at 7-8, filed May 6, 2004.

D. Liggett

5. Defendant Liggett has engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from 1990 through January 29, 2003. Liggett's predecessors in interest engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) from 1953 until 1990. Order #308, United States v. Philip Morris, at ¶1, filed January 31, 2003; Mem. Opinion to Order #538, United States v. Philip Morris, at 7-8, filed May 6, 2004.

E. Lorillard

6. Defendant Lorillard has engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from 1953 to December 10, 2002. Order #280, United States v. Philip Morris, at ¶5, filed December 11, 2002; Mem. Opinion to Order #538, United States v. Philip Morris, at 7-8, filed May 6, 2004.

F. BATCo

7. Defendant BATCo has engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from 1953 to December 10, 2002. Order #280, United States v. Philip Morris, at ¶6, filed December 11, 2002; Mem. Opinion to Order #538, United States v. Philip Morris, at 7-8, filed May 6, 2004.

G. Brown & Williamson

8. Defendant B&W has engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from 1953 to December 10, 2002. Order #280, United States v. Philip Morris, at ¶3, filed December 11, 2002; Mem. Opinion to Order #538, United States v. Philip Morris, at 7-8, filed May 6, 2004.

H. American

9. Defendant American, predecessor to Defendant B&W, engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from 1953 to February 28, 1995. Order #280, United States v. Philip Morris, at ¶4, filed December 11, 2002; Mem. Opinion to Order #538, United States v. Philip Morris, at 7-8, filed May 6, 2004.

I. Tobacco Institute

10. Defendant Tobacco Institute admits that it was a not-for-profit corporation and tobacco industry association formed in 1958 under the laws of the State of New York, and that, at one time, its principal place of business was located in Washington, D.C. Answer, Defenses and Jury Demand of The Tobacco Institute, Inc., United States v. Philip Morris, filed October 30, 2000, at 16.

11. From at least 1959 through 1995, Defendants American, B&W, Liggett, Lorillard, Philip Morris, and RJR were among the member organizations of the Tobacco Institute who, as a part of their membership, contributed to the Tobacco Institute's funding. TIFL0020285-0311 at 0297-0305 (JD-080429) (O).

12. From 1958 until 1999, Defendants Philip Morris, RJR, American, B&W, Lorillard, and Liggett declared contributions of over $618.4 million to the Tobacco Institute, which were processed through the interstate banking system. Response of Brown & Williamson Tobacco Corporation to United States' First Set of Interrogatories to Defendants, United States v. Philip Morris, served February 6, 2001, at 97-103 (US 89561) (O); Liggett Group Inc.'s Objections and Responses to United States' First Set Of Interrogatories to Defendants, United States v. Philip Morris, served February 6, 2001, at 54-56 (US 75925) (A); Lorillard Tobacco

Company's Responses to United States' First Set of Interrogatories to Defendants, United States v. Philip Morris, served February 6, 2001, at 40-44; (US 89561) (O); Philip Morris Incorporated's Responses to United States' First Set of Interrogatories to Defendants, United States v. Philip Morris, served February 6, 2001, at 71-73 (US 75555) (A); Response of R.J. Reynolds Tobacco Company to Plaintiff United States' First Set of Interrogatories, United States v. Philip Morris, served February 6, 2001, at 132-135 (US 89561) (O).

13. For the period 1980 through 1994 alone, the Tobacco Institute spent more than $169 million for public relations and advertising. TIFL0020285-0311 at 0298 (JD-080429) (O).

14. The Tobacco Institute, its agents, or former employees have made numerous public statements or admissions of the interstate nature and scope of its business. For example, on January 12, 2005, Brennan Dawson, former Senior Vice President for Public Affairs of the Tobacco Institute, testified at trial in this case that she made public statements, on behalf of the Tobacco Institute, concerning smoking and health issues on television programs, including CNN's Newsmaker Sunday, CNN's Crossfire, Good Morning America, and CBS News Night Watch, and that she intended that millions of American television viewers believe such public statements. Dawson TT, 1/12/05, 9925:17-9930:16.

15. During trial, Brennan Dawson also testified that many of the Tobacco Institute's press releases and other public statements were disseminated to the public via newspapers and magazines. Dawson TT, 1/12/05, 9928:19-9929:10.

16. On February 25, 1994, the Tobacco Institute's Senior Vice President of Administration, William Adams, and its Senior Vice President for State Activities, Kurt L. Malmgren, mailed, out of state, individual letters to: Brown & Williamson Senior Vice President Ernest Pepples (authored by Mr. Malgrem); Philip Morris President and CEO William Campbell

(authored by Mr. Adams); and Lorillard Senior Vice President M. Alfred Peterson (authored by Mr. Adams), requesting their company's respective contribution of at least $100,000 to the Michigan Citizens for Fair Taxes to fight a 1994 ballot initiative, and requesting that each of the companies wire its contribution to the Tobacco Institute's Washington, D.C. bank account. TI16370185-0402 at 0366, 0368, 0369 (US 21258) (O).

17. On August 31, 1994, William Adams, Senior Vice President of Administration of the Tobacco Institute, mailed, out of state, individual letters to: Philip Morris President William Campbell; Reynolds Executive Vice President David Anderson; Brown & Williamson Senior Vice President Ernest Pepples; Lorillard Senior Vice President M. Alfred Peterson; and American Vice President John Hager, advising them each that the Tobacco Institute Management Committee had approved additional lobbying expenditures for a state initiative and requesting their respective company's payment. TI16370185-0402 at 0340-0346 (US 21258) (O).

J. TIRC/CTR

18. Defendant TIRC was formed in January 1954 by several entities, including Defendants Philip Morris, RJR, B&W, American, and Lorillard. TIRC had its principal place of business in New York. In 1964, TIRC changed its name to The Council for Tobacco Research – U.S.A. In 1971, the name was changed to The Council for Tobacco Research – U.S.A., Inc., when CTR incorporated as a not-for-profit corporation organized under the laws of the State of New York. Answer of Defendant The Council for Tobacco Research - U.S.A., Inc. to Plaintiff's Complaint for Damages and Injunctive and Declaratory Relief, United States v. Philip Morris, filed October 30, 2000 ("CTR Answer"), at 4, 6.

19. From 1954 to 1999, Defendants Philip Morris, American, B&W, Liggett, Lorillard, and RJR contributed a total of approximately $505.4 million to CTR, which payments

were processed through the interstate banking system. From the period 1954 through 1999, member contributions to the CTR General Fund, processed through the interstate banking system, totaled over $470.2 million. DXA0630917-1033 at 1017-1023 (US 75927) (A).

20. Through 1997, CTR funded 1,657 research grants-in-aid, research contracts, and scientific conferences, totaling approximately $317 million, in the United States and abroad. McAlllister WD, 53:3-54:3; 70000302-0618 at 0308 (JD-090039) (A).

21. From about 1966 to 1991, CTR also administered the funding of certain CTR Special Projects, which were separate and distinct from CTR's grant in aid program. CTR administered Special Project funding through a separate checking account, and received direction and funding from sponsor companies, including defendants Philip Morris Companies, Philip Morris, American, B&W, Liggett, Lorillard, and RJR and/or their attorneys. CTR also sent correspondence and funds to Special Project recipients and/or their affiliated institutions through the United States Mail. For the period 1966 through 1990, CTR members contributed over $18.2 million toward the funding of these Special Projects. CTR Answer, at 9; McAllister WD, 159:8-164:5; DXA0630917-1033 at 1024 (US 75927) (A).

22. CTR provided funding to Special Projects recipients via checks processed through the interstate banking system and delivered via the United States Mail. McAllister PD, United States v. Philip Morris, 5/24/02, 98:3-99:2, 102:13-22, 103:7-19.

23. According to Harmon McAllister, CTR's 30(b)(6) witness on the subject of mailings, CTR mailed its Annual Reports through the United States mails. McAllister PD, Philip Morris, 5/24/02, 65:11-66:21.

III

DEFENDANTS DEVISED AND EXECUTED A SCHEME TO DEFRAUD CONSUMERS AND POTENTIAL CONSUMERS OF CIGARETTES

1. From in or about December 1953 and continuing to the present, Defendants did knowingly and intentionally devise and execute a scheme and artifice to defraud consumers and potential consumers of cigarettes of money and property by means of material false and fraudulent statements, pretenses, representations and promises, and omissions of material facts, knowing that the statements, pretenses, representations and promises, were false, misleading and deceptive when made, including: (1) to deceive consumers into starting and continuing to smoke cigarettes by endeavoring to misrepresent and conceal the adverse health effects caused by smoking cigarettes and exposure to cigarette smoke and by maintaining that there was an "open question" as to whether smoking cigarettes causes disease and other adverse effects, despite the fact that the defendants knew otherwise; (2) to deceive consumers into starting and continuing to smoke cigarettes by undertaking an obligation to take actions, including funding independent research, in order to determine if smoking cigarettes causes cancer or other diseases, while pre-selecting researchers and directing funds to irrelevant research and research that supported Defendants' positions on smoking and health issues; (3) to deceive consumers into becoming or staying addicted to cigarettes by maintaining that nicotine is not addictive, despite the fact that Defendants knew that nicotine is addictive; (4) to deceive consumers into becoming or staying addicted to cigarettes by manipulating the design of cigarettes and the delivery of nicotine to smokers, while at the same time denying that they engaged in such manipulation; (5) to deceive consumers through deceptive marketing to exploit smokers' desire for less hazardous and "low

tar" cigarettes; (6) to deceive consumers, particularly parents and children, by claiming that they did not market to children, while engaging in marketing and advertising with the intent of addicting children into becoming lifetime smokers; and (7) to suppress and conceal information, including to destroy documents relevant to these allegations.

A. Adverse Health Effects

(1) Defendants Jointly Engaged in a Massive Public Relations Campaign to Fraudulently Deny and Distort the Health Consequences of Smoking

(a) Cigarette Smoking, Including Exposure to Secondhand Smoke, Causes Disease and Death

2. Cigarette smoking and exposure to secondhand smoke, also known as environmental tobacco smoke or "ETS," kills nearly 440,000 Americans every year. The annual number of deaths due to cigarette smoking is substantially greater than the combined annual number of deaths due to illegal drug use, alcohol consumption, automobile accidents, fires, homicides, suicides, and AIDS. Approximately one out of every five deaths that occur in the United States is caused by cigarette smoking. TLT0960104-0112 at 0104 (US 87047) (O) (Centers for Disease Control and Prevention, Smoking-Attributable Mortality and Years of Potential Life Lost—United States, 1994, MMWR, 46(20) (1997)); VXA1000001-0604 (US 77217) (A) (Thun M., Myers D., Day-Lally C., Namboodiri M., Calle E., Flanders W.D., Adams S., Heath Jr. C., Age and the Exposure-Response Relationships Between Cigarette Smoking and Premature Death in Cancer Prevention Study II, Chapter 5, Smoking and Tobacco Control Monograph 8: Changes in Cigarette-Related Disease Risks and Their Implications for Prevention and Control, National Institutes for Health – National Cancer Institute, p. 383-476 (1997)); TLT0930001-0949 (US 88621) (A) (2004 Surgeon General Report).

3. Cigarette smoke contains carbon monoxide, nitrogen oxides, cyanide, benzene, radioactive polonium, aldehydes, numerous toxins and other human carcinogens. Samet WD, 22:15-23:10. Carcinogens and toxins are absorbed into the bloodstream when cigarette smoke is inhaled. Samet WD, 23:11-24:3.

4. Cigarette smoking causes lung cancer. Lung cancer kills 160,000 Americans each year, and 90% of all lung cancer cases are caused by cigarette smoking. The five-year survival rate for lung cancer is only 14%. Samet WD, 71:18-22, 80:1-3; Carmona WD, 1:18-21.

5. The risk of developing lung cancer increases with an increase of smoking. Individuals smoking ten to twenty cigarettes per day have a ten-fold increased risk and individuals smoking forty or more cigarettes per day – two packs and over – have more than a twenty-fold increased risk of developing lung cancer. This rate of risk is referred to as "relative risk." Samet WD, 64:17-67:19; (no bates) (US 17141) (A).

6. There are four types of lung cancer: small-cell carcinoma, squamous-cell carcinoma, adenocarcinoma, and large-cell carcinoma. Small cell-and squamous-cell carcinomas usually arise early in the divisions of the airways as they move out to the alveoli. Adenocarcinomas arise more frequently in the periphery of the lung. This type of carcinoma has become more common in the past 25 or 30 years, and now accounts for 30% of the lung cancers in the United States. Samet WD, 71:23-72:2, 74:12-75:11.

7. Cigarette smoking, including exposure to secondhand smoke, causes cardiovascular disease, including myocardial infarction (commonly known as "heart attack"), coronary heart disease ("CHD") and atherosclerosis. CHD refers to diseases which affect the blood vessels of the heart. CHD can cause a deprivation of oxygen to the heart, and thus, cause

heart attacks. Atherosclerosis refers to the development of plaque on the arteries. This contributes to the blocking of blood flow to the heart. Samet WD, 107:18-118:21; (no bates) (US 17165) (A); (no bates) (US 17158) (A); (no bates) (US 17134) (A); (no bates) (US 17159) (A); (no bates) (US 17160) (A); (no bates) (US 17204) (A).

8. Cigarette smoking causes bladder cancer. Samet WD, 90:22-91:4; 97:5-98:17; (no bates) (US 17103) (A).

9. Cigarette smoking causes cerebrovascular disease. Samet WD, 118:21-120:18, 121:15-122:14.

10. Cigarette smoking causes chronic obstructive pulmonary disease ("COPD"). Samet WD, 81:4-90:21.

11. COPD, previously referred to as "emphysema" or "chronic bronchitis," was found to be causally related to smoking in 1964. Id., 81:10-83:14.

12. Cigarette smoking causes esophageal cancer. Id., 90:22-91:4; 94:5-95:13.

13. Cigarette smoking causes kidney cancer. Id., 90:22-91:4; 98:18-101:4.

14. Cigarette smoking causes laryngeal cancer. Id., 91:5-92:21.

15. Cigarette smoking causes oral cancer. Id., 92:22-94:4.

16. Cigarette smoking causes pancreatic cancer. Id., 90:22-91:4; 95:14-97:4.

17. Cigarette smoking causes peptic ulcer disease. Id., 125:10-127:3.

18. Cigarette smoking causes aortic aneurysm. Id., 122:15-125:9.

19. Cigarette smoking causes cataracts. Id., 127:4-128:8.

20. Cigarette smoking causes low bone density in post-menopausal women. Id., 128:9-129:22.

21. Cigarette smoking causes reduced fertility. Id., 130:12-131:23.

22. Cigarette smoking causes adverse reproductive outcomes, including pre-mature rupture of the membranes, placenta previa, placental abruption, pre-term delivery and shortened gestation, fetal growth restriction and low birth weight. Id., 130:20-132:9.

23. Cigarette smoking causes acute myeloid leukemia leukemia. Id., 101:5-102:23.

24. Cigarette smoking causes stomach cancer. Id., 103:1-104:9.

25. Cigarette smoking causes cervical cancer. Id., 104:10-105:15.

26. Cigarette smoking causes liver cancer. Id., 105:16-106:9.

27. Cigarette smoking causes diminished health status. Id., 132:15-135:20.

28. Exposure to secondhand smoke causes acute respiratory illness and chronic respiratory symptoms in children and infants. Id., 207:7-211:16.

29. Secondhand smoke causes reduction of lung function growth in otherwise healthy children. Id., 211:17-213:15.

30. Secondhand smoke causes asthma exacerbation and symptoms in children. Id., 213:16-218:2.

31. Prenatal and neonatal exposure to cigarette smoke causes sudden infant death syndrome ("SIDS"), otitis media, and cognitive and behavioral difficulties. Id., 201:14-207:6; Weitzman WD, 19:18-20:2.

32. On May 27, 2004, the United States Surgeon General announced causal conclusions in connection with a substantial number of additional diseases that were not previously causally associated with smoking: cancers of the stomach, uterine cervix, pancreas, and kidney; acute myeloid leukemia; pneumonia; abdominal aortic aneurysm; cataract; and

periodontitis. The report also concludes that smoking generally diminishes the health of smokers. TLT0930001-0949 (US 88621) (A) (2004 Surgeon General Report).

(b) Scientific Investigation of the Rise in the Incidence of Lung Cancer Led Researchers to Identify Smoking as a Cause of Disease by the Early 1950s

33. The Court recognized Dr. Allan M. Brandt as an expert in the history of science and medicine without objection from Defendants. Brandt TT, 9/27/04, 642:19-643:3.

34. Dr. Brandt's qualifications and expertise in, broadly, the history of science and medicine and, more specifically, the development of scientific knowledge of the disease risks associated with cigarette smoking and Defendants' response to the emerging scientific evidence, are unquestionable. He is the Amalie Moses Kass Professor of the History of Medicine at Harvard Medical School and Professor of the History of Science at Harvard University, where he is the chair of the Department of the History of Science. Brandt WD, 1:3-6. Dr. Brandt has published extensively in the field of the history of science and medicine for a period of almost three decades, receiving a Pulitzer Prize nomination for his work, and has published more than 15 peer-reviewed essays and articles on the history of cigarette smoking during the past decade. Id., 3:17-15:3.

35. In the course of his historical investigation of tobacco, Dr. Brandt has reviewed and analyzed the archival materials from the 1964 Surgeon General's Advisory Committee at the National Archives, and numerous additional archival collections, including those of Harvard University (William Cochran); the Countway Library at Harvard Medical School (J. McKeen Cattell), the University of Maine (C.C. Little); Washington University, St. Louis (Evarts Graham); the Wisconsin Historical Society (Bruce Barton, John W. Hill, Robert Lasch, M.V.

O'Shea); the Alan Mason Chesney Medical Archives at the Johns Hopkins Medical Institutions (Lewis Robbins); University of Washington, Seattle (Warren Magnuson); the Library of Congress (Edward Bernays, Harvey Wiley); Yale University (Chester Bliss, Lester Savage); Duke University (the John W. Hartman Center for Sales, Advertising and Marketing History); the Smithsonian (NC Ayer Collection, The Warshaw Collection of Business Americana); the National Library of Medicine (Stanhope Bayne-Jones); and the National Archives (The Surgeon General's Advisory Committee). He has also reviewed internal documents of Defendants, including correspondence, reports, and memoranda on tobacco industry activities and programs. Id., 26:14-28:13.

36. The historical methods utilized by Dr. Brandt in his extensive study of cigarettes in the United States and in preparation for his testimony as an expert in this case were systematically and rigorously applied, and he arrived at interpretations and conclusions that are both persuasive and authoritative, and that meet professional standards of evidence and objectivity in his field. Defendants did not call an expert witness in Dr. Brandt's field, nor did they offer testimonial or documentary evidence that in any way contradicts or impeaches Dr. Brandt's testimony.

37. By the middle of the twentieth century, physicians and public health officials in the United States had widely noted an alarming increase in numbers of cases of lung cancer. Virtually unknown as a cause of death in 1900, by 1935 there were an estimated 4,000 deaths annually attributed to lung cancer. A decade later, the estimate of deaths attributed to lung cancer had nearly tripled. VXA1601844-2232 at 1986 (US 64057) (A) (1964 Surgeon General Report); Brandt WD, 31:16-32:1.

38. The rise in lung cancers had followed the dramatic increase in cigarette consumption beginning early in the twentieth century. Annual per capita consumption of cigarettes in 1900 stood at approximately forty-nine cigarettes; by 1930, annual per capita consumption was over 1,300; by 1950, it was over 3,000. Even though the increases in lung cancer cases and deaths substantially lagged this increase in cigarette use, the apparent association led to considerable speculation about this relationship. VXA1601844-2232 at 1895-1898 (US 64057) (A) (1964 Surgeon General Report); Brandt WD, 32:2-17; Samet TT, 9/29/04, 01031:13-01033:25.

39. The dangers of smoking, including its connection to lung cancer, began to attract more concerted attention of scientists in the 1920s, when researchers began to focus on the specific health consequences of smoking. Brandt WD, 32:18-34:13.

40. As early as 1928, researchers conducting a large field study associated heavy smoking with cancer. 2060544267-4274 (US 39010) (A) (Lombard, Herbert L. and Carl R. Doering, "Cancer Studies in Massachusetts: Habits, Characteristics and Environment of Individuals With and Without Cancer," *New England Journal of Medicine* 196.10: 481-487 (1928)); Brandt WD, 33:14-34:13.

41. In 1931, Frederick L. Hoffman, a well-known statistician for the Prudential Insurance Company, linked smoking with cancer. Hoffman assessed the basic methodological questions of such research: issues of representativeness, sample size, and the construction of control groups. These questions presented researchers with a series of complex problems, of which they were aware and then began to find ways to resolve them. VXA2510202-0219 (US 63597) (A) (Hoffman, Frederick L., "Cancer and Smoking Habits," *Annals of Surgery* 93: 50-67

(1931)); Brandt WD, 33:21-34:4.

42. In 1938, a population biologist and biometrician from Johns Hopkins, Raymond Pearl, published one of the first significant statistical analyses of the health impact of smoking. Pearl's conclusion was that individuals who smoked could expect shorter lives. 503285883-5884 (US 20714) (A) (Pearl, Raymond, "Tobacco Smoking and Longevity," *Science*: 87:2253 (1938)); Brandt WD, 34:5-13.

43. Early research efforts led to publication of the first case control study that showed the connection between smoking and lung cancer in Germany in 1939. VXA2510202-0219 (US 63597) (A) (Hoffman, Frederick L., "Cancer and Smoking Habits," *Annals of Surgery* 93:67 (1931)); VXA251 0239 (US 63595) (A) (F. H. Muller, "Abuse of Tobacco and Carcinoma of the Lungs," *Journal of the American Medical Association* (translation of the original from Zeitschrift fur Krebsforschung, Berlin) (1939)); Brandt WD, 34:5-36:7.

44. In the 1930s, chest surgeons such as Alton Oschner and Richard Overholt published observations that the patients they saw with advanced lung malignancies were typically smokers. Oschner and another surgeon, DeBakey concluded that: "In our opinion the increase in smoking with the universal custom of inhaling is probably a responsible factor, as the inhaled smoke, constantly repeated over a long period of time, undoubtedly is a source of chronic irritation to the bronchial mucosa." 85868807-8823 at 8807 (US 63596) (A) (Oschner, Alton, DeBakey, Michael, "Primary Pulmonary Malignancy, Surgery, Gynecology and Obstetrics 68:435-45 (1939)); Brandt WD, 34:14-36:7.

45. By the end of 1940s, more evidence linking smoking to disease began to appear. Beginning in 1948, under the auspices of the Medical Research Council, a unit of the recently

created National Health Service in the United Kingdom, Bradford Hill and Sir Richard Doll conducted a study to investigate the rising incidence of lung cancer. Following World War I, Hill had become one of the most distinguished medical statisticians in Great Britain. Doll, a physician, also possessed sophisticated training in statistics and epidemiologic methods. They realized that questions concerning the causality of systemic chronic diseases would not readily succumb to experimental laboratory investigation (unlike the study of infectious disease where specific causality was important). Nonetheless, the timeliness and public health significance of these questions demanded immediate attention and the development of new knowledge. TIMN0145510-5519 at 5510, 5518 (US 62855) (A) (Doll, Richard, and A. Bradford Hill, "Smoking and Carcinoma of the Lung: Preliminary Report," *British Medical Journal* (1950)); Brandt WD, 32:18-34:13; 40:19-44:2.

46. From their data from lung cancer patients and a control group in late 1948 and early 1949, it became clear to Doll and Hill that cigarettes were the crucial factor in the rise of lung cancer. With data on almost 650 lung cancer patients, they concluded that they had, in fact found cause and effect. The findings were impressive: among the 647 lung cancer patients entered into Doll and Hill's study, all 647 were smokers. They waited to publicize their results, however, until they had data on 1400 lung cancer patients, further strengthening their conclusions. TIMN0145510-5519 (US 62855) (A) (Doll, Richard, and A. Bradford Hill, "Smoking and Carcinoma of the Lung: Preliminary Report," *British Medical Journal* (1950)); Brandt WD, 42:1-44:2.

47. In the early 1950s, Doll and Hill understood that some critics might dismiss findings linking smoking to disease (as Defendants did) as "merely" statistical. As a result, they

meticulously described the specific criteria that they required before an "association" could be identified as a genuine causal relationship. First, they worked to eliminate the possibility of bias in the selection of patients and controls, as well as in reporting and recording their histories. Second, they emphasized the significance of a clear temporal relationship between exposure and subsequent development of disease. Finally, they sought to rule out any other factors that might distinguish controls from patients with disease. This explicit search for possible "confounders" and their elimination marked a critical aspect of their arrival at a causal conclusion. They insisted on carefully addressing all possible criticisms and all alternative explanations for their findings. In this respect, Doll and Hill and the other epidemiologic investigators expressed a strong commitment to inductive science, hypothesis-testing, and scientific method:

> Consideration has been given to the possibility that the results could have been produced by the selection of an unsuitable group of control patients, by patients with respiratory disease exaggerating their smoking habits, or by bias on the part of the interviewers. Reasons are given for excluding all these possibilities, and it is concluded that smoking is an important factor in the cause of carcinoma of the lung.

VXA2510117-0126 at 0125 (US 63604) (A) (Doll, Richard, and A. Bradford Hill, "Smoking and Carcinoma of the Lung: Preliminary Report," *British Medical Journal* (1950)); Brandt WD, 42:10-43:9.

48. Noted historian Charles Webster observed of the first Doll and Hill paper, published in 1950: "This modest paper is now regarded as a classic. From these findings emerged the realization that smoking has been responsible for as many deaths per annum as were claimed by the great cholera epidemics of the nineteenth century. Smoking was thus established as a major cause of preventable disease." VXA2510301-0310 at 0301 (US 63589) (A) (Webster,

Charles, "Tobacco Smoking Addiction: A Challenge to the National Health Service," *British Journal of Addiction* 79:7 (1984)); Brandt WD, 46:4-47:23.

49. Doll and Hill's work withstood scientific scrutiny. In fact, two years later, in a 1952 follow-up report, Doll and Hill offered additional evidence for sustaining their conclusion, again fully considering alternative explanations:

> The present analysis of nearly 1,500 cases, or more than double the number dealt with in our preliminary report, supports the conclusion then reached and has revealed no alternative explanation – for example, in the use of petrol lighters.
>
> It has been suggested that subjects with a particular physical constitution may be prone to develop *(a)* the habit of smoking and *(b)* carcinoma of the lung, and that the association might therefore be indirect rather than causal (Parnell,1951). We know of no evidence of such a physical constitution characteristic of patients with lung carcinoma. If it does exist we should still have to find some environmental factor to account for the increased incidence of the disease in recent years.

VXA2510127-0142 at 0139 (US 63603) (A) (emphasis in original) (Doll, Richard, and A. Bradford Hill, "A Study of the Aetiology of Carcinoma of the Lung," *British Medical Journal* (1952)); Brandt WD, 43:10-44:2.

50. Doll and Hill also sought to confirm the findings of their retrospective study through prospective investigation. They gathered data from 40,000 British physicians who were followed in order to see whether they would develop lung cancer. This study showed that heavy smokers had death rates 24 times higher than non-smokers did. Doll and Hill's research was continued through June of 2004 when Doll and his colleagues published a 50 year observational study in the *British Medical Journal*. Brandt WD, 46:1-20; VXA2510001-0005 (US 63612) (A) (Doll, Richard, and A. Bradford Hill, "The Mortality of Doctors in Relation to Their Smoking

Habits: A Preliminary Report," *British Medical Journal* (1954));VXA2510006-0021 (US 63611) (A) (Doll, Richard, and A. Bradford Hill, "Lung Cancer and Other Causes of Death in Relation to Smoking," *British Medical Journal* (1956)).

51. Other researchers studied the connection between smoking and lung cancer during the same time period. In 1949, Evarts Graham, a leading surgeon at Barnes Hospital in St. Louis, and Ernst Wynder, a medical student at Washington University, designed and implemented a study to address and resolve directly the persistent and increasingly important questions concerning the possible harms of cigarette smoking. Graham, a nationally known surgeon who had performed the first pneumonectomy, was a heavy smoker himself and skeptical of the cigarette-lung cancer hypothesis. He initially had speculated that, if smoking was a cause of lung cancer, it would occur more bilaterally (rather than in a single lobe). Wynder and Graham collected extensive data on a group of 684 patients with lung cancer located in hospitals throughout the United States. These patients were extensively interviewed about their smoking levels and histories. Histological exams confirmed the diagnosis in all cases. This group was then compared to a "control group" of non-smokers, similar in age and other demographic characteristics. Wynder and Graham explained, "[T]he temptation is strong to incriminate excessive smoking, and in particular cigaret smoking, over a long period as at least one important factor in the striking increase of bronchiogenic carcinoma." They offered four reasons to support this conclusion. First, it was very unusual to find lung cancers among non-smokers. Second, among patients with lung cancer, cigarette use tended to be high. Third, the distribution of lung cancer among men and women matched the ratio of smoking patterns by gender. And finally, "the enormous increase in the sale of cigarettes in this country approximately parallels the

increase in bronchiogenic carcinoma." These results were reported in the *Journal of the American Medical Association ("JAMA")*, a prestigious, peer reviewed journal, on May 27, 1950. VXA2510109-0116 at 0114 (US 63605) (A) (Wynder, Ernst L., and Evarts A. Graham, "Tobacco Smoking as a Possible Etiologic Factor in Bronchiogenic Carcinoma: A Study of Six Hundred and Eighty Four Proved Cases," *JAMA* 143.4: 329 (1950)); Brandt WD, 32:18-34:13; 37:13-40:15.

52. That 1950 issue of *JAMA* also included the report of an investigation reaching similar conclusions by Morton Levin and others. In his commentary on research into the connection between cigarettes and lung cancer, Levin compared the current epidemiological research on cigarette smoking to research on the smoking/lung cancer connection done in the preceding twenty years, arguing that the past work was "inconclusive because of lack of adequate samples, lack of random selection, lack of proper controls or failure to age-standardize the data." In the case of the data gathered for his study, careful attention to "excluding bias" had been central: "[I]n a hospital population, cancer of the lung occurs more than twice as frequently among those who have smoked cigarets for twenty-five years than among other smokers or nonsmokers of comparable age." VXA2510106-0108 at 0106, 0107 (US 63606) (A) (Levin, Morton L., Hyman Goldstein, and Paul R. Gerhardt, "Cancer and Tobacco Smoking; A Preliminary Report," *JAMA* 143.4 (1950)); Brandt WD, 39:23-40:18.

53. By the 1950s, animal research was also pointing to the carcinogenicity of cigarettes. Wynder and Graham turned their attention to the question of the "biological plausibility" of their epidemiological findings. In conducting animal investigations, Wynder reasoned that if tumors could be produced in animals, it would be an important step in

confirming the early epidemiologic findings. Noting that smoke condensates, also known as tars, contained benzopyrenes, arsenic and other known carcinogens, he painted the backs of mice to evaluate their effects. Fifty-eight percent of the mice developed cancerous tumors. Wynder concluded that "the suspected human carcinogen has thus been proven to be a carcinogen for a laboratory animal." These findings were reported in *Cancer Research* in December 1953. The study was often referred to as the Sloan-Kettering study because Wynder was affiliated with the Sloan-Kettering Institute of the Memorial Center for Cancer and Allied Diseases. CW00860130-0144 at 0137(US 58868) (A) (Wynder, Ernst L., Evarts A. Graham, and Adele B. Croninger, "Experimental Production of Carcinoma with Cigarette Tar," *Cancer Research* 13.12 (1953)); Brandt WD, 62:13-63:13; Harris WD, 62:4-63:10.

54. By late 1953, there had been at least five published epidemiologic investigations, as well as others pursuing carcinogenic components in tobacco smoke and its impacts. These researchers had come to a categorical understanding of the link between smoking and lung cancer. This understanding was markedly more certain than the case studies and preliminary statistical findings earlier in the century. While some of the epidemiological methods were innovative, the scientists using them were careful to approach them in a thorough manner; these methods were completely consistent with established scientific procedure and process. Epidemiology was not just based on statistics, but also was an interdisciplinary, applied field. The studies had substantially transformed the scientific knowledge base concerning the harms of cigarette use. Unlike earlier anecdotal and clinical assessments, these studies offered new and path-breaking approaches to investigating and resolving causal relationships. Brandt WD, 46:21-47:17.

55. Medical historians would come to view these studies as among the most important contributions to public health and medicine in the twentieth century. They offered a sophisticated scientific methodology for resolving central questions of causality. Brandt WD, 46:21-48:6.

(c) The Scientific Evidence Establishing Smoking as a Cause of Lung Cancer Led to Concerted Action by Defendants

56. The studies connecting smoking and lung cancer were receiving attention outside the scientific community by 1953. For example, published reports like a Readers Digest article titled "Cancer by the Carton" shared the scientific findings in national media, creating public concern. 03358234-8235 (US 46459) (A); Brandt WD, 48:1-18.

57. The "Cancer by the Carton" article, published in 1952 explained:

> A study of 684 cases, made by Ernest L. Wynder and Evarts A. Graham for the American Cancer Society and published in the AMA *Journal*, May 27, 1950, stated this conclusion: "Excessive and prolonged use of tobacco, especially cigarettes, seems to be an important factor in the induction of bronchiogenic carcinoma."
>
> More recently Wynder, now associated with Memorial Cancer Center in New York, expanded the statement: "The more a person smokes the greater is the risk of developing cancer of the lung, whereas the risk was small in a nonsmoker or a light smoker."

03358234-8235 at 8235 (US 46459) (A).

58. As detailed above in Section I, supra, by 1953-1954, tobacco company executives were aware both of the significant scientific studies establishing smoking as a cause of lung cancer and the public attention the studies were receiving. Defendants' executives well understood that this new scientific evidence constituted a full-scale crisis for their respective

companies. Brandt WD, 48:19-51:23.

59. In late 1953, at the same time as the Wynder and Graham study was published, tobacco stocks declined. Overall cigarette sales had also declined about 2% in 1952, which was the first time sales had declined since the Great Depression. Harris WD, 63:11-64:12; 01138541-8542 (US 34313) (A).

60. As evidence regarding the harms of smoking surfaced, Defendants engaged in advertising campaigns to induce the public to believe that cigarette smoking was actually beneficial to one's health. Some examples of Defendants' advertisements include: Kent Micronite filters, which were supposedly "developed by researchers in atomic energy plants," Kent cigarettes, which claimed "No other cigarette approaches such a degree of health protection and taste satisfaction," a Chesterfields ad claiming to cite test results that "smoking Chesterfields would have no adverse effects on the throat, sinuses, or affected organs." ADV1100001-0003 at 0002-03 (US 88703) (A); LW02427396-7397 at 7396(US 74413) (A); ADV1110007-0009 at 0008 (US 88728) (A); ADV1100040-0043 at 0042 (US 88715); Harris WD, 67:11-70:20.

61. While continuing to insist that there was no indication that cigarettes were unsafe, Defendants moved aggressively to market products which they subtly and not-so-subtly implied were safer. In 1953, Defendant Liggett hired Arthur D. Little, Inc. ("ADL") to test tobacco condensates on mice in an attempt to develop strategies for removing carcinogens, at the same time that it advertised its filters as "Just What the Doctor Ordered." VXA2611190-1190 (US 63543) (A) (Liggett Advertisement, "Fredric March Says - This Is It L & M Filters Are Just What the Doctor Ordered").

62. Initially, individual promotion and advertisement to persuade the public that each

brand was safer, smoother, better tasting and less irritating by Defendants was competitive, rather than cooperative or collusive, from an economics standpoint. In 1953, however, as reflected in the creation of TIRC and the issuance of the Frank Statement, Defendants shifted into a cooperative and collusive economic model. Harris WD, 71:19-83:6.

63. As detailed in Section I, supra, in December 1953 Defendants entered a conspiracy to defraud the public and maintain the viability of their product. This conspiracy began at a series of meetings at the Plaza Hotel in New York City. The Plaza Hotel meetings were the first time since 1939 that the chief executives of major cigarette manufacturers had come together. While prior fears of anti-trust violations had previously kept them from doing so, the concern over the crisis of smoking and health trumped that concern. Brandt WD, 51:1-14.

64. From an economic standpoint, Defendants' response to the smoking and health crisis was consistent with collusion. Collusion occurs when competitors in a market take actions that will benefit them only when rivals cooperate in that plan, and which harms the consuming public. Harris WD, 22:12-28:17.

65. Collusion is noted when internal data contradicts public statements, as seen with Defendants refusals to admit that smoking caused disease. In the case of Defendants, it was their only hope to stay afloat–working together they had the sway to create doubt within a public who was hearing contradictory messages from public health institutions. In a market functioning with typical competition, one company would not stand to gain from such a denial–it would generally lose credibility and thus, business. Defendants benefitted from uniform denial in lawsuits as well as in sales. Harris WD, 102:1-106:5.

66. At the meetings, the executives of American, Lorillard, RJR, Philip Morris,

B&W, Benson & Hedges, Tobacco Associates, and United States Tobacco developed a public relations plan to respond to the emerging scientific information indicting their product. They agreed to meet with the public relations firm, Hill & Knowlton, and with Hill & Knowlton's assistance launched their public relations campaign with the issuance of the Frank Statement and the formation of the Tobacco Industry Research Committee ("TIRC"). Brandt WD, 51:15-23; 86017454-7454 (US 21418) (A).

67. TIRC purported to sponsor research into "all phases of tobacco use and health" and issued a "Frank Statement to Cigarette Smokers," which appeared in 448 newspapers in 258 cities. The Frank Statement was a public relations act that reflected the strategy that Hill & Knowlton had crafted along with the tobacco executives. Among other promises made in the Frank Statement were:

> We accept an interest in people's health as a basic responsibility, paramount to every other consideration in our business.
>
> We believe the products we make are not injurious to health.
>
> We always have and always will cooperate closely with those whose task it is to safeguard the public health.

86017454-7454 (US 21418) (A); Brandt WD, 54:20-55:21. The promises contained in the Frank Statement were false.

68. The Frank Statement fraudulently claimed:

> That there is no proof that cigarette smoking is one of the causes [of lung cancer]
>
> * * *
>
> That statistics purporting to link cigarette smoking with the disease could apply with equal force to any one of many other aspects of

> modern life. Indeed the validity of the statistics themselves is questioned by numerous scientists.

86017454-7454 (US 21418) (A); Harris WD, 65:2-67:10.

69. In sworn testimony, Joseph Cullman, the former President and CEO of Philip Morris, admitted that Philip Morris intended consumers to rely on the representations made in the Frank Statement. Cullman PD, Minnesota v. Philip Morris, 6/11/97, 88:12-89:20.

70. Rather than carefully and critically assessing the emerging scientific data concerning the harms of smoking, the TIRC took the lead in denying and distorting these harms. Brandt WD, 54:20-55:21; CTR-TIRCMIN000033-0052 (US 33006) (A).

71. Internal TIRC documents provide evidence of the goals and strategies it employed:

> Essentially, the major purposes of the TIRC are Research and Public Relations. Our job is to maintain a balance between the two, and to continue to build soundly so that at all times Research and Public Relations complement each other. In that way we intend to assume the mantle of leadership and, ultimately, to create a condition where the public will look to the TIRC for answers rather than to others.

CTR-TIRCMIN000033-0052 at 0043 (US 33006) (A); Brandt WD, 82:16-85:2.

72. The first Scientific Director of TIRC, appointed in 1954, was biologist Clarence Cook Little. A former president of University of Maine, University of Michigan, and the founder of the Roscoe B. Jackson Memorial Laboratory, Little quickly became a steadfast critic of the emerging scientific data linking cigarettes to cancer. Brandt WD, 86:4-88:5.

73. The fact that Little was recognized by some in the scientific community as "estimable" or "sincere" was important to Defendants in their effort to use TIRC, with Little at its

helm, to advance Defendants' public relations objectives. Little's personal commitments and a priori assumptions about cancer causality made him an ideal proponent of Defendants' goal of maintaining a "controversy" rather than scientifically resolving the questions regarding smoking and health. Id. As Dr. Brandt explained at trial, the selection of Little as Scientific Director of TIRC was consistent with Defendants' goals because

> he was so clearly an individual who would be highly skeptical of any evidence coming from any of the domains of investigation that I mentioned in my live direct testimony except for the laboratory. And so it became a very constricted view of exploring the question and causality, but it was also a view of saying we're doing science and this is valuable from a public relations point of view to the industry.

Brandt TT, 9/28/04, 968:10-23.

74. Little's public statements served Defendants well. On June 15, 1954, Little publicly emphasized the purported purpose of the newly- formed organization during a press conference when he stated that TIRC was "trying to find out the facts." 11310464-0500 at 0466 (US 20278) (A); Brandt WD, 86:4-88:5.

75. Little had no compunction about offering unsubstantiated claims about the health benefits of cigarette use: "It is very well-known, for example, that tobacco has relaxed a great many people. It is a very good therapy for a great many nervous people." 11310464-0500 at 0466 (US 20278) (A); Brandt WD, 86:4-88:5.

76. A confidential report of a TIRC meeting held October 19, 1954, made explicit Little's and Defendants' agenda: "He [Little] declared that both he and the members of the board were aware of the attacks which had been made on tobacco for over 200 years, and wished to build a foundation of research sufficiently strong to arrest continuing or future attacks."

CTRMN007295-7297 at 7295 (US 22900) (O); Brandt WD, 86:4-88:5.

77. Little tended to castigate as moralists those whose findings showed harms with tobacco use:

> The right of an individual to determine his own level or threshold of convincibility is unquestioned.
>
> There are and will always be individuals who are convinced without the need of experimental evidence that *all* tobacco in *any* form is evil, noxious and toxic. There are individuals with a similar attitude toward alcohol, coffee, and the use of drugs, sera or medicines.
>
> * * *
>
> Such assumptions [that smoking caused cancer] stimulated some investigators to begin an enthusiastic hunt for *the* "component" or "components" in tobacco smoke that can be blamed for the unproved cause-and-effect relationship as well as for the reported production of skin cancer in some experiments with certain strains of laboratory mice.

501773418-3466 at 3428-3429 (US 20686) (A) (emphasis in original); Brandt WD, 86:4-88:5.

78. Little continually called for more research: "In the active and continuing discussions about tobacco use and health, there seems to be nearly complete agreement among scientists on only one point: The need for much more intensive research into the subject." 501773418-3466 at 3425 (US 20686) (A); Brandt WD, 86:4-88:5.

79. Under Little's leadership, the major thrust of TIRC was to emphasize that human cancers were complex processes – difficult to study and difficult to understand. Little directed TIRC towards what he called "pioneer research." He claimed that studies focused on cigarettes could "stifle or delay needed research to find the basic origins of lung cancer or cardiovascular diseases, which are most powerful, diversified and deadly enemies to our well-being."

85865874-5946 at 5878 (US 21084) (A); Brandt WD, 86:19-88:5.

80. Little also argued that there were no known carcinogens in tobacco tars (this despite Defendants' clear knowledge to the contrary, as addressed infra). He repeatedly centered attention on the so-called "constitutional hypothesis," other environmental risks, and the need for more research:

> Too little is known about many factors, including why people smoke or what kind of people become particularly heavy smokers.
>
> * * *
>
> The problem of causation of any type of cancer is complex and difficult to analyze. All research on this so-called constitutional disease is, and must be, painstaking and time-consuming. There is not known today any simple or quick way to answer the question of whether any one factor has a role in causing human lung cancer. Despite all the attention given to smoking as an accused factor in human lung cancer, no one has established that cigarette smoke, or any one of its known constituents, is cancer-causing to man.

501773418-3466 at 3422-3423 (US 20686) (A); Brandt WD, 85:10-86:3.

81. Under Little, TIRC focused its energies and resources in two areas: (1) it served as a public relations unit for the tobacco industry, especially with regard to growing public concerns about the risk of smoking, repeatedly attacked scientific studies demonstrating the harms of cigarette smoke, and worked concertedly to reassure smokers about cigarettes; and (2) it developed a research program that focused on basic science mechanisms in cancers that was distant, if not completely irrelevant, to evaluating the risks and harms associated with smoking. Indeed, the TIRC research program was organized and devised to **not** address the immediate and fundamental questions of the health effects of smoking. See US FF § I.B, supra and § III.B, infra. In this way, both functions of TIRC (public relations and research) were integrally related;

both were fully committed to the goals of denying and discrediting the substantial scientific evidence of smoking's harms and reassuring the public (especially smokers and potential smokers) through promotion of the image that a genuine scientific controversy existed about whether smoking caused disease. Brandt WD, 57:16-59:7.

(d) A Scientific Consensus Existed that Smoking Was a Cause of Lung Cancer by the Mid-1950s

82. During the 1950s, the evidence implicating smoking as a cause of lung cancer became overwhelming and undeniable. The published research appeared in the most elite, peer-reviewed journals, and the conclusion was unanimous. Studies employing different methodologies all reached the same verdict, and not a single substantial study contradicted the findings demonstrating that smoking causes disease. Id., 66:10-73:10.

83. The history of science and medicine demonstrates that scientists have utilized clinical observation, population studies and laboratory investigation, alone or in combination, to reach correct causal conclusions for centuries. Brandt TT, 9/27/04, 643:5-652:11.

84. For example, in the mid-18th century, Dr. James Lind identified the cause of scurvy in sailors through acute clinical observation and case-controlled trials. Id., 643:17-644:23. Dr. Edward Jenner developed the smallpox vaccine through clinical observation and population studies during the 19th century. Id., 644:3-646:2. In the 1840s, Dr. John Snow identified certain London water supplies as the source for the cholera epidemic through the same scientific methods – clinical observation and population studies. Id., 646:3-647:9. In 1917, Joseph Goldberger utilized population studies to make determinations as to the cause of pellagra. Id., 650:22-652:8.

85. The critical scientific investigation that led to the determination that smoking was a cause of lung cancer in the early 1950s crossed all three domains of investigation that are utilized in the development of scientific and medical knowledge: clinical observation, population studies and laboratory investigation. Id., 658:4-11.

86. The existence of skepticism voiced by individual scientists at the time is not inconsistent with a finding of scientific consensus. Brandt TT, 9/28/04, 963:10-19. The isolated reservations about certain scientific findings proffered by Defendants at trial represent mere individual skepticism rather than any participation in a comprehensive assessment of the available evidence. Id., 963:3-9.

87. The opinions of Dr. Brandt concerning the formation of a scientific consensus in the mid-1950s are shared by Dr. David M. Burns, a medical doctor, senior scientific editor of Surgeon General's Reports and one of the world's most accomplished smoking and health researchers. And the opinions of both experts are consistent with comprehensive, independent evaluations of the entirety of the scientific evidence at the time. Those evaluations uniformly demonstrate the existence of a scientific consensus: smoking was established as a cause of lung cancer by the mid-1950s. Brandt WD, 46:21-47:3; Brandt TT, 9/28/04, 960:22-961:21; Burns WD, 10:19-20.

88. In 1956, at the urging of Surgeon General Leroy Burney, a study group on smoking and health was organized by the American Cancer Society, the American Heart Association, the National Cancer Institute, and the National Heart Institute. This group of distinguished experts met regularly to assess the character of the scientific evidence relating to tobacco and health. At that time, the group noted that sixteen studies had been conducted in five

countries all showing a statistical association between smoking and lung cancer. Among the studies they summarized, it was demonstrated that: lung cancer occurs five to fifteen times more frequently among smokers than non-smokers; on a lifetime basis one of every ten men who smoke more than two packs a day will die of lung cancer; and cessation reduces the probability of developing lung cancer. VXA2510023-0027 (US 63610) (A) (Strong, Frank M., et al., "Smoking and Health: Joint Report of the Study Group on Smoking and Health," *Science* 125:1129-1133 (1957)); Brandt WD, 69:22-71:7.

89. The group also noted that the epidemiological findings were supported by animal studies in which malignant neoplasms had been produced by tobacco smoke condensates. Further, human pathological and histological studies added evidence to strengthen the "concept of causal relationship." The authors concluded:

> Thus, every morphologic stage of carcinogenesis, as it is understood at present, has been observed and related to the smoking habit.
>
> The sum total of scientific evidence establishes beyond reasonable doubt that cigarette smoking is a causative factor in the rapidly increasing incidence of human epidermoid carcinoma of the lung.

VXA2510023-0027 at 0023 (US 63610) (A) (Strong, Frank M., et al., "Smoking and Health Joint Report of the Study Group on Smoking and Health," *Science* 125:1129-1133 (1957)); Brandt WD, 69:22-71:7.

90. In addition, surgeons and pathologists published clinical reports associating cancer in their patients with their smoking habits. In 1957, Oscar Auerbach and his colleagues first reported in the *New England Journal of Medicine* on "Changes in the Bronchial Epithelium in Relation to Smoking and Cancer of the Lung." Auerbach's study evaluated patients with

confirmed smoking histories who died and were autopsied. Microscopists were kept ignorant of the smoking histories in the 30,000 examinations that they made to assure against potential bias. Auerbach and his co-authors concluded: "These findings are fully consistent with the hypothesis that inhalants of one sort or another are important factors in the causation of bronchogenic carcinoma. The findings are also consistent with the theory that cigarette smoking is an important factor in the causation of bronchogenic carcinoma." Auerbach presented additional confirmatory findings in 1961 and 1979. 682628764-8771 at 8771 (US 54185) (A) (Auerbach, Oscar, et al., "Changes in the Bronchial Epithelium in Relation to Smoking and Cancer of the Lung A Report of Progress," *New England Journal of Medicine* 256.3:97-104 (1957)); VXA2511322-1328 (US 63538) (A) (Auerbach, Oscar, E. Cuyler Hammond, and Lawrence Garfinkel, "Changes in the Bronchial Epithelium in Relation to Cigarette Smoking, 1955-1960 vs. 1970-1977," *New England Journal of Medicine* 300.8:381-386 (1979)); Brandt WD, 63:14-64:11.

91. During the same time period, E. Cuyler Hammond and Daniel Horn conducted a massive epidemiological study of smoking and lung cancer under the auspices of the American Cancer Society. In the Hammond and Horn study, more than 200,000 men were followed prospectively for nearly four years; during this period 12,000 died. They found that not only was lung cancer far more prevalent among those who smoked as a cause of death (twenty-four times more than non-smokers), so too was heart disease and circulatory disease. Hammond and Horn estimated that among smokers, smoking might account for up to 40% of their mortality. VXA2510028-0045 (US 63609) (A) (Hammond, E. Cuyler, and Daniel Horn, Smoking and Death Rates--Report on Forty-four Months of Follow-up of 187,783 Men, *JAMA*, 2840-2857

(1958)); Brandt WD, 65:16-66:9.

92. These results were consistent outside the United States. In 1957, the Medical Research Council of Great Britain issued a statement printed in the *British Medical Journal* and the *Lancet* which read:

> Evidence from many investigations in different countries indicates that a major part of the increase [in lung cancer] is associated with tobacco smoking, particularly in the form of cigarettes. In the opinion of the Council, the most reasonable interpretation of ths evidence is that the relationship is one of direct cause and effect. The identification of several carcinogenic substances in tobacco smoke provides a rational basis for such a causal relationship.

01149261-9264 at 9264 (US 63537) (A); Brandt WD, 75:23-76:12.

93. In January 1959, Jerome Cornfield, who was Assistant Chief of the Biometrics Section at the National Cancer Institute and Chairman of the Department of Biostatistics at Johns Hopkins University, offered a substantive review of the available evidence linking cigarettes to lung cancer. Cornfield and his colleagues carefully considered the range of alternative hypotheses to account for the significant rise in cases of, and deaths from, lung cancer. They concluded:

> The magnitude of the excess lung-cancer risk among cigarette smokers is so great that the results can not be interpreted as arising from an indirect association of cigarette smoking with some other agent or characteristic, since this hypothetical agent would have to be at least as strongly associated with lung cancer as cigarette use; no such agent has been found or suggested. The consistency of all the epidemiologic and experimental evidence also supports the conclusion of a causal relationship with cigarette smoking, while there are serious inconsistencies in reconciling the evidence with other hypotheses which have been advanced. Unquestionably there are areas where more research is necessary, and, of course, no single cause accounts for all lung cancer. The information already available, however, is sufficient for planning and activating public

health measures.

This paper also explicitly refuted ongoing critiques by statisticians Fisher and Berkson, often trumpeted by Defendants:

> We see nothing inherently contradictory or inconsistent in the suggestion that one agent can be responsible for more than one disease, nor are we lacking in precedents. The Great Fog of London in 1952 increased the death rate for a number of causes, particularly respiratory and coronary disease, but no one has given this as a reason for doubting the causal role of the Fog. Tobacco smoke, too, is a complex substance and consists of many different combustion products. It would be more "incredible" to find that these hundred of chemical products all had the same effect than to find the contrary. A universe in which cause and effect always have a one-to-one correspondence with each other would be easier to understand, but it obviously is not the kind we inhabit.

VXA2510068-0098 at 0068, 0091 (US 63607) (A) (Cornfield, Jerome, et al., "Smoking and Lung Cancer: Recent Evidence and Discussion of Some Questions," *Journal of the National Cancer Institute* 22.1:173-203 (1959)); Brandt WD, 71:23-73:10.

94. Cornfield noted that investigations of the health implications of smoking had significantly accelerated following the epidemiological studies earlier in the decade. Not only did the new prospective studies conducted in diverse populations confirm and strengthen the earlier findings, so too did pathological and toxicologic analyses. Cornfield and his colleagues also noted that the persistent "debate" about the scientific findings regarding cigarette smoking was driven by Defendants:

> It would be desirable to have a set of findings on the subject of smoking and lung cancer so clear-cut and unequivocal that they were self-interpreting. The findings now available on tobacco, as in most other fields of science, particularly biologic science, do not meet this ideal. Nevertheless, if the findings had been made on a new agent, to which hundreds of millions of adults were not

> already addicted, and on one which did not support a large industry, skilled in the arts of mass persuasion, the evidence for the hazardous nature of the agent would generally be regarded as beyond dispute.

As Cornfield suggested, the very idea of a "controversy" had been manufactured by TIRC and other public relations efforts by the Defendants. VXA2510068-0098 at 0093 (US 63607) (A) (Cornfield, Jerome, et al., "Smoking and Lung Cancer: Recent Evidence and Discussion of Some Questions," *Journal of the National Cancer Institute* 22.1:173-203 (1959)); Brandt WD, 71:23-73:10; 79:14-82:15.

95. In November 1959, Surgeon General Burney offered his own evaluation of the scientific evidence linking cigarettes to lung cancer. Burney revisited the epidemiologic data, as well as other confirmatory animal and pathological investigations. After a thorough assessment of current data, Burney came to the following conclusions:

> There can be no doubt that a significant portion of the increase in lung cancer is real. This rise has not been caused solely by improvements in diagnostic techniques, better reporting on death certificates, or an increase of older persons in the population. If we accept as valid the sequence of pathological changes given above the prevention of lung cancer, to a large extent, becomes possible. This will be accomplished if carcinogenic substances from any source can be kept out of the air inhaled into the lungs.

VXA2510046-0054 at 0052 (US 63608) (A) (Burney, Leroy E., "Smoking and Lung Cancer A statement of the Public Health Service," *JAMA* 71:1828-1837 (1959)); Brandt WD, 76:13-77:21.

96. For Burney, this fact meant that there were important and timely opportunities to prevent disease:

> The Public Health Service believes that the following statements are justified by studies to date.

1. The weight of evidence at present implicates smoking as the principal etiological factor in the increased incidence of lung cancer.

2. Cigarette smoking particularly is associated with an increased chance of developing lung cancer.

3. Stopping cigarette smoking even after long exposure is beneficial.

4. No method of treating tobacco or filtering the smoke has been demonstrated to be effective in materially reducing or eliminating the hazard of lung cancer.

5. The nonsmoker has a lower incidence of lung cancer than the smoker in all controlled studies, whether analyzed in terms of rural areas, urban regions, industrial occupations, or sex.

6. Persons who have never smoked at all (cigarettes, cigars, or pipe) have the best chance of escaping lung cancer.

7. Unless the use of tobacco can be made safe, the individual person's risk of lung cancer can best be reduced by elimination of smoking.

VXA2510046-0054 at 0052-0053 (US 63608) (A) (Burney, Leroy E., "Smoking and Lung Cancer: A Statement of the Public Health Service," *JAMA* 71: 1828-1837 (1959)); Brandt WD, 76:13-77:21. The totality of the conclusions offered by Burney demonstrate that Defendants' focus on a single word – "implicates" – in an effort to soften Burney's analysis is misplaced: Burney's conclusion that cigarette smoking is a cause of lung cancer is unequivocal. As Dr. Brandt testified, "the Burney Statement, when you read the whole paper, and this is what historians do, is very clear." Brandt TT, 9/27/04, 706:3-4.

97. In 1960, the World Health Organization ("WHO") also issued a statement signaling their own confirmations of the Surgeon General's and Medical Research Council's conclusions, after conducting a review of the scientific findings. Brandt WD, 77:22-78:1.

98. In 1962, yet another thorough and far-reaching assessment of the scientific evidence reached the same conclusions as previous studies. The British Royal College of Physicians, after two years of investigation, stated, "[d]iseases associated with smoking now cause so many deaths that they present one of the most challenging opportunities for preventive medicine today." The report concluded:

> The strong statistical association between smoking, especially of cigarettes, and lung cancer is most simply explained on a causal basis. . . . The conclusion that smoking is an important cause of lung cancer implies that if the habit ceased, the death rate from lung cancer would eventually fall to a fraction, perhaps to one fifth or even, among men, to one tenth of the present level. Since the present annual number of deaths attributed to lung cancer before the age of retirement is some 12,000 . . . a large amount of premature shortening of life is at issue.

(no bates) (JD 001007) (A) (Royal College of Physicians of London, *Smoking and Health Summary and Report of The Royal College of Physicians of London on Smoking in Relation to Cancer of the Lung and Other Diseases*, 1 at 19)); Brandt WD, 78:2-17.

99. As the work of the Royal College of Physicians makes clear, lives were at stake in the assessment of this scientific evidence linking cigarettes to disease. Over and over again, independent critical evaluation of the scientific findings that cigarettes caused lung cancer reached the same conclusion.

(e) Internally, Defendants Recognized the Validity of the Scientific Consensus

100. Internal documents reveal that Defendants knowledge of the potential harm caused by smoking was markedly different from their public statements regarding the same subject. Defendants specifically recognized the validity of the scientific consensus that existed in

the 1950s.

101. At the same time that Defendants assured the public through their "Frank Statement" that "there is no proof that cigarette smoking is one of the causes [of cancer]," they documented a large number of known carcinogens delivered in cigarette smoke. 86017454-7454 (US 21418) (A).

102. For example, a December 24, 1952 memorandum entitled "Report of Progress – Technical Research Department" contained a "Cancer" section, which noted: "The B&W lab has in the past made a partial isolation and identification of the aromatic hydrocarbons, benzopyrene, in both smoke and original tobacco from RALEIGH blend cigarettes." The report refers to benzopyrene as a "carcinogenic hydrocarbon." 65020084-0095 at 0092 (US 21388) (O).

103. Beginning in 1954, the BAT Group's major research laboratory performed research into the carcinogenicity of cigarette smoke by conducting skin-painting experiments on mice. This research showed that when compounds in cigarette smoke were painted onto mouse skins, it caused cancerous tumors. 682621615-1617 at 1615 (US 54180) (O).

104. RJR recognized smoking as a cause of disease as early as 1953. This knowledge is documented in a February 1953 Report drafted by Claude Teague, an RJR research scientist, entitled "Survey of Cancer Research with Emphasis on Possible Carcinogens from Tobacco." It was clear to Teague that: "Some workers have attempted to produce experimental cancers in test animals by application of tars obtained from tobacco, tobacco smoke, and other materials derived from tobacco." Teague further acknowledged: "On the basis of the information at hand, it would appear that polynuclear aromatic compounds occur in the pyrolytic products of tobacco. Bensyprene and 'N-bensyprene[sic], both carcinogens, were identified in the distillates. . . .

Studies of clinical data tend to confirm the relationship between heavy and prolonged tobacco smoking and incidence of cancer of the lung." 501932947-2968 at 2952-2953, 2961, 2963 (US 21407) (A).

105. A 1959 RJR document written by Alan Rodgman, an RJR scientist, discusses a 1954 report of a "carcinogenic (cancer producing) polycyclic hydrocarbon, 3, 4-benzpyrene" and elaborates on RJR's in-house research which corroborated this finding.

> There is no evidence that any of these compounds will produce cancer in man. Nonetheless, there is a distinct possibility that these substances would have a carcinogenic effect on the human respiratory system. Medical experience has shown that man responds to various chemical substances in the same manner as experimental animals. It follows therefore that it would be better for the consumer if cigarette smoker were devoid of such compounds.
>
> * * *
>
> Some thirty-odd polycyclic hydrocarbons have since been similarly characterized in these laboratories. Of these, eight are carcinogenic to mouse epidermis.

500945942-5945 at 5942 (US 21249) (A).

106. RJR sought to remove some of the cancer-causing compounds at the same time they were denying that the compounds existed: "[h]aving confirmed and extended the early published findings on polycyclic hydrocarbons in cigarette smoke, we initiated a lengthy research program to develop methods to lessen the amounts of these potentially dangerous compounds in cigarette smoke." 500945942-5945 at 5943 (US 21249) (A).

107. Rodgman's later work corroborated his prior findings. He wrote an extensive paper on "The Analysis of Cigarette Smoke Condensate." In it, Rodgman explained:

> The research described in this report represents a concerted effort

> to determine whether or not the polycyclic aromatic hydrocarbons are present in cigarette smoke condensate. One of the major objections offered to previous investigations is that the identification of specific compounds solely on the basis of ultraviolet absorption studies is not definitive. Since the present research describes the actual isolation, identification and characterization of several polycyclic aromatic hydrocarbons including the highly carcinogenic 3, 4-benzpyrene, the major criticisms of past research are now nullified.

Rodgman further wrote of the studies undertaken using standard Camel cigarettes:

> In view of this data, it is logical to assume that the carcinogenic activity of cigarette smoke condensate is due to the presence of one or more carcinogenic polycyclic aromatic hydrocarbons.
>
> * * *
>
> Since it is now well-established that cigarette smoke does contain several polycyclic aromatic hydrocarbons, and considering the potential and actual carcinogenic activity of a number of these compounds, a method of either complete removal or almost complete removal of these compounds from cigarette smoke is required.

501008241-8293 at 8254, 8279, 8280 (US 20667) (A).

108. Rodgman's views were consistent with what visiting scientists from the United Kingdom observed in 1958 about researchers working for Defendants. While TIRC, under Little's leadership never wavered from its essential mission of attempting to maintain "controversy" and an "open question" while avoiding research centered on the potential impact of smoking on health, Defendants' researchers did not accept this approach. The three British scientists reported widespread acceptance that smoking causes disease among top officials and scientists in the United States tobacco industry, including those at TIRC, Liggett, Philip Morris, and American. They further noted that there was virtual consensus among researchers within the

industry that cigarettes played a role in the production of human cancers:

> With one exception (H.S.N. Greene) the individuals whom we met believed that smoking causes lung cancer if by "causation" we mean any chain of events which leads finally to lung cancer and which involves smoking as an indispensable link. In the U.S.A. only Berkson, apparently, is now prepared to doubt the statistical evidence and his reasoning is nowhere thought to be sound.
>
> * * *
>
> In their [Liggett's] opinion T.I.R.C. has done little if anything constructive, the constantly re-iterated "not proven" statements in the face of mounting contrary evidence has thoroughly discredited T.I.R.C., and the S.A.B. of T.I.R.C. is supporting almost without exception projects which are not related directly to smoking and lung cancer. Liggetts [sic] felt that the problem was sufficiently serious to justify large-scale investment by the Company directly in experimental research on smoke and cancer, accepting privately that a strong case against tobacco had been made out and avoiding any public comment until their own research had provided something concrete to offer.
>
> * * *
>
> The majority of individuals whom we met accepted that beyond all reasonable doubt cigarette smoke most probably acts as a direct though very weak carcinogen on the human lung. The opinion was given that in view of its chemical composition it would indeed be surprising if cigarette smoke were <u>not</u> carcinogenic. This undoubtedly represents the majority but by no means the unanimous opinion of scientists in U.S.A. These individuals advised us that although it is not possible to predict unambiguously the effect of any substance on man from its effect on experimental animals the generally successful use of animals in other fields as a model for man fully justifies their use in our problem.

TINY0003106-3116 at 3108, 3111, 3112 (US 21369) (A) (emphasis in original); Brandt WD, 94:8-96:13; Brandt TT, 9/28/04, 820:6-20.

109. In 1962, Rodgman offered his assessment of "the smoking and health problem":

> Although the major part of the sales of this Company consists of cigarettes, what the Company sells is <u>cigarette smoke</u>. This

> Company, therefore, should be concerned with the physiological properties and composition of cigarette smoke. The benefits from such knowledge are obvious, particularly it anticipates possible governmental regulation. During the past two decades, cigarette smoke has been the target of a host of studies relating it to ill-health and particularly to lung cancer. The majority of these studies incriminate cigarette smoke from a health viewpoint.
>
> * * *
>
> Epidemiological data: The results of 34 different statistical studies show that cigarette smoking increases the risk of developing lung cancer. Many authorities believe the relationship to be one of cause-and-effect. . . . The statistical data from the smoking-health studies are almost universally accepted. After more than ten years, criticisms of the studies have been reduced to the dictum A statistical study cannot prove a cause-and-effect relationship between two factors.

Rodgman made explicit that he considered the evidence of smoking's harm convincing:

> The Evidence to Date: Obviously, the amount of evidence accumulated to indict cigarette smoke as a health hazard is overwhelming. The evidence challenging this indictment is scant. Attempts to shift the blame to other factors, e.g., air pollutants, necessitates acceptance of data similar to those denied in the cigarette smoke case.
>
> * * *
>
> It has been repeatedly stated that some scientists discount the cigarette smoke-lung cancer theory. This is true. But it should be noted that many of those quoted in this regard are on record with contrasting views, e.g., Berkson, the statistician, has stated "...the definitive important finding of these statistical studies is not that there is an association between smoking and lung cancer, but that there is an association between smoking and deaths from all causes generally...."

504822847-2852 at 2847-2848, 2850-2852 (US 20735) (A) (emphasis in original); Brandt WD, 96:14-99:4.

110. Rodgman's testimonial explanation of his analysis of the evidence of smoking and disease, offered in deposition almost 40 years after he drafted U.S. Exhibits 20735, 21369 and 21249 and 20667 and read into the trial record during the cross-examination of Dr. Brandt (Brandt TT, 9/28/04, 933-935), directly contradicts Rodgman's own papers and is not credible.

111. Not only is Rodgman's post-hoc explanation contrary to the plain text of the documents he authored in the 1950s and 1960s, but Rodgman had a financial incentive to offer favorable testimony to RJR when deposed in litigation. Rodgman worked for RJR as a scientist from 1954 to 1987, rising to the level of R&D Director of Fundamental Research. Since his retirement from RJR in 1987, Rodgman has been retained as a paid smoking and health litigation consultant to Womble Carlyle PLLC ("Womble"), earning as much as $600,000 for his work there. Rodgman PD, United States v. Philip Morris, 6/26/02, 23:20-32:8. At the same time that he was being paid as a consultant to Womble, Rodgman also served as a fact witness for RJR in its defense of various smoking and health cases. Id., 12:10-16, 27:1-32:8, 33:2-25. Specifically, while a consultant, he testified as a fact witness for RJR in at least seven cases, giving at least eleven days of testimony. Rodgman admits that there is a virtually complete overlap between the "historical" information he has given Womble as a litigation consultant and the content of his testimony in these smoking and health proceedings. Id., 37:1-41:12, 42:14-43:11.

112. Not only has there been overlap between topics about which Rodgman consulted and topics about which he has testified, but there also was a blurring of the lines between when he was paid to consult and when he was paid to testify or prepare to testify. Rodgman acknowledged that he billed Womble for some of the time he spent meeting with lawyers and preparing to be deposed as a fact witness. On at least one occasion, he considered requesting

payment for his time testifying as a fact witness in a smoking and health deposition, and may have been paid for such testimony. Id., 40:1-43:11.

113. Teague and Rodgman do not provide the only internal acknowledgment of the mainstream scientific consensus within RJR. In 1968, RJR's Biological Research Division internally published findings regarding exposure of rats to cigarette smoke:

> The histology of the tissues from the rat which had smoked TEMPO cigarettes via an indwelling tracheal cannula has been completed with the results given on the following page.
> 1. A diffuse marked emphysema throughout the lungs.
> 2. Deposition of pigment (tars?) in lung tissue, mediastinal lymph nodes and tracheal adnexia.
> 3. Lymphocyte infiltration.
> 4. Frequent epithelial hyperplasia in trachea and bronchioles.

515384987-4992 at 4987-4988 (US 87980) (O).

114. Lorillard also conducted research which pointed to cigarette smoking as a cause of cancer and other diseases. In the early 1960s, Lorillard conducted in-house experiments on animals that showed ciliastatic effects of tobacco smoke on the respiratory tract. Spears PD, Blue Cross/Blue Shield of New Jersey v. Philip Morris, 3/23/00, 144:4-22 .

115. Philip Morris researchers and senior executives accepted the evidence that cigarette smoking caused disease as early as the 1950s. A July 20, 1956 confidential Philip Morris memo discussing the advisability and feasibility of new product designs demonstrated Philip Morris's knowledge that smoking caused disease. In the memo, which was indicated "Confidential", Philip Morris scientists observed: "Decreased irritation is desirable not only from the subjective viewpoint but also as a partial elimination of a potential cancer hazard." 2023226912-6913 at 6912 (US 20383) (O).

116. A July 24, 1958 memorandum written by C. Mace, head of research for Philip Morris, admitted that Philip Morris was aware that smoking was a causal factor for lung cancer. The memorandum stated that: "the evidence . . . is building up that heavy cigarette smoking contributes to lung cancer either alone or in association with physical and physiological factors." 1000305086-5087 at 5086 (US 20090) (O).

117. Dr. Helmut Wakeham, a high ranking Philip Morris scientist, candidly wrote of the cancer-causing effect of cigarette smoke in a September 22, 1959 memorandum regarding nicotine:

> One of the main reasons people smoke is to experience the physiological effects of nicotine on the human system. Nicotine, to the best of present knowledge, does not produce cancer. Hence, in theory one could achieve the major advantage of smoking without the hazard of cancer. But nicotine in tobacco smoke is present in the tar phase, and so far a reduction in tar by filtration or otherwise has been accompanied by a comparable reduction in nictoine.

1005039423-9424 at 9424 (US 21657) (A).

118. Wakeham's conclusion in 1961, which he shared with Philip Morris's Research and Development Committee was:

> Low irritation and low nicotine cigarettes for commercial exploitation will be developed in the course of our present R&D program during the next two to five years with an expenditure of not more than 25% of the R&D budgets during this period.
>
> A medically acceptable low-carcinogens cigarette may be possible. Its development would require:
>
> TIME
> MONEY
> UNFALTERING DETERMINATION

2023193305-3328, at 3328 (US 20381) (A) (emphasis in original).

119. On April 20, 1962, Wakeham recommended diversification of Philip Morris's business at a greater rate due to the evidence that smoking leads to disease. 1001882121-2122 (US 20120) (A).

120. At the very time that Defendants worked in concert to disparage meticulously conducted scientific investigations, their advertisements offered unverifiable reassurances from "medical specialists." At the same time that industry researchers, such as Rodgman of RJR and Wakeham of Philip Morris, were detailing carcinogenic substances in cigarettes and potential strategies for their removal, TIRC put out a press release dated September 27, 1960 asserting: "Chemical tests have not found any substance in tobacco smoke known to cause human cancer or in concentrations sufficient to account for reported skin cancer in animals." 500518873-8875 at 8874 (US 20635) (A); Brandt WD, 132:9-133:14.

121. Liggett accepted that cigarette smoke caused disease and sought to reduce or remove those constituents. In a memorandum dated March 15, 1961, Arthur D. Little, Inc., Liggett's outside research consultants, summarized the results of the contract research performed for Liggett:

> 1. There are biologically active materials present in cigarette tobacco.
>
> These are: a) cancer causing
> b) cancer promoting
> c) poisonous
> d) stimulating, pleasurable, and flavorful.
>
> 2. There is no reason why the poisonous group, CO, HCN, NO2, etc., cannot be reduced, even though they are not seen as a primary health hazard. Methods for removal are:
>
> a) filtration (treated carbon, etc.)

b) treatment for removing precursors, CN elimination
c) addition as a reactant (urea for NOs).

3. Cancer promoting materials, esters, phenols, amines, can possibly be reduced by some treatment, extraction, etc.

4. The cancer-causing materials apparently are in many substances that are pyrolyzed but seem to be associated with tobacco in greater concentration than for primarily cellulose.

These findings were marked "confidential." 2021382496-2498 at 2496 (US 20345) (A).

122. A Liggett document prepared on April 24, 1963 accepted inferences of a causal relationship between smoking and development of carcinoma that was suggested by Defendant scientists. 2022969727-9728 (US 20368) (A).

123. In addition, at trial in this action, Defendants' own scientists and former scientists admitted that they believed smoking was a cause of disease, along with their scientific colleagues and executives at the Defendant companies.

(f) Upon Formation of the Enterprise, Defendants Began a Decades-Long Campaign of Misinformation With False Statements about the Health Risks of Smoking That Were Directly Contrary to What They Recognized Internally

124. Beginning in the 1950s, all Defendants, including TIRC, the Tobacco Institute and TIRC's successor, The Council for Tobacco Research–U.S.A., Inc. ("CTR"), issued numerous false public statements designed to mislead the public about the connection between cigarette smoking and disease. The public campaign of misinformation was undertaken with reckless disregard for the truth of the assertions made – its sole purpose was to mislead.

125. A March 1954 public speech to the National Association of Tobacco Distributors by George Weissman, a Vice President with Defendant Philip Morris, captured Defendants'

public position that medical evidence had not established the link between smoking and disease:

> *For never in the history of American industry – a history that not so incidentally had its origins in tobacco – has one industry been under such attack as we are today, never has an industry's very existence been so dependent on its relations with the public.
>
> * * *
>
> Which brings me to another, and even more important current problem! – the current medical propaganda being directed against the cigarette industry by a small number of doctors and a large number of magazines, and newspapers. As many, if not more, distinguished scientists have disputed the arbitrary statements of the few doctors. As many, if not more, distinguished researchers, have pointed out other factors such as air pollution rather than cigarette smoking. There are many scientists who question the statistics and even doubt the fact that there is a health question involved in cigarette smoking. Yet, who rated the headlines when the charges were made? Unfortunately, the cigarette industry. Where were the denials and counterclaims? You sometimes had to use a microscope to find them. . . . If we had any thought or knowledge that in any way we were selling a product harmful to consumers, we would stop business tomorrow.

2022239339-9343 at 9339, 9341 (US 21766) (A) (emphasis in original); Brandt WD, 49:23-50:10.

126. On April 14, 1954, TIRC published "A Scientific Perspective on the Cigarette Controversy," which restated the Frank Statement's false pronouncement that the Defendants had accepted "an interest in people's health as a basic responsibility, paramount to every other consideration in our business." A total of 205,000 copies were printed and sent to 176,800 doctors, general practitioners and specialists. It was also sent to the deans of medical and dental colleges. The book and an accompanying press release went to a press distribution of 15,000, including editors of daily and weekly newspapers, consumer magazines, veterans magazines, and

medical and dental journals, news syndicate managers, business editors, editorial writers, science writers, radio and TV commentators, news columnists, and Members of Congress. The Sunday *New York Daily News* (circulation 3,800,000) gave feature treatment to the booklet, devoting a major part of the page to comment and a cartoon. The story was also sent to some 1,400 radio stations. 1005039987-0008 at 9990 (US 20192) (O); TLT0902954-2955 (US 88388) (A).

127. In a July 1, 1954 statement by TIRC, Defendants promised not only to conduct research, but to make their findings known to the public. VXA2511193-1194 (US 63544) (A).

128. On October 12, 1954, in newspapers such as the *New York Daily Mirror*, Timothy Hartnett, Chairman of TIRC, was quoted as saying that "no clinical evidence has yet established tobacco to be the cause of human cancer." ATC2454770-4770 (US 87049) (O) ("Tobacco Unit Assails Report," *New York Daily Mirror*, October 13, 1954).

129. In 1957, after figures from Hammond and Horn's epidemiological study showing that quitting smoking lowered one's risk, that death rates from lung cancer were ten times higher than for men who never smoked, and that the primary danger of smoking, in terms of average years of life lost, was from heart disease, Defendants responded with formulaic dismissals, arguing that smoking had never been conclusively linked with any kind of disease. For example, A June 4, 1957, TIRC press release asserted that: "the causes of cancer and heart disease are not yet known to medical science." and that statistical studies "do not prove cause and effect." CTR-PUBLIC STMT 000330-0330 (JD-094091) (O).

130. TIRC issued a July 15, 1957 press release entitled "Scientist Comments on Benzypyrene Report," where it disputed the United States Surgeon General's report that benzypyrene had been identified in cigarette smoke, and stated that scientists had concluded that

benzypyrene in cigarette smoke cannot be a cause of cancer in smokers. This public statement directly contradicted internal B&W research. 11313243-3244 (US 20280) (O); 650200084-0095 (US 21388) (O).

131. The Tobacco Information Committee, a TIRC subcommittee, published the first in a series of *Tobacco and Health* newsletters in October 1957. The newsletters contained articles that disputed the relationship between smoking and disease, criticized research that supported such a relationship, and asserted that differing opinions existed regarding tobacco use and health. The newsletter was sent to the medical and scientific communities. It reached a circulation of 520,000 in 1962, with about 315,000 copies being sent to doctors, dentists, and medical schools. The admitted purpose of the publication was to rebut and discredit the charges against tobacco. TIMN123324-3327 (US 21282) (O); 511018410-8413 (US 22459) (A); TIMN0070640-0656 (US 21299) (O); TIMN0070657-0674 (US 22983) (O); TIMN0081443-1457 (US 21307) (O).

132. A December 16, 1957 press release from TIRC falsely stated that "[n]o substance has been found in tobacco smoke known to cause cancer in human beings." 500518708-8711 at 8708 (US 21834) (A).

133. On June 27, 1958, Bowman Gray, President of RJR, told a meeting of the Flue-Cured Tobacco Co-operative Stabilization Corp.:

> The theory that tobacco smoking is a factor in lung cancer causation rests almost entirely on statistical observations. These are chiefly that there are more smokers among lung cancer patients than among other patients and that a higher proportion of lung cancer seems to appear among smokers than among non-smokers. The statement that a mere statistical association is neither proof nor good evidence of a cause and effect relationship has been asserted so often by so many scientists that it sounds almost like a broken phonograph record. Nevertheless, it remains as true and significant

> as ever. Yet, assiduous search by these methods has failed to identify sufficient quantity of any substance that could account for even the relatively infrequent results obtained by painting on skins of mice. Additionally, there is the fact that all tobacco smoke inhalation studies, conducted with different species of animals over a period of several years, have consistently failed to produce any bronchogenic carcinoma – the type of lung cancer most frequently found in human lungs.

TIMN436721-6734 at 6730, 6732 (US 21366) (A).

134. With the rising popularity of filters, Defendants found themselves in a delicate position of seeking to promote these new products as safer without explicitly indicating health problems with their previous products. They continued to insist that the rise of filter cigarettes merely reflected the nature of consumer demand. James P. Richards, President of the Tobacco Institute, explained on June 30, 1958:

> The cigaret industry has not changed its mind. Our position was and is based on the fact that scientific evidence does not support the theory that there is anything in cigaret smoke known to cause human lung cancer. . . . [The Tobacco Institute] believes that the health of the people is more important than dividends for any industry.

TIMN0122775-2775 (US 21326) (A).

135. In a newspaper article published on November 19, 1958, Clarence Cook Little was quoted as saying that there was scant clear evidence that smoking caused lung cancer, much more research was needed, and TIRC would continue to provide funds for independent research in universities and hospitals until the final answers were obtained. 501860595-0595 (US 21233) (A).

136. In a December 27, 1958 public statement, Hartnett, still TIRC's Chairman, emphasized that links to smoking and disease remained undetermined and asserted that an

increasing number of factors were being associated statistically with lung cancer incidents. He cited occupational exposures, specific air pollutants, place of birth and residence, previous lung ailments, and nutrition, claiming that these factors and others were subjects of much scientific investigation and further claiming that

> at its formation in January 1954, the Tobacco Industry Research Committee stated its fundamental position: 'We believe the products we make are not injurious to health.' We are pledging aid and assistance to the research effort into all phases of tobacco use and health. That statement and pledge are reaffirmed today by the members of the Tobacco Industry Research Committee.

500518759-8761 at 8761 (US 20636) (A); Brandt WD, 88:6-89:4.

137. In another *Tobacco and Heath* newsletter, TIRC claimed: "Continuing scientific research lends support to the position that too many unknowns exist today concerning lung cancer to warrant conclusions placing a major causative role on cigarette smoking, according to the 1957 Report of the Scientific Director of the Tobacco Industry Research Committee." The publication also declared: "Cigarette smoking is compatible with normal health, and even heavier-than-average cigarette smoking is compatible with better-than-average mortality rates, according to a scientific report presented before the Southern Medical Association." MNAT00515648-5651 at 5648 (US 72185) (A); Brandt WD, 84:10-85:2.

138. As the foregoing evidence demonstrates, TIRC, and its successor, CTR, were front and center in the Defendants' response to the scientific evidence that established smoking as a cause of lung cancer. TIRC, and later CTR and the Tobacco Institute, maintained that role as time progressed. TIRC representatives frequently issued statements during this period explaining: "Its purpose [TIRC] is solely to obtain new information and to advance human

knowledge in every possible phase of the tobacco and health relationship." Nonetheless, the TIRC program funded almost no research whatsoever that focused on the constituents of cigarette smoke and/or the health of smokers. 511018410-8413 at 8410 (US 22459) (A).

139. At the same time TIRC and CTR falsely pledged Defendants' dedication to advancing human knowledge about the relationship between smoking and disease, TIRC, CTR and the Tobacco Institute issued press releases and made public statements on behalf of Defendants that attempted to discredit non-industry scientists, government public health statements, and scientific findings that linked cigarette smoking to human disease. The statements contradicted both Defendants' own knowledge of the link between cigarette smoking and disease and the parallel, scientific study by public health scientists. See US FF § I.B, supra.

140. On November 27, 1959, the Tobacco Institute issued a statement attacking the article written by Surgeon General Burney on the hazards of cigarette smoking. The release marked a concerted and coordinated effort with TIRC to attack the Surgeon General, as Little's public criticism of Burney was released the following day. TIMN0110091-0091 (US 21319) (A).

141. Little issued the following statement upon the publication of Burney's 1959 evaluation:

> Despite the recent research trends, the conclusions set forth in the Public Health Service review rely almost entirely on past reports that are no more conclusive today than when these reports were first published. Most of the points are not new but are familiar to the American public because they were first advanced some years ago in statistical studies that admittedly are not supported by experimental evidence.

Little issued this statement despite the fact that Burney had carefully evaluated the science of recent investigators and had not limited his assessment to epidemiological studies. 503283464-

3467 at 3465-3466 (US 22981) (A); Brandt WD, 90:20-92:5.

142. Hill and Knowlton, TIRC's public relations counsel, explained its strategy in anticipation of the Burney report:

> Comment from TIRC for the press remains an effective way to meet anti-tobacco publicity efforts and emphasizes the multiple factors that should be considered. This, of course, is complemented with a continuing program of supplying information to give editors and writers a balanced perspective on questions of tobacco and health.
>
> * * *
>
> Published in the November 28 issue of the Journal of the American Medical Association, the article signed by the Surgeon General presented a selection of published data about smoking as related to lung cancer. Anticipating the appearance of the Burney article and learning of its contents in advance of publication, it was possible to provide the press promptly with statements from Dr. C.C. Little, Mr. James P. Richards, president of The Tobacco Institute, and others. Press stories used the tobacco industry comment in covering the Surgeon General's article.

HT0145148-5150 at 5148 (US 21177) (A); Brandt WD, 92:23-94:7.

143. Internally, Defendants acknowledged the falsity of their public statements and public relations strategy. William Kloepfer, Vice President of Public Relations for the Tobacco Institute wrote to Earle Clements, President of Tobacco Institute expressing concern about this issue: "Our basic position in the cigarette controversy is subject to the charge, and may be subject to a finding, that we are making false or misleading statements to promote the sale of cigarettes." TIMN0072354-2356, at 2354 (US 63576) (A).

144. But Defendants' campaign continued unabated. On July 6, 1961, Tobacco Institute issued a press release that quoted the Tobacco Institute President George Allen's

comments on current health concerns regarding cigarette smoking: "The tobacco industry itself is more interested than anyone else in finding out and making public the true facts about tobacco and health." Allen further claimed that "research in recent years has produced findings that weaken rather than support the claim that smoking is a major contributor to lung cancer." TIMN0104428-4429 at 4428 (US 21762) (A).

145. Defendants not only attacked mainstream scientists, they also made blanket assertions, denying the evidence that smoking caused disease. For example, another press release, issued following Allen's attack on the public health community in 1962, stated:

> The causes of cancer are not now known to science. Many factors are being studied, along with tobacco. The case against tobacco is based largely on statistical association studies, the meanings of which are in dispute.

TIMN0123775-3779 at 3777 (US 85930) (O).

146. These statements were made at the time the Surgeon General was forming an Advisory Committee, with the aim of developing the first Surgeon General's Report on Smoking and Health.

(g) In 1964, the Surgeon General Released the First Surgeon General's Advisory Committee Report on Smoking and Health

147. The 1964 Surgeon General's Report on Smoking and Health is widely considered by historians to be one of the most significant documents in the history of twentieth century public health. Brandt WD, 99:5-112:1.

148. The Surgeon General's Advisory Committee on Smoking and Health was organized to evaluate the evidence about cigarettes and disease and offer a definitive assessment. As a result, the process of the committee's work, its selection, and its findings were designed to

represent a model of objective, public scientific and medical inquiry based on a rigorous and systematic assessment of the health implications of smoking. Brandt WD, 99:5-112:1.

149. To establish the Advisory Committee, Surgeon General Luther Terry created a list of some 150 individuals. None were known to have taken a public position regarding the relationship of smoking and health. These individuals represented a number of fields and medical specialties from pulmonary medicine to statistics, cardiology to epidemiology. This list was then circulated to the American Cancer Society, the American Heart Association, the National Tuberculosis Association, the American Medical Association, as well as the Tobacco Institute. Each group was permitted to eliminate any name, without any reason cited. Individuals who had already published on the issue or had taken a public position were also eliminated. The selection process indicated Terry's commitment to a process that would eventuate in a genuine and definitive consensus. He had insured that the Report could not be attacked on the basis of its membership. All ten of the members chosen were eminent physicians and scientists; eight were medical doctors, one was a chemist and the other a statistician. Three of the panelists smoked cigarettes, two others occasionally smoked pipes or cigars. VXA1601844-2232, at 1864-67 (US 64057) (A) (1964 Surgeon General Report); Brandt WD, 100:8-102:8.

150. The 1964 Report explained: “All of the major companies manufacturing cigarettes and other tobacco products were invited to submit statements and any information pertinent to the inquiry. The replies which were received were taken into consideration by the Committee. VXA1601844-2232 at 1870 (US 64057) (A) (1964 Surgeon General Report); Brandt WD, 100:8-102:8.

151. Terry's first ten selections all agreed to serve on the Advisory Committee, indicating to him "that these scientists were convinced of the importance of the subject and of the complete support and confidence of the Public Health Service." VXA2511396-1397 at 1396 (US 21376) (A) (Terry, Luther L., "The Surgeon General's first report on smoking and health A challenge to the medical profession," *New York State Journal of Medicine* 1254 (1983)); Brandt WD, 102:4-23.

152. The Report drew on the respective disciplinary strengths of the committee members. Walter J. Burdette was a prominent surgeon and chair of the Surgery Department at the University of Utah; John B. Hickman was the Chair of Internal Medicine at the University of Indiana; and Charles LeMaistre was a pulmonary specialist and head of a very large cancer treatment center. The pathologists joining the Committee were: Emmanuel Farber, Chair of Pathology at the University of Pittsburgh; Jacob Furth from Columbia, an expert on the biology of cancer; and Maurice Seevers, Chair of the University of Michigan Pharmacology Department. Louis Feiser of Harvard University was an eminent organic chemist. Completing the Committee were: Stanhope Bayne-Jones, a bacteriologist, former head of New York Hospital and Dean of Yale Medical School; Leonard H. Schumann, epidemiologist at the University of Minnesota; and William G. Cochran, a Harvard University mathematician with expertise in statistical methods. VXA1601844-2232 at 1864-67 (US 64057) (A) (1964 Surgeon General Report); Brandt WD, 102:9-23;

153. Terry divided the work into two distinct phases. The first phase, the work of the Advisory Committee, was to determine the "nature and magnitude of the health effects of smoking." The Committee sought to arrive at a clinical judgment on smoking. As one public

health official explained, "What do we (that is, The Surgeon General of the United States Public Health Service) advise our patient, the American public, about smoking?" VXA2511346-1350 at 1346 (US 63531) (A) (Surgeon General's Advisory Committee on Smoking and Health, *The Nature, Purpose and Suggested Formulation of the Study of the Health Effects of Smoking, Phase I*, National Archives, Record Group 90, Typescript).

154. The Advisory Committee met together nine times in just over a year. In between these meetings, both committee members and staff worked to review, critique, and synthesize what had become a formidable volume of scientific work on tobacco. Terry promised that the report on these findings would be followed by phase II, proposals for remedial action. This was significant, for it kept the Committee away from the politics that swirled around the tobacco question. What Terry sought – and ultimately got – was a document that was unimpeachable from a scientific point of view. Terry astutely recognized that the Advisory Committee could only speak with authority about the scientific nature of the health risks of smoking; he would leave the policy questions to the political process. Brandt WD, 103:23-104:19.

155. The Advisory Committee established a set of criteria to evaluate the significance of a statistical association. Recognizing that the nature of inference, as a process, requires judgment, the committee sought to define this process specifically, outlining five specific conditions for judging causal relations:

a. Consistency of the Association. Nearly all the retrospective and prospective studies produced comparable results, despite the fact that different methods were employed for collecting data.

b. Strength of the Association: the ratio of lung cancer rates for smokers versus non-smokers. The Committee assessed the significance of the dose effect phenomenon, finding that risk increased with amount smoked.

According to the Report:

> [A]verage smokers of cigarettes have a 9- to 10 fold risk of developing lung cancer, and heavy smokers, at least a 20-fold risk. Thus it would appear that the strength of the association between cigarette smoking and lung cancer must be judged to be high.

c. Specificity of Association. This criteria, according to the Report:

> implies the precision with which one component of an associated pair can be utilized to predict the occurrence of the other, i.e. how frequently the presence of one variable (e.g., lung cancer) will predict, in the same individual, the presence of another (e.g., cigarette smoking).
>
> In a discussion of the specificity of the relationship between any factor possibly causal in character and a disease it may produce, it must be recognized that rarely, if ever, in our biologic universe, does the presence of an agent invariably predict the occurrence of a disease. Second, but not less important, is our growing recognition that a given disease may have multiple causes.

In the current case, the specificity of the association was especially strong. The Report explained, "of the total load of lung cancer in males about 90 percent is associated with cigarette smoking."

d. Temporal Relationship of Associated Variables: the Advisory Committee wrote:

> Exposure to an agent presumed to be causal must precede, temporally, the onset of a disease which it is purported to produce. . . . [N]o evidence has thus far been brought forth to indicate that the initiation of the carcinomatous process in a smoker who developed lung cancer antedated the onset of smoking.

e. Coherence of the Association: the Advisory Committee concluded:

> A final criterion for the appraisal of causal significance of an association is its coherence with known facts in the natural history and biology of the disease.

VXA1601844-2232, at 2033-36 (US 64057) (A) (1964 Surgeon General Report); Brandt WD,

105:6-111:7.

156. The 1964 Surgeon General's Advisory Committee's assessment of causality was part of a coherent and logical explanation. These criteria have become the basic orthodoxy for causal inference concerning disease since the time of the report. Brandt WD, 104:20-108:21.

157. In all, the 387-page 1964 Surgeon General's Report cited 7,000 articles; its critical review of this evidence substantiated the cigarette as a cause of disease. The Report came to the following conclusions:

> Cigarette smoking is associated with a 70 percent increase in the age-specific death rates of males. The total number of excess deaths causally related to cigarette smoking in the U.S. population cannot be accurately estimated. In view of the continuing and mounting evidence from many sources, it is the judgment of the Committee that cigarette smoking contributes substantially to mortality from certain specific diseases and to the overall death rate.
>
> * * *
>
> Cigarette smoking is causally related to lung cancer in men; the magnitude of the effect of cigarette smoking far outweighs all other factors. The data for women, though less extensive, point in the same direction.
>
> Their risk of developing lung cancer increases with duration of smoking and the number of cigarettes smoked per day, and is diminished by discontinuing smoking.

VXA1601844-2232, at 1884 (US 64057) (A) (1964 Surgeon General Report); Brandt WD, 108:22-111:7.

158. The 1964 Report carefully evaluated the animal studies that had been conducted up to that time:

> Condensates of tobacco smoke are carcinogenic when tested by

> application to the skin of mice and rabbits and by subcutaneous injection in rats.
>
> * * *
>
> Bronchogenic carcinoma has been produced in laboratory animals by the administration of polycyclic aromatic hydrocarbons, certain metals, radioactive substances, and viruses. The histopathologic characteristics of the tumors produced are similar to those observed in man and are predominantly of the squamous variety.

VXA1601844-2232 at 1884, 1994-97, 2016 (US 64057) (A) (1964 Surgeon General Report); Brandt WD, 108:22-111:7.

159. The 1964 Report found very high death rates among smokers, which increased with consumption:

> The death rate for smokers of cigarettes only, who were smoking at the time of entry into the particular prospective study, is about 70 percent higher than that for nonsmokers. The death rates increase with the amount smoked. For groups of men smoking less than 10, 10-19, 20-39, and 40 cigarettes and over per day, respectively, the death rates are about 40 percent, 70 percent, 90 percent, and 120 percent higher than for non-smokers. The ratio of the death rates of smokers to nonsmokers is highest at the earlier ages (40-50) represented in the studies, and declines with increasing age. The same effect appears to hold for the ratio of the death rate of heavy smokers to that of light smokers. In the studies that provided this information, the mortality ratio of cigarette smokers to non-smokers was substantially higher for men who started to smoke under age 20 than for men who started after age 25. The mortality ratio was increased as the number of years of smoking increased. In two studies which recorded the degree of inhalation, the mortality ratio for a given amount of smoking was greater for inhalers than for non-inhalers.

VXA1601844-2232 at 1888-89 (US 64057) (A) (1964 Surgeon General Report); Brandt WD, 108:22-111:7.

160. The 1964 Report also reached conclusions as to coronary heart disease: "It is also

more prudent to assume that the established association between cigarette smoking and coronary disease has causative meaning than to suspend judgment until no uncertainty remains." The 1968 Report went a step further, concluding that "[b]ecause of the increasing convergence of epidemiological and physiological finding relating cigarette smoking to coronary heart disease it is concluded that cigarette smoking can contribute to the development of cardiovascular disease and particularly to death from coronary heart disease." VXA1601844-2232 at 1885 (US 64057) (A) (1964 Surgeon General Report); ATC1081418-1542 at 1430 (US 65351) (A) (1968 Surgeon General Report).

161. The 1979 Report flatly stated that "for purposes of preventive medicine, it can be concluded that smoking is causally related to coronary heart disease for both men and women in the United States." VXA1604926-6020 at 4969 (US 64071) (A) (1979 Surgeon General Report).

162. From both a clinical and a public health perspective, the 1964 Report concluded that stopping smoking lowered an individual's risk of disease and health:

> Cigarette smokers who had stopped smoking prior to enrollment in the study had mortality ratios about 1.4 as against 1.7 for current cigarette smokers. The mortality ratio of ex-cigarette smokers increased with the number of years of smoking and was higher for those who stopped after age 55 than for those who stopped at an earlier age.

VXA1601844-2232 at 1888-89 (US 64057) (A) (1964 Surgeon General Report).

163. Unfortunately, the 1964 Report did not stop Defendants' efforts to perpetuate the idea of a "controversy" over whether smoking causes disease. Defendants simply re-doubled their efforts and maintained the strategy they had laid out in 1953: Insist there was no proof, attack and undermine all studies showing that smoking caused disease, and fund research that

investigated alternate theories of carcinogenesis. Brandt WD, 112:2-114:6.

(h) Defendants Intensified Their Fraudulent Public Relations Campaign in Anticipation of and Immediately Following the Release of the 1964 Report

164. The 1964 Report caused Defendants to further intensify their public relations campaign, which was undertaken without any regard for the truth of public statements and assertions and, in fact, with knowledge of the falsity of Defendants' claims that smoking had not been established as a cause of disease.

165. Before the Surgeon General's Report was released in January 1964, Defendants took steps to minimize its impact. George Allen, president of the Tobacco Institute, laid out the Defendants' ongoing position in a radio interview:

> ALLEN:. . . .All the medical authorities as far as I know, or practically all of them, agree that nobody knows what causes cancer, and specifically lung cancer, and this is a matter that remains to be found by thorough and energetic scientific investigation.
>
> * * *
>
> ALLEN: . . .That study [from the Royal College of Physicians, 1962], while considered very strong in its accusations, charges regarding smoking, nevertheless that study itself said that the majority of people smoke without any harm to their system. So if you say, am I going to get lung cancer if I smoke, a lot of people get lung cancer who have never smoked in their lives. We had a recent case, in which 27 nuns had died of lung cancer, not all together, not in the same place, but among the statistics. . . who had never been near tobacco. So, certainly one would have to say that if you just ask the question flatly, if I smoke, will I get lung cancer, there are many, many cases and evidences - cited statements to the fact that there is no proved cause and effect relationship between the two.

This was precisely designed to mislead the public concerning the known harms of cigarette

smoking. 500062010-2018 at 2011, 2015-2016 (US 20619) (A); Brandt WD, 114:6-115:7.

166. On March 14, 1963, the Tobacco Institute issued a press release to the *New York Times* containing a statement by Allen:

> Scientific opinions differ widely. Many scientists say that more must be learned before it will be known whether any of the factors now under study, including smoking, has a role in causation of diseases such as lung cancer, and, if so, whether that role is direct or indirect, primary or incidental. In the opinion of these scientists, singling out tobacco as a major factor is not warranted by scientific knowledge.

TIMN0131426-1426 (US 21336) (O).

167. On April 15, 1963, Allen commented on a recent booklet issued by the American Cancer Society:

> There is dispute among scientists as to the causes of lung cancer. Many differing opinions exist. . . .
> The booklet does not purport to contribute new knowledge.
>
> It is our belief that the answers to questions about diseases such as lung cancer will come through the research laboratory, not through booklets or campaigns for or against smoking.

TIMN0118348-8349 at 8348 (US 21320) (O).

168. A June 1963 Tobacco Institute statement by Allen similarly claimed that there was "dispute among scientists as to the causes of lung cancer." Allen reported that since 1954 the tobacco manufacturers had supported grant-in-aid research through TIRC and had contributed more than $6 million in funds towards independent medical and scientific research. While the research programs were continuing, the press release claimed that research findings regarding underlying causes of cancer and cardiovascular diseases were to that date inconclusive. TIMN0104311-4312, at 4311 (US 21317) (O).

169. A July 9, 1963 press release reaffirmed the Tobacco Institute's public position to not accept any claims that smoking played a part in causation of human disease until further research provided facts to link smoking to certain health effects. The release quoted Allen: "With the numerous theories, statements, and resolutions that have been presented to the public, there is some danger of losing sight of what ought to be the basic objective of all who are concerned. That is, doing the needed research. We believe the answers will be found. And they will be found in the scientific laboratory, not through pronouncements either for or against tobacco." TIMN0098597-8598 at 8598 (US 21270) (A).

170. In September 1963, the Tobacco Institute issued a publication entitled "Tobacco and The Public Interest." It provided: "there ought to be a respite from theories, resolutions and emotional statements for a time at least, so that scientists can objectively evaluate what is known and what is not known." He reaffirmed Defendants' purported commitment to research to find necessary facts: "That is what this industry has tried to do in the past, through the research program of the [TIRC]. And that is what we shall do in the future, until enough facts are known to provide solutions to the health questions involved." TIMN0104251-4256 at 4254, 4256 (US 21316) (O).

171. On October 11, 1963, in order to intensify Defendants' public relations campaign in anticipation of the 1964 Report, the Tobacco Institute issued a press release: "Allen Outlines Some of Reasons Why Smoking-Health Theory is Disputed." It provided: "people sometimes forget that there are good reasons why the theories about smoking and health problems are in dispute, and are often questioned by responsible scientists. . . . [T]he original theory about smoking and lung cancer – the theory that smoke was a direct, contact carcinogen – has virtually

been abandoned." He asserted that the case against smoking rested largely on statistical studies, whose meanings were questioned by many leading medical statisticians, and that there was a growing interest among scientists studying the issue as to the possible role of constitutional and genetic factors. TIMN0118249-8250 at 8249 (US 21561) (O).

172. On November 3, 1963, a Tobacco Institute news release entitled "Tobacco Industry Confident Research Will Find Answers, George Allen Says," stated that Allen was "convinced that scientific research will discover the answers to questions about smoking and health and the causes of the diseases with which smoking has been associated." After cataloguing Defendants' positions on smoking and health, Allen "suggested a moratorium on resolutions and emotional statements about smoking and health, so that scientists can objectively evaluate what is known and what is not known." TIMN0118245-8246 at 8245, 8246 (US 77055) (O).

173. The Surgeon General's Report was released on January 11, 1964. Following the release of the Report, the principal approach by Defendants to the burgeoning knowledge of tobacco's harms was to "stay the course." Defendants continued to rely on the basic strategic formulations set forth in the mid-1950s. They continued to assert alternative causation theories (through arguments that had already been effectively refuted). Despite overwhelming evidence from a wide range of disciplines including statistics and epidemiology, pathology and chemistry, clinical observation, and animal experimentation, and their own observations, Defendants continued to claim "no proof" and continued to attempt to create doubt about the scientific findings.

174. Defendants intentionally exploited denial and rationalization by smokers. In a

memo to Joseph F. Cullman of Philip Morris, George Weissman described how in response to the 1964 Surgeon General's Report "we must in the near future provide some answers which will give smokers a psychological crutch and a self-rationale to continue smoking." Among the "crutches" and "rationales" proposed to be offered to the smokers were questions of medical causation, "that more research is needed," and that there are "contradictions" and "discrepancies." 1005038559-8561 at 8559-8560 (US 20189) (A).

175. In testimony on June 25, 1964 at a hearing of the Committee on Interstate and Foreign Commerce, Bowman Gray, Chairman of the Board of RJR, stated: "I believe . . . that nearly everyone familiar with these difficult problems would agree that there are large and basic areas where there is lack of knowledge, uncertainty, and where a great deal more research is essential before definitive answers can be made. Many distinguished scientists are of the opinion that it has not been established that smoking causes disease." 501935056-5071 at 5060 (US 20690) (A).

176. In a newspaper article dated July 12, 1964, Horace Kornegay, the Chairman and President of the Tobacco Institute, was quoted as saying: "There exists no definite proof that smoking cigarettes causes lung cancer or any other dreaded disease." TIMN013181-3181 (US 88779) (O).

177. On August 17, 1964, CTR issued a press release quoting Little: "the fact remains that knowledge is insufficient either to provide adequate proof of any hypothesis or to define the basic mechanisms of health and disease with which we are concerned." MNAT00287815-7818 at 7815 (US 21224) (A).

178. On December 29, 1965, the Tobacco Institute issued a press release stating that

research had not established whether smoking causes disease and that it was still an "open question." The release went on to state that "[i]f there is something in tobacco that is causally related to cancer or any other disease, the industry wants to find out what it is, and the sooner the better." TIMN0123790-3793 at 3790, 3791 (US 21330) (A).

179. On October 21, 1966, the Tobacco Institute issued a public statement to newspapers that stated that the tobacco industry knew "of no valid scientific evidence demonstrating that either 'tar' or nicotine is responsible for any human illness." TIMN0099040-9041 at 9040 (US 21550) (A).In 1967, Defendants received feedback showing that their "open controversy" strategy was working. Through a focus group with smokers conducted by public relations firm Ted Bates and Company for Lorillard, Defendants learned that

> because they are still smoking, smokers are <u>compelled</u> to feel the government has not proved its case. If they want to hear anything, it is reassurance that smoking does <u>not cause</u> lung cancer – not that there is a difference of opinion. Smokers agree that smoking is "unhealthy" but don't translate this as meaning it causes lung cancer or any specific, potentially fatal, disease. Smoking may cause shortness of breath, a cough or even a shorter life – but they don't expect it to give them lung cancer.

92382009-2011 at 2010 (US 21554) (A) (emphasis in original).

(i) Following Publication of the 1964 Report, the Scientific Community Continued to Document the Link Between Smoking and an Extraordinary Number of Serious Health Consequences

180. Smoking and health is one of the most studied subjects in the field of public health. The Smoking and Health Database, maintained by the Centers for Disease Control and Prevention, United States Department of Health and Human Services, is a bibliographic database – accessible via the internet – which covers over thirty years of information and abstracts with over 62,000 items on smoking and health. The medical literature is replete with extensive epidemiological studies, conducted over decades, comparing the disease and death rates of millions of smokers and nonsmokers. Every relevant population and demographic group has been examined. Examples of these studies are: American Cancer Prevention Study I and II; British Physicians Study; Dorn Study of United States Veterans; National Health Interview Study; Current Population Survey; and the Behavioral Risk Factor Survey. Burns WD, 9:2-16.

181. This body of literature has been reviewed and presented in Reports of the Surgeon General on Smoking and Health published in 1964, 1967, 1968, 1969, 1971, 1972, 1973, 1974, 1975, 1976, 1979, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1988, 1989, 1990, 1992, 1994, 1998, 2000, and 2001. Id.

182. The scientific conclusions presented in each of the Reports of the Surgeon General are based on the consensus of then-existing scientific understanding. Burns WD, 14:10-12.

183. Beginning with the first Report in 1964, the United States Public Health Service has followed the scientific consensus formation approach when producing a Report of the Surgeon General on Smoking and Health. The scientific community forms a consensus on issues

of causation by reviewing all of the scientific evidence available; examining that evidence for its strength, consistency, coherence, temporal association and biological plausibility; and then reaching a judgment as to whether the data support a causal relationship between smoking and a disease. Burns WD, 14:13-19.

184. The Reports go through a careful process to ensure that individual biases are not determining the conclusions or statements within the volume. That process occurs through a set of expert reviews of the Report at various stages in its preparation. Individual scientists, usually outside of the government, are first selected and asked to author chapters on a given topic. Sometimes the entire Report will be devoted to a specific topic, like cancer or heart disease or lung disease, but individuals are asked to offer chapters or sections on specific questions that relate to the issue examined, so that chapters can be assembled to cover the entire topic. The individual authors selected are extensively knowledgeable in the specific area that they are asked to write about, with the constraints that all of the pertinent scientific literature is to be considered and that conclusions of the chapter are to be based on the data presented in that literature rather than on the individual perspective of the author. Initial drafts of chapters are prepared for each Report by the individual authors, and the initial drafts are received by the editors and edited into chapters. Once the chapters are submitted, the editors make all subsequent changes and the chapters are not resubmitted to the authors for approval of those changes. The chapters are next sent out to a group of expert scientific reviewers for peer review of their scientific accuracy and completeness, as well as for balance, tone and appropriateness of the conclusions drawn from the scientific data. These comments are integrated into the volume, and the entire volume is sent out to a group of senior scientists in the academic community for review of the entire volume for its

accuracy, balance and tone. The Report is also formally reviewed by each of the agencies of the Public Health Service. Once these reviews are completed, the editors again integrate the comments into the text to strengthen the text and the science. Each Report is then submitted for formal clearance by the Centers for Disease Control, by the Assistant Secretary for Health and the Surgeon General, and by the Secretary of Health and Human Services. Once it is cleared, it is transmitted as a formal requirement of the law to Congress as the official position of the HHS on the issue. It is also released to the public and the press. Burns WD, 15:3-16-7.In 1960s and 1970s, the Report preparation process was accomplished within approximately a one-year time period. More recently, given the vast expansion in the body of smoking and health literature, it has required two to three years to accomplish the task of preparing a Report of the Surgeon General on Smoking and Health. Burns WD, 16:8-11.

185. The expansion in the body of smoking and health literature and intense study of the leading preventable cause of death in the United States has led scientists to determine that smoking is a cause of numerous additional diseases, as set out in the 2004 Surgeon General's Report (summarized in US FF § III.A(1)(a), supra).

(j) Defendants Continued Their Determined Fraudulent Campaign Throughout the Late 1960s and Early 1970s

186. Defendants responded to the formation of scientific consensus throughout this period in the same way they had responded to the evidence that smoking caused lung cancer in the early 1950s: with a campaign of proactive and reactive responses to scientific evidence that were designed to mislead the public about the health consequences of smoking in furtherance of the goals of the Enterprise.

187. For instance, publications of the Tobacco Institute consistently argued that evidence implicating cigarettes and smoking as causes of disease remained hypothetical, limited and static.

188. One of the most significant of those publications was created in 1967. In November 1967, at the direction of outside lawyers David Hardy of Shook, Hardy & Bacon, and Ed Jacobs of Cabell, Medinger, Forsyth & Decker, the Tiderock Corporation, the Tobacco Institute's public relations firm, prepared an action plan entitled "The Cigarette Controversy." The action plan laid out the objective of influencing public opinion by designing specific initiatives to re-establish the "cigarette controversy." The program called for the creation of a position paper for intra-industry use as well as one for distribution to the media and public. The plan included targeted categories for mailings such as the medical profession, scientists, communicators (press, radio, television), educators, top public figures, and 10,000 top corporate presidents. It also detailed the publication of magazine articles. 1005109086-9106 (US 20211) (O); TIMN0070816-0821 (US 77048) (O); 502644592-4616 (US 20703) (A).

189. In 1968, the Tobacco Institute published a pamphlet entitled "The Cigarette Controversy: An Examination of the Facts by the Tobacco Institute -- The Tobacco Industry's Contribution to Health Research." It declared:

> In order to help advance scientific understanding of the causes, as well as the means of preventing and controlling disease, the American tobacco industry has contributed millions of dollars for independent research on smoking and health. During the past thirteen years, the industry has supported over 300 independent health studies through the industry's Council for Tobacco Research - U.S.A. Do cigarettes cause disease? In spite of all the debate – in spite of all of the research – that questions is still unanswered. The industry will continue to seek the truth in the continuing

cigarette controversy.

TINY0006498-6601 at 6534-6536 (US 87056) (O); TIMN0104765-4868 at 4802-4803 (US 21613) (O).

190. An April 23, 1968 version of The Cigarette Controversy re-stated and re-emphasized Defendants' views:

> Q: Has any important new evidence against cigarettes been reported in recent years?
>
> A: No. Cigarettes today are branded guilty on virtually the same kind of evidence that was considered insufficient only a few years ago.
>
> * * *
> Q: Is smoking a health hazard?
> A: That question is still an open one.
>
> * * *
> At that time [the early 1950s], most scientists considered the findings of these studies insufficient to prove a case against smoking. Since then, many other studies have been done. But there is still no proof that cigarette smoking is a cause of lung cancer- or any other disease.

502644592-4616 at 4595, 4596 (US 20703) (A).

191. In a 1969 press release entitled "American Tobacco Refutes Anticigarette Charges," American announced it was distributing a another version of "The Cigarette Controversy." The booklet purported to review research done over the prior fifteen years and concluded that, in the absence of medical evidence, "the question is still an open one." It was mailed to more than 140,000 stockholders of American. TLT0962304-2309 at 2304 (US 88668) (O).

192. This updated version presented "facts" explaining that there was "controversy"

surrounding the science of smoking and health that must be answered by further scientific research and public discussion. The pamphlet was reviewed by CTR's Scientific Director Robert Hockett prior to publication. According to a letter from David Hardy, an attorney with Shook, Hardy & Bacon, to Hockett this Tobacco Institute booklet was written to explain to the public the "reasons why representatives of the Cigarette Industry contend that the case against cigarettes has not been proved." Hardy explained that "the Tobacco Institute has felt it desirable to have some readable document or pamphlet to give them which spells out some of the unanswered questions." 1005152849-2896 (US 20226) (O); HK0108004-8004 (US 21171) (O).

193. In 1971, the Tobacco Institute revised and republished another edition of "The cigarette controversy - eight questions and answers." It was distributed by direct mail to physicians, librarians, newspaper and magazine editors, Members of Congress and their top aides, members of public relations groups, medical school faculties, leading tobacco growers and executives of industry supplier firms, other United States business leaders, college and university presidents and department heads, science writers, and business and financial writers and securities analysts. Copies were also mailed to a large list of ministers. The mailing went to nearly 350,000 persons. It was sent to over 300 radio and TV station managers together with a sixty second announcement. TIMN300233-0257 (US 21675) (A); 690014815-4838 (US 21041) (O); TIMN0080470-0477 (US 21716) (O); 03768320-8337 (US 20064) (O).

194. The Tobacco Institute published a shorter summary of the 1970 "Cigarette Controversy" pamphlet in 1971 entitled "Smoking/Health An Age-Old Controversy." This leaflet briefly stated Defendants' opinions on the questions of causation and the validity of the scientific research conducted to date. A November 9, 1973 Tobacco Institute memorandum

regarded "Smoking/Health An Age-Old Controversy" as a "good synopsis of the [1970] pamphlet" and a "shorter version of the industry stand on the cigarette controversy" that should "be put to good use." TIMN0121524-1527 (US 21710) (A); TIMN0395428-5429 at 5429 (US 21365) (O).

195. In November 1971, RJR requested and received from the Tobacco Institute 1,000 copies of the pamphlet "Smoking/Health An Age Old Controversy" for use in responding to inquiries from children about smoking and health. Again in February 1973, 500 more copies were requested again for responding to school children. TIMN0121524-1527 (US 21710) (A); 500005148-5148 (US 21323) (A); 500013882-3882 (US 20611) (O).

196. After the publication of "The cigarette controversy," the Tobacco Institute published a series of advertisements in various magazines, inviting readers to request copies of the pamphlet. For example, on November 6, 1972, the Tobacco Institute ran an advertisement in *The Nation* that stated "YOU HAVE A RIGHT TO A FULL DISCUSSION ABOUT smoking and health. The cigarette question is still a question. Send for free booklet, 'The Cigarette Controversy.'" TIMN0124460-4460 (US 21333) (O).

197. The Tobacco Institute published a 1974 version of "The Cigarette Controversy" and continued to argue that objective research was needed to explore questions about smoking and health. The Cigarette Controversy stated that a causal relationship between smokers and illness or death had not been established and that such claims were unproven. Over one million copies of the Cigarette Controversy which was described as "the basic guide for other forms of communication" were in print by the end of the year. TIMN0017604-7612 (US 23020) (O); TIMN217628-7639 at 7634 (US 21263) (O).

198. Defendants pursued their fraudulent public relations strategy through addictional means during the same time period. In an address delivered on October 3, 1967, Paul D. Smith, Vice President and General Counsel of Philip Morris, stated: "The truth of the matter is this: No one knows whether cigarette smoking causes any human disease or in any way impairs human health." Smith also claimed that "[n]obody has yet been able to find any ingredient as found in tobacco or smoke that causes human disease." He also criticized the Public Health Service's accusations against tobacco and claimed that the public research community was biased due to influence from the distribution of federal funds. 2015068601-8612 at 8603, 8611 (US 20337) (O); 2010035814-5818 (US 21603) (O).

199. In 1968, a sportswriter named Stanley Frank wrote an article entitled "[T]o smoke or not to smoke–that is still the question," appearing in the "Science" section of *True.* In the article, Frank stated that he had reviewed the evidence on smoking and disease and found it inconclusive and contradictory. He also stated that the risks of smoking were not as real as the public had been led to believe. Frank later acknowledged that he was at the time an employee of Hill & Knowlton and he was paid $500 by the Tobacco Institute for the work. TIMN462375-2380 (US 21660) (O); 690012994-2994 (US 54322) (O).

200. The Tobacco Institute ordered millions of reprints of the Stanley Frank article for mass mailings. In April 1968, Lorillard, RJR Philip Morris, and B&W purchased reprints of the article for further mailings. 690012994-2994 (US 54322) (O); TIMN0070307-0307 (US 21571) (O); TIMN0070324-0335 (US 21592) (O); TIMN0071398-1401 (US 21301) (O).

201. Later, when the FTC began an investigation into industry involvement in the Frank article, the Tobacco Institute's Vice President of Public Relations, William Kloepfer,

falsely denied direct involvement or knowledge of payment for the freelance article or mailings of article reprints. In actuality, as noted above, the Tobacco Institute had initiated mass mailings of reprints before the article appeared.

202. In an internal memorandum outlining the Tobacco Institute's involvement with the Frank article, Kloepfer noted with approval that the Tobacco Institute's involvement in another article, "the Barron's editorial," had not been uncovered: "It should be noted that our earlier project, the advertisement of the Barron's editorial, escaped noticeable rebuttal. The editorial will be remembered, however, as an independent criticism of government activity, with no reasonable suspicion possible that cigarette interests were responsible for its preparation." TIMN0071398-1401 (US 21301) (O); 1005112459-2461 at 2460 (US 20213) (O).

203. Endeavors like the Cigarette Controversy series, the Frank article, and public statements of the industry were all undertaken as part of a concerted, fraudulent public relations strategy on the part of Defendants. In particular, the Tobacco Institute's internal documents reveal Defendants' true intentions with respect to the Tobacco Institute's press releases and public statements. The Tobacco Institute's 1968 "Tobacco and Health Research Procedural Memo" states: "The most important type of story is that which casts doubt on the cause and effect theory of disease and smoking. . . . [T]he headline should strongly call out the point – Controversy! Contradiction! Other factors! Unknowns!" TIMN0071488-1491 at 1489 (US 21302) (A).

204. The public relations effort was extensive. A December 24, 1968, statement prepared by Shook Hardy for Joseph F. Cullman, Chairman of the Board of Philip Morris explained:

> The cigarette industry recognizes its responsibility to the American

> people. It is anxious to seek the answer to the question of whether cigarettes are in fact the cause of any human disease. It is unfortunate that emotional propaganda against cigarettes has been permitted to suppress scientific inquiry and proof.

The statement also asserted that statistical association can never prove cause and effect. 1000313777-3779 at 3779 (US 20093) (O).

205. In 1969, the Tobacco Institute prepared an article entitled "Centuries-old Smoking/Health Controversy Continues," which asserted that the causes of cancer and heart disease were still unknown. The article stated that evidence concerning smoking and cardiovascular disease was, if anything, more confused than it was in 1964 and did not permit the conclusion that there was a causal relationship between smoking and cardiovascular disease. TIMN395434-5437 (US 21664) (O).

206. Claims that smoking was only statistically linked to disease persisted. A February 3, 1969 CTR press release explained:

> The scientist who has been associated with more research in tobacco and heath than any other person [Clarence Cook Little] declared today that there is no demonstrated causal relationship between smoking and any disease. The gaps in knowledge are so great that those who dogmatically assert otherwise – whether they state that there is or is not such a causal relationship – are premature in judgment. If anything, the pure biological evidence is pointing away from, not toward, the causal hypothesis. . . . Statistical associations between smoking and lung cancer, based on study of those two factors alone, are not proof of causal relationship in the opinion of most epidemiologists.

670307882-7891 at 7882 (US 21867) (A).

207. On February 6, 1969, General Counsel for Philip Morris, RJR, B&W, Lorillard, Liggett, and their members of the Committee of Counsel, approved the running of a copy of the

foregoing press release under the headline: "How much is known about smoking and health." The ad was run in major newspapers around the country, advertising journals, and medical journals, including papers in Richmond, Raleigh, Knoxville, Nashville, Washington, New York, Louisville, Lexington and Columbia; in the eastern edition of the *Wall Street Journal*, *Advertising Age*, *Broadcasting*, *Editor and Publisher*, *Southern Advertising and Publishing*, *National Association of Retail Druggist Journal*, *Food Topics*, *VEND*, *Retail Tobacconist*, *Southern Tobacco Journal, Tobacco*, *Tobacco Distributor and Confectionary Guide*, *Tobacco Jobber*, *Tobacco Leaf*, *Tobacco Record*, *Tobacco Reporter*, *US Tobacco Journal*, *Medical World News*, *Medical Economics*, and *US Medicine.* 1005132848-2849 (US 20222) (A); 1005153098-3099 (US 20227) (A); TIMN0081698-1698 (US 21309) (O); TIMN0000560-0561 (US 21874) (A); TIMN0081695-1696 (US 21308) (A).

208. Members of the Enterprise realized that they needed to change public opinion in order to sustain the viability of the tobacco industry even if there was no evidence to support their position. In an August 10, 1967 RJR memo from J.S. Dowdell to C.B. Wade, Dowdell acknowledged:

> Despite the fact that the industry has very little, if any, positive evidence upon which to base the aggressive campaign necessary at this late date to materially change public opinion, public attitudes can be changed. At least to the extent that the majority who now believe smoking is a <u>proven</u> cause of lung cancer could become doubtful; and, others who are now skeptical could be convinced that before the industry is further penalized more evidence is required. However, the unfavorable opinion on the hazards of smoking will remain definitely high, and will not shift in a favorable direction, until positive action is taken by the industry to counter the anti-smoking propaganda and publicity.

Dowdell advocated that the Tobacco Institute Executive Committee approve the 1967 Public

Relations Program and begin an aggressive public relations campaign. 500006192-6194 at 6193 (US 47761) (O).

209. At the same time, an internal B&W document entitled the "Smoking and Health Proposal" explained: "Doubt is our product since it is the best means of competing with the 'body of fact' that exists in the mind of the general public. It is also a means of establishing a controversy." 690010951-0959 at 0954 (US 21040) (A).

210. In a 1969 B&W document prepared for public dissemination entitled "How Eminent Men of Medicine and Science Challenged the Smoking-and-Health Theory During Recent Hearings in the U.S. Congress," B&W stated that "the question of smoking and health remains an open, not a closed, issue." B&W also asserted that "[t]he cause of cancer in humans, including the cause of cancer of the lung, is unknown" and that "[t]he concept that cigarette smoking is the cause of the increase in lung cancer and emphysema is a colossal blunder." 650332832-2839 at 2833, 2835-2836 (US 20947) (O).

211. On November 11, 1969, the Tobacco Institute published an advertisement entitled "All Advertising Should be Truthful," which contained a reprint of an article entitled "The Truth Seems a Little Twisted," from the Advertising Age, which attacked the American Cancer Society and the American Heart Association commercials regarding cigarette smoking risks. The article alleged that the commercials were untruthful and misleading; and that "wild" unsupported allegations should not be permitted on the air. The Tobacco Institute ran these advertisements in newspapers in New York, Boston, Philadelphia, Washington, Chicago, Los Angeles and San Francisco and in issues of *Time, Newsweek*, and the *Wall Street Journal*. 1005132842-2842 (US 21667) (O); 1005132840-2840 (US 21668) (O); 1005132841-2841 (US 21669) (O).

212. By the 1970s, the die of denial was long since cast and it proved impossible to shift Defendants' position of "no proof," "open question," and "controversy." Even as new data confirming the powerful harms of tobacco came to be understood and articulated, Defendants held fast to their position that the dangers of smoking had not been demonstrated. Brandt WD, 125:2-131:4.

213. In February 1970, the Tobacco Institute issued an announcement intended for publication titled "The Tobacco Institute believes the American public is entitled to complete, authenticated information about cigarette smoking and health," with the subtitle "The American Cancer Society does not seem to agree." This announcement challenged information issued by the American Cancer Society concerning a research project published by Dr. Oscar Auerbach titled: "The Effects of Cigarette Smoking Upon Dogs." TIMN0081949-1949 (US 21686) (O).

214. On April 30, 1970, the Tobacco Institute sent a press release that falsely claimed that the American Cancer Society had refused to release experimental data underlying the Auerbach/Hammond "smoking beagles" study (which discovered bronchial carcinoma in beagle dogs forced to smoke tobacco). T076378-6379 (US 21237) (O). For a complete discussion of the Enterprise's efforts with respect to the Auerbach Studies, see US FF § I, infra, and § III, supra.

215. In March 1970, the Tobacco Institute approved TV spots which alleged: "Today, we in this industry support more impartial research on the vital question of tobacco and health than any agency of the Federal Government, and more than all the voluntary agencies combined. We have great confidence that the findings of this research will lead the way in providing fair and accurate information regarding cigarette smoking." "Do Smokers have common sense? We in

the tobacco industry believe they do, and that millions of reasonable and responsible men and women who smoke will not be misled by the campaign of fear that is conducted against smoking." We believe that these emotional charges are no substitute for objective facts gathered from research." 2010008819-8822 at 8820 (US 20300) (O).

216. On April 22, 1970, a CTR press release issued by Leonard Zahn titled "Studies Raise Questions About Smoking as Health Hazard" quoted Clarence Cook Little as stating: "The deficiencies of the tobacco causation hypothesis and the need of much more research are becoming clearer to increasing numbers of research scientists." 500015901-5905 at 5902 (US 47778) (A).

217. On September 7, 1970, Dr. Sheldon Sommers, Scientific Director of CTR and Chairman of the SAB, asserted in an article entitled "Smoking and Health: Many Unanswered Questions": "I do not believe it has been scientifically established that cigarette smoking causes human disease," and "The Council for Tobacco Research is deeply committed to the search for answers." ZN16062-6065 at 6063, 6065 (US 21161) (O).

218. In December 1970, the Tobacco Institute issued yet another statement, published as an advertisement in major American newspapers, this one titled "The Question about Smoking and Health Is Still a Question":

> [A] major portion of this scientific inquiry has been financed by the people who know the most about cigarettes and have a great desire to learn the truth . . . the tobacco industry. And the industry has committed itself to this task in the most objective and scientific way possible. . . .1115 reports in all. Through this work much valuable data have been produced about lung cancer, heart disease, chronic respiratory ailments and other diseases. However, there's still a lot more to be learned. . . . There are eminent scientists who believe that the question of smoking and health is an open one and

> that research in this area must go forward. From the beginning, the tobacco industry has believed that the American people deserve objective, scientific answers. With this same credo in mind, the tobacco industry stands ready today to make new commitments for additional valid scientific research that offers to shed light on new facets of smoking and health.

But the eminent scientists in such pronouncements were never identified. Defendants widely distributed reprints of the advertisement and provided it to every member of Congress with a personal letter from Horace Kornegay, President of the Tobacco Institute. TIMN0081352-1352 (US 21305) (A); 2010008873-8873 (US 22010) (O); 1005132832-2832 (US 21666) (O); 2010008878-8879 (US 36514) (O); 500004807-4809 at 4807 (US 20608) (O); Brandt WD, 128:14-129:11.

219. Defendants' executives also continued to insist in the 1970s, as they had in the 1950s, that "if and when" any harmful elements were identified in cigarettes, they would take necessary steps to remove them. For example, on January 3, 1971, Joseph Cullman III, President of Philip Morris, explained in a "Face the Nation" TV interview:

> [T]his industry can face the future with confidence because when, as, and if any ingredient in cigarette smoke is identified as being injurious to human health, we are confident that we can eliminate that ingredient . . . . We do not believe that cigarettes are hazardous; we don't accept that. But we are working with the government, working very hard with the government, on various methods of ascertaining whether or not cigarettes can be found to be hazardous. . . . I believe they have not been proved to be unsafe.

1002605545-5564 at 5550, 5560 (US 35622) (A).

220. During the same televised interview, Cullman falsely denied that cigarettes posed a hazard to pregnant women or their infants. His statement contradicted what Helmut Wakeham, Philip Morris's Vice President for Corporate Research and Development, had informed him two

years earlier. 1002605545-5564 at 5561-62 (US 35622) (A); 1000211305-1305 (US 20080) (O).

221. In 1997, Cullman testified that he was speaking on behalf of the tobacco industry during this interview, and that he expected viewers of the 1970 program to believe what he said. Cullman PD, Minnesota v. Philip Morris, 6/11/97, 194:8-195:13.

222. In an effort to detract attention from smoking as a cause of disease, Defendants pointed to other possible causes. On January 3, 1971, a Tobacco Institute press release contained statements criticizing public health efforts, and suggested to the public that not enough was being done to investigate incidents of lung cancer in non-smokers. The press release alleged that "thousands of lung cancer victims who have never smoked cigarettes [are] being neglected by expensive propagation of myths instead of scientific knowledge." It also quoted Tobacco Institute President Horace Kornegay: "Any organization in a position to apply resources in the search for those keys– and which fails to do so – will continue to be guilty of cruel neglect of those whom it pretends to serve." Kornegay told the public that the defendants planned to provide more than $4 million in 1971 for independent scientific research. 2001052715-2718 at 2716, 2718 (US 21719) (O); TIMN0123716-3720 at 3717 (US 21328) (O).

223. A May 25, 1971 Tobacco Institute press release again publicly denied any links between smoking and health. In this press release, Defendants represented that "many eminent scientists" believe that "the question of smoking and health is still very much a question." TIMN0131768-3769 at 3769 (US 21337) (O).

224. On November 15, 1971, the Tobacco Institute stated in a press release challenging the claim that smoking is harmful to pregnant women. Horace Kornegay, President of the Tobacco Institute, was quoted: "We just don't know, and only further research on smoking and all

the other possible factors that may affect pregnancy will answer the question." TIMN0100469-0470 at 0469, 0470 (US 21687) (O).

225. TI prepared an entire "backgrounder" on smoking and pregnancy which was sent to newspaper editorial writers throughout the country. A TI press release discussing the backgrounder claimed that "...opponents of cigarettes are endeavoring to scare pregnant women with such statements as that of the Surgeon General that 'we are losing babies because of mothers' smoking.'" TIMN0100469-0470 at 0469 (US 21687) (O).

226. In the January 24, 1972 issue of the *Wall Street Journal*, Philip Morris's Senior Vice President James Bowling was quoted as stating: "[i]f our product is harmful . . . we'll stop making it. We now know enough that we can take anything out of our product, but we don't know what ingredients to take out." Bowling further stated that "[w]e don't know if smoking is harmful to health, and we think somebody ought to find out." 500324162-4164 at 4163 (US 20627) (A).

227. On February 1, 1972, the Tobacco Institute issued a press release declaring that "[t]he cigarette industry is as vitally concerned or more so than any other group in determining whether cigarette smoking causes human disease, whether there is some ingredient as found in cigarette smoke that can be shown to be responsible, and if so, what it is," and that "despite this effort [the commitment of $40 million by the tobacco industry for smoking and health research] the answers to the critical questions about smoking and health are still unknown." TIMN0120596-0597 at 0597 (US 21321) (O).

228. Defendants vilified reports demonstrating the adverse health effects of smoking. A February 26, 1972 Tobacco Institute press release asserted that the 1972 Surgeon General's

Report "insults the scientific community" and that the report was "another example of 'press conference science' -- an absolute masterpiece of bureaucratic obfuscation." The press release further asserted that "the number one health problem is not cigarette smoking, but is the extent to which public health officials may knowingly mislead the American public." TIMN0120602-0603 at 0602 (US 21322) (O).

229. The reason behind the Tobacco Institute's public relations campaign touting the open question controversy is explained by a 1972 Tobacco Institute internal document, which stated: "In the cigarette controversy, the public – especially those who are present and potential supporters (e.g. tobacco state congressmen and heavy smokers) – must perceive, understand, and believe in evidence to sustain their opinions that smoking may not be the causal factor." 87657703-7706 at 7705 (US 21098) (A).

230. In a 1975 marketing document, B&W acknowledged the necessity of continuing the "open controversy" strategy, for the company discovered that:

> Smokers perceive cigarette smoking as dangerous for one's health. However, they continue to smoke. Thus, they are faced with the fact that they are behaving illogically. They respond by providing either a rationalization for smoking or by repressing their perceptions of the dangers involved. . . . The advertising must also cope with consumer attitudes about smoking, providing either a rationale or a means of repressing the health concern.

680113760-3763 at 3761-3762 (US 20987) (A).

231. These materials, and the entirety of Defendants' fraudulent campaign, took public positions that were both extraordinarily uniform in content as a result of Defendants' coordination, and directly contrary to Defendants' internal assessments, which recognized that smoking caused disease.

(k) Defendants' Internal Documents and Research from the 1960s, 1970s, and Beyond Show Their Continued Recognition of the Health Effects of Cigarette Smoking

232. Defendants knew there was a consensus in the scientific community that smoking caused lung cancer and other diseases, yet they publicly insisted that there was a scientific controversy and disputed scientific findings linking smoking and disease knowing that their assertions were false.

233. Following the 1964 Surgeon General's Report, a report by Helmut Wakeham noted that "little basis for disputing the findings [of the 1964 Surgeon General's Report] at this time has appeared" and acknowledged that the report reflected a "professional approach" to the matter of smoking and health. However, Philip Morris continued to maintain – for another forty-five years – its public position that the causal link between smoking and health was an "open question." Philip Morris and the other Defendants attacked the Report with reckless disregard for the truth or falsity of their assertions. 1000335612-5625 at 5615, 5616 (US 22986) (A).

234. According to a February 1964 report prepared by Alan Rodgman at RJR, "Cigarette smoke from any tobacco type or tobacco blend contains carcinogenic components" The report also indicated that "None of the chemical data acquired in our studies or in studies conducted elsewhere is inconsistent with reported biological, pathological, or statistical data indicting cigarette smoke as a health hazard." 504912643-2713 at 2704 (US 20736) (O).

235. In August 1964, Rodgman recognized in an internal RJR document:

> Many nitrosamines [substances in tobacco smoke] have been shown to be carcinogenic for different organs in several species of animals. As nitrosamines are formed by the reaction of oxides of nitrogen with secondary amines, it is possible that cigarette smoke could contain nitrosoanabasine and nitrosonornicotine.

> Nitroanabasine, which is a derivative of the carcinogenic nitrosopiperidine, has now produced many tumors of the esophagus when given orally to rats.

501013277-3277 (US 20670) (O).

236. In 1966, in a semi-annual report on Philip Morris's "Project 6900," which explored the biological activity of tobacco smoke, Project Director Peter C. Luchsinger noted that "cigarettes will most likely be implicated as one of the causative agents in these diseases [emphysema and bronchitis]." Luchsinger noted that in a series of long-term primate experiments financed by Philip Morris, monkeys that were forced to inhale smoke had a higher rate of emphysema than those in a non-smoking control group. Project 6900 included other experiments with smoking rodents, cats and other animals to determine whether lung function was differently disabled by different types of cigarettes. Luchsinger's report, never released to the public and marked "[n]ot to be taken from this room," concluded based on long-term inhalation studies that "gross lung pathology can be induced by smoking cigarettes." 100341400-1414 at 1402, 1406 (US 20095) (O).

237. A May 1967 report on "Project 6900" described further tests with mice, pigs, monkeys and cats, concluding that filtered smoke was "no less tumorigenic than nonfiltered smoke." 1000342063-2073 at 2065 (US 20096) (O).

238. Wakeham informed Philip Morris executives on January 10, 1969, that "[n]ow we have a study of the effect of smoking in pregnancy which supports previous conclusions that smoking mothers produce smaller babies," and that the medical field recognized that "smaller babies suffer detrimental effects all through life," including "lower intelligence test scores at age 10." 1000211305-1307 at 1306 (US 20080) (O).

239. A 1969 Phillip Morris memorandum revealed:

> A review of recent mouse skin painting data from the Harrogate Laboratories appearing in progress reports of the Tobacco Research Council (Great Britain) indicates strong support for previously published data on the following points: Cigaret smoke condensate painted on the backs of mice over a two-year period produces tumors in numbers proportionate to the amount of condensate applied. In other words, the dose-response relationship is clearly being followed in these experiments.

2025010581-0583 at 0591 (US 20405) (O).

240. In the 1960s, RJR established a facility in Winston-Salem, North Carolina to research the health effects of smoking using mice. In this facility, nicknamed the "Mouse House," RJR scientists researched a number of specific areas, including studies of the actual mechanism whereby smoking causes emphysema. Internally, an RJR-commissioned report favorably described the Mouse House work as the most important of the smoking and health research efforts because it had come close to determining the underlying mechanism of emphysema. Bumgarner PD, Texas v. American Tobacco, 11/11/86, 32:9-33:5

241. Research done in RJR's science and health group located at the Mouse House was routinely withheld from the scientific community: scientists were forbidden both to discuss and publish their findings. Id., 35:3-38:18.

242. As a result of the Mouse House work, RJR was aware that smoking was linked with emphysema. Dr. Joseph Bumgarner, a scientist who worked in the "Mouse House, testified that he saw slides from within his group comparing normal lung tissue with exposed lung tissue that was showing signs of emphysema. After exposure the animals suffered weight loss and changes in metabolism of lipids both in surfactant and in lung and liver. Id., 63:17-66:15, 68:14-

20.

243. By 1969, RJR had a plan to carry out studies to examine the lungs of animals to see if they could detect changes in chemical metabolism that would relate to the diseased state. Id., 75:4-81:4.

244. RJR knew that exposing rabbits to tobacco smoke led to: slowing of heartbeat during puffs, decrease in pulse pressure, increased number of goblet cells, alveolar collapse, erythema of nasopharynx, acute pulmonary edema, erythema, endocardial hemorrhage, kidney disease, bronchial hyperplasia, emphysema, epithelial hyperplasia, bronchial edema, bronchiolar plugs, and gross lesions on lungs. 515384994-4999 (US 87983) (O).

245. Moreover, the fact that RJR scientists had produced emphysema in chronic-smoke- exposed rats was known to Philip Morris. In a 1969 Philip Morris document concerning the biological research program at the Mouse House and the links it showed to smoking and disease, a Philip Morris scientist wrote: "I met Dr. Price from R.J Reynolds at the CTR-USA meeting of December 11 and 12, 1969. He mentioned doing chronic cigarette smoke exposure studies with rats. The animals received up to 500 cigarettes and emphysema was produced." 1001882748-2749 at 2748 (US 26123) (A).

246. In 1970, Philip Morris's President complained to RJR about the work going on in the Mouse House. Despite the progress made there, RJR responded to the complaint by closing the Mouse House -- disbanding in one day, without notice to the staff, the entire research division, firing all twenty-six scientists at the Mouse House, and destroying years of smoking and health research. 110315968-5971 (US 26378) (A).

247. At the meeting informing employees working at the "Mouse House" of its

disbanding, the group was informed by its supervisor that the legal department had requested their lab notebooks. They were initially told that the notebooks would be returned, but they were not. Later, Anthony V. Colucci, Director of the company's Scientific Litigation Support Division, informed them that the notebooks had been accidentally destroyed in the legal department. Bumgarner PD, Texas v. American Tobacco, 11/11/96, 38:19-44:4.

248. On the day the "Mouse House" was disbanded, twenty-six people were called into a conference room, and with the exception of a few technicians, everyone was terminated. Scientists were told that the terminations were not a reflection on their work, but that "economic reasons" caused a change in the direction of the company. Id., 44:5-53:24.

249. When the scientists were dismissed, they were reminded that they had signed confidentiality agreements that meant they were not to discuss company research. Id., 44:5-53:24.

250. The United States' expert economist, Dr. Jeffrey Harris, testified that he reviewed the closing of the Mouse House in great detail. He concluded that although RJR later contracted with an outside program for certain research activities, the "magnitude and intensity of the research program subsequent to the closing of the Mouse House was diminished considerably." Harris TT, 10/18/04, 02753:12-20; 02768:5-02769:11.

251. Defendants also obtained evidence about the health effects of smoking that was contrary to their public statements from research they funded jointly. Dr. Gary Huber conducted smoking and health research funded by Defendants from 1972 to 1980 while working at Harvard University Medical School. Huber's research was conducted pursuant to a written agreement between Harvard and B&W, Liggett, Lorillard, RJR, and Philip Morris. The agreement created

the Harvard Research Tobacco and Health Program, with Huber as its head and chief investigator. Huber PD, Texas v. American Tobacco, 9/20/97, 11:9-12:16; 24:1-11; 24:13-25:9.

252. Huber and his group conducted numerous studies into the response of the lung to tobacco smoke using laboratory animals. These studies assessed the effects of smoke on the lung airways, lung parenchyma, and the heart and cardiovascular systems of animals. The studies also looked at COPD, emphysema, chronic bronchitis and coronary artery disease. Huber's animal studies utilized commercially available and research cigarettes, including commercially available cigarettes supplied by Defendants, and produced human-type diseases in the lungs of animals that inhaled cigarette smoke. The inhalation studies demonstrated changes in animal lungs that Huber's group concluded were analogous to human diseases. Id., 12:4-13:20; 40:13-15; 40:17-25; 42:2-43:3.

253. Huber specifically reported to his sponsors – B&W, Liggett, Lorillard, RJR, and Philip Morris – that his research demonstrated a response to inhaled cigarette smoke, including disease mechanisms similar to those associated with diseases in humans. Id., 12:20-13:20; 14:17-15:1; 15:6-16; 17:24-18:14; 18:22-24; 19:3-9.

254. Huber also conducted research funded by Defendants that studied changes in human smoking behavior as a function of lower and higher nicotine levels in cigarettes. The research (discussed at greater length in US FF § III.B, infra) demonstrated that smokers of lower nicotine cigarettes had an increased risk of developing pulmonary disease. Huber found that "compensation," or smoking behavior modifications, exhibited by smokers of lower nicotine cigarettes, rendered such cigarettes potentially more harmful than high nicotine counterparts because deeper inhalation carried the smoke deeper into the lung where adenocarcinoma

generally occurs. Id., 49:6-50:3, 50:5-51:4, 51:6-11.

255. Another group of inhalation studies conducted by Huber focused on rats. The research showed that rats exposed to cigarette smoke developed emphysema. Huber reported these results to Defendants. Id., 17:16-18, 18:21-24, 19:3-9.

256. Huber had frequent contact with scientists working for Defendants, including Alexander Spears of Lorillard, Alan Rodgman of RJR, and Thomas Osdene of Philip Morris, but Huber's access to them was controlled by Defendants' attorneys. Additionally, Spears made several site visits to Huber's laboratory and reviewed his progress reports. Spears admitted that the research conducted by Huber concluded that tobacco smoke caused changes in the respiratory tracts of the animals consistent with chronic obstructive lung disease. Id., 27:15-28:23; 29:4-13; Spears PD, Texas v. American Tobacco, 7/24/97, 233:1-238:12, 239:8-16; Spears PD, Cipollone v. Liggett, 7/26/84, 177:1-181:25.

257. On September 26, 1977, Philip Morris's Assistant General Counsel, Alexander Holtzman, sent a warning to the company President, Joseph Cullman, informing him that the results from the Harvard Project had led Huber to the conclusion that exposure of rats to cigarette smoke for six months causes emphysema and that a paper announcing the results would be delivered at the American College of Chest Physicians meeting the next month. Holtzman indicated that attorney William Shinn of Shook, Hardy & Bacon, under the direction of the industry counsel at the Tobacco Institute, had been sent to change Huber's mind on the results and causation, but the attorney did not succeed in altering the scientists' interpretation of the results of ths study. The Tobacco Institute prepared a press release to mitigate the damage in the event Huber's interpretation received any media attention. 1005053856-3856 (US 20197) (O).

258. In 1980, Huber sought to continue his research on animals at a time when he was making significant progress in his smoking and health research, but Defendants cut off funding for his research at Harvard and denied his request for funding after he moved later that year to the University of Kentucky. In a 1980 meeting at a Boston hotel, Defendants' attorneys told Huber that the reason funding for his research had been discontinued was because he was "getting too close to some things." The attorneys included Lee Stanford from Shook, Hardy & Bacon, Ernest Pepples from B&W, and Arthur Stevens from Lorillard. Huber PD, Texas v. American Tobacco, 9/20/97, 41:4-17; 43:21-44:15; 46:6-10; 46:12-24; 47:2-5; 73:12-74:18.

259. A number of exhibits were identified and introduced by plaintiff's and Defendant's counsel during Dr. Huber's September 20, 1997 deposition in the State of Texas litigation, documents that shed light on Dr. Huber's relationship with Defendants and that provide specific examples of information withheld from him by Defendants. HTT0010212-0214 (US 88807) (O); HTT0010215-0216 (US 88808) (O); HTT0010217-0219 (US 88809) (O); HTT0010220-0222 (US 88810) (O); HTT0010223-0225 (US 88811) (O); 1335866-5870 (US 88812) (O); HTT0010359-0360 (US 88815) (O); HTT0010361-0363 (US 88816) (O); HTT0010364-0368 (US 88817) (O); 1000037069-7069 (US 88818) (O); 501009723-9727 (US 88819) (O); 01421596-1600 (US 88820) (O); 03540193-0194 (US 88821) (O); 01346204-6208 (US 88822) (O); HTT0010392-0404 (US 88823) (O); 504822923-2923 (US 88824) (O); 504912643-2713 (US 88825) (O); HTT0010502-0503 (US 88826) (O); 0000130803-0803 (US 88827) (O); 01370915-0915 (US 88828) (O); HTT0010508-0510 (US 88829) (O); HTT0010511-0513 (US 88830) (O); HTT0010514-0516 (US 88831) (O); HTT0010517-0531 (US 88832) (O); HTT0010532-0534 (US 88833) (O).

260. When Huber was subpoenaed by the State of Texas to testify in its case against the Defendants in 1997, lawyers for Defendants, including Robert McDermott at Jones Day and Lee Stanford at Shook, Hardy & Bacon, contacted him and urged him "to keep the faith, to hold the line." Huber PD, Texas v. American Tobacco, 9/20/97, 99:21-100:2, 100:4-8. The attorneys implied to Huber that he did not "fully appreciate the full weight of Shook, Hardy & Bacon and Jones Day" representatives of the tobacco industry; the calls caused Huber to fear for the safety and financial security of his family. Id., 101:4-8, 10-21. The message to Huber was clear: Defendants wanted to keep him silent. Id., 102:3-17.

261. After the conclusion of his Texas case deposition, Defendants obtained an order sealing the transcript to keep Dr. Huber's testimony from public view and vigorously opposed efforts by litigants to obtain the transcript. Those efforts continued in this case, before this Court and in the Eastern District of Texas. Defendants succeeded in keeping the transcript sealed for almost seven years, but ultimately, the United States obtained an order from the Eastern District of Texas in 2004, unsealing the transcript. In re United States' Motion to Modify Sealing Orders, 5:03-MC-2 (E.D.Tex. June 18, 2003), Order of June 8, 2004.

262. Scientists working for Defendants also recognized the validity of research conducted by Dr. Oscar Auerbach with smoking beagles in the 1960s and early 1970s.

263. Principal Philip Morris scientist Raymond Fagan sent a memorandum dated February 25, 1970 to Wakeham, then Philip Morris's Research Director, on "Auerbach's Smoking Beagles" that described his visit to Auerbach's laboratory to observe a smoking dog and evidence slides. Fagan observed: "I would say that the experiment is a crude one but effective in that carcinoma in dogs has been produced. . . . The crux of the situation is whether there is general

agreement by qualified pathologists that carcinoma . . . has indeed been produced. And even if the cancer-production is invalidated the obvious emphysema produced cannot be denied." 1000837391-7392 at 7392 (US 20109) (O).

264. On January 7, 1969, Wakeham informed his superiors at Philip Morris that an abstract of a paper prepared by a researcher receiving funding from CTR stated: "scientific findings suggest that inhalation of fresh cigarette smoke may enhance carcinogenesis in mice." 682011667-1671 at 1668 (US 21021) (O).

265. On April 3, 1970, a company researcher of Gallaher Ltd. (American Tobacco Company's British-based sister company) wrote his managing director a confidential memo titled "Auerbach/Hammond Beagle Experiment" describing Auerbach's research as "undoubtedly a significant step forward" and that "[W]e believe that the Auerbach work proves beyond reasonable doubt that fresh whole cigarette smoke is carcinogenic to dog lungs and therefore it is highly likely that it is carcinogenic to human lungs." The research manager continued, "[t]he results of the research would appear to us to remove the controversy regarding the causation of the majority of human lung cancer," and "[t]o sum up, we are of the opinion that Auerbach's work proves beyond all reasonable doubt the causation of lung cancer by smoke." 321993992-3995 at 3992, 3993, 3994 (US 21688) (O).

266. After a review of a presentation before the Tobacco Working Group, Lorillard's Alexander Spears admitted that "[t]he slides (shown by Auerbach) represented obvious lung pathology with increased cellular proliferation with smoke exposure." Spears PD, Cipollone v. Liggett, 7/26/84, 190:1-191:25.

267. Defendants also reviewed outside research that confirmed that smoke constituents

were carcinogenic. A February 14, 1973 research report distributed to Defendants and their outside law firms linked smoking to cancer. The report, titled "Cigarette Smoke Condensate Preparation and Dermal Application to Mice," was prepared by Hazelton Laboratories and submitted to American, B&W, Liggett, Lorillard, Philip Morris, RJR, and the law firm of Covington & Burling. It reported that "97 of the 100 mice developed gross lesions in the skin in the area of dermal applications of benzo(a)pyrene." Examination indicated that these were squamous cell carcinomas. 501547434-7448 at 7444 (US 20682) (O).

268. In March 1975, a Lorillard chemist acknowledged in an internal memorandum that smoking posed a health hazard, and speculated about whether a nicotine-free cigarette could possibly reduce risk. 516966953-6953 (US 79297) (O).

269. A July 21, 1970 letter from B&W outside counsel Shook, Hardy, Ottman, Mitchell & Bacon to B&W General Counsel Debaun Bryant, reveals that B&W was concerned that statements of B&W and BAT employees, "which appear to demonstrate a belief on the part of company personnel that cigarette smoking has been established as a general health hazard or a cause of some particular disease or diseases," would expose B&W and BAT to smoking and health litigation. As examples, the letter discusses statements memorialized in the minutes of a conference at Kronberg, Germany, held from June 2 through 6, 1969 that was attended by both BAT and B&W researchers. It was David Hardy's opinion that such statements "constitute a real threat to the continued successful defense of smoking and health litigation." The letter also discusses additional concern stemming from the existence of a "'BAT/B&W Cost & Risk Pooling Agreement' executed in July 1969." 681805313-5319 at 5313, 5314, 5316 (US 30935) (O).

270. In 1974, David Hardy of Shook, Hardy & Bacon advised BATCo against

admitting to the public what its scientists knew internally – that smoking causes disease. At the time, BATCo was considering placing a warning on cigarette packages sold in England – with no government attribution – that stated that smoking "causes lung cancer, bronchitis, heart disease." In a letter addressed to BATCo, Hardy advised that this admission of fact would impede the defense of smoking and health litigation in the United States. He wrote:

> The proposed new warning removes the attribution of the warning to "H.M. Government," and instead appears to be a voluntary and direct admission by the cigarette manufacturer that the cigarettes contained in the package cause "lung cancer, bronchitis, heart disease." A wholly owned subsidiary of the manufacturer would, in our opinion, be adversely and prejudicially effected by such a voluntary warning even though it is a separate entity.
>
> * * *
>
> Once the fact and content of the warning got before a jury in the United States in a case involving the subsidiary, the defense of "no proof of causation" would be lost for all practical purposes. Such a result would indeed be unfortunate in view of the fact that in every instance where the matter has been explored in our Courts through expert testimony and otherwise, the cigarette manufacturer has prevailed.

110318156-8157 at 8156, 8157 (US 34974) (A).

271. Similarly, a January 1, 1976 letter from B&W Vice President and General Counsel, Ernest Pepples, to BATCo General Counsel, H.A. Morini, discusses B&W's concern that voluntary consent by BAT to bring additives under the Tobacco Medicine Act would prejudice B&W, because it could attribute to B&W knowledge of specific hazards, which would badly weaken B&W's litigation position. MNATPRIV00023457-3457 (US 86869) (O).

272. BATCo senior scientist S.J. Green questioned the logic of Defendants' stance on smoking and health in the light of its knowledge, stating in an October 27, 1976 memorandum

entitled "Cigarette Smoking and Causal Relationships":

> The problem of causality has been inflated to enormous proportions. The industry has retreated behind impossible demands for "scientific proof" whereas such proof has never been required as a basis for action in the legal and political fields. Indeed if the doctrine were widely adopted the results would be disastrous. . . . It may therefore be concluded that for certain groups of people smoking causes the incidence of certain diseases to be higher than it would otherwise be.

109938433-8436 at 8433, 8436 (US 34938) (O).

273. In February 1978, Rodgman wrote a colleague at the company instructing him to decline an invitation to write a handbook of trace substances found in tobacco. He explained that he had spoken with both in-house and law firm attorneys, who questioned whether it would be better to have RJR or an industry scientist write the handbook. Rodgman concluded: "Why hand the scientists antagonistic to the industry a complete compilation of the information useful to them in their efforts to put us out of business?" 501557495-7496 at 7496 (US 20684) (O).

274. In 1980, BATCo internally admitted: "It is simply incorrect to say, 'There is still no scientific proof that smoking causes ill-health.'" 680050983-1001 at 0998 (US 20981) (O).

275. Philip Morris scientist James Charles (who would later serve as the company's Vice President of Research) addressed a February 23, 1982 memorandum to department head Thomas Osdene, responding to the 1982 Surgeon General's Report on Smoking and Health: "Cigarette smoke <u>is</u> biologically active" and "cigarette smoke condensate applied to the backs of mice causes tumors." He listed nine facts on the biological activity of cigarette smoke and told Osdene "you may shred this document . . . or use [it] in any way you see fit." 1003171563-1567 at 1564, 1566 (US 26137) (O).

276. In May 4, 1982, a BATCo consultant, Francis Roe wrote to BAT and explained why he believed the industry position on causation to be unsupported, noting that "[i]t is not really true, as the American Tobacco industry would like to believe, that there is a raging worldwide controversy about the causal link between smoking and certain disease." 100432193-2203 at 2194 (US 20182) (O).

277. RJR's recognition of the validity of epidemiological and scientific studies led Anthony V. Colucci, Director of the company's Scientific Litigation Support Division, to write to attorney James E. Young of Jones, Day, Reavis & Pogue to push the "mechanistic argument" of causation. Colucci explicitly admitted: "that cigarettes are a risk factor for human lung cancer is an irrefutable fact." 507910855-0856 at 0855 (US 20803) (O).

278. Lorillard was aware that every major medical and scientific group in America that had studied the question has concluded that smoking causes disease. The company was equally aware that the only scientific studies to disagree with that conclusion were performed or funded by the tobacco industry. Spears PD, Texas v. American Tobacco, 7/24/97, 58:3-60:12.

279. Defendants' internal acceptance of the fact that smoking causes disease was unequivocally demonstrated during trial. First, former Philip Morris scientist Dr. William Farone, an impressive witness who appeared as both a fact and expert, testified:

> **Q: What was the view among Philip Morris scientists on the question of whether smoking cigarettes is a cause of lung cancer and other diseases?**
>
> A: There was widespread acceptance that smoking caused disease. I never talked with a scientist at Philip Morris who said that smoking doesn't cause disease.
>
> **Q: What was the basis for this understanding, if you**

know?

A: The compelling epidemiology such as that recounted in the Surgeon's General's reports, and our knowledge about the chemicals that were created by cigarettes and what was delivered to the smoker, hundreds of times per day on average.

* * *

Q: Did discussions about whether smoking causes adverse health effects occur frequently in and around the Richmond meetings?

A: I wouldn't necessarily say it was frequently discussed, because it was so well accepted internally. At the Richmond meetings and other meetings internally, the issue for the company was not whether smoking caused disease, but how the company should respond to that fact.

Q: Did any of these executives, in your discussions with them, challenge the validity of the scientific evidence that smoking caused disease?

A: No. Their comments generally focused on how the company could or should respond, not to whether the scientific evidence was valid. Remember, a main reason why they hired me in 1976 was to help develop a less hazardous cigarette. It seemed to me at the time I was hired, and certainly was the case during my entire time there, that hiring me for that job was itself implicit recognition that the cigarettes that were out there being sold were causing disease.

Farone WD, 66:11-18, 68:22-69:10. This testimony from Dr. Farone was not challenged by Defendants.

280. Subsequently, Jerry Whidby, a former Philip Morris scientist who continues to appear as a fact and expert witness for the company and was paid $2800 per day by Philip Morris for his testimony in this case, responded to questions from the Court on the same subject:

THE COURT: And you were asked in this question: "How long have you recognized that smoking was dangerous and caused cancer, emphysema and other diseases?"
And am I correct that you answered: "Since years before I went to work for Philip Morris."
So the answer would be, I gather, that for years before 1972, you recognized that smoking caused cancer, emphysema and other diseases; is that correct?

THE WITNESS: Yes, that is correct. When I was in high school and grammar school, we talked about it in school.

THE COURT: And the next question was: "Have you ever doubted that smoking was dangerous and caused cancer, emphysema and other diseases?"
And you answered: "No, I have never doubted that."
Is that correct?

THE WITNESS: That's what I answered, yes.

THE COURT: And were you aware from 1972 for at least 20 years, more than 20 years that you were working at Philip Morris, that Philip Morris was taking the public position that it was an open question as to whether smoking was dangerous and caused cancer, emphysema and other diseases?

THE WITNESS: I was aware of some of those statements, not all the statements, no.

THE COURT: And did you not also testify, and I must admit I probably don't have that marked -- but did you not also testify in your direct that that was the common knowledge amongst your scientific colleagues at Philip Morris, that smoking was dangerous and caused cancer, emphysema and other diseases?

THE WITNESS: People I worked around who shared their beliefs with me, yes, that's what we thought. We were there to make the cigarette better.

Whidby TT, 2/22/05, 14112:6-14113:11.

281. Former B&W scientist Dr. Jeffrey Wigand confirmed that B&W scientists held

the same views as their counterparts at Philip Morris. Wigand WD, 32:5-15, 34:16-35:8.

(l) Despite Their Internal Knowledge, Defendants Continued Their Public Campaign of Denial from 1975 Onward

282. A memo written by Fred Panzer, Vice President of the Tobacco Institute describes the strategy employed by Defendants:

> For nearly twenty years, this industry has employed a single strategy to defend itself on three major fronts–litigation, politics, and public opinion.
>
> While the strategy was brilliantly conceived and executed over the years helping us win important battles, it is only fair to say that it is not–no was it intended to be–a vehicle for victory. On the contrary, it has always been a holding strategy consisting of
>
> > –creating doubt about the health charge without actually denying it
> >
> > –advocating the public's right to smoke, without actually urging them to take up the practice
> >
> > –encouraging objective scientific research as the only way to resolve the question of health hazard.
>
> On the litigation front for which the strategy was designed, it has been successful. While we have not lost a liability case, this is not because juries have rejected the anti-smoking arguments.
>
> On the political front, the strategy has helped make possible an orderly retreat. But it is fair to say that it has not stemmed the pressure for new legislation, despite the major concessions we have made.
>
> On the public opinion front, however, our situation has deteriorated and will continue to worsen. This erosion will have an adverse effect on the other fronts, because here is where the beliefs, attitudes and actions of judges, juries, elected officials and government employees are formed.

Panzer, like others, noted that the open question strategy was not likely to be successful much

longer. Still, he believed the traditional defense was viable in some respects:

> As things stand we supply them [the public] with too little in the way of ready-made credible alternatives.
>
> * * *
>
> Two such credible alternatives exist:
>
> 1) The Constitutional Hypothesis i.e. people who smoke tend to differ importantly from people who do not, in their heredity, in constitutional makeup, in patterns of life, and in the pressure under which they live.
>
> 2) The Multi-factorial Hypothesis i.e. as science advances, more and more factors come under suspicion as contributing to the illnesses for which smoking is blamed–air pollution, viruses, food additives, occupational hazards and stresses.
>
> Our 1970 public opinion survey showed that a majority (52%) believed that cigarettes are only one of the many causes of smokers having more illnesses. It also showed that half of the people who believed that smokers have more illnesses than non-smokers accepted the constitutional hypothesis as the explanation.

TIMN0077551-7554, at 7551-7553 (US 63585) (A).

283. Consistently with the strategy, on January 14, 1975, the Tobacco Institute released another version of its booklet "The Cigarette Controversy." This announcement stated that:

> If smoking does cause disease, why, after years of intensive research, has it not been shown how this occurs? And why has no ingredient as found in smoke been identified as the causal factor? These are among the unanswered questions set forth in a new publication of the Tobacco Institute, entitled The Cigarette Controversy.

TIMN0120638-0639 at 0638 (US 21698) (O).

284. Defendants continued to recognize that their public relations campaign provided rationalization to the smoker. Their use of public relations was calculated and precise, and

internal research done on it demonstrated its efficacy. As B&W stated in a November 29, 1976 memo entitled "Cigarette Advertising History": "Good cigarette advertising in the past has given the average smoker a means of justification on the two dimensions typically used in anti-smoking arguments: [risk to health and immorality] . . . All good cigarette advertising has either directly addressed the anti-smoking arguments prevalent at the time or has created a strong, attractive image into which the besieged smoker could withdraw." 680086039-6044 at 6039, 6040 (US 20984) (A).

285. On June 6, 1977, Addison Yeaman, B&W's General Counsel, publically reaffirmed Defendants' promise to conduct meaningful research, as he explained in his remarks at Maxwell Associates Biannual Tobacco Seminar that: "I am utterly secure in saying to you that the tobacco industry recognizes its responsibility and its duty and that it will continue its every effort and at whatever cost to find the answer to the question, 'what part, if any, does tobacco play in human diseases'". CTRPUBLICSTMT001437-1445 at 1445 (US 21164) (O).

286. In a document distributed by B&W entitled "Facts Every Tobacco Man Should Remember," which appeared in the October 27, 1977 edition of the *United States Tobacco Journal*, B&W claimed that "The case against tobacco is not closed . . . in a sense, the jury still isn't able to retire to consider the case because it doesn't have all the relevant facts." 544001284-1297 at 1285-1286 (US 20935) (O).

287. The Tobacco Institute's public relations strategy was to focus as much attention as necessary in order to get Defendants' message out to the public that there was no definite link between smoking and health and that until answers to these questions were found, smokers should not fear that their health was endangered. Defendants' four-point platform is set out in a

December 29, 1977 Tobacco Institute press release:

1. The question of smoking and health is still a question requiring scientific resolution.

2. Tobacco smoke does not imperil normal nonsmokers.

3. The tobacco farm program is an essential part of public policy.

4. The freedom of choice of our industry's customers must be preserved.

TIFL0522279-2280 at 2280 (US 21424) (O).

288. In 1977, the Tobacco Institute published a pamphlet titled "Facts About the Smoking Controversy." The pamphlet claims that the 1964 Surgeon General's Report "was essentially a 'study of numbers – a selective review of population studies which compared disease rates among smokers, ex-smokers and non-smokers." It also stated: "Has the Surgeon General's report established that smoking causes cancer or other diseases? No." TIMN0055129-5135 at 5130 (US 21298) (O).

289. Defendants focused much of their public relations campaign on lung cancer and, as time went on, heart disease. In 1978, a Tobacco Institute pamphlet falsely stated: "The flat assertion that smoking causes lung cancer and heart disease and that the case is proved is not supported by many of the world's leading scientists." TIMN319568-9604 at 9578 (US 62902) (O).

290. On January 12, 1978, Ross Millhiser, President of Philip Morris, stated in a letter to the editor in the *New York Times*: "as for the lack of research on the 'harmful' effects of smoking, the fact is there is good reason to doubt the culpability of cigarette smoking in coronary

heart disease." ATC2411308-1308 (US 21378) (O) (Millhiser, "In Defense of Smoking," *New York Times*, January 12, 1978).

291. In May 1978, the Tobacco Institute published a fifty-four page document entitled "Fact or Fancy?" and sent it to broadcasters, editors, writers, and officers of women's associations and organizations "because the tobacco and health controversy has increasingly focused on women and smoking." The document was allegedly produced "to present more factual and balanced answers on the health question about which mature women need to know more," however, it presented the controversy argument that causality had not yet to be proven in any of the diseases and conditions linked statistically with cigarette smoking. 03731785-1838 (US 21466) (O); 04326897-6897 (US 21468) (O); 04326898-6898 (US21467) (O); 04326900-6900 (US 21469) (O); 04326901-6901 (US 21470) (O).

292. Defendants also continued to insist publicly that there was no need to undertake research to develop "safer" cigarettes, based on their assertion that no harm could be attributed to cigarettes. In June 1978, William Dwyer, Vice President of the Tobacco Institute, explained in an article entitled "Smoking: A Free Choice":

> A question often asked of the tobacco industry is whether researchers are developing a 'safe' cigarette. A variation of that question is whether low 'tar' nicotine cigarettes are safer. The tobacco industry is convinced that no cigarette has been proved unsafe. Therefore, they regard any suggestion of a 'safe' or 'safer' cigarette as tortured logic. The reduced 'tar' and nicotine cigarettes represent about 20 percent of sales and are in the marketplace because of consumer demand. That demand obviously reflects the personal preferences of smokers.

TIMN0074796-4800 at 4797 (US 21480) (A).

293. In December 1978, the Tobacco Institute published "The Smoking Controversy: A

Perspective." The publication stated that society was on the "brink of paranoia" regarding smoking; that "No one really knows whether this personalized warfare against tens of millions of Americans will prevent a single case of lung cancer," that "No one really knows the root or causes of cancer," and that the "wars" against disease that were being "waged by the government and voluntary health agencies" were "beyond the realm of science." TIMN0129593-9628 (US 21499) (O); MNAT00224317-4354 (US 21223) (A).

294. In 1979, the Tobacco Institute published a document entitled "TOBACCO from seed to smoke amid controversy." It declared that "it has not been established that smoking causes any human disease." 690142176-2180 at 2178 (US 21512) (O).

295. Defendants' public relations response to the release of the 1979 Surgeon General's Report demonstrates the extent to which they pursued the strategy of denying scientific consensus and seeking to discredit or undermine mainstream scientific investigation.

296. One year prior to the release of the 1979 Surgeon General's Report, Defendants' planned their response, which set up a task force to write and publish a rebuttal paper. Rather than have scientists evaluate the evidence or the Report's findings, the Tobacco Institute had a public relations staff member research, write, and edit this paper. Anne Duffin was assigned this responsibility, under the direction and guidance of the law firm Shook, Hardy & Bacon. Other public relations staff members re-read and edited the chapters of the document as it was drafted. TIMN0073990-3992 at 3990 (US 21525) (O).

297. On January 10, 1979, one day prior to the release of the 1979 Report of the Surgeon General on Smoking & Health, the Tobacco Institute published a document entitled "Smoking and Health 1964-1979: The Continuing Controversy." The Tobacco Institute prepared

it for distribution to the news media and tailored it to respond to the content of the 1979 Report. The Tobacco Institute had managed to obtain three draft chapters of the Surgeon General's Report which assisted it in the development of the publication. The document was 166 pages long and represented a major effort on the part of the tobacco industry to pre-empt the impact of the1979 Surgeon General's Report. TIMN0084430-4594 (US 21534) (O).

298. BATCo consultant Peter Lee characterized the Tobacco Institutes's 1979 document "The Continuing Controversy" (to which they referred as "TA73") as "misleading." He wrote that the Tobacco Institute's counter publication did not appear to understand the idea of medical causation:

> Discussion of the role of other factors can be particularly misleading when no discussion is made of relative magnitudes of effects. For example, heavy smokers are observed to have 20 or more times the lung cancer rates of non-smokers. Sure, this does not prove smoking causes lung cancer, but what it does mean, and TA73 never considers this, is that for any other factor to explain this association, it must have at least as strong an association with lung cancer as the observed association for smoking (and be highly correlated with the smoking habit).
>
> * * *
>
> TA73 seems ready to accept evidence implicating factors other than smoking in the aetiology of smoking. This is blatantly unscientific without requiring the same stringent standards of proof that it requires to accept evidence implicating smoking.

100214029-4047 at 4046 (US 21515) (O).

299. While he identified problems with the Tobacco Institute public relations document, Lee, a long-time consultant for Defendants on numerous smoking and health issues, acknowledged the scientific authority of the Surgeon General's Report: "There is no doubt that it is an impressive document." His memorandum dated February 9, 1979 also states that "The way

in which the information was presented was on the whole sound, scientific and unemotive." He predicted that the Report would become "the Number One basic reference document for smoking and health researchers the world over." 100214029-4047 at 4030 (US 21515) (O).

300. Defendants held a press conference the day before the 1979 Report was released, distributed press kits, and arranged for several television appearances by Horace Kornegay, President of the Tobacco Institute. A January 25, 1979 Tobacco Institute document memorializes remarks made at a TI Executive Committee meeting where the goal of the TI approach to the 1979 Surgeon General's Report was explained. Among these stated goals was: "...to encourage the press and public officials to apply a skeptical, or at least questioning, attitude to the substance of the report, and its source." TIMN0073990-3992 at 3991-92 (US 21525) (O); TIFL0403308-3312 at 3308 (US 62631) (O); TIMN0055304-5330 (US 62816) (A).

301. And while Defendants have argued at trial that their efforts to undermine the 1979 Report were not successful based on evidence that the editorial commentary in the press following release of the 1979 Report favored the Surgeon General, Defendants' internal documents note that their public relations efforts received press coverage that equaled what the findings of the Report received: "Most of us are aware that news coverage of the 1979 Surgeon General's Report achieved a balance, of sorts, with attention given to the Tobacco Institute's views both before and after the actual event." TIMN0073993-4002 at 3994 (JD-011663) (A).

302. On January 11, 1979, for example, the *News and Observer* of Raleigh, North Carolina, quoted the Tobacco Institute as stating that "'many scientists' are becoming concerned that the focus on cigarette smoking diverts attention from other suspected health hazards." TIMN0122721-2721 (US 21325) (O).

303. On January 17, 1979, the Tobacco Institute continued its aggressive public relations effort around the release of the 1979 Surgeon General's Report when it issued a press release which stated that the tobacco industry had spent $75 million on research over twenty years to learn whether smoking is harmful, but that "the case against cigarettes is not satisfactorily demonstrated." TIMN0074006-4006 (US 87985) (O).

304. Philip Morris's 1979 Annual Report similarly declared: "No conclusive clinical or medical proof of any cause-and-effect relationship between cigarette smoking and disease has yet been discovered." 2043819548-9607 at 9561 (US 20451*) (A).

305. While the public relations assault persisted, Defendants continued to falsely promise their commitment to disinterested research. In 1981, for instance, the Tobacco Institute published a document entitled "On Smoking - 21 questions and answers," written by the law firm Shook, Hardy & Bacon, which stated: "The tobacco industry has committed more that $91 million for independent research on smoking and health questions. . . . The tobacco industry remains committed to advancing scientific inquiry into the gaps in knowledge in the smoking controversy." TIEX0007587-8106 at 7589 (US 87061) (O).

306. On December 31, 1981, the Tobacco Institute published a document entitled "Tobacco Industry Research on Smoking and Health: A $104 Million Commitment" that again asserted: "questions of smoking and health are unresolved." 2046754709-4710 at 4710 (US 20474) (O).

307. In 1982, the Tobacco Institute launched a national series of advertisements on behalf of Defendants that addressed smoking and health issues, environmental tobacco smoke ("ETS"), public smoking restrictions, and youth smoking. These ads asked readers to keep an

open mind on tobacco issues and "[w]eigh both sides before [they] take sides." Readers were encouraged to request a free copy of the Tobacco Institute's booklet "Answers to the Most Asked Questions about Cigarettes." 03028799-8809 at 8801 (US 20053) (O).

308. On February 18, 1982, "Smoking and Cancer – A Scientific Perspective" was published by the Tobacco Institute in anticipation of the release of the 1982 Surgeon General's Report on Smoking and Health. The timing of the release was based on the Tobacco Institute's "axiom that it is more effective to take the initiative in situations involving a prospective negative news event." The press release accompanying the 104-page Tobacco Institute document stated that scientific research has not been able to establish a causal link between smoking and cancer. Copies were provided to correspondents and to various Members of Congress. 2025431644-1748 (US 20417) (O); TIMN0245529-5529 (US 21340) (O); 03762472-2472 (US 20063) (O); TIMN0245530-5532 (US 21341) (O); TIMN0245292-5292 (US 21339) (O); 03762460-2461 (US 20062) (O).

309. A May 7, 1982 memorandum to RJR executives advised that the key point to be made in any discussion of the issue of smoking and health "is that it is a legitimate scientific controversy which continued unresolved. The insistence on an open controversy in 1982, along with the company's other positions, was contrary to at least twenty-nine years of internal research at RJR, as well as more than three decades of conclusive mainstream scientific study. 502483421-3421 (US 20700) (A).

310. In 1983, in anticipation of 1983 Surgeon General's Report, "The Health Consequences of Smoking – Cardiovascular Disease," the Tobacco Institute published a document titled "Cigarette smoking and Heart Disease." It falsely stated that smoking was not an important

risk factor for heart disease, and that "[w]hether cigarette smoking is causally related to heart disease is not scientifically established." The document was first distributed to Defendants, who were asked not to distribute the publication widely, but to use it for internal purposes until the Report was released. Upon release, the Tobacco Institute distributed the document, as did the Defendants' European information clearinghouse, known as "INFOTAB" (discussed in detail at US FF § I.H, supra). 2501112047-2098 at 2090, 2091 (US 20561) (O); 2023274132-4133 (US 20386) (O); 2501023645-3645 (US 20556) (O).

311. Sheldon Sommers, Scientific Director of CTR, testified before Congress that year that "cigarette smoking has not been scientifically established to be a cause of chronic diseases, such as cancer, cardiovascular disease, or emphysema." 503685073-5075 at 5073 (US 88734) (O).

312. In 1984, RJR placed an ad in numerous newspapers, including the *New York Times*, entitled "Smoking and health: Some facts you've never heard about." This ad contained the statement,

> You hear a lot these days about reports that link smoking to certain diseases. This evidence has led many scientists and other people to conclude that smoking causes these diseases.
>
> But there is significant evidence on the other side of this issue.
>
> It is regularly ignored by the critics of smoking. And you rarely hear about it in the public media. But, it has helped persuade many scientists that the case against smoking is far from closed.
>
> No one wants to know the real answers more than RJR. That is why we are providing major funding for scientific research. The funds are given at arm's length to independent scientists who are free to publish whatever they find. We don't know where such research may lead. But this much we can promise: when we find the

answers, you'll hear about it.

504100135-0136 at 0136 (US 50882) (A).

313. In 1983, the Tobacco Institute published a pamphlet entitled "Tobacco Industry Research on Smoking and Health: A $120 Million Commitment." This pamphlet stated: "Since the first questions were raised about smoking as a possible health factor, the tobacco industry has believed that the American people deserve objective, scientific answers. The industry has committed itself to this task." 2045377870-7876 at 7871 (US 20460) (O).

314. In January 1984, an RJR press release declared:

> After all of this study, there are many scientists who believe there is no laboratory of clinical proof that cigarette smoke does – or does not – cause disease. We believe that reasonable people who examine all the evidence concerning smoking and disease would agree this is an open scientific controversy, not a closed case.

504638054-8056 at 8056 (US 20733) (O).

315. A month later, Edward Horrigan, Chairman of the Board at RJR, made the following comments as part of a panel discussion on the "Nightline" television program: (1) "It is not known whether cigarettes cause cancer"; (2) "Despite all the research to date, there has been no causal link established [between smoking and emphysema]"; and (3) "As a matter of fact, there are studies that while we are accused of being associated with heart disease, there have been studies conducted over 10 years that would say, again, that science is still puzzled over these forces." 502371212-1223 at 1216, 1217 (US 20699) (A).

316. Also in 1984, RJR placed an ad in daily newspapers entitled, "Can we have an open debate about smoking?" In this ad, RJR claimed that "Studies which conclude that smoking causes disease have regularly ignored significant evidence to the contrary", that these "scientific

findings come from research completely independent of the tobacco industry." It also states that "reasonable people who analyze it [the evidence] may come to see the issue not as a closed case, but as an open controversy." 513943434-3434 (US 50268) (A).

317. The same year, the Tobacco Institute published a document entitled: "Cigarette Smoking and Chronic Obstructive Lung Diseases: The Major Gaps in Knowledge." It declared that Defendants did not agree with the judgment of the Surgeon General's reports that cigarette smoking had been established as a cause of chronic bronchitis and that a causal relationship between smoking and either chronic bronchitis or emphysema had not been established scientifically. TI13062142-2156 (US 62409) (O).

318. Also in 1984, the Tobacco Institute published a report entitled "The Cigarette Controversy: Why More Research is Needed" as a formal statement of Defendants' position. It purported to be a review of testimony at the 1982 and 1983 congressional tobacco labeling hearings. It discussed the testimony of the thirty-nine scientists who testified to Congress, but undisclosed was the fact that most of these scientific witnesses were tobacco consultants receiving funds from the lawyer's Special Account No. 4. It stated:

> Thirty nine scientists presented testimony against proposals in the bills. Their evidence was based on their own published research or their review of scientific literature.
>
> Each of them in his or her own right is a recognized scientist, and most have reached eminence in their area of expertise.
>
> * * *
>
> The evidence presented by these men and women is summarized in the following pages. The scientists and their professional affiliations are listed in the Appendix. We publish this summary in the belief that the controversy about smoking must be resolved by

> scientific research and in the belief that informed discussion of the controversy is in the public interest.
>
> * * *
>
> Fifteen witnesses explained why they consider the hypothesis that cigarette smoking causes lung cancer to be unproven.
>
> * * *
>
> Witnesses also questioned the assertion that cigarette smoking causes emphysema in particular and chronic obstructive lung disease (COPD) in general.

The report was presented to United States Congressional committees. TI12431636-1650 at 1638, 1642,1645 (US 62384) (O).

319. In a July 1984 deposition, Lorillard's Alexander Spears declared that there were no epidemiological studies that could be designed or conducted to determine if cigarette smoking played a role in lung cancer development. Spears PD, Cipollone v. Liggett, 7/26/84, 200:22-25. Dr. Spears's statement was false.

320. In July 1984, RJR mailed letters from employee Ann Griffin addressed to various children who had written to the company. In the letters, RJR claimed to be engaged in an effort to determine the harmful effects of smoking for the benefit of smokers, promised to support disinterested research into smoking and health, and claimed that research had not revealed any "conclusive" evidence that any element in cigarettes causes disease. 505465919-5919 (US 20741) (A).

321. Over time, RJR sent numerous letters to survivors of deceased smokers, falsely denying the scientifically established links between smoking and disease. For instance, on August 18, 1988, RJR sent a letter to Anthony A. Christina (the widower of a lung cancer victim) in

which the company denied that there was any causal link between smoking and disease. 515792869-2869 (US 20869) (A).

322. At trial, the Court questioned RJR Chairman Andrew Schindler about the Christina letter, asking, if Mr. Schindler were writing the letter today, whether he would have admitted that smoking causes disease. Mr. Schindler indicated that the answer was no. Instead, "based on where we are now, it would have been significant health risks and may contribute to certain diseases in some people." Schindler TT, 1/24/05, 10810:9-21.

323. In January 1990, RJR's Public Relations Manager wrote in a letter to the principal of a grade school and one of the school's students:

> The tobacco industry is also concerned about the charges being made that smoking is responsible for so many serious diseases. Long before the present criticism began, the tobacco industry, in a sincere attempt to determine what harmful effects, if any, smoking might have on human health, established the Council for Tobacco Research--USA. The industry has also supported research grants directed by the American Medical Association. Over the years the tobacco industry has given in excess of $162 million to independent research on the controversies surrounding smoking-- more than all the voluntary health associations combined. Despite all the research going on, the simple and unfortunate fact is that scientists do not know the cause or causes of the chronic diseases reported to be associated with smoking.

508466199-6200 at 6199 (US 20813) (A).

324. RJR's letter-writing was paralleled by public relations activities of wider reach and visibility. Beginning in 1986, Brennan Dawson (formally Brennan Moran) as the spokesperson for the Tobacco Institute reiterated in numerous television appearances the Tobacco Institute's public position that the links between smoking and disease were based on statistics, and that the causative relationship between smoking and disease had not yet been established. The Tobacco

Institute's position that it had not been proven that smoking caused disease was not shared by a single public health organization during the entire time Dawson served as a spokesperson for the organization. Dawson WD, 64:17-23, 76:8-11; Dawson TT, 1/3/04, 10102:5-24.

325. During an August 17, 1986 appearance on the television program "Newsmaker Sunday," Dawson falsely stated, in response to a question about the Tobacco Institute's position on whether cigarette smoking is hazardous to the smoke, that "what we think . . . is that the facts are not clear. The causal relationship has not been established." (US 89296) (A).

326. Other spokespersons made similar false statements to those of Dawson. In January 1987, the Tobacco Institute's Vice President of Media Relations, Walker Merryman, appeared in an advertisement where he was quoted as saying, "I'll fill in the government's blanks. No judge would decide a case without hearing both sides. But a lot of people have done just that on the subject of smoking." TIMN0133708-3708 (US 77073) (O).

327. In an April 8, 1987 appearance on the television show "Ask An Expert," when asked whether smoking causes lung cancer, Dawson stated, "[i]t's not a yes and it's not a no. . . We're not going to tell anyone that smoking is good for them. We're not going to tell them that smoking is bad for them. It may be, it may not be." (no bates) (US 89292) (A).

328. In a January 11, 1989 appearance on the television show "Good Morning America," Dawson falsely stated that "all the links that have been established between smoking and certain diseases are based on statistics. What that means is that the causative relationship has not yet been established." This was 25 years after the Surgeon General announced a causal relationship between smoking and lung cancer. TIMN389474-9479 at 9475 (US 21286) (A).

329. Similarly, in an appearance on CNN's Crossfire on April 18, 1989, Dawson falsely

claimed:

> Statistically there are associations. In terms of biological causation that hasn't been found which is why I came to the conclusion that smokers have to make up their own minds. We all know what the Surgeon General's warnings say. In fact, the vast majority of people believe it so I think we are intelligent enough as adults to make up our own minds.

(US 89290)(A).

330. In a February 27, 1990 appearance on CBS Nightwatch, when asked whether she believed cigarette smoking "contributes to heart disease and cancer," Dawson refused to provide a straight answer, instead responding that "I think that that's an individual decision that each person needs to make for themself." CORTI1731-1738 at 1737 (US 87735) (A).

331. In a subsequent appearance on Crossfire on an April 11, 1990, when asked whether smoking caused cancer, heart attacks, or strokes?," Dawson again repeated the industry mantra that: "The links that have been made between smoking and disease you just rattled off, for example, are statistical in nature. The industry sticks by that position." CORTI1828-1841 at 1831 (US 85150) (A).

332. After repeated probing by the Court, Dawson acknowledged during trial that she intended the public to believe the statements on smoking and health matters she made during her television appearances before millions of viewers. Dawson TT, 1/12/05, 9929:11-9930:18.

333. Other high level executives of Defendants also admitted that they intended the public to rely on their public statements concerning the health consequences of smoking.

334. Defendant Altria, which was incorporated in 1985 (as Philip Morris Companies Inc.), effectively and actively controls the activities of all of its subsidiaries, including Defendant

Philip Morris USA Inc. and Philip Morris International, Inc. ("PM International"). Overall policies on all major aspects of Altria operating companies' operations are set by Altria management, and senior Altria executives, employees, and agents participate in and/or control decisions about how the operating companies implement those policies, through both formal and informal reporting relationships. Berlind PD, United States v. Philip Morris, 5/23/02, 8:4-10:13; 2071412978-3143 (US 23061*) (A).

335. The Chief Executive Officer and Chairman of Philip Morris Companies, Geoffrey Bible, was the ultimate authority on content of public statements on smoking and health made by Philip Morris Companies subsidiaries, including Philip Morris USA. Bible PD, United States v, Philip Morris, 8/22/02, 83:9-84:9, 85:22-86:25.

336. Bible agreed that when a company makes a statement about the carcinogens in its product, that has much more impact upon the consuming public than if some third party does. Bible PT, Minnesota v. Philip Morris, 3/2/98, 5762:5-9.

337. Bible testified that when Philip Morris made statements about smoking and health, the company intended the public – including consumers and public health authorities – to rely on them. Id., 5718:7-14.

338. Similarly, when former B&W CEO and current Reynolds American CEO Susan Ivey appeared at trial, she specifically admitted:

> Q. And so when Brown & Williamson puts statements on its website, doesn't it intend that consumers should act in reliance upon the information given by Brown & Williamson?
>
> A. Yes. Yes.

Ivey TT, 11/16/04, 6098:16-19

(m) Defendants' Fraudulent Public Relations Campaign and Failure to Admit to the Disease-Consequences of Cigarettes Continues to the Present Day

339. More than forty years after Defendants issued the Frank Statement and invented TIRC, Defendants' essential position on the relationship of smoking and health had remained virtually unchanged. In April 1994, in Congressional hearings before the Subcommittee on Heath and the Environment, Defendants' executives asserted yet again that the causal relationship of smoking and cancer had not been proven: the CEOs of Defendants B&W, Liggett, Lorillard, Philip Morris USA, and RJR publicly denied that smoking caused cancer. TLT0730001-0850 (US 77011) (O); TLT0730851-1975 (US 77012) (O); Brandt WD, 128:14-131:4; Cimons, Marlene, "Cigarette Chiefs Steadfastly Deny Smoking Kills," *Los Angeles Times*, April 15, 1994 at A1 (US 20468) (A).

340. The statements of the CEOs were restatements of positions the companies continued to take publicly and uniformly during this time period. For instance, in 1991, Philip Morris Companies coordinated with its international competitors the development of unified industry language continuing to deny that cigarette smoking had been proven to "cause" lung cancer. 2023235511-5512 (US 22725) (A).

341. Thomas Sandefur, CEO of B&W from 1993-1996, testified in 1994 that "there's a health risk with smoking and disease," but that it "hasn't been proven that it [smoking] causes lung cancer." Sandefur PD, Broin v. Philip Morris, 7/13/94, 84:22-86:5.

342. Sandefur also testified that he did not agree with the Surgeon General's conclusion that smoking does cause cancer, heart disease, and other diseases because, as he stated, "[t]hey're not dealing with whole smoke. They're dealing with painting of mice and that kind of thing. I

don't think that's valid in terms of human practices of smoking whole smoke." Later in the deposition, Sandefur admitted that he was unaware of any studies showing that whole smoke does not cause disease. Id., 86:6-87:4; 125:13-16.

343. During a 1994 deposition, Sandefur was unable to name one scientist or medical doctor totally unconnected with the tobacco industry who said that it had not been established that cigarette smoking causes cancer. He stated that, according to his personal opinion, scientists are convinced that smoking causes cancer because they do not know what causes cancer and that it is "a cop out." Id., 89:11-17; 144:15-145:9.

344. Sandefur also testified that he had never seen any sort of in-house document that shared evidence that smoking is hazardous to health and addictive. When asked what he would have done if he had ever seen such a document, he indicated that he "would have pursued it very vigorously and if I were convinced it was right, I would have made it public." Id., 124:11-125:3.

345. Holding the line articulated by Sandefur, in April 1995, B&W informed B&W Japan to answer inquiries about smoking and health by reassuring the person making the inquiries that whether or not smoking cause diseases "is still [an] inconclusive matter." 450180143-0143 (US 21885) (O).

346. Lorillard's position on causation as of the early1990s was as follows: "Lorillard does not and will not authorize the use of the Risk Factor formulation for causation for public relations purposes. We wish to maintain the traditional articulation: unproven, statistical, lack of mechanism. Risk Factor discussion is for scientists only and only in the courtroom and its controlled circumstances." 92348935-8936 (US 57176) (A); Stevens WD, 47:21-48:13.

347. Michael Prideaux, a spokesperson for BAT, stated in 1994 that BAT's current

position was that there was no causal link between smoking and cancer. 502576028-6030 at 6028 (US 86882) (O) ("British tobacco companies hushed up health dangers," *The Independent*, June 19, 1994).

348. Martin Broughton, Chairman of BAT plc, the ultimate parent of BATCo, falsely stated in opening remarks to analysts, investors and journalists at a briefing held at Windsor House on October 30, 1996, that "We have no internal research which proves that smoking causes lung cancer or other diseases or, indeed that, smoking is addictive." 800113810-3812 at 3810 (US 85343) (O).

349. In 1994, Philip Morris ran a paid newspaper statement about smoking, nicotine and addiction. It said: "Both smokers and non-smokers deserve to know facts, not innuendo, about cigarettes." The statement also said "'Philip Morris does not believe cigarette smoking is addictive. People can and do quit smoking all the time." 2023011263-1263 (US 20371) (A); Keane WD, 36:21-37:16.

350. In 1997, Philip Morris Companies Chief Executive Officer and Chairman, Geoffrey Bible, took the position that cigarettes were not a cause of lung cancer, but asserted that if they were shown to be, "I'd probably . . . shut [the] company down instantly to get a better hold of things." He made this statement four decades after Philip Morris USA recognized the carcinogenic and disease-causing nature of cigarettes in internal documents. Bible PD, Florida v. American Tobacco, 8/21/97, 27:1-24.

351. During a 1997 deposition, Joseph Cullman, former President and CEO of Philip Morris, was asked “If Philip Morris had concluded that there was sufficient proof that cigarettes caused emphysema, would Philip Morris nevertheless have continued to sell cigarettes?”

Cullman simply responded: “We have continued to manufacture cigarettes. That’s the answer that I give you.” Cullman PD, Minnesota v. Philip Morris, 6/11/97, 58:12-19.

352. Although Philip Morris expressed "differences" in opinions between it and the public health authorities, Senior Vice President and General Counsel Denise Keane could not cite any peer-reviewed article, study, or consensus report that disputed the scientific conclusion that smoking causes lung cancer. Keane WD,16:18-17:12.

353. Also in 1997, Bible testified that he did not agree with an Australian cigarette label warning that stated: “Smoking causes lung cancer.” Bible PD, Florida v. American, 8/21/97, 32:16-33:8.

354. In 1998, Bible testified that he would reassess his duties if one person died from smoking, but that he would only shut down the business after he talked to the government about whether they would ban the product. Bible PT, Minnesota v. Philip Morris, 3/2/98, 5708:2-5710:3.

355. The same year, Bible confirmed that Philip Morris intends for the public and consumers to rely on its public statements about cigarettes. Bible PT, Minnesota v. Philip Morris, C1-94-8565, 3/2/98, 5718:7-14.

356. As reported in the *New York Times*, Bible was asked, "[h]as anyone died from smoking cigarettes?" His reply: "I don't know if anyone died from smoking tobacco, I just don't know." VXA2511462-1464 at 1462 (US 22167) (A) (Bill Dedham, “Executive Says He's Uncertain about Tobacco's Harm,” *New York Times*, March 3, 1998, at A16).

357. At his deposition in this case, Bible testified that he did not know if Philip Morris cigarettes had ever caused disease in any individual. Bible PD, United States v. Philip Morris,

8/22/02, 63:19-64:5.

358. On October 13, 1999, Philip Morris launched a corporate website which discussed Philip Morris' public position on smoking and health issues. It stated: "There is an overwhelming medical and scientific consensus that cigarette smoking causes lung cancer, heart disease, emphysema, and other serious disease in smokers." Steve Parrish, Senior Vice President of Corporate Affairs for Altria Group, acknowledged that the overwhelming scientific consensus referenced in the October 1999 statement had existed for decades. Parrish further conceded that Philip Morris' refusal to acknowledge prior to October 1999 that smoking caused disease had damaged the company's credibility because there was no support for Philip Morris' view outside of the tobacco industry. 2085240087-0089 at 0087 (US 45673) (A); Parrish WD, 9:20-12:3, 15:5-10; Keane WD, 24:21-25:28:8.

359. Philip Morris's October 1999 website statement was preceded by a series of adverse litigation verdicts against the company, and was made within a few weeks of the of the filing of the complaint in this case, United States v. Philip Morris. Parrish WD, 13:1-14:21.

360. Prior to October 1999, Philip Morris' public position on disease causation was that smoking cigarettes was a risk factor for many diseases, but may or may not cause these diseases. A senior executive of Altira, Steve Parrish, admitted that Philip Morris' "risk factor" position was at odds with the position of the public health authorities who had stated for decades that smoking was not merely a risk factor for certain diseases, but caused these diseases as well. Parrish WD, 15:11-16:14

361. Although Philip Morris recognized this "overwhelming medical and scientific consensus," regarding cigarette smoking disease causation it did not admit to agreeing with it

prior to October 2000. Parrish acknowledged that Philip Morris changed its position on causation in 2000 because of criticism from the public health community, and that Philip Morris' decision to state its agreement with the "overwhelming medical and scientific consensus" was not based on any new scientific evidence. The scientific basis for the "overwhelming medical and scientific consensus" had existed for decades prior to Philip Morris' decision to state its agreement with it. Keane WD, 27:11-28:11; Parrish WD, 19:13-21:21.

362. At the same time that the campaign continued, at least one Philip Morris executive falsely denied Defendants' decades-long "open controversy" strategy. Denise Keane, Philip Morris General Counsel and an attorney at the company since 1977, discounted the "open controversy" on October 2, 2002, when she testified under oath: "From my perspective, Philip Morris has not historically discussed smoking" publicly until the 1997 statement submitted to Senator Hatch and its 1999 website. Keane WD, 26:1-11.

363. While Philip Morris can voluntarily change the information it includes on cigarette warning labels, the company chose not to change their labels after October 2000 when the company changed its position to state that smoking causes disease and is addictive. Bible PD, United States v. Philip Morris, 8/22/02, 112:12-113:17.

364. Philip Morris has never told its customers on the cigarette packaging or in onserts that it agrees that smoking causes cancer and other diseases in smokers. They have only included the website address on packages. Keane WD, 35:10-22.

365. And while Defendants have grudgingly made certain concessions in the form of limited or qualified admissions, testimony at the trial of this action demonstrates that Defendants have not changed.

366. RJR Chairman Andrew Schindler, who received between $44 million and $45 million in compensation in 2004, refused to admit on behalf of RJR at trial that smoking causes disease.

(i) Mr. Schindler was specifically challenged on this point, "you won't say sitting here today that cigarette smoking causes disease, right?" He responded: "Well, my testimony and what's on our Website today is cigarette smoking and inherent health risks may cause certain diseases in some people." Schindler TT, 1/24/05, 10811:11-19.

(ii) When pressed, "So you say it's possible, it's likely, but you don't say it does, do I have that right?" Mr. Schindler admitted, "Yes." Id., 10812:20-22.

(iii) RJR's website, like its Chairman, does not admit that smoking is a cause of disease, but merely repeats the mantra that Mr. Schindler retreated to at trial. Id., 10814:11-15.

(iv) Mr. Schinder admitted that the website does not state that smoking causes disease, despite the fact that RJR could, if it desired, state unequivocally that smoking causes disease. Id., 10816:22-10817:5.

367. Lorillard CEO Martin Orlowsky refused to admit to the full extent of smoking's harm. He was specifically asked, "Why hasn't Lorillard specifically stated publicly that smoking causes any diseases other than smoking emphysema, COPD or heart disease?" He responded:

> We have – in certain instances, we do not know if in fact the evidence, the scientific evidence is such that it warrants saying it does cause. However, Lorillard's longstanding position, as long as I've been with the company, is that certainly smoking can, and is a risk factor for those diseases.

Orlowsky TT, 10/13/04, 2303:7-15.

368. Arthur Stevens, former Senior Vice President and General Counsel of Lorillard responded in 2000 to the question of whether smoking causes disease: "I am aware that the company and others are of the position and the view, and I embrace that, that cigarette smoking is a risk factor for disease and I have no argument with the public health and the medical and other authorities taking that position." Stevens WD, 47:1-11.

369. The risk factor language was not and is not the position of the scientific community and Stevens knew that. When questioned regarding that testimony, Stevens testified: "Q: Were you aware, Mr. Stevens, that the risk factor formulation you stated was not the position of public health authorities? A: Yes I was." Stevens WD, 47:12-14.

370. In this litigation, Stevens was asked whether Lorillard's position in the 60s, 70s and 80s was that smoking was **not** a risk factor for disease. He testified: "I do not know every position Lorillard took in the defense of its product liability litigation over the decades in hundreds of cases. Therefore, I do not know that Lorillard consistently took a position in litigation that smoking is not a risk factor for disease. If I testified otherwise in any proceeding, I was mistaken." Stevens WD, 48:17-19.

371. Stevens' familiarity with Lorillard's positions taken during the same period of time improved and allowed him to answer the next question posed: "Q. And isn't it true that Lorillard consistently took a position during that same time in litigation that smoking does not cause disease? A. Yes, I believe that was our position." Stevens WD, 48:20-22.

372. Lorillard continues to issue public statements on smoking and health issues through PR Newswire. Press releases are sent by interstate wire transmission by PR Newswire,

which in turn sends the releases out to news media so that Lorillard can "get the message out." Milstein TT, 1/7/05, 9261:8-18, 9271:7-17.

373. Press releases are also kept on Lorillard's website, where they can be accessed and reviewed by the public. Id., 9272:12-20.

374. Lorillard General Counsel Ronald Milstein admitted that the content of recent Lorillard press releases on smoking and health issues, including addiction and the health effects of exposure to ETS, is similar to statements that Defendants have made for decades. Id., 9264:11-24; 9266:6-16; 9277:23-9278:12; TLT0961610-1610 (US 86693) (A); USX5710001-0002 (US 89303) (A); USX5710005-0006 (US 89305) (A). At trial, Mr. Milstein specifically refused to remove from Lorillard's website a press release on addiction, which falsely stated that willpower is the only smoking cessation aid that always works. Milstein TT, 1/7/05, 9288:12-19.

375. Two years after the effective date of the Master Settlement Agreement, B&W told visitors to its website: "We know of no way to verify that smoking is a cause of any particular person's adverse health or why smoking may have adverse health effects on some people and not others." (JD-012645) (O).

376. Liggett's controlling shareholder Bennett LeBow equivocated on the question of whether smoking causes lung cancer when he appeared at trial, despite touting Liggett's supposed admissions concerning the health consequences of smoking in an effort to secure favorable financial consideration in litigation and regulation over nearly a decade. LeBow TT, 2/7/05, 12246:11-14; 4/4/05, 17565:17-17567:17.

377. The foregoing evidence demonstrates an absence of change on the part of Defendants' communication with the public concerning the serious health risks posed by smoking.

(2) Passive Smoking: The "Open Question" Fraud Continues

(a) Introduction

378. Defendants' collective effort to maintain an open question as to the health effects of cigarette smoking was not limited to whether cigarettes caused disease in smokers themselves. During the 1970s, scientific evidence suggesting that exposure to cigarette smoke was hazardous to nonsmokers began to grow, and public health authorities began to warn of a potential health risk to both adults and children. Fearing government regulation to restrict smoking in public places and sensing a decrease in the social acceptability of smoking, Defendants were faced with a major threat to their profits.

379. In 1974, Tobacco Institute chairman Horace Kornegay warned that smoking restrictions not only impacted sales but also "could lead to the virtual elimination of cigarette smoking." TIMN0067732-7755 at 7734 (US 22047) (O). Reynolds CEO Ed Horrigan wrote Lorillard executives in 1982: "We all know that probably the biggest threat to our industry is the issue of passive smoking." 93443843-3843 (US 32289) (O). A 1986 BATCo document recorded: "The world tobacco industry sees the ETS issue as the most serious threat to our whole business." 100993158-3165 at 3158 (US 89556) (O). Philip Morris Companies Vice Chairman Bill Murray was advised in 1987: "The situation can't get any worse. Sales are down, can't be attributed to taxes or price increases. ETS is the link between smokers and non-smokers and is, thus, the anti's silver bullet." 2021502671-2678 at 2678 (US 22950) (A).

380. In response, Defendants crafted and implemented a broad-based "open question" strategy to attack and distort the evidence indicting passive smoking as a health hazard. Defendants initiatives and public statements with respect to passive smoking attempted to, and in many ways succeeded in, deceiving the public, distorting the scientific record, avoiding adverse

findings by government agencies, and forestalling indoor air restrictions. Before and after 1986 – the year the scientific community reached a consensus that passive smoking can cause disease in healthy nonsmokers – Defendants' objective to deceive the public, government officials, and scientists has remained constant. This was done in spite of the Frank Statement and other public promises to seek the truth and conduct objective research, and in spite of internal research suggesting that passive smoke was a health hazard. Defendants' conduct with respect to passive smoking continues to this day, when currently no Defendant publicly accepts the overwhelming scientific consensus that passive exposure to cigarette smoke causes disease and other adverse health effects.

(b) Exposure to Secondhand Tobacco Smoke Causes Disease and Other Adverse Health Effects

(i) The Scientific Record on Passive Smoking

381. Secondhand smoke, also called passive smoke or environmental tobacco smoke ("ETS"), is a mixture of mostly sidestream smoke given off by the smoldering cigarette and some mainstream smoke exhaled by smokers. Samet WD, 171:2-14; 186:10-13.

382. Evidence of the health risks of passive smoking comes from knowledge of the health risks of active smoking, the carcinogenicity and toxicity of components of mainstream and sidestream smoke, the evidence of the absorption by nonsmokers of disease-causing components of tobacco smoke, and epidemiological studies that have assessed the association of passive exposure with disease outcomes. Samet WD, 185:21-186:23; see also TLT0240387-0537 at 0470-0480, 0485-0517 (US 60597) (A) (1972 SGR); 03763710-3956 3804-3833 (US 34340) (A) (1975 SGR); VXA1604926-6020 at 5418-5457 (US 64071) (A) (1979 SGR); TLT0242222-2551 at 2468-2484 (US 60598) (A) (1982 SGR); VXA1601456-1742 at 1649-1675 (US 64059) (A) (1984 SGR); VXA2110670-1053 at 0806-0865 (US 63709) (A) (1986 SGR); VXA2111054-

1229 at 1072-1092 (US 63708) (A) (1986 NRC Report); VXA1600406-0824 at 0483-0598 (US 64066) (A) (1986 IARC) (A); DXA0390094-0699 at 0142-0194 (US 88654) (A) (1992 EPA Risk Assessment); JDM1870820-1333 at 0864-0867 (US 76125) (A) (1997 California EPA Report); 2065192422-2615 at 2438-2448 (US 22092) (A) (1997 Australia Report); VXA1600843-0981 at 0872-0879 (US 64063) (A) (1998 UK SCOTH Report); VXA1600982-1000 (US 64062) (A) (1999 WHO); VXA1240568-1258 at 0928-0957 (US 64315) (A) (2001 SGR); TLT0970001-1455 at 1191-1230 (US 86746) (A) (2002 IARC).

383. Conclusions about the causal relationship between secondhand smoke exposure and adverse health effects are based on the extensive evidence derived from epidemiological and toxicological investigation of active smoking. Additionally, studies using biomarkers of exposure and dose, such as the nicotine-specific metabolite cotinine and white cell adducts, document the absorption of known disease-causing components of secondhand smoke by exposed nonsmokers, confirming the biological plausibility and observed associations of secondhand smoke with adverse health effects. Samet WD, 172:17-173:18; VXA2110670-1053 at 0866-0914 (US 63709) (A) (1986 SGR); VXA2111054-1229 at 1127-1140 (US 63708) (A) (1986 NRC Report); VXA1600406-0824 at 0563-0570 (US 64066) (A) (1986 IARC); DXA0390094-0699 at 0181-0189 (US 88654) (A) (1992 EPA Risk Assessment); JDM1870820-1333 at 0875-0884 (US 76125) (A) (1997 California EPA); 2065192422-2615 at 2444-2446 (US 22092) (A) (1997 Australia Report); TLT0970001-1455 at 1207 (US 86746) (A) (2002 IARC).

384. Passive exposure of infants and children to tobacco smoke has adverse effects on their respiratory health, including increased risk for severe lower respiratory infections, middle ear disease (otitis media), chronic respiratory symptoms, and asthma. Passive exposure also causes a reduction in the rate of lung function growth during childhood, and is linked to Sudden

Infant Death Syndrome (SIDS). Samet WD, 132:10-14 (SIDS), 209:11-15 (acute respiratory infections), 220:1-6 (middle ear disease); 211:11-16 (chronic respiratory infections), 217:1-218:2 (asthma); 213:9-15 (reduced rate of lung growth), 220:11-13 (summary statement); (no bates) (US 17304) (A); see also 03763710-3956 at 3829 (US 34340) (A) (1975 SGR); VXA1601456-1742 at 1665-1670 (US 64059) (A) (1984 SGR); VXA2110670-1053 at 0720-0744 (US 63709) (A) (1986 SGR); DXA0390094-0699 at 0320-0387 (US 88654) (A) (1992 EPA Risk Assessment); JDM1870820-1333 at 0940-1153 (US 76125) (A) (1997 California EPA); 2065192422-2615 at 2164-2193 (US 22092) (A) (1997 Australia Report); VXA1600843-0981 at 0876-0877 (US 64063) (A) (1998 UK SCOTH Report); VXA1600982-1000 (US 64062) (A) (1999 WHO).

385. In adults, exposure to secondhand smoke causes lung cancer. Passive exposure causes two to three percent of all lung cancer cases in the United States. Compare DXA0390094-0699 at 0118, 0309 (US 88654) (A) (1992 EPA Risk Assessment) (over 3,000 deaths annually) with Samet WD, 63:15-64:5 (155,000 lung cancer deaths from all causes in 2000) and DXA0390094-0699 at 218 (US 88654) (A) (98,451 lung cancer deaths in 1979); see also (no bates) (US 17140) (A).

386. In 1986, the Surgeon General, the National Research Council of the National Academy of Sciences (NRC), and the International Agency for Research on Cancer (IARC) concluded that passive smoking causes lung cancer in nonsmokers. Samet WD, 179:13-180:10; (no bates) (US 17304) (A) (summary chart of authoritative scientific conclusions); VXA2110670-1053 (US 63709) (A) (1986 Surgeon General's Report); VXA2111054-1229 (US 63708) (A) (1986 NRC Report); VXA1600406-0824 (US 64066) (A) (1986 IARC Monograph).

387. The 1986 Surgeon General's Report represents a scientific consensus on

secondhand smoke causing lung cancer in adults and increased frequency of respiratory infections, increased respiratory symptoms, and slightly smaller rates of increase in lung function among smokers' children. Burns WD, 12:8-14:19, 68:20-69:2.

388. Exposure to secondhand smoke can also cause coronary heart disease in adults. Samet WD, 198:1-21 (coronary heart disease); (no bates) (US 17304) (A) (summary chart of authoritative scientific conclusions); JDM1870820-1333 (US 76125) (A) (1997 California EPA Report at Table ES.1); VXA1600843-0981 (US 64063) (A) (1998 Report of the UK Scientific Committee on Smoking and Health); VXA1240568-1258 at 0957 (US 64315) (A) (2001 SGR at 372).

389. Secondhand smoke is also linked to the exacerbation of asthma, reduced lung function, and respiratory symptoms in children. Samet WD, 132:10-14 (SIDS), 209:11-15 (acute respiratory infections), 220:1-6 (middle ear disease); 211:11-16 (chronic respiratory infections), 217:19-218:2 (asthma); 213:9-15 (reduced rate of lung growth), 220:11-13 (summary statement). See generally (no bates) (US 17304) (A) (summary of authoritative conclusions).

390. Dr. David M. Burns testified without objection as an expert witness on the science of tobacco and health, disease causation, the adverse health effects of secondhand smoke, and the effects of nicotine on smokers. Dr. Burns is a professor of medicine at the University of California at San Diego's School of Medicine and a licensed physician who is board certified in pulmonary and internal medicine. He is a recipient of the Surgeon General's Medallion and has participated as an author, editor, or reviewer on 18 Surgeon General's Reports. Dr. Burns was the Senior Scientific Editor and an author of the 1986 Surgeon General's Report "The Health Consequences of Involuntary Smoking." Dr. Burns has been the editor of ten National Cancer Institute monographs in its series on smoking and health. He remains an active researcher and

has published over 30 peer-reviewed articles on issues involving smoking and health. He is a member of the EPA's Indoor Air Quality Board and NCI's Advisory Committee for the COMMIT trial. VXB3740061-0081 (US 78526) (A).

391. Dr. Burns testified that since the 1986 Surgeon General's Report, reviews and assessments of the science on ETS conducted by other public health authorities have reviewed available evidence and consistently concluded that ETS causes lung cancer in adults. Burns WD, 12:8-14:19, 68:12-69:2. Indeed, each Surgeon General's Report is intended to represent and, as a result of an extensive peer-review process, does represent the scientific consensus on smoking and health topics. Burns WD, 13:7-15; 14:10-19; 16:12-17. Dr. Burns' expert opinion is that:

> Multiple reviews conducted by medical and governmental organizations over the years leave no doubt that environmental tobacco causes disease in nonsmokers and is particularly dangerous for children. Regulation of smoking in indoor environments clearly stands on a strong foundation of scientific support.

Burns WD, 68:12-69:2.

392. Dr. Jonathan M. Samet testified without objection as an expert in the science of smoking and health, including epidemiology, pulmonary medicine, and internal medicine. Samet TT, 9/29/04, 1026:10-18. Dr. Samet is professor and chair of the Department of Epidemiology at the Johns Hopkins Bloomberg School of Public Health. He is also a licensed physician who is board certified in pulmonary and internal medicine. Dr. Samet is a member of the National Academy of Sciences' Institute of Medicine, the Board of Scientific Counselors of the National Cancer Institute, and EPA's Clean Air Scientific Advisory Committee. He is a recipient of the

Surgeon General's Medallion and has participated as an author and/or editor of nine Surgeon General's Reports, including as Consulting Scientific Editor and an author for the 1986 Report. He has participated in four NCI monographs in its series on smoking and health. He chaired the 2002 review of active and passive smoking and health for the International Agency for Research on Cancer of the World Health Organization. Dr. Samet remains an active researcher and has published over 80 peer-reviewed articles on topics related to smoking and health. VXB3740316-0364 (US 78540) (A).

393. Defendants have recognized Dr. Samet's expertise and conservatism regarding opinions on the causal relation between adverse health effects and passive smoking in an internal litigation document that was written in or about August 1994:

> Dr. Samet is highly respected by his professional constituency. His scientific/medical capabilities appear to be quite sophisticated and are recognized as such by the professional societies with which he is affiliated. . . . This is probably due at least in part to his scientific conservatism regarding inference and interpretations from limited information; in most instances, Dr. Samet carefully assesses the available information prior to drawing general conclusions. . . . He seems to be a believer in the 'weight-of-the-evidence' approach and, usually, does not form conclusive opinions until the available data are sufficiently consistent and of high enough quality to warrant such opinions.

2050987891-7898 at 7891 (US 76214) (A).

394. In arriving at his opinions, Dr. Samet applied the Surgeon General's causal

criteria: consistency of association; strength of association; specificity of association; temporal relationship of the association; and coherence of association. Samet WD, 53:10-56:16; VXA1601844-2232 at 1874 (US 64057) (A) (1964 Surgeon General's Report); see (no bates) (US 17132) (A) and (no bates) (US 17133) (A).

395. In addition to concluding that exposure to secondhand smoke causes lung cancer and coronary heart disease in adults and a number of respiratory diseases in children, Dr. Samet concluded that the knowledge gained from active smoking, the knowledge of components of sidestream smoke, and the absence of a "safe" level of exposure to the carcinogens and toxins found in tobacco smoke, were sufficient evidence to conclude that the health risk posed by exposure to secondhand smoke is significant.

> [C]igarette smoke contains carcinogens and inhaling smoke causes cancer. We have no scientific evidence to postulate that there is a level of smoke exposure that does not increase lung cancer risk. On this basis alone, including our knowledge of the nature of the carcinogens in secondhand smoke and the evidence from active smokers, I conclude that exposure to secondhand smoke poses a significant health risk to nonsmokers. The association of involuntary smoking with lung cancer derives biological plausibility from the presence of carcinogens both in secondhand smoke and in sidestream smoke, its main source, and from the lack of a documented threshold dose for respiratory carcinogens in active smokers. In my opinion, therefore, the question is not whether secondhand smoke poses a risk; rather, the question is how much of a risk does secondhand smoke pose. That question has been studied by epidemiologists and public health officials over the past three decades, and they have quite consistently shown and

concluded that secondhand smoke causes disease, including lung cancer, in nonsmokers. Those findings would be expected, as secondhand smoke contains the same irritants, toxicants, and carcinogens that are found in sidestream and mainstream smoke, and biomarkers of tobacco smoke, such as cotinine and the carcinogen NNAL, show that secondhand smoke is absorbed by non-smokers.

Samet WD, 186:5-21.

(ii) Defendants' Expert Witnesses

396. In response to the overwhelming weight of scientific authority finding that secondhand smoke is a health risk to both adults and children, Defendants called only a statistician, Edwin Bradley. Dr. Bradley's opinion was that "the existing epidemiologic evidence does not demonstrate a valid association between ETS exposure and either lung cancer or heart disease." Bradley WD, 1:17-19.

397. Defendants did not call one expert witness in the field of epidemiology, disease causation, internal medicine, toxicology, or chemistry to challenge the scientific evidence on ETS. Defendants also did not offer any expert evidence to challenge the biological plausibility that passive smoking can cause cancer, namely, that active smoking causes disease and ETS contains the same known carcinogens as the smoke inhaled by the active smoker.

398. Dr. Bradley is not a medical doctor, epidemiologist, biologist, or toxicologist. Bradley TT, 3/15/05, 15553:2-23. Dr. Bradley is not aware of the components of tobacco smoke or what components might be carcinogens. Id. at 15538:5-15539:19. Dr. Bradley has never published on passive smoking; in fact, he has never published on smoking and health generally; he has never been the principal investigator on any grant of any kind. (no bates) (JD-025137) (A); Bradley TT, 03/15/05, 15564:19-15566:15, 15568:3-16. None of his analyses have ever

been subjected to peer review, much less published. Id. at 15564:19-24. Dr. Bradley is not qualified to use most of the Surgeon General's criteria for disease causation. Id. at 15467:4-11. He has not served on an editorial board of a journal or a government review panel. Id. at 15566:10-18. He retired from his position at the University of Alabama at Birmingham in 1997 to become a full-time professional witness and litigation consultant. Bradley WD, 10:4-5, 11:15-19; Bradley TT, 03/15/05, 15554:12-15555:24.

399. Dr. Bradley has testified on behalf of the tobacco industry in 25-30 cases over the past ten years, earning approximately $800,000. He earned $200,000 for this case alone. Most of the cases on which he has worked for Defendants involved active smoking. Bradley TT, 03/15/05, 15556:1-15558:21; Bradley WD, 18:14-16. In active smoking cases, Dr. Bradley continues to dispute the overwhelming scientific consensus that smoking causes disease, claiming instead that smoking "may" cause lung cancer, heart disease and emphysema. Bradley TT, 3/15/05, 15559:3-24. This opinion parrots the industry's long-time public position on active smoking. See supra US FF §§ III.A(1)(l) and (m).

400. In ruling on the Government's Daubert objection to Dr. Bradley's testimony, the Court stated, "There's . . . no question that all of the issues which the government very effectively raised in its cross-examination will go to my determinations about the credibility of this witness, both personal credibility and substantive credibility in terms of the testimony he's offered, and will weigh very heavily with me in terms of ultimate findings of fact." Bradley TT, 03/15/05, 15573:1-7.

401. Dr. Bradley's methodology questioned only the epidemiological evidence that secondhand smoke causes lung cancer and heart disease in adults. Bradley WD, 1:14-23; Bradley TT, 03/14/05, 15462:25-15463:4; Bradley TT, 03/15/05, 15561:13-19. Dr. Bradley did

not challenge any of the Surgeon General's conclusions, beginning with the 1975 Report, that exposure to parental smoking causes diseases in neonates and other children. Specifically, children of parents who smoke are more likely to have bronchitis and pneumonia during the first year of life due to smoke exposure (03763710-3956 at 3829 (US 34340) (A) (1975 SGR)), have an increased prevalence of reported respiratory symptoms (VXA1601456-1742 at 1671 (US 64059) (A) (1984 SGR)); and have an increased frequency of respiratory infections, increased respiratory symptoms, and smaller rates of increase in lung function (VXA2110670-1053 at 0690 (US 63709) (A) (1986 SGR)). See generally (no bates) (US 17304) (A) (chronic respiratory symptoms; decrement in pulmonary function; acute respiratory illness; middle ear disease; new asthma; severity of asthma episodes and symptoms; SIDS).

402. Indeed, Dr. Bradley did not even include these important scientific conclusions of the Surgeon General in his review of the authoritative scientific studies. See, e.g., Bradley WD, 119:7-14. Nor did he challenge the 1972 Surgeon General's conclusion that secondhand smoke exacerbates nonsmokers' allergies: "Tobacco smoke can contribute to the discomfort of many individuals. It exerts complex pharmacologic, irritative, and allergic effects, the clinical manifestations of which may be indistinguishable from one another. . . . Exposure to tobacco smoke may produce exacerbation of allergic symptoms in nonsmokers who are suffering from allergies of diverse causes." TLT0240387-0537 at 0495 (US 60597) (A) (1972 SGR).

403. Dr. Bradley's "methodology" was dependent on his evaluation of statistical significance. His position was that any epidemiological study whose result is not statistically significant *must* be discarded and cannot be relied upon to determine whether an association exists. Dr. Bradley stated: "If a purported association is not statistically significant, your inquiry can end there." Bradley WD, 25:8-14, 99:1-3; Bradley TT, 03/14/05, 15426:6-9.

404. No scientific or medical authority shares Dr. Bradley's view. Statistical significance is not a Bradford Hill or Surgeon General criterion at all; as described below, it is a statistician's term of art, a tool to evaluate chance in a particular study. Indeed, a careful reading of Dr. Bradley's testimony confirms that he recognizes this. Bradley WD, 21:19-22:15.

405. Moreover, Dr. Bradley admits that he stands alone in adopting and applying his test. When confronted with the conclusions of Sir Richard Peto, Sir Richard Doll, the Surgeon General, the EPA, WHO, IARC, National Research Council, and the American Heart Association, Bradley responded:

> I didn't say they were wrong. I said that my opinion is that [causation of lung cancer and CHD] has not been established. Now they have other judgments and methodologies they used to come to that conclusion. **Using my methodology, I cannot establish an association.**

Bradley TT, 03/15/05, 15563:3-15564:4 (emphasis added). Dr. Bradley did not testify that he consulted with any scientific or medical authority in establishing his causal criteria or reaching his conclusions.

406. The foundation of Dr. Bradley's opinion was "statistical significance." As a statistical term of art, statistical significance is determined solely by whether the value of one (also called the "null hypothesis," or the possibility that the observed risk is due to chance) is contained within a given confidence interval. Bradley TT, 03/14/05, 15427:16-15429:6. In determining statistical significance, no other causal evidence is evaluated.

407. Rothman & Greenland's MODERN EPIDEMIOLOGY, identified by Dr. Bradley as a leading epidemiological text, specifically rejects Dr. Bradley's position that statistical significance is a bright line test by which to accept or reject results of epidemiological studies. Bradley TT, 03/14/05, 15465:8-23. Instead Rothman & Greenland state:

Although a single confidence interval can be . . . informative, it is subject to the

> misinterpretation that values inside the interval are all equally compatible with the data, and all values outside it are equally incompatible. The specific level of confidence used in constructing a confidence interval is arbitrary, however; values of 95% or less often 90% are those most frequently used. A given confidence interval is but one of an infinite number of ranges nested within one another. **Points nearer the center of these ranges are more compatible with the data than points further away from the center**.

(no bates at 191) (JD-003150) (A) (emphasis added).

408. Indeed, as Rothman & Greenland emphasize, the point estimate found in a study is always the best answer to what the effect is, even if the confidence interval includes 1. Or, stated another way, "results that are not significant may be compatible with substantial effects. **Lack of [statistical] significance alone provides no evidence against such effects**." (no bates at 192) (JD-003150) (A) (emphasis added). Rothman & Greenland state: "It is lamentable to go to the trouble to calculate confidence limits and then use them for nothing more than classifying the study finding as statistically significant or not." (no bates at 194, Fig.12-2 at 190) (JD-003150) (A).

409. Dr. William Wecker, a statistician put forward by Defendants as an expert on the issue of the health benefit of low tar cigarettes, testified under questioning by the Court that the point estimate is the most accurate estimate of risk in a particular study. Using exhibits in which he used the height of bars to mark the point estimates within the "whiskers" of the confidence interval, Wecker testified: "[T]he better interpretation is that the best estimate we can make is the height of the bars [the point estimate] . . . . It's always the height of the bar that is the best estimate. It's a statistical term of art". Wecker TT, 03/15/05, 15693:23-15694:7.

410. When questioned by the Court, Dr. Bradley admitted that his methodology was in "fundamental disagreement" with Rothman & Greenland about "how much weight . . . should be given to the factor of statistical significance." Bradley also agreed that under the recognized

methodology of Rothman & Greenland, secondhand smoke studies whose confidence intervals include 1, and are therefore not statistically significant as a technical matter, are nonetheless more compatible with a positive association. Bradley TT, 3/15/05, 15548:22-15549:8, 15546:9-15.

411. Dr. Bradley chose to limit his analysis to epidemiological studies from the United States. In so doing, he arbitrarily eliminated all foreign studies, whether statistically significant or not, including the Hirayama and Trichopoulos studies. Bradley WD, 55:4-60:6. No review of the ETS evidence by any recognized authority has ever limited itself solely to the studies from one country. Many of the foreign studies have elevated, statistically significant relative risk estimates; See, e.g., VXA2110670-1053 at 0750-0766 (US 63709) (A) (1986 SGR); DXA0390094-0699 at 0225-0226 (US 88654) (A) (1992 EPA Risk Assessment). Bradley's "methodology" thus permitted him to exclude these results from consideration and from the meta-analysis he used to counter those relied upon by Dr. Samet. Bradley WD, 59:3-60:6.

412. Another element of Dr. Bradley's method is his belief that "relative risks below 2.0 are too weak to support a conclusion that an exposure is associated with a disease." Bradley TT, 03/14/05, 15473:12-16.

413. Yet again, Rothman & Greenland reject this proposition: "As [Bradford] Hill himself acknowledged, the fact that an association is weak does not rule out a causal connection." (no bates at 24) (JD-003150) (A). In fact, many risk factors with relative risks below two are considered important to public health. Bradley TT, 03/14/05, 15474:15-15475:18 (high blood pressure in men has a relative risk of 1.6 for coronary heart disease).

414. Rothman & Greenland specifically use active smoking and coronary heart disease (CHD), and secondhand smoke and lung cancer as examples of weak associations that are

recognized to be causal: "Cigarette smoking is not seriously doubted as a cause of cardiovascular disease. Another example would be passive smoking and lung cancer, a weak association that few consider to be noncausal." (no bates at 24) (JD-003150) (A). Dr. Bradley acknowledged under questioning by the Court that there is no bright line rule in epidemiology concerning the magnitude of the relative risk with regard to causation. Bradley TT, 03/14/05, 15473:17-19; see also Samet WD, 53:10-56:16; VXA1601844-2232 at 1874 (US 64057) (A) (1964 SGR); (no bates) (US 17132) (A) and (no bates) (US 17133) (A).

415. Dr. Samet's opinions are entirely consistent with the causal criteria set forth by the Surgeon General and the dictates of Rothman & Greenland. Dr. Samet relies on causal conclusions with regard to active smoking, the constituents of mainstream and secondhand smoke, and the absence of a "safe" threshold dose of tobacco smoke. Samet WD, 186:3-13.

416. While Dr. Bradley admitted that he is not qualified to interpret most of the Surgeon General's criteria on disease causation, he nonetheless criticized the methodology and quality of a number of the epidemiologic studies and meta-analyses relied on by Dr. Samet and the major scientific reviews of the evidence. Bradley TT, 03/15/05, 15467:4-11. Dr. Bradley testified that the studies were flawed because of misclassification bias (smokers classified as non-smokers) and confounding (other risk factors associated with lung cancer). Bradley WD, 2:13-3:10; Bradley TT, 3/15/05, 15544:5-15545:6.

417. Defendants' expert testimony that bias and confounding explain the increased risk of both lung cancer and heart disease among nonsmokers exposed to cigarette smoke did not present any novel concepts. Dr. Samet considered whether bias and confounding influenced study results and testified that they did not account for the magnitude of the excess risk of passive smoking shown in the epidemiological studies. Samet WD, 176:16-177:4, 177:9-23,

180:11-19, 187:9-188:3 ("The extent to which this bias explains the numerous reports of association between spouse smoking and lung cancer has been considered and found to be an insufficient basis for explaining the association of spouse smoking with lung cancer."); Samet WD, 188:4-189:7 ("Thus, confounding cannot explain the consistent findings by researchers over the past 25 years that secondhand smoke is associated with lung cancer."); see also Samet TT, 9/30/04, 1244:7-1245:17.

418. The scientific community has routinely addressed the issues of bias and confounding in evaluating studies of the association between lung cancer and passive smoking. In fact, all of the major reviews of the evidence on the lung cancer and heart disease risks of ETS discuss both bias and confounding at length and take both factors into consideration. See, e.g., VXA2110670-1053 at 0787 (US 63709) (A) (1986 SGR) ("Speculation that the positive results reported in Japan and Greece were due to cultural bias against admission of smoking by women in these more traditional societies may be discounted because positive significant findings have now been observed in the United States . . . where no comparable social stigma exists."); DXA0390094-0699 at 0243-0246, 0267-0279 (US 88654) (A) (1992 EPA Risk Assessment) (In summary, an examination of six non-ETS factors that may effect lung cancer risk finds none that explains the association between lung cancer and ETS exposure as observed by independent investigators across several countries that vary in social and cultural behavior, diet, and other characteristics."); TLT0970001-1455 at 1264-1266, 1269, 1409 (US 86746) (A) (2002 IARC) ("The excess risk is of the order of 20% for women and 30% for men and remains after controlling for potential sources of bias and confounding.").

419. More importantly, Dr. Bradley never advised the Court that there are biases in epidemiological studies that *reduce* the reported relative risks as well as biases that *increase*

them. He intentionally chose to take into consideration only those biases that would tend to increase reported risks. Similar critical information was omitted from recently published papers vetted and sponsored by Defendants. See supra US FF §§ III.A(2)(k)(i), (iv).

420. Scientific authorities have recognized that studies are also subject to biases that would tend to reduce reported risks. For example, the 2002 IARC Monograph stated, "Studies of the risk for lung cancer exposure to secondhand smoke have defined the reference [or control] group as never-smoking women with husbands who are nonsmokers. However, these women although not exposed at home, may be exposed to secondhand smoke outside the home. **This bias will tend to underestimate the true relative risk.**" TLT0970001-1455 at 1263 (US 86746) (A) (2002 IARC).

421. Relying on studies of cotinine levels found in the blood of never-smoking women with husbands who are nonsmokers, Alan K. Hackshaw, Deputy Director, Cancer Research United Kingdom and University College London Cancer Trials Centre, observed, "In the epidemiological studies the reference group – non-smoking women living with non-smokers – was taken to have no exposure and no increase in risk. Some of these women would have been exposed to environmental tobacco smoke from other sources. The average urinary continine in nonsmokers is not zero, yet nicotine from tobacco smoke is, for practical purposes, the only source of cotinine. **This increase in risk in the reference group will dilute (reduce) the relative risk estimate.**" 325300938-0946 at 0942 (US 20599)(A). Hackshaw calculated that adjusting for the exposure of the reference group increased the risk of lung cancer among never smoking women living with a smoking spouse in his meta-analysis from 1.24 to 1.42 (CI 1.21-1.66). Id. That is an absolute increase in the risk of lung cancer from 24% to a 42% increased risk. See also (no bates) (JD-024502) (A).

422. For all these reasons, Dr. Bradley's opinions, and Defendants' reliance on statistical significance, bias, and confounding to disregard the epidemiologic evidence, is overstated and not credible. Moreover, Defendants have put on no evidence to contest the testimony by the United States' experts and findings by public health authorities on the biological plausibility of harm caused by passive smoking, that is, that passive smoke contains carcinogens and toxins that are absorbed into the bodies of exposed nonsmokers.

(c) The Mounting Scientific Evidence That Passive Smoke is a Health Hazard

423. Several years after the 1964 Surgeon General's Report concluded that active smoking caused lung cancer and other diseases, the issue of the harms of exposure to secondhand smoke began to receive public attention.

424. In January 1971, Surgeon General Jesse Steinfeld spoke before the National Interagency Council on Smoking and Health, where he advocated indoor smoking regulations to protect nonsmokers. Steinfeld stated that: "Finally, evidence is accumulating that the nonsmoker may have untoward effects from the pollution his smoking neighbor is forcing upon him," and that "it is high time to ban smoking from all confined places such as restaurants, theaters, airplanes, trains, and buses." Dr. Steinfeld's speech generated press coverage across the country. TIMN0121541-1558 (US 65632) (O). In 1971, the Interstate Commerce Commission mandated separate smoking sections in the rear of all interstate buses. VXA2110670-1053 at 0973 (US 63709) (A); see 37 F.R. 5700 (Mar. 18, 1972) (ICC order issued on November 8, 1971 and effective April 17, 1972).

425. In February 1972, Surgeon General Steinfeld issued a new report to Congress that collected and reviewed the mounting body of scientific evidence concerning the risks of passive smoking. The Surgeon General described studies showing that "tar and nicotine levels in

sidestream smoke may be significantly higher than mainstream smoke and may be harmful to the nonsmoker." TLT0240387-0537 at 0505 (US 60597) (A) (1972 SGR); Samet TT, 09/29/04, 1044:25-1045:13.

426. In the 1972 Report, the Surgeon General also summarized the scientific evidence on the adverse effect of ETS on nonsmoker allergies:

> Tobacco smoke can contribute to the discomfort of many individuals. It exerts complex pharmacologic, irritative, and allergic effects, the clinical manifestations of which may be indistinguishable from one another. . . . Exposure to tobacco smoke may produce exacerbation of allergic symptoms in nonsmokers who are suffering from allergies of diverse causes.

TLT0240387-0537 at 0495 (US 60597) (A).

427. Chapter 8 of the 1972 Report, titled "Public Exposure to Air Pollution from Tobacco Smoke," catalogued the existing scientific findings concerning carbon monoxide and other constituents of tobacco smoke that can exacerbate existing heart disease and other conditions:

> The level of carbon monoxide attained in experiments using rooms filled with tobacco smoke has been shown to equal, and at times exceed, the legal limits for maximum air pollution permitted for ambient air quality in several localities and can also exceed the occupational Threshold Limit Values for a normal work period presently in effect in the United States as a whole. **The presence of such levels indicates that the effect of exposure to carbon monoxide may on occasion, depending upon the length of exposure, be sufficient to be harmful to the health of an exposed person.** This would be particularly significant for people who are already suffering from chronic bronchopulmonary disease and coronary heart disease. . . .
>
> Other components of tobacco smoke, such as particulate matter and the oxides of nitrogen, have been shown in various concentrations to adversely affect animal pulmonary and cardiac structure and function. The extent of the contributions of these substances to illnesses in humans exposed to the concentrations present in an atmosphere contaminated with tobacco smoke is not presently known.

TLT0240387-0537 at 0513 (US 60597) (A).

428. On February 26, 1972, Defendants counterattacked in a Tobacco Institute press

release disputing the 1972 Report. Quoting Tobacco Institute vice president J.C.B. Ehringhaus, Jr., the press release stated, "[T]he 1972 report of the Surgeon General to Congress on smoking and health 'insults the scientific community' and that 'the number one health problem is not cigarette smoking, but it is the extent to which public health officials may knowingly mislead the American public.'" Defendants' statement deceptively downplayed the significance of the Surgeon General's statements on secondhand smoke by focusing on statements about the difficulties encountered in collecting scientific evidence: "Ehringhaus noted that a 'new section' of the report dealt with allegedly hazardous effects of smoking on nonsmokers. But, the tobacco industry representative said, just three days after the report's release the Surgeon General went on television and said: 'The real problem is that . . . even in a crowded room, or an automobile, we can't measure the effect of the trace chemicals upon the nonsmoker.'" TIMN0120602-0603 (US 21322) (O).

429. In 1973, new federal regulations made nonsmoking sections in airplanes mandatory. VXA2110670-1053 at 0973 (US 63709) (A). See 38 F.R. 12207 at 12211.

430. Several of the earlier studies during the 1960s had focused on allergic and toxic substances in sidestream smoke – notably particulates in the form of soot and ash, but also carbon monoxide, nitrogen oxides, and other noxious/poisonous gases. A 1967 study by Czech researcher Milan Srch, for example, examined the impact of riding in a closed car with smokers and found that levels of carbon monoxide in the blood of the nonsmokers increased by 250%. TLT0240387-0537 at 0507 (US 60597) (A) (1972 SGR).

431. A different methodology was used in a 1973 experiment by the U.S. Department of Transportation, which measured ambient carbon monoxide in a bus where 23 cigarettes were smoked, compared to a situation where three cigarettes were smoked. At the driver's seat, carbon

monoxide levels rose to 33 parts per million (ppm) in the former situation, compared to 18 ppm in the latter. 03763710-3956 at 3812 (Table 2, ref. 44) (US 34340) (A) (1975 SGR). Both situations exceeded the "maximum acceptable ambient level of 9 ppm." Prolonged exposures to low levels of carbon monoxide had already been implicated in heart disease by 1975. 03763710-3956 at 3748-3749 (ref. 4) (US 34340) (A) (1975 SGR).

432. More generally, scientific studies documenting the health hazards of secondhand smoke increased in both quality and quantity in the 1970s. In 1970 and 1971, German researcher Hans-Peter Harke studied nonsmokers in smoky environments where there was ventilation and found a 50% increase in carbon monoxide in the blood. 03763710-3956 at 3816 (ref. 23) (US 34340) (A).

433. Other studies further analyzed the chemical composition of secondhand smoke. Ulrich Hoegg's 1972 study, for example, was only one of a number of studies at this time exploring the concentration of carbon monoxide in closed, smoke-filled environments. The sidestream smoke, for example, was found to contain a concentration of carbon monoxide nearly five times as great as that derived from mainstream smoke. 03763710-3956 at 3809-3810 (ref. 32) (US 34340) (A).

434. The 1975 Surgeon General's Report conducted another review of the increasing scientific evidence demonstrating that secondhand smoke causes adverse health effects, particularly in children. In Chapter 4, the Surgeon General reviewed the causation of disease in newborns: "Children of parents who smoke are more likely to have bronchitis and pneumonia during the first year of life, and this is probably at least partly due to their being exposed to cigarette smoke in the atmosphere." 03763710-3956 at 3829 (US 34340) (A).

435. Carbon monoxide continued to pose a health risk in secondhand smoke. The

Surgeon General also stated in the 1975 Report: "Even in cases where the ventilation was adequate, the measured CO levels did exceed the maximum acceptable ambient level of 9 ppm". 03763710-3956 at 3811 (US 34340) (1975 SGR)(A). The 1975 Report also warned of effects on patients with heart disease: "Levels of carbon monoxide commonly found in cigarette smoke-filled environments have been shown to decrease the exercise tolerance of patients with angina pectoris." 03763710-3956 at 3829 (US 34340) (A).

436. On December 29, 1977, the Tobacco Institute issued a press release claiming that the links between smoking and health generally were still unproven and that passive smoking in particular was not dangerous. In the press release, Tobacco Institute vice president Bill Dwyer stated that the first two points of the industry's "four-point platform" were: "1. The question of smoking and health is still a question requiring scientific resolution" and "2. Tobacco smoke does not imperil normal nonsmokers.'" TIFL0522279-2280 at 2280 (US 21424) (O).

437. In the late 1970s and continuing thereafter, more studies focused on hazardous components in secondhand smoke, as well as links to lung cancer, heart disease, and health effects on children. Earlier studies had noted the presence of benzpyrene in sidestream smoke; now, there was increasing attention given to nitrosamines, a family of carcinogens already coming under scrutiny for their presence in smoked and nitrate-cured meats. Studies by Klaus Brunneman and his colleagues in the late 1970's, for example, showed the presence of n-nitrosamines (which derive from nicotine), carbon monoxide, and others substances in sidestream smoke in even far greater concentrations than in mainstream smoke. The concentrations of these substances are 5 to 10 times higher in sidestream smoke. VXA1604926-6020 at 5422, 5633 (US 64071) (A) (1979 SGR). In addition, scientists had established that n-nitrosamines (NNN, NNK, etc.) were carcinogenic. VXA1604926-6020 at 5631-5633, 5648-

5649 (US 64071) (A) (1979 SGR).

438. Based on these studies and others, the Surgeon General stated in the 1979 Report: "Many of the substances, including nicotine, carbon monoxide, and ammonia, are found in much higher concentrations in sidestream smoke than in mainstream smoke. **Thus, the total smoke exposure of nonsmokers is quantitatively smaller than the exposure of smokers, but the smoke nonsmokers inhale may be qualitatively richer in certain compounds than mainstream smoke.** This qualitative difference in smoking exposure makes the quantification of the involuntary smoking exposure in terms of 'cigarette equivalents' confusing and inaccurate." VXA1604926-6020 at 5422-5431 (US 64071) (A) (emphasis added).

439. The 1979 Report, as the 1972 and 1975 Reports before it, addressed possible health effects passive smoking. After reviewing the scientific evidence and earlier warnings about the adverse effects of secondhand smoke, and emphasizing the effects of carbon monoxide on nonsmokers and the effects of tobacco smoke on exposed children, the Surgeon General warned:

> Tobacco smoke can be a significant source of atmospheric pollution in enclosed areas. Occasionally, under conditions of heavy smoking and poor ventilation, the maximum limit for an 8-hour work exposure to carbon monoxide (50 ppm) may be exceeded. The upper limit for CO in ambient air (9 ppm) may be exceeded even in cases where ventilation is adequate. . . .
>
> Children of parents who smoke are more likely to have bronchitis and pneumonia during the first year of life, and this may be due to their being exposed to cigarette smoke in the atmosphere.
>
> Levels of carbon monoxide which can be reached in cigarette smoke-filled environments have been shown to decrease the exercise duration required to induce angina pectoris in patients with coronary artery disease . . . [and to] reduce the exercise time until onset of dyspnea in patients with hypoxic chronic lung disease."

VXA1604926-6020 at 5449-5450 (US 64071) (A); see Samet TT, 9/29/04, 1045:15-24.

440. One week later, Defendants again went on the attack. The Tobacco Institute issued a press release on January 17, 1979, quoting their vice president Bill Dwyer:

> Dwyer said at the time the report was released that it was an attempt to "guess us out of business." The best the government can say is that cigarette smoking "may be hazardous to health." It may not be.

TIMN0074006-4006 (US 21303) (O).

441. Later in 1979, Defendant Tobacco Institute issued a brochure to the public called "Fact or Fancy?" that denied any adverse health effects caused by cigarettes. With respect to passive smoking, the brochure disputed that: "Women who smoke harm their babies before and after birth." Moreover the brochure claimed: "It is difficult to understand why parental smoking is blamed for a child's coughs or wheezes, in view of these conflicts in research findings." TIMN0133740-3798 at 3741, 3754 (US 21280) (A).

442. In 1980, following the lead of earlier researchers, James Repace of the United States Environmental Protection Agency and Alfred Lowrey of the United States Naval Research Laboratory conducted measurements of respirable particulates in cocktail lounges, restaurants, and public halls in both the presence and absence of smoking. Repace and Lowery found that short-term measurements in rooms with smokers yielded high respirable particulate concentrations, varying from 100 to 1000 micrograms per cubic meter. VXA2110670-1053 at 0826, 0852 (US 63709) (A) (1986 SGR).

443. James White and Herman Froeb published an article in the *New England Journal of Medicine* that same year finding that nonsmokers working in smoky environments tend to have pulmonary functions similar to light smokers. White and Froeb calculated that in terms of long-term lung (small-airway) dysfunction, nonsmokers working in a smoky environment had about the same risk of impairment as smokers who inhaled between one and ten cigarettes per day.

VXA2110670-1053 at 0744 (US 63709) (A) (1986 SGR).

444. In 1980, the Tobacco Institute published a brochure titled "A Two-Way Street" in which Defendants ignored the mounting evidence that passive smoke posed a hazard, particularly to young children: "First of all, it is important to understand that there is no convincing evidence that tobacco smoke causes disease in nonsmokers." 2024299572-9575 at 9573 (US 20401) (O).

445. The results of two major epidemiological investigations were published in 1981. First, Takeshi Hirayama, Chief of Epidemiology at Tokyo's National Cancer Centre Research Institute, published a study titled "Non-Smoking Wives of Heavy Smokers Have a Higher Risk of Lung-Cancer: A Study From Japan" in the *British Medical Journal*. Hirayama's study showed a significant correlation between lung cancer and ETS based on his epidemiological studies of 91,540 nonsmoking Japanese women over nearly fifteen years. Hirayama showed that wives of heavy smokers had "a higher risk of developing lung cancer" and that "the effect of passive smoking was most striking in younger couples and in agricultural families (ruling out the complication of urban air pollution), relative risk reaching 4.6, probably because of the lesser extent of the exposure to passive smoking outside the family in the case of rural residents." 2046342378-2380 (US 22963) (A); Samet WD, 176:15-177:4; US 17172 (A) (summary chart of Hirayama study).

446. Second, Dimitrios Trichopoulos, working with colleagues from the University of Athens School of Medicine and the Harvard School of Public Health, published a case-control study of 51 Greek women suffering from lung cancer in the *International Journal of Cancer*, finding that the non-smoking wives of heavy smokers had elevated lung cancer risks. 504437867-7870 (US 50615) (A); see also Samet WD, 177:5-23; (no bates) (US 17201) (A) (summary chart of Trichopoulos study). Trichopoulos, like Hirayama, found that lung cancer

was about twice as common among nonsmoking women whose husbands smoked as among nonsmoking women whose husbands did not smoke.

447. Later in 1981, the results of a third study were also reported in the *Journal of the National Cancer Institute* by Lawrence Garfinkel in a paper titled "Time trends in lung cancer mortality among nonsmokers and a note on passive smoking." Garfinkel 's observed risks of lung cancer were 1.27 for women married to men who smoked less than 20 cigarettes per day, and 1.10 for women married to smokers of more than 20 cigarettes per day. However, in contrast to the observed risks found by Hirayama and Trichopoulos, the elevated risks in the Garfinkel study were not statistically significant. TLT0242222-2551 at 2478-2479 (US 60598) (A).

448. Thus, all three major epidemiologic studies published as of 1981 showed an increased risk of lung cancer with passive smoke exposure. For the first time, the Surgeon General in 1982 warned about the link between secondhand smoke and lung cancer, stating in the Foreword:

> While the nature of this [lung cancer] association is unresolved, it does raise the concern that involuntary smoking may pose a carcinogenic risk to the nonsmoker. Any health risk resulting from involuntary smoke exposure is a serious public health concern because of the large numbers of nonsmokers in the population who are potentially exposed. **Therefore, for the purpose of preventive medicine, prudence dictates that nonsmokers avoid exposure to second-hand tobacco smoke to the extent possible.**

TLT0242222-2551 at 2228 (US 60598) (A) (1982 SGR) (emphasis added).

449. All three epidemiologic studies were reviewed, along with evidence of carcinogens in both mainstream and sidestream smoke, in Chapter 4 of the 1982 Report. The Report concluded that:

> 1. Mainstream and sidestream cigarette smoke contain similar chemical constituents. . . These constituents include known carcinogens, some of which are present in higher concentrations in sidestream smoke than they

are in mainstream smoke. . . .

2. In two epidemiological studies, an increased risk of lung cancer in nonsmoking wives of smoking husbands was found. In these studies, the nonsmoking wife's risk of lung cancer increased in relation to the extent of the husband's smoking. In a third study, the risk of lung cancer among nonsmoking wives of smoking husbands was also increased, but the difference was not statistically significant.

3. **Although the currently available evidence is not sufficient to conclude that passive or involuntary smoking causes lung cancer in nonsmokers, the evidence does raise a concern about a possible serious public health problem.**

TLT0242222-2551 at 2481 (US 60598) (A) (emphasis added).

450. In response to the three studies showing an increased risk of lung cancer among spouses married to smokers and the Surgeon General's warning of a "possible serious public health problem," Defendants again went on the attack. In 1982 and 1983, Defendant Tobacco Institute ran a series of advertisements called "Answers to the most asked questions about cigarettes." "Question 5" was "Does Cigarette Smoke Endanger Nonsmokers?" The Tobacco Institute's "answer" in the advertisement blatantly distorted both the scientific evidence and the Surgeon General's conclusions:

Here's what two major opponents of smoking said on the subject:

1. The Surgeon General. Clearly and simply put, he has not concluded from the scientific literature reviews that cigarette smoker causes disease in nonsmokers.

2. The American Cancer Society. A report covering 17 years and some 200,000 people indicated that 'second-hand' smoke has an insignificant effect on lung-cancer rates in nonsmokers. Fact from a report published by the Statistical Director of the Society in June, 1981.

A recent Japanese study made claims about lung cancer rates among nonsmokers. This got wide press coverage. But the validity of the study was seriously questioned by a variety of experts around the world.

TIMN0121194-1205 at 1196 (US 85358) (O); see also 93852854-2869 at 2854 (US 88574) (O).

451. The ad campaign attacking the 1982 Surgeon General's Report was substantial: "The campaign . . . [was] targeted to reach eight out of 10 Americans 25 years or older. It is appearing in publications including Newsweek, People, Sports Illustrated, Time, TV Guide, U.S. News & World Report . . . " Previous ads had already generated 10,000 requests for the Tobacco Institute's booklet. A series of nine ads were planned to run throughout 1982. TIMN0121194-1205 at 1196 (US 85358) (O); see also 93852922-2933 at 2931 (US 21118) (O); TI04591849-1855 at 1853 (US 22028) (O); TINY0006369-6379 at 6376 (US 87667) (O).

452. In October 1983, the Tobacco Institute ran another advertisement in the series called "Answers to the most asked questions about cigarettes," posing the question "What happens to cigarette smoke in the air?" The ad ran in the Wall Street Journal and other news media. Among other things, the ad stated, "Even the U.S. Surgeon General, an outspoken critic of smoking, said in 1982 that the available evidence is not sufficient to conclude that other people's smoke causes disease in nonsmokers. The fact is, no claim of adverse health effect of cigarette smoke on a healthy nonsmoker has yet been proved." TLT0601093-1095 at 1094 (US 65131) (O); TLT0601100-1104 at 1101-1102 (US 65133) (O).

453. The 1984 Surgeon General's Report continued to review the passive smoking evidence, looking specifically at the evidence of biomarkers showing exposure to and absorption of secondhand smoke components. The Surgeon General concluded, "Cigarette smoke can make a significant, measurable contribution to the level of indoor air pollution at levels of smoking and ventilation that are common in the indoor environment. The Report added that: "Nonsmokers who report exposure to environmental tobacco smoke have higher levels of urinary cotinine, a metabolite of nicotine, than those who do not report such exposure." The Report also reviewed the scientific evidence on adverse health effects on children and reiterated the conclusion from

the 1982 Report: "The children of smoking parents appear to have an increased prevalence of reported respiratory symptoms, and have an increased frequency of bronchitis and pneumonia early in life." VXA2110670-1053 at 1475 (US 64059) (A).

454. In 1984, Defendant Reynolds ran an advertisement entitled, "Can we have an open debate about smoking?" Among other things, the advertisement stated, "Studies which conclude that smoking causes disease have regularly ignored significant evidence to the contrary. These scientific findings come from research completely independent of the tobacco industry. We at R. J. Reynolds think you will find such evidence very interesting. We think reasonable people who analyze it may come to see this issue as not a closed case, but as an open controversy." Reynolds included the adverse health effects of secondhand smoke in its campaign:

> We will also explore other important issues including relations between smokers and non-smokers, smoking among our youth, and 'passive smoking.' Some of the things we say may surprise you. Even the fact that we say them may prove controversial. But we won't shy away from the controversy because, quite frankly, that's our whole point. We don't say there are no questions about smoking. Just the opposite. We say there are lots of questions – but, as yet, no simple answers.

513943434-3434 (US 50268) (A).

455. Subsequently in 1984, Reynolds ran an advertisement entitled "Smoking and Health: Some facts you've never heard about." The advertisement directly attacked the conclusions of the Hirayama study:

> You also hear a lot today about 'passive smoking' – breathing other people's cigarette smoke. One study from Japan, which recently received tremendous publicity, claimed to have shown that wives of smokers ran a greater risk of lung cancer than wives of non-smokers. But this study contained such serious flaws that it was quickly and strongly criticized by several independent scientists – including the statistician who designed the test used in the study.

506100136-0136 (US 50882) (A).

456. In fact, studies confirming the original Hirayama/Trichopoulos findings continued to accumulate in the 1980s. See, e.g., VXA2110670-1053 at 0755-0775 (US 63709) (A) (1986 SGR). In addition, Hirayama published follow-up studies in 1983 and 1984 finding essentially identical results to those reported in his 1981 paper. VXA2110670-1053 at 0755, 0759 (US 63709) (A) (Reported relative risks were 1.42, 1.58, and 1.91 for nonsmokers married to smokers of 1-14 cigarettes/day, 15-19 cigarettes/day, and 20+ cigarettes/day, respectively.). Trichopoulos also published a report in 1984 updating his findings. VXA2110670-1053 at 0763 (US 63709) (A) (Reported relative risks were 1.9 and 2.5 for women married to smokers of 1-20 cigarettes/day and 21+ cigarettes/day, respectively.) These new studies, and the updated reports from Hirayama and Trichopoulos, further strengthened the link between passive smoking and lung cancer in nonsmokers.

457. From January 1984 to April 1986, Reynolds ran an a series of advertisements in newspapers across the country. One was titled "Smoking in Public: Let's separate fact from friction"; another was titled "Secondhand smoke: Let's clear the air"; and a third ran under the headline "Secondhand smoke: The Myth and the Reality." The three Reynolds advertisements asserted: "**In fact, there is little evidence - and certainly nothing which proves scientifically - that cigarette smoke causes disease in nonsmokers.**" 506290558-0792 at 0608, 0611, 0612 (US 29799) (O).

458. As described above, the 1986 Surgeon General's Report concluded that passive smoking is a cause of disease, including lung cancer, in healthy nonsmokers. The 1986 Report also expanded the scientific consensus regarding disease causation in children, finding that the children of parents who smoke have an increased frequency of a number of adverse health effects. Finally, the Report concluded that separation of smokers within the same air space does

not eliminate exposure to secondhand smoke. VXA2110670-1053 at 0690 (US 63709) (A).

459. That same year, two separate, independent reviews also concluded that exposure to secondhand smoke was a health hazard. The National Research Council (NRC) of the National Academy of Sciences (NAS) issued "Environmental Tobacco Smoke, Measuring Exposures and Assessing Health Effects." The 1986 NRC Report found that known toxic and carcinogenic chemicals in mainstream smoke are also found in ETS; and that respiratory effects, such as wheezing and coughing, are increased in children of smoking parents. With respect to lung cancer, the NRC Report concluded:

> Considering the evidence as a whole, exposure to ETS increases the incidence of lung cancer in nonsmokers. . . .
>
> Since carcinogenic agents contained in ETS are inhaled by nonsmokers, in the absence of a threshold for carcinogenic effects, an increased risk of lung cancer due to ETS exposure is biologically plausible.

VXA2111054-1229 at 1066 (US 63708) (A).

460. In 1986, the International Agency for Research on Cancer (IARC) of the World Health Organization issued its Monograph titled "Tobacco Smoking, the latest in a series of IARC "Monographs on the Evaluation of the Carcinogenic Risk of Chemicals to Humans." Similar to the 1986 Surgeon General's Report and the 1986 NRC Report, the 1986 IARC Monograph concluded that secondhand smoke was a health hazard and a carcinogen:

> Tobacco smoke affects not only people who smoke but also people who are exposed to the combustion products of other people's tobacco. The effects produced are not necessarily the same, as the constituents of smoke may vary according to its source. Three main sources exist: (i) mainstream smoke, (ii) sidestream smoke, and (iii) smoke exhaled to the general atmosphere by smokers. . . . Examination of smoke from the different sources shows that all three types contain chemicals that are both carcinogenic and mutagenic. The amounts absorbed by passive smokers are, however, small, and effects are unlikely to be detectable unless exposure is substantial and very large numbers of people are observed. The observations on nonsmokers that have been made so far are

compatible with either an increased risk from 'passive' smoking or an absence of risk. **Knowledge of the nature of sidestream smoke and mainstream smoke, of the materials absorbed during 'passive' smoking and of the quantitative relationships between dose and effect that are commonly observed from exposure to carcinogens, however, leads to the conclusion that passive smoking gives rise to some risk of cancer.**

* * *

There is *sufficient evidence* that tobacco smoke is carcinogenic to humans.

VXA1600406-0824 at 0714 (US 64066) (A) (emphasis added).

461. The Enterprise was thus confronted with a series of major reports indicting passive smoking as a health hazard and cause of lung cancer. It was this global scientific consensus, and in particular the need to cast doubt on the consensus and create an "open question," that would guide Defendants statements and conduct thereafter.

462. In December 1986, the Tobacco Institute published a brochure titled "Tobacco Smoke and the Nonsmoker: Scientific Integrity at the Crossroads." The Tobacco Institute claimed in its brochure that "a detailed review of the scientific literature on ETS" led to the conclusion that: "**The evidence does not support conclusions that ETS represents a health hazard to nonsmokers.**" TIMN 284404-4413 at 4405 (US 77088) (O) (emphasis added).

463. In April 1987, the General Services Administration restricted smoking in Federal buildings. 41 C.F.R. §101-20.105-3, 52 F.R. 11263 at 11269 (April 8, 1987).

464. Defendants continued their drumbeat of public statements denying that cigarettes and tobacco smoke are a hazard to nonsmokers. The statements often borrowed from what the industry had said with respect to active smoking. For example, the Tobacco Institute published a booklet in 1987 titled "Smoking Restrictions: The Hidden Threat to Public Health." In this booklet, the authors asserted with respect to the health effects of passive smoke that:

> A detailed review of the scientific literature on environmental tobacco smoke yields two basic conclusions:
>
> First, environmental tobacco smoke has not been shown scientifically to pose a health hazard in nonsmokers.
>
> Second, as a National Academy of Sciences panel noted recently, more and better research needs to be done.

520911538-1542 at 1539, 1540-1541 (US 85593) (O).

465. A 1987 series of Philip Morris advertisements had pictures of smokers "talking" to the reader. The smokers in the ads asserted: "Please don't tell me my cigarette smoke is harmful to you. There's just no convincing proof that it is"; and "I know there's no proof my smoke can hurt you." 2500146093-6096 (US 20554) (O)

466. The Tobacco Institute published a brochure in 1988 titled "Environmental Tobacco Smoke and Health: THE CONSENSUS." This brochure referred to the 1986 reviews on passive smoking, then declared: "SCIENTIFIC CONSENSUS: No scientific case against environmental tobacco smoke." 507828094-8102 at 8096 (US 51276) (O).

467. On August 18, 1988, Reynolds Public Information Manager Jo Spach wrote, "We firmly believe that cigarettes have been unfairly blamed as a cause of human disease." 515792869 (US 20869) (A).

468. In 1988, the Federal Aviation Administration imposed a smoking ban on all domestic commercial flights of two hours or less. See 14 C.F.R. §121.317, 52 F.R. 12358 (April 13, 1988) (effective April 23, 1988). Subsequently in 1990, the FAA's smoking ban was extended to domestic flights of six hours or less. See 55 C.F.R. 8364 (March 7, 1990).

469. An April 1990 INFOTAB publication titled "Children & Smoking-The Balanced View" stated: "Exposure to ETS has not been scientifically proven to adversely affect the health of children." 2501342105-2110 at 2109 (US 20565) (A).

470. On January 11, 1990, Spach at Reynolds wrote the principal of Willow Ridge School, Amherst, NY, asking him to tell his fifth grade students:

> The tobacco industry is also concerned about the charges being made that smoking is responsible for so many serious diseases. . . . Over the years the tobacco industry has given in excess of $162 million to independent research on the controversies surrounding smoking – more than all the voluntary health associations combined. . . . **Despite all the research going on, the simple and unfortunate fact is that scientists do not know the cause or causes of the chronic diseases reported to be associated with smoking.** The answers to the many unanswered controversies surrounding smoking – and the fundamental causes of diseases often statistically associated with smoking – we believe can only be determined through more scientific research. Our company intends, therefore, to continue to support such research in a continuing search for answers.

508466199-6200 at 6199 (US 20813) (A) (emphasis added).

471. In 1992, the EPA issued "Respiratory Health Effects of Passive Smoking: Lung Cancer and Other Disorders," commonly called the EPA Risk Assessment. That report concluded, "ETS is a known human carcinogen, responsible for approximately 3,000 lung cancer deaths annually in U.S. nonsmokers." DXA0390094-0699 at 0115 (US 88654) (A). The EPA report was also issued as NCI Monograph 4. TLT0780160-0684 (US 78711) (A).

472. Defendants' statements and conduct with respect to the EPA Risk Assessment are addressed in detail later in this section in light of the magnitude and complexity of Defendants' initiatives. See supra US FF § III.A(2)(l).

473. Many of Defendants' public statements asserting an "open question" did not distinguish between active and passive smoking. For example, on November 12, 1993, Reynolds' Catherine Clinton responded to a letter from M. E. Smith in Hayward, California, with the statement: "[A] cause and effect relationship between smoking and disease has not been established." 513601091 (US 21815) (O). Similarly, on April 25, 1995, B&W's Melanie

Gnadinger transmitted the company's position on smoking and health to Hiromi Mikami: "'B&W believes that tobacco smoking and human health is still an inconclusive matter.'" 450010016-0019 at 0016 (US 21539) (O).

474. At the RJR Nabisco Holdings Company annual shareholders' meeting held on April 17, 1996, in Winston-Salem, corporate executives of the holding company, RJR Nabisco, and RJR Tobacco presented an overview of their companies' performance and answered questions from shareholders. One shareholder asked the companies' position on passive smoking and children, that is, whether the company believed that people should smoke around children. The answer from management did not acknowledge any health risk to children. Instead, the following ensued between the shareholder and the chairman of RJR Nabisco:

> THE CHAIRMAN: I will not restrict anybody's right to smoke. If the children don't like to be in a smoky room, and I wouldn't like to be, they'll leave. I don't know if you've got any grandchildren; I do. And if there is smoke around that's uncomfortable, they'll leave.
>
> MS. DONLEY: An infant cannot leave a room.
>
> THE CHAIRMAN: Well - Okay. **At some point they begin to crawl, okay. And then they begin to walk, and so on. I guess that's enough said.** Thank you very much.

520800648-0821 at 0708-0709 (US 92100) (A).

475. In 1997, California's EPA reviewed the evidence on passive smoking and concluded that exposure to secondhand smoke causes lung cancer, heart disease, and other adverse health effects. This report was also issued as NCI Monograph 10 and stated: "Using the most up-to-date evidence available, Cal/EPA concluded that ETS causes not only lung cancer in adults and respiratory problems in children, but also low birth weight, sudden infant death syndrome, middle ear infections, nasal sinus cancer, and heart disease morbidity and mortality." JDM1870820-1333 at 0834-0836 (US 76125) (A); DXA0581235-1694 at 1236 (US 78716) (A).

476. In August 1997, the President phased in the elimination of smoking in Federal facilities over a one-year period. Exec. Order 13058, 62 F.R. 43451 (August 9, 1997).

477. On October 2, 1997, Philip Morris Companies sent a letter to Congress in response to a request from senators for the Philip Morris position on smoking and health issues. In this letter, often referred to as the "Hatch Statement," the company stated that "the evidence with respect to ETS is not persuasive." 2085633197-3198 at 3198 (US 45754) (A). Philip Morris Companies Chairman Geoffrey Bible repeated this statement during his testimony before the House Commerce Committee on January 28, 1998. 86592673-86592675 at 3344 (US 21820) (O). Lorillard's letter to Congress, dated October 1, 1997, similarly asserted, "We do not agree that exposure to environmental tobacco smoke has been shown to be a cause of disease in nonsmokers. 86592673-2675 at 2675 (US 56175) (A).

478. In June 2002, IARC released "IARC Monograph (Vol. 83), Tobacco Smoke and Involuntary Smoking." The 2002 IARC Monograph was the product of a scientific working group of 29 experts from 12 countries who "reviewed all significant published evidence related to tobacco smoking and cancer, both active and involuntary." The Monograph concluded, "There is sufficient evidence that involuntary smoking (exposure to secondhand or 'environmental' tobacco smoke) causes lung cancer in humans. . . . Involuntary smoking (exposure to secondhand or 'environmental' tobacco smoke) is carcinogenic to humans (Group 1)." TLT0970001-1455 at 1413 (US 86746) (A).

479. Since the 1986 Surgeon General's Report, every major scientific review and assessment of the science on passive smoking and its health effects has independently and consistently concluded that passive smoking causes disease and other adverse health effects in adults and children. See, e.g., DXA0390094-0699 (US 88654) (A) (1992 EPA Risk

Assessment); 2065192422-2615 (US 22092) (A) (1997 Australia Report); JDM1870820-1333 (US 76125) (A) (1997 California EPA); VXA1600843-0981 (US 64063) (A) (1998 UK SCOTH); VXA1600982-1000 (US 64062) (A) (1999 WHO); VXA1240568-1258 (US 64315) (A) (2001 SGR) ; TLT0970001-1455 (US 86746) (A) (2002 IARC); see also Samet WD, 198:7-8 (1992 American Heart Association).

(d) More Frank Statements: Defendants' Public Promises With Respect to Passive Smoking

480. As was discussed previously, Defendants made several representations to the American public in 1954 in what became known as the "Frank Statement." Two promises in the 1954 Frank Statement are important to Defendants' conduct with respect to passive smoking:

> We accept an interest in people's health as a basic responsibility, paramount to every other consideration in our business.
>
> We always have and always will cooperate closely with those whose task it is to safeguard the public health.

86017454-7454 (US 21418) (A).

481. While active smoking was the battleground between Defendants and the scientific community for decades after the Frank Statement, in the 1970s and 1980s, more and more scientists were reporting research confirming the health implications of passive smoking, as discussed above. The 1972 Surgeon General's Report noted the widespread public exposure to carcinogens and toxins that were being found in secondhand smoke. TLT0240501-0537 (US 60597) (A). The 1975 and 1979 Reports described ominous similarities between mainstream and sidestream smoke, as well as some potential adverse health effects. 03763710-3956 at 3809-3810 (US 34340) (A). The 1982 Surgeon General's Report examined the first epidemiological studies demonstrating elevated risks of lung cancer among nonsmoking women married to smokers, and cautiously concluded that "the evidence does raise a concern about a possible

serious public health problem." TLT0242222-2551 (US 60598) (A).

482. In response, Defendants reiterated the deceptive claims made in the 1954 Frank Statement, but this time tailored their statements to meet the mounting evidence of the adverse health effects of secondhand smoke.

483. In 1982, the Tobacco Institute ran the fifth in its series of advertisements called "Answers to the most asked questions about cigarettes." The advertisements ran in major magazines nationwide, including *Newsweek*, *People*, and *Sports Illustrated*. The advertisement asked, "Does Cigarette Smoke Endanger Nonsmokers?" After disputing the evidence linking passive smoking to lung cancer, the advertisement represented to the public that the industry was committed to "independent" research to answer questions about exposure to secondhand smoke:

> Like you, we seek answers.
>
> The tobacco industry has committed more funds for independent research on smoking and health than any non-governmental group. More than the American Cancer Society, the American Heart Association, and the American Lung Association combined. The researchers we fund are encouraged to publish whatever they find. Whatever the outcome.
>
> If you'd like more information, write for our booklet, 'Answers to the most asked questions about cigarettes.'

TIMN0121194-1205 at 1196 (US 85358) (O); see also 93852922-2933 at 2931 (US 21118) (O); TI04591849-1855 at 1853 (US 22028) (O).

484. In October 1983, the Tobacco Institute ran another advertisement in the series called "Answers to the most asked questions about cigarettes," publicly posing the question "What happens to cigarette smoke in the air?" The ad ran in the Wall Street Journal and other news media. The 1983 ad also publicly reiterated Defendants' representation that the industry was funding independent research and was committed to finding scientific answers to questions about smoking and health:

> The tobacco industry has committed more funds for independent research on smoking and health than any nongovernmental group. . . . Researchers funded by the tobacco industry are encouraged to publish whatever they find. Whatever the outcome.

TLT0601093-1095 at 1094 (US 65131) (O); TLT0601100-1104 at 1101-1102 (US 65133) (O).

485. Reynolds ran an advertisement in 1984 titled "Smoking and health: some facts you've never heard about." In the ad, Reynolds attacked the Hirayama study but then told the public:

> No one wants to know the answers more than R.J. Reynolds. This is why we are providing major funding for scientific research. **The funds are given at arms length to independent scientists who are free to publish whatever they find**.
>
> We don't know where such research may lead. **But this much we can promise: when we find the answers, you'll hear about it.**

506100136 (US 50882) (A). (emphasis added).

486. In or about 1987, a Tobacco Institute brochure called "Tobacco Smoke and The Nonsmoker: Scientific Integrity at The Crossroads" asserted: "The tobacco industry is therefore devoting substantial resources to the investigation of indoor air quality generally and to the ways in which particular constituents of indoor air - including tobacco smoke - may affect human health." 2025364951-5007 at 4954 (US 22173) (A).

487. These public promises, like the "Frank Statement" some 28 years before, were made with the intent to deceive the American public into believing that there was no risk associated with passive smoking and that Defendants would fund objective research to find answers. Instead, Defendants' conduct over the decades that followed was to attack independent research, to fund research designed and controlled to generate industry-favorable results, to suppress adverse passive smoking research, and to thwart the public health authorities, all designed to create the impression of an independent scientific controversy where there was none.

(e) The "Silver Bullet": Defendants' Recognition of the Passive Smoking Threat

488. Defendants' fraudulent conduct with respect to passive smoking can only be understood in the context of Defendants' acute appreciation since the 1970s that passive smoking posed a profound threat to the industry's profits and viability. As with Defendants' conduct in all areas of smoking and health, Defendants' motive was to maximize sales/consumption and protect profits.

489. On January 31, 1974, at the 1974 Tobacco Institute's annual meeting in New York, Tobacco Institute president Horace Kornegay described the gradual acceleration of indoor air restrictions, stating that these restrictions not only impacted sales but also "could lead to the virtual elimination of cigarette smoking." TIMN0067732-7755 at 7734 (US 22047) (O).

490. Two years later, BATCo held its Chairman's Conference in Hot Springs, Virginia. The conference gathered BAT executives from its subsidiaries around the world, including BATCo and Brown & Williamson. At this June 1976 conference, there was "unanimous agreement" that the social unacceptability issue resulting from evidence that cigarette smoke harmed nonsmokers "constitutes 'a more serious threat to the industry's future than any other aspect of the attack on smoking.'" 2025025481-5494 at 5481 (US 37220) (O). The minutes of the Chairman's Conference recorded: "It had been estimated that the issue of passive smoking had already lost the industry cigarette sales of 1,000 million a year" in Germany alone. 680040485-0502 at 0489 (US 25437) (O); 110069862-9862 (US 88580) (O).

491. BATCo understood that the passive smoking issue not only risked an increasing number of smoking restrictions, but even threatened to reduce the number of starting smokers. Papers from Australia, the United States, Canada, and Germany presented at the 1976 Hot Springs conference emphasized that the threat of "social unacceptability" emanating from the

health risks to nonsmokers "threatens to undermine smokers' confidence and to dissuade people not to take up the habit." 2025025457-5460 at 5457 (US 75152) (O).

492. In preparation for the 1976 Chairman's Conference, former BATCo chairman T.J.N. Foley set out the link between the health effects of passive smoking and the "social unacceptability" issue in these terms:

> Social Unacceptability of Smoking
>
> **The subject is inseparably linked with passive smoking and presents a major danger and challenge to the industry**. The danger exists in the clearly evident snowballing effect of the tactics aimed at making smoking a distasteful practice. **The challenge lies in the industry's need to devise a counter-campaign.**

110069860-9875 at 9863 (US 34951*) (O) (emphasis added).

493. In 1978, the Roper Organization conducted a study for the industry titled "A Study of Public Attitudes Toward Cigarette Smoking and the Tobacco Industry." Roper advised that:

> What the smoker does to himself may be his business, but what the smoker does to the non-smoker is quite a different matter. . . . **This we see as the most dangerous development to the viability of the tobacco industry that has yet occurred.** While there is little sentiment for an out-right ban on smoking in public gathering places, there is already a majority sentiment for providing separate facilities for smokers and non-smokers. As the anti-smoking forces succeed in their efforts to convince non-smokers that their health is at stake too, the pressure for segregating facilities will change from a ripple to a tide as we see it.

TITX0000963-1015 at 0968 (US 88582) (O) (emphasis added).

494. In January 1980, R. J. Reynolds scientist Frank Colby wrote in a draft memorandum addressing the activities of the precursor to the Hoel Committee, "The public smoking issue is, in my judgment, the issue most threatening to the Industry, not only in the United States and Canada, but also in Western Europe and elsewhere." The threat was to sales and profits: "The 'public smoking' activities of the anti-smoking forces do not only tarnish the

'image' of the industry, but they also represent a very substantive threat to sales. A cigarette which a smoker is prevented from smoking because of restrictions to smoke in public areas, is a cigarette not smoked." 502668016-8018 at 8016, 8018 (US 75399) (O).

495. In a June 29, 1982 letter from Reynolds CEO Ed Horrigan to Lorillard Executive Vice President of Sales Robert Ave, Horrigan stated flat out, "We all know that probably the biggest threat to our industry is the issue of passive smoking." 93443843 (US 32289) (O).

496. In September 1986, William Kloepfer, Senior Vice President of Tobacco Institute Public Relations, acknowledged that ETS "is our biggest public/political issue and deserves top-level navigation." TI10191292-1293 (US 62270) (A).

497. 1986 was the watershed year when the Surgeon General, the National Research Council, and IARC each evaluated the evidence linking passive smoking to disease and concluded that cigarette smoke was indeed a hazard to nonsmokers. Defendants' concern over the ETS issue was shaping up to be one of the most intractable problems for the tobacco industry. In 1987, a Philip Morris strategic planning memorandum on "social acceptability" stated that "the effects of ETS on others is now the most powerful anti-smoking weapon being employed against the industry." 2021553739-3926 at 3901-3905 (US 36767) (A).

498. Not surprisingly, the BATCo October 23, 1986 "ETS Action Plan" stated: "The world tobacco industry sees the ETS issue as the most serious threat to our whole business." 100993158-3165 at 3158 (US 89556) (O).

499. Philip Morris Companies subsequently held its conference called "Operation Downunder" in June 1987 to formulate a worldwide strategy on passive smoking. Covington & Burling's John Rupp told the group that the industry was "in deep shit" as a result of the 1986 reports and the industry's "serious credibility problem." 2021502102-2134 at 2105-2106 (US

20346) (A).

500. The following was recorded among the typed notes from the June 1987 "Downunder" meeting:

> Business Trends
>
> –2% annual decline in sales in U.S. . .
>
> –Decline in U.S. not explained by price increase . . .
>
> **In U.S., ETS issue will have devastating effect on sales . . .**
>
> **We are just at <u>beginning</u> of impact of ETS issue. . .**
>
> 1. Problem - threatens number of smokers and numbers of cigarettes they smoke.
> 2. How to alter public perception that ETS is damaging. . .
>
> (Assume that #2 causes #1)

2021502102-2134 at 2109-2110 (US 20346) (A) (emphasis added).

501. At the close of "Operation Downunder," Philip Morris Companies Vice Chairman Bill Murray asked about the risks of the proposals, and whether the proposals would "make the situation worse." He was told that "**The situation can't get any worse. Sales are down, can't be attributed to taxes or price increases. ETS is the link between smokers and non-smokers and is, thus, the anti's silver bullet.**" 2021502671-2678 at 2678 (US 22950) (A) (emphasis added).

502. An undated Philip Morris report from the 1990s stated, "Without a doubt, the social acceptability of smoking practices is the most critical issue that our industry is facing today. . . The consequences of any decrease in social acceptability are extremely important because of their direct effect on the total volume of sales . . . Attacks on acceptability are almost exclusively based on claims that ETS can cause diseases in the exposed population."

2026226012-6021 at 6012 (US 88583) (O).

503. The actual impact of smoking restrictions on cigarette sales was so substantial that by January 1992, Philip Morris USA was measuring past impacts on sales and modeling the future sales impact of the possible workplace smoking restrictions resulting from public concerns about the significant health impacts of secondhand smoke on non-smokers. John Heironimus was tasked to study the impact, and wrote the following in a January 22, 1992 memorandum to Louis Suwarna and copied to David Beran:

> Summary of Major Findings
>
> 1. Total prohibition of smoking in the workplace strongly affects industry volume. Smokers facing these restrictions consume 11% - 15% less than average and quit at a rate that is 84% higher than average. . . .
>
> 4. From 1987 to 1991, the industry lost an estimated incremental 1.7% (9.5 billion units) due to increasing workplace restrictions [alone]. If these trends continue, the industry will lose an additional 1.3% to 1.9% (8.4 to 11.4 billion units) from 1991 to 1996.
>
> 5. If smoking were banned in all workplaces, the industry's average consumption would decline 8.7%-10.1% from 1991 levels and the quitting rate would increase 74% (e.g., from 2.4% to 4.4%).

2023914279-4284 at 4280 (US 88584) (O).

504. In a July 1994 presentation, Philip Morris's Tina Walls stated: "The rights of smokers to smoke where they work, play – and even where they live – is under attack as it has never been before. The immediate implications for our business are clear: if our consumers have fewer opportunities to enjoy our products, they will use them less frequently and the result will be an adverse impact on our bottom line." 2041183751-3790 at 3752 (US 37924) (A).

505. Defendants recognized the parallels between the threat of passive smoking in the 1970s and beyond, and that of active smoking in the 1950s and 1960s. For example BATCo counsel Andrew Foyle wrote to representatives of the British manufacturers in 1993: "There is a

view that the industry now finds itself in the same position in relation to ETS that it was thirty-to-forty years ago in relation to active smoking." 503055325-5326 (US 20712) (O). At a 1987 meeting of the industry's international ETS groups and manufacturer associations, a Philip Morris representative similarly remarked: "I am reminded of the situation 20-30 years ago and all the research we put into active smoking." 2501458142-8148 (US 27951) (O).

506. As described below, from the mid-1970s forward Defendants affirmatively and collectively took steps to counter the threat to their profits posed by the evidence, and later the scientific consensus, that passive smoking was hazardous to the health of nonsmokers. Defendants acted collectively to counter the passive smoking threat through various industry committees and groups both in the United States and abroad. Defendants' response to the emerging scientific evidence was approved by their corporate leaders. In addition, in-house counsel and the outside law firms of Shook, Hardy & Bacon, Jacob & Medinger, and Covington & Burling played central roles in coordinating Defendants' actions worldwide.

(f) Internally, Defendants Recognized the Connection Between Passive Exposure and Disease

507. Defendants' fraudulent conduct also must be assessed in view of what the companies knew internally as to the health effects of passive smoking. Within the walls of the companies, Defendants recognized that secondhand smoke contained high concentrations of carcinogens and other harmful agents. Defendants also recognized that the research showing that passive exposure caused disease was persuasive evidence of the harmful effects of secondhand smoke. Most importantly, covert research funded by Defendants provided stark evidence confirming the public health authorities' warnings that passive exposure to cigarette smoke was a health hazard.

508. According to a March 30, 1980 document, a Philip Morris scientist reviewed the

1980 paper by James White and Herman Froeb titled "Small Airway Dysfunction in Nonsmokers Chronically Exposed to Tobacco Smoke." White and Froeb concluded in their study that nonsmokers exposed to secondhand smoke suffer significant damage to airway function. The Philip Morris scientist wrote to Tom Osdene and Jim Charles, "I have reviewed the above paper and find it to be an excellent piece of work which could be very damaging to our business." The scientist suggested several ways to attack the study, but concluded, "I can find little to criticize. The authors have put together an excellent paper in my opinion." 1002641904-1907 (US 22933) (O).

509. Philip Morris had recognized long before the 1980s that sidestream smoke contained known carcinogens. In 1961, scientist Helmut Wakeham presented a paper to the Research & Development Committee cataloguing known gas and particulate chemicals in cigarette smoke, including those that Wakeham acknowledged had been identified as carcinogens. According to Wakeham's analysis, 84% of cigarette smoke was sidestream smoke. 2024947172-7196 (US 22891) (O).

(i) ETS Research at Philip Morris's Institut für Biologische Forschung (INBIFO)

510. Much of Defendants' internal knowledge of the potential adverse health effects of ETS traced to a laboratory in Germany wholly owned by Philip Morris since 1971. The laboratory was (and still is) called INBIFO, a German acronym for Institut für Biologische Forschung, or Institute for Biological Research.

511. The Philip Morris acquisition of INBIFO followed a discussion among senior executives as to the advantages of the purchase, primarily the opportunity to conduct secret smoking and health research. In a February 24, 1970 memorandum from Philip Morris CEO Joseph Cullman to his Vice President of Research & Development Helmut Wakeham, Cullman

stated, "The possibility of getting answers to certain problems on a contractual basis in Europe appeals to me and I feel presents an opportunity that is relatively lacking in risk and unattractive repercussions in this country." 100216742-6742A (US 35183) (O).

512. Secrecy and confidentiality was an oft-repeated reason behind the Philip Morris decision to purchase INBIFO. A May 7, 1970 memorandum from Philip Morris President Ross Millhiser to Cullman attached an April 15, 1970 memorandum from Wakeham recommending the INBIFO purchase. Wakeham's recommendation included the following more candid assessment:

> It has been confirmed to me . . . that TRW has definitely decided to sell INBIFO in Cologne, Germany. The asking price is about $190,000...
>
> Since we have a major program at INBIFO, and **since this is a locale where we might do some of the things which we are reluctant to do in this country, I recommend that we acquire INBIFO**. . . Mr. Hugh Cullman and Mr. John Murphy of Philip Morris International have offered their services in acquiring INBIFO as that **its ownership would be achieved through some Swiss subsidiary of FTR. In this way, our involvement would not be unduly exposed.** On the other hand, International has stated a complete disinterest in operating INBIFO, and wish to leave that completely to the [Philip Morris] Research Department [in Richmond].

2012580900-0906 at 0902-0903 (US 89328) (A) (emphasis added).

513. Wakeham's April 15, 1970 memorandum also included a chart listing the advantages of owning INBIFO over simply contracting out the research. The following were listed among the advantages to Philip Morris:

> 1. Better security - research projects and research results are more likely to be kept confidential.
>
> 7. Location near major airport in Germany makes access easy and obviates the necessity of doing controversial biological work in United States.

> 10. Records of work in Germany cannot readily be subpoenaed for use in the United States.

2012580900-0906 at 0904 (US 89328) (A).

514. Philip Morris purchased INBIFO in July 1971 through FTR, the Philip Morris subsidiary in Neuchatel, Switzerland. 2023226100-6118 (US 89415) (O)

515. In December 1972, Philip Morris hired Ragnar Rylander to serve as the company's intermediary and "representative at INBIFO." 2081912524-2525 (US 89358) (A). Rylander reported to Philip Morris Research & Development in Richmond, with whom his contract was signed, while FTR would approve and pay INBIFO bills. 2501368665-8668 (US 89327) (A). A December 9, 1986 report by Reynolds' Charles Green recorded the following from a conversation with Osdene during a 14-hour flight to Tokyo: "Dr. Osdene is in charge of the INBIFO laboratory in Cologne. The managing director, $150K/year, reports directly to Osdene." 505491406-1410 at 1406 (US 50835) (A).

516. The secrecy of INBIFO and the desire to avoid any overt ties between Philip Morris (Richmond) and INBIFO continued. Philip Morris's Bob Seligman advised Philip Morris Europe's Max Hausermann in a letter dated March 31, 1977:

> As you were copied, you know that Helmut [Gaisch, or FTR] was requesting that we send samples directly to INBIFO. This suggested procedure is in direct conflict with our communications from the New York office. **We have gone to great pains to eliminate any written contact with INBIFO, and I would like to maintain this structure**.
>
> Therefore, I am advising Jerry Osmalov to continue sending samples to Neuchatel for transshipment to INBIFO. If this is unacceptable to you, **perhaps we should consider a "dummy" mailing address in Köln [Cologne] for the receipt of samples**.

2000512794-2795 (US 20295) (A) (emphasis added).

517. Repeated experiments carried out by Philip Morris at INBIFO in the early 1980s

were suggestive of adverse health effects associated with ETS. In a January 26, 1982 letter to Tom Osdene in Richmond, Rylander reported the following:

> Last week I visited with INBIFO. **The results from the first side stream smoke experiment are available and confirm the previous observation that this smoke on equal TPM is more irritating and/or toxic.** The histology demonstrates more advanced lesions in the nasal epithelium and hyper and metaplasia in areas which are not affected by main stream smoke. The extent of cornification observed in these animals has never been seen before.

1000081782-1783 (US 89174) (A) (emphasis added).

518. Rylander had previously informed Shook, Hardy & Bacon attorney Don Hoel in August 1981 that he was not "in a position to give ETS a clean bill of health." 680542957-2962 at 2958 (US 85718) (A).

519. Rylander also advised Osdene in his January 1982 letter that INBIFO was planning a series of new sidestream smoke studies utilizing two dose levels. 1000081782-1783 (US 89174) (A).

520. As described in the paragraphs that follow, a number of internal INBIFO research reports documented results of ETS inhalation experiments suggesting adverse health effects. Philip Morris USA continued to control INBIFO throughout the 1980s and 1990s.

521. From the early 1980s onward, INBIFO ETS studies began generating results suggesting harm. A July 29, 1982 INBIFO report titled "21-Day Smoke Inhalation Study with Mainstream and Sidestream Cigarette Smoke of Standard Reference Cigarette Type 2R1 on Rats" recorded the following in the "Results" section:

- The experiments used ETS-like smoke, namely "diluted mainstream and sidestream smoke from puffed and nonpuffed cigarettes."
- A number of "gas/vapor phase components were distinctly higher in diluted sidestream smoke than in diluted mainstream smoke: carbon monoxide (4 times),

carbon dioxide (3 to 4 times), nitric oxide (6 to 7 times) and acetaldehyde (2 to 3 times)."

- "By and large, the rats of the sidestream groups reacted more vigorously than those of the mainstream group. All rats showed general signs of exhaustion after the end of the daily exposure. In contrast to the rats of the mainstream group, which recovered by the next morning, the rats of the sidestream group continued to show shaggy fur and some pronounced respiratory symptoms characterized by whistling and rattling sounds."

- While the rats in the control group increased their body weight approximately 50% and those of the mainstream group increased their body weight 30%, the rats in the sidestream group "showed a decrease to approximately 80% of their initial body weight."

- Rats in the sidestream group also showed a decrease in water consumption and body temperature as compared to the control and mainstream groups.

- "All of the examined sidestream-exposed rats showed slight to severe atrophic or necrotic lesions of the olfactory epithelium, in some cases together with reactive inflammation. The ciliated epithelium of all sidestream-exposed rats showed squamous-cell metaplasia, with cornification in some cases."

- "Exposure to diluted side- and mainstream produced histological changes in the nasal cavity and larynx."

- "Generally spoken, sidestream exposure induced more frequent and more severe epithelial lesions in the olfactory and ciliated epithelium of the nasal cavity than mainstream of equal TPM concentration."

- "Sidestream smoke exposure invoked atrophy of the olfactory and metaplasia of the ciliated epithelium."

2029190329-0354 at 0335-0340 (US 89331) (A).

522. INBIFO scientists drew the following conclusions in their July 29, 1982 report of the inhalation study:

> The systemic toxicity of mainstream and sidestream smoke impaired the body temperature, food and water uptake, body weight development and increased mortality . . . . Puffed and nonpuffed sidestream caused almost identical reactions, but the reaction to mainstream was much less pronounced than to sidestream exposure.
>
> **If one extrapolates from the experience of previous mainstream**

> **inhalation studies, the mainstream TPM concentration of this study would have to be increased by a factor of 3 to produce similar strong reactions [to those] seen with sidestream exposure in this study.**

2029190329-0354 at 0344 (US 89331) (A) (emphasis added).

523. The introductory section of the July 29, 1982 report, bearing the name Ragnar Rylander, acknowledged that sidestream and mainstream cigarette smoke were "qualitatively similar" and that sidestream smoke condensate had "higher tumorigenic activity than mainstream condensate" in previous INBIFO skin-painting studies. 2029190329-0354 at 0331 (US 89331) (A).

524. Smoke condensate experiments at INBIFO continued to confirm that sidestream smoke was "more active" than mainstream smoke. In a July 6, 1984 INBIFO report titled "Comparison of 2R1 Mainstream and Sidestream Dry Impaction Cigarette Smoke Condensates, Base Fractions, and Neutral Fractions Activities in the Salmonella/Microsome Assay," scientists concluded that:

> In [Salmonella strain] TA98, the specific activity of MS [mainstream] and SS [sidestream] CSC [cigarette smoke condensate] suggest that MS CSC may be slightly more active than SS CSC. **The reverse was true for total activity, i.e., MS CSC was less active than SS CSC.** In [Salmonella strain] TA100, MS CSC specific activity appears to be less than or equal to SS CSC specific activity; **however, SS CSC total activity is greater that MS CSC total activity**.

2501656104-6125 at 6123 (US 89335) (A) (emphasis added).

525. Another study was carried out at INBIFO in 1985 to identify the "components causing biological effects of sidestream smoke." According to an INBIFO memorandum, the study results were presented to Philip Morris USA's Robert Pages in November 1985. 2028986635-6654 (US 89330) (A).

526. The following are excerpts from the November 1985 INBIFO sidestream smoke presentation to Pages:

> The last report gave you a survey of the irritative effects caused by inhalation of sidestream smoke (SS), such as reduced body weight development, histological changes in the respiratory tract, as well as biochemical changes.
>
> In addition, to the listed effects, SS causes a stimulation of the nerves. . . . Furthermore, this nervous stimulation causes a reduced CO2 [carbon dioxide] exhalation and a decrease in body temperature. **The observed irritative effects of SS are relevant to humans exposed to SS.**
>
> In this context the most important question is: which SS-components are responsible for the irritative (biological) effects of SS. . . .
>
> **Our first starting point to clarify these questions came from previous inhalation studies which showed that the irritative activity of SS was nearly 4 times higher than that of mainstream smoke (MS), based on body weight development and histological changes in the nasal mucosa and the larynx.** The comparison of the smoke composition of MS with SS shows that in SS the concentrations of aldehydes and ammonia are much higher than in MS. Therefore, it was supposed that these components are responsible for the irritative effects of SS.

2028986635-6654 at 6635-6636 (US 89330) (A) (emphasis added).

527. Later in the presentation, Pages was told of the results of examinations of animals exposed to sidestream smoke. These results included atrophy of the olfactory epithelium (nasal cavity), "reserve cell hyperplasia of the respiratory epithelium," "squamous metaplasia of the respiratory epithelium," and hyperplasia and squamous metaplasia in the larynx/vocal cords. Pages was also told that these effects were "concentration-dependent." 2028986635-6654 at 6646, 6648 (US 89330) (A).

528. Philip Morris produced a document from its files titled "ETS-Related INBIFO Projects, Status: Dec. 94." This 110-page report is a roll-up of ETS-related work at INBIFO

throughout the 1980s and 1990s, listing project names, dates of commission, a summary of the main results of each study, and an indication of whether the study was ever published. Very few INBIFO ETS studies were ever published. 2057077801-7911 (US 89333) (A).

529. The following is a small sample of the ETS-related inhalation, genotoxicity, and skin-painting projects summarized in the November 1994 INBIFO report. 2057077801-77911 (US 89333) (A). According to the report, none of these projects was ever published.

Project Number	Date	Objective	Main Results
5223 (page 7808)	7/22/91	Analyze fresh and room-aged sidestream smoke for polycyclic aromatic hydrocarbons (PAH), nitrosamines, and heavy metals).	"Data on cadmium and nitrosamines were generated. 24-h profile of several components in a smoke-filled room during ventilation showed persistence of formaldehyde, ammonia, and nicotine in the room."
5228 (page 7809)	8/02/91	Study of persistence of nicotine and n-nitrosamines absorbed on materials.	"TSNA [tobacco specific nitrosamines] and nicotine are still detectable after 50 days.
2126 (page 7811)	7/22/85	Determination of mainstream and sidestream smoke PAH in condensate from test cigarettes.	"PAH concentrations in the condensates similar for both cigarette types and both kinds of condensates (MS/SS); highest concentration found for phenanthrene."
3199 (page 7832)	10/13/83	Comparison of the cytotoxicity in human lung cells using mainstream and sidestream smoke from reference cigarette.	Sidestream smoke found approximately three times more cytotoxic than mainstream smoke.

3113 (page 7868)	11/27/84	Inhalation study of effects of diluted mainstream and sidestream smoke on the rat respiratory tract.	"In comparison to MS, SS caused a greater reduction in body weight gain and in weight of thymus and spleen as well as more pronounced histopathological changes in the nose and lungs. Only in the SS group atrophy and ulceration of the nasal olfactory epithelium were seen. Equally strong changes for MS and SS were seen in the trachea, and for SS less pronounced changes than for MS in the larynx."
3069 (page 7889)	11/04/82	Inhalation study of effects of diluted mainstream and sidestream smoke on the rat respiratory tract.	"Lung: Foam cells in alveoli, hyperplasia of bronchial epithelium; numerically higher incidence in SS-exposed rats. Larynx: Increased thickness of laryngeal epithelium, MS: Squamous metaplasia without or with cornification; SS: basal-cell hyperplasia; changes in MS-exposed rats stronger than in SS-exposed rats."
3068 (page 7897)	10/18/82	Tumorogenicity study of mainstream and sidestream smoke condensate on mice.	"Sidestream condensate showed a 2- to 6-fold higher tumorigenicity than mainstream condensate."
3070 (page 7898)	11/10/82	Acute toxicity (mortality) study of mainstream and sidestream condensate on mice.	"(SS = More Toxic)."

530. Philip Morris also knew that sidestream smoke effects were produced at very low concentrations. A 1994 written "short survey" of INBIFO ETS-related inhalation studies research was sent from INBIFO to Philip Morris USA. This survey stated that INBIFO inhalation research showed:

In general, the biological activity of SS (e.g., respiratory tract

> irritancy and mouse skin tumorigenicity as well as in vitro cytotoxicity, mutagenicity, and clastogenicity) has been found to match or to slightly exceed that of mainstream smoke . . . .
>
> **In order to allow extrapolations to possible environmental concentrations of SS, lowest observable effect concentrations for various biological responses to fresh SS have been established in subchronic inhalation studies on rats and hamsters . . .**
>
> Morphological changes (hyperplasia and metaplasia of airway epithelia) were detected in the rat larynx down to concentrations of 1 ug TPM/l. In the rat nose, hyperplasia was seen down to 6 ug/TPM/l. . . . Biochemical changes, i.e., the induction of the aryl hydrocarbon monoxygenase, was observed down to 0.5 ug TPM/l in the lungs. . . .
>
> Comparing the fresh and room-aged SS, the respiratory tract irritancy as well as the enzyme induction is mainly dependent on the total particulate matter concentration of the smoke regardless of the aging-related changes in the chemical composition.

2029221119-1120 (US 89417) (O) (emphasis added).

531. Several documents establish that Philip Morris intentionally concealed the adverse ETS-related study results from the public. First, the November 1994 INBIFO Status Report reveals that the few studies that produced industry-favorable results were generally published, but those that did not (described above) were not. For example, the one published INBIFO short-term inhalation study found that all but one of the observed effects on the rat respiratory tract reversed completely during the post-inhalation period; two studies finding that nicotine and particulate matter in fresh sidestream smoke was significantly reduced when the smoke aged and made contact with certain surfaces also resulted in a publication. The remaining INBIFO studies, many of which are described in the table above, were never published according to the 1994 status report. 2057077801-7911 at 7810, 7884, 7908 (US 89333) (A).

532. Other documents reveal an intent to conceal. In May 1986, Philip Morris USA

barred INBIFO scientists from presenting findings of a sidestream and mainstream smoke condensate study and an inhalation study to an upcoming symposium in Essen, Germany. In a May 9, 1986 telex to INBIFO director Ulrich Hackenberg, Dr. Pages advised the following:

> We have not yet reached a conclusion on what (if anything) could be presented. I should have something definitive to say by this time next week. . . .
>
> **We are having real problems with the presentation of the inhalation methodology in light of the fact that we almost assuredly [will] not authorize you to present any inhalation results.** Thus the idea occurred to try to focus on SS CSC [sidestream cigarette smoke condensate] with an emphasis on comparison to MS SCS [mainstream cigarette smoke condensate]. Strictly in vitro results and/or analytical chemistry. That type of thinking prompts the above questions. This idea would not allow you to illustrate the INBIFO specialty, but it might be better than not presenting anything.

2501459834 (US 87035) (A) (emphasis added).

533. In a memorandum dated May 20, 1986, Tom Osdene requested approval from management for the INBIFO scientists to present their smoke condensate results at the Essen symposium on ETS. The smoke inhalation studies were no longer under consideration in Osdene's memorandum. Osdene wrote the following in support of what he knew was still a controversial request:

> The principal reasons for allowing INBIFO to participate in the symposium are:
>
> 1) I have discussed the three papers with Don Hoel of Shook, Hardy & Bacon and he feels that we would not be assuming a major risk in having this material presented by INBIFO.
>
> 2) The presentation of these papers would be helpful to us on some aspects of the ETS issue. (Hoel concurs with this view.)
>
> 4) The presentations would be identified as coming only from INBIFO; there would be no mention of PM whatsoever. . .

> 6) The subject matter of the presentations would be restricted solely to the collection, chemical analysis, and in vitro testing of sidestream (SS) cigarette smoke condensate (CSC) from the University of Kentucky Reference Research Cigarette. . . .

2001225907-5911 (US 87033) (A).

534. Even after taking the inhalation studies off the table, Philip Morris blocked the remaining INBIFO studies. The decision was made at the highest level, by Philip Morris USA President and CEO Frank Resnik, to bar the INBIFO presentations. Dr. Pages wrote Dr. Hackenberg a May 28, 1986 telex informing him of the news:

> Regret to inform you that we were unsuccessful in obtaining approval for INBIFO to present any of the proposed abstracts at the Norpoth Symposium. . . .
>
> I want you to know that Tom [Osdene] personally discussed the abstracts with both Serrano and Resnik. We even wrote a short memo to put forth all the reasons why it would be helpful and beneficial to have the papers presented. . . . **Resnik was hesitant: he said he wanted to run it by the New York lawyers (Fred Newman). Newman said no. Resnik decided to go along with Newman and that was the end of that.**

2501459823-9823 (US 87034) (A) (emphasis added).

535. Dr. Pages informed the other members of the TI ETS Advisory Group of Philip Morris's decision to not allow the presentations. 505347180-7186 at 7185 (US 85779 (O); 504933596-3702 (US 24219) (A).

536. INBIFO studies that produced results adverse to Defendants' position on ETS were even used as a basis to block research outside of INBIFO. For example, in a November 1990 Philip Morris memorandum intended to memorialize reports to Philip Morris Companies general counsel Chuck Wall and Alex Holtzman, the following was described with respect to VdC (Verband, or German manufacturers association), VdC director Franz Adlkofer, and research that Philip Morris stopped in order to avoid probable adverse findings:

> The smoking and health program of the VdC consists of three units . . .
>
> (3) The third unit is the industry-owned and operated research laboratory in Munich, directed by Dr. Adlkofer. . . . There have been some disagreements between Adlkofer and Philip Morris about certain projects he has proposed. Philip Morris recently succeeded in blocking Adlkofer's plan to conduct a lifetime animal inhalation study of sidestream smoke. [On our visit to INBIFO we learned that Dr. Reininghaus, Director of INBIFO, provided an analysis of Adlkofer's proposal pointing out that an INBIFO study had shown that in a 90-day inhalation test no non-reversible changes had been detected. **In a lifetime study, the results were almost certain to be less favorable. Based on the analysis, the other members of the German industry agreed that the proposed study should not proceed.**]

2023223372-3383 at 3376-3378 (US 22337) (A) (emphasis added).

537. The report to Wall and Holtzman also disclosed that Adlkofer was conducting other secret ETS research in Munich as well:

> A list of ETS projects proposed by Adlkofer was shown on a slide. [Note: Should obtain a copy. Certain projects relating to the measurement of effects of passive smoking in humans - e.g. acute reactions of the airways; content of cadmium in lungs of smokers and nonsmokers - should be closely followed.]

2023223372-3383 at 3376-3378 (US 22337) (A).

538. In a March 1, 1994 presentation by Adlkofer to an industry sidestream smoke meeting attended by representatives of Philip Morris, Reynolds, and BATCo, he again asserted that his 90-day study finding both dysplasia and metaplasia in exposed rats was not permitted to be extended to a longer-term study: "Dr. Adlkofer then told us that he wanted to do a 2-year study in rats, but the industry would not support the study because they were afraid of the results." 508793116-3129 at 3117 (US 88577) (O).

539. Secrecy was consistently important to Philip Morris, as was the need to avoid a document trail leading to Philip Morris. In an undated 1984 document, Director of Science &

Technology, Tom Osdene listed the following steps to be taken with respect to INBIFO documents:

> 1. Ship all documents to Cologne by Tom.
>
> 2. Keep in Cologne.
>
> 3. **OK to phone and telex (these will be destroyed) . . . .**
>
> 5. We will monitor in person every 2 - 3 months.
>
> 6. **If important letters or documents have to be sent, please send to home - I will act on them + destroy.**
>
> 7. Advise Rylander - when writing re INBIFO.

1000130803 (US 34424) (A) (emphasis added).

540. Even into the 1990s, documents sent to Richmond from INBIFO were returned to INBIFO, ostensibly to avoid disclosure. A December 2, 1993 memorandum written by Shook, Hardy & Bacon attorney Lee Stanford recorded a conversation with fellow Shook, Hardy attorney Tony Andrade:

> On November 30, 1993, I talked with Tony Andrade about records at INBIFO . . . . According to Tony, final reports on PM USA product research are sent to Richmond for a review and are then returned to INBIFO. Supporting data and documents are kept at INBIFO.

2043725390-5391 (US 20449) (A).

541. Keeping the ties between Rylander, INBIFO, and Philip Morris hidden served the secondary purpose of creating a facade of scientific "independence." Rylander himself wrote in a June 23, 1997 letter to Philip Morris USA's Richard Carchman: "I have never been involved with any Philip Morris executive in meetings or contacts with outside persons, to retain as far as possible the image of an independent scientist." 2063590609-0610 (US 85731) (A).

542. Defendants cannot claim that the INBIFO studies were not related to operations in

the United States. A 1990 Philip Morris memorandum written by Philip Morris Companies General Counsel Chuck Wall estimated that "INBIFO's work comes approximately 80% from PM-Richmond and 20% from FTR." FTR is the Philip Morris European subsidiary that Philip Morris used to purchase INBIFO in 1971. 2023223372-3383 at 3383 (US 22337) (A).

543. Philip Morris shared the adverse results of some of its INBIFO studies with other Defendants. B&W's Gil Esterle recorded the following at the May 22, 1986 meeting of the Tobacco Institute ETS Advisory Committee:

> Toxicity Testing. At the April meeting, Dr. Osdene (PM) requested delaying further discussions on the Deskin (RJR) proposal until May. Dr. Pages (PM) now reports that PM has had a toxicity project on ETS going on for three years in a Cologne, Germany laboratory. . . Animals are whole body exposed to sidestream smoke greatly diluted with air. Exposure is carried out in a chamber in which diluted sidestream smoke is continuously fed while exhausting an equal volume of chamber air. Both rats and hamsters are being exposed. Animals are exposed seven hours/day for 21 consecutive days . . . .
>
> At higher concentrations of particulate, 20 ug/m3 and 60 ug/m3, histological changes occur. The changes at 60 ug/m3 are greater than at 20 ug/m3. Changes are reversible with cessation of exposure. PM estimates that the diluted sidestream is about three times as active as mainstream smoke at some concentrations of particulate.

655042500-2503 at 2502 (US 22921*) (O); 505347180-7186 at 7185 (US 85779 (O); 504933596-3702 (US 24219) (A).

544. According to one record of this May 22, 1986 meeting of the TI ETS Advisory Group, Covington & Burling attorney John Rupp stated to the committee that ETS was the "Achilles heel of the industry." TIBU28843-8845 at 8845 (US 75440) (O). It was no surprise, then, that at the June 1987 Philip Morris conference code-named "Operation Downunder" it was Rupp who was quoted as introducing his presentation on ETS with the phrase "Where we are / In

deep shit." 2021502102-2134 at 2105 (US 20346) (A).

(ii) Defendants' Recognition of the Validity of the Hirayama Study

545. In January 1981, Takeshi Hirayama published his ground breaking epidemiological study in the *British Medical Journal* showing a significant correlation between lung cancer and secondhand smoke based on his studies of 91,540 nonsmoking Japanese women. Hirayama showed that wives of heavy smokers had "a higher risk of developing lung cancer" and that "the effect of passive smoking was most striking in younger couples in agricultural families (ruling out the complication of urban air pollution), relative risk reaching 4.6, probably because of the lesser extent of the exposure to passive smoking outside the family in the case of rural residents." 2046342378-2380 (US 22963) (A).

546. Dr. Samet, a scientific editor and author to the 1986 Surgeon General's Report, testified that the 1981 Hirayama report was undermined by the tobacco industry. Dr. Samet testified:

> When these first studies on secondhand smoke and lung cancer were published, they received substantial criticism. Some of the criticism was organized by the tobacco industry. Critics raised questions in particular about misclassification of exposure and confounding. **From the tobacco industry's own documents, we know that efforts were made to create and sustain an apparent scientific controversy concerning research on secondhand smoke.**

Samet WD, 179:1-9 (emphasis added).

547. In fact, Defendants' internal documents demonstrate that defendant Tobacco Institute knowingly issued false public attacks on the Hirayama study in the United States and worldwide. On or about June 14, 1981, the Tobacco Institute issued a press release claiming that professor Nathan Mantel had found a mathematical error in the Hirayama study that invalidated its conclusions. 03739919-9920 (US 22958) (O). The Tobacco Institute media initiatives to

discredit Hirayama - including a press kit, press releases, and several letters from Tobacco Institute consultants. Tsokos and Kastenbaum- were the subject of at least one Committee of Counsel meeting on June 24, 1981. ATX9275490311-0324 at 0316 (US 36232) (O). A lengthy Tobacco Institute document summarizing the June/July initiatives revealed that Defendants' statisticians supposedly found a "statistical error" in the Hirayama study, that the Tobacco Institute and Burson-Marsteller publicized the "error" to the press, and that the "error" received widespread coverage in the national media. TITX0027702-7826 at 7707, 7803, 7814 (US 22332) (O).

548. In August 1981, the Tobacco Institute leveraged the June press coverage by publishing an advertisement proclaiming: "Here's what's now being said about tobacco smoke in the air. . . . Scientist disputes findings of cancer risk to nonsmokers." In the ad, the Tobacco Institute declared that newspapers were reporting that "several eminent biostatisticians" had found a "statistical error" in Hirayama's calculations that raised "serious questions about the study." TIMN0019293-9293 (US 21575) (O).

549. The Tobacco Institute knew, however, that the Hirayama data was correct and that the "statistical error" did not exist. Prior to making the press release public, industry consultant Peter Lee reviewed Hirayama's data and the Tobacco Institute statisticians' allegations. Lee concluded that the Tobacco Institute claim of a statistical error in the study was "wrong and that Hirayama was right." 501622432-2433 (US 88150) (O).

550. Indeed, in early June 1981, both Lee and Mantel made it clear in writing to the Tobacco Institute that any error, even if an error did exist, did not invalidate Hirayama's results. Lee wrote in a June 10, 1981 telex that:

> Mantel's suspicions. . . are in my opinion definitely unfounded.

> Even if they were correct, T.I. should not quote Mantel as saying there is an arithmetical error which invalidates the claim of a high level of significance. . .I have talked to Mantel and he feels it probable that the best analysis methods would not significantly alter Hirayama's conclusions. . . .
>
> Please show this to T.I. and try to persuade them not to do the press release. If it is released and it is proved that Hirayama was not in error, they will be in danger of implicitly agreeing passive smoking causes lung cancer.

03029460-9461 (US 22830*) (O).

551. In fact, notes of the June 24, 1981 Committee of Counsel meeting minutes recorded that recorded that Mantel was "backpedaling" on his initial allegation of a statistical error. ATX9275490311-0324 at 0316 (US 36232) (O).

552. Lee's confirmation of the Hirayama conclusions did not sit well with Defendants. RJR's Frank Colby wrote to general counsel Sam Witt on June 12, 1981that Lee's conduct constituted an "act of **extreme disloyalty**." 501622432-2433 (US 88150) (O) emphasis added).

553. By July 15, 1981, Franz Adlkofer, Scientific Director of the German Verband, had reviewed Hirayama's data and, after discussions with Lee, also expressed internally his opinion that the Japanese study was accurate and that the Tobacco Institute had issued its press release despite knowing that the study was accurate. B&W in-house counsel Kendrick Wells summarized the events to Ernie Pepples in a July 24, 1981 memorandum as follows:

> Dr. Adlkofer . . . has committed himself to the position that Lee and Hirayama are correct and Mantel and TI are wrong. Adlkofer called Frank Colby at Reynolds and said that Germany has received new data from Japan which confirms the Hirayama work. Adlkofer and Lee and another German associate were all asked to review Hirayama's work and did not find the error picked up by Kastenbaum. They believe that Hirayama is a good scientist and that his nonsmoking wives publication was correct. . . .
>
> **[Adlkofer] replied with a strong statement that Hirayama was correct, that the TI knew it and that TI published its statement**

about Hirayama knowing that the work was correct."

2050987570-7571 at 7571 (US 22318) (A) (emphasis added) ; see also Rupp TT, 10/28/04, 4343:1-4346:6.

554. Adlkofer invited Tsokos and Kastenbaum to Germany to review the Hirayama data. However, Tobacco Institute president Kornegay "gave a forceful veto" of the proposal without the dissent of any member company. 2050987570-7571 at 7571 (US 22318) (A). Thus, Defendants intentionally chose not to review the Hirayama data, and instead continued their public campaign attacking the study.

555. The Tobacco Institute published its press release with its false claim of a statistical error as part of an aggressive campaign that reached an estimated 56.7 million people by July 31, 1981. TITX0027702-7826 at 7707 (US 22332) (O). In an advertising campaign that ran through October 1981, the Tobacco Institute continued to insist the study was flawed. TIMN0073499-3499 (US 77049) (O). Reynolds was running a similar ad as late as 1984. 504100136-0136 (US 50882) (A).

556. With respect to the Tobacco Institute advertisement that the Mantel "error" "invalidated" the Hirayama study, Mantel later publicly stated, "I didn't say that – the Tobacco Institute did." 2015029221 (US 22923) (O).

557. In a November 16, 1981 speech at the Tobacco Institute, the chairman of INFOTAB stated that the Tobacco Institute had provided INFOTAB with its Hirayama communications plan (press package) for worldwide use and publication. This activity was considered an example of the "outstanding help we have been receiving from the Tobacco Institute." 2501029891-9901 at 9898 (US 20557) (O).

558. Defendants internally were aware that they were never able to overcome the 1981

Hirayama study. In 1986, John Rupp considered the Hirayama study "the most damaging evidence that has been cited to support a risk due to ETS exposure." 2021004058-4064 at 4063 (US 20339) (A). In 1988, Donald Hoel recorded Rupp's comments at a joint industry ETS meeting in London, frankly admitting that the industry had not succeeded in discrediting the conclusions of Hirayama's study:

> Rupp then engaged in a defense of existing scientific undertakings. He noted that epidemiological evidence is necessary if for no other reason than to effectively respond to anti-smoking groups, which are still engaged in epidemiological research. Furthermore, the industry has not yet adequately dealt with Hirayama's study.

2021548222-8235 at 8233 (US 20349) (O).

(iii) Other Internal Research and Statements Revealing Defendants' Knowledge of the Health Risks of Passive Smoking

559. While Philip Morris used INBIFO to carry out the bulk of its secret ETS research, the company also conducted a limited amount of internal research suggestive of adverse ETS health effects at its FTR affiliate in Neuchatel. 2057077653-7661 (US 66809) (A). According to former Philip Morris scientist William Farone, Philip Morris initiated a study in 1985 code-named "Project Tasso" to determine the levels of tobacco-specific nitrosamines such as NNK (nicotine-derived nitrosaminoketone) in sidestream smoke. Farone WD, 175:17-19.

560. Tobacco-specific nitrosamines are known toxic substances generated by the smoking of tobacco, and are known components of secondhand smoke. Farone WD, 175:17-176:17; (US 17108) (A); Samet WD, 171:15-172:16.

561. In a 1986 Philip Morris report from Project Tasso, FTR scientists wrote, "The NNK formation rate and concentration 3.5 h. [hours] after smoking is directly related to the filler nitrate content." Dr. Farone explained at trial that this means "the chemical reactions that result

in the formation of NNK," reactions that occur in secondhand smoke, "continue in the air as long as there are adequate concentrations of nicotine and oxides of nitrogen." 2024770266-0267 (US 37155) (A); 2028638794-8803 (US 37424) (A); Farone WD, 175:17-176:17.

562. The objective of Project Tasso belied Philip Morris's knowledge of the TSNA hazard posed by secondhand smoke:

> OBJECTIVE
> Previous test chamber experiments had shown that NNK concentration in SS increased after smoking and reached a maximum concentration about four hours after smoking. The objective of project TASSO is to investigate the mechanism of NNK formation, to determine the reason for the increase of NNK concentration in SS with time and to attempt to suppress NNK formation by cigarette filler or paper modifications.

2028638794-8803 at 8794 (US 37424) (A); 2024770266-0267 (US 37155) (A).

563. Researchers wrote in the "Project TASSO" Intermediate Report dated November 24, 1986, that: "Commercial cigarettes present a wide range of NNK formation in aging SS. . . . Because these compounds [TSNAs] could pose a health risk, reducing their levels in cigarette smoke is therefore a primary goal." 2026209210-9269 at 9212-9213 (US 89557) (O).

564. Philip Morris in the 1980s also carried out a study, code-named "Project POLDI," another study to determine the levels of toxic compounds in sidestream smoke. A 1985 interim report on Project POLDI recorded that the levels of NNK "rose sharply" in the secondhand smoke until four hours after smoking; the levels of other TSNAs rose as well. Dr. Farone stated at trial that Project POLDI is further evidence of "Philip Morris's awareness, in 1985, that undesirable sidestream smoke reactions and effects continued for hours after the sidestream smoke entered the air." Farone WD, 176:18-177:2; 2028639730-9731 (US 37427) (A).

565. Dr. Farone testified that he is aware of no subsequent research that disproved the results obtained by Philip Morris in Project TASSO and Project POLDI, namely that exposure to

carcinogenic TSNAs increases over time, even after smoking. Defendants did not challenge this testimony during cross-examination. Farone WD, 175:11-16, 177:3-9; 2062574000-4016 (JD-040113) (O).

566. Also at its Neuchatel facility, Philip Morris studied the concentrations of numerous compounds in ETS. A report titled "Quantitative Evaluation of Cigarette Sidestream Smoke Components Under Controlled Experimental Conditions" summarized the measurements of known harmful components as a function of time and number of cigarettes smoked. Researchers generated sidestream smoke in ambient air, then measured nicotine, carbon monoxide, ammonia, cyanide, and nitrogen oxides over time in an experimental chamber. 2029269056-9126 (US 20432) (A).

567. BATCo appears to have employed a policy of withholding at least some of its research from the public. The summary/minutes of the 1982 BAT Group Research Conference in Montebello, Canada recorded the following with respect to ETS:

> (a) We must get hard data both to help counter anti-smoking attacks and to support the design of future products . . . .
>
> (b) We should keep within BAT:
>
> i) animal results on sidestream activity
>
> ii) thoughts on the biological activity of sidestream
>
> iii) research findings on the consumer annoyance aspects of environmental smoke - since there have potential commercial value.

100448162-8184 at 8170 (US 34661) (A).

568. B&W recognized the weight of the scientific evidence indicting passive smoking as a cause of harm. In a November 16, 1982 memorandum from B&W in-house counsel Bob Sachs to company scientists and lawyers, Sachs questioned the role of the Tobacco Institute in

affecting the "public smoking" issue given "the overwhelming weight of scientific literature pointing toward [the] toxicity" of tobacco smoke. 680546750-6752 (US 21001) (A).

569. In 1988, Reynolds partially funded a comprehensive assessment of the health risks of passive smoking. The assessment, conducted by a working group led by Professor Walter Spitzer at the University of Toronto, was published in 1990 in *Clinical and Investigative Medicine* under the title "Links Between Passive Smoking and Disease: A Best-Evidence Synthesis." 515251440-1465 (US 92103) (A).

570. The 1990 Canadian (Spitzer) study funded by Reynolds concluded that "the weight of the evidence is compatible with a positive association between residential exposure to environmental tobacco smoke (primarily from spousal smoking) and lung cancer." The study also found links between passive smoking and respiratory illness and reduced lung function in both adults and children, as well as childhood hospitalization and asthma in children. 515251440-1465 at 1441 (US 92103) (A).

571. Reynolds in-house counsel Mary Ward recognized the impact of the Canadian study even before it was published. Ward wrote to fellow counsel in a memorandum dated March 15, 1989, that "this document can be very damaging when we are confronted with it in a legislative or litigation context." She also recommended that Reynolds not fund the publication of the final study. 515541733-1736 at 1733, 1736 (US 51950) (A).

572. When Defendants learned that Spitzer and his scientific working group would publish their study concluding that passive smoking was associated with lung cancer and other adverse health effects, Defendants took steps to "neutralize" the study, including organizing the 1989 McGill "symposium" described below. 2500048508-8515 at 8508 (US 20549) (A).

573. On July 6, 1994, the Majority Staff, Health and the Environment Subcommittee of

the Committee on Energy and Commerce in the United States of Representatives sent members of Defendants' CIAR Science Advisory Board (SAB) a survey on the health effects of passive smoking. Six of the seven SAB members who responded agreed that ETS "presents a serious and substantial public health threat to children" and five of the seven members agreed that ETS is "a human lung carcinogen." 2044436543-6544 (US 21991) (A).

574. In 2000, Philip Morris commissioned the firm Arthur Little to study the economic impact of tobacco use in the Czech Republic. Philip Morris then submitted the economic impact analysis in opposition to a proposed excise tax increase. The analysis concluded that tobacco use results in millions of dollars in cost benefits to the Czech Republic in terms of reduced pension and healthcare costs for smokers who die early because of smoking-related illnesses. 2085293756-3783 (US 45699) (A).

575. With respect to passive smoking, the Philip Morris-commissioned study not only assumed that secondhand smoke may be harmful to the health of non-smokers, and but also that a certain fraction of health care costs attributable to cigarette smoking resulted from passive smoking. While the analysis was carried out by Arthur Little, it was submitted by Philip Morris to the Czech government. 2085293756-3783 at 3759, 3764, and 3772 (US 45699) (A); 2085238767-8768 (US 25214) (A).

576. When word of the economic impact analysis became known, Philip Morris Companies apologized. Steven Parrish stated, for example, that the calculation of cost savings due to the early deaths of smokers was an "inappropriate" reason for his company to advance in opposition to the excise tax increase. Parrish TT, 1/26/05 11315:22-24. Chairman Geoffrey Bible admitted that submitting the report was "terrible judgment." 2085259123 (JD-054580) (A). However, Philip Morris has *never* claimed that Arthur Little's assumptions and calculations

- including the assumption that a certain number of persons will incur health care costs due to passive smoking - were erroneous. 2085238767-8768 (US 25214) (A).

577. In 2001, Philip Morris executives even discussed changing the Philip Morris corporate position to admit that passive smoking caused disease. As described below, a number of documents related to this proposal reveal that executives believed that the case against ETS had been made.

578. When Philip Morris Companies originally established the Philip Morris website in October 1999, the Philip Morris public position on passive smoking was that while "many scientists and regulators have concluded that ETS poses a health risk to nonsmokers," Philip Morris did not agree with these conclusions. (no bates) (US 92056) (A).

579. In summer 2001, Philip Morris decided to revise its position on ETS. According to a June 11, 2001 memorandum from Paula Desel to Raymond Lau and others, and copied to Ellen Merlo, Chuck Wall, Denise Keane, Mark Berlind, and others, Desel attached a draft revised ETS position for the Philip Morris website. Philip Morris withheld the draft ETS position itself from production in this litigation on the basis of privilege. 2083609049-9049 (2083609050-9056 (withheld as privileged)) (US 92058) (A).

580. The draft was forwarded to Roger Walk, a Philip Morris scientist in Europe (and INBIFO Scientific Adviser), who forwarded his comments to Raymond Lau. According to an undated Philip Morris document, someone at Philip Morris reviewed Walk's and Lau's comments, then responded to Desel with the following revision to the paragraph on lung cancer and heart disease:

> The conclusions reached by governmental authorities and the public health community with respect to lung cancer and heart disease in non-smoking adults are based on a large number of scientific studies that have investigated the association of reported

> ETS exposure with these health end points. **These studies have shown a small, but generally consistent, increase in the relative risk of contracting these diseases for non-smokers reportedly exposed to ETS.**

2085126542-6544 at 6542 (US 92059) (A) (emphasis added).

581. A later draft of the Philip Morris revised position on passive smoking, marked "Confidential" and dated August 6, 2001, was produced in this litigation. The three page document, bearing the handwritten notation "PMI," is titled "Our Policy and Position on Secondhand Tobacco Smoke." This iteration of the company's position acknowledged *and agreed with* the scientific consensus that passive smoking can cause lung cancer and other diseases:

> We agree with [accept] the consensus among governmental authorities and the public health community that secondhand smoke (also known as environmental tobacco smoke or ETS) can cause or increase the risk of diseases - including lung cancer and heart disease - in nonsmoking adults, as well as conditions in children such as asthma, respiratory infections and Sudden Infant Death Syndrome.

2085126539-6541 at 6539 (US 92057) (A).

582. The August 6, 2001 draft Philip Morris position even stated that, "Given the health effects of secondhand smoke, we believe that legislatures should adopt meaningful and reasonable public smoking restrictions, considering all the factors and interests involved." 2085126539-6541 at 6539 (US 92057) (A).

583. A Philip Morris e-mail dated August 6, 2001, from Even Hurwitz states that the attachment reflected the "current view" of Philip Morris International (PMI) on a possible ETS policy. According to the message from Philip Morris USA counsel Mark Berlind forwarding the PMI draft from Hurwitz, Berlin agreed with the PMI position: "I know I still owe you my own thoughts (**they're pretty much in line with the [PMI] draft below**); I'll try to get them to you

today." 2085776232-6232A (US 93324) (O) (emphasis added).

584. Notwithstanding the position of Philip Morris International and Mark Berlind that Philip Morris should state its agreement with the consensus that passive smoking causes lung cancer and other diseases, the current Philip Morris position, as stated on its website, does not even acknowledge the existence of a consensus, much less an agreement with that consensus. (no bates) (US 92055) (A). See infra US FF § III.A(2)(m)(i).

(g) Defendants' Collective Responses to the Economic Threat Posed By Passive Smoking

585. As described above, Defendants recognized from the mid-1970s forward that the health effects of passive smoking posed a profound threat to industry viability and cigarette profits, through (1) increasing numbers of smoking restrictions; (2) making smoking "socially unacceptable"; and (3) reducing the number of starter smokers. This recognition resulted in concerted, international action by Defendants and other members of the industry to meet the passive smoking threat head on.

(i) 1975-1980: The "Public Smoking Advisory Group" to the Research Liaison Committee

586. Defendants set up the Research Liaison Committee in 1974 to collectively assess and guide research that was jointly funded and managed by the companies. The RLC was comprised of senior executives and industry attorneys. A subcommittee or "Advisory Group" to the RLC, including outside attorneys Don Hoel and Ed Jacob, was tasked in 1975 to consider and recommend research related to the emerging issue of passive smoking. The RLC meetings in 1976 were additionally staffed by company general counsel such as Cy Hetsko (American Brands) and Alex Holtzman (Philip Morris). BWX0007549-BWX0007588 at 7575-7576 (US 20286) (A); 1003293761-3763 (US 86502) (O); 500294698-4698 (US 24145) (O);

1003293752-3753 (US 20169) (O).

587. Projects recommended by this Advisory Group to the RLC were presented to and approved for funding by the Committee of Counsel, and funded by Defendants as both CTR Special Projects and Special Account 4 projects. 1003294930-4933 at 4931-4932 (US 23416) (O); 503673145-3146 (US 86405) (A); 1000255997-6001 (US 20086) (O).

588. The activities of the Advisory Group, referred to in some documents as the "Public Smoking Advisory Group," were kept secret from the public. According to Hoel's summary of the October 2, 1975 meeting of the group, and confirmed in the notes of the same meeting by Philip Morris's Bill Dunn and Ray Fagan:

> All communications with potential researchers should be kept in strict confidence (i.e., the submission of a proposal should not later appear in a researcher's curriculum vitae). Potential researchers should be instructed not to place individual company names on proposals. Finally, the proposals should be labeled "DRAFT" and should not contain language of the type discussed.

1003294930-4933 at 4931-4932 (US 23416) (O); 1000205071-5073 (US 20079) (O).

589. A handwritten Philip Morris summary of the November 5, 1975 meeting of the Advisory Group even recorded that: "Ed Jacob suggested that no further formal minutes [of meetings] be made - also **all should destroy** [crossed-out] **remove notes and previous minutes from corporate files.**" 1003294811-4814 at 4811 (US 23402) (O) (emphasis added).

590. Very few documents describing the actions of the Advisory Group exist (or were produced) after the date of Jacob's "suggestion" to group members to cease keeping records of meetings. However, other documents establish that the actions of the Advisory Group resulted in the funding of several ETS-related projects through CTR Special Projects and Special Account 4 throughout the late 1970s and into the early 1980s. These projects included work by John Salvaggio, Response Analysis, Stanford Research Institute (SRI) and others. 1005122237-2240

(US 20215) (A); 1005122267-2271 (US 20219) (A).

(ii) 1984-1988: The Tobacco Institute ETS Advisory Group (ETSAG), or "Hoel Committee"

591. In September 1984, the Committee of Counsel directed Donald Hoel to reconstitute and reconvene the committee he had helped coordinate in the 1970s to manage Defendants' passive smoking efforts. This new group was called the Tobacco Institute ETS Advisory Group (TI-ETSAG), sometimes referred to as the "Hoel Committee" after its chairman. 2015029667 (US 20315) (O); Green TT, 11/15/04, 5975:23-5976:7.

592. The TI-ETSAG existed from 1984 to 1988, when its mission was turned over to the Center for Indoor Air Research, or CIAR. 2023054167-4167 (US 75232) (A); 511252621-2626 (US 51554) (A); See infra US FF § III.A (2)(g)(iv).

593. The TI-ETSAG was made up of representatives from the cigarette manufacturer Defendants, in-house counsel, outside law firm attorneys, and public relations experts from the Tobacco Institute. In addition to Hoel, some of the committee members included John Rupp of Covington & Burling; Lorillard's Alexander Spears, Reynolds scientists Charles Green and Guy Oldaker, Reynolds in-house counsel Mary Ward, Philip Morris scientists Tom Osdene and Bob Pages, Brown & Williamson scientist Gil Esterle, and Marvin Kastenbaum, Bill Kloepfer, and Charles Waite from the Tobacco Institute. The group met monthly. 2021004058-4064 (US 20339) (A); TI00610153-TI00610154 (US 62064) (O).

594. While Liggett and American Tobacco did not participate directly, they contributed funding to the committee activities. 2021004058-4064 at 4058 (US 20339) (A); Rupp TT, 10/27/04, 4009:4-16.

595. The purpose of the TI-ETSAG was to generate data to resist smoking restrictions and conclusions that supported the industry's public position that ETS posed no proven health

risk to nonsmokers. Tom Osdene wrote the following in an April 28, 1988 letter to Tobacco Institute president Sam Chilcote:

> I think many of us have conceptualized the ETS issue as a battlefield in which the arena is dominated by public relations and legal issues, while the ammunition which is used happens to be science. **It has been the purpose of CIAR as well as its precursor, the ETS Advisory Committee, to provide ammunition in this fight.**

2021012384-2388 at 2384 (US 20340) (A) (emphasis added).

596. A Philip Morris document dated February 25, 1986 stated the mission of the ETSAG in these terms: "Solicit and review proposals for the conduct of **ETS-related research that will be helpful to the industry.** Recommend (to the Committee of Counsel) that approved projects be funded as CTR Special Projects." 2021004058-4064 at 4058 (US 20339) (A) (emphasis added).

597. Don Hoel testified that the projects were funded as CTR Special Projects, with no SAB review, because the ETSAG "was more litigation oriented" as opposed to scientifically oriented. In fact, one purpose of the ETSAG was to fund projects in order to "get scientific publications that would be of use in litigation." Donald Hoel PD, United States v. Philip Morris, 6/27/02, 58:20-59:19.

598. Another goal of the ETSAG was to generate data and conclusions from "independent" scientists. The same Philip Morris report noted, "To be useful and effective, approved research projects: 1) should be conducted in independent, outside laboratories (not obviously connected with the tobacco industry) . . . . " 2021004058-4064 at 4058 (US 20339) (A).

599. Thus, the Hoel Committee reported to and provided updates to the Committee of Counsel, who were authorized to approve ETS projects for funding. 521028862-8863 (U.S.

52693*) (A); 680542518-2522 at 2520-2521 (US 30899) (O); 91821775 (US 57128) (O); 91820443 (US 57123) (O); Donald Hoel PD, United States v. Philip Morris, 6/27/02, 129:3-10, 129:24-130:7; Ward TT, 11/3/04, 4961:11-4962:5.

600. From 1984 to 1988, the ETSAG was responsible for developing and managing the following passive smoking projects, all designed to generate data and findings that Defendants could use to attack evidence indicting passive smoking as a health hazard, and all funded through CTR as Special Projects:

ORNL Personal Nicotine Monitor, developed by Roger Jenkins and Michael Guerin at the Oak Ridge National Laboratory (ORNL) and Reynolds. The method of measurement was intended to reveal that nicotine levels in ambient air were "very low. . . contrary to what is stated or assumed in many presently published reports." Approved funding via ETSAG: $855,000.

Indoor air particulate sampling, by Salvatore DiNardi. The purpose of this project was "to refute [the] oft-cited paper of Repace and Lowery (1980) concluding that nonsmokers were exposed to high levels of airborne particulate due to ETS. Approved funding via ETSAG: $688,878.

Indoor air testing/surveys, by ACVA, a firm controlled by industry consultant "Gray" Robertson. The purpose of the project was to show that the "vast majority of [indoor air] complaints are directly caused by airborne dust, bacteria, and or fungi" as well as poor ventilation, "and not to the presence of ETS." Approved funding via ETSAG: $13,800.

Portable air sampler, developed by Reynolds. The purpose of the sampler was to take "measurements" of air in aircraft, restaurants, homes, and workplaces, to show that everyday indoor air contains very small amounts of ETS. While the sampler was created by Reynolds, "scientists from PM, B&W, Lorillard and Reynolds will participate." Testing was carried out in numerous cities - including New York, Ottawa, Dallas, and others - using the Reynolds apparatus. The results were then used to resist smoking restrictions in those cities.

Epidemiological and other scientific critiques, by industry consultants Lee Husting, Theodor Sterling, David Sterling, Demetrios Moschandreas, Marvin Kastenbaum, and James Kilpatrick. The purpose of these critiques was to cast doubt on the epidemiological studies by Hirayama (called "the most damaging evidence that has been cited to support a risk due to ETS exposure") and others showing an association between passive smoking and lung cancer. Known approved funding via ETSAG: $198,034 (Husting); $70,000 (D. Sterling).

ETS allergy testing, by Tulane University researchers John Salvaggio and Samuel Lehrer. In Hoel's words, "it is expected that even the extreme case of the allergic asthmatic will not show physiological responses to ETS." Approved funding via ETSAG: $263,117.

Aircraft cabin air quality measurements, by R.J. Reynolds using the R.J. Reynolds sampler apparatus described above.

2021004058-4064 (US 20339) (A); TIDN0008191-8194 (US 62592) (O); 86024167-4167 (US 56093) (O); 86024168-4172 (US 21089) (A); 92613920-4198 (US 32132) (O); 2028343885-3890 at 3887 (US 75166) (O); 504933703-3707 (US 24220) (O); 512252621-2626 (US 51554) (A); 521028861 (US 27065) (O).

601. The clear intent of the ETSAG was to obtain data helpful to the industry. As Hoel wrote in his April 5, 1985 letter on behalf of the group to the Committee of Counsel requesting $855,000 in joint CTR Special Project funding for ORNL to develop a nicotine sampler:

> The proposed project involves the development and field testing of the personal nicotine monitor originally designed and developed by Dr. Muramatsu of the Japan Tobacco and Salt Public Corporation [JTI]. This original research which was published in 1984 indicated that nonsmokers are exposed to much lower amounts of environmental tobacco smoke than those claimed by industry critics such as James Repace. . . .
>
> It is the opinion of the Advisory Group that the present proposal . . . should provide useful data on the issue of nonsmoker response to environmental tobacco smoke.

507734379-4380 (US 29905) (O).

602. One means to insure that projects would produce industry-favorable results was to carry out small-scale pilot studies. Scientists were often asked to provide the results of a proposed study first, and thus they employed "pilot" studies to give the lawyers advanced information. If the preliminary study produced results unfavorable to the litigation positions of Defendants, the lawyers would not continue to fund them. Donald Hoel PD, United States v. Philip Morris, 6/27/02, 176:13-20, 178:6-179:22.

603. For example, Reynolds scientist Charles Green advertised at a presentation to an

INFOTAB meeting on October 15, 1986 that while he was a part of ETSAG, "One of the things that the lawyers always ask us before we do any experiment is what are the results going to be. So oftentimes we conduct pilot studies." These pilot projects enabled Defendants fund only projects that they knew would generate industry-favorable results. 2501457517-7522 (US 22956) (A); 89259467-9468 (US 22982) (A); Donald Hoel PD, United States v. Philip Morris, 6/27/02, 176:13-20,178:6-179:22.

604. When Green was asked at trial if it was also unusual for groups like the ETSAG, and later CIAR, to consider the expected results of a study when making a funding decision, he admitted, "Sometimes that would be discussed." Green TT, 11/15/04, 5976:16-19.

605. A 1986 ETSAG meeting record stated that an ACVA "Home Ventilation Evaluation" project was carried out first as a pilot study coordinated by Covington & Burling's Mike Michaelson. 504933703-3707 at 3704 (US 24220) (O); 80406377-6385 (US 23476) (A).

606. Another means to control research results was to have lawyers review all project proposals prior to funding and papers prior to publication. For example, a November 21, 1986 legal bill from Shook, Hardy & Bacon to Philip Morris, Reynolds, Lorillard, and B&W detailed the following work under the heading of "Science and Research":

> [R]eview Sterling memorandum re Vancouver ETS seminar; attorneys and analysts conference re Dr. First and ETS Advisory Group projects . . . review Koo manuscript . . . review DiNardi proposal . . . review ORNL paper submission on ETS; review IITRI project proposals and abstracts . . . telephone conference with Dr. Sterling regarding clearance of manuscript . . . review and analyze ETS Advisory Group agenda . . . review research project and send to general counsel . . . correspondence and telex to Dr. Rylander . . . telephone conference with Dr. Sterling regarding clearance of paper on smoking by occupation. . . . "

682174838-4844 at 4839-4840 (US 69159) (O).

607. Numerous meeting minutes and summaries illustrate how ETSAG group

members, particularly attorneys from Shook, Hardy & Bacon and Covington & Burling, designed, monitored, and carefully controlled projects initiated by the group. See e.g., 2021003952-3957 (US 25563) (O); 2021004054-4057 (US 25564) (O); 2021004286-4290 (US 25565) (O); 2021003620-3625 (US 25562) (O); 504933596-3702 (US 24219) (A); 512309183-9189 (US 24751) (A); 505491303-1308 (US 50834) (O); TIBU0030330-0331 (US 62566) (O); TI05440380-0380 (US 62214) (O); 2021001009-1009 (US 25533) (A); 511252621-2626 (US 51554) (A).

608. The ETSAG even reviewed and edited papers written by the outside researchers prior to publishing. For example, a record of the May 22, 1986 ETSAG meeting recorded the following with respect to the paper by long-time industry consultant Theodor Sterling critiquing the model used by Repace in estimating annual deaths attributable to ETS:

> Sterling on Repace - Kastenbaum (TI) has had a conversation with Sterling suggesting he rewrite his papers before submitting for publication. The consensus is that Sterling has a good series of papers on Repace but needs to rewrite. Especially noted is the need not to appear to support the Repace model. . . . Hoel will follow up.

655042500-2503 at 2501 (US 22921*) (O).

609. The ETSAG avoided research that might have confirmed that ETS was indeed a health hazard. Osdene admitted in his April 25, 1988 letter to Chilcote: "In terms of the second issue, sponsorship of research into alleged health effects of ETS, with the exception of some [allergy] work by Dr. Salvaggio, we have avoided this issue." 2021012384-2388 at 2384 (US 20340) (A).

610. In addition, the Tobacco Institute Executive Committee and Committee of Counsel set guidelines for the types of scientific research that Hoel and his committee could direct. For example, several documents establish that the ETSAG was barred from directing any

research into whether components of cigarette smoke, or biomarkers, were absorbed into the body fluids of nonsmokers. The November 2, 1984 meeting agenda listed as one of the "Executive Committee and Committee of Counsel Guidelines": "No body fluid testing for the present." 2021004916-4917 (US 21706) (O). Osdene's notes of the meeting contain the same guideline. 2021004909-4912 at 4909 (US 25577) (A).

611. The industry ban on ETS body fluid testing traces back to 1981. Following the release of the first epidemiological studies suggesting that ETS was associated with an increased risk of lung cancer, the Industry Research Committee discussed a project by Battelle labs to study cotinine, a nicotine metabolite, in the urine of nonsmokers. Spears recorded the following in his notes of the October 1981 meeting:

> The cotinine proposal was discussed which is now funded and on-going at Battelle in Phase 1. . . . Janet Brown and Ed Jacob separately indicated their possible reluctance to fund Phase 2 which involves some measurement of cotinine in non-smokers exposed to environmental tobacco smoke. Jacob's objection is on the basis that he believes that **we should not be involved in demonstrating that non-smokers' body fluids contain anything related to tobacco smoke.** He apparently has no objection to measuring smoke components in the environment, but draws this distinction and objection to measurements in non-smokers' body fluids.

03543860-3864 (US 89058) (A) (emphasis added).

612. Defendants' self-imposed ban on ETS body fluid studies was in stark contrast to their liberally funded air sampling projects through the ETSAG. In other words, while Defendants readily initiated projects to test *air* in an attempt to show that ETS was a minimal contributor to indoor air quality, Defendants stayed away from *body fluid* research that would show that nonsmokers absorb cigarette smoke into their bodies. This is important considering that the biomarker evidence (nonsmoker absorption of smoke components) was still developing in both the 1982 and 1984 Surgeon General Reports. TLT0242222-2551 at 2470 (US 60598) (A)

(1982 SGR); VXA1601456-1742 at 1652 (US 64059) (A) (1984 SGR).

613. Defendants' self-imposed ban on body fluid testing continued into 1988, when Osdene wrote to Chilcote in his April 25, 1988 letter with respect to research directed by the ETSAG:

> I would remind you that **there were restrictions placed upon us over the period of time regarding any determinations of any smoke components in body fluids.** This, I believe led to discouragement of doing specific experimentation in this area.

2021012384-2388 at 2384 (US 20340) (A) (emphasis added).

614. Defendants coordinated the actions of the ETSAG with those of other international industry bodies. For example, on April 8, 1986, a joint meeting of the ETS Advisory Groups from the United States, the United Kingdom, Germany, and INFOTAB took place in London "to discuss scientific and public relations problems relating to environmental tobacco smoke" and to "avoid duplication of the various efforts." Osdene and Green presented a summary of ETSAG projects to the assembled group. 505347172-7174 (US 20739) (A).

615. For two days in March 1987, the entire ETSAG met with representatives of the U.K. Tobacco Advisory Council (TAC), the German Verband der Cigarettenindustrie (VdC), and Japan Tobacco (JTI) at the L'Enfant Plaza Hotel in Washington, D.C. Each group presented its projects for discussion at this meeting. Records of the March 1987 meeting make clear that the industry was not interested in objective research, but only research that served its goals. For example, a public affairs presentation at this joint meeting stated that the industry needed to have a **"systematic programme of research designed to refute the major allegations made against us."** In addition, "Successful PA work on ETS will depend on **the case remaining 'not proven,'** and the need to ask you to keep producing work that challenges the anti-smokers' argument." Participants also agreed that the ETS research needed to utilize "neutral scientists" and the ETS

issue needed to be expanded into overall "ambient air quality." TI00682162-2163 at 2162 (US 21240) (O); 2501458142-8148 at 8142 (US 27951) (O).

616. Charles Green's record of the March 1987 meeting contained the following observation, one that would guide Defendants' research initiatives for years to come:

> **All agreed that the most significant ETS problem facing the industry is the result of epidemiological studies which indicate a low risk related to ETS exposure.** More industry sponsored research is needed to address this issue.

508226799-6804 at 6804 (US 75279) (A) (emphasis added).

(iii) 1977-1991: "Operation Berkshire" and Defendants' Coordinated International Initiatives

617. Defendants' passive smoking concerns were also addressed on an international level from the mid-1970s forward. BATCo held its Chairman's Conference in Hot Springs, Virginia in June 1976, where there was "unanimous agreement" that the social unacceptability issue resulting from evidence that cigarette smoke harmed nonsmokers constituted "a more serious threat to the industry's future than any other aspect of the attack on smoking." 2025025481-5494 at 5481 (US 37220) (O). The issue of passive smoking and "social acceptability" of smoking were "inseparably linked," and presented "a major danger and challenge to the industry." BATCo identified "the industry's need to devise a counter-campaign." 110069860-9875 at 9863 (US 34951*) (O).

618. According to a Philip Morris memorandum dated December 3, 1976, Imperial Tobacco Chairman Tony Garrett called Hugh Cullman, then Executive Vice President of Philip Morris Incorporated and President of Philip Morris International, that day to explore whether several of the world's largest manufacturers, including Philip Morris, BATCo, Reynolds, Reemtsma, and Rothmans "might be prepared to meet discreetly to develop a defensive smoking

and health strategy for major markets such as the UK, Germany, Canada, US and possibly others." 2025025286-5286 (US 20407) (A).

619. The initial objective of Garrett's proposal was "to develop a defensive smoking and health strategy which would include a voluntary agreement that no concessions beyond a certain point would be voluntarily made by the members [of the group] and if further concessions were required by respective governments, that these not be agreed to and that governments be forced to legislate." The stated concern was that "**the companies and countries would be picked off one by one** and that the Domino theory would impact on all of us." 2025025286-5286 (US 20407) (A) (emphasis added).

620. Garrett memorialized the conversation in a December 3, 1976 letter to Cullman in which he reiterated the objective "to form a defensive smoking and health strategy, to avoid our countries and/or companies being picked off one by one, with a resultant domino effect." Garrett also reported that BATCo, Reynolds, Reemtsma, Rothmans, and Imperial were prepared to consider such a unified strategy, and suggested that a meeting take place in April or May 1977 with company representatives and CEOs. 2025025290-5291 (US 22980) (A).

621. According to a February 23, 1977 letter from Cullman to Garrett confirming the participation of Philip Morris, the meeting became known as "Operation Berkshire." 2025025288-5289 (US 20408) (O). Garrett wrote in his March 7, 1977 letter to Philip Morris general counsel Alex Holtzman that "Operation Berkshire" was scheduled to be held on June 2-4, 1977, at an English manor called Shockerwick House near Bath. The goal was to allow executives an opportunity to "have a frank, informal, exchange of views on political strategy in respect of smoking and health." 2025025347-5348 (US 20410) (O).

622. In a March 24 follow-up letter to Holtzman, Garrett emphasized, "There is general

agreement that we should make every effort to maintain tight security over our meeting, but we need to be prepared for the possibility of a leak." To that end, Garrett attached a draft "statement" that could be used if the press learned of the secret meeting. 2025025341-5343 (US 20409) (A).

623. In preparation for the June 1977 "Operation Berkshire" meeting, BATCo and Philip Morris drafted and circulated a confidential "Position Paper" for the companies to discuss at the meeting. BATCo forwarded the "Position Paper" to Garrett under cover letter dated April 28, 1977. The "Position Paper" set out a number of guiding principles relating to smoking and health, as part of the maintaining "controversy" or open question:

> We acknowledge the fact that there is a continuing smoking and health controversy but we do not accept as proven that there is a causal relationship between smoking and various diseases . . . . In our view the issue of causation remains controversial and unresolved. . . .
>
> We believe it is better to speak as an industry with one voice on such matters and that this can be accomplished through national associations of manufacturers.
>
> **We take the view that to date there is no persuasive scientific evidence to support the contention that the non-smoker is harmed by the tobacco smoke of others . . . .**

2501024571-4575 at 4572-4573 (US 21904) (A); 2025025313-5318 (US 23741) (O).

624. Executives of the seven companies met at Shockerwick House in June 1977. Attendees at "Operation Berkshire" included Holtzman from Philip Morris Incorporated, BATCo chairman Patrick Sheehy, BATCo deputy chairman Kit Lockhart, and Reynolds chairman Bill Hobbs. The companies established three "working parties" at the meeting, the first one to address the "social acceptability of smoking." Each of the working groups was tasked to develop an industry "position paper" to serve as a "vehicle to activate Industry Associations throughout

the world." 2025024797-4803 (US 20406) (O). In the words of Reynolds counsel Sam Witt and confirmed in a Philip Morris record of the meeting, the working parties would examine the areas of interest and "develop strategy" to collectively address smoking and health issues. Reynolds was tasked to "spearhead the Social Acceptability Working Party," or SAWP. 502948580-8591 at 8587 (US 21908) (O); 2025025295-5300 (US 75146) (A).

625. To guide the efforts of the "working parties" and coordinate the positions of the companies under an umbrella organization, the seven "Operation Berkshire" participants/companies formed the International Committee on Smoking Issues (ICOSI). 502948580-8591 (US 21908) (O). The executives met again in November 1977 and March 1978, agreeing thereafter "that ICOSI should continue on a permanent basis." 2501020298-0308 at 0299 (US 21903) (O). A $2 million budget for ICOSI, drawing on funding from the participating companies, was quickly established for the group to carry out its mandate. 2501024103-4107 (US 21909) (O).

626. A Philip Morris report on ICOSI dated April 1979 reviewed the history and goals of the organization, stating, "The whole industry, companies and Trade Associations alike, must unite with common targets and common approaches." The report later stated: "ICOSI will thus be more involved in world, or perhaps regional, strategy and in achieving a truly united industry approach on problems affecting or likely to influence several countries." 1003717317-7330 (US 86518) (O); see also Proctor PD, United States v. Philip Morris, 8/27/02, 48:13-49:19, 50:21-52:7.

627. Through BATCO, B&W also participated in ICOSI. B&W general counsel Ernie Pepples reported in an April 12, 1978 memorandum to company leadership that ICOSI had been set up "on a formal basis in Brussels." Pepples recommended that B&W increase its

participation in the organization given that the passive smoking issue had "reached a fever pitch here" in the United States. Pepples cautioned, "The things ICOSI will do or fail to do will have impacts in this market as well as in others." 503143820-4106 at 3909 (US 75974) (A).

628. In October 1977, the ICOSI Social Acceptability Working Party (SAWP) distributed its first report to member companies, largely restating the industry's earlier position on passive smoking expressed at the Operation Berkshire meeting. The first report listed BATCo public relations manager Richard Haddon and representatives from Philip Morris, Rothmans, Gallaher, and Reemtsma among the members of the SAWP, chaired by Reynolds. 501472756-2794 (US 66342) (O).

629. The first report by SAWP to ICOSI also drew an explicit link between the health risks associated with passive smoking and the larger issue of "social acceptability" and warned that the trend in decreasing "social acceptability" had "serious long-term implications for the industry." The group identified the two most important basic influences on social acceptability issues : (1) the health effects to smokers and (2) government regulations of smoking resulting from the health effects of passive smoking. However, the SAWP gave the passive smoking issue "top priority," finding that "passive smoking is the most critical one of the social acceptability issues facing the industry today." To respond to the threat, the group recommended sustained "countermeasures," and emphasized the "need to act, not just react." 501472756-2794 at 2762-2772 (US 66342) (O).

630. The SAWP further concluded that "national trade associations (rather than individual companies) are key vehicles for launching countermeasures on social acceptability issues. Such association countermeasures become even more effective when they carry 'third party' endorsements." 501472756-2794 at 2772-2773 (US 66342) (O).

631. ICOSI continued to function as a means to coordinate the industry's position on passive smoking. In November 1977, the unified position of member companies was reaffirmed at an ICOSI meeting in Lausanne, Switzerland. According to the revised "Position Paper," the member companies continued to adopt the position "that there is no persuasive scientific evidence that the non-smoker is harmed by the tobacco smoke of others." 321795931-5951 at 5936 (US 28675*) (O). The companies thereafter "agreed to adhere to the positions and guidelines contained in the paper," with the goal of "coordinating views and activities related to smoking and health." 2501020298-0308 at 0298, 0305 (US 21903) (O).

632. This position, enunciated at "Operation Berkshire" and through ICOSI, would serve as the industry's, and Defendants' fundamental position on passive smoking for the next 25 years and beyond.

633. The SAWP finalized its second report and forwarded the report to members under a Reynolds cover memorandum dated February 7, 1978. In the second report, the SAWP stated its continued belief that passive smoking must be given "first priority" in resolving the "social acceptability" issues. The group also recommended that future coverage of ICOSI activities be centered on the United States, the United Kingdom, Australia, Belgium, Canada, Ireland, the Netherlands, Switzerland, and Germany. 980037079-7167 at 7082, 7085, 7161 (US 32445) (O).

634. The second report also included a lengthy position paper, or "policy statement on passive smoking" for the ratification of the member companies. The "policy statement" was drafted by a law firm for the use of the companies. The ultimate conclusion of the "policy statement" was that "tobacco smoke in the atmosphere does not cause disease in non-smokers." 980037079-7167 at 7086-7088 (US 32445) (O).

635. A March 1978 BATCo document revealed the true goal of ICOSI was not to

objectively present the scientific record on passive smoking, but to sow doubt in the minds of the public: "The aim of ICOSI is defensive research aimed at throwing up a smoke screen and to throw doubt on smoking research findings which show smoke causes diseases." 321588692-8692 (US 28544) (O).

636. One theme running through the ICOSI passive smoking position papers is the role of lawyers in coordinating the member companies' actions. The lead firms involved were Shook, Hardy & Bacon and Jacob & Medinger, who represented the companies with input from the Tobacco Institute. 2501025100-5100 (US 86516) (O); 2501025098-5099 (US 86515) (O); 2501018326-8327 (US 21505) (O).

637. As part of the worldwide coordination, ICOSI and the SAWP held a major meeting of member company representatives and international industry manufacturer associations on May 20-23, 1979 in Zurich. A Reynolds meeting summary recorded the "agreement that smoking does not pose a health hazard to non-smokers." The ICOSI chairman emphasized to the group that "member companies and associations should speak with one voice." 500876807-6812 at 6808, 6810 (US 24168) (O).

638. The Board of Directors of ICOSI met in Bermuda in October 1980. At this meeting the member companies decided that ICOSI would change its name to the International Tobacco Information Center, or INFOTAB. 503143820-4106 at 3910 (US 75974) (A); 2501017220-7226 (US 45873) (O).

639. INFOTAB, the successor to ICOSI, was formed "to provide a unified forum amongst members of the industry to defend itself in the face of attack." It would monitor public health organizations, prepare unified positions and strategies on a global basis. 300528729-8731 at 8729 (US 46572) (O). The INFOTAB Board of Directors included, at various times, Philip

Morris Executive Vice President Hugh Cullman, Philip Morris general counsel Alex Holtzman, and Reynolds CEO Ed Horrigan, (who was also at the time the chairman of the Tobacco Institute Executive Committee). Don Hoel continued to attend meetings. 2025013308-3308 (US 21585) (O).

640. Defendant B&W produced a "Conspiracy Notebook," a July 17, 1990 binder prepared for the company by outside counsel at Lovell, White, Durrant and King & Spalding. The outside attorneys presumably had complete access to their client's documents. In this binder, the mission of INFOTAB (as well as its predecessor ICOSI) was described by B&W's counsel as follows:

> The American tobacco industry, working with its counterparts in other countries around the world, organised ICOSI, later renamed INFOTAB for the purpose of coordinating the worldwide response of the industry to anti-tobacco activities. **INFOTAB was used to formulate and publish a consensus position on the part of the industry.** It monitored anti-tobacco organizations. It created an information service for the purpose of accumulating and disseminating intelligence on anti-smoking activities. It was used to identify and enlist allies around the world for the tobacco industry, **to perform studies and research whose results would be helpful,** and to rebut data and allegations from anti-smoking forces. **The organization worked closely with TI in carrying out this mission.**

503143820-4106 at 3909 (US 75974) (A) (emphasis added).

641. In fact, members of the Tobacco Institute met and coordinated with members of INFOTAB in furtherance of the Enterprise. The chairman of INFOTAB gave a speech at the Tobacco Institute on November 16, 1981. In his speech, the chairman recalled how the Tobacco Institute provided INFOTAB with its communications plans regarding the Hirayama study linking passive smoking and lung cancer. INFOTAB alerted 28 national associations around the world and as soon as the Tobacco Institute had its press releases prepared, it telexed them to

INFOTAB and INFOTAB transmitted them by telex to the other associations for their use in generating similar press coverage in other countries. 2501029891-9901 at 9898 (US 20557) (O). Don Hoel was recorded in the minutes of the October 1981 meeting as pointing to "passive smoking as an example of where NMAs [national manufacturer associations, such as the Tobacco Institute] in the U.S. and Europe had taken coordinated action." 502738346-8371 (US 24212) (O).

642. INFOTAB members and the Tobacco Institute held a joint meeting in Brussels in October 1984. Hoel - a lawyer - provided an update on ETS science issues. Tobacco Institute vice president Bill Kloepfer made a presentation titled "Ambient Tobacco Smoke - Political Action" to the group; Tobacco Institute president Sam Chilcote spoke on the economic implications of smoking restrictions, and the industry's initiatives to defeat them. Kloepfer's and Chilcote's counterpart at the UK Tobacco Advisory Council (TAC) made a presentation as well. TI12820001-0290 (US 62398) (O); TIOK0029713-9723 (US 86547) (O); TIOK0029724-9734 (US 86548) (O).

643. In 1985, the Secretary General of INFOTAB recommended that INFOTAB play a role "in arranging for publicity material through the TI on passive smoking for use in other areas" and "in encouraging scientific research" on passive smoking. He also sought to improve the industry's position on passive smoking by highlighting symposia concluding that ETS did not pose a hazard to health, and through an increased emphasis on coordination with the members of INFOTAB and the Tobacco Institute and other associations. These industry-managed symposia are described later within these Findings of Fact. See infra US FF § III.A(2)(i); 103366351-6353 (US 26249) (O).

644. On April 8, 1986, INFOTAB's Board of Directors met in London with industry

scientists and lawyers to review the member companies' current and planned passive smoking research, as well as to discuss the industry's "public relations problems relating to environmental tobacco smoke." At this time, the Board of Directors continued to include senior executives from BATCo (Robert Ely), Philip Morris (Hugh Cullman), and Reynolds (Richard Marcotullio). Members of the ETSAG (Green and Osdene) attended and made a presentation on ongoing projects. Hoel and Rupp were present as well. 505347172-7174 at 7172-7173 (US 20739) (A); 2022932502-2506 (US 22828) (A).

645. The 1986 INFOTAB "ETS Action Plan" recognized "the ETS issue as the most serious threat" to the industry and called for a plan "to slow down the wheel that is turning against us." The "General Approach" of the plan directly linked science and public relations to counter the evidence indicting ETS as a health hazard:

> General Approach
>
> This will be to provide a body of authoritative scientific evidence, based on existing and possibly future research programmes, and to use this as the core argument for addressing specific sub-issues with a range of PR and advertising techniques. . . . The PR and advertising techniques can then be used as appropriate to a particular country's position. . . .

100993158-3165 at 3158, 3159, 3161 (US 89556) (O).

646. The influence on INFOTAB from the United States continued. Six months later, Green provided another update of ETSAG projects at the October 15, 1986 INFOTAB workshop in Brussels. Osdene and Kloepfer spoke at the workshop on passive smoking as well. 2501457517-7522 (US 22956) (A); 2021594646-4648 (US 26059) (O); TI06391934-1959 (US 62239) (O).

647. Indeed, the ETSAG, Shook, Hardy & Bacon, and Covington & Burling linked non-INFOTAB members (Lorillard, American, and Liggett) to INFOTAB. Hoel and Rupp

attended meetings of both ETSAG and INFOTAB. Updates of ETSAG projects often included INFOTAB work as well. An August 1986 outline set out Defendants' coordinated efforts to develop industry-friendly science on ETS, including projects managed by the ETSAG, the Tobacco Institute, Shook, Hardy & Bacon, Covington & Burling, and INFOTAB. 86024168-4172 (US 21089) (A); 86024167 (US 56093) (O); 2021002296 (US 36687) (O); 502738346-8371 (US 24212) (O).

648. In 1987, INFOTAB distributed to member companies worldwide a video and "press kit" provided by the Tobacco Institute. The materials related to presentations by industry consultant and ETSAG funding recipient "Gray" Robertson. TI00731591-1593 (US 62090) (A); see infra US FF § III.A(2)(h)(vii).

649. INFOTAB continued to coordinate the companies' positions through a document known at the "ETS Kitset." The "Kitset" identified two key strategy objectives for its members:

> Objective 1 To demonstrate the inconclusive nature of claims that ETS has harmful effects, by bringing to light the scientific controversy over such claims.
>
> Objective 2 To position ETS as just one (and a very minor) factor in a complex atmospheric mix which also includes petrol/diesel fumes, dust, bacteria (particularly in air conditioned environments), pollen, and in industrial situations an enormous variety of chemical fumes and substances.

2501155644-5648 at 5646 (US 45901*) (A).

650. These two objectives would guide many of Defendants' actions in the years that followed, including the formation of public statements, the creation of a worldwide ETS consultancy program, and the management of industry "symposia," as described elsewhere in this section.

651. The INFOTAB "Kitset" also contained "Campaign Resource Materials" that

instructed members on the best ways to run publicity campaigns, and publicity leaflets addressing six "sub-issues" created by INFOTAB for use by recipients, with the aim that the "scientific" presentations therein reach the "target audience." To that end, INFOTAB provided a Public Affairs Guide ("for use with politicians, civil servants, journalists and other opinion-leaders") and a "general leaflet" that addressed "the two major strategic themes of 'demonstrating scientific controversy' and 'ambient air quality.'" 2501155644-5648 at 5648 (US 45901*) (A).

652. At the same time, the "Kitset" introduction made clear the INFOTAB Board's desire to keep its control and influence over the campaign secret:

> This kitset contains two distinct types of document[s]. The leaflets have been written for publication outside the industry and have been scrutinized by industry experts. They are clearly distinguished as printed, two-colour publications, and do not carry either the Infotab name or the ETS campaign logo.
>
> IN CONTRAST, THE INTERNAL PAPERS - OF WHICH THIS INTRODUCTION IS ONE - ARE FOR USE INSIDE THE INDUSTRY ONLY AND SHOULD BE TREATED AS CONFIDENTIAL. FOR THIS REASON, THE INTERNAL PAPERS HAVE BEEN PRODUCED IN A FORM WHICH IS INAPPROPRIATE FOR PUBLIC USE AND ARE CLEARLY MARKED AS CONFIDENTIAL INFOTAB DOCUMENTS.

2501155644-5648 at 5648 (US 45901*) (A) (emphasis in original).

653. INFOTAB remained a focal point of coordinated industry action on ETS throughout the 1980s. At the 1989 INFOTAB worldwide conference in Hong Kong, Tobacco Institute president Sam Chilcote, John Rupp, and Don Hoel made presentations, along with Philip Morris USA president Frank Resnik, who served as INFOTAB chairman. TI12801762-1767 (US 62397) (O); see also TIMN362946-2949 (US 62874) (O) (joint TI/INFOTAB "Global Argumentation Project").

654. INFOTAB was also used in conjunction with the "Whitecoat Project," or ETS

Consultancy Program, in the late 1980s. 2501254704-4708 at 4705 (US 27938) (A).

655. INFOTAB was dissolved in 1991. However, the Tobacco Documentation Centre (TDC) was formed in 1992 to carry forward the information collection and database functions of INFOTAB. Proctor PD, United States v. Philip Morris, 6/12/02, 16:13-18. As described below, the international coordination of Defendants' passive smoking strategy, positions, and research was taken over in 1992 by an industry committee of lawyers and scientists called the International ETS Management Committee, or IEMC. 502601564-1567 at 1565 (US 29570) (O).

(iv) 1987: Operation Downunder

656. As described previously in this section, 1986 was the watershed year in which three major public health authorities concluded that passive exposure to tobacco smoke was a health hazard. In a June 8, 1987 letter, Philip Morris Companies Vice Chairman Bill Murray invited a small group of executives to attend a conference on Hilton Head Island, South Carolina, to assess the ETS problem and formulate solutions. The conference would come to be known as "Operation Downunder." 2023551340-1343 (US 85518) (A).

657. In his June 8, 1987 letter to invitees, Murray emphasized the gravity of the passive smoking problem, and his belief that the problem had to be addressed both as a company and as an industry:

> It will come as no surprise to you that the public policy situation affecting our industry and our company has deteriorated in recent months. This is largely due to the recent Surgeon General's report dealing with environmental tobacco smoke and its alleged harmfulness to nonsmokers. Clearly the climate in which we are now operating requires that we, as a company and as an industry, take action to at a minimum slow down the anti-smoking forces and at best actually reverse some of their advances. . . .
>
> Your personal participation in this vital activity is extremely important. I cannot overemphasize the importance of this activity. . . .

> It is important to point out that we are not embarking on this exercise to simply exchange ideas on the ETS problem. Rather, we have been instructed to examine the problem and to arrive at solutions that can be immediately implemented.

2023551340-1343 (US 85518) (A).

658. Murray, who was involved in Operation Berkshire in 1977, was on the CTR Board of Directors at the time of Downunder. His letter was copied to the Chairman of Philip Morris Companies, Hamish Maxwell. According to the Downunder agenda, the conference began on June 23, 1987, and ended on the afternoon of June 26 with a presentation of a plan to senior management. All attendees were housed in private villas on the island, and all expenses were paid by the Philip Morris. 2024270524-0527 (US 75083) (A).

659. Many details of the four-day meeting are contained in a 33 page Philip Morris document titled "PROJECT DOWNUNDER CONFERENCE NOTES." The morning session on June 24 began with a chronology of passive smoking, including: the 1972 Surgeon General's Report which was the first Report to address ETS, the 1981 Hirayama study, the 1985 Repace/Lowery study, and the 1986 Surgeon General's Report concluding that ETS posed a cancer risk to nonsmokers. 2021502102-2134 at 2102-2105 (US 20346) (A).

660. John Rupp then addressed the group, opening with, "Where we are. In deep shit." He noted the "watershed significance" and "tremendous credibility" of the 1986 Surgeon General's report. He told the conference attendees the industry's position on passive smoking was restricted to "ETS not shown to be health hazard to non-smoker." He cautioned that: "We cannot say ETS is 'safe' and if we do, this is a 'dangerous' statement.'" 2021502102-2134 at 2106 (US 20346) (A).

661. Rupp emphasized that the cigarette manufacturers had little on their side, but had to do something given what was at stake: "Someone has to say ETS is no risk. [This] has to

come from somewhere." 2021502102-2134 at 2107 (US 20346) (A).

662. The magnitude of the problem facing the industry clearly permeated the meeting - corporate profits, indeed corporate existence, was at stake. Conference notes revealed that sales were declining in the United States, and "in U.S., [the] ETS issue will have [a] devastating effect on sales." Philip Morris was very concerned that the industry was "just at the beginning of [the] impact of [the] ETS issue." 2021502102-2134 at 2109-2110 (US 20346) (A).

663. Philip Morris considered passive smoking a problem of perception, and that "perception is everything." The task of altering public perception had to be carried out (1) "in [the] face of overwhelming adverse information and publicity" relating to the harm of passive smoking to nonsmokers; (2) in the absence of "objective science" in favor of the industry's position; and (3) despite the fact that "10 of the 13 [ETS] studies show [an] effect in the direction of harm." 2021502102-2134 at 2110-2112 (US 20346) (A).

664. The conference notes also included admissions that "a scientific battle was lost" with the 1986 Surgeon General's report and that ETS research was historically feared and avoided by the industry partly because of the "risk in doing research where you don't know where it will lead." 2021502102-2134 at 2112, 2115 (US 20346) (A).

665. The conference attendees proposed the following solutions, among many: "Create our own expert," "More research – prove ETS is safe," "Create a bigger monster (AIDS)," "Make it hurt (political risk) to take us on," "Seriously look at TV, print, other media campaigns," "Create science journal," "Create non-science journal," "Infiltrate WHO," "$2-5 million funding for CIAR now," "Sue the bastards," "Undermine Koop," "Defeat Waxman," and "Attack anti-groups where they hurt." The conference notes also stated, "Central to many of our ideas is a third-party conduit." The group debated and rejected a "lie low strategy," choosing instead a

campaign to "take positive action." 2021502102-2134 at 2116-2118, 2123- 2124 (US 20346) (A).

666. The conference attendees later agreed that the industry needed "substantial funding in ETS via CIAR" and needed to "increase [the] number of scientists up to 50 in the U.S. and also throughout world." The "effort should be organized worldwide" and the "science program has to be joint-industry based." 2021502102-2134 at 2130-2132 (US 20346) (A); 2021502679-2683 (US 75077) (A).

667. On June 26, 1987, the final day of "Project Downunder," the conference attendees presented their conclusions and recommendations to Murray. The group recommended a "dramatic increase in scientific activity on ETS." The group additionally recommended what they called an "NRA strategy" of "select[ing] the weakest of our enemies, mak[ing] an active effort to defeat them in the next election, then let[ting] people know what we did and why we did it," in conjunction with the "financial support" of industry friends. The "perception" problem would be worked in the media and in the science community, worldwide. The increased funding of CIAR, the increased recruitment of "consulting scientists," and the establishment of an industry "scientific journal" were to play roles in the industry "solution" as well. 2021502671-2678 (US 22950) (A).

668. The Philip Morris group also stated their intent to bring on the other members of the tobacco industry though discussions "at the highest level":

> We also need to tell the tobacco industry, regarding accommodation strategy, [sic] This is what we are doing, join us. Use TI if helpful to do so. RJR can be expected to buy on. Concept should be introduced to R.J. Reynolds and other majors at the highest level. CEO to CEO, Chairman to Chairman.

2021502671-2678 at 2676 (US 22950) (A).

669. One week later, Rupp took the Philip Morris ETS message out to the other

members of the industry. A document titled "Report on Industry Meeting Concerning ETS" reveals that Rupp met with representatives of Reynolds, Philip Morris, Liggett, Hill & Knowlton, and the Tobacco Institute on July 2, 1987. The report records that Rupp "shared some general objectives which were articulated at a Philip Morris exercise a week earlier." Rupp warned participants that the manufacturers had to act as a unified front on ETS: "Individual companies, he noted, are in a position to take advantage of their commercial resources but should make every effort to do so toward the common goal of the industry as a whole." 87697186-7193 (US 88587) (A).

670. The Philip Morris Companies and Philip Morris USA senior leadership approved the "Downunder" conclusions and recommendations. In a July 14, 1987 letter from Philip Morris Corporate Affairs vice president Guy L. Smith, to Osdene in Richmond, Smith announced:

> It is a great pleasure to inform you that Vice Chairman Murray, after consulting with Chairman Maxwell and President Resnik, asked that the recommendations of the Operation Downunder group proceed immediately. . . .
>
> As we move into the executional elements of Operation Downunder, selected working groups will be established to make certain that the project advances according to plan.

2023551320-1320 (US 23683) (A).

671. A major part of Operation Downunder after the conference was the expansion of the industry's ETS "whitecoat" or international consultancy program. This was set in motion at the direction of Bill Murray. Osdene recorded the following at a meeting of Philip Morris executives in New York on July 8, 1987:

> "Whitecoats"
>
> Bill Murray ----- Where do we have scientific witnesses and how can we increase?

Shook, Hardy & Bacon + Covington & Burling

Comprehensive list
- scheme to expand.

2021001643-1645 (US 75223) (O).

672. On January 4, 1988, the Tobacco Institute's Executive Committee "approved the concept of Operation Downunder." On February 18, 1988, representatives of Reynolds, Lorillard, Liggett, American, the Tobacco Institute, and Covington & Burling were invited by the Tobacco Institute to develop a consensus recommendation for the Executive Committee. Tobacco Institute vice president Roger Mozingo wrote that:

> We have long agreed with many of Downunder's basic goals. . . . Further, the aggressive industry posture evident throughout the plan is needed if we are to stem the tide of legislative and private industry initiatives to ban or severely restrict smoking, as well as deal with other important industry issues.

TIDN0002710-2719 at 2711 (US 65548) (A); 506617595-7596 (US 20760) (A).

673. The details of "Operation Downunder" were also presented to the Tobacco Institute's Communications Committee on February 3, 1988, for implementation by committee chairman and Guy Smith, who had been responsible for coordinating the Downunder conference eight months before. The minutes of the meeting record that Rupp of Covington & Burling and Lee Stanford of Shook, Hardy & Bacon attended along with representatives of the cigarette manufacturer Defendants. Sam Chilcote stated in a June 16, 1988 speech that the Downunder proposals had been discussed at multiple meetings of the State Activities Policy Committee and the Communications Committee through the Spring of 1988. TIDN0005811-5812 at 5811 (US 65558) (A); TIDN0008865-8890 (US 65559) (A).

674. Chilcote told the Executive Committee that they were now tasked to "move forward with an expanded comprehensive effort" to deal with the ETS threat. The "two basic

objectives" in implementing Downunder were "to defeat or lessen all smoking restrictions" and "to slow the decline of the social acceptability of smoking." These goals were to be achieved through, inter alia, funding the Center for Indoor Air Research, "media tours," and "more experts." TIDN0008865-8890 (US 65559) (A).

675. The ETS program that developed from "Operation Downunder" was made part of a larger program via Philip Morris's FTR subsidiary in Neuchatel and Covington & Burling, in order to export and expand the Downunder concepts around the world. Helmut Gaisch, Director of Philip Morris (Europe-FTR) Science & Technology, documented a meeting in his September 1987 Monthly Report on September 10, 1987 between Gaisch, "Drs. Green (RJR - Winston-Salem) and Stuhl (RJR - Cologne) and Dr. Osdene **on coordinating the scientific part of Project Downunder on a worldwide basis.**" This followed a "series of meetings" on September 8th "involving both EEMA and EEC top management, as well as visitors from New York . . . on a wide range of questions including Project Downunder." Gaisch also reported on a "'Downunder' liaison meeting" with Rupp in London on September 23. 2001160764-0780 at 0772, 0774 and 0778 (US 75221) (A) (emphasis added).

676. In an October 8, 1987 memorandum from Helmut Gaisch to Lee Pollak, in-house counsel in New York, Gaisch advised that Operation Downunder was being implemented in Europe with other cigarette companies and Covington & Burling. Gaisch described the link between Downunder and the recruitment of consultants, or "whitecoats," who would work on behalf of the industry throughout the world:

> Within the framework of the scientific part of "Downunder," we are involved in the process of enlisting the assistance of scientific experts on a world-wide basis. As there are other tobacco companies involved, e.g. RJR, John Rupp of C&B has been charged with coordinating this part of the project. . . . I have personally arranged meetings of John Rupp with key "whitecoats"

in a number of European countries.

2501000364-0365 at 0365 (US 45866) (A).

677. On February 17, 1988, Philip Morris and Covington & Burling presented the Downunder recommendations in London to BATCo and other European cigarette manufacturers to bring them on board as part of what would become a complex international program. The chief objective of the "scientific" program was to "keep the controversy alive" via the use of law firms and "independent" consultants. BATCo Scientific Director Sharon Boyse recorded the following from the London meeting:

> Philip Morris presented to the UK industry their global strategy on environmental tobacco smoke. In every major international area (USA, Europe, Australia, Far East, South America, Central America & Spain) they are proposing, in key countries, to set up a team of scientists organised by one national coordinating scientist and American lawyers, to review scientific literature and carry out work on ETS to keep the controversy alive . . .
>
> Because of the heavy financial burden, Philip Morris are [sic] inviting other companies to join them in these activities to whatever extent individual companies deem appropriate. . . .
>
> Dr. Gaisch said that **their strategy on ETS had been established in the USA at a meeting between Philip Morris and Covington & Burling, the lawyers acting for the Tobacco Institute in the USA.** At a later date R.J. Reynolds were also brought in to support some of their US activities, one of these being the Centre for Indoor Air Research."

321140944-0949 (US 20586) (A) (emphasis added).

678. There can be no doubt that the "meeting" described by Gaisch in Boyse's record of the February 17, 1988 London meeting was "Operation Downunder." This is confirmed in a February 21, 1988 report from Helmut Gaisch titled "The European Counterpart to 'Operation Downunder,'" in which Gaisch describes the initiatives, along with Covington & Burling and Shook, Hardy & Bacon, to develop consultants and "scientific events" (conferences) "to disperse

the suspicion" of an "ETS health risk." 2028343858-3860 (US 75086) (A).

679. Boyse's and Gaisch's memoranda not only connect "Operation Downunder" to the massive worldwide initiatives that followed, but also provide a link between the Defendants as members of the enterprise and a link between the ETS program in the United States and ETS initiatives implemented abroad. 321140944-0949 (US 20586) (A); 2028343858-3860 (US 75086) (A).

680. In other words, Defendants' ETS programs continued to be, as with ICOSI/INFOTAB, coordinated and global. Reynolds' Mary Ward wrote the following in a July 8, 1988 memorandum to company general counsel Wayne Juchatz:

> John Rupp invited me to a meeting of European scientists who have been recruited to speak and write about ETS. John has coordinated this effort on behalf of Philip Morris as part of PM's Operation Downunder. Groups similar to IAPAG . . . have been organized in the UK, France, Italy, and the Nordic region.. . . . John and I met with Rich Marcutullio and Peter Van Every to discuss whether and to what extent RJRTI could become involved.

520737744-7745 at 7744 (US 30363) (A).

(v) 1988 - 1999: The Center for Indoor Air Research (CIAR)

681. In 1986, the ETSAG began to study the utility of forming a more formal organization to identify, recommend, and fund industry projects related to ETS or passive smoking. In the words of Reynolds attorney and ETSAG member Mary Ward in a February 9, 1987 memorandum, "Members of the [ETSAG] group began to express the opinion that a more efficient mechanism to search out and supervise such [ETS] research needed to be considered." 87780454 (US 23531) (O).

682. At the May 26, 1987 ETSAG meeting, members decided that a new ETS research coordinating organization for the Defendants should be called the Center for Indoor Air Research

"in order to dissociate it and avoid confusion with the Tobacco Institute." From that point forward, the ETSAG began calling the planned organization the Center for Indoor Air Research, or CIAR. 506300804-0815 (US 20756) (A); 511252621-2626 at 2621 (US 51554) (A); 620002505-2506 (US 53330) (O).

683. CIAR was also an important component of the industry's ETS program established at "Operation Downunder" in June 1987, where Philip Morris executives agreed that the industry needed "substantial funding in ETS via CIAR" as part of the effort to counter the evidence that passive smoking was a health hazard. In fact, CIAR was included in a document titled "Operation Downunder; Science Implementation Plan." 2021502102-2134 at 2130-2132 (US 20346) (A); 2021502679-2683 at 2681 (US 75077) (A); 508221912-1914 at 1912-1913 (US 24738) (A).

684. Throughout 1987, the formation and structure of CIAR was a major topic of discussion by the ETSAG, who formally presented their proposal to the Tobacco Institute Executive Committee on December 10, 1987. CIAR was recommended to the committee, including Liggett general counsel Josiah Murray, as "a formal organization of a research organization to deal with issues relating to indoor air quality." The proposal called for the creation of an organization "with its own staff and an increased research budget" over the ongoing ETSAG projects. At the end of the Executive Committee meeting, "it was agreed that Dr. Osdene and his group would proceed with the hiring of an Executive Director and the preparatory corporate and other steps for the establishment of the CIAR." TIMN0014390-4393 (US 62782) (A).

685. Pursuant to the Tobacco Institute Executive Committee agreement, CIAR was officially incorporated in January 1988 to take over the research responsibilities of the ETSAG,

or Hoel Committee. The charter members, or founders, of CIAR were Philip Morris, Lorillard, and Reynolds, who controlled the activities of the organization through the Board of Directors. 87824558-4562 (US 23564) (O).

686. Brown & Williamson joined CIAR as a voting board member in 1995. Eisenberg WD, 25:14-15. While Liggett was never officially a member of CIAR, it attended at least one meeting of the organization and participated in ETS seminars and meetings organized by Covington & Burling. Dietz PD, United States v. Philip Morris, 7/1/02, 132:1-138:17; 2023053733 (US 86513) (A). BATCo, while not a formal member of CIAR, provided funding for several CIAR "sponsored" projects. See, e.g., discussion of Malmfors/SAS Study, Hazleton Project, and Latin American Project, infra.

687. CIAR stepped into the shoes of the ETSAG with respect to industry ETS projects underway in 1988. A comparison of agendas from both groups, as well as a comparison of meeting minutes from both groups confirms this. Compare 2021001205-1205 (US 25534) (O) (12/7/87 ETSAG meeting agenda) with 2021000945 (US 25532) (O) (3/10/88 CIAR Board of Directors meeting agenda); compare 2021004058-4064 (US 20339) (A) (1986 list of ETSAG-managed projects) with 2021006060-6065 (US 89161) (A) (minutes of 10/25/88 CIAR meeting). Indeed, all of the ETSAG-managed projects ongoing in 1987 were managed through CIAR from 1988 forward. These projects included the Malmfors/SAS airline study, the ORNL air sampler project, an aircraft study by Delbert Eatough, the ETS/asthma project at Tulane, and several critiques of epidemiology by industry ETS consultants. 2021006060-6065 (US 89161) (A); see also 2023054167-4167 (US 75232) (A) (CIAR board member Bob Pages wrote: "CIAR evolved out of an ad hoc ETS advisory group to the Tobacco Institute . . . ."); 86003256-3257 (US 23510) (A) (In requesting Committee of Counsel approval for an ETSAG project, Hoel refers to

CIAR as a "new funding mechanism for ETS projects.").

688. Defendants first offered the job of CIAR Executive Director to outsider Irwin H. Billick. However, when Dr. Billick questioned the independence, objectivity, and credibility of an organization where all research funding decisions were made by the Board of Directors, the offer was withdrawn. 2023555370-5370 (US 22842) (A); 2023553133-3137 (US 22991) (A); 2023555364-5365 (US 22844) (A); 2023553132-3132 (US 22845) (A).

689. Reynolds scientist and ETSAG member Guy Oldaker served as "interim director" in 1987 and throughout much of 1988 until another executive director candidate could be located. TI00682069-2070 at 2069 (US 62088); 508220128 (US 92022) (A). Moreover, until CIAR was set up in its own office, it was administered as a part of the Tobacco Institute. 2023554658-4660 (US 37464) (A).

690. On August 1, 1988, Max Eisenberg was hired by Defendants to be CIAR's first and only executive director. At the time of Eisenberg's hiring, CIAR's Board of Directors was composed of Tom Osdene and Bob Pages from Philip Morris, Charles Green and Gary Burger from Reynolds, and Alexander Spears and Vello Norman from Lorillard. Eisenberg WD, 1:15-22; 3:10-13.

691. CIAR was not an independent research or grantmaking organization. According to the CIAR Bylaws, only a "corporation engaged in the business of manufacturing and marketing of cigarettes that produced two billion or more tax-paid cigarettes during calendar year 1987" was eligible to become a charter member of CIAR. The CIAR Certificate of Incorporation stipulated that only the directors of charter members were entitled to select Board members and vote on what research would be funded. During the entire existence of CIAR (1988 - 1999) only cigarette company executives/scientists sat on the Board of Directors. 86205444-5452 at 5444

(US 21827) (A); 87824558-4562 at 4560 (US 23564) (O); Eisenberg WD, 3:20-4:10.

692. Rupp was appointed general counsel to CIAR, and attorneys Mary Ward and Don Hoel regularly attended Board meetings just as they had attended ETSAG meetings before. Eisenberg WD, 26:3-6.

693. Defendants and CIAR charter members Philip Morris, Reynolds, Lorillard, and (after 1995) Brown & Williamson, paid over $4 million annually to fund ETS projects through CIAR. Funding was determined by market share. 2050764508-4508 (US 20492) (A); 2021006060-6065 at 6060 (US 89161) (A); Ward TT, 11/3/04, 4968:4-19; 2041653307-3385 at 3382-3385 (US 38214) (A).

694. Eisenberg verified that less than one-half of one percent of the operating costs for CIAR projects were provided by "regular" or "associate" members, that is, members who were not cigarette manufacturer charter members. For example, in 1996, the non-cigarette manufacturers (associate members) contributed only $36,000 of CIAR's $7.7 million in funding. In other words, the contribution of the non-cigarette manufacturers was a mere 0.47%. 566943537-3528 (US 92018) (A); Eisenberg TT, 11/8/05, 5444:22-5446:11.

695. Moreover, all "regular" and "associate" members were connected to the tobacco industry, and most were suggested to Eisenberg by members of the CIAR Board of Directors. Using the 1988 and 1996-97 Request for Applications (RFA) as examples, associate members Consolidated Safety Services, ENV Services, and Meckler Engineers Group were all consultants to the Tobacco Institute; Universal Corporation, DIMON International, and Standard Commercial Corporation are the three largest tobacco leaf merchants in the world; Hoechst Celanese is a maker of cigarette filters; Mead Paper, Mundet International, and Ecusta are all paper suppliers to the tobacco industry; and Quest International Flavors is a flavorant supplier to

the industry. 321141105-1144 (US 20588) (A), 2061691882-1913 (US 24012) (A); Eisenberg TT, 11/8/04, 5428:16-5431:10; 5443:7-21; 5453:2-5456:5.

696. Although Eisenberg held the title of executive director and (after 1989) there was a Scientific Advisory Board to review some project proposals, only the CIAR Board of Directors had authority to approve the funding of any CIAR project. Eisenberg WD, 3:20-23, 15:21-16:6.

697. Tobacco Institute executives attended a number of CIAR Board of Directors meetings after Eisenberg established an office in Linthicum, Maryland. In April 1989, Eisenberg, Spears, and Rupp gave a presentation and status update to a meeting of the Tobacco Institute Executive Committee. In 1993, Eisenberg delivered a presentation to foreign cigarette manufacturers as well. Eisenberg WD, 6:8-10; TIMN0014955-4960 (US 62784) (A); 2023053733 (US 86513) (A).

698. On January 19, 1993, Liggett Scientific Issues Manager Dennis Dietz attended a CIAR meeting in London, along with executives from Philip Morris, Lorillard, Reynolds, BATCo, B&W, and several international manufacturers. 2023053733 (US 86513) (A).

699. An examination of the publications and conduct of CIAR establishes that Defendants used CIAR as a seemingly independent funding entity to conceal the true role of the tobacco industry in funding and managing their ETS research sponsored under CIAR's name. The primary CIAR publication to prospective researchers was its "Research Agenda," or "Request for Applications" (RFA). CIAR RFAs were published from 1989 to 1998. The introduction in the 1988 RFA described CIAR as "an independent, non-profit corporation" whose purpose was "to sponsor scientific and technical research" on indoor air issues. 321141105-1144 (US 20588) (A) (1989-1990 RFA); TI01900054-0094 (US 77530) (A) (1991 RFA); 2023523979-4010 (JD-080303) (A) (1992-1993 RFA); 2025471735-1762 (JD-024508) (A)

(1994 RFA); 2057790373-0404 (US 23995) (A) (1995 RFA); 2061691882-1913 (US 24012) (A) (1996-1997 RFA); 86616778-6810 (JD-042662) (A) (1998 RFA).

700. The names of the Charter Members was printed only on one page in an appendix in each of RFAs, on the same page with the names of the seemingly independent "regular" and "associate" members. See, e.g., 321141105-1144 at 1142 (US 20588) (A) and 2061691882-1913 at 1898 (US 24012) (A).

701. None of the CIAR RFAs disclosed that:

- CIAR was almost exclusively funded by major cigarette manufacturers, and that the remainder of the funding (<½ %) was supplied by tobacco leaf vendors and other companies affiliated with the manufacture of cigarettes;
- The affiliations of the CIAR Board of Directors, who had complete control over which projects were funded and who were at all times composed of executives/scientists in the employ of cigarette manufacturers.
- CIAR received significant funding from international cigarette manufacturers, including BATCo, Rothmans, and Imperial Tobacco (see discussion of Malmfors and Hazleton projects, below).
- Although CIAR had a Scientific Advisory Board in place as of early 1989 to review proposals for scientific merit, CIAR funded and managed a large number of projects that never went through the SAB process (see discussion of Applied Projects, below).

702. The other major publication used by CIAR to communicate with the public and with researchers was its quarterly newsletter called "CIAR Currents." Eisenberg and his staff published "CIAR Currents" from 1991 to 1998. Eisenberg TT, 11/9/04, 5486:15 - 5487:2.

703. CIAR published 19 editions of "CIAR Currents." In none of the editions did Defendants disclose that CIAR was controlled and funded by the tobacco industry; nor did the newsletters ever disclose the names and affiliations of the members of its Board of Directors, all executives/scientists in the employ of major cigarette manufacturers. 88803301-3304, 2023055036-5039, 88803309-3312, 2028462984-2987, 2023521998-2001, 87251727-1730,

2028462980-2983, 89273328-3331, 89273324-3327, 89273320-3323, 89273316-3319, 89273312-3315, 89273308-3311, 515952380-2383, 517577679-7682, 2063650763-0767, 517557109-7112, 517557145-7148, 2063835149-5152 (US 92019) (A).

704. In contrast, the CIAR newsletters, like the RFAs, *did* disclose the names and university affiliations of Scientific Advisory Board members. And while the newsletter did announce new additions/replacements to its SAB, it never disclosed the departure or arrival of new members of the cigarette manufacturer Board of Directors. Moreover, while "CIAR Currents" *did* announce when seemingly independent companies joined as minor associate members (such as Dibrell Brothers, International Paper, Somerville Packaging, Standard Commercial Corporation), it never disclosed when new cigarette manufacturers joined as members (such as Brown & Williamson, Japan Tobacco, and Svenska Tobaks (Sweden)). At trial, Eisenberg called this omission an "oversight." (US 92019) (A); Eisenberg TT, 11/9/04, 5499:18-22, 5501:5-11.

705. Eisenberg's testimony at trial disputing that CIAR was established and operated so as to mask the involvement of Defendants in ETS research was contradicted by the documentary evidence and not credible. In addition, it was disclosed that Eisenberg left his $60,000/year job with the State of Maryland in 1988 for the $120,000/year CIAR executive director position. When CIAR was dissolved in 1999, Defendants were paying Eisenberg $210,000 annually and had awarded him a $50,000 bonus. Eisenberg TT,11/09/04, 5645:11-5646:6. Eisenberg received over $1 million as a severance payment upon dissolution of CIAR. 2076950430E-0430 at 0430E (US 93321) (A); 2072060487-0489 at 0488 (US 93313) (A). Philip Morris paid Eisenberg $2,000 per day to appear at trial. Eisenberg TT, 11/9/04, 5646:7-18. Eisenberg continues to work for Philip Morris, now earning over $400,000 to manage the Philip Morris External

Research Program (PMERP). Eisenberg TT, 11/9/04, 5643:19-5644:15.

(aa) CIAR Applied Projects

706. Many documents admitted at trial established that CIAR funded a class of studies called "Applied Projects." Similar to CTR Special Projects, CIAR Applied Projects were those that were approved and directed by the Board of Directors with no review or recommendation by the Scientific Advisory Board. As described below, CIAR Applied Projects were used by Defendants to generate data and conclusions to attack the scientific consensus and support the industry's position on passive smoking.

707. The existence of Applied Projects is disclosed in a number of internal documents. CIAR Board member and Lorillard scientist Vello Norman wrote in his minutes of the February 2, 1989 Board of Directors meeting:

> CIAR funds two kinds of studies:
>
> a. Research - involvement by SAB, peer review, etc.
>
> b. Special Studies - would normally be initiated by the Board, not subject to peer review (airlines, indoor air surveys, reviews, etc.)

87823747-3750 (US 85695) (A).

708. Board member Tom Osdene took notes from the same meeting, recording that "Special Studies" were distinct from CIAR "research," were not peer reviewed, would be initiated by the Board, and were also called "Applied Projects." 2021005961-5969 (US 25580) (O).

709. Fellow Board member and Philip Morris scientist Bob Pages wrote in a September 14, 1990 memorandum that CIAR was a "vehicle to sponsor/conduct special projects (Applied Studies)." Pages also listed a number of the CIAR "Applied Studies," including the Malmfors/SAS project and Rupp's "Asia Project," which are described later in this section.

2023530026-0029 (US 23003) (A).

710. In a May 14, 1992 memorandum to Jim Charles, Pages distinguished "Applied Studies" from CIAR's ordinary research in these terms:

> The SAB recommends proposals for funding after they have been peer reviewed. Proposals can only be funded subsequent to approval by the Board. **A second class of research projects - Applied Studies - are also funded if approved by the Board; such projects are not normally reviewed or recommended by the SAB.**

2023054167-4167 (US 75232) (A) (emphasis added).

711. Once CIAR was in place as a funding mechanism, ETS projects no longer needed to be proposed and funded as CTR Special Projects through the Committee of Counsel, but were instead proposed and funded as Applied Projects through the Board of Directors. A January 17, 1989 memorandum describing CIAR from Brown & Williamson scientist Gil Esterle to general counsel Ernie Pepples and others drew the explicit comparison to CTR Special Projects:

> The SAB will recommend projects to the Center's Board who will approve/not approve for funding. The Center's Board is comprised of six directors, two from each of the participating companies . . . . **The Center seems similar to CTR in structure including an SAB program and a special projects activity.** The 1989 budget remains at $4.5 million.

400975593-5594 (US 92021) (A) (emphasis added).

712. The millions of dollars in funding for Applied Projects, in particular the repetitious exposure studies conducted by Defendants around the world through CIAR, were often billed by CIAR as "Special Assessments" in addition to the yearly market share-based payments of the companies to CIAR. (US 92032) (A).

713. CIAR Applied Projects were used by Defendants to fund studies that were previously approved by the TI-ETSAG, or Hoel Committee, and underway at the time of CIAR's

formation in early 1988. These studies included projects by industry consultants Delbert Eatough, Torbjorn Malmfors, Roger Jenkins, and Gray Robertson.

714. In addition, the CIAR category of Applied Projects was used by Defendants to carry out, under the name of CIAR but with no SAB review, the following projects designed to generate data and conclusions favorable to the industry's position on ETS:

- **James Enstrom ($525,000)**; this study examined the association between spousal smoking and lung cancer using CPS 1 data.

- **Torbjorn Malmfors ($638,806)**; this was a study of air cabin air quality aboard SAS aircraft.

- **Roger Jenkins/ORNL ($920,794)**; three projects purportedly measuring ETS and passive exposure to tobacco smoke in Knoxville; in a restaurant/bar; and in a corporate facility.

- **Roger Jenkins/Michael Guerin/ORNL ($1.7 million)**; this was an ETS exposure study of subjects in 16 cities across the country. (Guerin was a member of the CIAR SAB.)

- **Marvin Kastenbaum ($170,935)**; this was a statistical project to develop certain tables to evaluate indoor air components. (Kastenbaum was a statistician employed by the Tobacco Institute.)

- **Keith Phillips/Hazleton Labs (later called Covance Labs) ($8.0 million)**; these were a number of exposure/measurement studies conducted in foreign cities.

- **ETS "Treatises"** (funding amount unknown); these refer to "textbooks" on ETS and related indoor air topics (See BR2000545-0785 (JD-065024) (A); (no bates) (JD-044893) (A); (no bates) (JD-080699) (A); (no bates) (JD-080700) (A)).

- **Samuel Lehrer ($2.45 million)**; at least three projects assessing ETS and asthma in children and adults, and a project to assess asthmatic responses to perfumes.

- **Alan Hedge ($979,092)**; this study was carried out to probe "the extent to which ETS is related to the perception of comfort and health of office workers in office buildings," as well as ventilation conditions.

- **Genevieve Matanowski ($2.3 million)**; one project ($1.6 million) was a confounders study designed to attack documented associations between ETS and lung cancer; the second project ($679K) investigated lung cancer in non-smokers in South America. (Matanowski was a member of the CIAR SAB.)

- **Ragnar Rylander ($333,031)**; a study using a questionnaire to determine lifestyle differences (confounders) between groups in Sweden and Switzerland.

- **Thomas Platts-Mills ($590,642)**; a project evaluating ventilation, wheezing, and allergens.

- **Milt Meckler ($127,318)**; a project to assess the impact of a ventilation/filtration system on indoor air. (Meckler was a paid Tobacco Institute consultant.)

- **Demetrios Moschandreas/IITRI ($525,312)**; three projects assessing perceptions/reactions of persons to ETS in the air. (Moschandreas was a member of the CIAR SAB.)

- **Antonio Miguel ($72,760)**; a project to test for gas and particle phase substances in indoor air in Brazil.

- **Gray Robertson/HBI ($138,000)**; testing of air samples in office buildings.

- **Robert Tardiff ($466,297)**; a project, using the Jenkins/ORNL data, "to produce distributions of exposure to ETS."

- **Giovanni Viegi ($1.28 million)**; research into ETS confounders, assessing risk factors for cardiovascular and respiratory disease in Italy.

2505442777-2960 (US 25643*) (A); 83205526-5581 (US 92033) (A) (Applied Projects are indicated with the notation "Other").

715. Thus, Defendants funded over $21.5 million in CIAR projects as "Applied Projects." 2505442777-2960 (US 25643*) (A); 83205526-5581 (US 92033) (A).

716. Many internal documents reveal the true purpose of CIAR to control science for the benefit of the industry in litigation and before regulatory bodies. Indeed, the overarching goal of CIAR was to generate data and conclusions to resist smoking restrictions and maintain profits. John Rupp summarized the work of CIAR in 1993 by stating that "a number of CIAR-funded projects have contributed significantly to the industry's ongoing efforts to oppose unwarranted smoking restrictions." Rupp then ticked off the Applied Projects that had proven valuable for Defendants, including the HBI project, the Malmfors/SAS study, his "Asia Project" by Sarah

Liao, the Hazleton Project, and the Jenkins/ORNL projects. Rupp then stated, "What we have learned over the past five years, the period of CIAR's existence, is that CIAR can make - indeed, already has made - an important contribution to the industry's efforts to fight unwarranted smoking restrictions." 87602277-2281 at 2278-2279 (US 23516) (A).

717. Applied Projects eventually assumed a more prominent role in CIAR operations than the SAB-vetted studies as the industry's "needs" for certain types of studies grew. CIAR Board member Bob Pages wrote the following in an August 19, 1992 Philip Morris e-mail to Steve Parrish with respect to the future CIAR budget:

> As I mentioned at our July 1st ETS science meeting, the CIAR board has come up with a plan to refocus CIAR efforts so that we get more research results which will be useful and responsive to our needs: maintain the SAB-related research budget at a (reduced) constant, self-sustaining level; and fund more applied projects which are better targeted to meet our needs.

2023132080-2081 at 2080 (US 92031) (A).

718. CIAR Board of Directors chairman Tom Osdene of PM wrote Sam Chilcote of the Tobacco Institute five years earlier in an April 25, 1988 letter that "the purpose of CIAR" was "to provide ammunition" for the industry on the ETS "battlefield." 2021012384-2388 at 2384 (US 20340) (A)

719. Rupp wrote in a March 1993 letter to Imperial Tobacco: "In sum, while one might wish it otherwise, the value of CIAR depends on the industry's playing an active role (1) in identifying research projects likely to be of value and (2) working to make sure that the findings of funded research are brought to the attention of decision makers in an appropriate and timely manner." 2023053717-3720 at 3719 (US 20373) (A).

720. An August 17, 1988 memorandum, written by former Covington & Burling advisor and current BATCo scientific head Chris Proctor, discussed CIAR and the advantages of

membership to BATCo and Brown & Williamson. Proctor wrote:

> Meetings of the board are held every five weeks in Washington and, in addition to the board members, John Rupp (Covington and Burling), Don Hoel (Shook, Hardy and Bacon), Mary Ward (RJ Reynolds) and a TI representative attend to observe. Rupp and Hoel comment on product liability aspects. **In terms of scientific acceptability, CIAR provides a further buffer between the Company and the third party, yet allows strong control of projects without major in house effort**.

400974598-4600 at 4598, 4600 (US 47526) (A) (emphasis added).

721. Another goal, consistent with concealing the member companies and Board of Director affiliations in the CIAR RFAs and newsletters, was to conceal the management and funding of the projects by the cigarette manufacturers. In an internal PM e-mail April 15, 1991 from Bob Pages to Steve Parrish, Pages recommended against using CIAR to fund what would become the Japanese Spousal Study, but added: "although **there MAY be (I'm not convinced yet) a reason to say it was sponsored by CIAR so as to "hide" industry involvement** (as was done in Rupp's 'Asia project')." 2023544456 (US 22816) (A) (emphasis added).

722. BATCo Scientific Director Sharon Boyse (Blackie) made a similar comment when she observed in a June 19, 1991 memorandum that "the Japanese study could be channeled through an 'independent' organization such as CIAR. No matter how good the science, independence is always preferable, and in fact BAT made the decision to discontinue part of its research on ETS for this very reason." 507974107-4109 at 4108 (US 24730*) (A).

723. In reality, then, CIAR was an industry front. In a March 12, 1991 letter to Boyse, Rupp even bragged about how effective the CIAR structure had proven in concealing the industry source of funding:

> In fact, I am not aware of an instance in which our opponents have been able to dismiss the results of CIAR-funded projects by attacking the funding source. That is, it seems to me, a very real

and important achievement.

87602277-2281 at 2278 (US 23516) (A).

724. Defendants' schemes to use CIAR as a tool to hide their involvement were sometimes complex. For example, in a November 15, 1992 ETS consultancy program status report, Rupp recorded the following plan to use CIAR as a strawman funding "source" to allow project authors to attribute funding to CIAR, and hide the involvement of BATCo's Chilean affiliate Chiletabacos:

> There was substantial discussion of the mechanics of the funding, which resulted in agreement that we should attempt to convince the Center for Indoor Air Research (CIAR) in the United States to be responsible for approximately ten percent of the project's cost, with Chiletabacos making a contribution to CIAR in that amount. The rest of the funding, because of tax considerations, would be contributed by Chiletabacos to the University of Chile while being earmarked for the study.

2503011704-1710 at 1704-1705 (US 22853) (A).

725. Through CIAR, Defendants' could also hide the role of their own employees in the design and execution of the Applied Projects. For example, in a May 3, 1988 Reynolds ETS project update to Charles Green, Guy Oldaker reported that a Washington, DC air sampling study using a Reynolds-designed sampling apparatus (the PASS system) would be "managed" by Lorillard's Dr. Crouse with "technical direction" from Oldaker. 506291779-1780 at 1780 (US 92096) (A).

726. A number of documents demonstrate the role of tobacco industry attorneys, as opposed to scientists, in the funding and approval of CIAR projects. In a June 28, 1988 memorandum to Philip Morris Assistant General Counsel Todd Sollis detailing Shook, Hardy & Bacon's ETS initiatives, Don Hoel wrote:

> SHB is instrumental in developing scientific research in the area of

> ETS. In the United States, much of this development is now undertaken through the Center for Indoor Air Research (CIAR). PM is a member of CIAR and currently chairs its Board of Directors. **Within that organization, SHB represents the interests of PM in evaluating research proposals and in determining which existing projects should be continued.** The firm also monitors ETS Advisory Group projects, which are now being "folded" into CIAR.

2015007199-7207 at 7205 (US 20311) (A) (emphasis added).

727. Indeed, at least one of the industry attorneys (Hoel, Rupp, and Ward) attended every CIAR Board meeting where project proposals were discussed and approved. See, e.g., 2021006342-6347 (US 25581) (A); 2023531016-1018 (US 23674) (A); TIBU34458-4469 (US 65527) (A); TI01900211-0214 (US 21241) (A); 87823743-3746 (US 90011) (A); 87802318-2319 (US 23535) (A); 87823747-3750 (US 85695) (A); 2353587697352-7354 (US 56308) (O); 400974598-4600 (US 47526) (A).

728. As detailed later in this section (see U.S. FF §§ III.A(2)(g)(v)(bb), III.A(2)(g)(vi), and III.A(2)(k)(iii)), Defendants also directed and funded Applied Projects to counter the impact of public health authority actions such as the OSHA indoor air proposed rule and the IARC Multi-Centre Study. 2505443991-4000 at 3996 (US 22202) (A).

729. In Report and Recommendation #151, adopted by the Court in Order #525, the Special Master concluded:

> Plaintiff has offered evidence that could convince a trier of fact that the CIAR was publicly-billed as an independent scientific entity organized to support research projects addressing indoor-air issues, when in fact funding was controlled by the tobacco industry, and projects were sought for the purpose of establishing industry-favorable science and potential expert witnesses. . . . Plaintiff also establishes that CIAR-supported research was sought for litigation purposes, an interest that, for the industry, is not neutral and one not likely to be funded in a disinterested manner. . . . While Lorillard claims that the affiliation of CIAR to the industry was widely known, the Special Master is not

> persuaded in light of the paucity of evidence provided by Lorillard in support of its position, and the fact that it appears from counsel's correspondence that the industry intended to create an entity where the affiliation would not be obvious. Also, while Lorillard claims that the researchers were free to publish the results of their research, the Special Master notes that the fact that the industry exercised final decision-making authority over what projects would be funded established sufficient industry control at the front end of the research to call into question CIAR's true intent, and to potentially manage what final results would occur.

R&R #151 at 110-111 (internal footnote omitted).

(bb) Using CIAR to Hide Defendants' Control and Management of Industry-Funded "Science"

730. Defendants selected and funded Applied Projects in order to counter the impact of mainstream publications and to trivialize ETS exposure, while simultaneously masking industry involvement behind the seemingly "independent" facade of CIAR. The Malmfors/SAS and Enstrom projects funded through CIAR are described elsewhere in this section as examples of scientific fraud. Several other CIAR-sponsored Applied Projects are described below to illustrate how CIAR served the industry's goal of concealing tobacco industry funding and control.

731. The Rylander Confounders Study. From 1994-1996, CIAR sponsored a project by long-time industry consultant Ragnar Rylander, resulting in a 1999 published paper titled "Dietary Habits for Non-Smoking Females Living With Smokers or Non-smokers." The paper highlighted differences between groups, differences that supported the industry's argument that confounders (risk factors other than ETS) explained the association between ETS and disease. 2067224066-4069 (US 85733) (A).

732. Philip Morris funded the project alone 2028381480-1480 (US 26873) (A); 2028381481-1490 (US 26874) (A), and paid for Rylander's project via a "special assessment" from CIAR. 2050764511 (US 92032) (A); Eisenberg WD, 43:16-19. Though the Rylander

study was a Philip Morris project, the published paper stated only that the study was "supported by CIAR." 2067224066-4069 (US 85733) (A).

733. "Rupp's Asia Project." In 1991, industry ETS consultants Sarah Liao and John Bacon-Shone published a paper titled "Factors Influencing Indoor Air Quality in Hong Kong: Measurements in Offices and Shops." The paper concluded that indoor air quality in Asian cities was largely influenced by outdoor air pollutants, and that ETS therefore played only a very minor role in indoor air quality. The paper fails to disclose the source of funding. TLT0500039-0047 (US 65087) (A).

734. Despite the omission of a funding source in the paper and the repeated denial of sponsorship by Eisenberg in Court, numerous documents confirm that CIAR "sponsored" the Liao/Hong Kong project, the project was funded by Defendants, and that the project was closely managed by industry scientists and lawyers.

735. According to John Rupp's September 27, 1989 Asian ETS consultancy "Status Report," the Hong Kong project protocols were designed by BATCo's Chris Proctor and Reynolds' Guy Oldaker for industry ETS consultant Liao to use. 2500048508-8515 at 8509-8510 (US 20549) (A); 300541891-1894 (US 85550) (A). A project proposal from Liao to CIAR was dated March 6, 1990; the introduction in the proposal stated: "The project shall be sponsored by Centre for Indoor Air Research (CIAR) of U.S.A." 2023530411-0428 at 0412 (US 23672) (A). In Tom Osdene's notes of the March 27, 1990 CIAR Board of Directors meeting, he recorded that BATCo's Chris Proctor was working with Liao on a "revised proposal" and that John Rupp "needed the project sponsored by CIAR." 2023530327-0330 at 0329 (US 90023) (A).

736. The Hong Kong project apparently went forward sponsored by CIAR. The July 24, 1990 minutes of the Board of Directors meeting recorded that Eisenberg himself presented an

update on the "current status of the Hong Kong project." 2023530120-0121 at 0121 (US 90025) (A). Proctor presented a progress report on the project at the February 6, 1991 CIAR Board of Directors meeting. 87802318-2319 at 2318 (US 23535) (A). Proctor sent Eisenberg and the Philip Morris and Reynolds directors a draft of the Hong Kong paper under a cover letter dated March 1, 1991. 2023546632 (US 90026) (A). CIAR Board member Bob Pages wrote Steve Parrish on April 15, 1991 that CIAR was used to sponsor the study "so as to 'hide' industry involvement." 2023544456 (US 22816) (A). Rupp himself told Sharon Boyse (Blackie) in a letter dated March 12, 1993 that the Liao/Hong Kong study was one of many CIAR sponsored projects that had proven valuable to the industry. 87602277-2281 at 2278 (US 23516) (A).

737. Finally, in a January 29, 1999 article in the South China Morning Post, Liao admitted that she received approximately $1 million from CIAR to carry out the Hong Kong study with Bacon-Shone. Liao asserted that she was not aware that the source of the CIAR funding was the tobacco industry. 2072522793-2795 at 2793 (US 24607) (A).

738. While the Hong Kong study was "sponsored" by CIAR, several documents reveal that the "Asia Project" was in reality funded by Philip Morris, Reynolds, and BATCo as part of the larger Asian ETS consultancy program run by Rupp. 509591861-1870 at 1869-1870 (US 24741) (A); 2500048976-8998 at 8988-8989 (US 23007) (A). In fact, Liao and Bacon-Shone were both industry ETS consultants recruited by Rupp in 1989. 2500048635-8640 at 8636-8637 (US 20550) (A); 2500048508-8515 at 8510 (US 20549) (A).

739. The value of the study was in its perceived "independence" from the tobacco industry. In his February 14, 1990 Asian ETS consultancy update to Defendants, Rupp stated, "Because the Hong Kong study will be conducted and reported by independent scientists, we expect that the results (however inappropriately) will carry more weight with a variety of target

audiences than have the results of previous studies conducted and reported by industry scientists." 2500048976-8998 at 8989 (US 23007) (A). Proctor distributed the published paper to sponsors from BATCo, Philip Morris, and Reynolds, thanking them for their "commitment to the study." 300541761 (US 23597) (O). The Tobacco Institute cited the paper as seemingly "independent" authority in support of its March 20, 1992 "Comments" to OSHA. TLT1022319-2405 at 2367 (US 87404) (A).

740. At trial, Eisenberg inexplicably denied that CIAR sponsored the Liao/Hong Kong study at all. Eisenberg TT, 11/9/04, 5568:24-5569:3. However, the totality of the evidence relating to the Hong Kong project establishes that CIAR was used by Rupp and Defendants as a front to hide tobacco industry funding and obtain the participation and authorship of "independent" researchers. 2023544456 (US 22816) (A).

741. The Hazleton/Covance Project. At a cost of over $8 million, CIAR sponsored a number of exposure projects carried out by Hazleton Laboratories, which later became Covance Laboratories. The purpose of the Hazleton studies, like the multitude of exposure studies funded and directed by Defendants via CIAR and other means over the years, was to trivialize ETS as only a minor indoor air pollutant in the context of overall air quality, and to generate bias data to attack epidemiological studies showing an association between spousal smoking and lung cancer in nonsmokers. The Hazleton Project resulted in the publication of more than 11 studies. 2505442777- 2960 at 2880-2885 (US 25643*) (A); 2501003237-3242 at 3238-3239 (US 22320) (A).

742. Internal documents detail how CIAR was used by Defendants and other cigarette manufacturers to hide the direct management of the Hazleton Project by industry personnel. The Hazleton Project was also called the "Rothmans Study" because of its origin with British

cigarette manufacturer Rothmans and Rothmans scientist Barry Frost. The project was agreed upon by Defendants and other manufacturers via the IEMC. In a February 5, 1992 e-mail to Matt Winokur, Philip Morris's Bob Pages wrote with respect to the Rothman's project, "I'm in favor of this type of work because it's quick (relatively) and is very likely to generate helpful data." 2023522351-2352B at 2352A, 2352B (US 75127) (A).

743. The Hazleton project was carried out to defuse or at least forestall one epidemiological study in particular: the IARC Multi-Centre Study (see below). Documents written by Philip Morris's Helmut Gaisch and Richard Carchman disclose how Defendants, through the IEMC, agreed to fund Hazleton as part of the industry's broad "Response to the IARC ETS Study." 2505443991-4000 at 3996 (US 22202) (A); 2028363615-3616 (US 37366) (O).

744. Using CIAR to "sponsor" the Hazleton Project permitted the covert funding of the work by ten international cigarette manufacturers and trade associations. According to the Frost's January 1993 presentation to the IEMC, the contributors to the first of the Hazleton studies were Rothmans, Philip Morris, Reynolds, Imperial Tobacco, BATCo, Japan Tobacco, the German Verband (VdC), French manufacturer Seita, Spanish manufacturer Tabacalera, and the Swedish tobacco organization Reserca. 2021520163-0180 at 0167 (US 26738) (A).

745. Using CIAR also allowed Defendants to hide the fact that Frost managed the project and may have participated in the writing of the first of the resulting papers. Two Philip Morris records of the May 18, 1993 IEMC meeting recorded that "Hazleton or Barry Frost will write the paper" on the United Kingdom study. 2501003237-3242 at 3239 (US 22320) (A); 2028372583-2596 at 2595 (US 22926) (A).

746. The Hazleton Project resulted in numerous publications, some of which appeared

in the tobacco industry's journal *Indoor and Built Environment*. 2505442777-2960 at 2883-2885 (US 25643*) (A).

747. The Latin American Project. In 1995, Antonio Miguel published a paper titled "Characterization of Indoor Air Quality in the Cities of Sao Paolo and Rio de Janiero, Brazil" in the journal *Environmental Science & Technology*. The paper concluded from the data collected that ETS was only a minor part of indoor air particulate matter in the restaurants and offices tested. The paper included an acknowledgment at the close stating that the study was funded in part by CIAR. 89273967-3974 (US 92023) (A).

748. The Miguel paper was part of the Latin American Project funded directly by the CIAR Board of Directors as an Applied Project. Under cover letter dated September 30, 1992, Covington & Burling analyst Chris Proctor forwarded two project proposals directly to Eisenberg and the CIAR Board of Directors for funding. The purpose of the projects, the first by Miguel the second by Maria Calfaro, was to gather data on indoor air in restaurants and offices in Brazil, Costa Rica, and other Latin American countries. The cost of the projects as proposed was $72,760 and $76,820, respectively. 2023591432-1459 (US 26794) (A).

749. Proctor wrote in his letter that funding the projects through CIAR would have "no direct implications for CIAR's budget." This was because, according to notes written by CIAR Board member Bob Pages on Proctor's cover letter, the projects were not funded by CIAR, but directly by Philip Morris (40%) and BATCo (60%). Moreover, Proctor's expenses in managing the projects were to come out of the "ongoing consultant program," and John Rupp would "pick up out of pocket CIAR expenses." Thus, CIAR was used for sponsorship only, to avoid having to name Philip Morris and BATCo as sponsors in the published paper. 2023591432-1459 (US 26794) (A).

750. Other documents shed light on important aspects of the projects. A November 23, 1992 update from Rupp reported that the funding of the Alfaro study, although "conducted under the auspices of CIAR" would be split among Philip Morris and BAT Group companies in Guatemala, Panama, El Salvador, Nicaragua, Honduras, and Costa Rica. 300543217-3227 at 3218-3219 (US 28139) (A). An October 2, 1992 letter from Covington & Burling attorney Patrick Davies to Souza Cruz, the Brazilian affiliate of BATCo, advised that Rupp had asked him to respond to "questions to Sharon [Boyse] about billing for the Brazilian field study" and that Covington & Burling had set up a checking account in Sao Paolo to receive payments from BAT companies and disburse payments to the researchers. Davies also wrote that Proctor would be "returning to Brazil to oversee the field study." 300543295 (US 92025) (A); see also 300543259-3260 at 3259 (US 28145) (A) (11/29/92 letter from Davies acknowledging CIAR sponsorship of Central American study.)

751. A Philip Morris record of an August 14, 1992 ETS meeting confirms that CIAR was chosen as a cover for the two projects to avoid disclosure of cigarette company involvement:

> MW [Philip Morris's Matt Winokur] or J. Rupp to meet with A. Gonzalez / C. Rodriguez concerning **how best to handle disclosure issue** concerning Brazil and Central America projects (**CIAR was suggested as the best way to handle the projects**).

2051810375-0377 at 0376 (US 92066) (A) (emphasis added).

752. In 1995, CIAR billed Philip Morris a "special assessment" of $1 million for "Latin America / Asia exposure studies." 2050764531 (US 92032) (A).

753. Eisenberg did not deny that CIAR sponsored the Brazilian study. However, while a November 19, 1992 letter from Davies and the November 23, 1992 Rupp update described above both stated that CIAR sponsored the Central American study, Eisenberg denied CIAR sponsorship at trial. 300543259-3260 at 3259 (US 28145) (A); 300543217-3227 at 3218-3219

(US 28139) (A); Eisenberg TT, 11/9/04, 5592:7-9; 5611:14-21.

754. The 16 Cities Study. One of the more expensive studies funded through CIAR as another Applied Project was the ORNL project published as the 1996 paper "Exposure to Environmental Tobacco Smoke In Sixteen Cities In The United States Determined By Personal Breathing Zone Air Sampling." (JD-044272) (A); Ogden WD, 6:1-11; Ogden TT, 3/17/05, 15948:15-15949:8.

755. Defendants undertook what was known as the 16 Cities Study in response to a workplace indoor air rule proposed by OSHA in September 1991. 2023859480-9486 (JD-080318) (A). Defeating the proposed OSHA rule was critical to Defendants. In fact, according to an October 8, 1992 Philip Morris e-mail from CIAR Board member Bob Pages to Steve Parrish, Reynolds CEO Jim Johnston conditioned his company's continued funding of CIAR on the initiation of projects that would help the industry oppose the OSHA: "CIAR must use all of its resources in support of projects/activities that will help us with OSHA." In the same e-mail, Pages stated that fellow CIAR Board member and Reynolds scientist Charles Green told him that "the prevailing attitude around Winston-Salem is that 'if we lose with OSHA, it's all over.'" 2028472657A-2028472658 (US 75169) (A); Ogden TT, 3/17/05, 15947:6-9.

756. For the many reasons that follow, the 16-Cities Study was not objective, neutral research. The project was planned in early 1993 with Reynolds, ORNL, and Reynolds' long-time marketing research firm, Bellomy Research. 508692972-2972 (US 92102) (A). Bellomy was responsible for proposing the cities in the study, locating marketing research firms in those cities, and overseeing the entire process of obtaining the questionnaire data from participants. Ogden TT, 3/17/05, 15951:23-15953:6; Ward TT, 11/3/04, 4990:6-4991:24. Bellomy and Reynolds created the questionnaire given to participants. Ogden TT, 3/17/05, at 15955:4-14. CIAR

funding was split between ORNL and Reynolds, who received over $500,000 to "assist" ORNL in the study. 522057702-7708 at 7702 (US 93165) (A); Ogden TT, 3/17/05, 15967:23-15968:5.

757. All of the laboratory testing of body fluids and air samples for metabolites of nicotine was carried out at the Reynolds laboratories in Winston-Salem. Ward TT, 11/3/04, 4987:17-24; (JD-044272 at 483) (A) ("ETS and saliva samples were shipped to the RJR/RD analytical laboratories. . . ."); 522057702-7708 at 7702 (US 93165) (A). The use of Reynolds' labs, as opposed to an outside, independent testing laboratory, was requested by CIAR, not ORNL. Ward TT, 11/3/04, 4987:25-4989:17.

758. The 16-Cities Study was a large scale version of exposure studies that Reynolds had previously conducted, studies that Reynolds had used to generate favorable results that the industry could rely on in submissions to legislative and regulatory bodies in opposing smoking restrictions. Ogden TT, 3/17/05, 15960:25-15962:14; JD-023787 (A).

759. According to performance documents for Reynolds scientist Mike Ogden and his testimony in this case, Ogden (1) "designed and executed" the 16 Cities Study; (2) was responsible for completing all the analysis of the body fluid samples in the study; (3) authored 17 Reynolds Research & Development Memoranda (R&DMs) on the project; and (4) could have been listed as an author on the published paper. 510781780-1782 at 1780 (US 30001) (A); 522057702-7708 (US 93165) (A); 519274420-4426 at 4422 (US 30351) (A); Ogden TT, 3/17/05, 15967:10-22.

760. Jenkins and ORNL had been recipients of major tobacco industry funding in the 1980s through the ETSAG. 2021004058-4064 (US 20339) (A); 507734379-4380 (US 29905) (O). The lead researchers at ORNL were Roger Jenkins and Michael Guerin; Guerin served Defendants as a member of the CIAR SAB at the time the 16-Cities Study was carried out.

2025471735-1762 at 1736 (JD-024508) (A); 2057790373-0404 at 0375 (US 23995) (A).

761. The results of the 16-Cities Study, predictably, were favorable to the industry in disputing the basis for the proposed OSHA rule: the study concluded that exposure to ETS in the workplace was only a fraction of what was estimated by OSHA in the proposed rule. (JD-023787) (A) at II-48 - II-72 ("The ORNL Study is the best evidence in the record concerning workplace exposure to ETS.") Through this CIAR managed and funded study, Defendants were able to obtain favorable data while concealing that (1) the study was designed and largely executed by a Reynolds scientist; (2) the study was never staffed through the CIAR Scientific Advisory Board or peer reviewed; (3) the marketing research firm who was responsible for gathering and compiling questionnaire data was the long-time marketing research agency for Reynolds; (5) the listed author (Jenkins/ORNL) had a preexisting long-term relationship with the tobacco industry; and (6) the project was carried out by a group of cigarette manufacturers with the specific intent to resist the proposed OSHA indoor air rule. (JD-044272) (A).

762. Jenkins has testified for Defendants as an expert witness in two smoking and health cases since appearing as an author on the published 16 Cities paper in 1996. Ward TT, 11/03/04, 4986:7-21. However, in 1997, Jenkins was barred by the court in Broin v. Philip Morris Companies, Inc. (Broin I) from testifying about the results of the 16 Cities study because of the close connection between Defendant Reynolds and the ORNL research itself. Ward TT, 11/3/04, 4991:25-4992:4.

763. Jenkins was named in this case as an expert witness, then as a fact witness; Defendants then elected to submit designations from his deposition. See Jt. Defs.' 5/4/04 Witness List at 17; Jt. Defs.' 4/11/05 Notice of Designations of Prior Testimony and Related Exhibits for Dr. Roger Jenkins.

(cc) The Demise of CIAR

764. The projects carried out through CIAR were coordinated with industry ETS projects carried out by other companies and industry organizations abroad. For example, Don Hoel convened a joint industry meeting on June 17, 1988, in London for industry executives, scientists, and lawyers to discuss scientific research and strategies on ETS and how these relate globally." CIAR Board member Tom Osdene and CIAR counsel John Rupp made presentations to the group, which included industry representatives from the United Kingdom, Germany, Canada, and Japan. 401033458-3465 (US 85530) (A); 2021548222-8235 (US 20349) (O).

765. A series of slides from a 1995 Reynolds presentation, entitled "ETS: a global offensive and defensive strategy" and produced from BATCo's files, reveals that the two Defendant Cigarette Companies coordinated their efforts to use CIAR to preempt the upcoming IARC study, which was to be the largest epidemiological study of ETS. These slides stated, in part:

> ETS Objectives: Pre-empt IARC with CIAR exposure studies . . . Counter directly with misclassification & confounder data . . . Build positive approach on IAQ – ventilation/ accommodation.
>
> ETS key messages: Threats related to ETS exposure grossly exaggerated . . . Adults have the right to be properly informed about smoking . . . Consumers favor separation and accommodation, not total bans . . . Tobacco industry will take lead on encouraging 'equal' accommodation.

502558482-8497 at 8489, 8491, 8493, 8496 (US 29562) (O).

766. The MSA, signed by the parties in November 1998, required that Defendants shut down and disband CIAR within 45 days of "Final Approval." Although the MSA was signed by the parties in November 1998, "Final Approval" by the settling States did not take place until approximately one year later. (no bates at 32-33) (JD-045158) (A).

767. The CIAR Board of Directors voted to dissolve CIAR on October 7, 1999, and Eisenberg formally dissolved the organization on December 6, 1999. 86205205-5206 (US 21091) (O).

768. Between the MSA signing in November 1998 and CIAR dissolution in December 1999, Defendants continued to fund millions of dollars of new and continuing research. In fact, in February 1999 alone the CIAR Board of Directors voted to fund over $3.5 million in new research. 2063908736-8736 (US 20514) (A); 83205163-83205165 (US 23493) (A).

769. The effects of CIAR-funded projects continued to be felt after the organization was disbanded. For example, in 2000, the second edition of the CIAR text by ETS consultant Roger Jenkins was published, with Max Eisenberg listed as editor. The publication, titled, "The Chemistry of Environmental Tobacco Smoke: Composition and Measurement" continues to parrot Defendants' practices of disputing the known health effects of passive smoking and trivializing its role as an indoor air pollutant. According to Jenkins's introduction to his book: (1) "The degree to which ETS exposure represents a health hazard remains a point of contention"; and (2) "The contribution of ETS to the concentration of indoor air contaminants in commonly encountered environments is much less than is implied by the extreme values included in many tabulations of ranges observed." BR2000545-0785 at 0553 (JD-065024) (A).

(vi) Post-1991: The Continuation of the International Conspiracy Through the IEMC

770. After INFOTAB was dissolved in 1991, Defendants' global coordination to attack and distort the evidence of the health effects of passive smoking continued by other means. In March 1991, executives and lawyers representing several Defendants and other cigarette manufacturers formed the International ETS Management Committee (IEMC) as yet another vehicle for the enterprise (1) to fund and manage research to maintain an ETS scientific

"controversy" and (2) to coordinate the industry's strategy and position on passive smoking.

771. A May 1991 Philip Morris document stated that the IEMC was established to insure that:

> 1. Common position statements and policies are developed and adopted worldwide;
>
> 2. Major potential threats of smoking restrictions and bans are identified;
>
> 3. Strategies are developed to deal with them;
>
> 4. The necessary resources are made available to the staff in the markets and regions; and,
>
> 5. Finally, that optimal coordination and cooperation across the companies is promoted to ensure the best application of those resources.

2500061112-1113 (US 22821) (A).

772. The executives and lawyers of the IEMC represented BATCo, Reynolds, Philip Morris, American Brands/Gallahers, Imperial Tobacco, Reemstma, and Rothmans, and was intended to work with a larger European industry organization called the Confederation of European Community Cigarette Manufacturers, or CECCM. 2500061112-1113 (US 22821) (A); 507782317-2318 (US 20788) (A).

773. According to a 1991 memorandum by BATCo's IEMC representative Sharon Boyse (Blackie), the IEMC was established "following the AFCO judgment in Australia" when "a group of international industry lawyers met in London to consider the implications for the industry." This group became the IEMC. 300522762-2767 at 2763 (US 22223) (A).

774. A brief summary of the AFCO case is necessary to understand how the AFCO decision spurred Defendants and other international cigarette manufacturers to create the IEMC in the wake of INFOTAB's demise.

775. The AFCO case arose from a July 1986 advertisement by the Tobacco Institute of Australia, published in Australian newspapers to dispute the health effects of passive smoking. The advertisement claimed:

> Lately, however, many non-smokers have been led to believe that cigarette smoke in the air can actually cause disease.
>
> **There is little evidence, and nothing which proves scientifically that cigarette smoke causes disease in nonsmokers.**

AFCO v. Tobacco Institute (Aust) (1991) 27 FCR 149 (emphasis added).

776. The Australian Federation of Consumer Organizations (AFCO) brought suit against the Tobacco Institute, alleging that the advertisement was deceptive under the Australian Trade Practices Act. AFCO v. Tobacco Institute (Aust) (1991) 27 FCR 149.

777. After a full trial on the merits involving scientific witnesses and a number of the industry's ETS consultants, the trial court found in favor of AFCO. In its February 1991 decision, the court held that the Tobacco Institute's advertisement was misleading and deceptive with respect to the scientific evidence that passive smoking caused lung cancer, respiratory diseases in children, asthma attacks, and middle ear disease. With respect to lung cancer, the Australian court held:

> In relation to the disease of cancer, the statement was erroneous and was misleading and deceptive both in 1986 and to date because: (a) far from there being little evidence that cigarette smoke caused disease in nonsmokers, there was much evidence to that effect, irrespective of whether the primary articles alone were regarded as evidence for the purposes of the advertisement, or regard was also had to the major reviews; and (b) a review of the totality of the available data leads to the conclusion that there was scientific proof in the sense that there was compelling scientific evidence that cigarette smoke caused lung cancer in nonsmokers.

AFCO v. Tobacco Institute (Aust) (1991) 27 FCR 149.

778. The trial court's findings that the Tobacco Institute's advertisement was

misleading and deceptive were upheld on appeal. Tobacco Institute (Aust) v. AFCO (1992) 38 FCR 1; Tobacco institute (Aust) v. AFCO (1993) 41 FCR 89.

779. The AFCO outcome provides context for Boyse's July 24, 1991 memorandum linking the AFCO decision to the formation of the IEMC. The industry realized after AFCO that it could be liable for and embarrassed by statements that cigarette manufacturers or their trade associations (such as the Tobacco Institute) made denying the health effects of ETS. Therefore, if the companies wanted to continue their attempts to maintain a scientific and public "controversy," they would have to (1) use terms other than "little evidence" and "no scientific proof"; or (2) if the companies wanted to deny the health risks in a way that might lead to liability, they had to do so covertly through their use of "independent" consultants:

> One conclusion that was very clear from the industry lawyers was that we had to further develop our resources of independent spokespersons who were not directly associated with the tobacco industry, in order to minimize situations in which we respond as an industry and so potentially lay ourselves open to legal claims.

300522762-2767 at 2763 (US 22223) (A).

780. One major role of the IEMC was to formulate a common position for the Enterprise to deny the health risks of passive smoking. In furtherance of the Enterprise's effort to ensure that public statements concerning ETS exposure were uniform, Covington & Burling prepared a position paper, the "ETS White Paper," for the IEMC and CECCM. The conclusions of the paper, and therefore the uniform positions of the companies, were that (1) knowledge of the chemical composition of mainstream and sidestream smoke is not relevant to the composition of ETS; (2) knowledge of the health effects of active smoking is equally irrelevant; (3) ETS is only a very minor source of indoor air contaminants, and can be addressed via ventilation; and (4) the "pertinent evidence" did not support any claim that exposure to ETS was a cause of any

disease or any adverse health effects in children or adults. 2023581802-1841 at 1808-1812, 1827, 1831, 1838 (US 88467) (O).

781. This echoed the ICOSI role in the late 1970s to formulate a common position on passive smoking to guide the companies' statements to the public, the media, and government officials. According to 1992 company memoranda from Philip Morris's Matt Winokur and BATCo's Sharon Boyse (Blackie) to their respective company executives worldwide, including Steve Parrish, the Covington & Burling position paper had been "approved and adopted for use by all the IEMC member companies" for public use. 2023581801-1801 (US 20392) (A); 300528914-8914 (US 46573) (A).

782. The 1992 "ETS White Paper" was also forwarded to CECCM, the Tobacco Document Center (TDC) and all company representatives. 300543969-3970 (US 88468) (A); 300543940-3942 (US 88469) (A). Covington & Burling revised the "white paper" in 1993 and distributed it to IEMC and CECCM members for comments and approval. 500874371-4371 (US 88470) (A); 300544202-4208 at 4206 (US 88471) (A); 2025495368-5373 at 5370 (US 37270) (A).

783. One of the 1993 industry position papers approved through the IEMC and CECCM, titled "Environmental Tobacco Smoke: Science or Politics," concluded that government agencies, and specifically the EPA, had "ignored or manipulated" the "pertinent science" on ETS to serve "political goals." 700547265-7291 at 7290 (US 54554) (A); Blackie WD, 158:3-7. Blackie stated at trial that one of the roles of the IEMC and CECCM was to coordinate the industry's position with respect to the EPA. Blackie WD, 143:18-144:4. CECCM members at that time included BATCo, Philip Morris, Rothmans, R.J. Reynolds, Reemtsma, Gallahers and Imperial. 502601564-1567 at 1565 (US 29570) (O).

784. CECCM worked with the IEMC and approved the IEMC position papers for use by all of its cigarette manufacturer members both with the media and with government officials. 300545701-5705 (US 88464) (A); 300543440-3445 at 3443 (US 88465) (A); 2504088209-8210 at 8209 (US 20571) (A). In the words of the Rothmans representative to the IEMC: "It was eventually resolved: IEMC will *develop* the messages (globally); CECCM will *deliver* these message (in Europe)." (emphasis in original) 900006204 (US 88482) (A); 900006205-6209 (US 88483) (O). Building on the IEMC/CECCM position papers, an "ETS Communications Manual" was compiled and distributed to all IEMC and CECCM members. 900006078-6080 (US 88485) (O); 2072418746-8749 at 8746 (US 89141) (A).

785. The IEMC also played a central role in coordinating the industry's attack on science. In the 1990s, IARC undertook a study in multiple cities to assess the health effects of passive smoking. Defendants used the IEMC as a platform to monitor, influence, and attack the study as it progressed. Boyse wrote the following in a December 1, 1993 memorandum to BATCo executives:

> IARC is to publish, in 1994 or 1995, the largest epidemiological study of ETS ever carried out, covering eleven Centre in Europe, North America, and Asia. We believe it likely that on the basis of this study, IARC will classify ETS as carcinogenic, which would lead to a situation not dissimilar to that with the EPA in the USA . . . .
>
> Through the International ETS Management Committee (BAT, PM, RJR, Rothmans, Imperial UK and Reemtsma) we are developing a strategy, both scientific and media-related, to cope with this study.

500844318-4319 (US 48464) (A).

786. A September 2, 1993 Philip Morris memorandum discussing the IARC study warned that: "The results are anticipated to have significant credibility both because this study

consists of original research and because IARC itself has a solid reputation. **Preliminary indications suggest that the study may find a very weak, but positive link between ETS exposure and lung cancer in non-smokers.**" 2501117793-7797 at 7793 (US 27932) (O) (emphasis added).

787. According to several Philip Morris documents, industry objectives in 1993 included: (1) "delay the progress and/or release of the study"; (2) taking steps to "neutralise the possible negative results of the study"; and (3) making efforts "to get the study shelved altogether." However, these objectives were to be executed as part of "one global strategy." 2501117793-7797 at 7794 (US 27932) (O); 2501348679-8683 (US 88474) (O).

788. Philip Morris had planted a number of "moles" to track the study's progress, and had engaged Covington & Burling to use industry ETS consultants to "try to uncover as much information as possible on the current status, etc., of the IARC study." 2025493295A-3296 at 3295A (US 26839) (O); 2029231774-1782 at 1774 (US 88102) (A).

789. The industry even asked: "Can we kill the credibility of the research up front, before publication?" 2500156109-6110 at 6109 (US 88473) (O); 2025493279-3283 (US 88111) (O).

790. An updated 1993 plan was presented by Philip Morris's David Greenberg to Philip Morris Companies President and COO Bill Murray in September 1993. Objectives continued to include delaying the progress and release of the IARC study, as well as neutralising its results. Greenberg proposed setting up a Philip Morris IARC team - composed of Philip Morris employees and attorneys from Shook, Hardy & Bacon and Covington & Burling - to insure that the strategies were "implemented globally." 2021184116-4116 (US 26730) (A); 2021184117-4121 at 4118-4119 (US 36718) (O).

791. There was great concern among the tobacco industry because: "IARC is credible, the study is a REAL one, and its results will have MAJOR impact, and there needs to be a serious multi-country strategy that encompasses all 16 IARC member nations," including the United States, a member of IARC. 2025493295-3296 at 3296 (US 26839) (O). Greenberg wrote Murray in New York that, "Indeed our scientists go as far as to state that **IARC is virtually unassailable**." 2021184117-4121 at 4117 (US 36718) (O) (emphasis added).

792. Philip Morris's IARC planning involved executives and scientists from Philip Morris USA and Philip Morris Europe (FTR), in conjunction with the outside lawyers. Philip Morris (FTR) Scientific Director Helmut Reif was to take the lead in organizing and coordinating all of the inter-industry scientific efforts. These efforts included preemptive assessment of the questionnaire to expose weaknesses; organizing with the law firms a team to identify and mobilize consultants, and offering IARC industry funded study results and protocols through Max Eisenberg at CIAR. Philip Morris USA's Matt Winokur wrote to Philip Morris USA's general counsel Steve Parrish in a January 24, 1994 e-mail: "I agree that S & T (Richmond and Neuchatel) must be involved with all phases - scientific, political and communications - that come together when developing the industry's response to the IARC study. And already this is happening." 2029174855-4855 (US 88475) (O); 2024104538-4538 (US 88476) (A).

793. Philip Morris's IARC plan formed the basis of a coordinated industry plan implemented through the IEMC to counter the IARC threat. 2024104596-4596 (US 88735) (A); 2023693108-3108 (US 88477) (A); 2501355932-5944 at 5944 (US 88104) (O).

794. From 1994 forward, a plan to counter IARC was carried out through a "subgroup" or "task force" of the IEMC representatives. In addition, CECCM had its own "IARC Working Group" whose membership included many members of the IEMC "subgroup." The subgroup

met to formulate the industry's comments and responses (called "ETS messages") to the IARC study both before and after publication; these "messages" were then be forwarded to CECCM and IEMC member companies to insure unified positions. 900006185-6185 (US 88480) (A); 2028361781-1781 (US 88478) (O); 2078742949-2949 (US 27722) (A).

795. In a January 17, 1994 memorandum to David Greenberg, Matt Winokur summarized how the "IARC task force" had been set up "to coordinate plans and resources among the companies and in conjunction with National Manufacturers Associations." These plans included IARC "intelligence gathering" and the development of a "global communications . . . to address the impact of the study." 2025493459-3460 at 3459 (US 26843) (O).

796. BATCo produced in this case a 1995 Reynolds Powerpoint presentation entitled "ETS: a global offensive and defensive strategy". The Reynolds presentation focused on the ongoing IARC study, calling IARC a "manageable threat" that could be "globalized" and countered by CIAR and other industry passive smoking initiatives. The "Target Audiences" were broad, including consumers, government officials, and the scientific community. 502558482-8497 at 8483, 8488, 8489, 8492 (US 29562) (O).

797. The industry's coordinated "IARC Release Plan," as written in 1996, involved many players. The plan was presented to IEMC and CECCM, ostensibly for their approval. Rupp was tasked with writing various white papers that would be included in the National Manufacturer's Association manual. Shook, Hardy & Bacon would provide legal clearance. Peter Lee would review IARC’s ETS position and past practices to allow corporate affairs to identify weaknesses in the IARC methodology. There was a "Response Coordination Team" of executives from the member companies, including David Greenberg and Ruth Dempsey of Philip Morris, Chris Proctor of BATCo, and Steven Sears of Reynolds. More than a dozen other

company executives and scientists served in other roles for the "Coordination Team." 2048381563-1574 (US 88131) (O).

798. The "IARC Industry Release Plan" was coordinated through CECCM. The minutes of the January 28, 1997 CECCM corporate member meeting recorded that Philip Morris gave a status update on the IARC study, and the members agreed that CECCM would update the manufacturer associations (NMAs) at the next meeting in February 1997. The "IARC Industry Release Plan" involved the cigarette manufacturer members, the NMAs, and public relations firm Burson Marsteller. 2072417681-7682 (US 89132) (A).

799. One strategy to counter the anticipated IARC study was to create and convince scientific groups to adopt industry-favorable epidemiology standards, dubbed "Good Epidemiology Practices" or GEPs. 2501347174-7176 at 7175 (US 45951) (O); 2029260524-0539 (US 26895) (O); 2025493020-3030 (US 88108) (O); 2028381627-1627 (US 26885) (O).

800. Through the use of its "GEPs," Philip Morris created and pushed a standard under which relative risks of less than two would be ignored, and would be per se insufficient to establish causation. This "standard" was attractive to Defendants because, with respect to passive smoking, the majority of the relative risks of harm, although consistently elevated, were less than two. Parrish WD, 86:1-88:9.

801. Defendants were unable to convince any organization to adopt their version of "good" epidemiological practices. In an April 3, 1998 Philip Morris e-mail from Ted Sanders to Cathy Ellis in Richmond, Sanders summarized the 1994 GEP initiative as follows:

> Approximately three years ago, the concept of GEPs was discussed in considerable detail in PM. Corporate Affairs thought it was a wonderful idea, because at first they. . . felt that part of a code for Good Epidemiological Practices would state that any relative risk of less than 2 would be ignored. **This is of course not the case. No epidemiological organization would agree to this, and even**

> **Corporate Affairs realizes this now.** A number of initiatives were attempted, but the one initiative which continues in Europe is currently under the auspices of John Rupp.

2060566164-6165 (US 20505) (A) (emphasis added). See also discussion of relative risk above at US FF §III.A(2)(b)(ii).

802. In early 1998, IARC published a summary update of its ongoing Multi-Center ETS study in its 1996/1997 Biennial Report. 2063594009-4009 (US 39763) (O). In this Report, the researchers reported a relative risk of lung cancer of 1.16 for spousal exposure (CI = 0.93-1.44) and 1.17 for workplace exposure (CI = 0.94 - 1.45). Researchers also reported that "several quantitative indicators of ETS showed a dose-response relationship with lung cancer risk." 770007956-8214 at 8018, 8177-8178 US 88132; (no bates at 9) (JD 023241) (A).

803. Despite the findings in the IARC study of raised relative risks and a dose-response relationship, Defendants publicly distorted and misrepresented the evidence. IEMC representative and BATCo scientist Chris Proctor was quoted in a March 8, 1998 BATCo press release:

> Europe's Largest Ever Passive Smoking Study Has Failed to Establish a Meaningful Risk of Lung Cancer to Non-Smokers
>
> **The ten year study**, which was commissioned by the World Health Organisation and involved twelve centre in seven countries, **has cast further doubt on the status of passive smoking as a cause of disease.**
>
> Dr. Chris Proctor, Head of Science for British American Tobacco said: "New scientific research from the World Health Organisation has shown the risk of lung cancer from environmental tobacco smoke to be either non-existent or too small to be measured at a meaningful level. . . **If this study cannot find any statistically valid risk, you have to ask whether there can be any risk at all.**"

2063594018-4018 (US 39764) (A) (emphasis added).

804. The March 9, 1998 B&W press release went beyond distorting the evidence. The B&W headline, and in particular the quote from Sharon Boyse (Blackie), was false. Clearly the IARC study did find an elevated risk of lung cancer associated with spousal and workplace smoking. That the lower end of the confidence interval was below 1, therefore rendering the result not statistically significant to statisticians, did not change this fact. Nonetheless, B&W claimed in its press release:

> **MAJOR ENVIRONMENTAL TOBACCO SMOKE STUDY FINDS NO RISK**
>
> New research from one of the world's premier health organizations is out on environmental tobacco smoke.
>
> In the largest study of its kind ever performed in Europe, research by the World Health Organization's International Agency for Research on Cancer (IARC) has found no meaningful increase in lung cancer risk to non-smokers exposed to environmental tobacco smoke.
>
> "This is good news for smokers and non-smokers," said Sharon Boyse, director of scientific communication at Brown & Williamson Tobacco Corporation. **We welcome this new study which confirms what we and many other scientists have long believed, that while smoke in the air may annoy some non-smokers, the science overall does not show that being around a smoker is a lung cancer risk,**" she said.

DXA0680223-0233 at 0233 (US 79025) (A).

805. For their part, the WHO and IARC attempted to correct the misrepresentations and distortions of the IARC study by Defendants. A March 1998 WHO press release stated:

> PASSIVE SMOKING DOES CAUSE LUNG CANCER; DO NOT LET THEM FOOL YOU
>
> * * *
>
> The results of this study, which have been completely misrepresented in recent news reports, are very much in line with the results of similar studies both in Europe and elsewhere: *passive*

smoking causes lung cancer in non-smokers.

> The study found that there was an estimated 16% increased risk of lung cancer among non-smoking spouses of smokers. For workplace exposure the estimated increase was 17%. However, due to the small sample size, neither increased risk was statistically significant.

224460-4461 (US 79174) (A). See also discussion of statistical significance above at US FF § III.A(2)(b)(ii).

806. Another major purpose and function of the IEMC was to select and fund scientific studies to generate findings favorable to the industry's position that ETS was not a proven health hazard. For example, the Hazleton exposure studies described above and funded by Defendants through CIAR were directed by the IEMC. 2023522351-2352B at 2352B (US 75127) (A). The 1995 Reynolds Powerpoint presentation discussed above stated outright that one of the industry's "ETS Objectives" was to "pre-empt IARC with the CIAR exposure studies," confirming that the CIAR research was neither neutral nor objective. 502558482-8497 at 8489 (US 29562) (O).

807. The Japanese Spousal Study conducted by BATCO's Proctor and industry consultant Peter Lee is another example of an IEMC directed study funded to obtain industry-favorable results. 300512244-2245 at 2245 (US 67752) (A); see discussion of study above at US FF § III.A(2)(k)(i).

808. A June 8, 1994 presentation by Philip Morris USA's Richard Carchman to the IEMC records how the IEMC/CIAR research would be used to counter the IARC study. Carchman stated that IEMC-proposed exposure and confounder studies were to "be organized by and funded through CIAR." Carchman described four studies: two confounder studies by CIAR SAB member Genevieve Matanowski, the Hazleton project, and the ORNL16-Cities Study. The objective of the projects was to generate data for use with both scientists and policymakers in

1994 and 1995. In fact, Carchman had already planned for "promotion" of the studies, suggesting he knew that the outcome of the yet-to-be-performed studies would be favorable to the industry. 2505443991-4000 (US 22202) (A).

809. CIAR's role in the industry's IARC initiatives makes clear that CIAR was a tool of the industry and part of the industry's IARC team. In fact, CIAR director Max Eisenberg took part in an IARC planning meeting held at Philip Morris on June 15, 1994. The following is listed as the second "Meeting Outcome":

> Strategic plan for contacts, roles and responsibilities of CIAR, Scientific Affairs, World Regulatory Affairs, Science and Technology, and CRC [Contract Research Center, a Philip Morris laboratory in Belgium].

2050751946-1950 at 1946 (US 88100) (A).

810. The IEMC arranged for the funding of ETS studies through the CIAR which were conducted at Hazleton Laboratories. After an initial project cost of about $200,000 for the United Kingdom phase of the project, these industry-funded ETS studies cost the industry $7.28 million. 2021520163-0180 at 0167 (US 26738) (A); 25054422777-2960 (US 25643*) (A). To perpetuate the appearance of "independence," the task of publicizing the Hazleton results was assigned to outside public relations agency Spring O'Brien. According to an August 10, 1995 CECCM meeting :

> It was acknowledged that Spring O'Brien had already been appointed by the Corporate Members as the central agency dealing with PR activities on the Hazleton studies.

2046546263-6265 at 6263 (US 88101) (O).

Later in the same meeting minutes, the group acknowledged that they would conceal the tobacco industry source of the funding as much as possible to create a perception of "independent" science:

> It was stressed that it is important to tell the truth about the funding of the Hazleton Studies - if asked. (CIAR is sponsored in the US by the chemical and tobacco industries).

2046546263-6265 at 6265 (US 88101) (O).

811. The IEMC agreed that once the Hazleton Project and the Japanese Spousal Study were completed, industry ETS consultants would be tasked by Covington & Burling "to spread the scientific word on the new scientific info" from the two projects. In so doing, the industry could avoid attribution. The IEMC issue was "How to best market the results of these studies in order to influence public policy and merchandise the 'positive' progress in epidemiology." 2501003237-3242 at 3242 (US 22320) (A); 2501003235-3235 (US 22322) (O).

812. After the IARC study was published in October 1998, Brown & Williamson issued a press release dated October 7, 1998, largely reiterating the March 1998 press release and stating that study found only a "minimal risk posed by environmental tobacco smoke." 321926036-6037 at 6036 (US 88134) (A). The BATCo press release in October 1998 claimed that the IARC study showed: "[I]f there is any risk at all of lung cancer for living, working, or growing up with a smoker, it is too small to measure at a meaningful level." 2505445804-5804 (US 88133) (O).

813. One of Defendants' most prolific paid ETS consultants, Peter Lee, played a role in distorting and attacking the 1998 published IARC study as well, through letters to editors of journals and newspapers. 321557020-7021 (US 88135) (O); 321560600-0616 (US 88137) (O).

814. The Lee letter to the *Journal of the National Cancer Institute* criticizing the IARC report asserted that he was not paid by the industry for writing the letter. 321557020-7021 (US 88135) (O). However, an August 1998 letter from the head of the U.K. Tobacco Manufacturers' Association (TMA) stated that Lee had been paid over £50,000 by the TMA for the first eight

months of 1998 alone; a September 1998 TMA ETS Working Group meeting agenda attached the "P N Lee Consultancy Agreement 1998/1999." These documents suggest that Lee was in fact compensated by the tobacco industry for his efforts to attack the IARC study published in 1998, but concealed the funding in order to create an appearance of independence. 321556233-6234 (US 88145) (O); 321556235-6235 (US 88146) (O).

815. A July 2000 report authored by a committee of experts including Dr. David Kessler, former FDA Commissioner, to the Director General of the World Health Organization was titled "Tobacco Company Strategies to Undermine Tobacco Control Activities of the World Health Organization." The report documented a number of strategies and tactics employed by the tobacco industry to counter tobacco-related efforts by the WHO. The report stated, "Although these strategies and tactics were frequently devised at the highest levels of the tobacco companies, the role of tobacco industry officials in carrying out these strategies was often concealed." The Report also found that there was evidence in formerly confidential tobacco company documents that the tobacco companies had made "efforts to prevent implementation of healthy public policy and efforts to reduce funding of tobacco control within UN organizations." 770007956-8214 at 7958 (US 88132) (A).

816. According to the WHO expert report, the tobacco companies' communications strategy was the most successful element of its attempt to undermine the IARC study. By distorting the statistical underpinnings of the study results, tobacco industry officials managed to convince journalists around the world to write news stories that the study showed no increased risk of lung cancer from ETS exposure in non-smokers. According to the WHO report, the tobacco companies' distortion of the study results continues to be repeated in media accounts and in tobacco company presentations to regulatory authorities. 770007956-8214 at 7969 (US

88132) (A).

817. The industry has also distorted the IARC study results when addressing regulatory authorities. For example, Philip Morris's testimony before the National Toxicology Program (NTP) sought to use its misrepresentation of the IARC ETS study as the basis for its argument that the NTP lacked sufficient evidence to classify ETS as a carcinogen. 770007956-8214 at 8179 (US 88132) (A) (citing 2063594507-4508 (US 27115) (O)).

818. On November 2, 2000, and in the wake of the WHO report, CECCM met in an "Extraordinary Meeting" where Philip Morris voiced "serious reservations on CECCM representing the industry publicly." Philip Morris "fear[ed] exposure from a legal and credibility perspective," and even vetoed the proposal to place the WHO on the CECCM Agenda going forward. However, Philip Morris acknowledged that CECCM was still useful for exchanging views and "coordinating policy with the National Manufacturing Associations." 325128572-8573 (US 89143) (A).

(h) Defendants' Global ETS Consultancy Program

819. One of the more far reaching and complex of Defendants' passive smoking initiatives was the creation of a worldwide network of seemingly "independent" consultants who could covertly speak on behalf of the industry to influence the public, government officials, and scientists. As described below, the ETS Consultancy Program was a global, multi-company endeavor that created and utilized seemingly independent consultants and front organizations to make statements and publish papers disputing the scientific consensus and underlying evidence that passive smoking was a health hazard. The consultants and the "controversy" they created were then seized upon and touted by Defendants to resist smoking restrictions and sway public opinion, serving the ultimate business goal of maximizing sales.

(i) Establishment and Goals of the ETS Consultancy Program

820. As described previously in this section, Defendants publicly promised to fund objective scientific research with respect to passive smoking (see US FF § III.C(2)(d)); however, the work funded by Defendants through their web of ETS consultants was neither objective nor interested in finding answers. Numerous internal documents state that the objective in hiring consultants was simply to "keep the controversy alive" by attacking the scientific consensus that ETS was a health hazard. 321140944-0949 at 0944 (US 20586) (A); 2021181803-1812 at 1803 (US 22155) (A) (goal to "maintain the controversy"); 2047720166-0173 at 0169; (US 23966) (A) (1992 objective to "keep the controversy alive"); 321091680-1729 at 1685 (US 28271) (O) ("promote the 'no consensus' argument" to "maintain doubt").

821. Defendants also recognized that creating and maintaining a controversy in the media and in the scientific literature would allow them to continue making the argument that ETS was not a proven health hazard. Director of Science & Technology Helmut Gaisch explained in an April 19, 1988 Philip Morris document titled "ETS Plan and Budget for the years 1988, 1989, 1990, and 1991" how the consultants would serve this aim:

> Objective for S&T [Science and Technology]:
>
> To organise and support scientific work on a continuous basis leading to results which are published in the scientific literature and reported at public scientific events. . . . **This will enable the continued use of the argument: there is no convincing scientific evidence that ETS is a health risk for non-smokers.**
>
> Scope: Management of experts as scientific spokespersons
> Management of extramural research projects
> Support of international scientific events

2501152297-2300 at 2297 (US 89558) (O).

822. In the same document, Gaisch wrote under the heading "MODUS OPERANDI"

that the objective was: "The generation of data and their publication in the primary scientific literature." 2501152297-2300 at 2298 (US 89558) (O). In other words, Defendants' goal was the covert contamination of the scientific record to allow them to make an argument that they knew the existing scientific record did not support.

823. Starting in the mid-1980s, the Tobacco Institute, with the assistance of outside attorneys at Shook, Hardy & Bacon and Covington & Burling, began the consultancy program in the United States. 2081369202-9220 (US 27796) (A); TIMN435220-5272 (US 21734) (O); TIDN0019217-9268 (US 85597) (A); TI01140124-0133 at 0129 (US 62100) (A); see discussion of IAPAG and HBI/ACVA above at US FF §§ III.A(2)(h)(iii), (vii).

824. Sharon Boyse (Blackie) described in a July 1991 review and summary of the consultancy program the scope of the effort:

> The industry in the US . . . has had a huge programme to develop independent witnesses or consultants on ETS-related issues, for media as well as for legal and scientific purposes. It is believed by the US industry that this wide availability of independent witnesses has been critical in their track record to date of defeating approximately 90% of all state initiatives to legislate on smoking restrictions.

300522762-2767 at 2762 (US 22223) (A).

825. After the June 1987 "Operation Downunder" meeting, Defendants expanded their consultancy program to train and deploy industry-friendly scientists worldwide. 2028343858-3860 at 3858 (US 75086) (A). Defendants referred to these efforts in the United States and globally as, *inter alia,* the ETS Consultancy Program, and continued well into the 1990s. See 2500048635-8640 at 8639 (US 20550) (A); 2071027438-7442 (US 40371) (A) (1992-93); 2078462906-2909 at 2906 (US 75367) (A) (1998-99).

826. The ETS Consultancy Program, also called the "Whitecoat" project in many

documents, ultimately sought to "resist and roll back smoking restrictions" and "restore smoker confidence" in all of Defendants' markets. 2501254705-4708 (US 75267) (A). To do this, the industry had to reverse the scientific evidence and restore the social acceptability of smoking. 2023542519-2522 at 2519 (US 23677) (A); 2501474253-4259 at 4253 (US 22017) (A).

827. Many internal documents lay out the collaborative and global activities of the various tobacco companies to locate consultants to perpetuate a "debate" on the health effects of secondhand smoke. It is also clear that some within the industry wanted to even "establish affirmatively that ETS presents no significant health risk to non-smokers." 2501474253-4259 at 4254 (US 22017) (A); 2028343858-3860 at 3858 (US 75086) (A). To achieve these objectives, the tobacco industry had a strategy "that relie[d] on deception and creating controversy as a 'smoke screen.'" Schwartz WD, 21:15-16.

828. The description of the ETS Consultancy Program in a February 17, 1988 memo from BAT scientist Sharon Boyse revealed its scale and focus. Through a global program, Defendants identified, educated and paid scientists in every market to present papers, pen letters to scientific journals, plan and attend conferences, generate research results, and publicly speak on behalf of the cigarette companies:

> In every major international area (USA, Europe, Australia, Far East, South America, Central America & Spain) they are proposing, in key countries, to set up a team of scientists organized by one national coordinating scientist and American lawyers, to review scientific literature or carry out work on ETS to keep the controversy alive. They are spending vast sums of money to do so, and on the European front Covington & Burling, lawyers for the Tobacco Institute in the USA, are proposing to set up a London office from March 1988 to coordinate these activities.

321140944-0949 at 0944 (US 20586) (A).

829. Defendants' intent was to influence "three audiences": "the scientific community,

regulatory authorities, and the general public." 2501474253-4259 at 4258 (US 22017) (A).

(ii) Defendants' Execution of the ETS Consultancy Program: Recruiting, Training, and Educating the Consultants

830. Defendants and their lawyers created and trained a network of consultants to attack research finding or suggesting that secondhand smoke caused adverse health effects, and to divert attention away from ETS to the issues of indoor air quality and ventilation.

831. A Helmut Gaisch memo entitled "Proposal for the Organisation of the Whitecoat Project" described how the program was intended to be pro-industry in its goals:

> Pro-active element: a) to generate a body of scientific and technical knowledge in the field of ETS within the PM EEMA and EEC markets. The Project's activities and programmes will include fundamental research, IAQ and IAQ studies. These will be undertaken by whitecoats, contract laboratories and commercial organisations such as ACVA.
>
> b) to disseminate and exploit such knowledge within specific communications programmes in these markets.

2501254705-4708 at 4705 (US 75267) (A).

832. Thus, the ETS Consultancy Program required lawyers to covertly identify and recruit "whitecoat" consultants who could then be called on to do and say publicly what Defendants wanted. At the same time, the lawyers had to quietly filter out any recruits whose views did not support the industry. Boyse summarized the recruiting process in her February 1988 memorandum in these terms:

> The consultants should, ideally, according to Philip Morris, be European scientists who have had no previous connection with tobacco companies and who have no previous record on the primary issue [active smoking] which might, according to [Covington & Burling attorney David] Remes, lead to problems of attribution. **The mechanism by which they identify their consultants is as follows: they ask a couple of scientists in each country. . . to produce a list of potential consultants. The scientists are then contacted by these coordinators or by the**

> **lawyers and asked if they are interested in problems of Indoor Air Quality: tobacco is not mentioned at this stage. CVs are obtained and obvious "anti-smokers" or those with "unsuitable backgrounds" are filtered out.** The remaining scientists are sent a literature pack . . . . They are asked for a genuine opinion as independent consultants, and if they indicate an interest in proceeding further, a Philip Morris scientist makes contact.
>
> Philip Morris then expect the group of scientists to operate within the confines of decisions taken by PM scientists . . . .

321140944-0949 at 0944 (US 20586) (A); see also 300538976-8999 (US 88778) (A).

833. The key was to find consultants with a clean slate on smoking and health issues who could be trained to adopt, believe, and parrot the industry's positions on passive smoking. In the words of David Remes, the lawyers were entrusted to locate a "corps of scientific consultants and engineers in each market" around the world. Covington & Burling and consultants in the United States were given the task of "weeding out unsuitable candidates." A particular problem was consultants who had ever expressed an adverse opinion on active smoking:

> Candidates who have made public statements adverse to the industry on the primary health issue generally are avoided, lest those statements be attributed to the industry if those candidates were retained as consultants on the ETS issue.

2501474253-4259 at 4256 (US 22017) (A).

834. In a February 4, 1987 memorandum from Mary Pottorff, the recruiting method was outlined to Philip Morris Companies Vice Chairman Bill Murray, who, according to a Remes memorandum, was the source of the Philip Morris funding for the program. 2501152342-2344 at 2342 (US 75263) (A); 2501474253-4259 at 4255 (US 22017) (A).

835. A January 25, 1988 letter from Rupp to Philip Morris executives again explained how the Covington & Burling "recruiting" followed "strict clearance procedures" and how multiple meetings with prospective consultants were held before candidates were told that their

consultancy would relate to ETS on behalf of the tobacco industry. 2501474296-4301 at 4300-4301 (US 27955) (A).

836. An important aspect of the program was that Defendants intentionally targeted consultant "recruits" who had very little or no expertise in smoking and health issues, much less the health effects of secondhand smoke. In this way, the consultants would be more malleable to serve Defendants' purposes. The only downside was that Defendants had to thoroughly "educate" and train consultants before they could be deployed.

837. Numerous documents reveal the extent of the "training" and "education" that the consultants received in order to become effective, yet covert, spokesmen for Defendants. For example, a March 9, 1987 Philip Morris memorandum from Arjuna Kannangara to Mary Pottorff provided an update of recruiting efforts in Finland, Sweden, and Switzerland. Kannangara wrote that in order "to influence expert opinion" and "popular attitudes," the "strategy" was to:

> **[R]ecruit and educate "consultants" to operate as credible third-party spokesmen** in environmental toxicology and ETS (comparable to John Rupp/Indoor Air Pollution Advisory Group - IAPAG)

2023541666-1668 (US 23675) (A) (emphasis added).

838. A later, undated Philip Morris proposal acknowledged that: "The worldwide consultants program was initially designed and funded as an effort to **identify and educate consultants** on the ETS issue." The proposal also stated that the European program had been "successful in establishing a core group" of consultants. 2023590685-0687 at 0685 (US 37027) (O); 2023590786-0788 (US 85525) (A) (emphasis added).

839. A January 25, 1988 letter from Rupp to Gaisch and Philip Morris Europe counsel Bradley Brooks referred to consultants obtained by the industry in the ETS Consultancy Program as "'whitecoat' recruits." Rupp also described a March 1988 meeting of the Nordic consultants

for "training and further orientation" of the new "recruits." Rupp stated: "Our goal is to leave the March training/orientation session with seven scientists . . . completely cognizant concerning the science of environmental tobacco smoke and prepared to share that knowledge with others at the industry's request." 2501474296-4301 at 4296-4297 (US 27955) (A).

840. The Asia ETS Consultancy Program was set in motion in 1989, based on the model already in place in the United States and Europe. A study of documents, particularly those authored by Covington & Burling attorneys, reveals how Defendants in Asia once again covertly "recruited," "trained," and "educated" a group of consultants to influence scientific and public opinion. 2500048655-8662 (US 27900) (A); 2500048643-8654 (US 22857) (A); 2500048508-8515 (US 20549) (A); 2500048976-8998(US 23007) (A). For example, the February 29, 1989 Asia Covington & Burling program status report detailed the covert contact with prospective consultants ("this is critical if we are to avoid compromising the project"); yet not one had expertise in ETS. 2500048655-8662 (US 27900) (A).

841. The April 10, 1989 Asia program status report detailed "selections" of consultants in Asia on the basis of convincing them to adopt the industry's position on passive smoking. The document described how the Covington & Burling attorneys would make contact with a potential consultant, but withhold their affiliation with the tobacco companies. The attorneys would then give him or her a "packet" of ETS materials for review and comments. The researcher's potential as a consultant was then determined by these comments. Nonetheless, the report noted that at least one promising consultant (Roh) needed "educating" on the industry's "misclassification" argument. Another consultant (Liao) would serve as a "buffer" between a high-visibility consultant (Koo) and Covington & Burling to provide a further layer of insulation from the industry. A two-day training session to educate and indoctrinate the consultants on the relevant

literature (provided by Covington & Burling) was scheduled for June 1989 in Bangkok. 2500048643-8654 (US 22857) (A).

842. In Rupp's September 27, 1989 Asia program status report, he emphasized how the consultants' participation in the upcoming McGill "symposium" would further the creation and training of ETS "experts" by getting the consultants' names into the scientific literature:

> We have not asked any of our Asian consultants to act as presenters but instead have requested that some of them participate in selected panel discussions. The symposium presents an ideal opportunity to expose the Asian consultants to the full range of issues and the most advanced current thinking on ETS and should bolster their confidence substantially. **As the panel discussions will be transcribed and published alongside the keynote presentations, McGill will mark their first appearance in the scientific literature on ETS.**

2500048508-8515 at 8509 (US 20549) (A).

843. Finally, Rupp's February 14, 1990 Asia program status report stated that "much of the project's first year was consumed with the recruitment and orientation of consultants." With the consultants sufficiently "oriented," Rupp planned in 1990 to focus on "deployment of the consultants within the Asian markets of interest to the supporting companies." Rupp identified the companies as Reynolds, Philip Morris, BATCo, and B&W. 2500048976-8998 at 8976 (US 23007) (A).

844. Later in the February 1990 status report, Rupp reiterated: "One key objective of the project has been to recruit and educate scientists who would then be available to testify on ETS in legislative, regulatory, or litigation proceedings in Asia or elsewhere." Rupp acknowledged that the need to "educate" the scientists was the result of "essentially no local scientists with a background in ETS issues." Rupp then listed the various activities already undertaken by the Asia consultants on behalf of the industry, including distributing the McGill

"symposium" proceedings, participation in scientific conferences, infiltrating a public health committee, serving on the IAI journal board (see infra), carrying out research (the Rupp/Liao Hong Kong "Asia Project" discussed under CIAR, supra), and various media appearances. 2500048976-8998 (US 23007) (A).

845. The ETS Consultancy Program was subsequently exported to Latin America in 1991, with joint funding by Philip Morris (40%) and BATCo (60%). In the proposal from Sharon Boyse (Blackie) to Rupp dated January 2, 1991, Boyse summarized what had already taken place in Asia, emphasizing that the funding companies there (RJR, Philip Morris, BATCo, and Japan Tobacco) had created ETS "experts" out of whole cloth:

> The tobacco industry in Asia (BAT, PM, RJR and Japan Tobacco) has, for the past couple of years, been supporting a project to establish a consultancy group on ETS and related issues in the region.
>
> In each country . . . one or more scientists have been identified whose background enables them to take a scientific interest in the issues surrounding debate on ETS. . . . **The consultants meet regularly to discuss ideas and learn about ETS issues, and have the background to become experts on ETS in their country**, and to carry out research if required. Many are influential members of the scientific community . . .
>
> **As a result of the project, local experts on ETS are now available** to provide consultancy services and to organize events and research. In many countries, positive media coverage of the issues has occurred, resulting in a decreased emphasis on ETS and increased attention to other environmental and indoor air pollution problems.
>
> **In order to ensure independence from the tobacco industry, the programme is managed by John Rupp of Covington & Burling**, a Washington-based law firm. All funding arrangements and contact with scientists is arranged through this firm.

321673508-3525 at 3509 (US 28585) (A) (emphasis added).

846. Boyse then proposed to Rupp that an identical program be set up in Latin America

to identify, recruit, and indoctrinate consultants there to become industry-controlled "experts" on ETS. The project was projected to cost BATCo and Philip Morris $340,000 in the first year to "recruit and train" 14 consultants in five Latin and South American countries. Boyse wrote:

> It is proposed to develop a similar programme in Latin America. . .
> .
>
> The programme would be managed by Covington & Burling. **Overall manager of the project would be the responsibility of Mr. John Rupp, with associates such as Mr. Chris Proctor contributing to the recruiting and training of the scientists**. . . .
>
> Covington & Burling and Philip Morris already have scientific contacts in South America who could be used as starting points for recruitment. . . . **Once scientists have been recruited, training in ETS issues would take place at orientation sessions held at regular intervals with the participation of Covington & Burling**. . . . Once scientists have some training, a programme of activities would be put together. . .

321673508-3525 at 3510 (US 28585) (A) (emphasis added).

847. Indeed, Defendants and their law firms sought only consultants who would further the goal of maintaining an ETS controversy, regardless of the scientific consensus that ETS was harmful. A July 24, 1991 document that listed consultant "selections" by Covington & Burling, titled "Latin American Candidate Recommendations," showed how the industry only used scientists who were willing to toe the industry line, dispute the health risks associated with secondhand smoke, and generate the necessary "controversy." In this document, Covington & Burling provided the details and qualifications of many scientists, but recommended only those who whose pro-Industry views had been verified. For example, Carlos Alvarez from Buenos Aires had "already consulted for the companies in lawsuits involving cardiovascular disease from ETS exposure. Clearly, he shares the industry view on this issue." Eduardo Gros not only smoked, but had previously worked with BATCo scientist Chris Proctor. Covington & Burling

had verified that Osvaldo Fustinoni of Argentina "does not believe that ETS poses a major health risk." These types of persons were recruited into the program. 2503001504-1519 (US 85542) (A).

848. On the other side, Morton Schienberg of Brazil was rejected because he and his wife "despise cigarettes and do not let anyone smoke in their house or around them." Covington & Burling rejected Dr. Rodrigo Villalba, a smoker, because he would not smoke "in front of his children or his patients because he believes ETS poses a hazard to them." Dr. Oscar Aldrey was not selected because he "believes that ETS is worse than mainstream smoke because it is not diluted by a filter." 2503001504-1519 at 1517, 1519 (US 85542) (A).

849. Like Covington & Burling, Shook, Hardy & Bacon attorneys also made certain that the lawyers served as intermediaries between the scientists and the companies, that only pro-industry scientific consultants were recruited, and that the companies worked in concert. In a letter dated June 28, 1988 from Hoel to Todd Sollis of Philip Morris, Hoel wrote:

> One of the most important roles assumed by SHB in the scientific development of the ETS issue is that of liaison between the researchers and sponsoring members of the tobacco industry. By facilitating communication among all parties involved, maximum cooperation can be achieved. This helps assure PM of a ready source of scientists prepared to address the ETS issue at public hearings and scientific conferences as needed.

2015007199-7207 at 7206 (US 20311) (A).

850. Of course, Defendants were continuing to "recruit and train" consultants in the United States as well. Rupp wrote a letter to Philip Morris's John Dollison dated May 25, 1989 justifying the cost of the Asian ETS Consultancy Program. According to Rupp, "The Tobacco Institute Executive Committee approved at its last meeting $1.4 million in additional 1989 funding to permit us [Covington & Burling] to recruit, train, and deploy - on behalf of the U.S.

industry - a total of ten new ETS consultants in the United States." 2500048635-8640 at 8639 (US 20550) (A).

851. Reynolds chairman and Tobacco Institute Executive Committee chairman Jim Johnston delivered a speech to the committee on September 27, 1989, in which he described the Tobacco Institute's ongoing "efforts to identify, recruit, and deploy academic scientists." TIDN0022706-2739 at 2717 (US 65557) (A).

852. An April 1990 Tobacco Institute "Management Plan Progress Report" documented that the Tobacco Institute continued to "identify and recruit academic researchers for the scientific witness program," another name for the consultancy program. TIMN194351-4398 at 4363 (US 87418) (O). The Tobacco Institute's public relations people and their attorneys ensured that the tobacco industry's consultants were fully aware of the scientific positions taken by the Tobacco Institute regarding secondhand smoke issues. Schwartz WD, 6:17-21.

853. Part of the tobacco industry's consultant strategy involved diverting the public's attention to "the broader issue of indoor air quality and the need for improved ventilation systems or more efficient use of existing systems." TIDN0011770-1784 at 1771 (US 85683) (O); see also 2028404047-4049 (US 85610) (O).

(iii) The Indoor Air Pollution Advisory Group (IAPAG)

854. The Tobacco Institute was the primary center of the domestic consultancy program that it used to dispute the science establishing the harms of ETS. One component of the Tobacco Institute's program was a group set up by Covington & Burling and several U.S. consultants called the Indoor Air Pollution Advisory Group (IAPAG). Schwartz WD, 7:6-21.

855. IAPAG activities were billed through the Center for Environmental Health and Human Toxicology (CEHHT), a consulting firm founded by consultants Sorell Schwartz and

Philip Witorsch in late 1982 to enable the professors to perform consulting work beyond the 20 percent time limit imposed by Schwartz's employer, Georgetown University. Schwartz WD, 2:25-3:9. Schwartz and Witorsch did their tobacco industry-related consulting work through CEHHT, and the Tobacco Institute covered CEHHT's basic operating costs. 2026335488-5492 at 5489 (US 26860) (A).

856. IAPAG consultants traveled throughout the country testifying at public hearings and other events. IAPAG consultants also performed the following tasks for the Tobacco Institute: "reviewed, evaluated and critiqued scientific literature updated the database, educated and prepared scientific witnesses at direction of the Tobacco Institute, coordinated their interaction with the EPA, prepared scientific papers, participated in meetings." Schwartz WD, 5:7-9; see also TIDN0007373-7378 (US 77020) (A); 2023542584-2586 at 2584 (US 87329) (A); TI07560820-0821 at 0820 (US 65475) (A).

857. The purpose of the Tobacco Institute's use of IAPAG was clear – to rebut science implicating ETS as a health hazard. Tobacco Institute vice president Walter Woodson wrote an internal memo dated January 15, 1988, warning about the impact of new epidemiological studies confirming the association between ETS and lung cancer:

> I would like to know IAPAG's plans for dealing with new studies. For example, Balter mentioned three new cancer/ETS publications from late 1987, but it was unclear – to me, at least – what, if anything, they are doing to rebut new work in this and other ETS areas. Also, I'd like to know if IAPAG papers are underway for publication in peer-review journals. Such articles are a key reason for IAPAG existence, in my view.

TIOK0023599-3602 at 3600 (US 65701) (A).

858. The billing scheme and contacts between IAPAG consultants and the cigarette manufacturers was managed so as to hide ties between the two. The billing for IAPAG's

activities was done through CEHHT. See e.g., TI42550751-0754 (JD 54135) (A). Rupp served as a buffer between Schwartz and the Tobacco Institute. Schwartz billed Covington & Burling. Rupp kept the Tobacco Institute informed of IAPAG's activities. Money originated from the Tobacco Institute, but checks to IAPAG and CEHHT were from Covington & Burling. The Tobacco Institute determined where to send the consultants to make statements. Schwartz WD, 3, 8; TI07560615-0619 at 0618 (US 65472) (A).

859. During the 1980s and 1990s, CEHHT billed the tobacco industry millions of dollars for their services. The Tobacco Institute often spent tens of thousands per month on CEHHT fees. In 1986 alone, Schwartz's consulting firm received $1,032,000 from the Tobacco Institute. TI07560820-0821 at 0820 (US 65475) (A); 87824794-4797 (US 32070) (A); 87824798-4801 (US 32071) (A); TI42550751-0754 (JD 54135) (A); TI42550732-0740 (JD 54140) (A); TI43990461-0455 (JD 54155) (A); TI44110204-0205 (JD 54157) (A); TI44110160-0162 (JD 54167) (A); TI43370130-0132 (JD 54170) (A); TI43370125-0127 (JD 54173) (A); TIMN431124-1124 (US 62974) (A); TI10160667 (US 65485) (A).

860. Philip Morris also gave significant sums to Schwartz's firm for other work. Schwartz TT, 10/25/04, 3636:10-19; TI15330633-0633 (JD 54229) (A); 2023856259-6287 at 6262, 6263, 6264, 6266, 6269, 6283 (US 87394) (A).

861. Schwartz's public appearances and the public relations aspect of his alliance with Defendants was discontinued in 1988 after he became uncomfortable providing the "unabashed advocacy" urged by the industry. Schwartz also became uncomfortable with the stand that the industry wanted him to take, namely to cast doubt on the scientific conclusion that ETS was a health hazard. Schwartz 12:22-26, 14:27-16:17. TI07560744-0746 at 0744 (US 62246) (A); TI07560611-0614 at 0611, 0613 (US 65471) (A); TI07562260-2261 (US 62247) (A).

862. With the role of IAPAG moving into the background, Defendants' domestic consultancy program began to rely more and more on newly-recruited consultants to dispute the scientific consensus via public statements, letters to the editor, and submissions to regulatory bodies. See, e.g., TIDN0019217-9268 (US 85597) (A); TIMN0435220-5272 (US 21734) (O).

(iv) The Appearance of "Independence"

863. Through their "recruiting" and "education" process of consultants around the world, Defendants created an arsenal of seemingly independent consultants to support the industry's position on secondhand smoke. This was intended to create an illusion that a legitimate "controversy" existed among "independent" scientists. The global effort to create and manage this illusion by masking the ties between the consultants and the Cigarette Company Defendants spanned years and required intense coordination among the companies and their counsel.

864. The need for "independent" consultants emanated in part from an internal recognition that the industry had no credibility among the public and among regulatory bodies. As stated in a July 24, 1991 BATCo summary of the program:

> It has been apparent to the industry for some time that **we do not have sufficient credibility to put forward a position on ETS** (or any other issue for that matter) unless we can identify independent scientists who are saying the same thing. **If independent scientists back up our position, it becomes more credible, not only to the general public and the media, but to politicians and other decision-makers**. . . .
>
> Although it is essential for the industry to speak up about it positions, there are some things that are better left to independent scientists to express.

300522762-2767 at 2762 (US 22223) (A) (emphasis added).

865. The industry also realized that only consultants who appeared "independent"

could create the appearance of a legitimate scientific controversy. On July 15, 1988, company representatives from Philip Morris, Reynolds, BATCo and others, along with Covington & Burling and Shook, Hardy & Bacon lawyers attended a "Joint Meeting on ETS" at which they plotted the continuing industry ETS strategy of generating "marketable science" to use for public relations purposes. As one company representative told the group, "In providing this [ETS] information, **the industry must be inconspicuous**. Otherwise, he argued, the public will suspect the authenticity of the information." He recommended the use of third parties to convey Defendants' message. 2021548222-8235 at 8234 (US 20349) (O) (emphasis added).

866. Defendants sometimes used proven loyal consultants, such as George Leslie and Francis Roe, to carry out recruiting and training tasks, so as to add more distance between the consultants and the tobacco industry. In fact, Leslie and Roe assisted Rupp in identifying and recruiting additional industry ETS consultants in both Europe and Asia. 2500048598-8600 (US 75372) (A); 300541877-1877 (US 85568) (A); 2501474253-4259 at 4256-4257 (US 22017) (A).

867. The consultants would bill Covington & Burling for their work, then Covington & Burling would bill the companies, to avoid direct payments from the companies themselves. See e.g., 2023856341 (US 23713) (A); 2023856342 (US 23714) (A); 2023856343 (US 23715) (A); 2023856344 (US 23716) (A); 2023856345 (US 23717) (A); 2023856346 (US 23718) (A); 2023856348-6349 (US 23719*) (O).

868. The need to use a law firm "buffer" to maintain "independence" was clear to Defendants. In a memorandum dated December 12, 1988 from Philip Morris's Stig Carlson to Covington & Burling attorney Charles Lister, Carlson listed some specific industry ETS initiatives in Scandinavia, emphasizing the need to use different "contact" points to "avoid the infamous 'fingerprints'" of the cigarette companies. 2501255446-5447 at 5446 (US 85562) (A).

869. Once on board, the consultants were instructed to keep their ties to the tobacco industry hidden as well. For example, Rupp wrote in a July 5, 1989 letter to U.K. industry consultant George Leslie, whom Rupp had been sent to a number of Asian countries to recruit and train new consultants, that: "You have agreed to send a note to each of our Asian consultants **confirming the importance of discretion** in any discussions of the Asia ETS project." 2500048598-8600 (US 75372) (A) (emphasis added).

870. Defendants intended the lawyers to mask the industry's support and involvement with their paid consultants. In Boyse's July 1991 review and summary of the program, she wrote:

> It was agreed that the kind of program that had been going on in the Far East and was being developed in Latin America was ideal, because the scientists were of good quality, were largely prepared to enter a more public arena than scientists normally would, and **the programme was handled in such a way thanks to Covington & Burling that there was no direct association between the scientists and the tobacco industry**. . . .
>
> For this type of programme **it is absolutely essential to ensure that administration of the programme and contact with consultants is made quite independently of the tobacco industry, and that no tobacco industry executives have contact with them.**

300522762-2767 at 2763, 2767 (US 22223) (A) (emphasis added).

(v) Deploying the Consultants

871. Boyse's summary of the February 1988 industry meeting in London stated that Philip Morris had prepared a list of prospective scientific consultants in several European countries. By then, the consultancy program was already up and running in the United States via Covington & Burling and Shook, Hardy & Bacon. 321140944-0949 at 0944 (US 20586) (A).

872. The program would only grow in numbers of consultants and initiatives. Through the consultancy program, the tobacco industry was successful in reaching "public, scientific and

governmental audiences." 2500048956-8969 at 8967 (US 27901) (A). This was because, in the words of B&W counsel Kendrick Wells: "The consultants groups' operation is essentially a public relations program, not a scientific operation." 401033325-3328 (US 24099) (A).

873. In July 1989, after less than two years of participating in the program, Philip Morris vice president Andrew Whist reported to Philip Morris International president Geoffrey Bible (who later became CEO of Philip Morris Companies) that:

> Several hundred specific activities or events have been completed. These have included numerous press briefings, repeated briefings of important government officials, the publication of a number of review articles on the science of ETS, several air quality monitoring studies, convening of a number of scientific conferences, submission of comments on smoking restriction proposals being considered in a number of countries, testimony before a variety of legislative bodies, preparation and submission of affidavits and offers of proof in cases involving claims concerning ETS, publication of a book ("Clearing the Air") that seeks to put ETS into proper perspective, drafting of two additional books on ETS and indoor air quality issues, and approximately 100 separate presentations at major international scientific meetings challenging the unwarranted health claims that have been made concerning ETS.

2023034623-4632 at 4623 (US 26775) (O).

874. This July 1989 overview of the ETS Consultancy Program provides a snapshot of the size and complexity of the program. Whist stated further that some 70 scientists had been recruited in Europe, Asia, Australia, and Canada. This number included 49 scientists who were university-affiliated and 21 who were private. The consultants were sent to 36 scientific conferences in 1989, published some 43 papers, published three books in seven languages, delivered over 70 scientific and political briefings, gave over 1100 media interviews, and signed ten affidavits in an Australian AFCO lawsuit. According to the memorandum, this effort was managed by some 30 attorneys and cost approximately $3.5 million in consultant and legal fees

in 1989. 2500048772-8781 (US 85527) (A). This was *before* Defendants expanded the consultancy program into Latin America and additional Asian countries.

875. A sample of Defendants' uses of the multifaceted ETS Consultancy Program are also contained in a Philip Morris January 31, 1989 report titled "Boca Raton Action Plan." In this report, the company details its worldwide ETS initiatives, including placing consultants in scientific seminars, using consultants to resist aircraft smoking bans, using consultants to oppose restaurant smoking restrictions, the creation of Burson-Marsteller 'News Bureau" programs in Europe for media distribution, and the coordination with other industry groups such as INFOTAB and CORESTA. All of these initiatives helped create the illusion of an ETS controversy. 2021595753-5910 (US 85541) (O). A September 1989 Philip Morris report also titled "Boca Raton Action Plan" updated the progress of the consultants in influencing the WHO and public opinion generally via "News Bureau" articles in the media. 2501204997-5021 (US 22858) (O).

876. Similarly, an October 1989 report from Covington & Burling provided Defendants a nine-page list of "conferences attended by consultants, recent publications, and ongoing projects" in Europe. 2500019903-9911 (US 25337) (A). The program was obviously bearing fruit.

877. The Tobacco Institute played a pivotal role. In a 1990 summary report titled "Consulting Scientists on ETS and Indoor Air Quality," the Tobacco Institute updated its role and progress in the retaining of American and foreign consultants domestically:

> Scientific Witness Team. TI now has 23 consulting scientists whose businesses are to market their scientific expertise. Their principal mission is to testify before state and local legislative bodies on ETS and indoor air quality issues. They also respond to adverse articles in scientific technical, and general audience publications by submitting letters to editors. They attend and

> report on meetings of scientific organizations. . . . Members of the scientific witness team have made 48 legislative appearances and conducted 30 media tours to date this year. . . .
>
> Foreign Scientists. This strategy is to bring a "foreign" perspective on ETS science to U.S. journalists through the use of the industry's overseas consulting scientists. Through editorial board briefings and interviews with science and health reporters, these scientists will suggest that the U.S. understanding of ETS science is skewed by anti-smoker media hype, and that the U.S. response to ETS science is out of step with the rest of the world. . . . Next year we anticipate foreign scientists conducting at least one media tour per month in connection with attendance at scientific meetings.

TIDN0004239-4248 at 4239-4240 (US 75287) (O).

878. Through the domestic consultancy program alone, Defendants were able to manage a seemingly "independent" attack on any adverse ETS research or proposed legislation. TI01140124-0133 (US 62100) (A). The Tobacco Institute paid consultants to attack any scientific studies that identified ETS as a health hazard. For example:

> •The Tobacco Institute paid consultant Gio Gori $3,555 to write a letter to the editor of the *Journal of the National Cancer Institute* ("*JNCI*") captioned: "Environmental Tobacco Smoke: The Price of Scientific Uncertainty." The letter appear in the journal on January 6, 1993. The Tobacco Institute paid Gori another $4,137.50 to write an Op-Ed newspaper submission on the Environmental Protection Agency's Risk Assessment for the *Wall Street Journal*. TIMN0435220-5272 at 5225, 5226 (US 21734) (O).
>
> •The Tobacco Institute paid Peter Lee $4,000 to write a response to letters to the editor of *Environment International* that appeared on January 29, 1993, disputing the conclusion that ETS exposure caused lung cancer and mortality. TIMN0435220-5272 at 5253 (US 21734) (O).
>
> •On April 10, 1993, the Tobacco Institute paid Gio Gori $4,000 to write a letter to *Lancet*, disputing an editorial that had found the Environmental Protection Agency's Risk Assessment provided a firm regulatory basis for increased social action to minimize the public's exposure to ETS. TIMN0435220-5272 at 5231 (US 21734) (O).
>
> •In June 1993, the Tobacco Institute paid Peter Lee $5,000 to write a letter to the editor of *Journal of the National Cancer Institute* disputing results of an ETS study by Stockwell that post-dated the Risk Assessment and found a link between

> ETS exposure and lung cancer in nonsmoking women. The letter was published along with two other letters from Tobacco Institute consultants Paul Switzer and Max Layard. All were critical of the Stockwell study. None of letters disclosed that tobacco industry money had funded the letters. TIMN0435220-5272 at 5247 (US 21734) (O); 2046342683-2686 (US 20469) (O).

(vi) ARIA and IAI: Leveraging the Deception Through Industry-Created "Scientific" Organizations

879. The tobacco industry used its consultants to create larger organizations as well. Through these front organizations, the industry's ETS consultants arranged seemingly independent conferences, infiltrated legitimate conferences, and published pro-industry papers to get the industry's position on passive smoking into the scientific literature. 2500019903-9911 (US 25337) (A); 2500048956-8969 (US 27901) (A).

880. The industry's ETS consultants in the United Kingdom, along with Covington & Burling, formed a group called Association for Research on Indoor Air ("ARIA") in 1988. 2500048956-8969 at 8960 (US 27901) (A); 300538942-8943 (US 85552) (A). According to Chris Proctor's record of an October 25, 1988 meeting in London, Philip Morris and Covington & Burling, along with the three ARIA founding consultants Francis Roe, George Leslie, and Frank Lunau, presented the ARIA group to Reynolds, BATCo, and other British manufacturers. 400974548-4550 (US 47525) (A).

881. ARIA was presented as a "Philip Morris initiative" set up in order to create a "group of scientists in the UK that will comment on ETS issues." Roe emphasized the value of ARIA's perceived independence to the other manufacturers and the industry, although the consultants were aware of the funding source:

> He stressed at length that the 16 individuals currently operating for ARIA were **totally independent** and that there was to be no formal contact between the individuals (not to be termed consultants) and the industry. . . .

> It was suggested that **the position of Covington & Burling allows the members of each group to remain independent of the industry, though all know that it is tobacco money that is funding the exercise.**

400974548-4550 at 4548-4549 (US 47525) (A) (emphasis added).

882. Proctor drew a line diagram in his record of the meeting, showing how ARIA fit into the industry's program. At the top of his diagram was "Industry," with a line down to "Covington & Burling." From there, a line went to the individual consultant groups: Nordic, CEEHT, ARIA, Canada, France, and "Others to be organised." 400974548-4550 at 4549 (US 47525) (A).

883. In a memorandum dated October 10, 1988, B&W in-house counsel Kendrick Wells wrote Nick Cannar at BATCo that the industry also retained a public relations firm in London to generate material for distribution that was "intended to 'leverage' the statements" made by ARIA and its members. 401033325-3328 at 3325 (US 24099) (A).

884. Internal documents reveal that the public relations firm was in fact the London office of Burson-Marsteller, who tactically and proactively placed consultant statements in the European media through a contrived "News Bureau." Burson-Marsteller coordinated their media activities with Philip Morris and Covington & Burling. In particular, Covington & Burling attorneys often assisted Burson-Marsteller with its generation of pro-industry videos and other projects, from at least 1989 through 1991. 2500048951-8955 (US 85571) (A); 2500048939-8941 (US 85572) (A); 2500048926-8929 (US 85573) (A); 2500048846-8847 (US 85574) (A); 2500048931-8932 (US 85554) (A).

885. Covington & Burling organized, monitored, and funded the ARIA organization. 2500048956-8969 at 8960 (US 27901) (A); 300538945-8954 (US 85549) (A); 300541877-1877 (US 85568) (A); 300538976-8979 (US 88778) (A); 2501474253-4259 at 4256-4257 (US 22017)

(A); 2023856337-6349 (US 23712) (A).

886. In turn, ARIA gave birth to an organization called Indoor Air International (IAI) in late 1989. IAI was intended to function as a "learned society" to address scientific issues related to indoor air quality around the world. Rupp boasted in a memorandum on the European Consultancy Program:

> **Our consultants have created the world's only learned scientific society addressing questions of indoor air quality.** The society (Indoor Air International) is seeking memberships from all those interested in IAQ issues throughout the world. It will soon have its own periodic newsletter . . . . its own scientific journal . . . The society will sponsor meetings and conferences . . . . and **thus can serve as an independent and accepted source of ideas and research** regarding IAQ to the public and the scientific community. . . . **We are of course including Asian and American consultants in the society, so as to provide worldwide coverage on IAQ issues.**

2500048956-8969 at 8960 (US 27901) (A).

887. IAI was also founded to enable Defendants' paid consultants another means to conceal their tobacco industry affiliation and remain "independent." Helmut Gaisch wrote in October 1989:

> The purpose of the creation of [IAI] is to provide a scientific `home' for the wide range of disciplines involved in IAQ in order to make sure that independent scientists can identify with a professional organization and do not have to resort to giving vague explanations as to whom they are associated with.

2028440936-0950 at 0940 (US 75243) (A).

888. IAI was founded at an ARIA meeting in October 1989 exclusively by Defendants' paid European ETS consultants, notably Francis Roe, Frank Lunau, George Leslie, and Max Weetman. Most of the key members of ARIA were close friends of Roe. Covington & Burling managed the creation of IAI, publicly presented it as an "international learned society," and

drafted the organization's bylaws. 2021598978-8991 at 8981, 8986 (US 23604) (A); 2028440936-0950 at 0940 (US 75243) (A); 300538942-8943 at 8942 (US 85552) (A).

889. Rupp stated in his February 14, 1990 Asia consultancy program update that IAI intended to begin publishing a journal the next year. Rupp reported that Asia industry consultants were preparing to write articles for the journal, and several consultants were serving on the journal's editorial board. 2500048976-8998 at 8987-8988 (US 23007) (A).

890. In May 1990, the executive director of the U.K. Tobacco Advisory Council (TAC) (the counterpart to the Tobacco Institute) announced the formation of IAI to TAC members, and forwarded an "earnest plea" to the companies "to steer papers for publication in the direction" of "Indoor Air" for publication in the "ambitious" IAI journal. 2028467016-7019 (US 85558) (O).

891. IAI's publications and newsletters omitted any connection to the tobacco industry or tobacco law firms, both with respect to its inception and to its upcoming programs. Instead, its publications stated that the organization was merely a "learned society" dedicated to "promoting indoor air quality." 2028467035-7042 (US 85559) (A); 2028467029-7034 (US 85560) (A); 2023545366-5369 (US 23680) (A); 325297289-7360 (US 85561) (A).

892. IAI to some extent took over the law firm role of organizing and managing scientific conferences. According to a June 6, 1990 memorandum from Jim Newsom at Shook, Hardy & Bacon to other Shook, Hardy attorneys, the firm had a May 1990 meeting with Philip Morris's Steve Parrish to discuss ETS initiatives going forward. One topic was the industry's continuing use of IAI:

> We also briefly discussed whether we should be organizing conferences. Don [Hoel] had been responsible for these projects in the past. The newly-formed organization, IAI (Indoor Air International), plans to hold one indoor air conference each year. We told Steve [Parrish] that we would be willing to organize conference depending on his views on how many conferences are

needed , etc.

2023239673- 9695 at 9690 (US 26781) (A); see also 2028467016-7019 at 7018 (US 85558) (O).

893. The management and support of IAI through Covington & Burling and the cigarette companies was intended to remain secret. On September 5, 1991, Anthony Andrade wrote Mary Pottorff to voice his concern that Philip Morris should avoid direct involvement with IAI consultants:

> C&B should not recruit as consultants any scientists actively working for S&T. . . . **There is a grave risk that IAI members may be compromised if they have a direct relationship with Philip Morris S&T.** The best example would be Dr. Weetman. Dr. Weetman is obviously a critical leader in the C&B consultant program and IAI, and his potential usefulness could be jeopardized by his direct consulting relationship with PM S&T. Dr. Skrabanek is a second example.

2023856321-6328 at 6321-6322 (US 22037) (A) (emphasis added).

894. Pottorff agreed, stating in a memorandum dated September 24, 1991: "Weetman's project should be paid from C&B. He is a critical leader in the C&B consultant program and IAI and should not be compromised by being paid from S&T." 2023856259-6287 at 6264 (US 87394) (A).

895. Geoffrey Bible in New York was kept informed as to the progress and achievements of the ETS Consultancy Program, and specifically ARIA and IAI. In 1991 Helmut Gaisch provided Bible an update, emphasizing the ability of industry ETS consultants and their front groups to appear "independent" of the industry:

> **ARIA, an informal group, and IAI, a registered association, have made quite some progress during the recent months. It should be stressed that most act independently and are seen to be independent of us.** IAI, Indoor Air International, who deal with the broad topic of the indoor environment, have a newsletter and a learned journal published by the respected Swiss scientific publishing house Karger. IAI have conducted large and successful

> international meetings in Lisbon and Montreux. IAI will jointly sponsor meetings in the near future with universities, government agencies and independent societies in Paris, Pavia, Perogia, Budapest, Prague, Bangkok, Bratislava, Athens and Rotterdam. . . . IAI members have met with governmental ministers and officials in several countries. . . . In all, no other resource gives the industry any similar access to the scientific community, government and those who make decisions about IAQ issues and standards. **The key to this success is that an institution of growing professional authority was created, an institution that has developed an identity of its own.**

2023856111A-6112 at 6111A-6112 (US 23708*) (A) (emphasis added).

896. In 1995, the IAI changed its name to the International Society of the Built Environment ("ISBE") and the IAI journal title was changed to "Indoor+Built Environment." The ISBE is still in existence today, continues to publish its journal and hold conferences, and is still run by industry ETS consultants. TLT0500003-0006 at 0005 (US 65083) (A); 2063651094-1096 (US 75250) (A).

897. IAI was originally funded by Philip Morris until other industry funding/companies could be located. BATCo later participated in the funding of IAI's ETS activities. All billing was through Covington & Burling to avoid any direct connection to the industry. 300538942-8943 (US 85552) (A); 300511564-1568 (US 85553) (A); 2500048951-8955 (US 85571) (A); 2500048931-8932 (US 85554) (A); 2500049060-9062 (US 85555) (A); TI43370125-0127 at 0125 (JD 54173) (A).

898. Through ARIA, IAI and other industry groups, additional layers were erected between the companies and the consultants to hide the tobacco connection. Thus, as an example, the consultant would bill ARIA, ARIA would bill Covington & Burling, Covington & Burling would bill the Tobacco Institute, and Defendants would make contributions to the Tobacco Institute to fund its payments to the consultants. 2023592986-2998 (US 85548) (A);

2023592793-2797 (US 20394) (A); 2063780058-0058 (US 22863) (A); 2500048956-8969 (US 27901) (A); 2023592502-2502 (US 23701) (A); 2023592502 (US 75236) (A); 2001208997-9010 at 9003 (US 85598) (A); 2022889540-9543 at 9540 (US 26767) (A).

(vii) "Gray" Robertson and the ACVA/HBI

899. In June 1985, on the recommendation of the ETSAG, Defendants recruited John Graham "Gray" Robertson, owner of a small ventilation inspection firm called ACVA and later renamed Healthy Buildings International (HBI), to test air samples from homes in Boston and Florida. Robertson WD, 12:19-14:16; TLT0270555-0555 (US 85619)(A); 504221588-1593 at 1591 (US 85620) (A); 521028861-8861(US 52692*) (O); TIDN0011695-1704 at 1695 (US 62594) (A). Defendants funded the ACVA home testing as a CTR Special Project. Robertson WD, 15:7-11.

900. Although not a scientist, by January 1986 Robertson had become associated with the Indoor Air Pollution Advisory Group (IAPAG). Robertson WD, 18:13-20, 20:5-21:4 and 21:12-22:13; Schwartz TT, 10/25/04, 3580:11-21. Robertson would go on to become one the industry's most traveled ETS consultants.

901. Defendants paid Robertson to make statements at legislative and regulatory hearings on indoor smoking bans and to initiate pilot projects and studies that questioned the adverse health effects of secondhand smoke. TIDN0002692-2701 at 2695-2697 (US 85605) (A); TIDN0007373-7378 (US 77020) (A); TIDN0016039-6045 at 6041-6042 (US 75289) (A); Robertson WD, 12:19-14:16 (1985 home study); 51:8-53:13 (New York City study); 36:10-37:7 (1987 Tokyo Conference); 38:2-40:12 and 103:3-19 (1988 Swiss study for Philip Morris); 41:6-14 (1988 London Conference); 41:15-42:12 (1989 Brussels Conference proceedings paper); 45:5-46:11, 46:13-16, 48:5-50:13 (1989 CIAR-funded 585 Building Study); 62:14-64:4 (1989

McGill "symposium"); 61:3-9 (1989 Building Council on Indoor Air position paper); and 87:5-10 (1992 Athens Conference).

902. Defendants identified "Robertson and his colleagues at HBI" as "our foremost resources in our indoor air quality strategy." TI01140124-0133 at 0128 (US 62100) (A). Defendants hired and promoted Robertson as a "building doctor" and an expert in "sick building syndrome." TLT0880001- 0024 at 0004 (US 87336) (A). This was part of Defendants' effort to trivialize ETS exposure, promote ventilation as the solution, and to convince the public that banning indoor smoking would not have any impact on improving indoor air quality. TI01262206-2209 (US 62105) (A); TI12990109-0118 (JD-080482)(A).

903. Although they externally promoted Robertson and HBI as "experts," Defendants knew internally that Robertson's testing methods did not withstand scientific scrutiny and that his data were flawed. In a confidential note to BATCo and B&W, Sharon Boyse (Blackie) summarized a meeting with Reynolds on January 29, 1988. Boyse wrote: "RJR pointed out that **although the abilities of Gray Robertson . . .as a presenter are undeniable, this is not the case for his scientific abilities.** They felt, in particular, that **his methodology could not stand up to scientific scrutiny, and that some of his data was questionable**." BWBU242341-2343 at 2343 (US 21136) (A) (emphasis added). Project coordinator Michael Michaelson at Covington and Burling made a similar observation of Robertson's methods in 1985: "In summary, the data generated by the ACVA home study in Boston are deeply flawed and not subject to meaningful interpretation." 80406377-6385 at 6385 (US 23476) (A); 504933703-3707 at 3704 (US 24220) (O).

904. Other comments disparaging HBI's methods were made by senior tobacco company scientists in 1991 in reviewing a proposal eventually rejected for CIAR funding.

87776361-6362 (US 56325)(A); 87776358-6359 (US 56324) (A).

905. Robertson admitted at trial that smoking was prohibited in many of the buildings in which he took air samples for Defendants; thus, he took samples in buildings and rooms where there was no smoking, and his work was wholly irrelevant to whether persons in those buildings were exposed to ETS, much less to providing a measure of ETS exposure. Robertson WD, 62:14-63:10.

906. Robertson was, however, a gifted speaker and salesman. Robertson's true value to Defendants was not as a researcher, but as a perceived independent expert in public appearances around the world. TI07560609-0610 (US 85603) (A); 2061692011-2012 (US 85631) (A).

907. For this reason, Defendants took care to maintain the perception of an arm's length relationship with Robertson and HBI. Defendants warned that HBI must "be perceived to be at arm's length from the industry, including in media briefings. Its role at most should seem as yet another third party expert amongst others." 2046754737-4740 at 4739 (US 21646) (A). Robertson even bragged to Philip Morris vice president Guy Smith: "[O]ur greatest attribute is the fact that we are an independent company whose views occasionally and coincidentally coincide with the tobacco industry views." 2061692011-2012 at 2012 (US 85631) (A); 304058260-8263 at 8260 (US 85632) (A).

908. As a result of the perception of independence and expertise that was fostered by the industry, by 1994 Robertson and other HBI spokesmen had made over 125 legislative appearances and given over 700 media interviews. TLT0600106-0120 (US 65099)(A); TLT0860022-0022 (US 87367) (A); TLT0860023-0023 (US 87368) (A); TIDN0010792-0792 (US 85637) (A); TIDN0012371-2373 at 2372 (US 85638)(A).

909. Since beginning work for the Tobacco Institute in 1985, HBI and Robertson have

never been "independent" of the tobacco industry. Not only did Defendants create and sustain Robertson's public persona, Defendants also supported Robertson and HBI financially. Philip Morris, Reynolds and the Tobacco Institute assisted HBI in procuring private and public contracts for building inspections in the United States and overseas, including buildings owned by Defendants. See, e.g., Simmons WD 3:12-4:10; Robertson WD 26:7-13, 38:6-12, 62:8-13; TIILBC003774-3775 (US 85606) (A); TIDN0022522-2522 (US 85607) (O); TIDN0016673-6673 (US 62603) (A); TLT0600046-0052 (US 65096) (A). Defendants even paid 75% of Robertson's legal fees in the 1990s when he was investigated for scientific fraud. When Robertson objected to paying even the 25%, Philip Morris counsel Tony Andrade stated that Robertson could "recoup" the 25% from all the "legitimate business" that Philip Morris was steering to HBI. 2071977528-7528 (US 85629) (A). At trial in this case, Robertson still expected his legal fees to be reimbursed by Defendants. Robertson TT, 10/21/04, 3319:15-19.

910. By 1987, HBI was on monthly retainer to the Tobacco Institute and receiving payments for expenses, including the costs incurred for services that were provided by Fleishman Hillard, the Tobacco Institute's public relations firm. Robertson WD 42:13-43:1, 26:14-16, and 30:14-15; TIDN0004200-4235 at 4202 (US 77018) (A); TIDN0020081-0085 at 0082 (US 85612) (A); TIDN0023739-3740 at 3740 (US 85613) (A); TIDN0008801-8801(US 85614) (A); TIDN0025605-5612 at 5606 (US 85615) (A); TI10160671-0671 (US 65486) (A).

911. Through Robertson's work for Defendants, HBI went national, and eventually global. HBI grew from a small time ventilation duct inspection outfit with an annual revenue of about $250,000 to a multi-national business with over $2.5 million in annual revenue; Robertson became an indoor air quality "expert" in forums around the world. Robertson TT, 10/21/04, 3332:4-3339:15, 3406:1-3409:16; Robertson WD 3:11-4:8, 5:1-6:3, 64:5-65:16, and 73:4-74:11;

see also TLT0860122-0129 (US 87341) (A); 2501026750-6761 at 6753 (US 85609) (A); 2029370437-0437 (US 26896) (A). In 1990, at Fleishman Hillard's suggestion, the Tobacco Institute paid for HBI to expand by opening regional offices in the United States and abroad. Robertson WD 56:16-58:13, 64:5-65:16; TIDN0010085-0093 (US 85617*) (A).

912. Philip Morris, through Covington & Burling in order to maintain "independence," reimbursed costs incurred by HBI. Expenses included hundreds of thousands of dollars associated with Healthy Buildings International Magazine. 2063935035-5035 (US 39877) (A); Robertson WD 66:15-72:12; 2023590035-0036 (US 85621) (A); TIDN0010768-0769 (US 85622) (A); TIDN0011756 (US 85623) (A); 2029370155-0160 (US 87343) (A); 2029370138-0139 (US 87355) (A); 2503001929 (US 85611) (A); TIDN0021382-1383 at 1382 (US 85626) (A); 2043709159A-9159A (US 46241) (A); 2029370153-0161 (US 87356) (A); 2029372111-2112 (US 87357) (A); 2503001929-1929 (US 87359) (O). The full color, bi-monthly magazine presented Defendants' views to a wide range of recipients around the globe. TLT0860028-0039 (US 87344) (A). At least seven issues of "Healthy Buildings" were published between in 1990 and 1991. See, e.g., TLT0850001-0008 (US 87346) (A); TLT0850073-0084 (US 87352) (A).

913. In return, HBI provided testimony and made media appearances that downplayed the adverse health effects of secondhand smoke and promoted "sick building syndrome" as the real problem. Simmons WD 5:3-10; TIOK0023878-3878 (US 77107) (A); TIDN0002692-2701 at 2695-2696 (US 85605) (A); 87780965-0967 (US 85589) (A). For Defendants, HBI acted as "a third-party presenting a message through briefings and publications which is complementary to our position on IAQ and thus worthy of financial support vis-a-vis certain projects." 2063935035-5035 (US 39877) (A).

(viii) The Illusion of Independent Science in Print: The Industry's ETS Consultants Cited and/or Published Without Disclosure

of Tobacco Industry Ties

914. The illusion of "independent" scientists disputing the health risks attributable to ETS was played by the industry in the press throughout the world. For example, articles in the Hong Kong Standard and South China Morning Post identified British ETS consultant and ARIA president George Leslie simply as the "head of Associates for Research on Indoor Air UK," and identified Rupp only as "a senior US scientific adviser and member of the American Civil Liberties Union." The writer of the article was apparently never informed that Leslie and ARIA were part of the industry-financed ETS consultancy program, or that Rupp was a paid tobacco attorney. 2501204903-4903 (US 85577) (A); 2501204902-4902 (US 85544) (A); 87780965-0967 (US 85589) (A).

915. There are many other examples of newspaper and journal articles where consultants were quoted without disclosure of tobacco industry funding. See, e.g., 2501205177-5179 at 5178 (US 85579) (O); 2048551288-1289 at 1288 (US 85581) (O); TOMN343061-3061 (US 85582) (A); 86022880-2880 (US 85583) (A); 86022881-2881 (US 85584) (A); 2505533679-3705 (US 22898) (A); 2026127628-7634 (US 85564) (O).

916. In 1991, the book "Other People's Tobacco Smoke", a compilation of articles, all written by tobacco industry consultants, was published. The book was edited by A.K. Armitage, paid industry consultant and member of ARIA, who discussed with scientific strategies with Philip Morris. All of the articles furthered the tobacco industry's goal to cast doubt on the science finding ETS harmful to human health and to divert attention from ETS to indoor air quality. Despite the fact that the entire book was comprised of work by industry-funded consultants, the only mention of industry involvement was a half of a sentence by the editors at the end of a brief "Acknowledgments" paragraph thanking both their wives and Philip Morris

International for their "cooperation and assistance." 2051809899-10096 at 9908 (US 87373) (A); 2501152077-2091 (US 25597) (A); 2081369203-9220 (US 27796) (A); 2023034933-4946 (US 87334) (A); 2500019903-9911 (US 25337) (A); 2023592986-2998 at 2991 (US 85548) (A); TIDN0019217-9268, at 9236, 9238, 9239, 9244 (US 85597) (A); TIDN0011870-1870 (85635) (A); 2501474296-4301 at 4299-4300 (US 27955) (A); 2023591657-1659 (US 23692*) (A); 2023591835-1837 (US 23695) (A); 2023591891-1894 (US 23696) (A); 2023591915-1918 (US 23698) (A); 2023591962-1965 (US 23699) (A); 2023591985-1988 (US 23700) (A).

917. The illusion of independence was also peddled by the Tobacco Institute in its press releases and other publications attacking research and conclusions implicating ETS as a cause of disease. These press releases, distributed over the course of years, referred to industry-funded and managed consultants and conferences without reference to their tobacco industry source. Rather, the Tobacco Institute quoted favorable opinions from:

- "independent scientific teams" (referring to IT Corporation, a Special Account 4 recipient) 92756893-6894 at 6893 (US 85585) (A); 86002410-2413 (US 85716) (A); 86002393-2396 (US 86359) (A)

- "an expert on substances in indoor air" (referring to David Weeks, a paid industry ETS consultant) 92756893-6894 at 6893 (US 85585) (A); TITX0025965-5968 at 5968 (US 85522) (A); TIDN0019217-9268 at 9232-9233 (US 85597) (A)

- "a prestigious panel of scientists at an international symposium" (referring to the industry's hand-picked ETS consultants at the McGill Symposium) 87697659-7664 at 7660 (US 85586) (A)

- "a US lawyer specializing in antitrust and trade regulation law" (referring to John Rupp) 87780965-0967 at 0965 (US 85589) (A)

- "Maurice LeVois, Peter Lee, and Joseph Fleiss," who all provided an "objective review" 87697701-7772 at 7701-7702 (US 85587) (A); TIDN0019217-9268 at 9220, 9226-9227 (US 85597) (A)

- "independent scientists" Flamm and LeVois (noting ties to Federal Government including FDA, CDC, VA, but failing to disclose ties to tobacco industry) 91806529-6529 (US 88597) (A); 87698341-8342 (US 85588) (A);

TIDN0019217-9268 at 9220, 9226-9227 (US 85597) (A)

> •"[a]n independent analysis of more than 300 major private and public buildings by ACVA Atlantic, Inc., an indoor air quality analysis firm, identified tobacco smoke as a major contributing factor to air quality complaints in only four percent–twelve buildings." TLT0961875-1888 at 1881 (US 85591) (O).

918. Another aspect of the consultancy program was always hidden: the fact that the consultants' articles, letters, and submissions to regulatory bodies were reviewed and edited prior to publication. TIMN0435220-5272 (US 21734) (O); TI00581616-1629 (US 62969) (A); Dawson WD, 114:15-116:4; 680707970-7973 at 7970 (US 92065) (A); Parrish TT, 1/27/05, 11387:25-11393:1.

919. For example, written responses by industry ETS Consultant Peter Lee to James Repace and Judson Wells were revised by both Shook, Hardy & Bacon and Covington & Burling prior to submission to a journal. Similarly, Covington & Burling made revisions prior to submission to an article criticizing the EPA risk assessment by industry ETS consultants Flamm and Todhunter, and a letter to the editor by ETS Consultant Gio Gori criticizing an adverse study by Brownson. TIMN435220-5272 at 5222, 5223 (US 21734) (O).

920. Hiding attribution was large scale and intentional, and was continued even after some within Philip Morris began to question the practice. For example, a January 1993 memorandum described an ETS Consultancy Program meeting where Rupp and fellow Covington & Burling attorney Patrick Davies met with representatives from BATCo and Philip Morris participating in the ETS program to plan initiatives for 1993. A new Philip Morris "policy" requiring attribution was discussed:

> Disclosure. The Philip Morris policy was again discussed. **John Rupp assured everyone that the policy would not impair the effectiveness of the program in any way since there are ways of getting around it** and still comply with the requirements. . . .

> Company Contacts with Consultants. At our request the issue was raised. **John Rupp however insisted that contact between consultants and the companies should be kept to an absolute minimum.**

2503007280-7285 (US 45996) (A) (emphasis added) .

(ix) The Law Firm Shield: Abusing Privilege to Hide the Industry Control of ETS Consultants

921. Lawyers played a central role in Defendants' ETS Consultancy Program. Defendants utilized the services of its outside law firms to recruit and educate "independent" consultants, generate publications, and exploit the "science" through public relations activities. However, the use of law firms as a "legal buffer" also permitted Defendants to hide their actions behind attorney-client privilege. This latter use of the law firms is discussed here.

922. In 1988, both Covington & Burling and Shook, Hardy & Bacon played central roles in the organization and management of the international consultancy program:

> The [ETS Consultancy] Programme is divided geographically into two parts:
>
> (a) Europe, Middle East - organized by Helmut Gaisch (Neuchatel) and John Rupp (Covington & Burling)
>
> (b) Rest of World - organized by Don Hoel (Shook, Hardy & Bacon).

300538976-8999 at 8976 (US 88778) (A).

923. One long time industry consultant, Sorell Schwartz, testified that Hoel was a "major player in the ETS issue"and further stated that Hoel "seemed to be in charge of the entire industry, not just the Tobacco Institute." Schwartz WD, 18:28-30.

924. As described above, as the consultancy program expanded into Asia and Latin America, Covington & Burling assumed more of a lead role in the program internationally, and shared the coordination with Shook, Hardy & Bacon in the United States.

925. This was no accident. Law firms were used as a "buffer" between the ETS consultants and Defendants in order to prevent disclosure of documents showing the true connection between the industry and the consultants: all communications between the law firms and the ETS consultants they recruited and managed for Defendants are housed, if they still exist, in the law firms. Moreover, even if the production of documents were ever ordered by a Court, Defendants could assert privilege to avoid disclosure.

926. The role of law firms in the ETS program in order to hide documents was raised as far back as 1987. On May 12, 1987, Rupp met with several Philip Morris executives from New York and Europe in Lausanne. The meeting was held to discuss steps to avoid attribution of ETS consultants' statements to Philip Morris and to avoid discovery of documents; one step was to hide the contacts with consultants behind privilege. A memorandum of the meeting written by Philip Morris counsel Frederick Dulles recorded that:

> John Rupp believes that the only way to keep studies, documents, and correspondence between external experts and the company from being "discoverable" (available to opposing parties and eventually subject to submission in court) in litigation, through the use of the "attorney-client privilege," would be to have a lawyer or law firm act as an intermediary. This would preferably be a lawyer admitted to the bar in the United States.
>
> In the U.S., Covington & Burling pays the invoices for independent experts on ETS and rebills the U.S. Tobacco Institute.

Rupp TT, 10/27/04, 4142:9-4143:16.

927. Gaisch at Philip Morris also emphasized the role of attorneys as intermediaries: "S&T PME will systematically **use C&B as legal intermediates** [sic] with scientists and testing laboratories . . . . S&T PME **uses SH&B as legal intermediate** [sic] for the organisation of scientific events." 2028343858-3860 at 3859 (US 75086) (A) (emphasis added).

928. BATCo's Sharon Boyse (Blackie) wrote in a memorandum dated July 24, 1991

that the opportunity to hide communications with consultants behind privilege was one of the selling points for using Covington & Burling to manage the consultancy program. Boyse wrote: "We also benefit from the added protection of legal advice and privileged communications." 300522762-2767 at 2767 (US 22223) (A).

929. The participating companies knew that the law firms had injected themselves between the scientists and the companies to "horse-shed" the consultants and to serve as a buffer to hide behind privilege. In October 1988, B&W counsel Kendrick Wells wrote Nick Cannar at BATCo to report a conversation with Rupp about the consultancy program:

> I asked John why the U.K. industry should rely on a U.S. law firm to develop scientific consultants who would be active in Europe. John said it is important to have a law firm play the role of organizing because the firm can, in the process of organization and horse-shedding individual scientists, avoid product liability problems. **The law firm also can serve as a buffer between the companies and the consulting scientists, providing both distance and some opportunities for work product protection.**

401033325-3328 at 3326 (US 24099) (A).

930. By using the law firms to make all the contacts and arrangements with the consultants, Defendants have been able to conceal all consultant contracts, most billing statements, and most if not all correspondence with the consultants around the world. The documents are technically not in the possession of a Defendant; secondarily, the documents could potentially be withheld as privileged. In this case, because Covington & Burling and Shook, Hardy & Bacon were not required to produce any documents, the role of Defendants, their lawyers, and their consultants in fraudulently distorting the scientific record is not fully known. Rupp TT, 10/27/04, 4145:25-4146:19.

(x) Defendants Maintained Control and Oversight

931. Although the law firms had the direct contact with the industry's scientific

consultants to maintain a "buffer," the companies reviewed the consultants' progress and provided their input to the law firms. For example, a July 25, 1991 letter from Philip Morris's Aurora Gonzalez to Patrick Davies at Covington & Burling showed how Philip Morris would "review" the firm's recommendations before the firm would begin work on a "training seminar" for new consultant "recruits." 2503001506-1507 at 1506 (US 85566) (A).

932. Tobacco company control and Covington & Burling updates of the program status is also evident in a March 14, 1990 "SECRET" document from Sharon Boyse titled "Far East ETS Project Update." Boyse recalled that the consultancy program was truly a collective effort:

> The priorities and budget for the programme were subsequently discussed at a meeting of representatives from supporting companies (BAT/B&W, Philip Morris, R J Reynolds, Rothmans, and JTI) in Hong Kong on March 7th. Details of that meeting are now reported. . . . **It was agreed that regular meetings of representatives from the five major supporting companies (BAT/B&W, PM, RJR, Rothmans, JTI)** will be essential now that there are so many companies and countries involved. Setting of priorities and evaluating progress will of necessity be an ongoing process throughout the year. **Meetings will therefore be held every 2-3 months in Hong Kong. Covington & Burling will continue to produce regular written reports.**

300541874-1876 at 1874 (US 85567) (A) (emphasis added).

933. The Tobacco Institute monitored the domestic ETS Consultancy Program. The Tobacco Institute members spent millions of dollars in this effort. TIMN435220-5272 (US 21734) (O); TIDN0004200-04235 (US 77018) (A); 87780455-0463 at 0461 (US 56327) (A); TI09911543-1580 at 1552, 1555 (US 62251) (A); TI09911885-1920 at 1894 & 1896 (US 62255) (A); TIMN366674-6895 at 6678, 6700, 6877, 6879 (US 86120) (A); TIMN345741-5777 at 5750 (US 77093) (A); TIMN 345630-5665 at 5639 (US 77092) (A); TI09911997-2033 at 2008-2012 (US 22367) (A); TIMN344059-4096 at 4061, 4069 (US 65673) (O); TIMN344237-4271 at 4243-4244 (US 65674) (O); TIMN194351-4398 at 4364-4365 (US 87418) (O).

934. The direction of the ETS Consultancy Program was monitored by the Cigarette Company Defendants, both individually and collectively (e.g., through the Tobacco Institute). For example, to insure that proper resources were spent in countries where the tobacco industry was experiencing "problems," Anthony Andrade at Philip Morris emphasized industry control over the consultant projects in a September 1991 memorandum:

> I believe we should recommend formal quarterly or semi-annual reviews of the Covington & Burling consultant program to ensure that resources are being appropriately allocated. For example, we need to be in a position to direct C&B to expend more of its resources on Eastern European matters if the problems in that area take a higher priority than ETS issues within the European Community nations.

2023856321-6328 at 6328 (US 22037) (A).

935. Defendants shared the costs of the consultant program through the Tobacco Institute and through the law firms. Consultants would bill their services through Covington & Burling and Shook, Hardy & Bacon; the law firms would then bill the Tobacco Institute or other Defendant, who would pay the law firms with the funding from the participating companies. Using this scheme, the Cigarette Company Defendants were able to avoid direct payments to the ETS consultants and create an attorney wall between them and the ETS consultants. See, e.g., 2029378142 (US 87358) (O); 2503001929 (US 87359) (O); 2023591631-1634 (US 23690*) (A); 2023591657-1659 (US 23692*) (A); 2023591792-1794 (US 22161) (A); 2023591606-1608 (US 23689) (A); 2023591835-1837 (US 23695) (A); 2023591891-1894 (US 23696) (A); 2023591915-1918 (US 23698) (A); 2023591985-1988 (US 23700) (A); 2023591962-1965 (US 23699) (A); 2023591599-1603 (US 75424) (A); TIMN435220-5220 (US 21734) (O); Rupp WD, 69:1-8.

936. The Latin American ETS Consultancy Program, also run by Covington & Burling,

had a "central budget" as well as a "country-specific component" to fund its recruitment and use of scientists. The program had an annual total budget of over $600,000. 2023591264A-1270 (US 85536) (A); 2023590386 (US 85537) (A); 500874585 (US 85539) (A); 500874587-4590 (US 85540) (A).

937. Covington & Burling billed Philip Morris USA for a substantial portion of the Philip Morris cost of the ETS Consultancy Program. For example, Rupp attached a $300,000 bill for the Asia consultancy program under cover letter dated September 18, 1991 to Steve Parrish, then Philip Morris USA general counsel. A completed payment voucher shows that PMUSA paid the bill. 2071412978-3143 at 2982-2985 (US 23061*) (A).

938. A July 2, 1992 internal Philip Morris report revealed that consultancy program expenses were spread among Philip Morris International, Philip Morris USA, and Philip Morris Companies. 2023591481-1486 (US 92008) (A).

939. The European ETS Consultancy Program had a 1988 budget of $2.5 million from Philip Morris alone. 2501474253-4259 at 4255 (US 22017) (A). According to Rupp, the ETS Consultancy Program had a 1990 budget of $800,000 in Asia. 2500048999-9000 (US 85535) (A).

940. A November 1992 document titled "Revised 1993 Budget: European Consultant Program" lists a budget of $1.6 million, apparently for Philip Morris's share of the program costs. 2071027438-7442 (US 40371) (A).

941. While the total cost of the worldwide ETS program has not been ascertained, the 1993 annual budget for the European, Asian, and Latin American programs alone was $3 million, a sum described as a "substantial decrease" from 1992. Financial responsibility for program was shared among Philip Morris, BATCo, Reynolds, B&W, Japan Tobacco, and Rothmans, drawing

"funds from a central budget (shared by all participants)." 2023590685-0687 at 0685 (US 37027) (O); 2023590464-0466 (US 85529) (O) ($3.4 million projected for program in 1992).

(i) The Contamination of Science Continues: Defendants' ETS "Symposia"

942. As another means Defendants invented to undermine the scientific consensus as to the health risks of passive smoking, Defendants sponsored and planned various ETS conferences, sometimes dubbed "workshops" or "symposia," to generate favorable and seemingly independent scientific conclusions in the press and in the scientific literature. These conferences, held abroad to avoid scrutiny, included a 1974 Bermuda conference, a 1983 Geneva workshop, a 1984 Vienna conference, a 1987 Tokyo conference, the 1989 McGill "symposium," and others. The industry-planned conferences were a major tool whose conclusions and presentations were held out and publicized in the United States by Defendants as examples of "independent" scientific statements in support of the industry's position that ETS was not a proven health hazard.

(i) The 1974 Bermuda (Rylander) "Workshop"

943. The concept of covertly planning and managing conferences or "symposia" to generate published scientific conclusions favoring the industry's position on passive smoking traces back to at least 1974, when Defendants carefully used Swedish professor Ragnar Rylander to stage a passive smoking conference in Bermuda.

944. As stated previously, Rylander and Philip Morris signed a consultant agreement in December 1972 in which Rylander agreed to be the Philip Morris "representative" to INBIFO, a Philip Morris-owned research facility in Cologne, Germany. 2063590583-0586 (US 85704) (A). In this capacity, Rylander proposed to Philip Morris in July 1973 a "workshop" on the effects of passive smoking on nonsmokers. 1000259865-9865 (US 85708) (O); 1000259799-9803 (US 85709) (O).

945. The purpose of the workshop was to generate findings favorable to the industry's position opposing smoking restrictions. In July 1973, Philip Morris's Helmut Wakeham strongly recommended industry financing of the workshop to the Philip Morris leadership as a means to "put[] the facts in proper perspective" and to counteract smoking legislation. 1000053116-3116 (US 85707) (O). In a February 26, 1974 letter to Imperial Tobacco, Wakeham summarized the workshop as follows:

> We are looking forward to the report of this workshop. We hope it will provide us with a document we can use to quiet some of the hysteria on the subject. Our main concern is the legislation restricting smokers now being passed in some of the local governments in the U.S.A. A copy of the workshop outline is enclosed for your information.

2015035555-5556 (US 87376) (O).

946. The workshop was held in Bermuda on March 27-29, 1974. The proceedings of the workshop were published as a book. The only attribution to Defendants was in the preface: "The Workshop was supported by Geneva University through a grant from "Fabriques de Tabac Reunies." The proceedings did not disclose that FTR was and is the Philip Morris subsidiary in Neuchatel, Switzerland. 690019211-9302 at 9216 (US 88462) (A).

947. In addition, the role of Philip Morris in Rylander's Bermuda workshop was far more than mere funding through its European subsidiary. Several documents reveal that Rylander planned the workshop and the publication of the workshop proceedings with Helmut Wakeham of Philip Morris and Don Hoel of Shook, Hardy & Bacon. 2015035615-5615 (US 85710) (A); 2015035611-5611 (US 89406) (O); 1000259703-9703 (US 85713) (A); 1000260272-0272 (US 85714) (O); 1000259790-9790 (US 87036) (O). Hoel even collaborated on the list of conference participants. 1000259784-9784 (US 85717) (O); 2015035615-5615 (US 85710) (A).

948. In August 1974, the first summary of the workshop was "ghostwritten" by Philip Morris and "intended to be published over the name of Ragnar Rylander" in the magazine *Science*. 1000260242-0242A (US 89408) (O). However, there is no evidence that *Science* ever published the summary.

949. Later, Rylander also submitted drafts of the workshop proceedings to Philip Morris for review and comment before submitting the document for publication in the *Scandinavian Journal of Respiratory Disease*. 1000259693-9693 (US 86613) (O); 1000259703-9703 (US 85713) (A); 1000260272-0272 (US 85714) (O). Philip Morris's suggested "corrections," including those from Hoel, were sent to Rylander in August 1974. 1000260253-0253 (US 89407) (O).

950. Wakeham later called the published workshop proceedings a "very convenient piece of paper" when he presented it to members of the "Industry Technical Committee," a group composed of industry scientists. ATX300000015-0017 at 0017 (US 21129) (O). In a June 28, 1988 memorandum from Hoel to Philip Morris's Todd Sollis describing Shook, Hardy & Bacon's ETS efforts for the industry, Hoel bragged:

> Since 1974, SHB has been actively engaged in the organization and development of ETS conferences and symposia. . . . Once the proceedings from these conferences are published, they provide information that is useful in dealing with the attacks of anti-smoking activists.

2015007199-7207 at 7206 (US 20311) (A).

951. The 1974 Bermuda conference was also incorporated into a broad industry "Position Paper" on passive/public smoking distributed to Defendants as part of the operations of the international tobacco industry group called ICOSI. ICOSI distributed their "Position Papers" to coordinate the responses of the manufacturers on a number of smoking and health issues.

With respect to passive smoking, the companies were to say that:

> In 1974, a workshop (organized by, among others, Dr. Rylander of the Universities of Geneva and Gothenburg) was attended by scientists from all over the world to consider the health consequences of atmospheric tobacco smoke. These scientists were unable to conclude that cigarette smoking is a hazard to non-smokers.

513886735-6773 at 6737-6738 (US 87377) (O); 500876807-6812 (US 87378) (O).

952. The 1974 conference also gave rise to a financial relationship between Rylander and all company Defendants, acting in concert through the industry's Special Account 4 from 1975 to 1989. 1005122219-2222 (US 20214) (A); 507875857-5859 (US 20795) (O); 507876993-6994 (US 20799) (O); 86002454-2457(US 85776) (A); 86002410-2413 (US 85716) (A); 86002393-2396 (US 86359) (A); ATX140000938-0939 (US 21122) (A). Rylander's relationship with Defendants also continued as a consultant to Philip Morris and as a CIAR Applied Projects researcher through 1999. 2063590583-0586 (US 85704) (A); 2505442777-2960, 2905-2907 (US 25643*) (A).

(ii) The Geneva (Rylander) Conference

953. In 1981, epidemiological studies were published suggesting that passive smoking posed an increased risk of lung cancer in nonsmoking spouses married to smokers. As described elsewhere in this section, the studies, particularly those authored by Hirayama and Trichopoulos, were perceived by Defendants as major threats to both the social acceptability of smoking and to the freedom of smokers to smoke in public.

954. The 1982 Surgeon General's Report was the first to consider the epidemiological evidence. While not finding that passive smoking was a cause of disease, the Report (1) recommended that "nonsmokers avoid exposure to second-hand tobacco smoke to the extent possible" and (2) concluded that "the evidence does raise concern about a possible serious public

health problem." TLT0242222-2551 at 2228, 2481 (US 60598) (A).

955. To contest this new evidence and to dispute the ominous conclusion in the 1982 Report, Defendants covertly staged further passive smoking conferences to generate favorable evidence that they could use in public statements and regulatory submissions. The first of these conferences was held in 1983 and was planned by Defendants once again using Ragnar Rylander and the law firm of Shook, Hardy & Bacon.

956. The discussion and planning of a second Rylander conference can be traced back to August - October 1981, when Defendants, through the Tobacco Institute Executive Committee, the Committee of Counsel, and Shook, Hardy & Bacon, enlisted Rylander to assess the utility of another conference. 03554255-4255 (US 85641) (A). An August 1981 memorandum from Don Hoel recorded his meeting with Rylander at Shook, Hardy & Bacon. According to this memorandum, Rylander acknowledged that neither he nor a conference could give ETS a "clean bill of health"; however, Rylander did believe that "he could bring a healthy skepticism" to the conference and to claims against ETS. Hoel and other Shook, Hardy attorneys reviewed Rylander's proposed list of invitees. 680542957-2962 at 2958 (US 85718) (A).

957. Rylander's actions were carefully controlled by Defendants through Hoel. Defendants' plan called for Rylander's overview paper used to introduce the conference, as well as the discussion papers presented at the conference, to be provided to Defendants for review and input prior to Rylander's use at the conference and prior to publishing the materials. 680542957-2962 at 2958 (US 85718) (A).

958. On March 18, 1982 the Committee of Counsel asked Hoel and fellow industry attorney Tim Finnegan to present a specific proposal regarding a Rylander symposium for both the Committee of Counsel and the Tobacco Institute Executive Committee. 01330613-0613 (US

26461) (A). The proposal was approved by the Committee of Counsel in April 1982 and reported to the Executive Committee. According to Arthur Stevens' memorandum updating Lorillard's Curtis Judge and Alexander Spears, "The project will probably be conducted through the University of Geneva - and Don Hoel will propose a budget and more specific details after further consultation with Dr. Rylander." 01330467-0467 (US 26460) (A); 01330468-0469 (US 85719) (A).

959. Defendants chose Geneva as a "neutral ground" in order to minimize attention to the involvement of the United States tobacco industry in the conference. 680542957-2962 at 2960 (US 85718) (A). The conference was estimated to cost the industry between $65,000 and $80,000. 502122726-2727 (US 29551) (A). A later memorandum from Brown & Williamson in-house counsel J. Kendrick Wells put the cost to Defendants at $70,000. 401033325-3328 at 3327 (US 24099) (A).

960. The Geneva conference was organized by Rylander and Hoel and held in Geneva in March 1983. The conference proceedings were then published in a book titled "ETS-Environmental Tobacco Smoke, Report from a Workshop on Effects and Exposure Levels." The only attribution to Defendants in this publication is a statement within the preface that "It was supported by a grant from the Tobacco Institute, Washington, D.C., to the University of Geneva. 301153900-4051 at 3905 (US 85645) (O).

961. Rylander's workshop summary, printed in a section titled "Workshop Perspectives" at the close of the published conference proceedings, could not have been more favorable to Defendants. Rylander wrote that (1) the evidence linking ETS to any disease was "not considered conclusive"; (2) no passive smoking conclusions could be drawn from the data linking active smoking to disease; (3) the evidence of passive smoking causing child effects was

"contradictory"; carbon monoxide was "not important from a health point of view"; and the only proven effects of ETS were "irritation and annoyance." 301153900-4051 at 4042-4043 (US 85645) (O).

962. After the workshop, a Tobacco Institute update reported that Rylander told Hoel that the event "went very well" because the "consensus" of the participants was that there was no evidence that environmental tobacco smoke causes lung cancer. TIMN269624-9624 (US 85643) (O). The Tobacco Institute report also recorded that Hoel would review the written proceedings prior to publication. The industry-favorable conference "consensus" was predictable given that most of the participants were paid industry consultants at the time of the Geneva conference and that the event was chaired by Rylander.

963. Rylander's intimate links to Defendants, both as Special Account 4 recipient and Philip Morris consultant, are described above in relation to the 1974 Bermuda conference. Rylander was a Special Account 4 recipient at the time of the Workshop. 03746173-6182 (US 46500) (A); 1005122219-2222 (US 20214) (A); 507875857-5859 (US 20795) (O); 507876993-6994 (US 20799) (O). At the same time, he was a paid Philip Morris consultant. 2063590583-0586 (US 85704) (A). Although Defendants did at times admit to an undefined "grant" from the Tobacco Institute, Rylander's links to the industry and the involvement of Shook, Hardy & Bacon in planning the conference were not disclosed in either the conference proceedings or any of the industry statements citing the conference "conclusions." 301153900-4051 (US 85645) (O); 2025364951-5007 (US 22173) (A); 500642763-2772 (US 85644) (O).

964. Rylander invited a number of other Special Account 4 and CTR Special Project (see supra US FF §§ I.D(2), (3), supra) recipients; several even gave presentations at the

symposium on work they had performed on behalf of the tobacco industry. These participants included Domingo Aviado, Anthony Cosentino, Melvin First, Roger Jenkins, and Theodor Sterling. None of these relationships were disclosed in the published proceedings of the Geneva conference. 301153900-4051 (US 85645) (O).

965. For example, Melvin First was paid via Special Account 4 for work that he performed in early 1983 under the title "Methods for Environmental Tobacco Smoke Measurement," the subject of First's presentation at the Geneva conference. 1005125153-5154 (US 36085) (A); 03746173-6182 at 6179 (US 46500) (A). Theodor Sterling received hundreds of thousands of dollars in CTR Special Project funds in 1982 and 1983 for work related to his Geneva conference topic. 03746173-6182 (US 46500) (A). In addition, Sterling's financial ties to Defendants via CTR Special Project funding date back to the early 1970s and continued into the 1990s. 2024699783-9808 (US 85647) (A); 92613920-4198 (US 32132) (O); 2015006938-6940 (US 85764) (A). Domingo Aviado was also a long-time recipient of industry Special Project and Special Account funds at the time of the Geneva Conference. 92613920-4198 at 4107 (US 32132) (O); 03638980-8982 (US 85649) (A); 2015029462-9463 (US 85652) (A); 682070007-0008 (US 87369) (A); 682070001-0002 (US 36081) (A); 682069976-9997 (US 85654) (A); 682069978-9979 (US 85656) (A); 682069972-9973 (US 85657) (A); 682069965-9967 (US 85658) (A); 682069960-9961 (US 85659) (A); 682069953-9954 (US 85660) (A); 682069938-9940 (US 85661) (A); 507875841-5843 (US 85662) (A); 507875857-5859 (US 20795) (O); 507876993-6994 (US 20799) (O); 507875832-5834 (US 20794) (O); 507876986-6987 (US 20798) (O); 507875698-5700 (US 22953) (A); 86002454-2457 (US 85776) (A).

966. The Tobacco Institute quickly sent a report of the 1983 Geneva conclusions to the

U.S. Health and Human Services Secretary and Assistant Secretary, and to the Surgeon General. Moreover, the Tobacco Institute circulated a press release on the conference to medical and health publications, medical schools, members of Congress, newspapers, journalists and state health officials. TI12882975-2977 (US 62400) (O).

967. Rylander submitted comments to EPA in 1990 on the draft Risk Assessment stating: "I am sorry to see our own workshops from 1974 [Bermuda] and 1984 [Geneva] are not cited, particularly as the former was the first to apply the terms environmental tobacco smoke (ETS)." 2026127784-7790 (US 92064) (A).

968. Defendants went on to cite the conference as seemingly independent authority in advertisements, brochures, news releases, and submissions to Congress, OSHA, and EPA in support and furtherance of their effort to deny and distort the health effects of secondhand smoke and to promote cigarette sales. None of these materials informed readers that the conference was planned by an industry consultant (Rylander) and lawyer (Hoel) in order to generate industry-favorable "conclusions." 520911538-1542 (US 85593) (O); 500642763-2772 (US 85644) (O); 2025364951-5007 (US 22173) (A); TINY0020573-0577 at 0575-0576 (US 88600) (O); TIFL0055129-5139 at 5131-5132 (US 88601) (A); TIMN0120782-0785 at 0784-0785 (US 88602) (O); 517001328-1330 (US 88603) (O); 2070140494-0630 at 0595-0596 (US 88604) (O).

969. A May 1984 Tobacco Institute publication titled "Environmental Tobacco Smoke Workshops 1983 - 1984" is a noteworthy example of how Defendants hid the truth about the Rylander Geneva conference. This brochure proclaimed: "Three times since March 1983, participating researchers and other medical experts have declared, **forthrightly and independently**, that no conclusion can be drawn about whether ETS has any chronic health effects on the nonsmoker. . . Another physician-researcher organized an ETS workshop in

Geneva in March 1983 as follow-up to a similar conference in 1974. He concluded afterward that "irritation and annoyance must still be considered to be the most prevalent effects ascertained from exposure to ETS.'" 500642763-2779 at 2765-2766 (US 85644) (O) (emphasis added).

(iii) The Vienna Conference

970. Defendants covertly organized another symposium addressing passive smoking and health in Vienna, Austria, from April 9-12, 1984. The industry planning for the Vienna Conference can be traced back to 1981, on the heels of the first two passive smoking epidemiological studies (Hirayama and Trichopoulos) linking lung cancer in non-smoking spouses to smoking husbands.

971. A September 17, 1981 Reynolds "SECRET" memorandum from Associate Scientific Director Frank Colby to in-house counsel Samuel Witt, with copies to Hoel and others, detailed the industry's plans to hold a conference/workshop on passive smoking. The conference would be planned by Hoel and Colby, and would be chaired by Professors Helmut Valentin and Ernst Wynder, with the "thrust and intent" to convince German and American scientists "that there is no real controversy, and that the facts on the [passive smoking] problem are all on our side." To this end, the conference would be a "completely closed meeting by invitation only." 500534168-4169 (US 89428) (O). The conference described in this memorandum, chaired by Valentin and Wynder, was eventually held in Vienna in April 1984. 04211608-1610 (US 22131*) (O).

972. Valentin was a former recipient of industry funding via the Special Account 4. 1005045370-5383 (US 85777) (A) and 1005122262-2265 (US 20218) (A). The relationship between Wynder and the tobacco industry is described later in this section.

973. The covert funding mechanism chosen by the industry for its Vienna conference was the German Verband, the German cigarette manufacturer association with representatives of Philip Morris, BATCo, and Reynolds. According to a December 1, 1983 internal memorandum from Philip Morris (FTR) scientist Walter Fink to Tom Osdene at Philip Morris USA recording the minutes of a November 1983 Verband meeting, "DM 150,000 were approved for the Meeting on Passive Smoking to be held in Vienna in April 1984." 2028524616-4618 at 4618 (US 89162) (A).

974. Following the Vienna conference, Wynder and Valentin issued a press release announcing the conference "conclusions" that there was no link between passive smoking and any disease and "[s]hould lawmakers wish to take legislative measures with regard to passive smoking, they will, for the present, not be able to base their efforts on a demonstrated health hazard from passive smoking." The press release omitted any attribution to Defendants, the Verband, or the industry. 04211608-1610 (US 22131*) (O); 2024967092-7093 (US 87372) (O). The translated press release was quickly circulated by Don Hoel to the Committee of Counsel for Defendants' use and information. 2024967085-7085 (US 89431) (O).

975. In 1986, the Vienna conference was turned into published proceedings (*Medical Perspectives on Passive Smoking*) containing a summary preface and the presentations made by the industry-selected scientists. According to the book's preface, Dr. Hirayama was invited to attend the conference; not surprisingly, however, the preface reported that "[w]ith the exception of Dr. Hirayama, all the participants agreed that so far there was no definite proof of a causal relationship between passive smoking and the risk of lung cancer." While the conference was closed to a selected group of scientists in order to guarantee an industry-favorable consensus, the preface also made the claim that the conference proceedings "provide the interested reader with

an overview of **the present status of the scientific discussion of passive smoking**." TI12871546-1582 (US 87370) (O) (emphasis added).

976. Defendants' not only omitted any connection to the tobacco industry in their use of the Vienna conference in public statements (see below), but also affirmatively misrepresented that the conference was sponsored by or held "in cooperation with" the World Health Organization. See e.g., 500642763-2779 at 2767 (US 85644) (O); 04211608-1610 at 1608 (US 22131*) (O). The misrepresentation was stopped only after the WHO protested in writing that it "ha[d] not granted the workshop any kind of sponsorship or support." TI00681815-1818 (US 62083) (A); TI00681800-1803 (US 88606) (O).

977. It was important to Defendants that the Vienna conference appear to be wholly independent of the tobacco industry. Both Hoel and Covington & Burling's John Rupp would later even deny to industry consultants Sorell Schwartz and Nancy Balter that the Vienna symposium was a tobacco-sponsored event, a denial that Philip Morris's Mary Pottorff later set straight:

> At some point later, Nancy and I were sitting in Rupp's office and she brought [the Vienna conference] up again, emphasizing the importance of the question, our having relied on the conference proceedings as a neutral source. Rupp picked up his phone, dialed Don Hoel, put him on speaker, and said to Hoel: I have Sorell and Nancy here with me and they want to know if the Vienna conference was surreptitiously sponsored by the tobacco industry. Hoel's response - absolutely not. A year or two later, I attended a meeting in Europe on indoor air pollution. Mary Pottorff of Philip Morris was also there, and we were talking. I mentioned this Vienna story to her. She laughed and said to me, "You have got to be kidding, Don Hoel organized that symposium."

Schwartz WD, 19:29-38.

978. Like the Geneva conference, Defendants publicly and repeatedly exploited the Vienna "conclusions" finding no connection between passive smoking and disease. A May 1984

Tobacco Institute publication titled "Environmental Tobacco Smoke Workshops 1983 - 1984" claimed the Vienna conclusion that "a health hazard from ETS has not been demonstrated" was reached "forthrightly and independently." 500642763-2779 at 2765-2766 (US 85644) (O). The conference was also cited to at length by Defendants in the 1986 Tobacco Institute booklet aptly titled "Tobacco Smoke and the Nonsmoker: Scientific Integrity at Crossroads," in which the Tobacco Institute claimed that Hirayama "stood alone" in his finding that passive smoking was linked to lung cancer. 2025364951-5007 at 4957-4958, 4961 (US 22173) (A).

979. In 1987, the Tobacco Institute published a booklet titled "Smoking Restrictions: The Hidden Threat to Public Health," in which it declared that ETS had not been shown to be a health hazard to nonsmokers and that more research was needed. The booklet quoted statements made by organizers of the 1983 Geneva and the 1984 Vienna conferences, with no disclosure that the conferences were conducted by the tobacco industry. TI05540699-0705 at 0702 (US 21246) (A).

980. Defendants made similar statements in other public statements and submissions as well, implying or stating that the Vienna conclusions were independent. TINY0020573-0577 (US 88600) (O); 300551794-1823 at 1799 (US 88608) (O); 93766027-6051 at 6029 (US 85675*) (O).

(iv) The 1987 Tokyo Conference

981. In 1986 Defendants and their lawyers began planning another ETS "symposium," this time in Tokyo, and this time financed through Japan Tobacco Inc. (JTI). Once again, Defendants turned to Don Hoel and Shook, Hardy & Bacon to insure that the conclusions and resulting publication from the conference were favorable to the industry as well as amenable to being cited by Defendants in public and in submissions to regulatory bodies.

982. The 1987 Tokyo Conference was planned and managed by Defendants through the Tobacco Institute ETS Advisory Group (ETSAG), a group of company representatives and lawyers who met frequently between 1984 and 1988 to steer the industry's position and activities relating to passive smoking. See supra US FF § III.A(2)(g)(ii). Several ETSAG meeting agendas and summaries provide glimpses of Defendants' work to take the Tokyo conference from a "project proposal" to a reality. 506330874-0879 (US 50834) (O); 505491315-1320 (US 24227) (O); TIBU30330-0331 (US 62566) (O); 511252621-2626 (US 51554) (A).

983. The plan was for JTI to pay for and stage the conference to counter the 6th World Conference on Smoking and Health, an annual event slated to be held in Japan in November 1987. A December 9, 1986 Reynolds memorandum from Charles Green to Alan Rodgman reported on a "TI-ETS Advisory Committee Trip to Tokyo," where Hoel, Osdene and Green met with JTI representatives to begin planning the conference. 505491406-1410 at 1409 (US 75275) (A).

984. The conference was agreed upon by Defendants and JTI after several meetings between ETSAG and JTI representatives in late 1986 and early 1987. 506330874-0879 (US 50834) (O); 505491315-1320 (US 24227) (O); 512252621-2626 (US 51554) (A).

985. A February 4, 1987 internal Philip Morris ETS "Action Items" update memorandum from Mary Pottorff to Bill Murray reported the following under the heading "PMI Action on ETS":

> Tokyo University ETS Conference
>
> Don Hoel has informed us that this **PMI requested conference** will take place two weeks prior to 6th World Conference, pending confirmation from JTI.

2501152342-2344 (US 20017) (A) (emphasis added).

986. A draft summary of the May 26, 1987 ETSAG meeting documented that JTI paid

for the "symposium." While Defendants intended to admit the funding source if asked, "the plan [was] not to publicize the fact." 506300804-0814 at 0807 (US 20756) (A).

987. Professor Hitoshi Kasuga was tapped to chair the conference for JTI and Defendants. Kasuga was a Japanese scientist who was conducting research for JTI at the time the conference was planned. 508226799-6804 at 6801 (US 75279) (A). Defendants supplied names of American industry ETS consultants who would attend; the consultants' fees, along with their travel, food, and lodging expenses would be paid by JTI and Defendants. TI0068-2069-2070 (US 62088) (O).

988. The ETS conference, titled "International Conference on Indoor Air Quality," was held in Tokyo on November 4-6, 1987. The list of attendees disclosed that many of Defendants' American and European consultants were in attendance and in some cases presented papers. These consultants included Theodor Sterling, Franz Adlkofer, Karl Ueberla, Linda Koo, Ragnar Rylander, Peter Lee, Roger Perry, Domingo Aviado, Sal DiNardi, Melvin First, James Kilpatrick, Michael Lebowitz, Nathan Mantel, Gray Robertson, Sorrell Schwartz, and Ernst Wynder. Neither the list of attendees or conference program disclosed that the conference was funded through JTI and planned by both JTI and Defendants. 321091730-1825 (US 22892) (O).

989. The Tokyo Conference proceedings were published in 1990 as a book titled *Indoor Air Quality*. Kasuga's preface emphasized the existing ETS "controversy," and stated that none of the preceding conferences and "symposia," including Rylander's Geneva and Vienna conferences, had "established a definite causal relationship between ETS and lung cancer." Industry-favorable papers authored by Defendants' consultants Rylander, Lee, Perry, Adlkofer, Sterling, and others were published in *Indoor Air Quality*. The book even published attribution-free papers by BATCo scientist Chris Proctor and Reynolds scientist Guy Oldaker.

Kasuga summarized the conference in an "Outline" section at the conclusion of the book, where he stated that any number of factors in the air may have adverse effects on health, and ETS is merely one among many that should be studied. TLT0990809-1076 at 0812-0813, 1073-1074 (US 87398) (A).

990. None of the papers published in *Indoor Air Quality*, nor the book itself, disclosed that the conference was funded through JTI and planned by both JTI and Defendants. TLT0990809-1076 (US 87398) (A).

991. Defendants then cited the Tokyo Conference and papers published in *Indoor Air Quality* as objective scientific authority in support of their position that an ETS "controversy" existed, and that passive smoking was not a proven health hazard to nonsmokers. TI11951245-1685 at 1374 (US 85699) (A); 87654420-4485 at 4481, 4485 (US 87385) (O); 2024706618-6698 at 6687 (US 87405) (O).

992. Ernst Wynder, founder of American Health Foundation ("AHF"), was one of the organizers of the 1984 Vienna conference and the primary speaker at the 1987 Tokyo conference. Wynder had a long history with Philip Morris that also was not publicly disclosed. This relationship seemed to materialize around 1969, at which time Wynder described himself as one of the "best friends the cigaret [sic] industry has." 1000321438-1438 (US 85666) (A). Between 1976 and 1990, Philip Morris provided AHF with millions of dollars in research grants. 2021630792-0794 at 0793 (US 92067) (A); 2001202325-2325 (US 85724) (O); 1003710362-0363 (US 85669) (O); 2021636204-6204 (US 85671) (O); 2021594926-4930 at 4929 (US 85672*) (O).

993. In 1991, Kraft General Foods, a subsidiary of Philip Morris Companies (now Altria), continued the Philip Morris support of AHF. That year, Kraft sent AHF $657,500 toward

its five year commitment of nearly $2 million for a research and education program to be conducted from 1991 to 1995. This program studied the correlation between lifestyle and environmental exposures and major chronic illnesses, and the role of diet in cancers of the lung, oral cavity and bladder. 2046988683-8683 (US 85673) (O); 2021630974-0975 (US 87371) (O); 2046988682-8682 (US 85674) (A).

(v) The 1989 McGill "Symposium"

994. Continuing their pattern of covertly generating industry-favorable scientific publications to undermine the scientific consensus on passive smoking, Defendants and their lawyers planned and executed a "symposium" of industry-selected consultants to convene at McGill University in Montreal in November 1989. This event, and the published "symposium" proceedings that followed, provide perhaps the best example of Defendants' motives in fraudulently distorting the scientific record.

995. Defendants' true role, and specifically the role of Defendants' law firm Covington & Burling, in the planning and management of the McGill "symposium" was only revealed in documents formerly withheld by Defendants as privileged. As described below, the McGill "symposium" appears to have been the brainchild of Philip Morris and Covington & Burling, although funding and use of the "symposium findings" would later be shared among the companies.

996. McGill "symposium" planning began at the highest levels of Philip Morris. In an August 8, 1989 "Strictly Confidential" memorandum from Philip Morris International's Andrew Whist to Philip Morris Companies' Vice Chairman Bill Murray, with copies to Geoffrey Bible and others, Mr. Whist wrote:

> This memorandum summarizes our earlier conversation concerning the ETS symposium at McGill University.

> What we have been planning over the past several days is a major international **symposium which would be both closed and private** until the release, shortly after the symposium, of a monograph summarizing the proceedings. **Our goal, of course, is to produce an impressive document that would have the potential of neutralizing two reports that are scheduled to be released near the end of this year** - an ETS risk assessment that is being prepared by EPA and a detailed assessment of ETS health effects under preparation, at Rockefeller University, supervised by Professor Spitzer (an avowed anti-smoker). **The EPA and Spitzer reports would cause substantial damage unless they are somehow countered**.

2023034633-4637 (US 22932) (A) (emphasis added).

997. Whist continued that the plan was to use an established industry ETS consultant, Donald Ecobichon at McGill, to host the "symposium." To control exactly what was included in the published proceedings, Philip Morris would not only choose who would attend, but would also "transcribe and edit the panel discussions for inclusion in the monograph which will be published immediately following the symposium." Numerous Covington & Burling attorneys were to participate in the execution of the event on behalf of the industry. Whist recommended that Philip Morris, Reynolds, and the Tobacco Institute share the costs of the "symposium" evenly. Whist's closing paragraph to Murray and Bible noted that "security is vital." 2023034633-4637 (US 22932) (A).

998. A September 19, 1989 report of the industry "ETS Coordinating Committee," written by Reynolds attorney Mary Ward, recorded Rupp's McGill presentation to the committee. Rupp told the group that the published "monograph" (Ward refers to this as a "big, fat book") could be used by the companies to oppose the EPA. 515541696-1701 at 1700 (US 30103) (A). Representatives of the Tobacco Institute and its member companies sat on the ETS Coordinating Committee. 511514101-4102 (US 24746) (A).

999. A September 27, 1989 "Status Report" from Covington & Burling attorney John

Rupp echoed much of what Whist had stated in his August 1989 memorandum. The McGill event was conceived as a carefully orchestrated means to "neutralize" two ETS reports that were on the horizon, reports that the industry knew would indict passive smoking as a cause of disease:

> ETS Symposium at McGill University
>
> On November 3 and 4, 1989, approximately 60 of our consultant scientists from the United States, Canada, Asia, and Western Europe will convene for a private symposium devoted to ETS and risk assessment. The purpose of the symposium is to produce an authoritative monograph that will serve to neutralize two reports that are scheduled to be released near the end of this year - an ETS risk assessment that is being prepared by the U.S. Environmental Protection Agency and a detailed assessment of ETS health effects that is being prepared in Canada under Professor Spitzer's supervision.

2500048508-8515 (US 20549) (A).

1000. Another Covington & Burling "Status Report," dated February 14, 1990, told that the "symposium" went off as planned, but with 80 industry ETS consultants. 2500048976-8998 at 8984 (US 23007) (A). As intended by Defendants, the "symposium" was a wholly one-sided presentation of the industry's position on passive smoking. Chris Collett, an employee of industry consultant Theodor Sterling and an attendee at the "symposium," wrote in an internal review of the conference that:

> Other comments I overheard concerned the absence of criticism or disagreement between the attendees. **The presentations and panel discussions were sessions of "preaching to the converted."**

94348745-8752 at 8752 (US 85688) (A) (emphasis added) .

1001. In January 1990, the McGill proceedings were published by Lexington Books, along with a press release, and press kits for distribution by the Tobacco Institute with the

assistance of public relations firms Ogilvy & Meyer and Burson Marsteller. Through the published proceedings, Defendants were able to circumvent any peer review process and get favorable "scientific" conclusions into the published literature. 2023546229-6233 (JD-080524) (A).

1002. Covington & Burling sent the Tobacco Institute an itemized statement of McGill "symposium" expenses under cover letter dated January 19, 1990. The expense statement is a listing of many of the attendees, all industry ETS consultants, as well as industry-financed groups such as ARIA and HBI. The expenses and fees on this one statement, all for the production of the McGill "symposium," totaled over $800,000. TIDN 0021302-1305 (US 22731) (A).

1003. An examination of the published McGill "symposium" proceedings reveals that the controlling role of Defendants was not disclosed beyond a generic "tobacco industry grant." Moreover, the integral role of industry law firm Covington & Burling was entirely concealed. TLT0150001-0390 (US 65706) (A).

1004. The sole reference to the tobacco industry was contained in the preface, which stated only that the "symposium . . . was made possible by a tobacco industry grant and by grants and other support from the following co-sponsors." TLT0150001-0390 (US 65706) (A). The preface then listed 11 independent-appearing "co-sponsors." 2501474253-4259 (US 22017) (A). Several of the "co-sponsors" were merely the institutions where a number of attending industry ETS consultants worked; others had preexisting links to Defendants. TIDN0019217-9268 at 9219, 9234 (US 85597) (A) (Ecobichon/McGill University and Healthy Buildings International); 2501474253-4259 at 4255 (US 22017) (A) (Institut Fresenius); 2500048643-8654 (US 22857) (A) (Kim/Hanyang University); TIDN 0002692-2701 at 2695 (US 85605) (A) and TIMN0435220-5272 at 5264 (US 21734) (O) (National Energy Management Institute);

87697701-7772 (US 85587) (A) (National Federation of Independent Business);

2023592986-2998 at 2993 (US 85548) (A) (Allen/RCC Research and Consulting);

2023856321-6328 at 6322 (US 22037) (A) (Weetman/Sunderland Polytechnic).

1005. The proceedings also failed to disclose the following material facts:

- The "symposium" chairs (Ecobichon and Wu) were industry ETS consultants TIDN0019217-9268 at 9219, 9234 (US 85597) (A)

- The conference participants were all industry ETS consultants who had been selected by the industry and Covington & Burling. 2500048976-8998 at 8984 (US 23007) (A).

- The pre-selection of only industry consultants guaranteed that the unopposed "symposium" conclusions and "published" papers would be favorable to Defendants.

- Several of the "co-sponsors" did not sponsor the event at all; for example, the Covington & Burling list of expenses shows that McGill University, HBI and the Institute for International Health and Development were actually *paid* by Defendants. TIDN 0021302-1305 (US 22731) (A).

1006. On July 23, 1990, Brennan Dawson reported to Betsy Annese from R.J. Reynolds and Steve Parrish from Philip Morris that the Tobacco Institute would mail out packages of materials on the McGill symposium to over 200 science and health writers the next day. TI13341775-1775 (US 62415) (A).

1007. The McGill "symposium" was cited by Defendants in numerous public statements in press releases, legislative submissions, and letters to the editor in major newspapers. It is significant that attribution to Defendants was concealed in all of these submissions. The following are some highlights of Defendants' use of the McGill publication:

- Defendants coordinated nationwide "media activity" drawing attention to McGill through the Tobacco Institute's Public Affairs Division, but using ETS consultant interviews arranged by industry public relations firm Ogilvy & Mather. TIOK0017415-7416 (US 85698) (A).

- The October 1, 1990 "Comments of The Tobacco Institute on Health Effects of

Passive Smoking: Assessment of Lung Cancer in Adults and Respiratory Disorders in Children" repeatedly cited the McGill "symposium," characterizing the event only as an "international symposium on ETS" that generated "the consensus views of 80 eminent scientists." 87653565-6820 at 3941- 3998 (at 3958) (US 88596) (O).

- In its March 20, 1992 "Comments" in response to the OSHA Request for Information, the Tobacco Institute cited the proceedings and several individual "papers" presented at McGill. TLT1022319-2405 at 2324-2328 (US 87404) (A).

- The February 5, 1990 Tobacco Institute comments to the EPA on the draft Risk Assessment attached the McGill proceedings and described the event simply as a "a thorough, up-to-date discussion of the relevant literature" which concluded that "ETS has not been shown to present a health hazard to nonsmokers." TI11951245-1685 at 1254 (US 85699) (A).

- Philip Morris's September 28, 1990 "Comments" to the EPA on its draft Risk Assessment cited McGill in a lengthy section summarizing industry-favorable conclusions of "scientific symposia." 2070140494-0630 at 0598 (US 88604) (O).

- A June 25, 1990 Tobacco Institute press release titled "Draft Risk Assessment Described as Speculation" described McGill as a "prestigious panel of scientists at an international symposium on ETS held at McGill University in Montreal, Canada." 87697659-7664 (US 85586) (A).

- Tobacco Institute consultant letters to the editor appeared in newspapers such as the Chicago Sun-Times, Detroit News, Las Vegas Sun, and Salt lake Tribune drawing attention to the McGill "conclusions." TI09911997-2033 (US 22367) (A).

- Letters to the editor published in the Chicago Sun-Times, Las Vegas Sun and the Salt Lake Tribune under the name of industry consultant Jack Peterson, and in the Richmond-Times Dispatch on August 26, 1990, under the name of industry consultant David Weeks are typical examples in which the McGill "symposium" conclusions were communicated to the public with no industry attribution. Dawson WD, 134:13-135:13; TI12201464-1465 (US 86722) (O); TIMN343061-3061 (US 85582) (A); TIDN0019217-9268 at 9229 (US 85597) (A).

- A Tobacco Institute press release dated June 10, 1992 titled "Majority Favors Smoking Sections in Most Public Places, Anti-smoking activists recycle old claims to add new pressure" relied on the McGill "symposium." TIFL0523989-3992 (US 88456) (A).

- ETS consultants distributed the McGill proceedings to government officials in markets around the world. 300522762-2767 at 2766 (US 22223) (A).

1008. Defendants organized at least four other similar ETS conferences: London in 1988, Brussels in 1989, Lisbon in 1990, and Athens in 1992. Robertson WD, 41:6-14 (1988 London Conference); 41:15-42:12 (1989 Brussels Conference); 87:5-10 (1992 Athens Conference); 2500048956-8969 at 8957 (US 27901) (A) (1990 Lisbon Conference).

(j) "Blatant Scientific Fraud": Ghostwriting of Scientific Papers

1009. Another means Defendants used to create "independent" science to dispute the scientific consensus on secondhand smoke was the practice of "ghostwriting," or secretly authoring scientific papers under the names of persons with no apparent connection to the cigarette manufacturers or their law firms. Defendants then cited the ghostwritten papers as "independent" findings and conclusions to challenge the scientific consensus and oppose smoking restrictions.

(i) The 1990 Drake/Johnson Paper

1010. As revealed in a number of documents, Reynolds and Philip Morris scientists and lawyers collaborated in 1990 to publish a paper titled "Measurement of Certain Environmental Tobacco Smoke Components on Long-Range Flights" under the names of outside consultants John Drake and Dallas Johnson. The following was recorded under the heading "Ghostwriting" in a December 10, 1990 Reynolds ETS Division report titled "1990 Program Review":

> Drake, J.W. and Johnson, D.E. "Measurement of Certain Environmental Tobacco Smoke Components on Long-Range Flights," Aviat. Space Env. Med., 61, 531-542 (1990). [This paper describes the same work as that of publication number 2 above. **Ghostwriters include Dr. R.E. Fenner, Philip Morris, and Ms. M.E. Ward, and Dr. G.B. Oldaker III**.]

507984785-4801 at 4800 (US 29936) (A) (emphasis added) .

1011. The Drake/Johnson paper was in fact published in 1990 in a journal *Aviation,*

Space, and Environmental Medicine. The only authors listed are Drake and Johnson. As for the role of Defendants, the paper states only that the cabin air measurements were made by Philip Morris and Reynolds. The names and roles of Fenner, Oldaker, and Ward as authors of the paper are not acknowledged at all. The journal noted on the first page of the paper that it had been submitted for publication in May 1988. 511422087-2098 (US 92092) (A).

1012. Two drafts of the Drake/Johnson paper were introduced at trial, a January 15, 1988 version and a February 10, 1988 version. A comparison of the first draft (January 15) to the final published version of the article reveals the extent of the ghostwriting by Philip Morris and Reynolds. The January 15 draft is titled "Measurements of 747 Cabin Air Quality on Long Flights." Drake's attempt at the paper left several sections wholly blank, including the "Abstract," and "Summary and Conclusions" sections. The sections of the January 15, 1988 draft that do appear to have been provided by Drake, namely the "Introduction" and "Background" sections, only slightly resemble those sections in the final published paper. 2076278856-8872 (US 93356) (A).

1013. The published Drake/Johnson paper contained a lengthy "Results" section and a shorter "Conclusions" section that were not written by Drake and were not present in Drake's original January 15, 1988 "draft." The published paper also added a brief "Epilogue" paragraph directing readers to the 1989 Malmfors/SAS paper, discussed below. Compare 511422087-2098 (US 92092) (A) to 2076278856-8872 (US 93356) (A).

1014. A February 15, 1988 Reynolds memorandum from Oldaker explains how Philip Morris and Reynolds were able to transform Drake's January 15, 1988 draft into the February 10 draft and what was eventually submitted for publication:

> Dr. John Drake, an aviation consultant contracted to assist with the survey, prepared the first draft of the manuscript. An editing

> committee worked with Dr. Drake to make his draft more readable and to provide substantive input in areas where he had little prior experience. Ms. Mary Ward, Law, and I were members of the committee. . . . In the near future we plan to prepare at least two manuscripts addressing the results of our survey that will be submitted to scientific journals for publication.

506535991-5992 (JD-067998) (A).

1015. Defendants cited the ghostwritten Drake/Johnson paper in support of their opposition to airline smoking restrictions in September 1991. 2023216588-6626 at 6594 (US 87407) (A); 2024191369-1381 at 1375, 1380 (US 89401) (A). Industry consultant Larry Holcomb was retained by Philip Morris through its public relations firm, Burson-Marsteller, to write the article "Impact of Environmental Tobacco Smoke on Airline Cabin Air Quality"; Holcomb cited the Drake/Johnson paper in support of his position that scientific evidence did not support the prohibition of smoking on commercial aircraft. 2021595753-5910 at 5760 & 5788-5808 (US 85541) (O). Industry consultant "Gray" Robertson cited Holcomb's paper to the EPA in his critique of the EPA Review Draft. TIH&E 002781-2791 (US 65463) (A); Robertson also cited to both Drake and Holcomb in the McGill proceedings. TLT0150001-0390 at 0351 and 0356 (US 65706) (A).

(ii) The 1988 Carson/Erikson Paper

1016. Reynolds' Oldaker also ghostwrote another ETS paper published in 1988 that studied the impact of ETS in office buildings in Ottawa, Canada. A November 3, 1988 ETS Division report titled "1988 Objectives and Accomplishments" recorded the following under the heading "Publications":

> (ii) ETS in Ottawa offices **(Oldaker) [ghostwriter]**: Environ. Technol. Lett., 9, 501-508 (1988).

506813203-3208 at 3204 (US 92095) (A) (emphasis added).

1017. In fact, the 1988 paper ghostwritten by Oldaker and described in the ETS Division report, titled "Results From Survey of Environmental Tobacco Smoke in Offices in Ottawa, Ontario," was published in the journal *Environmental Technology Letters*. However, the paper was published under the names of John Carson and Carol Erikson. 2501197262-7269 (US 92101) (A). The paper does not disclose the role of Oldaker in authoring the paper, but only thanked him in the closing "Acknowledgments" paragraph for his "help and comments." Carson was a paid industry ETS consultant. 2023034933-4946 at 4943 (US 87334) (A). This is also not disclosed.

1018. Defendants produced a draft of a report of the Ottawa study dated September 28, 1987, from Erikson to Oldaker. 506293413-3441 (JD-068110) (O). Defendants argue that this draft report somehow refutes the evidence in other documents that Oldaker ghostwrote the published paper. In reality, a comparison of the September 1987 draft to the published paper shows the degree to which Oldaker - and not listed authors Carson or Erikson - took the data in Erickson's report and wrote a scientific paper. 506293413-3441 (JD-068110) (O); 2501197262-7269 (US 92101) (A).

1019. For example, the "Presentation of Results" and "Discussion" sections in the September 1987 draft bears no resemblance to the "Results" and "Discussion" section in the published paper. The ten references cited in Erikson's draft are removed in the final paper, replaced by Oldaker with 20 references, almost all new. *In fact, it is not an overstatement to observe that Oldaker left none of Erikson's "Results" or "Discussion" text in the 1988 published paper, and that most of the published paper was never a part of the September 1987 draft.* 506293413-3441 at 3428-3440 (JD-068110) (O); 2501197262-7269 (US 92101) (A).

1020. To leverage the value of the seemingly "independent" paper, Defendants since

1988 have cited often to the published study in support of their position that there is no proven health risk associated with ETS. Some examples include:

- Reynolds cited the paper over ten times in its October 1, 1990 response to the EPA's draft Policy Guide on workplace smoking. 87654420-4485 at 4426, 4430, 4431, 4437, 4440, 4446, 4449, 4458, 4467, and 4476 (US 92098) (A).

- The Tobacco Institute cited the paper in its March 20, 1992 Comments in response to the OSHA Request for Information (Occupational Exposure to Indoor Air Pollutants). TI02120021-0098 at 0035 (US 65685*) (A).

- Philip Morris cited to the paper five times in its September 28, 1990 Comments to the EPA in response to the Draft Risk Assessment. 2070140494-0630 at 0518, 0524, 0525, 0526, 0605 (US 88607) (O).

- Reynolds scientist Christopher Coggins cited to the paper in answers to questions from a Senate Subcommittee relating to his May 11, 1994 testimony opposing a bill to require the EPA to issue guidelines for instituting a nonsmoking policy in federal buildings. Hearing of the Subcommittee on Clean Air and Nuclear Regulation at 94 (JD 047608) (O).

- The Tobacco Institute referenced the paper in its February 1990 Comments in opposition to the EPA ETS Compendium, and later in its March 20, 1992 "Comments" in response to the OSHA Request for Information. .. TI11951245-1685 (US 85699) (A); TLT1022319-2405 at 2333 (US 87404) (A).

- Reynolds cited the Carson/Erikson paper in its 1992 response to the OSHA Request for Information. Reynolds Response to OSHA. (JD 023792 at 46) (A).

- Philip Morris cited to the paper in its 1997 submission to the California EPA. Philip Morris included its California EPA submission as part of its 1998 opposition to the National Toxicology Program's proposal to list ETS in its Report on Carcinogens. (JD 023799 at App. 8) (O).

- The Carson/Erikson paper was also cited in a 2000 CIAR-sponsored book *The Chemistry of Environmental Tobacco Smoke*, authored by industry consultant Roger Jenkins. (JD 065024 at 164, 434) (A).

- The paper was cited by industry consultants in the McGill "symposium" proceedings. TLT0150001-0390 at 0053, 0082 (US 65706) (A).

1021. The ghostwritten paper was integrated into the ETS Consultancy Program as well. A July 11, 1989 Philip Morris status report on the program from Andrew Whist to Geoffrey

Bible contained the following with respect to the Ottawa study:

> One of our consultants provided a written endorsement of an air quality monitoring study conducted in Canada by R.J. Reynolds. The endorsement was used at a press conference called to release the study to the Canadian press. . . .

2500017054-7063 at 7058 (US 20543) (A).

1022. Reynolds scientist Mike Ogden, who formerly worked with Oldaker in the 1980s before Oldaker's retirement from the company, testified to both the Drake/Johnson and Carson/Erickson articles ghostwritten by Oldaker. The Court asked Ogden: "Is there any doubt in your mind that this is an example, a blatant example of scientific fraud, or are you going to tell me this is done routinely in the scientific world?" Ogden answered that it was not routine in the scientific world, but claimed at first that it was not fraud. At that point, the following colloquy with the Court ensued, with Ogden finally conceding the point:

> THE COURT: You don't agree that when someone says they wrote something it's not a fraud if they didn't write it?
>
> OGDEN: If they said they wrote it and they didn't, that would be fraudulent.
>
> THE COURT: Isn't that what that usually means when someone is listed as the author of a document?
>
> OGDEN: That would be my interpretation, yes.

Ogden TT, 3/16/05, 15918:9-15919:6.

(k) Cooking the Books: The Manufacture of False Science to Support the Industry Position on ETS

1023. Defendants promised the American public to cooperate with public health authorities and fund independent scientific research about secondhand smoke and adverse health effects, but instead issued false public statements and covertly funded consultants, scientific

papers, and other publications to advance their preconceived goals. Several projects managed by Defendants as part of their worldwide ETS program illustrate how Defendants' attack on the scientific and medical consensus was at best a contamination of the scientific literature and at worst a scientific fraud. Four of these ETS projects - the 1995 Japanese Spousal Study, the 1989 Malmfors/ SAS paper, the 1992 HBI 585 Building Study, and the 2003 Enstrom/Kabat paper - are described in detail below.

(i) The 1995 Japanese Spousal Study

1024. In April 1995, a paper titled "Marriage to a smoker may not be a valid marker of exposure in studies relating environmental tobacco smoke to risk of lung cancer in Japanese non-smoking women" was published in the *International Archives of Occupational and Environmental Health* under the name of industry consultant Peter (P.N.) Lee. 900006054-6061 (US 57902*) (A) This paper, internally called "The Japanese Spousal Study" by Defendants, was funded and directed by Defendants through the International ETS Management Committee (IEMC) in order to challenge the association between lung cancer and spousal smoking reported in the Hirayama study. Blackie WD, 54:17-19; 2023522351-2352B (US 75127) (A). As detailed below, the study was not only closely managed by Defendants, but also falsely concluded that "high misclassification rates in Japan . . . undermine conclusions from epidemiological studies conducted there."

1025. On April 5, 1991, Covington & Burling's Chris Proctor proposed to Defendants a study of misclassification (misreporting of smoking status) among Japanese women married to men who smoked. Charles Green at Reynolds sent the proposal to Bob Pages and Tom Osdene at Philip Morris with the message: "We need to get our international folks involved in the funding." 2023544450-4455 (US 22817) (O).

1026. Proctor's proposal for what later became the Japanese Spousal Study was presented to the CIAR Board of Directors for funding. The proposal called for a payment of $45,000 to Covington & Burling for Proctor's "supervision . . . of all phases of the study, including the preparation of a publishable report." 87802262-2263 (US 56329) (A); 2023544450-4455 (US 22817) (O).

1027. According to an April 15, 1991 Philip Morris e-mail from Bob Pages, a member of the CIAR Board of Directors, to Steve Parrish, the proposal as presented by Proctor called for two Japanese investigators to serve as co-authors, but that Proctor would be "a 'behind-the-scenes study director." 2023544456-4456 (US 22816) (A).

1028. Concealing Defendants' involvement - both as to funding and authorship - was critical. Pages recommended the following to Parrish in his April 15, 1991 e-mail:

> Three concerns: 1) This is NOT a project that should be funded by CIAR, **although there MAY be (I'm not convinced yet) a reason to say it was sponsored by CIAR so as to "hide" industry involvement (as was done in Rupp's "Asia Project")**. 2) Proctor (and his fee) may be necessary to help get this done - at least he has the "hands on" experience with a similar study done in the UK - but this should be a Japanese study: **Proctor should not be a coauthor on any publication that comes out of it.**

2023544456-4456 (US 22816) (A) (emphasis added).

1029. While the project was still under consideration by CIAR, the discussion among Defendants extended over to other side of the Atlantic and the IEMC. BATCo's Sharon Boyse (Blackie) commented in a June 19, 1991 memorandum to other members of the IEMC (including representatives of Philip Morris, Reynolds, and Brown & Williamson in the United States) that:

> In the meantime, were we only to support one project we would support the Japanese one for the following reasons:
>
> - **Independence**. Although I accept many of the points made in [Rothmans'] Barry Frost's memo, the fact is that with Hazleton

> [laboratories], the tobacco industry is directly paying for the research, whereas **the Japanese study could be channeled through an 'independent' organization such as CIAR.** No matter how good the science, independence is always preferable, and in fact BAT made the decision to discontinue part of its in-house research on ETS for this very reason.

507974107-4109 (US 24730*) (A) (emphasis added).

1030. Ultimately the project was not funded through CIAR; instead, "independence" was achieved by using industry consultants and law firm supervision. Industry funding was agreed upon through the IEMC, using two Japanese consultants recruited by Covington & Burling as part of Defendants' Asian ETS Consultancy Program, with Proctor taking a direct role in every stage of the study. The plan was to avoid affiliation with the funding companies to the greatest extent possible. Boyse wrote her boss at BATCo Ray Thorton in a June 17, 1991 memorandum titled "IEMC ETS Research Projects" that:

> It was therefore decided by all companies to fund the project. The research will be carried out by two Japanese scientists who have been recruited by Covington and Burling as part of the Far East ETS project, and who are therefore in no way associated with the tobacco industry. The project will be monitored by Covington and Burling, with Chris having a direct involvement in assessing methodology and progress. Regular verbal progress reports will come from Chris.
>
> Peter Lee will also be involved in advising on certain aspects of the project. However, neither Peter nor Chris will appear as co-authors.

300512244-2245 at 2245 (US 67752) (A).

1031. This document also recorded that all members of the IEMC participated in the funding of the Japanese Spousal Study at an original cost of $200,000 as follows: Philip Morris ($36,000), Brown & Williamson ($36,000), Reynolds ($36,000), BATCo ($36,000), Rothmans ($36,000), and Imperial ($20,000). 300512244-2245 at 2245 (US 67752) (A).

1032. The Japanese Spousal Study was carried out under Proctor's direction. Pages provided Parrish an update of the progress in an e-mail dated November 8, 1991. This message disclosed another major aspect of the study that would, like Proctor's involvement in directing the study and drafting the report, eventually be concealed in the published paper: although the samples for the study were obtained in Japan, analyses of the samples were done on the other side of the globe at Reynolds' lab in Winston-Salem. Pages wrote:

> Spoke with Chris Proctor to get an update.
>
> Study seems to be moving along surprisingly quickly. . . Frozen urine samples will eventually be sent to RJR for analysis. . . .
>
> Proctor expects to return to Japan shortly to check on the distribution of subjects . . . . He would like to be back in Tokyo to begin drafting a report by mid-December.

2023544508-4508 (US 22913) (A).

1033. Reynolds scientist Mike Ogden admitted at trial that the testing of the samples for the Japanese Spousal Study was in fact carried out at his lab. Ogden TT, 3/17/05, 15982:8-22. The testing at Reynolds is also confirmed in a December 17, 1991 Reynolds laboratory report, establishing that the sampling results were provided directly to Ogden. 508217791-7793 (US 92094) (A).

1034. Ogden admitted at trial that the Japanese Spousal Study "was important to [his] company because [his] company needed to undermine the data reported in the Hirayama study." Ogden TT, 3/17/05, 15977:12-19.

1035. The Japanese Spousal Study ran into problems when the Japanese investigators recruited by Proctor refused to cooperate, forcing Defendants to use both Proctor and long-time industry consultant Peter (P.N.) Lee to write and publish the paper. According to a May 18, 1993 Philip Morris summary of an IEMC meeting, Proctor related the following as part of his

presentation to the group:

JAPANESE SPOUSAL STUDY IEMC

* * *

PAPERS

1. Lee did the statistics.

2. the Japanese scientists have "drifted away" from Proctor; the paper will be published but will be much weaker than Peter Lee's previous draft.

3. Proctor has written a paper and has sent it to them for their review

4. Peter Lee could still publish his paper w/o Japanese

5. neither draft recognizes no [sic] funding source nor that RJR did the analyses

6. Proctor - some concern that the Japanese scientists will talk about the tob. Industry involvement.

7. one of the Jap. Scientists is "lost completely" (Nigawa sp?) but Yano is still close to Proctor

2501003237-3242 at 3239-3240 (US 22320) (A).

1036. Yano, the remaining Japanese researcher recruited by Covington & Burling, backed out soon thereafter, forcing Defendants to look to Lee as the author for the study. 2023544546 (US 22925) (A).

1037. Philip Morris IEMC representative Helmut Reif wrote in his June 24, 1993 "Monthly Activities" that the Japanese scientists had become "uncomfortable" with Lee's conclusions. 2028372583-2596 at 2595 (US 22926) (A).

1038. A later Philip Morris report from Helmut Reif recorded that one of the Japanese consultants recruited to be an author voiced his belief that the findings were not supported by the

data, that Lee had changed the data in a rewritten paper, and that he felt "threatened" by the tobacco industry. The following is an excerpt from Reif's November 29, 1994 "Monthly Activities" report:

> (1) Japanese Spousal Study
>
> History:
> A[dlkofer] visited together with Wynder the Japanese author on behalf of the spousal study. **(Authors refused to publish under their name, PNL [Peter N. Lee] rewrote it**, editors of "Preventive Medicine" found it not matching their journal, Int.Arch.Occ.Med, Adlkofer took it over, however, had hesitations. Prof. Feinstein wanted answers to some detailed questions before publishing it).
>
> Results:
> Author Yano reported that he was shown around to several ETS conferences by Proctor and afterwards Proctor withdrew. **Author never thought he would have to publish this study and distanced himself from the paper by the following arguments:**
>
> (a) **Misclassification was not 30% - PNL calculated on the basis of active smokers, not on the basis of passive smokers - but only 10%, and this was counterbalanced by a similar misclassification from the other side** - nonsmokers wrongly claiming to be smokers.
>
> (b) **He feels threatened by the industry** . . .

2028372914-2915 at 2915 (US 22324) (A) (emphasis added).

1039. After the Japanese authors backed out of the project, the paper (now listing Lee as the author) remained unpublished through 1994. The *British Medical Journal* and the *American Journal of Epidemiology* rejected the paper for publication. Blackie WD, 62:21- 63:4; 2024210654-0658 (US 22866) (A).

1040. The *American Journal of Epidemiology* (AJE) rejected the paper on the basis of flaws that, it its view, could not be remedied. For example, one reviewer wrote: "The response rate of 33% is abysmal by any standards." The editor-in-chief informed Lee in his May 17, 1994

letter :

> Both reviewers found the overall response rate of 33% to be unacceptable, particularly since generalizations are made to population-based studies. Furthermore, the sampling approach is not adequately described and a "semi-random" approach may not be unbiased. Can the results obtained in the 1990s be extrapolated to the reported studies, particularly the cohort study of Hirayama in which the smoking information was collected decades earlier?
>
> The reviewers also questioned the basis of the estimation of the misclassification bias and the criteria used to select the factors that you considered as potential confounding factors. Both reviewers identified a number of other limitations of the manuscript, including errors in the tables and possible miscalculations. Given the low response rate, revision would not address the principal concern of the two reviewers.

2024210654-0658 at 0654 (US 22866) (A).

1041. One peer-reviewer for the AJE questioned the primary conclusion of Lee's paper, namely that the misclassification he found would have biased Hirayama's results higher. In reality, Lee's data (if accurate) would have biased the observed risks lower (a negative bias). *This peer-reviewer's comments mean that Hirayama's observed risks would have been higher if the misclassification bias found by Lee were correct and taken into account*. This suggests that Lee falsely stated that his conclusions were supported by the data, when in fact they were not:

> Even if the results of the current study are deemed valid and generalizable, the conclusions as summarized in the abstract are not supported by the data generated in the study. . . . Smokers married to non-smokers were significantly more likely to lie about their smoking status than were smokers married to smokers (64% versus 17%, P=0.002). **Thus the bias implied by the actual data generated in this study is a negative bias, which does not support the statements in the abstract to the effect that results from passive smoking studies in Japan are invalid and that the increased risk reported is probably due to bias from smoking misclassification** (i.e., smokers lying about their smoking status). Of course, the finding that smokers married to non-smokers are more likely to lie is no more reliable than any other finding in this study given the low response rate.

(emphasis added) 2024210654-0658 at 0655 (US 22866) (A). See also discussion of bias above at US FF § III.A(2)(b)(ii).

1042. In fact, Lee himself stated in the abstract of this unpublished version that: "Major findings were that over 30% of smokers (judged by cotinine) denied smoking, a much higher rate that reported in Western studies; **denial rates were higher for women married to non-smokers**" rather than for women married to smokers. Accordingly, as noted by the AJE reviewer, Lee's data supported the exact opposite conclusion than what Lee claimed in his abstract; the data actually supported the conclusion that the reported risks in the Japanese studies would be even higher but for the smoking misclassification. 2024210632-0652 at 0634 (US 22865) (A) (emphasis added).

1043. Lee sent the rejection letter and reviewers' comments under cover letter dated May 23, 1994, to Proctor (with copies to executives at Imperial Tobacco and Gallaher) with a recommendation that the paper be rewritten. 2024210653-0653 (US 22867) (A).

1044. Notwithstanding the warnings of both the American Journal of Epidemiology and one of the industry's own ETS consultants who assisted with the study (Yano), Lee clung to his false conclusion that misclassification bias could explain the raised lung cancer risks reported in Japanese epidemiological studies. Adlkofer's *International Archives of Occupational and Environmental Health* published Lee's Japanese Spousal Study paper in April 1995. The paper falsely concluded that high rates of misclassification "undermine conclusions from epidemiological studies conducted" in Japan. 9000006054-6061 at 5054 (US 57902*) (A).

1045. The final published version of Lee's Japanese Spousal Study paper concealed the fact that "denial rates were higher for women married to non-smokers." In other words, not only did Lee and Defendants publish a study they knew was false, they concealed the information that

would have allowed readers to determine that the conclusions were not supported by the data. 9000006054-6061 (US 57902*) (A).

1046. Lee's paper acknowledged only the "financial support from several companies of the tobacco industry." However, the paper omitted the following facts:

> The proposal for the project was written by BATCo scientist and Covington & Burling analyst Chris Proctor;
>
> The analyses of the samples collected for the study were performed by a cigarette manufacturer, namely Reynolds;
>
> The project was directed by Proctor who even assisted in the drafting of the paper;
>
> The study originally included two Japanese authors recruited by Proctor who later refused to publish the study under their names; and
>
> The project was initiated by cigarette manufacturers with the express intent to undermine the Hirayama study.

9000006054-6061 (US 57902*) (A).

1047. Defendants and their consultants then cited Lee's conclusions from the Japanese Spousal Study in support of the industry position that there were no proven health effects associated with ETS, the epidemiology was flawed, and the question was still open. The original plan had been to generate a paper "to undermine Hirayama conclusions in time for the EPA [Risk Assessment]." 2023522351-2352B (US 75127) (A). However, because the project was not completed and published until 1995, it was instead used in connection with the 1994 - 1995 OSHA proposed rulemaking. At the request of the Tobacco Institute, Lee submitted comments dated July 1994 and November 1995 to OSHA. Lee asserted in his comments that he was only "an Independent Consultant in Statistics and Epidemiology, providing advice to a wide range of clients, including the tobacco industry." He then cited the Japanese Spousal Study as support for

his opinion that misclassification bias is a major flaw in Japanese epidemiological studies. TIBR0006738A-TIBR0006754 at 6750 (US 62553) (A); TIBR0000567-0590 at 0568 (US 85817) (A).

(ii) The 1989 Malmfors/SAS Airline Study

1048. Industry ETS consultant Torbjorn Malmfors and other Swedish consultants published a paper in 1989 titled "Air Quality in Passenger Cabins of DC-9 and MD-80 Aircraft" in industry consultant Roger Perry's journal *Environmental Technology Letters*. The paper measured several ETS components in the passenger cabins of SAS airline flights and concluded: "The total exposure to cabin air ETS among the passengers is rather small and insignificant in comparison to total life exposure to air pollution" and that an effective ventilation system could maintain air quality in airline cabins. 87630985-1000 at 0998 (US 23522) (A). Internal documents predating the published paper reveal that Malmfors obtained results showing that separation of nonsmokers did not significantly reduce potential health risks caused by smoking, and that Defendants changed the results and conclusions to make the paper support their position.

1049. A number of documents detail how the Malmfors/SAS study was directed, funded, and managed by Defendants and their lawyers to (1) conceal Defendants' funding and control and (2) manipulate the results to more clearly support the industry's position disputing the health risks of passive smoking; and (3) generate a study that could be used to resist airline smoking restrictions.

1050. John Rupp wrote Stig Carlson at Philip Morris on April 2, 1987, and reported that he had successfully recruited Malmfors to work for Philip Morris and form a "scientific advisory group." Rupp advised that Malmfors "does not believe that any adverse health effects [of ETS] have been shown" and was ready to take the "next step in the process" and meet with the tobacco

industry directly. 2023543320-43321 (US 90036) (O). Malmfors was later listed in a May 18, 1988 memorandum from Philip Morris's Andrew Whist to Bill Murray as one of the company's ETS consultants. 2023034933-4946 at 4939 (US 87334) (A).

1051. In the late 1980s, the issue of airline smoking restrictions was becoming more and more critical to Defendants. In 1986, Congress requested a report by the NRC to the FAA concerning the smoking sections on airplanes. In that report, "The Airliner Cabin Environment: Air Quality and Safety," the NRC recommended "a ban on smoking on all domestic commercial flights, for four major reasons: to lessen irritation and discomfort to passengers and crew; to reduce potential health hazards to cabin crew associated with ETS; to eliminate the possibility of fire caused by cigarettes; and to bring the cabin air quality into line with established standards for other closed environments." JD-024863 at 6-7 (A). This recommendation was followed by legislation in 1987 directing the Secretary of Transportation to restrict smoking on domestic flights with a scheduled flight time of two hours or less. 2501042537-2541 at 2537 (US 89402) (O); see 29 U.S.C.S. App. § 1374(d).

1052. SAS airlines announced in late 1987 that it was planning to ban smoking on domestic Swedish flights as a test in the summer of 1988. Finnair had already decided to ban smoking on all domestic flights and permit only smoking breaks on international flights. 2501042537-2541 at 2537 (US 89402) (O).

1053. Philip Morris decided in 1988 to carry out its own airline cabin testing for ETS, with the objective to "persuade the management of airlines to adopt policies which permit smokers to enjoy cigarettes during flight." Philip Morris's Mary ("Mopsy") Pottorff was assigned to be project leader, Rupp was tasked to select researchers to participate in the study. 2501042537-2541 at 2537, 2539 (US 89402) (O).

1054. Philip Morris elected to finance the SAS study through CIAR in order to hide tobacco industry involvement and add credibility to the study:

> The official funding of IFAQ [in flight air quality] research can be the Center for Indoor Air Research (CIAR) in Washington, D.C. There are two benefits from this vehicle, namely all contributions to fund the research can be processed by CIAR staff & CIAR can then be correctly named as a sponsor of the research - which will diminish the effectiveness of the antis PR efforts to challenge the credibility of the research.

2501458517-8519 at 8518 (US 25615) (O).

1055. In a July 5, 1988 memorandum to Philip Morris's Andrew Whist in New York, Pottorff wrote that SAS had agreed to permit the air cabin testing and that the project would be funded by Philip Morris, Reynolds, and the Swedish manufacturers association. Pottorff further advised that three industry consultants would participate in the study, and that the air samples would be tested at a Dutch laboratory called TNO. Malmfors would then author the paper with the other two consultants. A September 2, 1988 letter from interim CIAR director Guy Oldaker to Chris Proctor stated that BATCo was funding the project with the other companies. 2501042534-2535 (US 90037) (O); 508220128-0128 (92022) (A).

1056. Industry control of the project was intense even before the test samples were taken. A four-hour meeting was held in Stockholm on August 30, 1988, between industry representatives (Pottorff (PM), Gaisch (PM), Oldaker (RJR), Vello Norman (Lorillard) and Rupp) and the Swedish consultants (Malmfors, Thorborn, and Westlin) to plan the project. Pottorff had prepared the project design for the consultants. The statistical tasks to be carried out by the consultants were set out by Oldaker. Gaisch and other Philip Morris scientists had located and were "coaching TNO scientifically from the earliest stages to the very last stages of the project." The resulting paper could be published in industry consultant Roger Perry's journal

Environmental Technology Letters; in addition, Malmfors would present his findings to the CIAR Board of Directors prior to publication. 87774866-4870 at 4866, 4868 (US 90039) (O); 508220001-0003 (US 90040) (O); 2501042601-2602 at 2602 (US 90041) (O).

1057. The Dutch laboratory TNO took air samples aboard a number of SAS aircraft during the month of September 1988. TNO analyzed the samples for ETS components and prepared a "Confidential" report of its results to CIAR dated December 16, 1988. This report included an "Analysis of the Results" section (pages 20 - 42) where the authors concluded that the particulate and carbon dioxide levels on the SAS aircraft were not only high, but exceeded WHO and hygienic standards on many of the flights. The authors also found that there was little difference in ETS and air quality between the smoking sections and one of the nonsmoking sections, suggesting that separation of smokers and nonsmokers was inadequate. 89816305-6347 at 6343-6346 (US 90043) (A).

1058. Gaisch recorded in his October 1988 monthly report that he had seen the TNO data, and noted that the high carbon monoxide levels were "an indication that the air in the aircraft cabin does by no means meet the ASHRAE standards (US norm for quality of indoor air)" and that the separation of smokers and nonsmokers was "nearly immaterial" to the air quality. 2501152077-2091 at 2088-2089 (US 25597) (A).

1059. Defendants' reaction to the adverse findings in the TNO report was swift. Meetings were held on January 3 and 4, 1989 at Covington & Burling to discuss the report, the first with Philip Morris executives, the second with scientists from Lorillard and Reynolds, along with the three Swedish consultants and Max Eisenberg. At the morning meeting on January 3, the group agreed that "the RSP data was unexpectedly high" and that the testing pads should be reanalyzed at a laboratory in the United States: "There was no definite knowledge of the impact

of three months aging, **although it was felt it could only lower the numbers**." 2501255448-5448 (US 90046) (O) (emphasis added).

1060. At the afternoon meeting on January 3, 1989, Malmfors and the other two consultants discussed their statistical analysis and observations. The industry group "was not too comfortable with the way Malmfors had presented the data." They therefore asked Rupp to talk to Malmfors about a "better approach." On January 4, "Rupp reported that Malmfors was agreeable to such an approach." 2501255448-5448 (US 90046) (O).

1061. In his handwritten notes of the January 3, 1989 meeting at Covington & Burling, Tom Osdene wrote that the report's "explanations" were "inappropriate," and that the solution was to "remove the discussion" section. 2023528894-8895 at 8895 (US 90035-Green) (A). In his notes of the January 4 meeting, Osdene wrote that the TNO report would be "discarded" and a "revised final version" would be prepared. 2023528896-8899 at 8898 (US 92036) (O).

1062. Helmut Gaisch's report of the meetings recorded the following:

> [I]t was decided by a majority that (1) the exposed filter pads should be sent to Dr. Max Eisenberg, CIAR, who will find a US-based laboratory to carry out the UV-PM analysis, (2) **All chapters of the narrative part of [the] TNO [report], going beyond mere description of the experimental part, should be eliminated**.

2501152038-2052 at 2044-2045 (US 90044) (A) (emphasis added).

1063. TNO prepared a second report for CIAR dated January 23, 1989. This revised report entirely eliminated the 22-page "Analysis of the Results" section from the earlier report. Thus, Defendants had secured the removal of all of the findings and conclusions adverse to the industry's position on ETS. 506848666-8687 (US 90047) (O).

1064. Defendants' actions to mold the Malmfors/SAS study did not end here. As recorded by Lorillard's Vello Norman in his notes of the February 2, 1989 CIAR Board of

Directors meeting, Defendants were concerned that Malmfors "need[ed] coaching as to what to say and how to say it." This was because the study showed that "Seat segregation, as practiced by SAS, is not very effective, and there is a danger that they might ban smoking altogether." Therefore, Malmfors draft paper would be sent to Rupp, U.S. industry consultants, and CIAR by February 3 for review. 87823747-3750 at 3749 (US 85695) (A).

1065. The "February 3" draft of the Malmfors paper described in Norman's notes and sent to Rupp and others for "coaching" has not been produced in this litigation. However, a second draft of Malmfors' paper was forwarded by Mary Pottorff to the CIAR Board of Directors and Rupp under cover memorandum dated March 16, 1989. This paper is very different from the prior TNO reports submitted to CIAR. 2023528820-8893 (US 92028) (O).

1066. Defendants were apparently still not satisfied with Malmfors' paper. Philip Morris's Helmut Reif summarized a meeting between Malmfors and industry representatives (including Pottorff, Proctor, Green, Reif, and Covington & Burling attorney Charles Lister) in Stockholm on March 21, 1989, where Malmfors presented his revised findings. Industry representatives apparently tried to pressure Malmfors to change his results even further, at which point the following occurred:

> As the discussion got too tight, Malmfors said that he would not change his opinion, but there were other experts who could do his job. By the way, one should not smoke on an airplane.

2028364552-4554 at 4552 (US 90036-Green) (A).

1067. Despite Malmfors' apparent resistance, a comparison of the March 16, 1989 draft (2023528820-8893 (US 92028) (O)) and the published Malmfors paper (87630985-1000 (US 23522) (A)) reveals that further changes were made to make the paper even more favorable to the industry. For example, the March 16 draft stated: "Any possible health effects for passengers

would have been least likely in the business non-smoking (BNS) section, while any such effects in the tourist non-smoking would have been closer to those in the smoking section." This statement was deleted from the published paper. The March 16 draft contained the conclusion: "Even if the levels in some instances were relatively high, the total exposure to cabin air ETS is rather small and insignificant in comparison to total life exposure to air pollution." The first clause of this conclusion was deleted from the published paper. The attribution to CIAR, made in the introduction in the March 16 draft, was moved to the end in the published paper. The published paper also added the misleading claim: "The authors have served as consultants to CIAR." In reality, Malmfors and his listed co-authors were consultants *to Philip Morris*, not CIAR. 2023528820-8893 at 8821, 8863, 8868 (US 92028) (O); 87630985-1000 at 0999 (US 23522) (A).

1068. Many of the documents above describe how John Rupp and Covington & Burling, along with industry scientists, played an important role in the drafting of the Malmfors/SAS paper. In addition, a Covington & Burling bill to CIAR for the first quarter of 1989 (January 1 - March 31, 1989) included a $15,755 charge for the following work, among other items:

> [C]ontinued work in connection with the SAS project, including consulting with Professor Malmfors and others in Washington and Stockholm concerning their research report, consulting with the Executive Director and Company scientists concerning the draft report and related matters, and editing the draft report . . . .

2023526960-6960 (US 90049) (A).

1069. The Malmfors/SAS project was funded through CIAR at a cost of $638,806. 2505442777-2960 at 2861 (US 25643*) (A). While the published paper did acknowledge the funding from CIAR, there was no mention of the source of CIAR funds, or the involvement of tobacco industry scientists and lawyers in the planning, management, and execution of the study,

as well as the writing of the published paper. 87630985-1000 (US 23522) (A).

1070. The Malmfors/SAS paper was cited by Defendants in submissions to regulatory agencies, including the Federal Aviation Agency, in support of its position that no regulation of smoking in aircraft was required beyond separation of smokers and nonsmokers. 2024191369-1381 at 1375-1376 (US 89401) (A); 2023216588-6626 at 6594 (US 87407) (A).

1071. Industry consultants HBI and Gary Huber cited the Malmfors study to the EPA in opposition to the ETS Risk Assessment. 87653565-6820 at 4753-4763 at 4762, 5519-5548 at 5323 (US 88596) (O).

(iii) The 1992 HBI 585 Building Study

1072. In 1989, CIAR funded a project by industry consultant "Gray" Robertson and HBI (see supra US FF § III.A (2)(h)(vii)) to assess indoor air quality and ETS in offices. The project cost $138,387 and resulted in the 1992 published paper "The Measurement of Environmental Tobacco Smoke in 585 Office Environments" (the "585 Building Study"). The paper concluded that ETS components in "typical office workspaces" were lower than had been previously reported, supporting Defendants' position that ETS was an insignificant contributor to indoor air quality and that good air quality can be achieved with adequate ventilation. 2505528777-8786 at 8786 (US 20572) (A); 2505442777-2960 at 2895 (US 25643*) (A).

1073. Because of falsified data, missing data on the height of rooms, failure to measure air exchange rates, and improper categorization of smoking areas and nonsmoking areas as separate rooms when the rooms were in fact contiguous, the HBI paper misrepresented the differences in indoor air quality between nonsmoking, light smoking, and heavy smoking rooms and improperly speculated that the lack of significant differences could be attributed to adequate ventilation.

1074. HBI field technician Gregory Wulchin testified at trial that he conducted a number of the ETS inspections underlying HBI's published 585 building study. Wulchin WD, 6:13-7:1. Wulchin examined eight of his ETS field reports that were included in the data underlying the published paper and found that false data entries had been made. Wulchin WD, 7:2-13:12; TLT0600139-0217 (US 65101) (A). Wulchin testified that at least one of his data sheets had been altered by Robertson. Wulchin WD, 3:21-5:16; TLT0600139-0217 at 0154 (US 65101) (A); Wulchin TT, 11/3/04, 4855:5-4859:10. Wulchin identified similar errors transposing several other data recordings that had been made by other HBI technicians. Wulchin WD, 13:13-16:14. In addition, Wulchin testified that the readings in two of his field reports demonstrated unacceptably high levels of particulate from cigarette smoking in rooms where there was good ventilation. Wulchin WD, 16:19-17:8. As a result of these irregularities and others, Wulchin testified, "My experience with HBI data as well as [my] review of HBI reports, leads me to conclude that HBI's data contained unexplained entries that raise serious questions about the integrity of its studies." Wulchin WD, 17:9-14.

1075. After the 585 Building Study was published, the results and data were the subject of a 1994 Congressional examination. Robertson WD, 89:4-8; 2047330959-0981 (US 38593) (O). The Subcommittee on Health and the Environment obtained HBI's then-existing ETS data forms and compared them to the data that was submitted in an interim report to CIAR. Robertson WD, 90:10 (Robertson "submitted the field notes that we had on file at that time."); TLT0600053-0084 (US 65097) (A), (interim submission to CIAR).

1076. Discrepancies were identified that would have affected the levels of ETS reported by HBI's study. HBI employees also confirmed that their data collection forms were often changed to minimize measurements of ETS.

> It is my belief that there were other instances in which HBI reduced field measurements of high levels of particulates in rooms where smoking occurred...
>
> I conducted a number of tests summarized in the CIAR report. My review of the report indicates that HBI mischaracterized and made numerous alternations in the data I collected.

Wulchin WD, 3:11-20, 5:2-13; TLT0600139-0217 at 0140 (US 65101) (A).

1077. Some of the criticisms made by HBI employees and tobacco industry scientists about HBI methodology were also made by James Repace, EPA, and Alfred Lowery, Naval Research Laboratory, widely published authors on ETS and indoor air quality, in a 1992 letter to the editor shortly after the 585 Building Study was published. For example, from the data provided in the paper, Repace and Lowery were able to determine that HBI took measurements of smoking areas within larger rooms, and HBI did not report the volume of any rooms in which readings were taken. 2505583630-3641 (US 85640) (A).

1078. In addition, Repace and Lowery criticized the lack of science underlying the study: air exchange rates were not reported; the number of buildings was not reported; the locale of the buildings was not reported; the types of buildings were not reported; the ages of the buildings were not reported; the types of air handling systems were not reported; the time of year recordings were made was not reported; the proximity of the detector to smokers was not reported; and there was no discussion of or comparison with earlier findings, as would normally be the case in scientific studies. 2505583630-3641 (US 85640) (A); see also VXA1601456-01742 at 1651-1652 (US 64059) (A) (1984 Surgeon General's Report, stating number of cigarettes burned, the size of the room, the effective ventilation rate, and smoke residence time are all important variables in determining levels of secondhand smoke exposure); VXA2110670-1053 at 0823-0826 (US 63709) (A) (1986 SGR).

1079. The importance of the variables discussed by Repace and Lowery were also emphasized by company scientists evaluating a later HBI proposal. 87776361-6362 (US 56325) (A); 87776358-6359 (US 56324) (A); see also TIOK0023880-3883 at 3881 (US 85608) (A).

1080. Indeed, on July 12, 1995, three years after the study was published, even Robertson reluctantly admitted to OSHA that "10 out of 585 data sets used in the original paper" had been struck out and not used in a version of the paper that was rewritten after the original study was published, and after the allegations of scientific fraud were investigated by Congress. 2505533424-3425 at 3425 (US 86720) (A).

1081. Defendants themselves recognized the flaws in Robertson's scientific methodology. In April 1991, even before the allegations of scientific fraud publicly surfaced the following year (2070332077-2104 (US 85627) (A)), CIAR Board members Spears (Lorillard), Green (Reynolds), and Pages (Philip Morris), discussed a proposal by HBI to gather additional data related to ETS and indoor air quality. CIAR rejected funding the proposal because it lacked scientific merit. 87776361-6362 (US 56325) (A); 87776358-6359 (US 56324) (A).

1082. Despite the evidence of scientific fraud, in March 1992 the Tobacco Institute cited the 585 Building Study as scientific authority in opposition to OSHA's IAQ Rule. TI02120021-0098 at 0035 n. 32 (US 65685*) (A); see also (JD-023792 at 91) (A), (Reynolds' 1992 OSHA submission).

1083. The published paper on the 585 Building Study acknowledged, "Funding for this work was made available in part by the Center for Indoor Air Research, Linthicum, Maryland." (US 20572) (A). As detailed above (see supra US FF § III.A (2)(h)(vii)), this statement does not provide the reader an accurate picture of Robertson/HBI's dependent relationship on the tobacco industry.

1084. As recently as 2000, the paper was cited by industry consultant Roger Jenkins. (no bates at 49) (JD-065013) (O); BR2000545-0785 at 0658 and 0670 (JD-065024) (A).

1085. As late as April 1998, Robertson and HBI continued to act on behalf of Defendants in connection with secondhand smoke and indoor air quality issues. 2072439561-9564 (US 41540) (A). Robertson, a small business ventilation duct inspector in Fairfax had become a worldwide spokesman for the industry's message on indoor air quality. TLT0860122-0129 (US 87341) (A).

(iv) The 2003 Enstrom/Kabat Study

1086. Defendants' efforts to generate industry-favorable ETS science to create a controversy and somehow transform the issue of whether ETS causes disease into an "open question" continued into 2003, when a CIAR-funded and managed study was published in the *British Medical Journal*. James Enstrom's May 2003 article, "Environmental tobacco smoke and tobacco related mortality in a prospective study of Californians, 1960-1998," concluded that the association between ETS exposure and lung cancer and CHD "may be considerably weaker than generally believed." (no bates) (JD-024496) (A).

1087. The Enstrom/Kabat study seemed like a coup for Defendants who not only touted the study publicly, but used it in this Court (1) to assert that the question of whether ETS causes disease is still an open one and (2) that Defendants' continued public statements disputing the scientific consensus were not fraudulent. Defendants Opening TT, 9/22/04, 0328:8-25; Bradley WD, 101:10-21.

1088. As shown below, the Enstrom/Kabat study is yet another self-serving, unreliable, and scientifically questionable product of the industry's unabated effort to attack the scientific consensus on passive smoking. Internal documents leading up to the funding decision by CIAR

suggest that Enstrom manipulated a data set that he and Defendants knew would produce an unreliable, yet favorable, result.

1089. At least two Enstrom proposals to perform statistical analyses on data from CPS I were sent to the Center for Indoor Air Research (CIAR) for funding in 1996 and 1997. Enstrom's first proposal to CIAR was included under this cover letter dated July 15, 1996, to Max Eisenberg stating:

> For the past three years I have done consulting and research for Jeffrey L. Furr of Womble Carlyle on behalf of R.J. Reynolds and Philip Morris. This research has found a number of results that raise serious questions about several published findings on the relationship of passive smoking to lung cancer and other diseases.

2063610840-0841 at 0840 (US 85796) (A).

1090. Enstrom also stated in his July 15, 1996 letter to Eisenberg that his proposed CIAR research would "continue and expand upon" the research done for Womble Carlyle. 2063610840-0841 at 0840 (US 85796) (A).

1091. A June 25, 1996 Philip Morris e-mail from Marc Firestone to Richard Carchman stated that Enstrom did work for Philip Morris and Reynolds "in the context of the EPA litigation," and that one of his new proposals was "clearly litigation oriented" and should be "pursued, if at all, in the context of attorney work product." 2063610699-0699 (US 27128) (A).

1092. Thus, Enstrom had already proven his value to Defendants as a consultant to one of their law firms, and Defendants could reasonably expect that they were going to get more research and conclusions helpful to their position.

1093. The final proposal from Enstrom to CIAR is dated October 20, 1997 (see page 2), and resulted in funding of at least $525,000 from Defendants through CIAR. 566943549-3579 at 3550 (US 85813) (A); 2505442777-2960 at 2815 (US 25643*) (A).

1094. The October 1997 Enstrom proposal was not prepared without Defendants' input. An earlier version of the proposal had already been sent to Philip Morris's secret overseas laboratory INBIFO for comments in October 1996. 250100107-0112 (US 92034) (A). The CIAR Scientific Advisory Board, the group held out by Defendants as the independent reviewers of research funded through CIAR, was left out completely. Max Eisenberg, the former and only executive director of CIAR, testified that he did not forward Enstrom's proposal to INBIFO, he had no idea how it got there, and he never even saw the comments from INBIFO. Eisenberg TT, 11/15/04, 5938:1-5939:9.

1095. The November 1996 minutes of the CIAR Board of Directors reveals that the Board discussed the Enstrom proposal, and that Philip Morris lead scientist Richard Carchman and Reynolds lead scientist Charles Green (two members of the CIAR Board) visited Enstrom at UCLA to discuss the proposal with him personally. 2063650515-0518 at 0515 (US 79212) (A).

1096. Enstrom wrote a January 15, 1997 letter following up on his proposal, not to CIAR or its SAB, but directly to Carchman at Philip Morris. He attached a protocol for a precursor to the study that was eventually published in 2003. This precursor study attempted to prove the hypothesis that there was a threshold dose for active smoking, below which there were no proven health effects. This would then undermine one of the rationales for biological plausibility for harm caused by passive exposure to tobacco smoke. This letter contains Enstrom's cryptic message making clear that he was prepared to do whatever was necessary to make his work favorable to the industry, as long as the tobacco companies were willing to pay for it. He wrote:

> A level of trust must be developed based on my past research on passive smoking and epidemiology in general in order to work out the best way for me to conduct this research. **A substantial research commitment on your part in necessary in order for**

> **me to effectively compete against the large mountain of epidemiologic data and opinions that already exist regarding the health effects of ETS and active smoking.**

2063654073-4073 (US 85811) (A) (emphasis added).

1097. According to the minutes of the May 15, 1997 CIAR Board of Directors meeting, CIAR played found a co-author collaborator for Enstrom, Geoffrey Kabat. Carchman, a member of the Board of Directors, attended the meeting. 517578187-8188 (US 85816) (A).

1098. By letter from Carchman dated April 25, 1997, Philip Morris agreed to fund a precursor study by Enstrom for $150,000. 2063610867-0867 (US 85787) (A). That same year, Enstrom received funding from CTR, via a letter that proposed paying him an additional $25,000 in addition to an ongoing CTR grant already in place. 40001769-1769 (US 85804*) (O).

1099. Defendants funded the Enstrom/Kabat project collectively through a 1998 contract with CIAR. The project was directly funded by the CIAR Board of Directors, all tobacco industry executives, as an Applied Project without any review by the CIAR Scientific Advisory Board. Defendants paid $525,000 for the project through CIAR. 83205526-5581 at 5538 (US 92033) (A); Eisenberg TT, 11/9/04, 5630:22-5631:8; 2505442777-2960 (US 25643*) (A).

1100. Enstrom's relationship to the tobacco industry expressed itself in other ways. For example, Philip Morris paid Enstrom to make a presentation at a June 2000 conference in Richmond on the health impact on smokers and nonsmokers from changes in cigarette design and use. 2073736520-6520 (US 27396) (O); 2073736523-6523 (US 85795) (O).

1101. The Enstrom/Kabat paper was published under the title, "Environmental tobacco smoke and tobacco related mortality in a prospective study of Californians, 1960-98," and appeared in the May 2003 issue of the *British Medical Journal*. TKT0500029-0038 (US 65086) (A).

1102. As originally planned, the researchers conducted a study using only California CPS I data to ascertain rates of reported cases of coronary heart disease, lung cancer, and chronic obstructive pulmonary disease for study participants identified as "never smokers married to smokers." The study yielded the following results: Never smokers married to smokers had a relative risk of 0.94 for developing coronary heart disease; 0.75 for developing lung cancer. Thus, according to the study, the relative risk of developing coronary heart disease and lung cancer *decreased* for never smokers married to smokers. Based on these results, the researchers concluded that there is no significant association between passive smoking and tobacco-related diseases in never smokers married to smokers. TKT0500029-0038 (US 65086) (A).

1103. The Enstrom paper was published in 2003 after the American Cancer Society had repeatedly warned him that using its CPS-I data in the manner he was using it would lead to unreliable results. Enstrom only used a small subset of the overall data, and, more importantly, the data corresponded to participants who enrolled in 1959, a time when exposure to tobacco smoke was common. This is critical when comparing, as Defendants had Enstrom do, lung cancer and CHD in spouses married to smokers versus spouses married to non-smokers. If a spouse married to a non-smoker gets lung cancer, that lung cancer could very well have been the result of exposure to ETS (for example at the workplace or socially), but Enstrom's study would not detect this, and his relative risk number would be lowered by this omission. See also discussion of bias above at US FF § III.A(2)(b)(ii). Moreover, no data was collected on the smoking status of the spouses from 1972 to 1999 at all. Enstrom used the CPS-I data anyway. TLT0961621-1623 (US 86735) (O); (no bates at 502-503) (JD-024502) (A).

1104. The study was roundly criticized in the scientific community, including this statement from the members of the 2002 working group on involuntary smoking and cancer for

the International Agency for Research on Cancer (IARC):

> Enstrom and Kabat's conclusions are not supported by the weak evidence they offer, and although the accompanying editorial alluded to "debate" and "controversy", we judge the issue to be resolved scientifically, even though the "debate" is cynically continued by the tobacco industry.

(no bates) (JD-024496) (A).

1105. Dr. Samet testified at trial that Enstrom's evidence was weak and that in any event, his conclusions were not supported by the evidence. Samet WD, 184:4-13; Samet TT, 9/30/04, 1245:18-1249:20.

1106. Defendants, of course, promoted the study. For example, BATCo even advertised the study on its website in October 2003, citing the report on its website in support of its position that "the claim that ETS exposure has been shown to be a cause of chronic disease is not supported by the science." BATCo stated that a "very large study published in the *British Medical Journal* in May 2003 on environmental tobacco smoke in the home has found no increases in risk for the key smoking related diseases." The website even provided a hyperlink to BAT's summary of the study:

> In our view, this is an important study which confirms that many of the estimates of the risks of public smoking are overstated in the extreme, and that considerable doubts remain as to whether ETS exposure is associated with any risk of chronic diseases such as lung cancer and heart disease. **We believe the study illustrates that calls for bans on public smoking cannot be justified on the basis of the suggestion of chronic health risk for non-smokers**, although of course we believe that the needs of non-smokers should be also catered for with solutions such as good ventilation.

ARG0412302-2303 (US 86747) (O) (emphasis added); TLT1020487-0488 (US 88461) (O).

1107. Counsel for Defendants argued that the 2003 Enstrom paper was evidence that all of Defendants' statements denying the health effects of ETS were made in good faith:

> And Your Honor, if it is fraud, as the government seems to maintain, to doubt the quantity and quality of evidence linking ETS to diseased non-smokers, the record will show that the defendants were in pretty good company. . . . In 2003, Your Honor, two scientists, Dr. James Enstrom and Dr. Geoffrey Kabat published a review article. They reviewed most of the literature on ETS. Their conclusion was, "It seems premature to conclude that ETS causes death from coronary heart disease and lung cancer."

Defendants Opening TT, 9/22/04, 0328:8-25.

1108. Defendants' statistician Edwin Bradley relied on the Enstrom paper in his written direct testimony submitted to this Court during Defendant' case-in-chief, in support of his opinion that bias and confounding explain the elevated observed risks in epidemiological studies finding an association between spousal smoking and lung cancer. Bradley WD, 100:36-101:21.

(l) The EPA Risk Assessment: A Case Study of Defendants' Use of Their ETS Products to Derail Public Health Conclusions

1109. On June 25, 1990, the EPA released for public comment its Risk Assessment of ETS-related lung cancer in adults. The Agency's draft risk assessment classified ETS as a Group A carcinogen and attributed approximately 3800 nonsmoker lung cancer deaths per year to ETS. 2046522986-3260 at 3002-3010 (JD-004716) (A). The June 1990 draft Risk Assessment followed the release of a draft "Compendium" of passive smoking data and information in November 1989.

1110. After a period of public review and comment, EPA issued its second draft of the ETS Risk Assessment or Review Draft in May 1992 entitled "Respiratory Health Effects of Passive Smoking: Lung Cancer and Other Disorders. 2504201767-2298X (JD-004717) (A).

1111. The EPA published the final ETS Risk Assessment in December 1992. The EPA concluded: "ETS is a human lung carcinogen, responsible for approximately 3,000 lung cancer deaths annually in U.S. nonsmokers." TLT0780160-0684 at 0175, 0180 (US 78711) (A).

(i) Defendants' Assault on the EPA and Its Risk Assessment

1112. In November 1989, EPA had requested that the Tobacco industry comment on a draft document entitled "Environmental Tobacco Smoke: A Compendium of Technical Information," a companion document to the upcoming ETS Risk Assessment. TI11951245-1685 at 1251 (US 85699) (A). In its February 1990 comments to EPA, the Tobacco Institute relied heavily on the McGill "symposium," holding out the "symposium" as an independent scientific conference by concealing that the event was funded and managed by the industry and its lawyers:

> In addition, we would like to point out that in November of this past year, a symposium on ETS involving some 80 scientists from 20 countries was held at McGill University in Montreal. The proceedings of the symposium reflect a thorough, up-to-date discussion of the relevant literature. **We believe that the results of this conference -- which concluded, overall, that ETS has not been shown to present a health hazard to nonsmokers -- should be carefully considered in further development of the EPA Compendium.** Accordingly, we are transmitting copies of the McGill proceedings for use by EPA and its consulting authors.

TI11951245-1685 at 1254 (US 85699) (A) (emphasis added).

1113. In support of its arguments opposing the compendium's conclusions, the Tobacco Institute also cited published papers by industry consultants Sterling, Kessler, Fleiss, Layard, Reasor, HBI, Robertson, Hood, Tollison, Wagner, Ecobichon, Wu, Gori, Turner, Holcomb, Weinberg Consulting Group, Viren, Lee, Koo, Kabat, Wynder, Eatough, Witorsch and Haley. Again, the Tobacco Institute created the impression of independence by not disclosing that it and the cigarette manufacturers funded and managed these consultants. TI11951245-1685 (US 85699) (A).

1114. On June 25, 1990, the day the EPA released its draft Risk Assessment, the Tobacco Institute publicly went on the attack. In its press release, the Tobacco Institute stated under the headline "DRAFT RISK ASSESSMENT DESCRIBED AS SPECULATION;

Underlying scientific foundation inadequate" that the conclusion that "ETS has been shown to be a cause of disease" was "contrary to fact." The Tobacco Institute then cited the McGill "symposium" findings, with no disclosure or attribution, as independent authority in support of its view:

> This very issue was recently addressed by a prestigious panel of scientists at an international symposium on ETS held at McGill University in Montreal, Canada. As the opening presenter to the risk assessment panel at the symposium emphasized:
>
> "The first order of business *** is for proper studies to be carried out with respect to a possible causal link between ETS and particular diseases. If studies justifying a causal inference were to become available, we could then employ the remaining steps in the risk assessment technique."

87697659-7664 at 7659, 7660 (US 85586) (A); Dawson WD, 135:18-137:3.

1115. The Tobacco Institute press release also quoted the statements of two unnamed researchers who spoke at the "symposium"; a comparison of the statements to the published proceedings confirms that the unnamed persons were Tobacco Institute consultants Alan Gross and Gary Flamm. Neither was identified as having an affiliation with the Tobacco Institute, even though both were consultants who were paid to attend the "symposium" as part of their consultancy. 87697659-7664 at 7660-7661 (US 85586) (A); Dawson, WD, 138:3-139:16.

1116. Within a month of the release of the Draft Risk Assessment, Tobacco Institute efforts were in full swing, not only on the Risk Assessment but also on the accompanying EPA Draft Policy Guidelines relating to smoking in the workplace. A Tobacco Institute Public Affairs Progress Report stated:

> We continued coordinating the industry's submissions on both draft documents with two member companies who plan to submit independent comments. . . .
>
> Editorials by scientific consultants criticizing the EPA ETS risk

> assessment in light of the findings of the McGill ETS symposium were published in the Detroit News, the Las Vegas sun and the Chicago Sun-Times. . . .

TI09911997-2033 at 2005 (US 22367) (A).

1117. Industry consultants were paid to prepare letters to the editor for publication in major newspapers attacking the draft Risk Assessment with the results of the McGill "symposium." As stated in the Progress Report quoted above, a number of these editorials/ letters were published. TI09911997-2033 at 2021 (US 22367) (A). By once again omitting industry attribution, the letters appeared to be independent. 1990 letters by Tobacco Institute consultant Jack Peterson in the Chicago Sun-Times, Las Vegas Sun and the Salt Lake Tribune, and by Tobacco Institute consultant David Weeks in the Richmond-Times Dispatch, all with no industry attribution, illustrate how Defendants publicly used the press to create seemingly independent opposition to the EPA. Dawson WD, 133:13-135:13; TI12201464-1465 (US 86722) (O) (Peterson letter titled "Passive smoking danger? Don't believe what you read"); TIMN343061-3061 (US 85582) (A) (Weeks editorial titled "The Facts About ETS"); TIDN0019217-9268 at 9228-9229 and 9232-9233 (US 85597) (A).

1118. As described below, the Tobacco Institute and other Defendants filed lengthy comments with the EPA on October 1, 1990, disputing to the conclusions of and evidence cited in the Risk Assessment and policy guide. In these submissions, Defendants relied on and presented the industry's carefully crafted ETS initiatives as seemingly independent science.

1119. The Tobacco Institute Submission. The Tobacco Institute's submission to EPA is dated October 1, 1990. 87653565-6820 at 3941- 3998 (US 88596) (O). The comments emphasize the findings of and papers presented at the McGill "symposium," as well as industry-funded papers by industry consultants Lee, Balter, Gori, LeVois, Mantel, Bacon-Shone, Lunau,

G.L. Reynolds, Viren, Fleiss, Gross, Wynder, Kabat, Reasor, Ecobichon, Wu, Gross, Kilpatrick, Todhunter, Perry, Kirk, Layard, Koo, Bieva and Witorsch, as well as the 1987 Tokyo conference and the 1988 "Perry" conference (organized by industry ETS consultant Roger Perry). 87653565-6820 at 3958, 3963-3967, 3969, 3972-3976 (US 88596) (O).

1120. The Reynolds Submission. The Reynolds EPA submission, also dated October 1, 1990, emphasizes many of the same industry consultant papers and industry-managed conferences, including: Koo, Witorsch, Kabat, Lee, Mantel, Kornegay, Kastenbaum, MacDonald, Layard, Viren, Kilpatrick, Butler, Rylander, the American Health Foundation (AHF), Adlkofer, Gori, Haley, Viren, Bieva, Sterling, Yano, Eatough, Proctor, Carson/Erikson (the paper ghostwritten by Reynolds scientist Guy Oldaker). 87654420-4485 (US 92098) (A).

1121. Oldaker and Paul Nelson were among a number of Reynolds scientists who wrote separate comments on the draft EPA Risk Assessment for the company. They similarly cited the industry's symposia and consultants in support of their opposition. Oldaker, the writer of the 1988 Carson/Erickson paper, repeatedly cited the paper as one of the authorities in support of his comments. 87653565-6820 at 4515-4531, 4604-4612, 4613-4618, 4619-4645 (US 88596) (O).

1122. The Philip Morris Submission. Philip Morris submitted comments to the EPA dated September 28, 1990. Like those of the Tobacco Institute and Reynolds, the Philip Morris submission cited to: Adlkofer, Haley, Robertson, Sterling, Kirk, Perry, Carson & Erikson, Proctor, Eatough, Jenkins, Kilpatrick, Viren, Koo, Lee, Ueberla, Mantel, Wynder, Kabat, First, Guerin, Schwartz, Balter, Aviado, Lunau, Rylander, Fustinoni, Kasuga, Katzenstein and Faccini, as well as several industry "symposia" and conferences. 2070140494-0630 at 0537-0553, 0595-0600, 0604-0608, 0611-0615 (US 88604) (O).

1123. In addition, Defendants also had a number of their consultants submit free-

standing comments to EPA in opposition to the draft Risk Assessment. The following "independent" scientists submitted separate comments to the EPA on Philip Morris's behalf, but did not disclose their affiliation with the tobacco industry in their comments to the EPA: Adlkofer; Aviado; Bridges; Bucci; Butler; Furst; Rutsch; Rylander; Schneider; Skrabanek; Springall; Sterling (individually and with Weinkam and Rosenbaum); Sullivan; Tweedie; and Ueberla. 2026127293-7298 (Adlkofer); 2026128531-8559 (Aviado); 2026129063-9064 (Bridges); 2026127908-7912 (Bucci); 2026135132-5136 (Butler); 2026128569-8575 (Furst); 2026128171-8176 (Rutsch); 2026127783-7790 (Rylander); 2026127753- 7760 (Schneider); 2023475720-5728 (Skrabanek); 2023128950-8981 (Springall); 2026127212-7236 (Sterling and Collett)); 2026128426-8477 (Sterling, Weinkam, Rosenbaum); 2026134124-4134 (Sullivan); 2026127923-8001(Tweedie); 2026127065-7102 (Ueberla) (US 92064) (A); 2026127628-7636 (US 85564) (O) (Crepat); 2081369202-9220 at 9205-9206 (US 27796) (A) (list of PM consultants); Parrish TT, 1/26/05, 11147:12-11148:22, 11160:22-11167:9.

1124. All of these submissions are separately addressed and bear individual EPA "Received" stamps, indicating that each was mailed separately by the consultants. (US 92064) (A); 2026127628-7636 (U.S. 85564) (O) (Crepat).

1125. Under cover letter dated September 28, 1990, industry consultant and McGill "symposium" co-host Donald Ecobichon separately submitted the proceedings of the "symposium" directly to the EPA, urging that EPA consider the conclusions of the participants; Ecobichon did not disclose any tie to the industry. 2026134978-4978 (US 87395) (O).

1126. One striking aspect of the submissions of Defendants' "independent" scientists is that not only were these individuals paid to make comments on behalf of the industry with no disclosure, but also that their submissions were reviewed and edited by industry lawyers prior to

submission. Shook, Hardy & Bacon billing statements show the depth of involvement by outside attorneys in the preparation, review, and revision of the consultants' submissions. According to the billing statement, Shook, Hardy billed the work to the ETS Witness Development account on behalf of Philip Morris, Brown & Williamson, and Lorillard. 680707970-7973 at 7970 (US 92065) (A); see also 2023590213-0299 at 0217-0220 (US 22818) (A).

1127. An August 15, 1990 letter from Rylander suggests that he worked with Philip Morris's Tom Osdene to prepare his comments to the EPA. 2023533777-3777 (US 85720) (O).

1128. Brennan Dawson admitted to working with several of the consultants to submit comments critical of the EPA Risk Assessment. Dawson TT, 1/12/05, 1008:5-17.

1129. In December 1990, EPA's Scientific Advisory Board held a public meeting to discuss the Draft Risk Assessment and the draft policy guide. 2040226083-6212 (JD-002884) (A). Again, the Tobacco Institute went on the attack with its "independent" scientists. That morning the Tobacco Institute issued a press release claiming that there were major flaws in the draft EPA Risk Assessment and Policy Guide. Critical comments by Tobacco Institute consultants Lee, LeVois, and Fleiss are quoted in the release. However, neither their affiliation with the Tobacco Institute nor the fact they were paid industry consultants was disclosed.

1130. The Tobacco Institute intended to create the false impression that a large number of scientists existed who, independent of the tobacco industry, opposed the EPA's proposed Risk Assessment. The press release was accompanied by 69 pages of background materials, including "an annotated list of scientific comments critical of the documents." The Tobacco Institute claimed that "dozens of scientists have challenged fundamental and technical aspects of the draft documents." 87697701-87697772 (US 85587) (A). In the words of Brennan Dawson, however, of the 59 scientists included on the list, "most of if not all of the scientists commenting would

have been retained by the industry." Dawson WD, 142:19-22, 143:9-19; Dawson TT, 1/12/05, 10008:5-10011-9.

1131. Not coincidentally, a number of the 59 scientists in the 1990 Tobacco Institute list were first identified by Sharon Boyse (Blackie) in her seminal memorandum documenting the February 17, 1988 presentation of the industry's ETS Consultancy Program to the British manufacturers, including Roe (UK), Leslie (UK), Faccini (France), Butler (UK), Brown, (UK), Daniel (UK), Bridges (UK), and Sullivan (UK). 401208386-8391 (US 29365) (A). Other long-time industry consultants on the Tobacco Institute press release list included Rylander (Sweden), P.N. Lee (UK), Cerioli (Italy), Skrabanek (Ireland), Malmfors (Sweden), Crepat (France) Sterling (Canada), Wu (Canada), Springall (England), Clayton (U.S.), and Goodfellow (Canada) and others like Adlkofer, Wynder & Haley of the American Health Foundation.

1132. In this way, as with the citations to the international consultants by the Tobacco Institute, Reynolds, and Philip Morris, and the separate submissions by the consultants themselves, Defendants made use in the United States of their larger international ETS program.

1133. Defendants also utilized third party entities to create a perception of another "independent" front against the EPA. Under cover letter dated October 15, 1990, Covington & Burling forwarded Lorillard a compilation of comments that were "filed by and on behalf of the tobacco industry" with respect to the draft ETS risk assessment and policy guide. The compilation contains submissions from various third party entities with varying document dates. For example, on October 1, 1990, the tobacco-industry funded Washington Legal Foundation filed comments on behalf of itself and twelve tobacco congressmen who opposed the EPA action. WLF also issued a news release to publicize their comments. Yet nowhere in the submission to EPA or in the press release does WLF acknowledge its industry funding.

87653565-6820 at 3567-3583 (US 88596) (O).

1134. These scientists submitted detailed comments, all parroting Defendants' views regarding the lack of necessity to regulate ETS, that there was still a debate regarding the risks of ETS, and that ETS was not a proven carcinogen. Another commonality among these submissions was that not one contained any acknowledgment that the comments were submitted on behalf of and paid for by the tobacco industry. The submissions also did not inform the EPA that these scientists and much of the works cited to in their comments were the fruit of a world-wide tobacco industry program which "financed the generation of knowledge" through the "mobilisation of a corps of scientific consultants and engineers." 2501474253-4259 at 4255 (US 22017) (A). Furthermore, neither the consultants nor Defendants disclosed the fact that tobacco industry attorneys were intimately involved in the preparation, review and revision of comments prior to submission.

1135. Defendants' assault on the EPA continued after the final EPA Risk Assessment was published in 1992. In 1993, John Luik was hired by CECCM to write a paper entitled "Pandora's Box: The Dangers of Politically Corrupted Science for Democratic Public Policy;" which attacked the Risk Assessment. Blackie WD, 132:19-133:10. Shook, Hardy & Bacon helped craft Luik's response to peer review criticisms after he submitted "Pandora's Box" to a journal for publication. 2024215189-5190 (US 37097) (A); 2025495375-5376 (US 89050) (A). In spite of this, and although Luik received funding from Reynolds, Philip Morris, and BATCo, neither the funding nor the industry support was acknowledged or disclosed in the paper, which was ultimately published in a Boston University alumni journal called *Bostonia*. 2025495237-5249 (US 89052) (A).

1136. The omission of attribution in the Luik paper was intentional. According to a

December 21, 1993 memorandum from CECCM Chairman John Lepere to Philip Morris's David Bushong and Matt Winokur, Lepere addressed a Philip Morris recommendation that consultants in the future disclose CECCM funding. Lepere responded:

> I consider that future decisions on disclosure would best be made, taking account of your company's recommendation, on a case by case basis as each arises . . . .
>
> The only recent project to which the recommendation would have been relevant in J.C. Luik's "Pandora's Box" project. **Although the decision was not recorded in the minutes of the meeting of our Working Group held on 9 June 1993, the Group then decided, without dissent, that credit should not be given to CECCM in any publication resulting from that project.** I confirmed accordingly to John Luik in writing on the following day. He submitted his paper shortly thereafter for peer-review for publication in the "Philosophy and Public Affairs" learned journal and it has also recently been part-published in the Bostonia magazine, in both cases without acknowledgment of CECCM's financial support.

2025495222-5223 (US 89049) (A) (emphasis added).

1137. In 1999, B&W funded a book by Luik and fellow industry consultant Gio Gori by funneling the money through a third party, the Fraser Institute. Blackie WD, 143:6-12. The book, entitled *Passive Smoke: The EPA's Betrayal of Science and Policy*, went so far as to allege scientific misconduct on the part of the EPA in conducting its Risk Assessment. JDX2781834-1954 (JD 067661) (O). The authors again did not acknowledge tobacco industry funding, and B&W never corrected their failure to disclose its financial backing. Blackie WD, 143:10-17.

(ii) The Substance of the Industry's Attack on the EPA Has No Merit

1138. Defendants devoted a significant amount of time at trial attempting to discredit the EPA's methodology and conclusions. See, e.g., Interim Summation TT, 9/20/04, 6499:25-6450:14. At the outset and as described previously, the 1992 EPA Risk Assessment is only one

of many authoritative reviews of the evidence, and only one of many authoritative conclusions that passive smoking causes lung cancer.

1139. The only "new" conclusion added by the EPA Risk Assessment was a quantification of the risk, that is, an estimation of the number of deaths that are attributable to passive smoke annually. DXA0390094-0699 at 0118 (US 88654) (A). For this reason, even if the Court were to discount and disregard the Risk Assessment, this would in no way diminish the overwhelming scientific consensus that ETS causes a number of diseases and adverse health effects, including lung cancer, or make Defendants conduct with respect to ETS any less fraudulent.

1140. The EPA Risk Assessment recited the scientific standard and the lines of evidence that EPA considered in determining that secondhand smoke was a Group A carcinogen. Except for examining six more years of scientific endeavor, the types of evidence that was evaluated by the EPA was the same type as that considered by the Surgeon General, the NRC, and IARC in 1986.

> The weight-of-evidence analysis for lung cancer hazard identification is developed in accordance with U.S. EPA's *Guidelines for Carcinogen Risk Assessment* (U.S. EPA, 1986a) and established principles for evaluating epidemiological studies. The analysis considers animal bioassays and genotoxicity studies, as well as biological measurements of human uptake of tobacco smoke components and epidemiologic data on active and passive smoking. The availability of abundant and consistent human data at actual environmental levels of exposure to the specific agent (mixture) of concern, allows a hazard identification to be made with a high degree of certainty. The conclusive evidence of the dose-related lung carcinogenicity of MS in active smokers (Chapter 4), coupled with information on the chemical similarities of MS and ETS and evidence of ETS uptake in smokers (Chapter 3), is sufficient by itself to establish ETS as a known human lung carcinogen, or "Group A" carcinogen under U.S. EPA's carcinogen classification system. In addition, the document concludes that the overall results of 30 epidemiological studies on lung cancer and

> passive smoking (Chapter 5), using spousal smoking as a surrogate of ETS exposure for female never smokers, similarly justify a Group A classification.

DXA0390094-0699 at 0116-0117 (US 88654) (A).

1141. As was done elsewhere, Defendants' attack on the EPA targeted only the interpretation of the epidemiological data; Defendants did not attack EPA's evaluation of tobacco smoke as a carcinogen based on the evidence of animal studies, mainstream and sidestream smoke constituents, and measurements of exposure using biomarkers. Bradley TT, 3/14/05, 15456:7-10, 15457:17-15459:23.

1142. EPA itself acknowledged the difficulties of a making a pinpoint quantification of the disease risk from the epidemiological studies:

> For lung cancer estimates among U.S. nonsmokers, the substantial epidemiology database of ETS and lung cancer among U.S. female never-smokers was considered to provide the most appropriate information. From these U.S. epidemiological studies, a pooled relative risk estimate was calculated and used in the derivation of the population risk estimates. The large number of studies available, the generally consistent results, and the condition of actual environmental levels of exposure increase the confidence in these estimates. Even under these circumstances, however, uncertainties remain . . . . Still, given the strength of the evidence for the lung carcinogenicity of tobacco smoke and the extensive human database from actual environmental exposure levels, fewer assumptions are necessary than is usual in EPA quantitative risk assessments, and confidence in these estimates is rated medium to high.

DXA0390094-0699 at 0117-0118 (US 88654) (A); see also DXA0390094-0699 at 0120-0122 (US 88654) (A) (executive summary of epidemiological studies); Chapters 5 and 6 (detailed analysis of epidemiological studies). EPA's evaluation of the weight of the evidence resulted in a primary finding that "Passive smoking is causally associated with lung cancer in adults, and ETS, by the total weight of evidence, belongs in the category of compounds classified by EPA as

Group A (known human) carcinogens." DXA0390094-0699 at 0120-0122 (US 88654) (A)

1143. Defendants' statistician Edwin Bradley criticized the EPA's meta-analysis of U.S. epidemiological studies, faulting EPA for achieving statistical significance by using an "unconventional 90 percent confidence interval." Bradley TT, 3/14/05, 15456:7-10. However, Bradley incorrectly characterized the confidence interval that the EPA used. Dr. Burns, who participated in the EPA Risk Assessment, testified that the EPA used a one-tailed 95% confidence interval, not a two-tailed 90% confidence interval. He also explained in detail why a one-tailed test was proper:

> **The EPA did not use a 90% confidence interval. They used a traditional 95% confidence interval, but they tested for that interval only in one direction.** That is, rather than testing for both the possibility that exposure to ETS increased risk and the possibility that it decreased risk, the EPA only tested for the possibility that it increased the risk. It tested for that possibility using the traditional 5% chance or a P value of 0.05. It did not test for the possibility that ETS protected those exposed from developing lung cancer at the direction of the advisory panel which made that decision based on its prior decision that the evidence established that ETS was a carcinogen. What was being tested was whether the exposure was sufficient to increase lung cancer risk, not whether the agent itself, that is cigarette smoke, had the capacity to cause lung cancer with sufficient exposure. The statement that a 90% confidence interval was used comes from the observation that if you test for a 5% probability in one direction the boundary is the same as testing for a 10% probability in two directions.

Burns WD, 67:5-15 (emphasis added). In fact, the EPA Risk Assessment stated, "Throughout this chapter, one-tailed tests of significance ($p = 0.05$) are used . . . " DXA0390094-0699 at 0223 (US 88654) (A).

1144. Defendants know that a one-tailed 95% confidence interval was used by the EPA. In a November 22, 1993 memorandum to industry consultant John Luik, with copies to BATCo's Chris Proctor and Philip Morris's Matt Winokur, Rothmans scientist David Rowland summarized

the facts and the source of the confusion over whether the EPA had applied a 90 or 95 percent confidence interval. Luik was in the process at that time of finding a journal to publish his "Pandora's Box" paper, discussed above. Rowland described a meeting with counsel at Shook, Hardy & Bacon, a legal opinion by outside counsel at Lovells, and the conclusion that "the 90% argument is out":

> [SHB attorney] Bernie O'Neill and I went through the EPA document. The key to the whole thing is a short paragraph on page 5-2. . . .
>
> **So the EPA used a one-tailed test of significance at p=0.05. (ie the 95% confidence level).** To effect this, they performed a two-tailed test with 90% confidence intervals, **which is equivalent**. Hence the source of confusion perpetuated by Stanton Glantz and other commentators.
>
> Since getting back to the office this morning, I see that **Kim Davis of Lovell, White and Durrant has come to a similar conclusion** after considering pages 5-34/35 and speaking to his contacts in the US.
>
> **Thus, the 90% argument is out**: what has to be attacked is the EPA's assumption that they were justified in using the one-tailed test.

2025495375-5376 at 5375 (US 89051) (A) (emphasis added).

1145. Rowland had undertaken his investigation of the 90% confidence interval allegation after Luik was told by a journal reviewer that "Luik's claim that EPA used BOTH a 90% confidence interval and a one-tailed test is 'manifestly false.'" 2024215189-5190 at 5189 (US 37097) (A). Notwithstanding Rowland's confirmation to Luik that EPA used a 95% confidence interval and a one-tailed test, Luik's article was not changed, and his published paper falsely impugned EPA for using both a 90% confidence interval and a one-tailed test. 2025495237-5249 at 5239, 5243 (US 89052) (A).

1146. Bradley testified that EPA used a 90% confidence interval to produce a

statistically significant relative risk, implying that EPA lowered its standards in order to obtain a statistically significant result. Bradley TT, 3/14/05, 15456:3-15457:21. But as Dr. Burns testified, and Defendants are aware, EPA used a one-tailed 95% confidence interval that did not include, and could not have included, 1 (the "null hypothesis"). Indeed, under questioning by the Court, Bradley admitted to understanding the EPA's rationale for a one-tailed test, even if he did not understand its application. He told the Court that EPA "had stated that they [EPA] felt like you could not have reduced risk with exposure to ETS, so therefore, that was not a possibility that the relative risk could be less than 1, it could only be greater than 1, and consequently, they wanted to look only at the increase . . . " Bradley TT, 3/14/05, 15456:23-15457:3.

1147. Thus, Defendants' criticism of the EPA meta-analysis is flawed for the same reason that their unwarranted reliance on statistical significance as the primary causal criteria is flawed. See supra US FF § III.A(2)(b)(ii).

1148. Defendants also attack the EPA Risk Assessment through the District Court opinion in Flue-cured Tobacco Cooperative Stabilization Corporation v. United States Environmental Protection Agency, 4 F.Supp.2d 435 (M.D.N.C. 1998), vacated, 313 F.3d 852 (4th Cir. 2002). This is a fatally flawed argument for the obvious reason that the Fourth Circuit vacated the opinion in 2002. In addition, the District Court judge was not a scientist, nor did he undertake a scientific review of the literature and evidence. He did not rule that secondhand smoke is not a proven health hazard. Moreover, the sole decision actually made by the court on cross-motions for summary judgment was the procedural one that EPA violated its procedures by not including industry representatives on its advisory board (the IAQC), because inclusion might have affected some part of the EPA's assessment. The court stated, "EPA's authority under the Act is contingent upon the Agency hearing and responding to the represented constituents'

concerns. The record evidence is overwhelming that IAQC was not the representative body required under the Act. Had EPA reconciled industry objections voiced from a representative body during the research process, the EPA Risk Assessment would very possibly not have been conducted in the same manner nor have reached the same conclusions." Id. at 466. In any event, this limited procedural holding was vacated on appeal.

1149. It also appears that the District Court judge may have been led astray by Defendants in reaching his conclusion. In its opinion, the court draws a distinction between "comments submitted by scientists" and those submitted "by the tobacco industry" citing scientific literature that disputed EPA conclusions." Id. at 453. In reality, *all* of the comments referenced by the judge in his footnotes were from the industry. The "scientists" listed in the footnote are Cronan, Gori, Todhunter, Flamm, Newell, and Reasor, all long-time industry paid ETS consultants. The judge does not seem to be aware of this, or else he would not have distinguished them from "the tobacco industry" in his opinion. In another part of his opinion, the court relied on submissions by Wynder and Kabat criticizing the relative risks associated with secondhand smoke and lung cancer for falling below 2.0. See also discussion of relative risk above US FF §§ III.A(2)(b)(ii) and III.A(2)(g)(vi). The court again does not seem to recognize the relationship between these consultants and the tobacco industry. 4 F.Supp.2d at 461-462.

(m) Defendants' Fraudulent Activity Continues to the Present Day

(i) Websites and Other Public Statements

1150. In this litigation, Philip Morris, BATCo, Brown &Williamson, Lorillard, and R.J. Reynolds have denied that ETS causes disease in nonsmokers. USX6390001-0400 at 0045-0046 (US 89555) (O) (BATCo); USX6390001-0400 at 0078-0079 (US 89555) (O) (B&W); USX6390001-0400 at 0147-0148 (US 89555) (O) (Lorillard); USX6390001-0400 at 0194-0195

(US 89555) (O) (PM); USX6390001-0400 at 0272, 0274-0275 (US 89555) (O) (RJR).

1151. Reynolds continues to publicly dispute that secondhand smoke causes diseases and other adverse health effects in nonsmokers. Reynolds' position on its website is that it believes "that there are still legitimate scientific questions concerning the reported risks of secondhand smoke." Reynolds' website further states:

> Considering all of the evidence, in our opinion, it seems unlikely that secondhand smoke presents any significant harm to otherwise health nonsmoking adults at the very low concentrations commonly encountered in their homes, offices and other places where smoking is allowed. We recognize that exposure to high concentrations of secondhand smoke may cause temporary irritation, such as teary eyes, and even coughs and wheezing in some adults. In addition, there is evidence that secondhand smoke, like other airborne irritants, or allergens such as pollen and dust may trigger attacks in asthmatics.

(US 92012) (A). Mary Ward, an in-house attorney for Reynolds until 2004, testified that the Reynolds position on passive smoking has not changed since she joined the company in 1985, with the exception of admitting that ETS "may trigger attacks in asthmatics." Ward TT, 11/4/04, 5076:9-5077:22.

1152. Reynolds corporate position on ETS and children is that "parents and others should minimize the exposure of children and young children to tobacco smoke and other airborne irritants." (US 92012) (A).

1153. Lorillard continues to dispute publicly the scientific consensus as well. On October 14, 2003, Lorillard issued a press release announcing a favorable verdict in the Miami case of a former flight attendant who alleged her chronic sinusitis and bronchitis were caused by ETS exposure over 27 years of working for airlines. After stating the trial result and providing a summary of the allegations, the press release stated: "**Jurors are increasingly seeing through the transparent body of evidence in these types of cases**, and we will continue our vigorous

defense against any and all such future claims." USX5710001 (US 89303) (A). The press release was picked up and run in the Los Angeles Times the next day. USX5710005 (US 89305) (A).

1154. Lorillard general counsel Ron Milstein testified that his company has never admitted in any forum that ETS exposure causes disease, and that the October 2003 press release was in line with the company's position that ETS is not a proven health hazard. Milstein TT, 1/7/05, 9263:8-9264:24.

1155. B&W also uses its website to try to convince the public that ETS is not harmful. The company's 2003 website stated: "It is, therefore, our view that the scientific evidence is not sufficient to establish that environmental tobacco smoke is a cause of lung cancer, heart disease, or other chronic diseases." TLT0390003-0003 (US 76761) (A). In 2004, the B&W public corporate position was revised to state its disagreement in slightly different terms: "In our opinion and in the opinion of others, however, there are legitimate scientific questions concerning the extent of the chronic health risks of ETS." USX5420009 (US 89165) (A); Ivey TT, 11/16/04, 6082:23-6083:14.

1156. B&W CEO Susan Ivey testified that her company places its position on ETS on its website for consumers to rely upon. Ivey TT, 11/16/04, 6098:7-19.

1157. BATCo also denies that passive smoke is a health hazard to adults or children. On its website, BATCo states that ETS can be "annoying," but disputes that it presents any risk:

> We believe, however, the claim that ETS exposure has been shown to be a cause of chronic disease is not supported by the science that has developed over the last 20 years or so. In our view, it has not been established that ETS exposure genuinely increases the risk of nonsmokers developing lung cancer, heart disease, or chronic obstructive pulmonary disease.

ARG0412302-2303 (US 86747) (O); see also ARU6220813-0814 (US 86743) (O).

1158. BATCo's website contains a number of distortions with respect to the scientific

evidence. For example, BATCo claims that the 1998 WHO/IARC study "found no meaningful increase in lung cancer risk," when in reality the IARC researchers reported a increased relative risk of lung cancer of 16% for spousal exposure and 17% for workplace exposure. BATCo summarizes the 2003 Enstrom study results, but fails to state that the study was funded and managed by the tobacco industry through CIAR and Philip Morris. BATCo advises visitors to its website that the 1992 EPA Risk Assessment was "declared invalid" by a federal judge, but fails to disclose that the district court decision was reversed by the appellate court and that the Risk Assessment reinstated. ARG0412302-2303 (US 86747) (O); see Flue-Cured Tobacco Coop. Stab. Corp. v. United States Envron. Prot. Agency, 313 F.3d 852 (4th Cir. 2002).

1159. BATCo has denied ETS-related health risks in other recent public statements. According to a March 1998 news article, BAT Chairman Martin Broughton was asked if he stood by the company's assertion that passive smoking is not a health risk. Broughton's response was: "There is virtually no evidence at all to the contrary." ARU6532231-2233 at 2232 (US 86878) (O).

For example, in 2002, BATCo published a document titled "British American Tobacco Social Report 2001/2002." In this report, BATCo asserted:

> There is also a debate about Environmental Tobacco Smoke (ETS), also known as passive smoking. Some say it poses health risks, and others, including ourselves, say there is no convincing evidence that ETS is a cause of chronic diseases such as lung cancer.

TLT0231830-TLT0231910 at 1844 (US 76316) (O).

1160. From 1999-2001, the Philip Morris website publicly stated its disagreement with the scientific consensus as well:

> Many scientists and regulators have concluded that ETS poses a health risk to nonsmokers. **Even though we do not agree with**

> **many of their conclusions**, below we have provided some links so you can access some of their views.

(US 92056 at 2) (A) (emphasis added); Parrish TT, 1/25/05, 11080:23-11082:14.

1161. While this case was pending, Philip Morris revised its position on ETS to delete its disagreement with the conclusions of "scientists and regulators." Philip Morris now states: "Public health officials have concluded that secondhand smoke from cigarettes causes disease, including lung cancer and heart disease in nonsmoking adults" as well as a number of adverse health effects in children. However, in contrast to its corporate position on active smoking, Philip Morris is careful not to state its agreement with, or even acknowledge the existence of, the scientific consensus that passive smoking causes disease. (no bates at 1 of 2) (US 92055) (A).

1162. Liggett does not take a public position on the effects of ETS; in fact, Bennet LeBow testified, "I do not know whether Liggett ever had or has a position on ETS and causation of lung cancer in healthy non-smokers." However, Lebow uses standard industry buzz-words in his testimony that "the scientific issues involving ETS, and the effects of cigarette smoke on non-smokers, are different, **more complicated and more controversial** today than the issue of whether smoking causes lung cancer and other diseases in smokers." LeBow WD, 56:10-57:9 (emphasis added).

(ii) The Resurrection of CIAR Through the Philip Morris External Research Program (PMERP)

1163. A number of documents suggest that Defendants have continued the mission of CIAR through a new organization called the Philip Morris External Research Program, or PMERP.

1164. The MSA, signed by representatives of certain Defendants on November 23, 1998, required that Defendants shut down and disband CIAR within 45 days of "Final Approval."

Although the MSA was signed by the parties in November 1998, "Final Approval" by the settling States did not take place until approximately one year later. (no bates at 32-33) (JD-045158) (A).

1165. The CIAR Board of Directors voted to dissolve CIAR on October 7, 1999, and Eisenberg formally dissolved the organization on December 6, 1999. 86205205-5206 (US 21091) (O).

1166. Notwithstanding the MSA requirement to disband CIAR, Defendants were already forming a plan to reinstate CIAR at the time the MSA was signed in 1998. On November 25, 1998, Lorillard general counsel Arthur Stevens wrote a letter to Philip Morris general counsel Denise Keane with copies to Charles Blixt at Reynolds and Ernie Pepples at B&W. Stevens wrote: "Please call me later in the morning on Monday, November 30, 1998, so that we can discuss the status of the plan to reinstate CIAR. The matter seems to be 'dragging' without direction toward a positive resolution." 86205404 (US 22164) (A). Several other documents confirm that Defendants had a plan to reconstitute CIAR in 1998 and 1999, and Eisenberg recalled at trial that the CIAR Board of Directors had even voiced their intent in 1998 to reconstitute the CIAR. Eisenberg TT, 11/15/04, 5881:6-17, 5883:2-6; 86205377-5378 at 5377 (US 75412) (A); 2064207030B (US 25744) (A); 2063871374-1380 at 1380 (US 92030) (A).

1167. On October 11, 1999, Eisenberg faxed Philip Morris a proposal to form an "External Research Program" to administer research largely using the CIAR model of an SAB, a research agenda, and peer reviewers. 2073327299-7301 (US 90035) (A).

1168. The PMERP was established in early 2000. The program is administered by an entity called Research Management Group (RMG), set up in 2000 solely to manage the PMERP. RMG has never managed any other program except for the PMERP. Eisenberg TT, 11/9/04, 5631:9-24. RMG is headed by Max Eisenberg, the former executive director of CIAR.

PMERP/RMG, also founded in early 2000, is operated out of the same offices in Linthicum, Maryland, that formerly housed CIAR. PMERP/RMG employs many of the same persons who were employed by CIAR, and even uses the same phone numbers as the former CIAR. Eisenberg WD, 52:6-10, 53:10-16; Eisenberg TT, 11/15/04, 5852:10-5853:7.

1169. Eisenberg testified that he and Philip Morris established a "Research Focus" and Request for Applications for PMERP in the same way that the Research Agenda and Request for Applications were established for CIAR. Eisenberg TT, 11/9/04, 5637:16-5638:14; 2085317779-7809 (US 22200) (A). Eisenberg located peer reviewers for the PMERP in the same way he had done for CIAR; in fact, the PMERP utilized a number of former CIAR peer reviewers and grantees, as well as ETSAG project recipients, including James Enstrom, Alan Hedge, Samuel Lehnert, Roger Jenkins, and Antonio Miguel. 563815-5639:9; 2085317779-7809 at 7802 (US 22200) (A). All told, 44 out of the 105 peer-reviewers listed by PMERP in its 2000 Request for Applications were drawn from the peer reviewer list in the 1998 CIAR Request for Applications. 2085317779-7809 at 7802 (US 22200) (A); 86616778-6810 (JD-042662) (A); Eisenberg TT, 11/15/04, 5663:14-18. Moreover, 53 of the peer reviewers were former recipients of CIAR funding. Eisenberg TT, 11/15/04, 5864:3-11.

1170. Eisenberg also organized the formation of a Scientific Advisory Board (SAB), similar in structure to the CIAR SAB. The PMERP SAB was originally staffed with two former members of the CIAR SAB. Eisenberg WD, 53:22-54:3; 2085317779-7809 at 7780 (US 22200) (A). Also, researchers funded through CIAR have continued to receive funding through the PMERP. Eisenberg WD, 54:14-17.

1171. Research funded through the PMERP is very similar to that funded through CIAR. The first research topic area in the PMERP Research Agenda is "Exposure/Biomarkers/

Dosimetry," a subject that includes the very same types of work that were funded as Applied Projects by CIAR. For example, PMERP funds work investigating "area and personal monitoring," "biological monitoring with biomarkers," and exposure assessment. 2085317779-7809 at 7785 (US 22200) (A); 2082735680-5706 at 5687 (JD-043675) (A). This is the exact type of exposure work funded by CIAR through its multi-million dollar ORNL, Hazleton, Latin American, and other projects. See supra US FF § III.A(2)(g)(v)(bb). This is also the same type of work carried out by Chris Proctor and Peter Lee in their Japanese Spousal Study funded by Defendants through the IEMC. See supra US FF § III.A(2)(k)(i).

1172. The PMERP also solicits epidemiological research proposals to study risk factors and confounders in the development of cancer. 2085317779-7809 at 7786 (US 22200) (A); 2082735680-5706 at 5688 (JD-043675) (A). Once again, this subject area was the topic of numerous CIAR-funded Applied Projects - such as the Rylander and Matanowski projects - that sought to find and exploit other risk factors for lung cancer aside from secondhand smoke. See supra US FF §§ III.A.(2)(g)(v)(aa) and (bb).

1173. A Philip Morris document titled "Philip Morris External Research Program Management Report" reveals the similarities in the types of work funded by the former CIAR and the current PMERP. For example, a number of projects, by their title, relate directly to ETS and indoor air quality. 2085522647-2721at 2663, 2671, 2672, 2675, 2688, 2697, 2717, 2720 (US 25310) (A).

1174. While Eisenberg testified at trial that the SAB has funding authority over research (Eisenberg TT, 11/15/04, 5831:9-13), he later conceded that, similar to the CIAR SAB, the PMERP SAB has no authority to sign contracts with researchers or commit funds for any studies. Eisenberg TT, 11/15/04, 5861:6-5862:6.

1175. In this way, Philip Morris has established an operation that duplicates the structure and research of the now-defunct CIAR. In fact, Helmut Reif, director of Science and Technology at Philip Morris's FTR subsidiary in Switzerland, testified that the change in the research funding source from CIAR to PMERP was immaterial from his perspective. Reif PD, United States v. Philip Morris, 7/30/03, 190:11-15, 193:10-19, 194:8-195:6.

1176. Through the PMERP, Philip Morris continues to manage projects conducted by ETSAG and CIAR researchers Roger Jenkins, James Enstrom, Demetrios Moschandreas and Samuel Lehrer. PM3002997014-7258 at 7087, 7088, 7105 (JD 055034) (A). Thus, Philip Morris has brought key parts of the industry's ETS initiatives forward to today.

(iii) Other Initiatives

1177. Moreover, after entering into the MSA, Philip Morris continued its efforts to jointly fund industry research through structures that existed prior to the MSA, undertaking joint funding of external research with BATCo through Philip Morris's Scientific Research Review Committee. Reif PD, United States v. Philip Morris, 7/30/03, 70:13-71:15.

1178. As late as 2000, Philip Morris and BATCo jointly funded a project called DIANAIDS 2000. The researcher hired for DIANAIDS 2000, Kiri Syrjaenen is a long time industry consultant. 2024961742-1744 (US 22046)(A). DIANAIDS 2000 researched the human papilloma virus (HPV) as a potential cause of cancer. The focus by DIANAIDS 2000 on alternative causes to diseases caused by passive smoking is similar to the work performed by TIRC and CTR which, contrary to Defendants' public assertion that they would "aid and assistance to the research effort into all phases of tobacco use and health," constituted research that focused on mechanisms in cancers that are distant if not completely irrelevant to evaluating the risks and harms associated with smoking. The DIANAIDS 2000 project, like so many of

Defendants' passive smoking projects before, is monitored by BATCo scientist, Chris Proctor. 2505456510-6515 at 6511a-6513 (US 46058) (O); Reif PD, United States v. Philip Morris, 7/30/03, 69:5-71:23, 72:8-72:24, 76:10-77:4.

1179. Other research that has been jointly funded by Defendants continues to yield results in published literature, which is then used by Defendants to support their fraudulent public positions on ETS and overall effort to perpetuate the notion that an open question exists regarding the health effects of secondhand smoke exposure to nonsmokers. See, e.g., TLT0500029-0038 (US 65086) (A).

1180. In addition, the industry ETS Consultancy Program may still be operational. In 1998, Ted Sanders, Director of Worldwide Scientific Affairs of Philip Morris, sent Richard Carchman in Richmond, a collection of company evaluations of ETS consultants still working for Philip Morris. The document also contains a summary of how the European consultancy program was transferred from Covington & Burling to Philip Morris in 1997:

> **European Consultant Group**
>
> This program, which WSA inherited approximately one year ago, has gone through and is continuing to go through significant changes. The program, which dates back about ten years, was originally administered through C&B. Once the program was transferred to WSA, scientists took on an active role in managing the program. That role has continued to expand to the point that for the first time in the program's history, face to face contact between the three principal consultants involved in the program and WSA scientists has been initiated. The three principal consultants involved are Dr. George Leslie, Dr. John Hoskins, and Dr. Max Weetman. By the end of next week I will have CV's on each on these three individuals which will be transmitted to you. At that time I think that further discussions are necessary to determine both how best to utilize these consultants and to ensure that this can be done.

2063593931-3949 at 3946 (US 24025) (A) (emphasis in original).

1181. In addition Defendants' consultants still operate the journal International Society of the Built Environment (ISBE). In fact, consultant John Hoskins continues to serve as the editor of the ISBE journal Indoor + Built Environment. TLT0500003-0006 at 0005 (US 65083) (A). Philip Morris, Reynolds and Japan Tobacco were sharing expenses for ISBE conferences as late as 1998. 2063651094-1096 (US 75250) (A).

1182. Defendants presentation of expert evidence in this case through Edwin Bradley perpetuates Defendants' efforts to distort the scientific record, in that Dr. Bradley relied on a large number of industry-directed studies and industry consultants for his opinions. Nowhere in his written direct did Dr. Bradley divulge that the reliance materials were financed by Defendants in this case. Bradley TT, 3/15/05, 15483:11-15501:25. The following are examples of Dr. Bradley's reliance materials that are products of Defendants' ETS initiatives:

- A 1998 article titled "Critical Commentary on Views Expressed by IARC in Relation to Environmental Tobacco Smoke and Lung Cancer" by industry consultant Peter Lee and published in *Indoor + Built Environment*, the journal established by Defendants' consultant group IAI. Bradley WD, 51:23-52:11; 2063594510-4526 (US 20513) (A); TLT0500003-0006 at 0005 (US 65083) (A).

- A 2002 industry-funded paper by Lee titled "Environmental tobacco smoke and cancer of sites other than the lung in adult non-smokers." Bradley WD, 104:9-12.

- The flawed 2003 Enstrom/Kabat study funded and managed by Defendants through CIAR. Bradley WD, 101:10-21.

- A 1995 heart disease study by industry ETS consultants LeVois and Layard, a study that generated four of the five lowest point estimates in Bradley's demonstrative exhibits and meta-analysis. Bradley WD, 65:7-70:3. (JDEM 020122, 020135, 020118) (A). Dr. Samet testified that the study misuses data. Samet WD, 192:21-23 (LeVois and Layard (1995)); and Samet TT, 9/29/04, 1122:9-1127:4; 9/30/04, 1250:2-1251:8 (LeVois and Layard (1995)).

- A 1994 paper by industry consultants LeVois and Layard and funded by Defendants through the Tobacco Institute. Bradley WD, 54:3-5; (JD-023708) (A).

- The 1996 paper by Koo, Kabat, and Rylander titled "Dietary and Lifestyle Correlates with Passive Smoking in Hong Kong, Japan, Sweden, and the U.S.A."

Bradley WD, 101:3-9; (JE-022908) (A). All authors were recipients of industry funding. 2085780290-0291 (US 27867) (A) Rylander was a consultant to defendant Philip Morris since at least 1972. 2063590583-0586 at 0583 (US 85704) (A). Rylander reported to Richard Carchman on meetings with Koo and the progress made on the study. 2028366233-6234 (U.S. Ex. 22,815) (O). Koo was listed as a consultant to INBIFO at the time. 2029175611-5611 (U.S. Ex. 23,868) (O). Kabat was a member of the American Health Foundation whose founder Ernst Wynder once called himself "one of the best friends the cigaret industry has." 1000321438-1438 (US 85666) (A).

- A 1991 Tobacco Institute funded paper by industry consultants Joseph Fleiss and Alan Gross, "Meta-analysis in epidemiology, with special reference to studies of the association between exposure to environmental tobacco smoke and lung cancer: a critique." Bradley WD, 53:20-54:1, 54:6-21; (JD-025140) (A); TIDN0019217-9268 at 9220-9221 (US 85597) (A).

- A 1992 paper by industry consultant James Kilpatrick titled "Environmental tobacco smoke and lung cancer: a critique of a meta-analysis." Bradley WD, 54:1-3, 54:22-55:3 (JD-025144) (A); Kilpatrick received industry funding via the ETSAG in the 1980s (2028343885-3890 at 3887 (US 75166) (O)), was a member of Rupp's IAPAG group (TITX0025965-5968 at 5966 (US 85522) (A)) , and was a Tobacco Institute consultant into the 1990s. TIDN0019217-9268 at 9225 (US 85597) (A).

- 1994 and 1995 Congressional Research Service reports by two economic analysts. Bradley WD, 126:5-128:6, (JD-004487) (A); (JD-067670) (A). The "industry may have indirectly impacted" the analysts through a request by a member of Congress on behalf of the industry. In any event, the analysts admitted in their 1994 statement to Congress on the report: "We do not have technical expertise in the physiological and biological transmission mechanisms of disease causing agents." (no bates at 1) (JD-003086) (A). In the 1995 report, CRS analysts reviewed the evidence and did not come to any causal conclusion as to the health effects of ETS.

- A 1991 Tobacco Institute funded article by industry consultants Gio Gori and Nathan Mantel titled "Mainstream and Environmental Tobacco Smoke." Bradley WD, 98:5-8; 2022979482-9499 at 9493 (JD-047056) (A); TIDN0019217-9268 at 9221, 9227 (US 85597) (A).

(3) In Furtherance of Their Public Relations Scheme Denying the Health Effects of Smoking, Defendants Agreed Not to Compete on Health Issues and Not To Perform Certain Biological Research

(a) Introduction and Summary of Findings

1183. Defendants' conduct relating to the research, development, and marketing of potentially less hazardous cigarettes is powerful evidence of Defendants' purposeful execution of the scheme to defraud in furtherance of the objectives of the RICO Enterprise. Extensive evidence proves that Defendants identified a substantial market for a cigarette that could be marketed as less hazardous.[1] However, Defendants jointly agreed not to do anything in the marketing and development of cigarettes that would jeopardize the public relations position at the core of the scheme to defraud: the denial that cigarettes on the market were a proven cause of disease.

1184. Defendants agreed not to compete on smoking and health issues in the marketing of cigarettes. Accordingly, when a Defendant designed a cigarette – or developed a cigarette component – intended to reduce the delivery of harmful smoke constituents to the smoker, the Defendant limited the types of information that it provided to consumers in marketing such products. Defendants failed to provide information – even if they believed it to be truthful scientific information – that certain brands or types of cigarettes were likely to be less harmful than others, because such information carried the obvious implication that other cigarettes were harmful. Thus, for the first 46 years of the fraudulent scheme – during the **entire** period during

[1] For sake of efficiency and uniformity, this section will use the term "less hazardous cigarette" as shorthand to refer to a cigarette that (1) Defendants specifically conceived and designed to potentially reduce the harms to smokers from smoking by decreasing the delivered dose of toxic or carcinogenic chemicals to the smoker, and that (2) Defendants concluded accomplished that goal. This section does not concern "low tar/low nicotine" or "light" cigarettes, the design and marketing of which is discussed at US FF § III.D, infra.

which Defendants uniformly failed to publicly acknowledge the overwhelming medical and scientific consensus that smoking causes disease – no Defendant that designed and tested a cigarette specifically to reduce the smoker's exposure to harmful smoke constituents **ever** told consumers about the product's potential exposure or harm reducing benefits.

1185. After the initiation of this lawsuit, certain Defendants began to communicate more truthfully about the adverse health effects of smoking – thus eroding the justification for the agreement not to compete on clear health claims in the marketing of cigarettes. As of today, only two products – RJR's Eclipse beginning in 2000, and Liggett's Omni for a short period in 2001 – have been marketed to consumers as potentially reducing the risk of diseases caused by smoking.

1186. Defendants' conduct in this area is evidence both that Defendants' recognized internally that their marketed cigarettes cause disease, and that Defendants' intentionally and jointly restricted their business conduct in furtherance of the "open question" component of the scheme to defraud.

1187. Similarly, documents show that Defendants limited the types of scientific research they conducted, because they did not want to generate internal evidence to suggest that the companies believed there was any need to examine whether a causative link existed between smoking and disease, let alone create scientific information that demonstrated such a link. Accordingly, Defendants jointly agreed not to perform certain types of biological tests using commercially sold cigarette brands in their domestic research facilities.

(b) Summary of Defendants' Response to the United States' Evidence

1188. At trial, Defendants' response to the United States' evidence on this topic concentrated in three general areas – two of which are unsupported by evidence, the other of which does not actually counter the evidence presented. They are briefly summarized here, and

discussed in more detail infra where appropriate.

1189. Defendants' first major response was that they have in fact competed in the development and marketing of less hazardous cigarettes. In defense of their conduct in this area, Defendants collectively pointed to a half-dozen cigarettes for the entirety of the half-century of the fraudulent scheme. As shown at US FF § III.A(3)(g), infra, the evidence does not support Defendants' contention that they competed with each other on health claims for these cigarettes or in any way jeopardized their fraudulent public denials of smoking's harms.

1190. The second major response by Defendants was that their conduct in the area of less hazardous cigarette development and marketing was hindered – even precluded – by the United States Government. Defendants offered at least three variations of this complaint, each of which fails upon examination, as discussed infra: first, the United States has not "endorsed" any particular product (e.g., Reynolds's Premier) or technology (e.g., charcoal filters) or informed Defendants of a particular set of tests that Defendants must conduct to evaluate a potentially less hazardous product; second, Defendants were affirmatively prohibited from competing on smoking and health grounds by the Federal Trade Commission; and third, the United States should be blamed for Defendants' failure to develop and market potentially less hazardous cigarettes because the United States – in 1978 – decided to discontinue the Tobacco Working Group, a limited research program in which a few scientists employed by Defendants nominally participated in their individual capacities. Each of these contentions by Defendants is a post-hoc explanation for their conduct that is not supported by contemporaneous evidence.

1191. The third major response is to highlight their supposed research efforts to develop potentially less hazardous technologies and products. This response does not in any way diminish or rebut the United States' proof. It is undisputed that, internally, Defendants' scientists

did a lot of science, and that Defendants expended time, effort, and resources looking at different ways to potentially reduce the harm of cigarettes. However, when it came time to deciding what, when, and how to market a product that the scientists had developed, the record is clear that executives and lawyers repeatedly chose adherence to the fraudulent public relations and litigation position and the agreement not to compete, so as not to threaten the overriding objectives of the fraudulent scheme – profit maximizing and avoiding adverse litigation verdicts.

(c) Major Witnesses on Less Hazardous Cigarette Design, Development, and Marketing

1192. On this topic, both sides offered evidence through live witnesses.[2] The United States' primary witness was William A. Farone, Ph.D., a physical chemist who was hired by Philip Morris in 1976 to, among other things, help Philip Morris develop less hazardous cigarettes. Dr. Farone was the Director of Applied Research at Philip Morris from 1977-1984. After submitting a 182-page written direct examination, he provided extensive fact and expert testimony over three days of vigorous and aggressive cross-examination by several defense counsel. As the Court observed at the close of his testimony, Dr. Farone was "extraordinarily credentialed, knowledgeable, articulate, nondefensive, [and] nondogmatic." Farone TT, 10/12/04, 2184:9-21; see also Interim Summation TT, 11/18/04, 6516:20-6517:7 (Court noting that "Dr. Farone was a very impressive witness, and one of the reasons he was impressive was because at least I didn't view him as a total ideologue."). For example, Dr. Farone readily agreed that much of the research he personally worked on and oversaw at Philip Morris was "a good thing" because it was high quality work relevant to the development of potentially less hazardous

[2] Both sides proffered other witnesses who discussed the issue of less hazardous cigarette development or marketing in some respects; this is simply a brief section to identify each side's primary witnesses on this topic.

cigarettes. Given his position at Philip Morris, he offered credible, at times compelling testimony about Philip Morris's "state of mind" and its internal understanding of smoking and health that was fully consistent with the contemporaneous documentary evidence. As an expert, Dr. Farone's own education, training, and experience overseeing Philip Morris's less hazardous cigarette development for 8 years made him supremely qualified to decipher – from his perspective as a physical chemist – the effects of various cigarette designs on the types and levels of chemicals delivered to smokers, and to evaluate the nature and quality of all of the manufacturing Defendants' activity in this area.[3] As the Court recognized, the bottom line of Dr. Farone's testimony was that Philip Morris and the other Defendants did not do enough or go far enough to get a safer cigarette into a posture of greater consumer acceptance. See Interim Summation TT, 11/18/04, 6516:20-6517:7.

1193. Dr. Farone's testimony on Defendants' agreement not to compete on health grounds in the marketing of cigarettes and on restricting research was bolstered by the testimony of United States' expert Jeffrey Harris, M.D., Ph.D. Dr. Harris, a medical doctor and economist from M.I.T. who has published extensively on the health effects and economic impact of smoking and been an invited contributor and reviewer to several Surgeon General's Reports, reviewed thousands of Defendants' internal documents to reach his opinions in this case. Dr. Harris concluded, based on sound economic principles outlined extensively in his direct

---

[3] Prior to working for Philip Morris, Dr. Farone, who holds a Ph.D. in Physical Chemistry, had extensively studied and published on the chemistry and physics of "colloidal systems" and aerosols, including smoke, and, inter alia, had been Director of Scientific Research for Lever Bros., a job that entailed including product testing and development. See Farone WD, 2:4-2:19, 5:2-27:21. Dr. Farone was accepted as an expert in each of the four areas in which he was tendered: (1) the chemistry and biochemistry of alkaloids and addictive drugs; (2) the chemistry and physics of cigarette smoke; (3) cigarette design and technology; and (4) the chemistry and biochemistry of toxic substances and their interactions with living systems. Farone TT, 10/12/04, 2171:25-2172:8; 2182:11-2190:7.

examination, that from an economic perspective Defendants' conduct in the area of the research, development, and marketing of potentially less hazardous cigarettes was consistent with overt collusion and conspiracy based on direct communications among Defendants. Dr. Harris explained why Defendants' actions were not simply those of independent competitors acting at arms-length solely in their self interest, but rather those of actors in a collusive arrangement. See, e.g., Harris TT, 10/14/04, 2502:13-23; Harris WD, 22:22-23:14. Defendants offered no expert witness to counter Dr. Harris's central conclusions, which rested on an enormous body of material.

1194. Defendants' countered with two scientific witnesses who focused on this topic – David Townsend of Reynolds and Anthony Albino of Liggett. Dr. Townsend repeatedly overstated his qualifications and expertise and misrepresented his publication history. For example, he insisted he had been invited by the National Cancer Institute to be an expert speaker on a panel at a scientific conference on the FTC test method, when in fact he had been picked by Covington & Burling on behalf of the tobacco industry, not to be an expert panel participant, but rather to attend the conference and possibly present information to an expert panel. Compare Townsend WD, 13:5-15 with Townsend TT, 3/7/05, 14474:3-14495:10. On cross-examination, Dr. Townsend was repeatedly impeached and contradicted by his own prior testimony, by the testimony of other Reynolds's employees, and by Reynolds's own internal documents, on topics for which he professed expertise, including those related to less hazardous cigarettes. After hearing from Dr. Townsend, the Court found "problems with [Townsend's] testimony, ... [which] go to credibility and bias" generally. Townsend TT, 3/7/05, 14593:1-3.

1195. Dr. Albino's testimony concerned the successful development by Vector Tobacco – a Liggett affiliate – of Liggett's XA technology of the 1970s into the Omni cigarette sold briefly

in 2001. As described below, Dr. Albino's testimony reaffirmed Dr. Farone's conclusion that recent designs touted as potentially less hazardous by Defendants rest on long-available technologies.

(d) Defendants Made Public Statements That Linked Development & Marketing of a Potentially Less Hazardous Cigarette to Their "Open Question" Position Denying the Adverse Health Effects of Smoking

1196. Defendants made false representations to the public that they would do their best to protect the public's health, while simultaneously taking the fraudulent public and litigation position that no cigarettes had been proven unsafe. Examples of such public false or fraudulent statements include the following:

1197. In January 1954, certain Defendants published the Frank Statement – the seminal public statement (discussed at US FF § I.B(2), supra) that launched their coordinated fraudulent public relations campaign to preserve the market for cigarettes and the industry's profits. In the Frank Statement, Defendants told the American public: "We accept an interest in people's health as a basic responsibility, paramount to every other consideration in our business. We believe the products we make are not injurious to health. We always have and always will cooperate closely with those whose task it is to safeguard the public health." 11309817-9817 (US 20277) (A).

1198. In March 1954, George Weissman, a Philip Morris Vice President, publicly reaffirmed the industry's commitment to protect the health of its customers, claiming that the cigarette industry would "stop business tomorrow" if it "had any thought or knowledge that in any way we were selling a product harmful to consumers." 2022239339-9343 (US 21766) (A).

1199. In 1964, Bowman Gray, Chairman of the Board of RJR, stated publicly on behalf of RJR, Philip Morris, B&W, Lorillard, Liggett, and American, that "[i]f it is proven that cigarettes are harmful, we want to do something about it regardless of what somebody else tells

us to do. And we would do our level best. This is just being human." (no bates at 161) (JD-002014) (A); 501935056-5071 (US 20690) (A).

1200. In 1971, Philip Morris chief executive officer Joseph Cullman III explained in a "Face the Nation" TV interview that Philip Morris was committed to removing harmful constituents from cigarette smoke:

> [T]his industry can face the future with confidence because **when, as, and if any ingredient in cigarette smoke is identified as being injurious to human health, we are confident that we can eliminate that ingredient**. We do not believe that cigarettes are hazardous; we don't accept that . . . .

1002605545-5564 at 5550, 5560 (US 35622) (A) (emphasis added).

1201. In the January 24, 1972 issue of the *Wall Street Journal*, Philip Morris Senior Vice President James Bowling declared that "[i]f our product is harmful . . . we'll stop making it. **We now know enough that we can take anything out of our product**, but we don't know what ingredients to take out." Bowling further stated that "[w]e don't know if smoking is harmful to health, and we think somebody ought to find out." 500324162-4164 at 4163 (US 20627) (A) (emphasis added).

1202. In June 1978, a Tobacco Institute Vice President, in the magazine *Business Horizons*, reflected the industry's public stance that cigarettes need not be made safer because they were already safe: "A question often asked of the tobacco industry is whether researchers are developing a ‘safe' cigarette. . . . The tobacco industry is convinced that no cigarette has been proved unsafe. Therefore, they regard any suggestion of a ‘safe' or ‘safer' cigarette as tortured logic." TIMN0074796-4800 (US 21480) (A).

1203. In 1997, Altria's Chief Executive reaffirmed his company's professed concern for smokers' health, stating in testimony that if Philip Morris ever agreed that smoking was a cause

of lung cancer, "I'd probably . . . shut [the] company down instantly to get a better hold of things." Bible PD, Florida v. American Tobacco, 8/21/97, 26:3-28:2.

1204. In each of the above statements, Defendants' stated commitment to act would have required them to accept and publicly acknowledge that their cigarettes were a proven cause of disease – an admission that would have contradicted the position at the core of their coordinated public relations campaigns and litigation defenses from 1954-2000. Farone WD, 134:3-135:17.

(e) Defendants Have Long Acknowledged Internally the Competitive and Economic Advantages from Marketing a Potentially Less Hazardous Cigarette

1205. Over the past four decades, the Cigarette Company Defendants repeatedly have recognized consumer interest in cigarettes that could be marketed as less hazardous. See Harris WD, 140:3-145. However, as shown in US FF § III.A(3)(g), infra, Defendants nonetheless chose not to market any such cigarettes – cigarettes that they designed and in fact believed to be less hazardous cigarettes – in this way.

1206. In a June 1966 report by Philip Morris researcher Myron E. Johnston, Jr., sent to top scientists Helmut Wakeham and Robert Seligman, Johnston noted: "If we could develop a . . . 'healthy' cigarette that tasted exactly like a Marlboro, delivered the nicotine of a Marlboro, and was called Marlboro, it would probably become the best selling brand." 1000338644–8671 (US 21487) (A).

1207. Similarly, in a May 25, 1966 report to Lorillard President J.E. Bennett, Alexander Spears, then Lorillard's Director of Basic Research and later its Chief Executive Officer, wrote that the development and marketing of a cigarette that yielded tar with "little or no tumorigenic response [in mouseskin painting tests], would be regarded as a highly significant development by the scientific community":

> Undoubtedly, **such a product would place the corporation in a highly enviable position, and in the writer's opinion a two or threefold increase in sales could result within a short period**. . . . On the other hand, if we fail to pursue this research and/or a competitor marketed a cigarette whose smoke condensate gave little tumorigenic response, the writer is of the opinion that a significant sales loss could result.

81577610-7625 at 7611-7612 (US 55403) (A) (emphasis added).

1208. In discussing one scientist's conception of a "safe cigarette" in its "Long Range Strategic Plan; External Forecast; 1979-1983," RJR noted internally: "If this concept received national consumer media, such as *Reader's Digest*, the dynamics of demand in the marketplace could change dramatically." 500676525-6577 at 6540 (US 22087) (A).

1209. In that same time period, Lorillard also recognized that the first cigarette company to market a less hazardous cigarette successfully would reap substantial and unilateral financial rewards. In a November 1977 letter, Benito Vila of Lorillard wrote to company marketing executive Richard E. Smith that since "I don't know of any smoker who at some point hasn't wished he didn't smoke," if Lorillard could develop an acceptable alternative method to deliver nicotine, **"I am 100% sure we would have a gigantic brand**." 01244294-4299 (US 21419) (A) (emphasis added);

1210. An undated draft memorandum titled "Notes on Group Research and Development Conference, March 1978" found in the files of S.J. Green, who served as a scientist, manager, and director of BATCo's Research and Development Department in the late 1970's, recognized that a "reduced biological activity" cigarette could be made and offered many "marketing opportunities":

> **Cigarettes of substantially reduced biological activity (SRBA) can be made by product modification and will continue to present a range of marketing opportunities**. By SRBA is meant cigarettes where epidemiology would show no greater incidence of

> disease for smokers than non-smokers. But there remains a need for credible biological tests to facilitate developments. Credibility will continually evolve but could be provided by outside independent medical and scientific advice. . . . **Defensive research will need to be provided for as far ahead as can be seen and this may well include social aspects**.

110083832-3838 at 3837-3838 (US 34964) (O) (emphasis added).

1211. Drs. Harris and Farone explained the nature of Defendants' "defensive" conduct. Dr. Harris testified that firms may maintain an inventory of modified products on their shelves, rather than introducing them into the marketplace, as a means of deterring cheating in a collusive arrangement. Harris WD, 147:28-148:8. Dr. Harris pointed to several examples of such defensive conduct in his testimony. Id., 153:15-154:18, 158:1-2; 160:7-161:6. Similarly, Dr. Farone pointed to 1000338644-8671 (US 21487) (A), wherein Myron Johnston recommended that Philip Morris "not introduce another health cigarette unless there is another health scare or additional restrictive legislation is passed." Dr. Farone testified Johnston's advice was reflective of Philip Morris's "attitude not to do anything to proactively develop and sell a potentially less hazardous product, but rather to develop and introduce such products only defensively." Farone WD, 107:23-109:2.

1212. Similarly, in a March 14, 1983 interoffice memorandum from RJR's R.A. Lloyd, Jr., Brand Manager, to Mike McKee, a Manager in the New Brands and Strategic Research Department, Lloyd commented on recent patents applied for or granted to Philip Morris and Imperial Tobacco Company:

> It is quite likely that smoking devices similar to those described in these patents or other new products perceived as ‘safer' will be introduced to the marketplace within the next few years by major tobacco companies. **The company which can introduce such products, which also supply a degree of user satisfaction which approaches that of current cigarette products, will become the dominate [sic] company in the industry almost overnight. It is**

> **reasonable to assume that the company who introduces such a product might capture as much as 25 share points in the first year if supply could keep pace with demand**.

501541129-1132 (US 21740) (A) (emphasis added); Harris WD, 140:3-143.

1213. And again in 1990, Philip Morris indicated to the Altria Board of Directors that "[w]e believe there is a potential consumer demand for a radically new smoking device that will provide a pleasurable smoking experience, address consumer concerns about health risks and social acceptability, and still be a profitable business venture." 2046741061-1074 at 1061 (US 22185) (A).

1214. B&W has stated similarly that the development and marketing of potentially reduced exposure cigarettes,

271098692-8695 at 8694 (US 22033) (O) (Confidential).

(f) Defendants Agreed Not To Compete on Health Issues in the Marketing of Potentially Less Hazardous Cigarettes

1215. Internal documents show that Defendants recognized that no cigarette company could make marketing claims about less hazardous cigarettes without implicitly or explicitly admitting that all other conventional cigarettes were hazardous. For this reason, Defendants for decades jointly maintained an agreement not to compete in the marketing of cigarettes by claiming that some cigarettes were likely to be less hazardous or "safer" than others. See, e.g., Farone WD, 134:3-135:22; Farone TT, 10/6/04, 1785:22-1786:19 (the Philip Morris scientists who discussed with Dr. Farone the agreement not to compete on health issues were "a hundred percent convinced that there was such an agreement and it related directly to the kinds of research we did . . ."); Harris WD, 187:22-197:2. This coordinated approach ensured that cigarette marketing would be consistent with, and thus an effective extension of, the core public relations position that cigarettes were not harmful to health.

1216. Even prior to issuance of the Frank Statement, in late 1953 the Presidents of three Defendants – Philip Morris, Lorillard, and American – agreed at a meeting that "their own advertising and competitive practices have been a principal factor in creating a health problem" because to that point, Defendants had made express comparative health claims in advertising. The meeting minutes stated that the Presidents "ha[d] informally talked over the problem and will try to do something about it." 2048375960-5964 at 5962 (US 85819) (A); Harris WD, 73:11-76:11.

1217. Additionally, during the December 14, 1953 meeting that included the presidents of Philip Morris, Reynolds, Lorillard, and B&W – one of the meetings that led to issuance of the Frank Statement – Reynolds's President Ed Darr stated that "he could not concur in sponsoring an industry paid advertising campaign . . . as long as the health theme continued to be featured by any one of the companies represented on the committee. . . . Mr. Peterson [of U.S. Tobacco] and Mr. Harnett [of Brown & Williamson] expressed their agreement with Mr. Darr's views in this matter." 680262226-2228 (US 88165) (A). Reynolds did, of course, participate in the joint public relations campaign – Mr. Darr was one of the signatories to the Frank Statement, 86017454-7454 (US 21418) (A) – providing further proof that the other companies agreed to Darr's demand that they all stop competing on health grounds in the cigarette marketplace. Brandt WD, 48:19-54:10; Harris WD, 73:11-76:11 75:25-83:6; Langenfeld TT, 3/10/05, 15184:3-15188:12.

1218. In September 1983 – thirty years after this "informal" discussion among industry heads not to compete on smoking and health issues in the marketing of cigarettes – this agreement remained in force. Patrick Sheehy, then Chairman of BAT Industries and former Chairman of Defendant BATCo, sent a telex and letter to Philip Morris's United States

headquarters to complain about a Philip Morris advertisement in Holland that was critical of BATCo's Barclay brand on smoking and health grounds:

> I find it incomprehensible that Philip Morris would weigh so heavily the short-term commercial advantage from deprocating a competitor's brand while weighing so lightly the long-term adverse impact from an on-going anti-smoking programme. **I believe this is the first time a Tobacco Manufacturer has purchased space to promulgate the anti-smoking position. In doing so, Philip Morris . . . makes a mockery of Industry co-operation on smoking and health issues** . . . .

2023102783 (US 36958) (A) (emphasis added); 201080394-0395 (US 78984) (A); 104576621-6624 at 6624 (US 20236) (A) (translation of advertisement); Harris WD, 187:22-197:2.[4]

1219. In October 1983, a phone call between BATCo board member Edgar A.A. Bruell and Philip Morris Chairman and Chief Executive Officer Hugh Cullman occurred to follow up on the letter and telex. The remarkable minutes recounting the conversation confirm the companies' mutual commitment to the established policy of not competing on health grounds in cigarette marketing. Cullman agreed that it was "Essential Industry hang together," and that the activity undertaken in Holland was "not PM company policy," and noted BATCo's request that Philip Morris "'instruct its No. 1's [top executives] **they must not use anti-smoking activities, statements or programmes for competitive gain**.'" BATCo's Bruell likewise emphasized that it was "[e]ssential to ensure that in future no member of the Industry does anything similar." 301030943-0944 (US 46577) (A) (emphasis added).

---

[4] While Philip Morris has complained that the matter concerned Philip Morris International, until Altria was formed in 1985 – two years after this incident – Philip Morris International was a division of Philip Morris Inc., the Defendant now known as Philip Morris USA. See Harris WD, 192:15-17; Keane WD, 3:2-4. Further, Philip Morris executives were directly involved in the matter – Sheehy sent the letter to Philip Morris Inc.'s George Weissman in New York – and the discussions about industry cooperation on smoking and health issues were worldwide in scope.

1220. Another internal memorandum from a top BATCo lawyer underscored how critical such continued cooperation among Defendants was for the entire industry. On October 3, 1983, BATCo's Alex Morini wrote that Defendants' success in civil litigation "has not been coincidental. On the contrary, it has very largely been achieved by a co-ordinated and consistently applied self-discipline on the subject of smoking and health within the Industry. **BAT believe that any breaking of ranks now can only have the most dire consequences on the future viability and profitability of the Industry as a whole**." Accordingly, Philip Morris's action in Holland "has jeopardised the credibility and long-term interests of the Industry as a whole" on the smoking and health issue. 301043570-3571 (US 93210) (A) (emphasis added).

1221. Defendants suggest that this "Holland incident" is in fact evidence of competition and conflict among Defendants, and point to the dispute in the United States at the Federal Trade Commission over B&W's advertising for Barclay. Philip Morris and Reynolds complained that the Barclay advertisements of its FTC tar yield were deceptive and misleading because Barclay's unique filter utilized air channels that vastly decreased the machine-measured tar yield; however, Barclay actually delivered much higher tar doses to smokers because smokers unavoidably crushed the air channels, thereby decreasing the amount of air mixed in with the smoke and increasing the tar delivery. Langenfeld WD, 101:23-102:8.

1222. And, as Dr. Farone testified, Philip Morris and Reynolds knew that their cigarette designs similarly yielded artificially low FTC ratings – they simply accomplished it by different design mechanisms that facilitated different forms of compensation from Barclay. Farone WD, 114:8-22.

1223. While Defendants point to this dispute as evidence of their competition, the FTC

proceeding was **secret**, and Defendants' submissions were maintained by the agency as confidential. Langenfeld TT, 310/05, 15265:15-15266:4. The Holland incident is probative because it shows that while Defendants were willing to challenge one another on smoking and health matters when their information was kept under wraps, as soon as the dispute was taken public – by Philip Morris's advertisement informing consumers of the Barclay deception – it prompted telexes, letters, and phone calls among the highest level executives to restore the public status quo – no competition among Defendants on smoking and health grounds.

1224. Similarly, in March 1988, Geoffrey Bible, then President and Chief Executive Officer of Philip Morris International (and later CEO of Altria) condemned tobacco companies publicly acknowledging the notion that smoking was harmful and that these harms could be reduced. Decrying a BATCo employee's referring to one of its products as "less harmful" in a newspaper article, Bible wrote, "The use of the words ‘less harmful' and ‘harmful components' has stunned us and I just cannot understand how tobacco companies can make such comments." 2500046188A (US 20548) (O).

(g) Defendants Adhered to the Agreement Not To Compete on Health Issues in the Marketing of Potentially Less Hazardous Cigarettes

1225. From the 1960s through the 1990s, the Defendants' actual approach to marketing cigarettes that they believed to be less hazardous than other cigarettes confirms that they intentionally avoided any contradiction with their core public relations position that smoking is not harmful. While Defendants have marketed remarkably few such less hazardous products, the approaches the different Defendants have taken in marketing these few products have been strikingly uniform.

1226. The record shows that though Defendants have known that commercial success of less hazardous products depends upon their informing consumers about their potential for harm

reduction, Defendants consistently decided against providing information to consumers because it would contradict their denial that smoking causes disease.

1227. This subsection first recounts the evidence proving Defendants' adherence to the agreement not to compete on health grounds. It then addresses Defendants' two major responses to this evidence – that they have competed, but the products have been commercial failures; and that they have not competed on health grounds in the marketing of cigarettes because they have been precluded from doing so since 1955 by the FTC.

(i) Evidence Proving Defendants' Adherence to Their Agreement Not to Compete on Health Grounds

(aa) The 1960s - Philip Morris: Saratoga Cigarette

1228. In the early 1960s, Philip Morris test marketed the Saratoga cigarette, which used a charcoal filter and which was, in its top researcher's view, "superior to anything in the marketplace" from a health standpoint. It failed, the company acknowledged, in part because Philip Morris chose not to inform consumers of what it believed to be its comparative health benefit relative to other brands.

> Two years ago, in anticipation of a health crisis to be precipitated by the Smoking and Health Report of the Surgeon General's Committee, we undertook to develop a physiologically superior product. . . . That product was known as Saratoga. Physiologically it was an outstanding cigarette. Unfortunately then **after much discussion we decided not to tell the physiological story which might have appealed to a health conscious segment of the market. The product as test marketed didn't have good 'taste' and consequently was unacceptable to the public ignorant of its physiological superiority**.

1000307159-7164 at 7159-7160 (US 20092) (A) (emphasis added); Farone WD, 164:16-165:8; Harris WD, 135:1-146:20 (presenting economic conclusions and internal documents reflecting Defendants' understanding that consumers informed about potential harm-reducing attributes of

cigarette are willing to trade off other attributes, such as taste).

(bb) The 1960s - R.J. Reynolds: Multijet Filter

1229. By the late 1960s, RJR had developed a feasible cigarette filter that, according to Reynolds's research, reduced the retention of smoke particulate matter in a smoker's lungs by 63%. Unlike the filters Defendants designed for cigarettes they marketed as "low tar" cigarettes, the "multijet" filter limited one form of smoker compensation – puffing harder on cigarettes to obtain more nicotine – and yielded tar and nicotine deliveries to human smokers that closely matched their FTC machine-measured yields. The multijet filter accomplished this by increasing its efficiency as flow rate increased – that is, the harder a smoker puffed on the cigarette, the less material passed through to the smoker. Farone WD, 133:13-134:1. See 514901941-1966 at 1941 (US 30086) (A); 504210090-0091 (US 29749) (A); see also Townsend TT, 3/8/05, 14790:25-14800:1, 14801:17-14803:9. Reynolds's expert witness David Townsend admitted that these findings were obtained using separate scientific testing methods, and thus strengthened the significance and validity of these results. See Townsend TT, 3/8/05, 14803:15-14804:11. Unlike other products offered by Reynolds and other Defendants, a cigarette with the multijet filter had the advantage of providing a smoker essentially the same tar dose as the FTC-reported yields.

1230. As early as 1971, RJR had a multijet filter product that both had a "satisfactory taste" and retained "considerably less" tar in the smoker's lungs and work had "progressed to the point where a complete cigarette design . . . [was] feasible and makable." 512279835-9836 at 9835 (US 30037) (A). Indeed, the company found that this prototype compared favorably to an existing Reynolds brand on the market, Vantage, which Townsend admitted was commercially feasible at the time. 512279835-9836 at 9835 (US 30037) (A); see also Townsend TT, 3/8/05,

14810:2-21. Townsend did not and could not present any documents indicating that the multijet filter was not commercially viable. Id., 14809:18-14810:1.

1231. In fact, the same document notes that the marketing department "had reservations" about selling it because Reynolds's marketers expressed "concern that **the utilization [in marketing] of the retention story, scientifically endorsed, may jeopardize the rest of the Company's cigarette business**." 512279835-9836 (US 30037) (A) (emphasis added).

1232. Reynolds never incorporated the multijet filter into marketed products. In fact, RJR revived the idea in the 1990s, again recognizing its potential ability to modify the particle size of the smoke aerosol delivered to smokers, but again did not develop the filter for use in any commercialized product. 510926982-6983 (US 87554) (A); 510827052-7068 (US 87555) (A).

1233. In his direct examination, Townsend insisted that the multijet filter did not prevent compensation and that "it didn't really [work]," in part because of clogging problems. Townsend TT, 3/7/05, 14593:1-3, 14412:16-14413:23. However, Townsend's testimony was undermined by documents showing that Reynolds believed the multijet did work – 504210090-0092 (US 29749) (A) and 514901941-1966 (US 30086) (A) – documents that Townsend had not reviewed or identified in reaching his opinions. See Townsend TT, 3/8/05, 14790:5-24, 14798:17-14799:3. Despite saying that he had "pulled every document I could find on Multijet," Townsend did not offer a single piece of contemporaneous documentary evidence to corroborate his testimony that multijet had clogging problems. Id., 14804:15-14808:4.

(cc) The 1970s - Brown & Williamson: FACT cigarette

1234. In the mid-1970s, B&W internally acknowledged a "scientific consensus on alleged ill effects of smoking" that included harm from constituents in the gas phase of cigarette smoke, including carbon monoxide ("artherosclerosis, permeable arteries, displacement of

oxygen in blood"), nitrogen oxide ("obstructive pulmonary disease, emphysema"), and hydrogen cyanide ("cilatoxic"). It thus developed FACT, which the company touted as a "low gas" cigarette to compete with low tar products. B&W perceived this sort of product as a potential vehicle not only to appeal to the "health-conscious" smoker, but as a method of slowing the incidence of quitting, and also as a way to address people's burgeoning concerns about environmental tobacco smoke:

> The gas reduction segment is expected to emerge in the next 1-2 years. The low gas segment is also seen as a means to eventually stem the decline in smoking incidence through positive statements to smoking consumers and passive smokers alike.

777076768-6792 at 6773, 6790 (US 54623) (O).

1235. While B&W believed that FACT presented a potential health benefit, it also believed that there were several impediments to offering "health reassurance via a new method" and, thereby, developing a successful marketing campaign for FACT. 777076768-6792 at 6768 (US 54623) (O). B&W recognized that this technology offered "the opportunity to make positive health statements to active and passive smokers alike," it was concerned about alerting smokers to another potential health threat from cigarettes. 777076768-6792 at 6768 (US 54623) (O). Accordingly, B&W rejected a proposed marketing campaign that would have informed consumers that gas from cigarette smoke was a health hazard, and an effective campaign would both educate them of as much, and show how FACT responds to that hazard. Indeed, B&W concluded that Liggett's and Lorillard's prior low gas products had failed in part because of "an inability of the positioning to communicate . . . distinct health hazards arising from cigarette gases." 777076768-6792 at 6771 (US 54623) (O); see also 681879254-9715 at 9293 (US 21020) (A). Nevertheless, a B&W Brand Manager stated explicitly in a memorandum to, among others, the Vice President of Brand Management: "We do not support definition in advertising of the

problem of gas in order to specifically communicate its consumer benefit and distinguish it from low ‘tar'. **To supply such definition would require overt references to the alleged ciliatoxic and cardiovascular ill effects of smoking**. **The possible ramifications of this in the Legal, Regulatory, and Policy area are appalling**." 667059296-9299 at 9297 (US 69068) (O) (emphasis added).

(dd) The 1970s - Liggett: Project XA

1236. By the early 1970s, Liggett had developed a new cigarette product, known as "XA," that internal research led it to conclude was less hazardous to smokers. Liggett viewed the XA cigarette as the means for its long-term survival as a cigarette manufacturer. According to sworn testimony of John Bowen Ross, an in-house lawyer, Liggett saw XA as a way to increase its market share, which had fallen to around 5%, by attracting smokers who desired a cigarette that was potentially less harmful than the cigarette they had been smoking. Ross PD, Washington v. American Tobacco, 10/22/98, 97:1-98:25; Harris WD, 174:13-175:2.

1237. Internally, Joe Greer voiced concerns about proceeding with the XA project. Greer was concerned that development of the XA would cast doubt on the "party line," which maintained that smoking was not harmful to health. Id., 37:6-38:18. These "concerns" about the development and marketing of the XA seriously frustrated the scientists who believed that they had developed a potentially less hazardous product. Mold PD, Cipollone v. Liggett, 12/13/85, 360:21- 362:15 (having overseen the XA project and spent "20, 25 years with a significant effort, something like twenty million dollars, working on something that the company has engaged you to do, you're successful at it, successful where no one else in the world has been successful, in other words, this is not just your run of the mill development, and now you're told one reason after another why you can't market this product or can't even publish [what] you have developed.

. . how many people that you know wouldn't be frustrated and annoyed?").

1238. The XA product utilized palladium as a catalyst to alter the chemical reactions occurring in a burning cigarette, thus modifying the composition of cigarette smoke. LATH00312201-2202 (US 22149) (A); Albino TT, 3/29/05, 17099:11-19, 17106:23-17107:1. By 1972, researchers at Liggett had determined that the smoke from XA cigarettes contained lower concentrations of polycyclic aromatic hydrocarbons ("PAHs"), some of the most harmful constituents in cigarette smoke. 681879254-9715 at 9485 (US 21020) (A); LATH00312201-2202 (US 22149) (A); Harris WD, 174:9-175:2; Albino TT, 3/29/05, 17096:7-16 ("Public health authorities had, for a long time, identified PAHs as a class of carcinogens in cigarette smoke that were closely associated with lung cancer risks."); Mold PD, Cipollone v. Liggett, 12/13/85, 360:21-364:22. By 1976, Liggett researchers had concluded, using the widely accepted, standard mouseskin-painting model, that the smoke condensate from XA cigarettes reduced overall tumors in mice by 85-88%, and cancerous tumors by 77-100%. Harris WD, 174:13-175:2; LG 2013584–3587 (US 21208) (A); LG166090–6102 at 6101 (US 21195) (A) (Figure 2); Meyer PT, Washington v. American Tobacco, 11/10/98, 5441:14-5443:2; Mold PD, Cipollone v. Liggett, 11/25/85, 100:2-105:15. Liggett also performed animal inhalation studies and chemical analyses that showed that the addition of palladium did not adversely affect the test animals or create threatening byproducts. Id., 104:17-105:15 (skin painting and inhalation studies "demonstrated that we had, in fact, eliminated the animal carcinogenicity"); 681879254-9715 at 9487 (US 21020) (A).

1239. In preparing to market the XA cigarette in the late 1970s, Liggett, like the other Defendants, strictly refused to inform consumers about XA's primary design feature and what Liggett concluded was its potential harm reduction benefit for the smoker. Liggett originally

wanted to develop a marketing campaign simultaneously conveying the benefits of XA (tentatively to be marketed as the "Epic" brand) while not making any express health claims about the product, because Liggett feared retribution from other Defendants in light of agreements to coordinate smoking and health research through CTR (which Liggett had not done with XA). Meyer PT, Washington v. American Tobacco, 11/10/98, 5471:25-5475:16, 5505:13-5508:10, 5508:18-5510:20, 5511:4-5518:13.

1240. Liggett's unwillingness to break from Defendants' joint agreement not to state explicitly or implicitly that any cigarettes were safer than any others was evident in a meeting it had with White House officials about XA. Lawrence Meyer, Liggett's outside counsel during this period, testified that the purpose of the White House meeting was "to let them know that the [XA] project was coming." Liggett perceived that the White House meeting "was positive" and "[t]hey were encouraged until such time as almost immediately, someone from the Tobacco Institute called and – and essentially asked . . . [Liggett counsel] Joe [Greer] and some of the others what the hell they were doing." Meyer PD, Washington v. American Tobacco, 9/8/98, 109:7-111:1.

1241. Liggett did not market XA. Albino TT, 3/29/05, 17103:9-11. Explaining this decision, Liggett's President K.V. Dey testified that the goal of the research, on which the company spent twelve years and millions of dollars, was for the purpose of producing a test cigarette yielding smoke condensate less tumorigenic to mouseskin, not to create a cigarette less hazardous to humans. Liggett considered the results irrelevant to the possible effects of smoking on humans, and continued to deny any link between smoking and cancer in humans. Dey PD, Cipollone v. Liggett, 4/19/84, 216:23-217:24, 218:5-219:16, 219:23-221:16; see also 681879254-9715 at 9505-9506 (US 21020) (A); Harris WD, 175:3-8 (after deciding not to

pursue XA in early 1980s, Liggett did not market any product utilizing that feasible technology for another 17 years); Mold PD, Cipollone v. Liggett, 12/13/85, 374:13-376:10 (Liggett's position mirrored that of the rest of the industry, "that epidemiology means nothing, painting on a mouse skin back means nothing, it can't be translated to man, and as far as publishing data regarding the constituents of smoke that were carcinogenic, I don't suppose anybody ever explained to me in so many words why they didn't publish it, but it was pretty obvious that they didn't feel that would be helpful" to their public position on cigarette smoking and health.)

1242. According to Liggett President Kinsley Dey, pressure and threats from Philip Morris not to market XA in the United States contributed to Liggett's decision not to market this cigarette. Mold PD, Cipollone v. Liggett, 11/26/85, 191:17-193:18.

1243. Lawrence Meyer, former antitrust counsel to Liggett, testified that B&W threatened Liggett's "very existence" if it marketed the XA cigarette, including freezing Liggett out of joint defense agreements, and perhaps excluding Liggett from the Tobacco Institute as well. This instruction, delivered through Ernest Pepples, B&W's representative on the Tobacco Institute's Committee of Counsel, was based on B&W's fear that selling XA would be an admission against the interest of all Cigarette Company Defendants. John Bowen Ross occasionally accompanied Greer on trips to meet with Ernie Pepples. In 1981, Pepples told Ross: "I hope you're not going to do anything with that damned [XA] project." 524007145-7151 at 7148-7149 (US 20917) (O); Meyer PT, Washington v. American Tobacco, 11/10/98, 5511:4-5518:13.

1244. Liggett feared that, given the view of the XA project by the other Cigarette Company Defendants, if it decided to terminate the XA project, it would appear that Liggett was responding to threats to terminate the project, and could be viewed implicitly or explicitly as an

agreement to restrain technology. Id., 5519-5526; Ross PD, Washington v. American Tobacco, 10/22/98, 82:11-89:17. Caught in a dilemma between violating the agreement not to compete on health claims and their perceived risk of antitrust allegations, Liggett chose to honor Defendants' fraudulent conspiracy by eliminating XA.

1245. RJR recognized that XA was a feasible less hazardous cigarette. In an internal defense memorandum prepared in approximately 1985, RJR (through its counsel) concluded that a non-carcinogenic cigarette could be made, noting with regard to Liggett's XA product: "Liggett abandoned it eventually, but only **after** it had come to a **successful** conclusion." RJR admitted it has made no effort to emulate the XA or otherwise to make a non-carcinogenic cigarette notwithstanding the expiration of Liggett's patent on the technology. RJR is well aware that it could market such a technology: "[XA] suggests that 'safer cigarette' technology has been available and in the tobacco industry's patented possession for the last 20 years . . . and still, no safer cigarette." 681879254-9715 at 9296, 9482 (US 21020) (A) (emphasis in original).

1246. After extensive review of the evidence concerning Liggett's development and ultimate decision not to commercialize its XA technology in the late 1970s, Dr. Harris, the United States' expert economist, testified that the "facts support the conclusion that, as a result of credible threats, Liggett withdrew its XA projects, and the collusive arrangement among cigarette manufacturers once again stayed intact." Harris WD, 185:12-17; see generally id., 176:3-185:17.

1247. XA remained an ignored technology at Liggett for nearly two decades. In the early 1990s, John Bunch, then a Liggett scientist and researcher, first learned of the XA technology. With little intervening advance in the technology, shortly following the creation of Liggett's affiliate Vector Tobacco in the late 1990, Drs. Bereman and Albino turned the XA technology into the Omni product in less than one year, and to get the product to market.

Bereman PD, United States v. Philip Morris, 4/23/02, 17:24-19:23, 20:9-21:8; Albino TT, 3/29/05, 17117:5-12 & 20-22, 17118:7-11; Bunch PD, United States v. Philip Morris, 5/22/02, 82:25-88:25, 116:15-120:20.

(ee) The 1980s - R.J. Reynolds: Premier Cigarette

1248. From the mid 1980s to 2000, RJR developed and test marketed three different products that were designed primarily – and RJR believed successfully – to reduce the delivery of harmful smoke constituents. The company test-marketed each of these products – Premier, Winston EW/Select, and Eclipse – in conformity with Defendants' joint agreement not to compete on health claims in the marketing of cigarettes, and with knowledge that adhering to the agreement prevented RJR from providing consumers with the information it knew was important to boost chances for commercial success.

1249. Dating back to as early as 1957, RJR was aware that researchers in the greater scientific community had recommended reducing the burning temperature of cigarettes to minimize the formation of harmful constituents such as polycyclic aromatic hydrocarbons (a family of compounds that include benzoapyrene). 507349165-507349287 at 9180 (JD-041934) (A); see also US FF § III.A(3)(j), infra (discussions of BATCo's Ariel and Philip Morris's nicotine aerosol research). But it was not until the mid-1980s that RJR developed a cigarette utilizing this design approach. The cigarette, eventually given the name Premier, was specifically designed to reduce the delivery of toxic cigarette smoke constituents by reducing the temperature of the burning cigarette. See, e.g., Townsend TT, 3/8/05, 14727:4-18; Burger PD, Arch v. American Tobacco, 8/21/97, 234:15-18; deBethizy PD, Hoskins v. Reynolds, 9/25/97, 47:16-48:19, 169:15-171:5 (Premier was "in a class of products that we were studying to try to address the risks associated with our product.").

1250. RJR conducted substantial research that led it to conclude that Premier accomplished its objective of decreasing delivery of many known harmful smoke constituents. See Townsend WD, 128:21-135:5 (discussing, in part, 507141075-1460 (JD-060325) (A)); Townsend TT, 3/8/05, 14727:15-18, 14813:16-14814:5; Burger PD, United States v. Philip Morris, 7/26/01, 71:4-74:16; Burger PD, Arch v. American Tobacco, 8/21/97, 234:15-18.

1251. Despite the internal belief about the harm-reducing potential of Premier, Reynolds never marketed Premier with clear health-related messages. Juchatz TT, 11/22/04, 6682:15-20. Reynolds's marketing of Premier was intentionally structured not to run afoul of Defendants' agreement not to compete on health grounds.

1252. Years before Premier was test-marketed in 1988, Reynolds's management and counsel, as well as counsel for other Defendants, had determined that Premier would not be publicly associated with the idea of risk reduction.

1253. Reynolds's approach to Premier started to take shape as early as 1982, when newly appointed Research & Development Department Director Dr. Robert DiMarco indicated, during his "Law Department orientation," that the consensus in the scientific community was that smoking caused disease and that it was his responsibility to make a cigarette with reduced mutagenicity – a cigarette less likely to cause the cellular changes that can lead to cancer. DiMarco's perspective alarmed the company and the industry. See generally 505741150-1153 (US 23009) (A); 505741141-1142 (US 20746) (A); 505741143-1147 (US 20747) (A); 505745988-5992 (US 20748) (A). Reynolds's chief counsel at the time, Sam Witt, stated that outside industry lawyers Ed Jacob and Tim Finnegan of Jacob, Medinger and Finnegan felt that it could be "devastating" if Dr. DiMarco, "as the company's chief scientist," were to testify about causation and take a position contrary to that of the industry. See Juchatz TT, 11/22/04, 6672:4-

6675:7 (discussing, in part, 505741143-1147 (US 20747) (A)), 6684:2-6686:15 (confirming that Witt authored US 20747).

1254. Therefore, as Reynolds lawyer Wayne W. Juchatz confirmed in his trial testimony, lawyers and management imposed specific conditions on DiMarco in exchange for permission to go forward with the development of Premier (and for keeping his job). First, DiMarco had to suppress or change his view that state-of-the-art scientific knowledge showed smoking caused disease, and that therefore the company's litigation defenses were obsolete and the industry's litigation "experts" who testified to the contrary lacked integrity and credibility. Second, any "less hazardous" product developed by DiMarco was not to have the term "safer" associated with it because it implied that Reynolds's existing products were unsafe – an admission that could be used against the company in litigation. And third, he was not to otherwise conduct research that, if subpoenaed, might jeopardize the company's legal defenses, might prove embarrassing for the company, or otherwise would be "hard to handle" for the company. Juchatz TT, 11/18/04, 6585:14-6587:5 (discussing 505741150-1153 (US 23009) (A)); 505741141-1142 (US 20746) (A); 505741143-1147 (US 20747) (A); 505745988-5992 (US 20748) (A)); see also Juchatz TT, 11/18/04, 6590:19-6591:16 (Reynolds Law Department "reach[ing] an understanding . . . to work with him [DiMarco] in an effort to devise a way in which he could do what he wanted without creating any serious legal problems"); id., 6592:23-6593:21, 6594:25-6596:8 ("The objectives of the Law Department were to allow him to do what he wanted to do, but minimize the risk."); id., 6598:20-6599:19, 6601:14-6605:21 (Juchatz could offer no substantive response to the Court's question: "Why in the world would he [DiMarco] have said things like that to you which impugn the integrity of his whole profession if he didn't believe it?"); id., 6609:6-6611:22 (outside lawyers thought DiMarco should be fired if he did not

come around); id., 6615:19-6617:9 (outside industry counsel Jacob and Finnegan expressed concern to RJR about DiMarco admitting causation). This, DiMarco understood, was the compromise position available to him in the face of threats (from, among others, Reynolds executives Ed Horrigan and Gerald Long, and outside counsel Ed Jacob) that otherwise he would be prohibited from developing this product. Id., 6583:19-6585:18, 6662:4-6669:12. Indeed, they went so far as to force DiMarco to adopt a "mission statement" they had drafted which ran contrary to the scientific views he had expressed to lawyers internally, and required him to have all his procedures reviewed by the Law Department. Id., 6619:9-6624:6 (discussing US 20746 & US 20747), 6668:6-6669:12, 6674:19-6675:8.[5]

1255. Consistent with this unrefuted evidence of the close monitoring by executives and lawyers of DiMarco's less hazardous cigarette development from its inception, when Premier was ready to come to market, RJR adhered to its longstanding agreement with Defendants rather than directly informing consumers of Premier's potential health-related benefits.

1256. In the fall of 1987, Reynolds sent Peter Hutt, a Covington & Burling lawyer who had previously served as Chief Counsel of the United States Food and Drug Administration ("FDA"), to meet with representatives of FDA and other government health officials. According to meeting minutes, Hutt refused to discuss "safety issues" with the FDA because the "tobacco industry" maintained that "**conventional cigarettes are not unsafe, and that it would never reverse this position**." He made clear that RJR would not "promote or label . . . [Premier] as safer than conventional cigarettes . . . [because] **such a claim would be an indictment of the tobacco industry and its long standing position that conventional cigarettes are not unsafe** .

[5] While Defendants told the Court that they intended to produce Dr. DiMarco to explain these events, and he was on the defense witness list (see Juchatz TT, 11/18/04, 6618:21-6619:8), Defendants did not call Dr. DiMarco.

. . nor did RJR have any intention of jeopardizing the industry's long standing position ." HHS0880359-0364 at 0361 (US 85828) (A) (emphasis added); see also Farone TT, 10/12/04, 2104-2106 (Dr. Farone testifies that Hutt's statements at this 1987 meeting are "totally consistent" with his opinions about Defendants' agreement not to compete on health grounds in cigarette marketing).

1257. Reynolds's views on this were corroborated by a letter written by Hutt that commented on a separate September 1987 meeting he had about Premier with the Director of the Centers for Disease Control's Office on Smoking and Health. Mr. Hutt wrote: "[Y]ou asked whether Reynolds agreed that cigarettes caused the health problems I had mentioned. I responded that they did not[;]" and "I again responded that Reynolds did not agree that the current cigarette is unsafe and would not contend that the new cigarette is safer or safe." 506147781-7783 (US 93089) (A).

1258. And in testimony in this case, RJR's Chief Executive Officer during its test-marketing of Premier, Gerald Long, confirmed RJR's commitment to protect Defendants' position that cigarettes are not harmful. Long testified that RJR carefully selected its marketing strategy to avoid any implication that conventional cigarettes posed a health threat:

> **[O]ne of the guidelines that we had right from the beginning [of putting together the marketing strategy was] that Premier could not be and would not be marketed as a safer cigarette because of the implications on the tremendous business that we had at hand already**. . . .
>
> **[I]f we had come out and stated here you have Premier, the safer cigarette or the safest cigarette or anything indicating to that, the implication would have come back on our own products and our competitive products in the industry which we were aware of that would have stated that they were not safe products, and since our position was that we were marketing, the industry and – ourselves and the industry were selling and marketing safe cigarettes, then we couldn't say in**

> **one of our brands that we were coming out with something that was safe, while all the rest was not safe**. . . .
>
> The negative implications, I think, are quite obvious, that **if we came out very strongly with a product, presuming that the product could deliver and it was the product that was in our opinion and the research showed it to be some kind of a – some kind of a product that was considered to be safer than any of the conventional cigarettes on the marketplace, it would have had a substantially negative effect on the rest of the tobacco industry**, and we felt we weren't ready to take on that obligation. . . . What kind of negative effects? It would have turned around and said to people, well, the tobacco companies are publicly admitting we do not market safe cigarettes.

Long PD, United States v. Philip Morris, 10/18/01, 86:3-90:25 (emphasis added).

1259. Reynolds test-marketed Premier from October 1988 to February 1989. Townsend TT, 3/8/05, 14813:23-14814:2. During that time period, Reynolds continued to deny that smoking caused cancer, emphysema, or heart disease. Id., 14814:6-15. For example, Reynolds wrote to the widow of one former smoker, "We firmly believe that cigarettes have been unfairly blamed as a cause of human disease." 515792869-2869 (US 20869) (A). And it made more broad public statements that "RJR disagrees with the view expressed in the Surgeon General's Report that cigarette smoking has been scientifically established to cause cancer." 507605620-5639 at 5620 (US 20781) (A). Thus, during this time period Reynolds in fact continued to tell the public there was no need for a potentially "safer" cigarette.

1260. Reynolds's attempts to explain its conduct concerning Premier are post hoc explanations without support in the record. For example, Dr. Townsend's denial that Reynolds's public relations position influenced its approach to marketing Premier was wholly undermined by the two Hutt documents and former CEO Long's sworn testimony, all of which expressly articulate RJR's reasoning. See Townsend TT, 3/8/05, 14820:8-14826:4. Rather, Dr. Townsend's strained explanation – 18 years after the fact – was that Hutt, a sophisticated lawyer

hired by Reynolds specifically to meet with high level government officials on this very issue, was out of step with his client. Id., 14826:8-19.

1261. Similarly, Reynolds's other response to explain why it did not make clear health-related statements is that such claims were impossible because "the government has defined no objective criteria or standards by which to demonstrate whether one cigarette is safer than another[; n]or is there a scientific consensus on what objective criteria or standards can be used." Townsend WD, 28:21-29:3. Neither Reynolds nor any other Defendant offered evidence that it is the United States' responsibility – legal or otherwise – to provide Defendants with an official set of standards or tests by which to evaluate their products for potential advertising claims, or that it would be scientifically appropriate to do so. In fact, as Dr. Harris confirmed during his redirect examination, it would be scientifically inappropriate to require a single battery of tests, because "the tests would have to be tailor-made" to address the differing scientific problems raised by particular products and designs. Harris TT, 10/21/04, 3286:9-3291:10. Second, it ignores Defendants' awareness of the range of available tests already available to assist in their assessment of cigarettes they design to be less hazardous. See 87633619-3626 (US 56267) (O) (Lorillard document identifying established biological tests for product evaluation). In any event, Reynolds's explanation is entirely inconsistent with its own subsequent conduct with Eclipse. Even though the United States has not issued any such "objective criteria or standards" for less hazardous cigarettes, Reynolds began making explicit health claims for Eclipse in 2000 based on a testing regimen it concluded supported such claims. Townsend WD, 148:8-18.

1262. At trial, Reynolds also offered two reasons why Premier failed in the marketplace. Premier's failure in the marketplace, whatever the reason, is **irrelevant** because it simply does not bear on, let alone counter, the United States' reason for proffering evidence on Premier – as

proof of Reynolds's intentional conduct to restrict their business conduct to protect and maintain consistency with Defendants' fraudulent denial of smoking's harms. Nevertheless, the United States briefly explains these responses by Reynolds.

1263. Reynolds contended that Premier failed because of "widespread condemnation by the public and public health community" – pointing to documents showing that public health representatives had urged the FDA to exercise jurisdiction over the product. But the evidence Reynolds presents belies this contention. The first two such documents urging jurisdiction were from the American Medical Association in April 1988 and from Surgeon General Koop in September 1988 – i.e., each coming before Premier was ever test-marketed; therefore they certainly did not stop Reynolds from going forward with the test market, let alone stop the test marketing prematurely. See HHS 0151020-1021 (JD-001592) (A). Contrary to and impeaching his trial testimony, Dr. Townsend was forced to admit that in 2002 – two years before this trial began – he had testified that Reynolds had not taken Premier off the market to avoid FDA jurisdiction. Townsend TT, 3/8/05, 14831:24-14834:3.[6]

1264. Reynolds's second response was that Premier failed because the product had flawed attributes, including its taste and the fact that it did not burn down. Townsend WD, 140:18-141:8. Reynolds denied that its failure to directly inform consumers of what Reynolds had concluded internally – that Premier actually reduced the harms from smoking – affected Premier's reception in the test marketplace. Contrary to Dr. Townsend's testimony, but consistent with the weight of the evidence in the record, Reynolds was well aware that its refusal to give

[6] In fact, there is evidence in the record that suggests that even at the time Reynolds was not particularly concerned about FDA regulation, because it had received information indicating that certain FDA officials were not interested in regulating Premier. Townsend TT, 3/8/05, 14835:4-14837:6 (discussing Burger PD, United States v. Philip Morris, 7/26/01, 128:8-21, 129:16-130:1).

consumers even the opportunity to weigh all of the product's attributes, by failing to provide clear information about Premier's reduced delivery of disease-causing smoke constituents, contributed to its performance in the test market. See Harris WD, 135:1-146:20.

1265. As David Iauco, RJR's head of business development, told the *Philadelphia Inquirer* in December 1997 (concerning RJR's Eclipse cigarette), "No smoker is going to switch to a lower-risk product unless they know of a benefit and believe it. There will be trade-offs and adjustments, things that the smoker will have to give up." 525413253-3262 at 3259 (US 87556) (O).

1266. RJR's marketing of Premier focused not on its potential health benefits, but instead on its purported cleanliness and courtesy benefits. See, e.g., Juchatz TT,11/22/04, 6682:15-19. The implausible explanation that RJR offered to the Court was that it spent the better part of one billion dollars, Townsend WD, 143:7-11, to make a cigarette that it could sell as a reduced odor, reduced ETS, "cleaner smoke." Townsend TT, 3/8/05, 14817:13-17. In fact, the CEO at the time, Gerald Long, confirmed that these themes for marketing Premier "failed because we couldn't say what we wanted to say [i.e., that Premier was a safer cigarette]" because of Reynolds's commitment to Defendants' public position on causation. Long PD, United States v. Philip Morris, 10/18/01, 86:7-88:2.

1267. Reynolds stuck with its non-controversial advertising plan even though it had learned through testing ad campaigns that "the claim ‘smoke-free' didn't mean anything" to consumers. Id., 87:5-7. Likewise, Reynolds's marketing executives concluded that "most [smokers] did not realize that the product had other [than low ETS] unique attributes (i.e., ... reduction in alleged controversial compounds) . . . As a result, many smokers who tried the product were not adequately prepared for its unique properties." 507543977-4004 at 3986 (US

85829) (O); see also deBethizy PD, United States v. Philip Morris, 4/17/02, 122:6-8 (Premier's "taste was dramatically different and people were unprepared for it").

1268. Philip Morris reached similar conclusions about Reynolds's marketing approach to Premier. Philip Morris hired consultants to evaluate Reynolds's marketing of Premier and found it to suffer from exactly the problem Reynolds's executive Iauco articulated: Premier's advertising was "ineffective in communicating a relative advantage over the smoker's current brand." 2022259027-9061 at 9027 (US 20363) (A); see also Farone TT, 10/7/04, 1818:10-1819:4, 2107:4-2108:3 (Farone testifies that Premier print advertisement was "fuzzy" because it didn't compare Premier to other marketed products such as Winston or Marlboro, did not inform consumers that the "compounds" are actually factors that cause disease or that there are carcinogens, and did not identify any chemicals in particular that might be harmful that were reduced by Premier.)

(ff) The 1990s - R.J. Reynolds: Eclipse Cigarette

1269. After abruptly ending Premier's test marketing after six months in 1989, RJR shifted its focus to development of another cigarette that reduced the burning temperature of the cigarette to reduce the formation and delivery of harmful constituents. Reynolds first test-marketed this product – Eclipse – seven years later, in 1996. And beginning in April 2000, Reynolds began marketing Eclipse with a claim that it may present less risk of lung cancer, chronic bronchitis, and emphysema. Townsend WD, 143:13-144:3, 148:7-11, 152:5-8.

1270. Reynolds pronounces that it competes with the other Defendant Cigarette Companies "based on the potential health benefits of Eclipse" and that Reynolds's marketing of this single product counters the wealth of evidence proving Defendants' agreement not to compete on health claims. Id., 153:4-13. However, the reality is that Defendants' conspiratorial

agreement not to compete on health claims continues and has influenced Reynolds's decisions on how to approach its products that it believes may reduce smoking's adverse effects. The evolution of Eclipse's these claims – in terms of timing and content – is a product of this conspiracy; the type of cigarettes with which Reynolds chooses to "compete" is a product of this conspiracy; and the true, limited target population for Eclipse is a product of this conspiracy.

1271. **Timing & Content of Eclipse Marketing** – From the beginning of its development in the early 1990s, Reynolds's primary internal goal and design criteria for Eclipse was risk reduction. Doolittle PD, United States v. Philip Morris, 5/10/02, 202:4-7; deBethizy PD, United States v. Philip Morris, 4/17/02, 56:8-11. By the time Reynolds first test marketed Eclipse in 1996, it already had concluded that it had met that primary design goal. deBethizy PD, Hoskins v. Reynolds, 9/25/97, 169:15-171:15. Yet at that time, no Defendants had ever acknowledged that any marketed cigarettes caused disease, and thus pursuant to Defendants' longstanding agreement had not marketed one cigarette as potentially less hazardous than another. So for the first four years of the Eclipse test-market, from 1996 to 2000, RJR marketed Eclipse in the same way it had marketed Premier: as a "cleaner" cigarette due to its producing very low levels of secondhand smoke, which Reynolds contends poses no health risk to humans, but is just an irritant. deBethizy PD, United States v. Philip Morris, 4/17/02, 56:8-11; 60:3-61:2; 61:22-63:11; 65:2-5; Doolittle PD, United States v. Philip Morris, 5/10/02, 202:18-23. Secondhand smoke reduction never was a design criteria or otherwise a goal in developing Eclipse. Id., 155:23-156:25, 157:7-160:1, 202:12-203:15, 272:19-273:4.

1272. In the late 1990s, certain Defendants began to make more truthful public statements about smoking's role in causing disease, thereby undermining Defendants' 45 years of lockstep uniformity denying that smoking is a proven cause of disease. For example, in October

1999, Altria and Philip Morris launched corporate websites stating, "There is an overwhelming medical and scientific consensus that cigarette smoking causes lung cancer, heart disease, emphysema, and other serious diseases in smokers." 2085240087-0089 at 0087 (US 45673) (A); (no bates) (JD-046719) (A); Keane TT, 1/19/05, 10555:22-10556:7; Parish TT, 1/27/05,11359:7-11360:1.

1273. Thereafter, in April 2000 – six months after the United States filed the Complaint in this case – RJR announced that it was beginning a new test market of the Eclipse cigarette with the marketing claim that Eclipse may present less risk of certain smoking related illnesses "compared to other cigarettes." Even without government-formulated and endorsed standards (the absence of which Defendants claim accounts for their failure to make clear health-related claims), Reynolds advertised that Eclipse may pose less risk for lung cancer, chronic bronchitis, and emphysema. Townsend WD, 143:13-144:3; 152:1-8. Today, in 2005, Reynolds says Eclipse "may present less risk of cancer associated with smoking." JD-068012 (A).

1274. While RJR did make some changes to Eclipse by 2000 compared to the initial release in 1996, none of the changes had to do with reducing health risks. Rather, Reynolds attributes the delay in making these claims until the year 2000 to the additional time it took to construct and apply its own scientific testing approach for labeling a cigarette less hazardous – what it refers to as the "Four Step Methodology." Townsend WD, 149:8-150:8. However, Reynolds possessed and had applied the "Four Step Methodology" well before 1996, when it first released Eclipse, let alone before 2000, when it first made risk reduction claims about the product. Id., 150:10-12. For instance, as outlined above, in the early 1990s, Reynolds used each and every component of its "Four Step Methodology" (chemistry testing, then biological testing, then human smoker tests, then review by an external panel of independent experts) in assessing

its "EW" product.

1275. **Content of Claims With Which Reynolds "Competes"** – Certain Defendants' recent statements acknowledging that smoking causes disease explains the timing of the health-related claims for Eclipse. Nevertheless, Reynolds itself has simultaneously acted to undermine them by (to this day) refusing to admit unequivocally that smoking directly causes any disease. Schindler WD, 18:11-22:4; Schindler TT, 1/24/05, 10812:23-10821:18. More, Reynolds refuses to inform the public as to what "other cigarettes" Eclipse was compared to support its health claim. As Dr. Farone testified, an assessment of whether Eclipse is a potentially less hazardous product "depends what [it is] compared to." Farone WD, 179:13-14. And Reynolds has not made available to the consuming public in a straightforward manner information that would permit a smoker to compare her brand to Eclipse on the measures that underlie Reynolds's claims about Eclipse. While Dr. Doolittle, Reynolds's Vice President for Product Evaluation, admits that the only way to make a scientifically valid toxicity comparison to actual brands is to test them all together at the same time using the same testing media in a single study, and admits that Reynolds regularly performs this comparison for the top 70 selling brands in the market, he concedes that Eclipse is never tested against them like this. Rather, Reynolds tested Eclipse in a separate study, against a non-market, lab-only "reference" cigarette, and not at the same time, nor using the same testing media as the actual market brands. Doolittle PD, United States v. Philip Morris, 5/1/02, 179:2- 184:19. There is nothing available to the public in the published literature containing even a non-contemporaneous comparison of Eclipse and actually marketed brands, and to the extent which data about other brands is published at all, they are coded. According to deBethizy, "[I]t would take a pretty sophisticated consumer" to determine how his specific brand stacks up. deBethizy PD, United States v. Philip Morris, 4/17/02, 101:18-102:20; 103:20-110:7

(testifying that "I don't know. I don't know how" a person could find out how Eclipse compared on the toxicity tests compared to his own brand such as Marlboro).

1276. **Reynolds's Choice of Cigarettes With Which It "Competes"** – In addition to the timing of the claims, Reynolds's decision to make health-related claims occurred in connection with a product, and in a manner, that did not directly threaten or disparage the market for conventional cigarettes. Reynolds was willing to make health claims about unconventional, hard-to-light, no-ash, odd tasting Eclipse in 2000. Yet as detailed above, prior to selling Eclipse or making health claims about it, Reynolds possessed and marketed a traditional style, **tobacco-burning** cigarette that it had concluded reduced risk and that it determined would sell well broadly. Reynolds has chosen not to make health claims about that product – or even to put it back on the market in the eight years since Reynolds pulled it off the shelves after it proved itself commercially successful. That cigarette is what was known internally at Reynolds as "EW."

1277. **True, and Limited, Target Population For Eclipse** – Reynolds would like the public and the Court to believe that it is using Eclipse to compete for other company's smokers – i.e., to get them to give up their current brands, which they otherwise would continue to smoke, and choose Eclipse, instead. See Townsend WD, 153:4-13. Reynolds tells the public through advertisements that, "The best choice for smokers who worry about their health is to quit[;]" that Eclipse "is not for people who want to quit" and "not an alternative to quitting[.]" Id., 152:14-21 (discussing JDX3281292-1293 (JD-061302) (A)). The evidence is clear, however, that Reynolds intended Eclipse to appeal precisely to those who want to quit, to provide an alternative to quitting, and perhaps even to lower the barriers for non-smokers to begin smoking.

1278. In September 1991, two prominent Reynolds scientists who were working on Eclipse took the extraordinary step of explicitly telling the chief executive of Reynolds that the

intention of Eclipse was to create the impression among smokers that Eclipse was reduced risk **expressly for the purpose of preventing a decline in the smoking population**. The two scientists were J. Donald deBethizy and David Doolittle, both of whom had also worked on Premier. See deBethizy PD, Hoskins v. Reynolds, 9/25/97, 47:6-20; deBethizy PD, Falise v. American Tobacco, 6/29/00, 108:24-109:3; Doolittle PD, United States v. Philip Morris, 5/1/02, 155:23-156:25.

1279. Doolittle and deBethizy together wrote a memo to CEO James Johnston regarding Johnston's Strategic Plan for 1992 to 1996 that urged Johnston to expand the focus of the strategic plan beyond just "capturing market share from other companies." Rather, they urged Johnston to include in his strategic plan a concerted effort for Reynolds to use its reduced risk products as the instrument of a strategy "**specifically aimed at stabilizing or reversing the [overall] market decline**" in cigarette sales – a strategy they perceived to be "critical to the long term growth of our business." 517706032-6033 (US 52122) (O) (emphasis added). Doolittle's and deBethizy's proposed method to do so was to "address the personal and social concerns of smokers" and increase market share by creating an impression that Reynolds's cigarettes be "**perceived by** the consumers as being less hazardous to their health relative to competitive products" – so these scientists urged "an aggressive long-term plan to **reverse the decline of smoking incidence** by repositioning our products" to "minimize . . . [smokers'] concerns regarding the hazards of smoking." 517706032-6033 (US 52122) (O) (emphasis added).

1280. Doolittle subsequently admitted that he intended for Reynolds to use Eclipse to attract potential quitters to stem the decline in smoking prevalence. Doolittle agreed that the decline in smoking due to health consciousness he was referencing was due to people quitting. Further, **"the only option for people who were concerned about their health was to quit, and**

that's the only option they had, and I think what I was trying to say was, we should give them another option." Doolittle PD, United States v. Philip Morris, 5/1/02, 155:23-156:25, 157:7-160:1, 186:23- 199:11, 204:8-205:25 (discussing 517706032-6033 (US 52122) (O) (emphasis added)).

1281. This plan was put into action. For example, seven years later – in 1999 – as part of its assessment of Eclipse, Reynolds hired University of Nebraska scientist Stephen Rennard to conduct studies on "smokers, specifically individuals with chronic bronchitis, who cannot quit but who switch to Eclipse." USX0010747-0841 (US 93085) (O). So not only did Reynolds go after people who "cannot quit" – but the company sought to use Eclipse as an incentive to **smokers who were already ill** to continue smoking rather than quit.

(gg) The 1990s - R.J. Reynolds: Winston EW/Select Cigarette

1282. According to Reynolds's expert Townsend, a hurdle for marketing a reduced risk cigarette is to achieve both technical feasibility and consumer acceptance. And according to Reynolds, despite all of its supposed efforts, Reynolds has not "cleared this hurdle." Townsend cited charcoal filtered cigarettes as an example of coming close but not succeeding. Townsend WD, 25:1-27:13; see also DXA0713376-3420 at 3383-3384 (US 78928) (A) (Townsend's expert report).

1283. Contrary to these statements, the United States demonstrated at trial – through Reynolds's own internal documents – that in the mid-1990s (between the periods of test-marketing Premier and Eclipse) Reynolds itself concluded that it had achieved both "technical feasibility" and "consumer acceptance" with a variation on a charcoal (carbon) filtered cigarette, referred to as "EW."

1284. As with its other potentially less hazardous products, Reynolds decided not to

market EW with clear health-related claims while it – like other Defendants – continued to publicly deny that smoking is a proven cause of disease. In fact, Reynolds discontinued sale of EW in 1997 despite a successful test market run that began in April 1995 – during which EW proved its consumer acceptability. Since then Reynolds has taken the same defensive approach toward the marketing of a supposedly new version of EW ("EW-2") as other Defendants have taken toward their own potentially less hazardous cigarettes – keeping it off the market unless and until its competitors market a similarly designed less hazardous product, and using it as a threat to assure they do not.

1285. "EW" is a tobacco-burning cigarette that, unlike the tobacco-heating Premier and Eclipse, is "much more like a traditional product that's in the marketplace that most people are familiar with today." Gentry TT, 10/14/04, 2386:6-11.

1286. R..J. Reynolds developed its "EW" cigarette to reduce certain harmful compounds in cigarette smoke and to be acceptable to consumers. Gentry WD, 9:1-8; Gentry TT, 10/14/04, 2388:4-14. It was envisioned as a tobacco-burning successor to Premier. Juchatz TT, 11/22/04, 6693:23-25; see also Gentry WD, 13:12-14:25; Gentry TT, 10/14/04, 2385:22-2387:14; Townsend TT, 3/8/05, 14853:12-14854:13 (asked about "the connection between Premier and EW[,]" Townsend explained, "the failure of Premier . . . led us to . . . consider how we can make a tobacco burning cigarette that is reduced risk . . . because that would ultimately be more successful in the marketplace than Premier . . . . And if it's more successful, it might have more effect on health.").

1287. There were two special components to the EW cigarette RJR introduced. The first was a "carbon scrubber" filter and the second was a "low nitrogen" blend of tobacco. Each contributed independently to EW's risk reducing potential. The low nitrogen blend reduced

constituents such as free radicals and nitrosamines, both of which are believed to play a role in disease formation. The carbon scrubber filter was an updated version of a charcoal filter. As explained further above, charcoal (or activated carbon) has the potential to selectively reduce harm-causing constituents. Cigarettes with such filters have historically earned a small market share in the United States, which Defendants attribute to an "off-taste" associated with it. Gentry WD, 5:18-6:20, 13:6-18; see also Gentry TT, 10/14/04, 2383:18-2384:5; Townsend TT, 3/8/05, 14704:10-14705:5; 513039845-9847 (US 22095) (O) (Confidential). Reynolds concluded that EW's filter "took care of most, if not all" of the taste problem, while at the same time being "more effective" in selectively reducing these harmful constituents than RJR's predecessor charcoal filter product, Tempo, or any other cigarette on the market at the time. Townsend TT, 3/8/05, 14705:6-14706:2. Reynolds scientists believed that the reduction in exposure resulting from these design features (filter and blend), had potential significance to cancer and heart disease caused by smoking. Burger PD, Arch v. American Tobacco, 8/21/97, 156:4-157:17, 237:1-238:23.

1288. By 1994, RJR (per Townsend) considered EW cigarettes to be "the first tobacco-burning products which exhibit reductions of this magnitude and are highly consumer acceptable." By this time, RJR had developed **six** consumer acceptable EW products

and in response to requests from the Marketing Department,

511689507-9510 at 9507 (US 22090) (A) (Confidential); see also Gentry WD, 10:11-18.

1289.

10:16-24 (discussing 511689507-9510 (US 22090) (A) (Confidential)), 12:2-4. By as early as

511689507-9510 at 9507 (US 22090) (A) (Confidential). Though it did not publicly label it a "four step methodology" back then, **like it later did with Eclipse**, **Reynolds substantiated (1) reductions in chemistry**, Gentry WD, 11:1-5, 15:13-21:19 (discussing data in 515873569-3776 (US 85886) (A), comparing EW version to Marlboro Light 85s), 25:3-28:7 (compared to Marlboro Light 85s, reporting substantial reductions in nitrosamines, which are possible human carcinogens, and other oxides of nitrogen, which may be linked to emphysema), 28:21-29:3; **(2) reductions in biological activity in both <u>in vitro</u> (testing on cells outside a live animal) and <u>in vivo</u> (live animal) tests**, Gentry WD, 29:4-34:1 (discussing 517400643-0671 (US 30327) (A) (Confidential), showing that EW prototypes had "statistically lower" mutagenicity scores compared to Marlboro Light 85s), 34:2-42:19 (discussing genotoxicity results reported in 520984125-4133 (US 80287) (A), 521967676-7677 (US 30519) (A)), 46:18-56:25 (discussing cytotoxicity results reported in 520984104-4117(US 80285) (A), 510941930-1938 (US 89101) (A), and 510959750-9752 at 9750, 9752 (US 51536) (A)), 42:23-44:13 and 44:17-46:17 (discussing <u>in vivo</u> sensory/Alarie irritation test results reported in 510768455 (US 87557) (A) and 511325258-5260 (US 30011) (A)); **(3) success in human smoker studies**, Gentry WD, 58:10-61:10 (discussing 520009013-9027 (US 89100) (A)); and **(4) review of this research by a panel of "independent" scientists**, Gentry WD, 62:13-68:12 (discussing the data presented to the panel in 515305298-5537 (US 89102) (A) and the panel's report, 518379726-9740 (US 30345) (A)). Unlike what was done with Eclipse, most of these tests on EW were done in

comparison to an actually marketed brand of a competitor – Philip Morris's Marlboro Lights.

1290. Further, RJR's marketing research at the time showed that potential consumers were most interested in hearing about a product's potential to reduce exposure to carcinogenic smoke constituents. For example, in 1992-93, the company concluded that out of 40 different product claims tested, the number one "enduring consumer want" was the "personal concern" want of "reduced controversial compounds" – i.e., "reduced risk." 508128536-8563 at 8541-8542 (US 85883) (A). RJR determined "Less risk" was far and away the reason for which smokers were most "willing to give up taste" and that "clear consumer communication of [that] consumer benefit [was] critical to motivating appeal." 508128536-8563 at 8545, 8553 (US 85883) (A).

1291. By 1994, RJR had sponsored extensive consumer concept and product testing for EW, including evaluations of the strength of various reduced exposure claims. It found that the stronger and clearer the reduced exposure message, the greater the consumer interest in the product. 508128536-8563 at 8545, 8553 (US 85883) (A); 515873569-3776 at 3681-3684, 3687-3688 (US 85886) (A) (message of "50% reduction in **alleged cancer causing compounds**" was preferred over the traditional taste claim in consumer testing by a wider margin than the amount by which the milder "50% reduction in **controversial compounds**" was preferred to a taste claim). Even though "the [EW] concept conveyed substantial taste trade offs compared to the 'traditional taste' claim, consumers had a significantly higher 'Purchase Interest' in the '50% reduction' claim than the traditional taste claim." 515873569-3776 at 3682 (US 85886) (A). In light of these results, the marketing research team at RJR repeatedly recommended that its executives use a reduced exposure claim for EW. 515873569-3776 at 3685 (US 85886) (A).

1292. RJR test-marketed six EW products beginning in April 1995 in Oklahoma as

Winston Select ("EW/Select"), and RJR compared sales in that area to sales of non-EW Winston Select in a comparable market in Tennessee. Gentry TT, 10/14/04, 2388:15-2389:10.

1293. Notwithstanding that (1) RJR scientists designed EW for the purpose of creating a reduced exposure cigarette acceptable to consumers; (2) RJR concluded that EW achieved that goal; and (3) marketing research showed that consumer interest was greatest for messages conveying potential exposure reduction, RJR **never informed** consumers in the Oklahoma test market that the EW version of Winston Select had the potential to reduce risk. While RJR proved willing to make health claims in 2000 about Eclipse without **any** epidemiological support, it asserted in 1995 that it could not and would not make health-related claims for EW/Select "[w]ithout 30 years of epidemiology." 510959750-9752 at 9750 (US 51536) (A). Indeed, instead of providing the EW test-market consumers the exposure-reduction information that RJR marketing personnel found to be the most appealing to consumers and that RJR scientists concluded could be substantiated, the EW/Select marketing campaign focused on taste. Townsend TT, 3/8/05, 14726:10-23.

1294. Reynolds did not market EW as a less hazardous cigarette because of the long established agreement among Defendants not to compete on health claims. Defendants refused to risk their profits from conventional cigarettes by implicitly or explicitly stating or disclosing that conventional cigarettes cause disease.

1295. In 1993, RJR chief counsel Wayne Juchatz asked outside law firm Jones Day Reavis and Pogue to conduct a thorough assessment of EW (then named "Project CC" internally) and its proposed potential marketing strategies, and to prepare a report for "attorneys defending Reynolds against future claims involving [EW]." In June 1994 Jones Day provided Reynolds with a 200-page report containing legal analysis and recommendations. Juchatz TT, 11/22/04,

6687:16-6688:25 (discussing 515873569-3776 at 3575 (US 85886) (A)).

1296. Jones Day concluded, in light of the scientific findings and the results of consumer tests conducted in 1993, "In sum, it appears that, in terms of both taste and price, [EW] is now ready to be introduced onto the market." Noting that RJR set as a benchmark for EW the reduction of 50% of "alleged carcinogenic compounds," and concluding they succeeded, Jones Day determined that "there are currently no regulations or statutes that prohibit the marketing of [EW]" as a potentially reduced exposure product. 515873569-3776 at 3581, 3667, 3672, 3699 (US 85886) (A). Juchatz understood this to mean that there were no legal barriers to advertising EW as a reduced risk product. Juchatz TT, 11/22/04, 6697:17-6698:11.

1297. Jones Day further acknowledged that "'50% less claimed cancer causing compounds' is more appealing to consumers than 'reduces controversial compounds' or 'reduces irritancy,'" and that any of these messages regarding "personal concern" were more appealing to consumers than the message concerning the taste of the cigarette. Jones Day nevertheless advised that any such direct, aggressive claims "may increase Reynolds' exposure to certain claims in smoking and health litigation," the most dangerous of which being that plaintiffs would posit that, with the development of EW, "Reynolds believes that other cigarettes are dangerous and must be redesigned to avoid future liability." 515873569-3776 at 3709-3766 (US 85886) (A). Jones Day recommended against making any reduced risk claims, even watered down ones such as "reduces irritancy" or "cleaner smoke." Juchatz TT, 11/22/04, 6693:23-6694:2.

1298. Jones Day's advice was contrary to the desired approach of "[m]any in Reynolds R&D Division, including Dr. David Townsend, [who] appear to favor strongly an aggressive approach . . . ." 515873569-3776 at 3687-3690 (US 85886) (A); Townsend TT, 3/8/05, 14720:21-14721:6 (Townsend admitted that he urged taking an aggressive approach to marketing

EW with health claims).

1299. As occurred repeatedly among Defendants from the 1960s forward, Reynolds chose to preserve its public relations and litigation position, and thus opted not to test market EW/Select with any claims that might imply Reynolds's recognition that smoking causes adverse health effects. 515873569-3776 at 3709-3766 (US 85886) (A).

1300. EW/Select's performance in the test market – even without health-related claims – was a success and confirmed its consumer acceptability. RJR's standard for whether a product is sufficiently consumer acceptable is whether, during its start-up or test market period, it achieves sales levels of between 0.3% to 0.5% of market share; sales at such a level would indicate "a very successful" product. Townsend TT, 3/8/05, 114681:5-14684:5, 14685:2-14686:13. Sales for EW/Select **far exceeded** this standard – at no time did it dip below 0.9% of market share. During the "action standard" months Reynolds identified as the measuring period for making a decision about EW/Select, it sold in the 1.0% to 1.25% market share range. Id., 14706:3-14711:8; 14733:8-13.

1301. Notwithstanding its strong sales performance, RJR discontinued the EW/Select test market in the summer of 1997. Gentry WD, 4:18-22; Townsend WD, 62:8-12. At trial Reynolds's witnesses claimed that EW was pulled because the scientists could not reach an agreement about whether it could make health claims about the product. Townsend WD, 62:13-63:7; Gentry TT, 10/14/04, 2469:7-2470:7. Townsend claimed that one of Reynolds's "top toxicologists" (Dr. Robert Suber) raised concerns about making such claims, as did others such as scientist Deborah Pence. Id.; Townsend TT, 3/8/05, 14711:9-14712:21, 14713:12-20. This post hoc claim by Dr. Townsend was immediately and directly impeached by an August 1997 memo about EW from Dr. Suber himself, which was copied to 25 RJR employees, including

Gentry, Townsend, and Deborah Pence, entitled "Revised Consensus to Claims Using the CS Filter and Low Nitrogen Tobacco." 70028426-8429 (US 22184) (A). Townsend was forced to admit at trial that this was a statement of unanimous agreement about a "consensus for commercial EW from a scientific perspective" with regard to the following claims that were reached after "conduct[ing] a number of chemical and biological assays on this product" and "are based on a competitive evaluation of other products within a local market":

- "The potential risks of smoking may be reduced due to the decrease in irritants, cytotoxins, and some carcinogens in the vapor phase";
- "Breakthrough filter giving good taste, but [sic] a significant reduction of many controversial or unwanted compounds may (might) reduce potential risks of smoking";
- "Decrease in many controversial compounds in whole smoke (with explanation insert) may (might) reduce potential smoking risks";
- "Decrease in irritants which may (might) potentially reduce the risks of smoking – throat harshness[,] throat irritation";
- "Decrease in many (some) vapor phase irritants, cytotoxins and genotoxins which may (might) potentially reduce the risks of smoking";
- "The potential risks of smoking may be reduced due to the decrease in free radicals in smoke";
- "Decrease in many (or most) controversial compounds in the vapor phase or whole smoke (with further information on pack or insert to define terms "controversial" and "many") may (might) reduce the potential risks of smoking"; and
- "Breakthrough in filter technology giving good taste, but [sic] significant reduction in most (or many) vapor phase compounds (or reduction in unwanted vapor phase compounds) may (might) reduce potential risks associated with smoking."

70028426-8429 at 8428-8429 (US 22184) (A); Townsend TT, 3/8/05, 14715:6-15, 14716:7-14718:25, 14722:13-14723:1. The United States similarly used this document to undermine Gentry's claim of "no consensus" on EW and to impeach his credibility. Gentry TT, 10/14/04,

2480:1-2485:15.

1302. Despite remembering that he received this Suber document, Townsend insisted that there was documentary evidence showing "no consensus" on EW. Townsend TT, 3/8/04, 14717:18-25. However, he failed to produce any such evidence with his written direct and could not identify a single such memo, email, or position paper on cross-examination that supported his claim. Id., 14715:24-14717:14, 14729:25-14731:11 ("I don't know of a single document that speaks to that"). Similarly, even though Townsend claimed in his written direct examination that the reason some scientists had doubts about these claims was that some of the chemistry reductions were not as great under "more intense puffing" conditions (Townsend WD, 63:18-20), he failed to produce or otherwise reference a single piece of documentary evidence – contemporaneous or otherwise – reflecting such findings. Id., 14731:17-14732:8.

1303. Upon questioning from the Court, Dr. Townsend could provide no explanation for the discrepancy between his testimony and the documentary evidence:

> THE COURT: Why do you think that Dr. Suber . . . would have put it in an important memo like that, that went to so many people, that there was a consensus if there wasn't a consensus and there was the level of disagreement that you've just described?
>
> [TOWNSEND]: I don't know, Your Honor, why he did that.

Id., 14729:11-17.

1304. Moreover, even if the Court were to credit Townsend's impeached testimony that there was disagreement within Reynolds about **how** to advertise EW/Select, even Townsend admitted that, in his expert opinion and his experience as a scientist, such disagreement is not a reason to keep EW/Select off the market entirely. Townsend TT, 3/8/05, 14724:15-14728:24.

1305. RJR insists that it has not abandoned the EW concept but instead has taken it back to the laboratory to improve performance and as of this year, was "still working on the

technology." Townsend WD, 64:1-5. The evidence shows that it is not technological problems that has caused Reynolds to withhold "EW-2," from the market since its development was completed in the late 1990s. Rather, Reynolds has, in the case of EW-2, taken the same defensive approach to less hazardous cigarette development characteristic of other Defendants.

1306. Specifically, the original EW had a goal of a 50% reduction in chemistry. Townsend TT, 3/8/05, 14766:6-8; Gentry WD, 11:1-5. By March 1998, Jeff Gentry (the leader on the EW project) reported on "EW-2 Product Development," stating that the objective was a 70% aggregate mass reduction in chemistry, that full analytical testing was complete, and that consumer testing was scheduled for the following month and would be completed the month after that. 700250382-0390 at 0386 (US 22188*) (A). In July 1998, R&D Director Gary Burger made a presentation to CEO Andrew Schindler on the 1998 "Top 10 R&D Priorities" and told him that with regard to tobacco-burning "reduced risk" cigarettes, **"EW-2 Development [was] Complete."** 519436056-6075 at 6065 (US 30352) (A) (emphasis added). Yet EW-2 has yet to make it to market.

1307. Defendants' ongoing conspiracy, not science, was the deciding factor in holding back EW-2. In July 1997, an RJR scientist asked in a presentation to Dr. Burger,

519186833-6877 at 6834-6835, 6838 (US 30349) (A) (Confidential). Townsend explained at trial that the belief was that any product out in the market prior to FDA regulations "might be

grand fathered," but if the company waited, FDA regulations that included pre-market approval could add "years and years" before it could be sold. Townsend TT, 3/8/05, 14782:15-14783:25.

1308. That recommendation notwithstanding, and despite a December 1997 document providing a timetable for EW-2, based on the assumption that FDA would regulate tobacco products and the conclusion that RJR should present FDA with its reduced risk products and technologies "as early as possible," Reynolds nonetheless decided that it would not go forward unless and until the "FDA bill containing reduced risk product policy **is moving in both houses**." 519990589-519990593 at 0591-0592 (US 30359) (A). The bill never made it that far, and EW-2 was not sold. Townsend TT, 3/8/05, 14765:21-14766:3.

1309. The Gentry-to-Townsend memo of July 1998 on "EW-2 Product Development" echoes these sentiments:

> **Importance to RJRT:** With the prospect of a national tobacco settlement approval by congress and signed by the president during the fourth quarter, reduced risk products such as EW-2 would provide RJR with a starting point for FDA approval. As a result RJR would have a consumer acceptable product ready for human trials by 8/98 [p]roviding RJR with an advantage in the establishment of testing protocols with the FDA for reduced risk products.

700250386-700250387 (US 22188*) (A). Yet there was no settlement "approved by Congress and signed by the President," Townsend TT, 3/8/05, 14765:17-25, and therefore RJR has chosen not to put EW-2 on the market at any time in the eight years since 1997.

1310. In short, RJR' approach to the development and marketing of EW products has proven strikingly similar to its approach to its other potentially less hazardous cigarettes, and similar to other Defendants' approach to such products – an approach dictated by Defendants' agreement not to compete on health grounds in the marketing of cigarettes and their collective commitment to avoid any public acknowledgment of smoking's role in causing disease.

(hh) The 1990s - Philip Morris: Accord

1311. In 1998, Philip Morris began to sell, in one limited domestic test market, its first cigarette since Saratoga in 1964 that was specifically designed to reduce the delivery of, and thereby the harm from, toxic smoke constituents. Known as Accord in the United States ("Oasis" in its Japanese test market), Accord is the first and only product marketed by Philip Morris in any capacity that exploits Philip Morris's long-understood principle of heating rather than burning tobacco to avoid the creation of harmful constituents via combustion. Farone WD, 177:10-179:12; Szymanczyk WD, 165:18-166:2, 167:15-169:3.

1312. Accord is Philip Morris's electrically heated smoking "system." The purchaser receives a kit – a starter set of shorter, specially designed cigarettes and a dark rectangular heating device approximately the size of a large candy bar. To smoke Accord, the smoker inserts a cigarette into the end of the heating device. When a smoker inhales on the inserted cigarette, the inhalation triggers the device's electrical heating element, which heats the cigarette at a temperature below that necessary to create combustion and delivers smoke to the smoker. The device permits a maximum of eight puffs per cigarette, and information about the activity and puff count is provided to the smoker on a small LED display on the device. 525335580-6084 at 5678 (US 20919) (A).

1313. Philip Morris researchers claim that various scientific studies demonstrate that Accord has substantially reduced the delivery of fifty-eight harmful constituents believed likely to contribute to smoking-related diseases. For example, the company says the level of polycyclic aromatic hydrocarbons is below a measurable amount, the carbon monoxide delivery is extremely low, there is a 90% reduction in 1,3-butadiene production, and the delivery of tobacco-specific nitrosamines ("TSNAs") is 50% below conventional cigarettes. Philip Morris research

has shown that mutagenic activity in the Accord cigarette is lower than conventional cigarettes, and the Ames test on Accord found essentially no mutagenic activity. Lilly PD, United States v. Philip Morris, 5/14/02, 246; 525335580-6084 at 5678 (US 20919) (A).

1314. Yet despite its scientific research showing Accord to be a substantial technological achievement, Philip Morris has never informed potential consumers in the test market, through promotional or marketing materials, of its conclusion that Accord is a reduced exposure product and a potentially reduced harm product. Farone WD, 179:13-23. Indeed, in a presentation to the Altria Board of Directors in late 1996, Philip Morris stated, "By controlling the heat applied to tobacco, [Accord] addresses in significant ways criticisms made of our current cigarettes," but that in marketing Accord to consumers, "**we do not want to disparage our existing brands**." 2086120855-0890 at 0855, 0871 (US 45812) (A) (emphasis added). Just like Reynolds's approach to marketing Premier and (initially) Eclipse, as of 2001 Philip Morris's marketing materials told potential consumers only that Accord "

Dudreck PD, United States v. Philip Morris, 6/21/02, 35:1-36:24; LB0011227-1236 (US 21854) (O) (Confidential); Harris WD, 229:10-230:23.

1315. Philip Morris's marketing representations reflect the company's conscious decision to avoid informing consumers about Accord's lower delivery of harmful smoke constituents.

Dudreck PD, United States v. Philip Morris, 6/21/02, 33:1-34:24; Dudreck PD, United States v. Philip Morris, 8/26/03, 465:22-466:25, 467:21-468:12 (Confidential); LB0037946-7950 (US 21855) (A); Harris WD, 229:10-230:23.

(ii) The 2000s - Brown & Williamson: Advance

1316. In October 1999, B&W entered into an agreement with an independent tobacco company, Star Scientific, Inc., ("Star") to develop a product utilizing tobacco cured by Star's patented process for creating low-TSNA bright tobacco. USX5110274-0292 (US 89063) (A); Honeycutt PD, United States v. Philip Morris, 4/23/02, 59:2-17, 68:25-70:3. This product is called Advance. Per the agreement, Star was responsible for test marketing Advance, and generating the onserts that were used in the test market. Blackie WD, 180:4-10.

1317.

Wessel 30(b)(6) PD, United States v. Philip Morris, 3/19/03, 42:1-43:1 (Confidential); Harris WD, 231:4-10; Honeycutt PD, United States v. Philip Morris, 4/23/02, 13:23-15:6, 61:3-66:6; USX5110274-0292 (US 89063) (A); StarUSvPM000251-0363 (US 85920) (O) (Confidential).

1318. In 2000, Star began test-marketing Advance in Lexington, Kentucky, and Richmond, Virginia. Blackie WD, 180:14-21. In addition to federally mandated warnings, Star voluntarily placed additional information about the product and smoking's harms on the package, and added an informational "onsert" attached to the package. 524942388-2389 (US 52963) (A);

524942390-2391 (US 88038*) (O); Blackie WD, 180:4-16 (acknowledging that US 52963 and US 88038 are the onserts used by Star Scientific in test-marketing Advance).

1319. B&W disagreed with Star on the package design for Advance because the copy on the back of Star's package included such statements as "Smoking can take YEARS off your life. It is much safer for you to QUIT than to switch or smoke" and "Star's processing methods greatly reduce SOME cancer-causing chemicals (nitrosamines) and its special filter reduced SOME toxic gases in cigarette smoke." B&W conceded that these statements were not misleading. Wessel 30(b)(6) PD, United States v. Philip Morris, 3/19/03, 19:3-22:23.

1320. Nevertheless, at the conclusion of Star's test-marketing of Advance in Richmond and Lexington, the agreement between B&W and Star was renegotiated. Blackie WD, 180:19-21. Under the renegotiated agreement, B&W gained control of the product, and the onsert became B&W's responsibility, not Star Scientific's. Blackie WD, 180:22-181:3; see also StarUSvPM000251-0363 (US 85920) (O) (Confidential).

1321. B&W began a new test market in Indianapolis in November 2001, using its redesigned packaging and onsert. Wessel 30(b)(6) PD, United States v. Philip Morris, 3/19/03, 24:2-10, 28:1-15.

1322. Dr. Blackie identified B&W's Advance onsert as TLT0960001-0002 (US 87216) (A); Blackie WD, 181:12-13. In contrast to Star, B&W was unwilling to voluntarily communicate clear, direct statements of smoking's harms in the text section of its onsert. Among the changes it made to Star's packaging and onsert, B&W:

- affirmatively removed Star's statements on the package that referred to "cancer-causing chemicals";
- deleted Star's statements that "Smoking related diseases can KILL you," "Smoking can take YEARS off your life," and "It is still better to QUIT than to switch or smoke";

- eliminated Star's text references to "carcinogens (cancer-causing chemicals)" and "potent cancer causing chemicals in tobacco and tobacco smoke" in the onsert. B&W instead referred to "toxins";

- deleted Star's onsert statement that "ALL SMOKED TOBACCO PRODUCTS ARE ADDICTIVE AND POSE SERIOUS HEALTH HAZARDS"; and

- deleted Star's statement explaining that "Because many smokers smoke to get nicotine, they tend to smoke more intensely when smoking 'lights' or 'ultra lights,' and that because of such nicotine-driven compensation 'lights' and 'ultra-lights' are NOT NOW viewed by health scientists as reliably less hazardous." Instead, B&W stated in minuscule type only that smokers 'can increase or decrease the amount of smoke that they take in depending on how they smoke their cigarettes' and thus actual delivery may differ from the FTC test measurements.

Compare 524942388-2389 (US 52963) (A) and 524942390-2391 (US 88038*) (O) with TLT0960001-0002 (US 87216) (A) (Onsert to B&W Advance). See also Wessel 30(b)(6) PD, United States v. Philip Morris, 19:3-22:23; Blackie TT, 10/26/04, 3897:15-3900:15.

1323. In sum, there is compelling evidence that Defendants agreed not to compete on health claims in the marketing of cigarettes, and that they adhered to that agreement. Over the past 50 years, Defendants have collectively offered to sale (in any capacity) a small handful of products that were designed to be less hazardous. Until Eclipse in 2000 – at a time when Defendants were beginning to publicly communicate more accurate, truthful information about smoking as a cause of disease – none of Defendants' marketing for any of these products expressly communicated to consumers the purpose behind the primary design features so as to allow smokers the ability to evaluate the potential benefits of the product, even though Defendants' marketing research showed that such information was important to consumers when considering whether to smoke the products.

(ii) Defendants' Responses to the United States' Evidence

1324. At trial, Defendants offered two general responses to the United States' evidence proving that Defendants followed their agreement not to compete in the marketing of less

hazardous cigarettes with clear health messages. First, Defendants contended that they have tried to market potentially less hazardous products, but the products have not attained sufficient market share to be considered a success. Without a doubt, Defendants' deliberate decision not to sell less hazardous cigarettes with clear health-related claims has not been the **only** reason that these products have not attained large market shares.[7] Testimony from witnesses for both Defendants and the United States indicated that the market reception of certain of these novel products has been affected by "taste" or other attributes. However, the substantial evidence introduced at trial and recounted above shows that Defendants recognized that the success of these novel designs depended upon informing consumers about the particular intended benefit of these products – lowered exposure to known harmful chemicals, and therefore potentially less harm. That evidence also shows that Defendants repeatedly and explicitly decided that was a line they would not cross because such information would be an indictment of all **other** cigarettes being sold.

1325. Moreover, as discussed above, the testimony of Dr. Farone and other witnesses and documents shows that in some instances, Defendants solved alleged problems with "taste" or acceptability, but chose not to incorporate those solutions into marketed products. In other instances, Defendants chose not to devote their fullest energies to finding a fix, and simply removed the product from the test market. It is also important to note that in the early days of "light" and "low tar" cigarettes, such cigarettes garnered a minuscule share of the market, and

---

[7] Of course, the fact that these less hazardous products have earned small market shares does not alone distinguish these products from other brands that these Defendants and other cigarette manufacturers keep on the market. The 2000 FTC report lists 1294 varieties of cigarettes in the United States for 1998. 525311179-1223 (US 52977) (A). Most brands have minuscule market share; indeed, the collective market share in 2004 of the fourteen versions of the 8th most popular brand of cigarettes, Reynolds's Salem, was 2.59%. (no bates - RJRT website at 2) (JD-068012) (A).

smokers similarly complained about weak "taste" or other characteristics. Yet Defendants continued to promote such cigarettes heavily with implied health reassurance messages (that were groundless, see US FF § III.D, infra), and eventually the market share of "low tar" cigarettes increased to the point where they now account for over 90% of the domestic cigarette market.

1326. Thus, while the failure to compete on health claims has not been the sole reason that these few products have failed to gain significant market share, it is a crucial reason, and one motivated primarily by Defendants' commitment to maintaining their fraudulent denials.

1327. Defendants also tried to explain that their failure to compete on health grounds in marketing was not a result of any agreement, but rather occurred because the Federal Trade Commission promulgated guidelines in 1955 ("1955 FTC Guidelines") that prohibited such health-related claims. Langenfeld WD, 52:3-55:8. Defendants' response fails for lack of any proof that it was actually the 1955 FTC Guidelines that influenced their marketing behavior. Langenfeld TT, 3/10/05, 15185:14-24. For example, the December 1953 meetings at which Defendants' agreed not to compete in the marketplace on health grounds predated by over 9 months FTC's promulgation in September 1954 of the draft version of what became the 1955 Guidelines. Id., 15186:4-15188:12. Further, Defendants' FTC expert, Dr. James Langenfeld, did not identify, in either his direct or his cross-examination, a **single** instance in which Defendants indicated that their decision about how to market a cigarette on health-related claims was constrained by the 1955 FTC Guidelines. Langenfeld TT, 3/10/05, 15202:4-16. Dr. Langenfeld was wholly unqualified to assess, let alone offer conclusions, about Defendants' intent or motivations. **Dr. Langenfeld did not consider a single internal document of Defendants for his work in this case**. Langenfeld TT, 3/10/05, 15171:7-15173:1, 15175:7-20. Thus, Dr. Langenfeld did not consider perhaps the most obvious source of evidence of Defendants' intent

and motivation – their own internal communications.

1328. In fact, Dr. Langenfeld conceded upon cross-examination that the FTC approved of the provisions on health-related advertising in the Defendants' 1964 voluntary Advertising Code that expressly **permitted** substantiated health-related claims. Id., 15195:12-16; see also Langenfeld WD, 63:14-68:20. Rather, the evidence – such as HHS0880359-0364 (US 85828) (A) – shows that Defendants' decisions were based on their commitment to their public denials that any cigarettes on the market were a proven cause of disease. Moreover, in the legal memorandum RJR prepared for submission to the FTC arguing that Reynolds's possible claims about Premier met FTC standards, Reynolds did not even mention the 1955 FTC Guidelines, let alone treat them as a binding legal restriction. 507349165-9287 (JD-041934) (A).

1329. Defendants' claim that the "tar derby" of the 1950s – a period of aggressive cigarette advertising by tobacco companies, including ads touting superior effectiveness of their respective filters – is evidence that they did in fact compete on health grounds in the marketing of cigarettes. See, e.g., Farone TT, 10/6/04, 1788:24-1790:24. Dr. Farone did not, however, consider that meaningful competition on a health claim because "**[t]here's no proof**; in order to say that something is better, you have got to show proof that it's better. I think they were all simply hyping it up. We have these filters, it lowers tar. The implication to the customer is that we are creating a tremendous decrease in the level of toxicity **with no evidence to support that**." Id., 1790:25-1791:6 (emphasis added).

(h) Defendants Agreed Not To Perform Certain In-House Biological Research That Would Confirm or Acknowledge That Smoking Cigarettes Causes Disease

1330. Another facet of Defendants' long-term coordination related to the development and marketing of potentially less harmful cigarettes was reflected in the "Gentleman's

Agreement" among the tobacco company Defendants. Under this agreement, Defendants committed not to perform certain types of biological research in their domestic facilities. Though Defendants themselves acknowledged that such research was critical to a meaningful evaluation of whether certain cigarettes were likely to be less hazardous than others, it might lead to the conclusion or prove that smoking caused disease or illness, and thus conflict with their public denials of smoking's adverse health effects.

1331. By their words and their actions, Defendants confirmed their common understanding of, and basic adherence to, this agreement. Dr. Farone testified that he learned about the Gentlemen's Agreement while he was at Philip Morris from top Philip Morris scientists, including the Vice Presidents for Research & Development Robert Seligman and Max Hausermann, as well as from documents. Farone WD, 134:2-137:7. As MIT economist Dr. Harris testified, certain Defendants did occasionally "cheat" by undertaking research in violation of this agreement, and were brought back in line by one or more of the other Defendants who were party to the agreement. Harris WD, 92:7-94:22,191:15-195:22; see also Farone TT, 10/7/04, 1909:21-1910:8 ("I don't think the fact that [the agreements restricting research and marketing on smoking and health grounds are] broken periodically means they don't exist. . . . it [501543470-3517 (US 21737) (A)] goes to, in my opinion, showing that, in fact, their concern about maintaining this agreement as opposed that it no longer exists"). Dr. Harris explained how such actions were consistent with Defendants' collusive, rather than competitive, arrangement and with economic theory; and Dr. Harris testified to his conclusion that while facets of this agreement may have gradually become inoperative over time, related agreements remained in force. See generally Harris WD, 35-51, 160:3-161:18.

(i) R.J. Reynolds

1332. In March 1983, high ranking RJR scientists Alan Rodgman and Frank Colby described the core parameters of this agreement:

> Throughout the domestic industry, two "gentleman's agreements" were operative in the early days:
>
> [a]ny company discovering an innovation permitting the fabrication of an essentially ‘safe' cigarette would share the discovery with others in the industry; and
>
> **No domestic company would use intact animals in-house in biomedical research**.

501543470-3517 at 3504 (US 21737) (A) (emphasis added). This agreement reflected Defendants' intent that no company undertake activities that would explicitly or implicitly acknowledge that cigarettes are harmful or yield research that shows cigarettes are harmful. See US FF § III.B, supra.

1333. In 1981, scientists at Temple University made a research proposal to RJR entitled "Selective Removal of Oxidants from the Tobacco Mainstream Smoke Aerosol." In an October 26, 1981 memorandum concerning the Temple proposal, Colby wrote:

> There is a clear-cut agreement among all U.S. cigarette manufacturers that any scientific discovery made within the companies, or otherwise sponsored by a single company, which might have a positive impact on the smoking and health controversy, would have to be freely shared, without any costs to the other manufacturers. There would, therefore, be no incentive for R.J. Reynolds to sponsor the Cohen project. This applies to any other product development oriented research by a medical institution to be sponsored by a U.S. tobacco company.

500534388-4389 (US 29467) (A).

1334. Earlier, the existence and terms of the Gentleman's Agreement was expressly recognized by a member of the Board of Directors of RJR. In 1978, Herschel H. Cudd, Jr., criticized Philip Morris for performing animal research at its INBIFO laboratory in Germany: "A

wholly-owned subsidiary in Cologne, Germany engages in carcinogenic biological research, such as mouse painting, **in violation of the verbal agreement among domestic companies not to perform animal testing in-house**." 503940653-0688 at 0669 (US 21436) (O) (emphasis added); 681879254-9715 at 9332 (US 21020) (A).

1335. And in 1981, Reynolds's scientist Colby stated in a memorandum that "[i]nformation was obtained that Philip Morris U.S.A. does not live up to the **alleged 'gentlemen's agreement' of not having animal laboratory facilities on their premises in this country**. Philip Morris indeed has had such facilities for at least 3-4 years and continues to operate them. This information was communicated to all concerned." 501626469-6469 (US 21576) (A) (emphasis added).

1336. RJR's repeated references to the Gentleman's Agreement in the 1970s and 1980s came after the company was found briefly to have violated the Agreement in the late 1960s, when it established a facility (known as the "Mouse House") to perform certain animal studies. When Philip Morris discovered and complained about RJR's violation of the Agreement, RJR quickly dismantled the Mouse House and its in-house biological research program. See US FF § III.B, infra (for detailed discussion).

(ii) BATCo

1337. Actions undertaken by BATCo also evidence an awareness of and conformity with the principles underlying the Gentleman's Agreement. On September 16, 1976, B&W in-house counsel Ernest Pepples warned BATCo against participating in a British safer cigarette working group because it would be recognized as an admission (that could be attributed to B&W in the United States) that the current state of the art knowledge is sufficiently advanced that an "independent committee can posit reasonable steps for a manufacturer to take which may reduce

risk to its consumers"; and that "cooperation with this committee is objectionable whether its advice is binding or not because it puts BAT in position of acknowledging that some hazard in cigarettes needs to be worked on." Instead, in order to protect United States legislative and litigation activities, B&W urged BATCo to take the following positions:

> **that the picture emerging is one of ever greater complexity in which a perceived one-on-one relation, as in a virus on disease, is most likely to be merely an illusion; [and]**
>
> **the strong current of authority in U.S. courts supports [the] view that the customers use of tobacco is not unduly dangerous and thus the manufacturer is not under a duty to consumer to warn him or to speculate about 'healthful' changes in the product.**

680273641-3643 (US 20998) (A) (emphasis added).

1338. BAT Industries Chair Patrick Sheehy, in a December 1986 letter to its partially owned Canadian subsidiary IMASCO, again reaffirmed the Defendants' collective position in response to a request that BAT support IMASCO's "safer cigarette research":

> . . . I cannot support your contention that we should give a higher priority to projects aimed at developing a 'safe' cigarette (as perceived by those who claim our current product is 'unsafe') by either eliminating, or at least reducing to acceptable levels, all components claimed by our critics to be carcinogenic.
>
> The BAT objective is and should be to make the whole subject of smoking **acceptable** to the authorities and to the public at large since this is the real challenge facing the industry. . . . .
>
> **In attempting to develop a 'safe' cigarette you are, by implication in danger of being interpreted as accepting that the current product is 'unsafe' and this is not a position that I think we should take**.

304017352-7354 (US 46613) (A) (emphasis added). Live examination of Dr. Wigand, who was personally aware of the substantive matters raised in the letter, confirmed that Sheehy wrote the letter for the reasons stated therein – not, as Defendants attempted to suggest, that it was merely a letter to resolve a dispute between scientists. Wigand TT, 1/31/05, 11658:21-11659:20; 11662:5-

13; 11662:24-11663:10; 11705:19-11712:13.

1339. As early as the 1960s, the Cigarette Company Defendants funded carefully controlled and collectively supported research in order to prevent individual companies from performing their own scientific research that might link smoking to disease. In 1962, BATCo's Charles Ellis told a conference of BATCo and B&W scientists, "We are committed not to carry out any biological testing ourselves and as I have said this is a valuable safeguard against unilateral action." 107468730-8764 at 8744 (US 20252) (A). The scientists recommended that any such testing be done through Harrogate, the lab supported by Tobacco Research Council, the British equivalent of the Tobacco Institute. 107468730-8764 at 8750 (US 20252) (A).

1340. BATCo urged that, as a strategic matter, Defendants should collectively perform all future research on the biological activity of cigarette smoke, noting:

> If, in fact, this had been the case in this circumstance then Lorillard could not have come out with such [a unilateral] pronouncement[ ] [that its Kent cigarette had a new filter with a 90% efficiency for phenol]. This is a good reason for doing medical and biological research industrywi[d]e and it points out the danger which might be expected when any single firm goes it alone.

107468730-8764 at 8735 (US 20252) (A).

1341. The BATCo researcher acknowledged that questions about the health effects of certain smoke constituents have both "the scientific side and the political attitude," and that the "**political implications have at the moment by far the greater importance** . . . ." He stated that Defendants refused to take "a more positive approach to this whole problem of producing ‘safe' cigarettes" because of the threat it posed to defense of ongoing lawsuits. He further urged that Defendants proceed collectively in any research studying the composition and adverse physiological effects of cigarette smoke. 107468730-8764 at 8735, 8737, 8739 (US 20252) (A) (emphasis added).

(iii) Philip Morris

1342. Immediately following the publication of the 1964 Surgeon General's Report, Philip Morris's scientists urged the company to be at the forefront of less hazardous cigarette development, reduced risk advancement, and product testing – to be prepared in case Defendants' agreement not to compete on smoking and health issues was abandoned. As shown below, in-house scientists' proposals to take a responsible approach to the testing and research on the health effects of Philip Morris's cigarettes were overridden by Philip Morris executives who were committed to the Gentleman's Agreement and the original plan hatched at the Plaza Hotel in December 1953. Farone WD, 138:22-139:10.

1343. In a February 18, 1964 memorandum, chief scientist Helmut Wakeham urged Philip Morris to: (a) gain a competitive advantage by increasing in-house research on the connection between smoking and health and by developing a "superior filter cigarette with acceptable taste having high gas-phase absorption and very low TPM [total particulate matter, or tar]" which would be "biologically approved on all major health questions"; (b) recognize that "health impact will surely be an important, perhaps the most important, basis for competition in the industry in the next few years"; (c) break up what he acknowledged to be "the common front approach of the industry through The Tobacco Institute and TIRC. RJR advocates a joint front, sit tight, status quo approach"; (d) establish "suitable biological approval specifications for all new smoking products"; and (e) change the status quo so that Defendants would conduct their own research on the connection between smoking and health "if they expect to develop proprietary position for the health competition." 1000335612-5625 at 5615-5618, 5623 (US 22986) (A); Farone WD, 162:7-19.

1344. Later in 1964, chief scientist Wakeham confirmed that Philip Morris's interest in

expanding its research capabilities was defensive in nature: "**Our philosophy is not to start a war, but if war comes, we aim to fight well and to win**." 1000307159-7164 at 7164 (US 20092) (A) (emphasis added); Farone WD, 139:19-140:8.

1345. Contrary to Wakeham's urgings, however, Defendants continued to **jointly** fund and perform biological research on the health effects of smoking, rather than individually performing cigarette research and development programs that could lead to competition on health claims in the marketing of cigarettes. In February 1968, for example, the scientific directors of Philip Morris, RJR, B&W, Lorillard, American, and Liggett met "to discuss the scientific aspects of the problems facing the tobacco industry with specific emphasis on tobacco and health." Notes of the meeting from Liggett's representative reported **"a general feeling that an industry approach as opposed to an individual company approach was highly desirable**." LG0092757-2761 at 2758 (US 56988) (O) (emphasis added).

1346. Chief scientist Wakeham admitted as early as 1964 that Philip Morris had the ability to conduct studies to determine whether Philip Morris's various cigarette designs caused any differential incidence of disease. Wakeham argued that Defendants, through TIRC/CTR, should sponsor an epidemiological study of the comparative health effects on smokers of non-filtered cigarette and filtered cigarettes:

> The health value of filters is undersold in the [Surgeon General's] report and is the industry's best extant answer to its problem. The Tobacco Institute obviously should foster the communication of the filter message by all effective means. At the same time TIRC can profitably sponsor development of those areas where exceptions to the report's treatment have been made [earlier in the document]. **Specifically, a prospective survey of filter vs. non-filter smokers is appropriate**. . . . [T]he industry must come forward with evidence to show that its products, present and prospective, are not harmful. Medical research must be done for this purpose, as well as for judging the merit of work done outside the industry. **The industry should abandon its past reticence**

> **with respect to medical research. Indeed, failure to do such research could give rise to negligence charges**.

1000335612-5625 (US 22986) (A) (emphasis added). Philip Morris never conducted this or any other epidemiological research. Carchman PD, Williams v. Philip Morris, 3/16/99, 54:22-58:13.

1347. Chief scientist Wakeham was well aware of the existence of the Gentleman's Agreement and the Defendants' continued adherence to it. In fact, BATCo scientists reported that Wakeham "was told that **there was a tacit agreement among the head of the US companies that [in-house biological research] would not be done**." 110315968-5971 at 5969 (US 26378) (A) (emphasis added).

1348. In the late 1960s, Wakeham again proposed to executives that Philip Morris abandon its agreement not to conduct in-house biological research that could lead to the conclusion that cigarettes cause disease. In a November 1968 internal memorandum identified as a draft and entitled "Need for Biological Research by Philip Morris Research and Development," Wakeham referred explicitly to the Gentleman's Agreement:

> We have reason to believe that in spite of **gentlemans [sic] agreement from the tobacco industry** in previous years that at least some of the major companies have been increasing biological studies within their own facilities. . . . **Essential** to the development and introduction of any product are **biological studies** proving safety of the product . . . .

1001607055-7061 at 7058, 7061 (US 21617) (A) (emphasis added). Dr. Farone saw this document when he was at Philip Morris. Farone WD, 135:20-136:15. See also 1002635062-5065 (US 20139) (A) (another version of the Wakeham memorandum recognizing that "this proposal to carry out biological research and testing may seem a radical departure from previous policy and practice"); Harris WD, 152:16-156:26.

1349. In that same memorandum, US 20139, Wakeham again proposed that Philip

Morris test the biological effects of its cigarettes for defensive reasons: "We must know more about our products than anyone else so that we are not surprised when our competitors or our antagonists publish information about our products. We must know how our products perform in conventional tests regardless of whether or not we believe the tests to be significant." 1002635062-5065 at 5065 (US 20139) (A).

1350. In July 1969, Wakeham, at the instruction of Philip Morris CEO Joseph Cullman III, prepared and distributed an eight-page proposal outlining a $500,000 per year, in-house biological research and testing program for Philip Morris. Wakeham emphasized that since the National Cancer Institute ("NCI") had begun using biological assays to test experimental cigarettes and was likely to proceed to test actual commercial brands of cigarettes, Philip Morris should perform its own testing on commercially sold cigarettes so that it would be prepared to respond to research results NCI produced. 2024972427-2436 (US 87559) (A).

1351. On September 9, 1969, Wakeham continued to advocate to Philip Morris executives that Philip Morris should perform research on and testing of the health effects of its cigarettes. In a memorandum, Wakeham reviewed British mouse skin painting data and: (a) noted that this was the best test for measuring biological activity for cigarette smoke, notwithstanding Defendants' public criticisms of this method; (b) explained the results to show the existence of a dose-response relationship, and to show that reconstituted tobacco cigarettes "made from whole leaves but not containing excess stems" produced fewer tumors than did condensate from flue-cured cigarettes, which suggested that the former results might play a positive role in developing a less hazardous cigarette; and (c) urged Philip Morris to begin testing its cigarettes with this methodology. This memorandum stated, in part:

> The mouse skin painting carcinogenicity test, despite all of its short-comings, is widely accepted as the critical test for biological

> activity of cigarette smoke. Even the tobacco industry is now hung on this one because of its acceptance of this test in the Chemosol evaluation. The Tobacco Working Group of the National Cancer Institute is also using this test as the primary assay of smoke. The conclusion from all this is inescapable: We should start testing our products now because it will be two years before we know the answer.

1000855768-5770 at 5768-5769 (US 20111) (A).

1352. Presented with the proposal and its competitive importance as explained by his head scientist, Chief Executive Officer Cullman decided that Philip Morris would not pursue any biological research program. On October 7, 1969, Cullman wrote to Millhiser: "I have discussed with you and George Weissman informally my serious reservations about the wisdom of embarking upon this program at this time. . . . **I still favor having the Council for Tobacco Research - U.S.A. approach this problem as it has in the past. The legal, philosophical, and practical problems of mounting a PM biological research program seem to me to outweigh the advantages**." 1003058247-8247 (US 87561) (A) (emphasis added).

1353. And in a February 24, 1970 memorandum to Wakeham that was copied to Weissman, company general counsel Paul Smith, Millhiser, and Wakeham's boss Clifford Goldsmith, Cullman elaborated on his decision and "the strong stand I have taken in connection with certain kinds of research activities by Philip Morris." He wrote that "our present policy is the correct one and that the program you are carrying out in Boston is as far as we should go now. **The possibility of getting answers to certain problems on a contractual basis in Europe appeals to me and I feel presents an opportunity that is relatively lacking in risk and unattractive repercussions in this country**." 1000216742-6742 (US 20081) (A) (emphasis added). Philip Morris ended up buying the INBIFO lab in Cologne, Germany, to perform some biological research in a way that would avoid "unattractive repercussions" in the United States.

Farone WD, 138:1-7. RJR considered even research at this Philip Morris-owned overseas facility a breach of the Gentleman's Agreement.

1354. Jerry Whidby – a scientist at Philip Morris for 26 years and a paid consultant to Philip Morris since his retirement in 1998 – confirmed that Philip Morris USA never conducted such biological testing of commercial cigarette brands like that advocated by Wakeham in the 1960s, and only started conducting some such testing in the late 1990s because of pressure from plaintiffs' lawyers in litigation. Whidby WD, 12:2-20, 13:10-13, 13:19-14:23; Whidby TT, 2/22/05, 13968:20-13971:9. Prior to 1998, Whidby never recommended that Philip Morris conduct biological testing of its as-marketed brands. Whidby WD, 15:1-3. Similarly, former Philip Morris scientist Richard Carchman has confirmed that the first time Philip Morris commercial brands were subjected to biological assays for cytotoxicity was 1999. Carchman PD, United States v. Philip Morris, 4/25/02, 220:6-223:20.

1355. And as Dr. Farone testified, he was directed by his superiors to maintain compliance with the Gentleman's Agreement: ". . . all of the testing, the – this huge amount of biological testing was all done on prototypes and Burley cigarettes and everything, virtually, **except cigarettes that are actually sold on the market**." Farone TT, 10/12/04, 2101:6-18 (emphasis added); Farone TT, 10/7/04, 1913:24-1914:4 (Farone acknowledged Philip Morris's production of biological research results, but noted that "none of them relate to marketed products.").

1356. Consistent with the Gentleman's Agreement not to perform certain types of biological research in the facilities of the Defendant Cigarette Companies, which continued into the 1980s, Philip Morris prohibited its scientists from publicly disclosing, without prior legal department approval, that Philip Morris was engaged in in-house animal research. See, e.g.,

1000127789-7790 (US 34422) (A) (1980 memorandum of a Philip Morris scientist referring to the Defendants' longtime legal defense that "'We within the industry are ignorant of any relationship between smoking and disease. **Within our laboratories no work is being conducted on biological systems**.'") (emphasis added); Harris WD, 218:1-219:23.

1357. On January 26, 1981, Paul Eichorn, a scientist on Philip Morris's manuscript review board, requested permission to circulate for internal review a report of a study that involved administering nicotine to rats. Eichorn asked Robert Seligman, Philip Morris's Vice President for Research & Development: "Before the Manuscript Review Board starts its review we would like to know if the subject matter (nicotine and physiological response – study in our facilities) would be allowed for release." Seligman responded on February 2, 1981: "I plan to pass this by Alex Holtzman [Philip Morris's counsel in New York] **before** going back to the M.S. board." 2021380745-0746 at 0745 (US 87562) (A) (emphasis in original); Farone WD, 153:23-155:18.

1358. Eichorn circulated the report to other Philip Morris personnel for review. The responses make clear Philip Morris's continuing secrecy of its in-house animal research:

> **Are we willing to publish results of studies performed inhouse on intact animals**? WFG [Walt Gannon]" "Good question RT [Robert Thomson] . . . Since word of this work and similar stuff does appear to find its way outside the company anyway publication may be preferable to suspicions. WF [William Farone] . . . **Need to get legal OK out of N.Y.** 2021380714-0714 (US 87563) (A) (emphasis added) (writer unidentified);
>
> **Do we want it known that we do animal studies**? CHO [Cynthia H. O'Donohue]. 2021380718-0718 (US 87564) (A) (emphasis added); and
>
> Longest abstract I've seen. **I'm still doubtful on publishing rat projects**. BK [B. Kosakowski]. 2021380721-0721 (US 87565) (A) (emphasis added).

1359. And, notwithstanding the 1981 claim by RJR's Frank Colby that Philip Morris was violating the Gentleman's Agreement, in 1984 Philip Morris research Director Thomas

Osdene, who oversaw Philip Morris's externally conducted research related to the health effects of smoking, testified that all such research was done outside of Philip Morris's research facilities in the United States. Osdene 30(b)(6) PD, Cipollone v. Liggett, 10/3/84, 47:25-48:16, 82:6-24, 123:15-124:5 ("We did not do any animal work in-house in the United States.").

1360. Dr. Farone confirmed that Philip Morris was adhering to the Gentleman's Agreement in 1984:

> . . . from a factual basis, all I can say is that in 1984, because of what Philip Morris would not do, at least what they thought, my supervisors, my superiors, vice presidents, both, said it was in effect. . . . I would have a hard time because of my factual knowledge in saying that it stopped some time sooner because I know in '84 it's still going on."

Farone TT, 10/7/04, 1905:21-1906:2.

1361. Indeed, at the April 14, 1994 Waxman hearings, B&W's CEO Tommy Sandefur and American Tobacco's CEO Donald Johnston confirmed that neither company had performed biological research in its own facilities. 516017590-7910 at 7756 (US 22901) (A).

(iv) Brown & Williamson

1362. B&W's adherence to the agreement not to conduct meaningful biological research in-house to develop potentially less hazardous cigarettes, and not to compete on health claims was articulated in a 1976 memorandum from counsel**, which indicated that Brown & Williamson should adhere to "the view that the customary use of tobacco is not unduly dangerous, and thus the manufacturer is not under a duty to consumer[s] to warn . . . or to speculate about 'healthful' changes in the product."** 680273641-3643 (US 20998) (A) (emphasis added).

1363. B&W believed that research on potentially less hazardous cigarettes would undermine Defendants' public relations and litigation position that cigarettes are not harmful.

Indeed, in 1989 B&W's longtime in-house counsel advised that B&W should not pursue the development of any less hazardous cigarette or undertake meaningful biological research that would be inconsistent with its public position regarding smoking and disease:

> You asked me to outline a response to a suggested strategy for modification of cigarettes in ways which would be said to reflect the smoking and health controversy. The suggestion includes constructing cigarettes which would have modifications such as lower biological activity, lower levels of specific smoke constituents, and lower tar and nicotine; approaching 'regulators' to seek approval of such modified products; and marketing the modified products to consumers. . . . [B&W] should oppose the suggested strategy for several reasons, the first of which is that **science does not support offering a modified product as relevant to concerns about smoking and health**. . . . B&W's positions on smoking and health are based on science. Today, **our opinion is science has not established that smoking causes disease in humans and no cigarette can be constructed which would be safer than another**. . . . Neither the Ames test nor any other bioassay (including 90 day rodent inhalation tests) would provide substantiation for a manufacturer's statement that a product modification was significant for smoking and health. . . . [I]t is not established that the reduction or removal of specific smoke constituents or of smoke constituents across the board, such as in low tar cigarettes, is significant for smoking and health.

680701034-1038 at 1034-5 (US 21010) (A) (emphasis added).

1364. In the fall of 1989, scientific leaders of BATCo research from its B&W location and from its foreign entities met in Vancouver, British Columbia, to discuss the development of a less hazardous cigarette, including the selective reduction of harmful substances and nicotine analogues. The scientists produced a twelve page set of minutes from that meeting. B&W and BATCo lawyers – particularly B&W Assistant General Counsel Kendrick Wells – obtained a copy of those minutes and eliminated ten of these pages, and substantially revised the remaining text. Kendrick Wells participated in this process, which reduced the minutes to approximately two and one-half pages, despite the fact that he did not attend the meeting. All references to less

hazardous cigarettes – from which a conclusion ostensibly could be drawn that currently sold cigarettes were not safe and that nicotine is addictive – were removed. Wigand WD, 35:11-53:22.

1365. Following the Vancouver meeting, B&W President Thomas Sandefur instructed Vice President for Research and Development Jeffrey Wigand to discontinue discussion or research relating to the health or safety of cigarettes. According to the testimony of Dr. Wigand, B&W's Vice President for Research and Development from 1989-1993, Sandefur told him directly that he was curtailing B&W's work in this area because "any activity or allusion to a safer cigarette would be deathly contrary to the company position relative to liability issues associated with smoking and health." Wigand WD, 128:4-8. Sandefur also prohibited B&W from having a scientific and medical advisory committee to provide direction or support for the development of a less hazardous cigarette. Wigand WD, 14:12-15:19.

1366. During the 1980s, B&W revived Project Ariel, an old alternative smoking device that had been started in the early 1960s. Wigand TT, 1/31/05, 11592:19-11593:6. This revived project, called Project Airbus, was shut down shortly after the Vancouver conference. Id. The Airbus research was eventually discontinued at B&W, and transferred overseas to BAT's Southampton facility. Wigand WD, 126:6-8; Wigand TT, 1/31/05, 11703:2-11705:3. This research "was conducted overseas because, in particular, Mr. Sandefur was concerned, in conjunction with the law department, that any safer cigarette work that was done in the United States would be subject to discovery and would play well into the hands of an adversary. It also was of concern that safer meant that everything else was unsafe and, therefore, one of the fundamental tenets of the legal defense of the industry and B&W was that the products never showed causality to creating disease." Id.; cf. Farone WD, 147:12-150:12 (as Philip Morris's

Director of Applied Research, Farone was not permitted to see results of biological research conducted at Philip Morris's German INBIFO facility).

(v) American Tobacco

1367. An August 1965 memorandum from counsel for Defendant American Tobacco reported the company's adherence to the agreement not to engage in an in-house biological research program:

> At the conclusion of our conference Harlow stated the opinion that the program contemplated would make the Company's past and current position in the health field 'untenable'. Harlan thought that 'we'll have to give it [the program] up'. Harlow ultimately stated that, while the program was important and he wanted very much to do it, he would certainly not want to do anything that 'has an impact on the Company's position or if it makes that position any less sound than it now is'.

The memorandum further noted that American Tobacco had "initiated no biological research on animals in its own laboratory" since the 1930s. Counsel warned that undertaking a proposed biological research program, which included developing techniques "to measure and evaluate [and compare] the biological effects" of American Tobacco's products, would potentially undermine its "past fundamental position" denying the harmfulness of cigarettes and to support its position in product liability litigation: "any attempt by the Company publicly to assert product improvement in terms of health on the basis of its [proposed] animal results involves all the . . . problems for its public and legal position in the health controversy." MNATPRIV00026861-6916 at 6863, 6909, 6912 (US 21478) (A).

(i) Defendants Have Developed Products To Use Defensively If Another Company Violated the Agreement Not to Compete

1368. Consistent with Defendants' agreement not to compete on health claims in the marketing of cigarettes, Defendants have withheld or removed from the market cigarettes that

their internal scientific research concluded were likely to reduce smoker's exposure to known harmful smoke components, and were technological improvements over competitor's cigarettes. To the extent that Defendants developed less hazardous cigarettes or technologies, they have done so for defensive reasons – to be prepared to respond if other Defendants contravened the agreement and began marketing a cigarette using health-related claims.

(i) Philip Morris

1369. By November 1961, Philip Morris had conducted sufficient research to conclude that a "medically acceptable low-carcinogen cigarette may be possible." Its Research & Development Department continued research into less hazardous cigarettes in order to be prepared to compete on health grounds, but only if necessary. A Helmut Wakeham presentation to the Philip Morris board of directors in October 1964 noted:

> [T]he Research and Development Department is working to establish a strong technological base with both defensive and offensive capabilities in the smoking and health situation. **Our philosophy is not to start a war, but if war comes, we aim to fight well and to win**.

1000307159-7164 at 7164 (US 20092) (A) (emphasis added); Farone WD, 139:19-140:8.

1370. As additional evidence of Philip Morris's defensive approach to the development of less hazardous cigarettes, in 1979 Philip Morris was considering the development of an extension of its new Merit brand that would reduce the delivery of carbon monoxide. In his notes from the October 15, 1979 meeting of scientists to discuss this product, Robert Seligman indicated Philip Morris's plan to keep the less hazardous product on the shelf once developed: "!! May be a very important product to have ‘on the shelf' and in test market." 1003713936-3938 at 3938 (US 35855) (O).

1371. Also in the late 1980s, Philip Morris developed a product it considered

competitively superior to Reynolds's Premier and that it believed to be a potentially less hazardous cigarette. However, a June 27, 1990 presentation to the Philip Morris Companies (now Altria) Board of Directors discussed Philip Morris's plan to market the less hazardous product as part of a defensive strategy only if necessary:

> We have developed our . . . prototype to the point where **it is a good competitive product for the Premier category.** It is superior to Premier in taste, lightability, and it delivers much less carbon monoxide than Premier. Our product is approaching the point where it will be ready for test market – further refinements are required but **we think we are pretty well placed to respond if necessary to a relaunch of a Premier-type product by Reynolds**.

2046741061-1074 at 1063 (US 22185) (A) (emphasis added).

1372. In the late 1990s, Philip Morris undertook its Selective Constituent Reduction Program ("SCoR" or "SCRP") to develop a conventional looking, lit-end cigarette product (unlike the electrically heated Accord device) that removes certain harmful constituents from the cigarette smoke. Szymanczyk WD, 171:4-12. Philip Morris has failed to market this product at all even though beginning in July 2002, its longtime advertising agency Leo Burnett designed and created all advertising, point-of-sale and direct marketing communication for the product and spent "9-10,000 man hours on [the project in 2003]." Dudrek 30(b)(6) PD, United States v. Philip Morris, 8/26/03, 216:5-218:5, 234:3-20, 236:19-237:25, 238:18-239:25, 241:1-4.

1373.

Dudreck PD, United States v. Philip Morris, 8/26/03, 238:18-242:4 (Confidential lines at 239:11, 241:20-23, 242:3); LeVan PD, United States v. Philip Morris, 6/25/02, 163-175 (Confidential lines at 163:11-25 & 165:19-23).

1374.

Dudreck PD, United States v. Philip Morris, 8/26/03, 231-232 (Confidential lines at 231:1-11, 18-20; 232:5-7).

Dudreck, United States v. Philip Morris, 8/26/03, 239-241 (Confidential lines at 239:11, 241:20-23).

1375. and according to Suzanne LeVan, former Philip Morris Vice President of Premium Brands from 1991-2001 and current Vice President of Marlboro,

LeVan, United States v. Philip

Morris, 6/25/02, 159-162, 163-175 (Confidential lines at 163:11-25 & 165:19-23); 2085803066-3084 (US 25329) (O) (Confidential); 2085297717-7736 (US 25241) (O).

1376. Moreover, Philip Morris did not introduce any research comparing its SCoR prototypes to its very lowest delivery cigarettes, to make sure that they don't actually deliver higher levels of chemicals compared to cigarettes it already has on the market. Farone TT, 10/6/04, 1761:4-13.

PM3000172528-2555 (JD-050240) (A) (Confidential).

(ii) BATCo

1377. The most significant example of BATCo developing less hazardous cigarette technology solely as a defensive measure is its history with its "Project Ariel." Ariel represents the earliest known demonstration of a Defendant's ability to deliver satisfying levels of nicotine – the primary reason people keep smoking – in aerosol form, without delivering the harmful constituents of tobacco combustion. Harris TT, 10/19/04, 2878:9-2881:20. However, BATCo failed to market Ariel because doing so would have implicitly undermined its public position that conventional cigarettes do not cause disease. 201035126-5126 (US 20304) (O).

1378. The first practical device to alter or avoid combustion was Project Ariel, which was patented in about 1964 and "based on research done for BATCo at Battelle." BATCo's own scientists determined that this device was feasible. "If you can alter or avoid combustion, you have the potential to prevent the formation, and thus the delivery of many of the harmful compounds in smoke." Various embodiments of this design "have been pursued since then and have been shown to be commercially feasible. Ariel was basically a ceramic tube placed in the middle of a conventional cigarette to run the complete length of the rod. The tube was connected to the filter or a mouthpiece, but that filter or mouthpiece is isolated from the tobacco that

surrounded the ceramic rod. Nicotine or nicotine plus flavor was placed inside the tube so that when the tobacco burned the nicotine and flavor were released when the hot zone reached that portion of the ceramic tube. The ceramic could be made to break or crumble when the hot zone passes along the tube. Thus it had the look and feel of a cigarette but the only chemicals delivered in the mainstream were the ones placed in the tube." Farone WD, 177:10-179:7.

1379. On February 13, 1963, Sir Charles Ellis wrote to BATCo Production Director D.S.F. Hobson to suggest a gradual transfer of responsibility for Ariel from Battelle to BATCo, and a "definite phrase stating that BAT will undertake the commercial realisation of the project." Ellis went on to state: "**There is no doubt that the project is feasible . . . . I have myself smoked two crude versions of the devices . . . and obtained a marked nicotine effect without, of course, any combustion products**." 301121935-1936 (US 20581) (A) (emphasis added); see also 301121911-1917 at 1917 (US 22023) (A) (February 18, 1963, Battelle report confirming that "it was possible to smoke a complete cigarette and get some satisfaction out of it. These experiments make it appear very likely that a satisfactory device can be developed."

1380. However, BATCo continued to adhere to Defendants' joint position denying adverse health effects of smoking. On the same day, BATCo board member (and future Board Chairman) D.R. Clarke stated in a memorandum that he could not see any likely commercial application for Project Ariel, which "**certainly could have no future unless the ordinary cigarette is proved to be harmful and the industry is unable to remove the cause of the trouble**." 201035126-5126 (US 20304) (O) (emphasis added).

1381. In July 1966, BATCo scientists again confirmed that with regard to Ariel, "the original objective is feasible and achievable." 105534272-4285 at 4283 (US 20241) (O). And again in May 1967, BATCo in-house scientists concluded that "the ARIEL design provides . . . a

satisfying smoke which, within present knowledge, is 'healthy.'" 301099888-9902 at 9890 (US 21547) (A).

1382. BATCo's adherence to Defendants' joint public relations position scuttled further marketing development of Ariel by patent holder BATCo, B&W, or a licensee of the Ariel patent. On March 2, 1970, BATCo's S.J. Green (in London) informed B&W researcher I.W. Hughes (in the United States) that he favored licensing the patent if a license were requested. He stated: "My reasoning is that to refuse is to invite adverse reaction – if we claim this invention has any conceivable contribution to make on health grounds." Hughes responded to Green's letter, stating that it was the view of people with whom he spoke at B&W that "it would be inadvisable for his [sic] development to be licensed to anyone in the U.S.A.," noting further that both companies agreed that "**the time for marketing such a product has not yet come**." 107623970-3970 (US 34856) (O). In the end, Ariel was neither developed by BATCo or B&W, nor licensed to any third party.

(iii) R.J. Reynolds

1383. As discussed, notwithstanding Reynolds's public statement that "[i]f it is proven that cigarettes are harmful, we want to do something about it **regardless of what somebody else tells us to do. And we would do our level best**," see US FF § III.A(3)(d), supra, Reynolds has not sought to reintroduce into the market its EW product (EW-2) – which exceeded its market share benchmark when briefly sold in the mid-1990s – despite repeatedly reaffirming its scientific conclusions that EW reduced the delivery of numerous smoke constituents to smokers and had great potential to reduce harm to its users.

(iv) Brown & Williamson

1384. Evidence shows that, notwithstanding B&W's recognition of offensive or

affirmative market opportunities for a potentially less hazardous cigarette, it has chosen not to market Advance, as a potentially less hazardous product, though it believes it to be one, unless other tobacco companies market reduced exposure or "reduced harm" cigarettes.

1385. Since at least 2001, B&W has had two versions of Advance ready to launch (a 100s version and a king-sized version). B&W's "Advance Brand Plan," reveals that it will not market Advance as a less hazardous cigarette unless necessary to compete with other tobacco companies:

271098692-8695 at 8694 (US 22033) (O) (emphasis added) (Confidential).

1386. B&W, in fact, has tracked its competitors' progress with respect to the development of potentially less hazardous products, and is ready to market the Advance cigarette. According to the Advance Brand Plan,

271098692-8695 at 8694 (US 22033) (O) (emphasis added) (Confidential).

That is, the Advance Brand Plan stated:

271098692-8695 at 8693 (US 22033) (O) (Confidential).

1387.

Wessel

30(b)(6) PD, United States v. Philip Morris, 3/19/03, 87:22-88:8 (Confidential); Blackie WD, 183:3-4.

1388. Therefore, as shown here, Defendants' agreement not to compete on health claims and not to conduct biological research in-house has led Defendants to abandon development and marketing of cigarettes that their own in-house scientists have determined to be less hazardous, until such a time as less hazardous cigarettes must be used defensively.

(j) There is Substantial Evidence That Defendants Chose Not to Incorporate Feasible Designs or Product Features Found to Potentially Reduce the Exposure to or Harm from Cigarette Smoke

1389. Contrary to James Bowling's 1972 public statement that because Philip Morris did not "know if smoking is harmful to health," it did not know "what ingredients to take out" of cigarette smoke, substantial evidence shows that, internally, Philip Morris (as well as other Defendants) has recognized that cigarette smoke is harmful to smokers, and has focused considerable research attention on the primary known harmful chemicals in cigarette smoke. See 500324162-4164 at 4163 (US 20627) (A). Since at least the early 1960s, Defendants knew about the many toxic constituents in cigarette smoke, several of which were known to be animal or human carcinogens, and include the tobacco-specific nitrosamines ("TSNAs"), aldehydes, and polycyclic aromatic hydrocarbons ("PAHs"). Farone WD, 60:11-66:18, 69:23-71:23; see also 2023193305-3328 (US 20381) (A). Further, Defendants have at times demonstrated – internally

– the scientific capability to substantially reduce or remove those harmful components. See, e.g., US FF § III.A(3)(g)(i)(bb), supra (discussing RJR's multijet filter). However, for innovations that chemical or biological tests suggested could potentially reduce hazards, Defendants failed to integrate the technologies into marketed cigarettes and to meaningfully test whether such features in fact caused less disease for smokers. Farone WD, 4:6-19, 156:18-179:23; Farone TT, 10/6/04, 1624:24-1625:10 ("The work [on less hazardous cigarettes] was great, the technology we developed . . . was very adequate. **It's the implementation that's the problem**.") (emphasis added). Dr. Farone testified that "when you look at the utilization of those technologies, you see that they were not utilized or used in a manner that would allow you to prove or to actually make the products that you could make using those technologies. And basically, the ones that saves you money, that resulted in no net costs, were the ones that were used. . . ." Farone TT, 10/12/04, 2121:25-2122:5. Even for the technologies that Defendants have incorporated that have potential to meaningfully reduce delivery of harmful chemicals – including filters, ventilation, and expanded tobacco, these features have not been exploited to their utmost capability. Id., 2114:13-22. And as Dr. Farone made clear, it was the executives – not the scientists – who ultimately chose what and how to market. Id., 2124:25-2125:5. Such evidence rebuts Defendants' claims that their recently developed or test-marketed cigarettes use novel technologies to reduce smokers' exposure to these toxins, and rebuts their claimed commitment to protect smokers' health to the greatest extent possible.

1390. One category of evidence that Defendants claim responded to the United States' proof about Defendants' conduct in the area of less hazardous cigarette marketing was evidence tending to show that Defendants have expended considerable time, effort, and resources on scientific research. As evidence shows, including the testimony of Dr. Farone, it is not disputed

that Defendants' scientists conducted research on technologies and processes that could potentially reduce the harms from smoking.

1391. Defendants' attempted response overlooks two points. First, all of the internal work on less hazardous cigarettes is itself powerful evidence that Defendants, contrary to their public denials, did recognize that their cigarettes cause harm in smokers. As the direct testimony and cross-examination of Dr. Farone shows, Philip Morris hired him to help them develop a less hazardous cigarette. If Philip Morris genuinely believed that their cigarettes on the market posed no health danger – as they told the public, see, e.g., TIMN0074796-4800 (US 21480) (A) (Tobacco Institute statement that idea of safer cigarette is "tortured logic" because cigarettes not yet proven unsafe) – there would have been no need to hire someone specifically to oversee work to make them **less** dangerous.

1392. Second, the purpose and conclusions about the internal work remained largely internal. While the scientists kept busy, and developed many promising technologies, they did not decide what, whether, or when to market cigarettes. Those decisions were made by executives and the lawyers working at their behest. And as discussed further infra, the evidence collectively and convincingly shows that the executives and lawyers consistently chose loyalty to the Defendants' agreed-upon policy of denying smoking's harms, and adherence to the agreement not to compete on health claims, and thereby restricted whether and how they would develop, test, and implement the scientific work of their R&D departments.

1393. In short, this evidence simply does not rebut the United States' proof that Defendants' jointly agreed not to – and did not – compete in the marketing of cigarettes on smoking and health grounds, so as to avoid conflict with their fraudulent public position denying that cigarettes were harmful.

1394. Moreover, substantial evidence rebuts Defendants' claims regarding their development and marketing of potentially less hazardous cigarettes. The products Defendants identify generally employ design features or technologies known to Defendants for at least 45 years. Further, there is substantial evidence that during the past five decades Defendants decided not to incorporate design features or processes that Defendants' own research concluded were likely to reduce the hazards of smoking, were technically feasible, and were acceptable to smokers.

1395. Substantial documentary and testimonial evidence also counters Defendants' claim that they have done "all they could" to research and development potentially less hazardous cigarettes. See, e.g., Townsend WD, 15:8-14.

1396.

(i) Altering or Preventing Cigarette Combustion and Nicotine Aerosols

(aa) Philip Morris

1398. By 1957, Philip Morris knew that reducing the burn temperature of cigarettes would decrease the levels of certain health-threatening hydrocarbons contained in smoke, and had identified potential methods of doing so, such as using catalysts; modifying the width of the cut and of the blend; controlling access of the air to burning coal; altering the cross-sectional size and shape of the cigarette; and using a non-catalytic filling material to conduct heat away from the coal and reduce its temperature. 1001935513-5548 at 5535 (US 20124) (A). It was forty years before Philip Morris test marketed a product based on this principle – the electrically heated Accord.

1399. By February 1972, Philip Morris research uncovered that scientists had the capability to substantially control the content of the smoke delivered to smokers by its cigarettes, and to limit the delivery of substances in the particulate phase of smoke that it acknowledged internally were "unhealthful." In a memorandum memorializing an "Idea Disclosure for an Indirect Cigarette," a Philip Morris scientist described a product which could use indirect heat to generate and deliver to the smoker an aerosol. The researcher stated that "[t]he particulate phase of the aerosol is generated from pure substances and its composition **is under full control;**

hence, it is capable of being made not only not unhealthful, but positively healthful." In fact, this technology was publicly known since the patents for BATCo's Ariel product were granted in the early 1960s. Philip Morris has never actively marketed an aerosol cigarette. 2026378749-8750 (US 20425) (A) (emphasis added); see also PM3000136418-6422 at 6420 (US 61504) (A) (1976 Philip Morris document indicating that "we can filter out all tar"); Farone WD, 178:6-14.

1400. In late 1993, Philip Morris conducted additional research regarding this approach through its "Ideal Smoke Program," where the objective was to "develop an aerosol delivery system for desired compounds only." 2050742052-2053 at 2052 (US 20491) (A); 2061945926-5928 at 5926 (US 20509) (A). A high-ranking scientist at INBIFO stated that among the "[d]esirable components, . . . [n]icotine and flavor components are perceived as essential." 2023119230-9231 (US 20376) (A); Farone WD, 81:15-20.

1401. Additionally, Philip Morris could easily inform smokers how to substantially reduce their intake of benzoapyrene ("BAP"), which has been long recognized as a carcinogen delivered by cigarette smoke, but has not done so. As early as 1958, a Philip Morris executive, Jet Lincoln, decreed that "BENZPYRENE MUST GO." 1005038656-8658 (US 22214) (O). And in 1997, Philip Morris Companies pledged publicly to shareholders to "look for opportunities to eliminate BAP from tobacco smoke." 2084331906-1944 at 1933 (US 88034) (O); 2065378797-8797 (US 88037) (O) (pledge, in draft opposition to shareholder proposal, to explore ways "to reduce, and perhaps eliminate, BAP from tobacco smoke"). In fact, Philip Morris has recognized that **90 percent of the BAP delivered by a cigarette is delivered in the "lighting" puff, and that the lighting puff of a match-lit cigarette delivers 20 times more BAP than any other puff**. 2086131534-1543 (US 70846) (O); 2072217133-7134 (US 88033)

(O). Philip Morris has also discovered that **the delivery of BAP from the lighting puff is cut by half if the smoker uses an electric lighter**, rather than a match, to light the cigarette. Yet Philip Morris has not taken the simple step of informing consumers of this or providing smokers with instructions for how to light a cigarette to minimize the disproportionate level of BAP from the lighting puff. Alonso PD, United States v. Philip Morris, 7/11/03, 155:2-156:15.

(bb) Lorillard

1402. The lack of activity at Lorillard regarding the development of a less hazardous cigarette similarly reflects behavior consistent with the "Gentleman's Agreement." Like other Defendants, in the early 1960s Lorillard studied ciliastasis. Ciliastasis is a condition in which the lung's cilia, the hair-like structures lining the lung passageways that are responsible for removing foreign matter such as particulate matter from cigarette smoke, become immobilized, or static, and cease their cleansing function. Lorillard conducted significant research relating to one compound in particular, phenol methyl oxadiazole ("PMO"), as a possible solution to the problem of ciliastasis. Coggins PD, United States v. Philip Morris, 6/27/02, 32-35.

1403. PMO was added to cigarettes for testing, but the taste was found to be unacceptable. Rather than conduct committed research to attempt to overcome this obstacle, Lorillard abandoned research on PMOs by the end of the 1960s. Coggins PD, United States v. Philip Morris, 6/27/02, 32-35.

1404. Like other Defendant manufacturers, Lorillard developed a sophisticated understanding of the physics and chemistry of tobacco and tobacco smoke. For example, a November 1973 document stated that "The analysis of a number of tobacco and smoke components and sever tobacco physical properties is regularly carried out in support of projects originating both within R&D and in other departments . . . These analyses include menthol,

humectants, flavors, **carbon monoxide**, carbon dioxide, plasticizer, specific volume, moisture, **particle size** and others." 83250679-0693 at 0688 (US 55641) (A) (emphasis added). This document further discussed Lorillard's intent to research and develop what it termed a "safe cigarette," and estimated – **in 1973** – that with the expenditure of a few hundred thousand dollars, "a marketable [‘safe cigarette'] product should be realizable within a total time span of five years." 83250679-0693 at 0692 (US 55641) (A).

1405. In 1977, Lorillard set a goal to develop and sell a "zero tar" cigarette by 1980, the year that Philip Morris introduced Cambridge. In a memorandum to Research Head Alexander Spears discussing the filtration, tobacco blend, and flavorant requirements to create such a low delivery product, Lorillard's scientist set "the probability of total success at 75 to 80 percent." 01417692-7714 (US 20047) (A).

1406. Notwithstanding Lorillard's steadfast adherence to the industry's public relations position that no cigarettes were a proven cause of disease, Lorillard has long recognized explicitly that a number of chemical and biological tests are capable of providing meaningful information about whether a change to a cigarette design or component is likely to reduce the carcinogenicity, mutagenicity, or genotoxicity of cigarette smoke. A 1986 draft document titled "Cigarette Modification Project: Biological Aspects" states Lorillard's assumptions prior to embarking on a project to conduct biological tests to evaluate potentially less hazardous products. One such assumption is: "**Our understanding of the causation of these diseases [cancer, emphysema, and cardiovascular disease] is sufficiently advanced that we may reasonably target specific smoke components or classes of components for reduction**." The document goes on to identify several different tests – including Ames mutagenicity tests, mammalian cell genotoxicity assays, and in vivo genetic toxicity screening – that would allow

Lorillard to evaluate whether its products were likely to be less hazardous. 87633619-3626 (US (O) (emphasis added); see also 87213942-3966 (JD-024775) (O).

(ii) Technologies to Reduce Delivery of Carcinogenic Tobacco-Specific Toxins

1407. For the last five decades, Defendants have been aware of various techniques to significantly reduce the delivery of tobacco-specific nitrosamines ("TSNAs") in cigarette smoke. Only in the last few years have any Defendants chosen to incorporate one of these approaches in a cigarette for sale.

(aa) Philip Morris

1408. Philip Morris has engaged in a course of delay and never-ending research of technologies to reduce TSNAs. Farone WD, 168:14-173:16. By 1980, Philip Morris had developed at least three different technologies for lowering the oxides of nitrogen ("denitrification") contained in reconstituted tobacco leaf, a tobacco filler created from bits of tobacco leaf discarded during the manufacturing process. Philip Morris found each of the three methods reduced the formation of nitrosamines well beyond the method then in use, and concluded each of the three was commercially and economically feasible. However, Philip Morris did not implement any of these technologies in the years after the technology was created. Farone WD, 172:11-173:16.

1409. Philip Morris secured at least three patents on various denitrification processes. See 2028516499-6546 (US 37394) (A) (electrodialysis) (Patent No. 4,566,469); 2051804769-4776 (US 78963) (A) (patent for "dissimilatory denitrification" that also recognized that "smoking products having lowered amounts of oxides of nitrogen present in smoke are desirable."); 2028596292-6292 (US 23057) (A) ("thermophilic process") (Patent No. 4,685,478); see also 2022203905-3906 (US 20355) (A) (1981 process improvement).

1410. In December 1980, Susan Dobberstein, a Philip Morris scientist, reviewed three different approaches that Philip Morris had to date developed to denitrify tobacco. Dobberstein concluded that all three were technically and economically feasible, and that "**consumer tests showed all three processes to be acceptable to the internal smoking panels used by Philip Morris to measure product "subjectives."** 2028516499-6546 (US 37394) (A) (emphasis added).

1411. Notwithstanding these conclusions, Philip Morris utilized none of these technologies to reduce the delivery of oxides of nitrogen to the smoker. Philip Morris has claimed that the NOD ("naturally occurring denitrification") process was abandoned in 1984 because it did not work consistently, even though it had patent applications stating to the contrary pending before the Patent and Trademark Office. In fact, a 1983 document states that NOD "[p]roduction feasibilit[y] was demonstrated." 2021605662-5671 (US 20351) (A); 2050824506-4550 at 4508 (US 20493) (A). Evidence in the record also shows that other potential obstacles were overcome. 2050817028-7043 (US 22219) (A) (November 1983 report sent to high level PM scientists showed that "modification of the NOD process improved the subjective character of NOD RL-TC on internal panel tests" and that the scientists had demonstrated the "reproducibility of the process"); Farone WD, 173:10-17.

1412. In the end, Philip Morris did not incorporate any of the improved methods for denitrifying reconstituted leaf, but not because it did not work. Philip Morris's Tobacco Technology Group ("TTG"), the internal committee responsible for deciding the manufacturing processes and technologies for Philip Morris entities to use worldwide, preferred as of September 1983 to "put NOD on the shelf," and "decided not to rush into commercializing" this process which reduced the nitrates in reconstituted leaf by 95%. Executive Hamish Maxwell reflected

the ambivalence, questioning "whether we really need to bring our NO delivery down" at all. 2000750261-0264 at 0262 (US 87567) (A); see also 2026232862-2862 (US 87568) (A) (describing the TTG's mission); 2000572749-2755 (US 87569) (A) (minutes of TTG meeting discussing denitrification processes).

1413. Yet in 2000, Philip Morris appeared to recognize again the effectiveness of bacterial denitrification and to consider this method in modifying the RL process to "eliminate or reduce" the elevated nitrosation occurring during the current RL process. 2086117481-7483 at 7481 (US 45774) (A); Farone WD, 173:17-174:8. As Dr. Farone testified on Philip Morris's failure to incorporate the denitrification technologies that were previously successfully tested,

> My criticism is that they have patented technology which they said worked, and today, as I read the research reports, once again Philip Morris is looking at microbial – using microbes to change the materials that are in tobacco. And we had several projects going on there that already did it. The data showed that you could make the plants. You could smoke the tobacco. You could put it in cigarettes.
>
> And what I read now is, Oh, we're thinking about let's try this once again. So my criticism is paralysis by analysis."

Farone TT, 10/6/04, 1771:9-17.

1414. Philip Morris did not offer any evidentiary counter, but rather asserted that these denitrification processes, even if successful, offered only incremental benefits because Philip Morris was already using a denitrification process using crystallization that removed 90% of the nitrates in their "reconstituted leaf," or RL. However, Philip Morris did not refute Dr. Farone's testimony that "**we knew that PM's nitrate levels were still the highest, and we needed to reduce the other 10% just to make our levels comparable to the competition**. The use of these processes in RL was only to be a first step. The goal was to use the process on Burley tobacco in general because this was the real problem." Farone WD, 172:18-23; Farone TT,

10/6/04, 1766:6-15.

1415. By at least 1982, Philip Morris developed another way to reduce the oxides of nitrogen in its cigarettes – blending and preparing tobaccos that would deliver lower levels of oxides of nitrogen. Farone WD, 168:18-169:22.

1416. Bright tobacco, also known as flue-cured tobacco, is one of the main tobaccos used in cigarettes sold in the United States. Bright tobacco has traditionally been cured by heating it in barns with propane heaters. Burley tobacco is the other main tobacco used in American cigarette production. Burley tobacco, which is naturally higher in alkaloids that promote TSNA formation, is "air-cured." PM3000136161-6165 at 6161 (US 61555) (O) (describing tobacco curing methods and content of "important ingredients" in various strains including sugars, nicotine, and total volatile bases); Farone WD, 44:2-45:22, 46:16-47:21. In a 1985 patent that Philip Morris submitted in 1982, Philip Morris described its discovery of a way to air-cure Bright tobacco and reduce harmful nitrogen oxide ("NO") in smoke:

> This novel tobacco, when formulated as a smoking article, such as a cigarette, and smoked, presents the aroma and taste of a blended tobacco smoking article and may be substituted in whole or in part for burley tobacco in blended tobaccos while substantially maintaining the subjective qualities of the burley tobacco and yet, as compared to the burley tobacco-containing blends, provides a reduced NO content in the smoke.

1000015245-5246 (US 22133) (A); 511351011-1019 (US 88040) (A) (Patent No. 4,516,590, filed November 26, 1982, issued May 14, 1985); see also 2026526349-6353 (US 86964) (A) (Patent No. 4,607,646, submitted in Feb. 1984, issued to Cliff Lilly on August 26, 1986, patenting a method for treating bright tobacco to create a tobacco with Burley's smoking characteristics, but without Burley's 'less desirable features').

1417. This invention allowed for substitution of air-cured Bright tobacco for burley

tobacco, and thus represented a potential advance in reducing the delivery of harmful TSNAs to smokers. However, while Philip Morris conducted a successful trial of incorporating air-cured Bright tobacco into marketed products, Philip Morris did not pursue utilization of air-cured Bright further. Farone WD, 169:23-171:17. Philip Morris offered no trial testimony to explain their failure to take advantage of this promising way to reduce smokers' exposure to TSNAs. Further, current Philip Morris Vice President of Product Development and Technology, Hector Alonso was not even aware of Philip Morris's prior successful research and utilization of lower TSNA air-cured Bright tobacco. See Alonso PD, United States v. Philip Morris, 7/11/03, 131:25-132:13.

1418. By 1985, Philip Morris had demonstrated its ability to use tobacco blend selection to "Deliver Adequate Nicotine and Reduced TSNA [Tobacco Specific Nitrosamines]." On April 1, 1985, Philip Morris scientists Sue Tafur and Ed Lambert wrote a memo to Ted Sanders, a high-level Philip Morris scientist, which was copied to other Philip Morris scientists including Jim Charles, Robert Ferguson, Robin Kinser, and William Morgan, reporting on their experiment "to determine if it is possible to deliver adequate nicotine to MS [mainstream] smoke while reducing mainstream TSNA by using an experimental filler blended from a high alkaloid tobacco with low alkaloid and oriental tobaccos. This work was designed to provide a preliminary indication of the feasibility of the concept." Tafur and Lambert concluded that "[t]he data presented here indicate that **the approach to delivering adequate nicotine to MS while reducing TSNA can be met by judicious blending of tobaccos**." 2001113614-3618 (US 22216) (A) (emphasis added).

1419. Thus, notwithstanding Defendants' scientific knowledge for the last five decades of methods to substantially reduce TSNA delivery from several different types of tobacco,

including burley and reconstituted leaf, Philip Morris (and other Defendants) have failed to incorporate such technology into a nationally marketed reduced risk cigarette.

1420. To the contrary, rather than incorporate reduced risk technologies into cigarettes, as recently as 2001, in response to Vector announcing its plans to market Omni, its potentially reduced exposure cigarette, Philip Morris and BATCo lobbied Argentinian officials to prohibit cultivation of the genetically modified tobacco that Vector says is a key component of Omni. Roberto Sanchez Loria, Agriculture Secretary of Tucuman, Argentina, confirms that these two companies warned him that his "province is in danger of losing business" from Defendants if it continues to plant transgenic tobacco. 524007145-7151 at 7150 (US 20917) (O).

1421. In the late 1980s, Philip Morris developed and utilized a process – supercritical fluid extraction – that removed virtually all of the nicotine from cigarettes. Because nicotine is the primary alkaloid in cigarettes responsible for TSNA formation, Philip Morris repeatedly demonstrated and reported that the supercritical fluid extraction process also removed virtually all of the harmful TSNAs from tobacco. Farone WD, 174:9-175:10. Yet when Philip Morris test-marketed the product under the brand names Next and De-Nic, it did not inform consumers that by removing nicotine, the cigarette eliminated the main source of physiological dependence that causes the repeated inhalation of harmful cigarette smoke constituents, or that the product had a substantially reduced level of TSNAs. 2023088294-8297 at 8296 (US 20375) (A); 2022207033-7038 (US 20356) (A). In fact, Philip Morris introduced no evidence – just counsel's arguments – that Philip Morris conceived of, designed, or tested its denicotinized cigarettes as a possible less hazardous cigarette.

(bb) R.J. Reynolds

1422. RJR, Philip Morris, and B&W all claim to have incorporated in their products, to

varying degrees, Bright tobacco that has been cured by an indirect heating process that replaces the old propane flue-curing technique.

1423. Reynolds takes credit for the development of this technology, and claims it is responsible for a 93% reduction in TSNAs. Townsend TT, 3/8/05, 14738:2-21. Reynolds further boasts that "one of the first things" it then did was to share its discovery with all of its "major competitor companies" because it was their obligation as scientists to do so. See Townsend WD, 66:23-67:4; see also Townsend TT, 3/8/05, 14744:1-14745:2. Importantly however, Reynolds was forced to admit that the **only** companies with whom it shared this technology were the (non-Liggett) joint defendants – i.e., other members of the RICO enterprise and conspiracy. Moreover, they did not share with the only company that Reynolds knew to have been aggressively researching TSNA-reduction methods – Star Scientific – even though Star had invited Reynolds to its labs and revealed all of its processes to Reynolds. Townsend TT, 3/8/05, 14744:1-14752:10 (discussing, in part, 505724149 (US 93144) (A)).

1424. The sincerity of Reynolds's commitment to reducing its consumers' exposure to TSNA's is undermined by evidence showing that almost a decade before Reynolds introduced its TSNA-reduced line in 2003, Reynolds was aware that its "EW" product – which had proven itself commercially acceptable in its test-market – reduced TSNAs by 65% compared to Philip Morris's Marlboro Lights by virtue of its removing nitrogen-containing compounds from tobacco. Yet in 1997 Reynolds removed EW from the market – at a time when it could not know the prospect of developing another such consumer-acceptable technology (like the heat exchange process it learned of years later) to reduce TSNAs. Townsend TT, 3/8/05, 14753:11-14759:14.

(iii) Charcoal Filters

1425. Like the idea of reduced TSNA deliveries through tobacco growing, curing, or

treating methods, Defendants' recent re-focus on charcoal filters concerns a technology Defendants have known to be effective for at least 45 years. Farone WD, 159:17-162:6.

1426. By 1959 at the latest, Defendants knew of the potential for filters containing charcoal or activated carbon to absorb harmful constituents of smoke, in particular from the part of cigarette smoke which remains in gaseous (as opposed to particulate) form. The February 18, 1964 report from Helmut Wakeham to Philip Morris senior management titled "Smoking and Health Significance of the Report of the Surgeon General's Committee to Philip Morris Incorporated," stated that "[t]he [Surgeon General's] report gives inadequate recognition to the selective adsorption of certain gas phase components from smoke which affect pulmonary cleansing mechanisms (viz., mucus flow, cilia activity). The statement that carbon filters previously employed do not have specific power to scrub the gas phase ignores pioneer work at American Tobacco reported in Tobacco Science, Vol. 3, pp. 52-56, 1959." 1000335612-5625 at 5618 (US 22986) (A); Farone WD, 162:4-19. Among the most harmful chemicals delivered in the gas phase of cigarette smoke are the toxic aldehydes. Id., 60:11-15, 64:9-14, 161:11-15.

1427. By 1964 Philip Morris had test marketed – consistent with the agreement not to compete on health claims (see US FF § III.A(3)(g)(i)(aa), supra) – the charcoal filtered Saratoga brand, which Philip Morris scientists considered "[p]hysiologically . . . an outstanding cigarette." 1000307159-7164 at 7160 (US 20092) (A) (emphasis added). Results of research Philip Morris conducted in 1969 on the biological effects of whole fresh smoke and the gas phase of cigarette smoke in unfiltered and charcoal-filtered cigarettes included the finding that carbon "filters effectively the biologically active components of smoke." 1000036347-6366 at 6354 (US 20070) (A).

1428. Similarly, RJR recognized the potential benefits of a charcoal filter by 1960.

However, RJR's sole carbon filter cigarette during that time was Tempo, which sold from the early 1960s to the early-to-mid 1970s. Townsend WD, 26:21-22.

1429. Additionally, record evidence rebuts Defendants' claim that "taste" has proven to be an insurmountable obstacle in developing consumer-acceptable cigarettes with charcoal filters.

1430. In 1971, RJR undertook research to "find[ ] chemical additives and blends which will reduce or mask the unpleasant off-taste associated with carbon filter cigarettes." 500605911-5915 at 5911 (US 48333) (A). The research concluded:

> Fifteen additives have been found which reduce the carbon taste on all flue cured test cigarettes, but these additives were not markedly effective on the TEMPO blend. By changing the blend, however, a significant reduction in the carbon taste was achieved even without the use of additives.

These researchers identified "Valmont" as an actual RJR brand sold abroad that modified Tempo and substantially reduced the carbon taste for smokers. 500605911-5915 at 5913 (US 48333) (A). Yet RJR did not make that change for the domestic market.

1431. Also in 1971, a report to Robert Seligman, Philip Morris's Vice President of Research and Development, described the results of a weeklong taste test of charcoal and noncharcoal versions of a new cigarette brand among almost 400 smokers. Almost one-fifth of the smokers (19%) had no preference between the two models, "many smokers had trouble discriminating between the two products," and even among those expressing a preference, "the two products were preferred about equally." 1000718502-8505 at 8502 (US 87571) (O).

1432. More dramatically, in April 1984 Philip Morris reported on a Public Opinion Liking ("POL") Study, a consumer test regularly utilized by Philip Morris to evaluate potential new cigarette brands, that compared a regular Merit cigarette to one utilizing a charcoal filter.

The purpose of the study was "[t]o determine consumer acceptability of Merit 85mm with charcoal filter relative to control Merit 85mm." The POL Study Leader summarized the results:

> The results, based on this sample of the control and experimental cigarettes, indicate that **the experimental cigarette [the version with the charcoal filter] was preferred and rated significantly higher on the qualitative attributes by the Merit 85mm and Merit Ultra Lights 85mm smokers. These results support previous results from a Richmond Product Placement Panel test . . . run in 1976**.

2075008054-8067 at 8054 (US 87572) (O) (emphasis added). Thus, Philip Morris confirmed on multiple occasions – in 1971, 1976, and again in 1984 – its ability to develop consumer-acceptable charcoal-filter cigarettes.

1433. Despite its scientific knowledge of the role of activated charcoal, in late 1997, Philip Morris re-initiated a research project with the objective of understanding "effects of carbon filters on gas phase deliveries" and included among its continued filtration research a project to "[d]evelop model of carbon adsorption." 2086131512-1513 (US 21933) (A); 2086131675-1675 (US 21934) (A). Such repetitive study of previously researched questions has characterized Philip Morris's research. Farone WD, 139:19-142:2, 166:3-14.

1434. In short, for 40 years Defendants have understood charcoal's potential benefits, but ignored research demonstrating feasible ways to exploit charcoal's capabilities and claimed that charcoal-filtered cigarettes were simply unacceptable to American smokers. The three charcoal-filtered products recently developed (or in development) that Philip Morris, RJR, and B&W tout as potential reduced exposure products – SCoR, EW, and Advance, respectively – must be viewed in this context.

1435. Defendants' other attempt to counter the United States' evidence on charcoal filters was to suggest, through its cross-examination of Dr. Farone, that no public health

authorities have endorsed charcoal-filtered cigarettes as less hazardous. As an initial matter, Defendants offered no proof that the United States "endorses" consumer products, let alone particular designs of cigarettes, and Dr. Harris's unrebutted testimony was to the contrary. Harris TT, 10/21/04, 3284:6-3286:2 (discussing Premier). Moreover, Dr. Farone testified that Defendants' contention is overly simplistic, because whether simply adding (or removing) a single design feature or component will make a cigarette meaningfully less hazardous cannot be scientifically determined in isolation, without substantial additional knowledge about the other design features and components, including the tobacco blend, and the type and density of charcoal. See, e.g., Farone WD, 163:10-16; Farone TT, 10/6/04, 1741:19-1747:1 ("the issue is whether putting [a charcoal filter] on a Marlboro cigarette, full-flavor Marlboro is enough of a reduction to be meaningful . . . . [I]f you only reduced the chemicals by an insignificant amount just to say that I've done some reduction, then it's not a very meaningful change compared to what you could do.").

1436. In the late 1990s, Philip Morris undertook its SCoR program to develop a conventional looking, lit-end cigarette product that removes certain harmful constituents from the cigarette smoke. To accomplish the intended reduced deliveries, Philip Morris has included a plug-space-plug filter – whereby activated carbon is sandwiched in the space between two "plugs" of another filter material. See Alonso PD, United States v. Philip Morris, 7/11/03, 74:24-75:16; 75:18-77:4. In fact, this filter design was known to Philip Morris **by 1959**. 2021656217-6217 (US 88023) (O) (1959 memorandum discussing plug-space-plug filter research). And in the late 1960s and early 1970s, Philip Morris researched precisely this plug-space-plug design utilizing charcoal. 1000320914-0914 (US 88024) (O) (March 1970 document concerning plug-space-plug filter using carbon, stating that "project is economically feasible"); 1000320619-0619

(US 88025) (O); 2028631322-1339 (US 88022) (O) (November 1974 report); Farone WD, 167:1-8 ("There is nothing in [SCoR] that represents a new technical breakthrough that was not available in 1980, as far as I've seen."). At the time the trial began, Philip Morris had not yet test-marketed any SCoR product. See Szymanczyk WD, 172:9-11.

1437. Second, Reynolds's EW/Select product, discussed at US FF § III.A(3)(g), supra, has a charcoal filter as one of its central exposure-reduction components, and RJR has internal information that the specific filter technology is decades old. Specifically, with regard to the carbon scrubber filter technology in EW, Jones Day identified a 1973 patent for technologies very similar to two of the primary features of the EW filter, and noted that RJR's application to patent the EW filter was denied because it was not deemed novel, useful and not obvious. 515873569-3776 at 3739-3742 (US 85886) (A).

1438. In short, Defendants' suggestion that recent product development efforts disprove the United States' claims is rebutted by evidence that these "new" products in fact rely on design approaches and features long known to Defendants, and reflect technologies that Defendants have for decades chosen not to meaningfully test and exploit.

(k) The NCI's Tobacco Working Group Bolsters the Evidence Proving Defendants' Conspiratorial Conduct on Less Hazardous Cigarette Development

1439. At trial, Defendants' attempted to suggest that their collective failure to develop, meaningfully test, and market any potentially less hazardous cigarette with health-related claims before 2000 was caused in substantial part by the United States' failure to continue the Tobacco Working Group ("TWG"), an NCI-sponsored project that ran for about ten years from 1968-1977. See US FF § I.E(3), supra (background activities of the TWG).

1440. Defendants attribute significance to the TWG's role in their own less hazardous

cigarette development that is not supported by the evidence. During his cross-examination, Dr. Harris testified that "[i]n terms of its scientific accomplishments, I would say the [TWG] program was minimal." Harris TT, 10/18/04, 2709:2-3. Similarly, Dr. Farone confirmed, Defendants did not meaningful translate whatever useful scientific information they collected from the TWG's efforts into marketed products with the potential to reduce harm. Farone TT, 10/12/04, 2159:24-2160:10 (while some information was "very useful" to scientists within the companies, "that wasn't intended to mean that the companies bought into those things. . . . [T]he companies did not in fact use those things . . .").

1441. Moreover, Defendants' conduct in connection with the TWG demonstrates the extraordinary extent to which Defendants coordinated their actions in the area of smoking and health, and in particular, coordinated their approach to the issue of less hazardous cigarette design, development, and marketing. Defendants' approach to the TWG and all Defendants' related activities were jointly formulated and closely monitored by committees of industry lawyers and executives to ensure that such "participation" in the TWG did not threaten – and indeed served – Defendants' common purposes. Defendants' representatives to the TWG regularly reported to their counsel, who kept company executives, CTR, the Tobacco Institute, and one another abreast of TWG activities. 501556259-6263 (US 22283) (O); 501555964-5966 (US 22284) (O); 500502060-2063 (US 22286) (O); 501990370-0374 (US 22287) (O); 1005070117-0121 (US 22288) (O); 1005070122-0122 (US 22903) (O); 680142648-2648 (US 22374) (O); 2015040862-0863 (US 36652) (O); 680143084-3084 (US 22293) (O); 03540217-0225 (US 22294) (A); BWX0003934-3938 (US 86425) (O); 03753993-3994 (US 22295) (A); 03646227-6228 (US 22296) (A); LG0208389-8389 (US 59040) (O).

1442. Murray Senkus, RJR's longtime representative to the TWG, admitted that

Defendants' attorneys encouraged Defendants' participation in the TWG; he recalled that Defendant lawyers conceived of the project because it would enhance their public image and "might be useful in anticipated litigation." 515872408-2456 at 2416-2417 (US 22261) (A).

1443. A March 9, 1972 document drafted by Alexander W. Spears of Lorillard recognized: "If I were to withdraw [from the TWG], Lorillard would lose considerable insight into the workings of the National Cancer Institute program with respect to cigarettes. There is a very real possibility that this program is going to have a profound effect on the cigarette industry, and I believe that we should be aware of these effects as soon as they become clear. **We also have some significant influence on the course of the detailed activities and, therefore, some effect on ultimate results.**" 01240178-0178 (US 22282) (A) (emphasis added).

1444. Defendants' employees who "participated" in the TWG repeatedly: (1) informed the TWG that their participation was in their individual capacities, not as representatives of a tobacco company; and (2) disclaimed that such participation represented acceptance that any cigarettes were unsafe. In fact, letters echoing this view – some of which are nearly verbatim – were drafted by Defendants' lawyers after their discussion with Defendants' executives, and were sent according to the timing decided upon by the Defendants' Committee of Counsel. See 501990061-0062 (US 88489) (O) (RJR's Murray Senkus stated in his March 27, 1968 acceptance letter that, by agreeing to serve on the TWG, "I am in no manner accepting the view (1) that present cigarettes are hazardous or (2) that the smoke of such cigarettes causes or contributes to the development of human lung cancer."); 500502337-2338 (US 67920) (O) (draft of Senkus letter prepared by RJR's counsel Henry H. Ramm); 03645686-5686 (US 22263) (O) (Lorillard's R&D Director Alexander Spears wrote in his March 28, 1968 acceptance letter to TWG Director Endicott that he agreed to serve as a scientific advisor to the group in his "individual capacity,

and not as a representative either of my company or of the tobacco industry and, accordingly . . . it will not be stated or implied that the tobacco industry or my company is represented."); 1003729890-9890 (US 69276) (A) (virtually verbatim acceptance, with same date, from Philip Morris's Helmut Wakeham to TWG); LG0267405-7405 (US 59094*) (O) (July 1974 letter of Liggett Research Department Director William Bates accepting formal membership on the TWG, stating: "you should understand that my services on the Group will be totally in my capacity as an individual and not as an employee or representative of Liggett and Myers Incorporated.").

1445. Contrary to their repeated declarations that their role in the TWG was solely as an individual, the scientists coordinated closely with each other and industry lawyers to jointly choreograph their involvement with the TWG. For example, at a March 10, 1972 meeting of Defendants' counsel and scientific directors at the Tobacco Institute, the attendees formulated a course of action to respond to congressional testimony by the head of the TWG, who had testified that the recommended animal inhalation tests the TWG was considering represented the joint understanding of United States Government and tobacco industry scientists as the best way to proceed. Defendants' lawyers discussed the need to "correct that impression . . . for the purpose of . . . litigation" that the scientific directors concurred in the type of animal tests which were being sponsored by the TWG: "After discussion it was agreed that the three original members of the Working Group (Wakeham [of Philip Morris], Senkus [of RJR], and Spears [of Lorillard]) would write separate letters to [Director] Gori correcting his statement. [Outside industry counsel David] Hardy was requested by [B&W general counsel and later CTR president Addison] Yeaman to draft the substance of such a letter." 1005055229-5230 (US 26186) (A).

1446. That very day, David Hardy of Shook, Hardy & Bacon wrote to Tobacco Institute Executive Committee member Thomas Ahrensfeld and lawyers for Defendant Cigarette

Companies, enclosing "a draft of the type of letter that should go to Dr. Gori from Doctors [Helmut] Wakeham, [Murray] Senkus and [Alexande]r Spears, the three initial members of the Tobacco Working Group. . . . The enclosed draft is not being sent directly to the research directors because I thought that in each instance counsel would want to take it up with their own director." 03645691-5692 (US 22265) (A). The scientific directors dutifully sent to Gori the letters drafted for them by Hardy. 501990268-0269 (US 22266) (O) (RJR's Senkus); 680231759-1760 at 1759 (US 22269) (O) (B&W's Hughes); 03645684-5685 (US 26069) (A) (Lorillard's Spears).

1447. Similarly, at the Committee of Counsel meeting held at the Tobacco Institute on March 14, 1973, Defendants' lawyers and research directors discussed Defendants' participation in the TWG. The minutes reflect that during the afternoon session of the meeting, they

> consider[ed] an appropriate response to the letter dated March 9, 1973, from Dr. Gori to the Research Directors in their capacity as members of the Tobacco Working Group. . . . **After careful consideration of the views of the members of the Tobacco Institute staff with regard to the public relations and political effects of the public withdrawal from the TWG, it was concluded that the research directors cannot withdraw. We should take steps to give the industry as much protection as is possible and at the same time remain in the Tobacco Working Group**.

680143026-3027 (US 22902) (A) (emphasis added). The Committee adopted a three-point proposal whereby Defendants' scientific directors would decline to concur with or comment on Gori's recommendations. 680143026-3027 (US 22902) (A).

1448. Defendants' research directors subsequently mailed new reservation and disclaimer letters prepared or outlined by counsel. On May 14, 1973, Liggett's counsel Joseph Greer wrote to his colleague Frederick Haas advising that Jack Roemer, Chairman of the Committee of Counsel, scheduled a CTR meeting for May 15, 1973, to discuss whether the

scientific directors should send a disclaimer letter to Gori concerning their participation on the TWG and whether CTR should participate in the TWG. LG2000466-0467 (US 22270) (O). Philip Morris's scientific representative Helmut Wakeham wrote to Associate General Counsel Alex Holtzman recalling that it had been decided at the CTR meeting on May 15th that the research directors should write another letter to NCI and that, "[a]s I recall it, you were going to prepare such a letter from me." 1004863309-3309 (US 22271) (O). Senkus subsequently wrote to Gori stating that "my role in the TWG is that of a scientific advisor. . . this role is confined to areas of chemical, analytical, physical and manufacturing problems related to cigarette smoke, tobacco composition, and physical and manufacturing characteristics of cigarettes." Senkus then informed his supervisor, William D. Hobbs, that "the other Research Directors will respond in the same vein." 501990170-0171 (US 22264) (A); 500081721-1721 (US 22274) (O); 501555598-5598 (US 22273) (O)

1449. Information gathering was a critical aspect of Defendants' involvement with the TWG. Defendants' scientific representatives on the TWG reported directly to their respective company counsel. For instance, over a number of years, RJR's Murray Senkus sent regular "Confidential – For Legal Counsel" summaries of TWG activity to RJR counsel Henry Ramm. See, e.g., 501556259-6263 (US 22283) (O); 501555964-5966 (US 22284) (O); 500502060-2063 (US 22286) (O); 501990370-0374 (US 22287) (O). Philip Morris's Osdene and Wakeham did the same for their counsel, Alex Holtzman. 1005070117-0121 (US 22288) (O); 1005070122-0122 (US 22903) (O).

1450. The Tobacco Institute was also kept informed of the activities of the TWG. On February 22, 1973, Alexander Holtzman, counsel for Philip Morris, wrote to Horace Kornegay, President of the Tobacco Institute, advising that Philip Morris scientist Wakeham had been

invited to a meeting of two subcommittees of the TWG on March 8, 1973. Holtzman also advised that the letter of invitation had advised that Gori would "set forth his ideas for future projects of the Tobacco Working Group and present a proposed budget for those projects" at a meeting on March 25, 1973. 680142648-2648 (US 22374) (O). Holtzman stated: "Perhaps Dr. Wakeham and others who may attend the meetings on March 8 will get some additional information about Gori's plans at that time." 680142648-2648 (US 22374) (O). Representatives of the Tobacco Institute also met directly with Gori in 1973. 690020214-0255 (US 31061) (O).

1451. CTR similarly was informed about TWG activities. On May 31, 1974, Defendants' outside counsel, David Hardy of Shook, Hardy & Bacon, wrote to members of the CTR Research Review Committee and the Industry Research Committee advising that summaries were "to be prepared with, if applicable to the topic, an emphasis on objectives (or relevancy), cost, source of funds, and supervisory information" on the TWG. William Bates, Liggett's TWG representative, was assigned responsibility for the TWG summaries. 2015040862-0863 (US 36652) (O). Bates provided the requested material for the CTR Research Review Committee and Industry Research Committee related to the TWG to David Hardy by letter dated July 30, 1974. Among the material Bates included was "a draft copy of the annual report for the Tobacco Working Group," which he indicated "should be used only for information purposes for members of the committee" because of the draft nature of the report. LG0208389-8389 (US 59040) (O); 680143084-3084 (US 22293) (O). The draft annual report of the TWG was discussed at a subsequent research committee meeting, the minutes of which reflect (among other things) that B&W's Wally Hughes commented that the "'Experimental Cigarette Report' to be presented at [the] Sept[ember] TWG [meeting is] going to be much more dangerous." 03540217-0225 at 0218 (US 22294) (A).

1452. An August 30, 1974 letter from David Hardy to DeBaun Bryant, Vice President and General Counsel of B&W, enclosed a copy of the draft TWG annual report, and stated: "I was under the impression that you and I were both receiving all of the Tobacco Working Group material." 680143084-3084 (US 22293) (A). As a result, CTR was able to regularly monitor and discuss TWG activity.

1453. Lorillard counsel Arthur Stevens similarly kept Defendants' outside counsel, William Shinn of Shook, Hardy & Bacon, informed about TWG activity. In an April 23, 1975 letter, Shinn thanked Stevens for material Stevens sent him on the TWG: "The status report on the smoking and health program and policies and procedures manual were most welcome. I have been trying to keep abreast of the Tobacco Working Group projects and found the material very helpful." 03753993-3994 (US 22295) (A); see also 03646227-6228 at 6227 (US 22296) (A).

1454. As part of their efforts to obtain information about TWG activities, Defendants cultivated relationships with government employees who could, from the inside, aid their monitoring efforts. One such TWG participant, T.C. Tso of the Agricultural Research Service of the United States Department of Agriculture, covertly shared information with Defendants about the TWG's activities. In a March 10, 1975 letter from BATCo scientist David G. Felton to various industry personnel worldwide, Felton enclosed material on the TWG that he had received from Tso. Felton advised:

> Following the meeting of the TWG held at Bethesda on February 18-19th, I have received, from Dr. T.C. Tso, a confidential copy of his internal report on the proceedings and, in accordance with my usual practice, I enclose a photocopy for your personal information. To preserve the confidentiality of the source, please do not discuss this report with outsiders.

105366949-6955 (US 22317) (O). Tso also had a meeting with J.C.B. Ehringhaus of the Tobacco Institute on July 23, 1975, in which he provided a status report on the TWG.

TIMN449671-9671 (US 22391) (O).[8]

1455. Contrary to Defendants' claim that the TWG was an open collaboration between Defendants and the NCI, the evidence shows that Defendants affirmatively withheld information from the TWG and chose not to contribute in ways that could potentially threaten their fraudulent approach of publicly denying that cigarettes are a cause of disease.

1456. In 1970, independent scientists Auerbach and Hammond conducted research that Philip Morris concluded was "the first time that cigarette smoke as a direct agent has produced lung cancer in an animal in any reliably conducted experiment." 1000298389-8392 (US 26082) (O). The industry immediately and for the next two years undertook to publicly undermine these data and it used its representation on TWG to try to curtail and then minimize the importance of TWG's work to replicate these studies. See US FF § I.E(3), supra (for detailed discussion of TWG). At one point during these efforts, it took the time to laud its accomplishments to that end, as stated at the 1971 Annual Meeting of the Tobacco Institute:

> Our constant pressure on Hammond's and Auerbach's shaggy – or shabby – dog story has put that work as reported so far into a permanent file marked controversy – especially among scientists. It did more than that. It demonstrated our counterattack capability as a team. During the rest of the year we missed no event worth talking about in which our comment wasn't issued – and printed and broadcast – the same day.

TIMN0081403-1405 (US 77050) (O).

1457. And in the early 1970s, Defendants' lawyers and executives determined that their

---

[8] Unsurprisingly, Philip Morris secured the services of Tso upon his retirement in 1983. Philip Morris, along with two other companies with whom Tso had worked at the TWG, approached Tso **prior to** his retirement from the federal government; he was persuaded to join Philip Morris by Tom Osdene, who had regularly participated in TWG activities for that company. 2023799642-9642 (US 87701) (O); 2000631334-1337 (US 87702) (O); 2000511301-1302 (US 87703) (O); 2000596045-6045 (US 87704) (O); 2001202319-2319 (US 87705) (O).

scientist representatives on the TWG would not offer suggestions to the TWG about the experiments to conduct or projects to pursue in the search for a less hazardous cigarette. Defendants' outside counsel David Hardy of Shook, Hardy & Bacon wrote company counsel and executives on August 7, 1973, that:

> I have gotten from [CTR Scientific Director] Dr. Sheldon Sommers a list of suggested projects for the Tobacco Working Group. . . . If you will arrange through Dr. Spears to find out which of this list of suggestions might be favorably considered by the Tobacco Working Group, Dr. Sommers will supply a proposed detailed protocol. . . . You will notice that a copy of this letter, as well as a copy of the suggested projects, is going to each General Counsel of the Institute members, who can take it up with their respective Scientific Directors, keeping in mind the stated limitations on the function of company scientists in connection with the Tobacco Working Group.

1005056343-6343 at 6343 (US 22272*) (O).

1458. Philip Morris counsel Alexander Holtzman forwarded Hardy's list to Philip Morris scientist Helmut Wakeham on August 10, 1973. 2021016081-6085 (US 22276) (O). Defendants' scientists marked up the list for potential priorities and circulated it to the scientific representatives on the TWG from the various cigarette companies. 000240215-0215 (US 26067) (O); 2021016079-6080 (US 22277) (O). The scientists conducted a conference call in August 1973, and determined that Sommers, CTR's Scientific Director, should prepare detailed protocols for six of the proposed projects for possible suggestion to the TWG. LWDOJ00095517-5517 (US 34114) (O); LWDOJ0095518-5519 (US 88792) (O).

1459. On September 6, 1973, Defendants' lawyers and scientists met as part of the Committee of Counsel at 100 Park Avenue in New York. 000240213-0214 (US 26066) (O) (letter from Wakeham to other Defendants' scientific directors about upcoming meeting). Those present included in-house counsel and scientists from the TWG-participating companies, as well

as Tobacco Institute representatives and outside industry counsel. At this meeting, Defendants decided **not to submit any of Sommers' proposals or make any additional research recommendations at all to the TWG**. 1000255835-5836 (US 26068) (A); 680215434-5435 (US 22279) (A).

1460. Haas' and Greer's notes from the September 6, 1973 meeting shed light on Defendants' real motivation for their participation in the TWG:

> Dr. Sommers had reviewed the projected research program sought to date by Dr. Gori of the NIH, who is in charge of the program. In short, Sommers seems negative about making any suggestions to Gori's group. . . . No one present, including the scientific directors, felt that we should proceed to prepare and send protocols as to suggested areas of research to Dr. Gori. **The feeling was** that the industry has not been hurt so much by science as by publicity and **we had better keep our flanks protected so as to be able to the extent possible, to criticize research which will take place in the forthcoming years under Dr. Gori's direction**.

LWDOJ00095539-5542 (US 34115) (A) (emphasis added).

1461. Individual company research directors also withheld potentially useful information from the TWG. Instead, Defendants let the TWG expend its own resources to investigate questions that Defendants had already explored years before. A December 3, 1975 Philip Morris interoffice correspondence from Thomas S. Osdene to "File," and copied to Helmut Wakeham, Frank E. Resnik, Robert B. Seligman, W.F. Cannon, and R.G. Carpenter, discussed the "Reconstituted Tobacco Sheet Workshop, Bethesda, Maryland, November 24, 1975." Osdene reported that Gori was exploring possibilities for a fifth NCI biological testing series and discussing variations of a prototype for testing. Osdene commented: "In summary, the meeting was of great interest. **Thus far, it appears that Gori is going down the road on which the tobacco manufacturers found themselves some 5 to 10 years ago**." 1003729912-9914 at 9914 (US 22280) (A) (emphasis added).

1462. Not only did Defendants never correct the path Gori was taking, but they never intended to work cooperatively with the TWG at all. For instance, Philip Morris scientist T.S. Osdene attended an October 1973 TWG meeting during which "Gori asked who should recommend ‘a less hazardous cigarette', Gori or the industry? There was no reply from any industry representatives." 1000051661-1665 at 1664 (US 22281) (A). As described by Tom Osdene, TWG member Dr. Marvin Schneiderman of NCI stated at an April 2, 1974 TWG meeting, "'We have found a less hazardous cigarette but it is not marketable or practical. We need more input from the tobacco companies: what can they market? I am tired of bull[deleted].' There were no comments from the members of the tobacco companies." 1003102962-2968 at 2965 (US 22443) (A).

1463. Similarly, RJR's Alan Rodgman, who succeeded Senkus as Reynolds's representative to the TWG in 1976, said that "the work done by the TWG really broke no new ground. Most of the mouse skin-painting studies and the variables tested had been tested before by the tobacco companies. Dr. Rodgman stated that, in fact, **the tobacco companies had revealed the procedures used in their skin-painting experiments to the NCI, but had refused to reveal the results of their tests**." 515872408-2624 at 2425 (US 22261) (A) (emphasis added).

1464. In sum, Defendants used the TWG to provide cover for their decisions not to develop, test, and market potentially less hazardous cigarettes. Defendants' representatives "participated" largely as passive monitors and information gatherers, engaged in a consistent pattern of non-cooperation, and at times acted affirmatively to try to derail and undermine TWG projects.

1465. Furthermore, Defendants utilized the connections made with certain government

scientists through the TWG and retained two members of the TWG, Gio Gori from NCI and T.C. Tso from USDA, as consultants. Following the termination of the TWG, Gori began working at the Franklin Institute, thanks to a large grant by B&W. Bloch PD, United States v. Philip Morris, 2/14/02, 1815:20-1819:20; HHS1091046-1048 (US 88738) (O). Gori has been a spokesperson and consultant for the industry ever since the 1980s. 680900035-0045 (US 21013) (A); 1005082903-2903 (US 21529) (O); TIMN435245-5245 (US 22487) (O); 2050986280-6281 (US 27064) (O).

(l) The Scientific Information That Reynolds Presents to the Public and to the Courts is Inherently Unreliable, as It Uses Financial Incentives to Compromise the Neutrality of Both External and Internal Scientists

1466. Reynolds has relied on statements by scientists to promote its less hazardous and other research efforts. However, Reynolds has undertaken actions to reward these scientists to the point of rendering their statements of support incredible. It has presented reports of supposedly independent outside scientists when the truth is these scientists have both ties to and reliance on the industry and the company. And it has repeatedly presented the testimony of its own scientists without revealing to the listener the fact that their professional status and financial success are tied to how well they do as witnesses.

(i) The "Independent" Scientific Reviewers of Eclipse

1467. When Reynolds CEO Andrew Schindler introduced Eclipse's reduced risk claims to company shareholders on April 19, 2000, he told them, "Before making any claim that a new cigarette product may present less risk of smoking, it must first be substantiated by extensive scientific testing and then verified by **independent** experts." 525073272-3277 at 3275 (US 78746) (O) (emphasis added). Reynolds expert Townsend testified that the fourth and final condition of its "Four Step Methodology" for making claims about Eclipse was that an "**external**

panel of **outside** experts had to – and, he said, did – review the data and agree that Eclipse may pose less risk. Townsend WD, 149:19-151:12 (discussing (no bates) (JD-060235) (A) – the panel report, issued in 2000) (emphasis added).

1468. A few noteworthy examples reveal that this eight-member panel was dominated by men who were anything but "independent," "external" or otherwise "outside" to the interests of the industry, Reynolds, and even Eclipse itself. It is clear that all these people owed something to Reynolds and could not possibly be the "independent" evaluators Reynolds held them out to the public to be. Real or apparent conflicts of interest abound, all of which were hidden or not affirmatively revealed.

1469. For instance, Bernard Wagner was the chairman of this panel and in charge of selecting its members, (no bates at 1) (JD-060235) (A), and incomprehensibly, was a long-time Reynolds and Eclipse insider intentionally portrayed by the company as an outsider. From 1991 to 1997, Wagner was a paid consultant working with the company on Eclipse. The internal memo to the company CEO reflecting Wagner's hiring – which, interestingly, was done by Reynolds's External Affairs department rather than its Research and Development department – expressly spells out that Wagner's consultancy work was to be on Eclipse. It said that Wagner was offered a "full time consultancy," noting that Wagner had developed scientific research for Premier. It specifically points out how Wagner will be "useful in contacting our political indoor air allies in industry and in positioning us with certain regulatory groups" and that he should **serve as a full time consultant, rather than as a Reynolds employee -- "This provides some flexibility and maintains his scientific/medical credibility which is essential."** 507777205-7208 at 7206 (US 78748) (O) (emphasis added). Wagner's role included proposing strategies to Reynolds about how to "blunt[ ] . . . political and emotional" reactions to Eclipse. See

511800168-0169 at 0168 (US 21940) (O).

1470. In just a three year period of this consultancy – 1992-1994 – Reynolds paid Wagner approximately $810,000 in fees for his work on "XDU" – which was then one of Eclipse's in house names. 511800230-0230 (US 78753) (O).

524538474-8474 (US 78752) (O) (Confidential).

1471. Stephen Rennard was another member of the Eclipse "independent" review panel. (no bates at) (JD-060235) (A). From 1999 to 2002 – **overlapping with the time he was serving on the Eclipse review panel** – Rennard conducted human lower respiratory tract studies on Eclipse for Reynolds. US 93088 (O) at 2. In other words, he was simultaneously conducting some of the studies he was independently evaluating. While Rennard was receiving an honorarium from Reynolds for serving on the "independent" Eclipse review panel, Reynolds also was paying him $822,396 to conduct these human smoker studies on Eclipse. See (no bates) (JD-060235) (A); USX0010747-0841 (US 93085) (O).

1472. Moreover, it appears that even before the "independent" Eclipse review panel had completed its review and published its report, Rennard already had published a separate article promoting the success of the cigarette – "Switching to Eclipse is Associated With Reduced Inflammation in the Lower Respiratory Tract of Heavy Smokers." See (no bates at 47) (JD-060235) (A).

1473. Martin Cline was another member of the eight-person, "independent" Eclipse review panel. (no bates at 1) (JD-060235) (A). From 1974 to 1982 he received a grant from the industry, including Reynolds, the last three years of which were funded at a level of $1.05 million. 501969919-501969921 (US 93057) (O).

1474. Shortly thereafter, Cline became what was believed to be the first scientist ever subject to sanction by the National Institutes of Health for violating DNA human subject guidelines, a situation that caused him to lose his chair at UCLA School of Medicine and his funding for several grants. See (no bates) (US 93099) (O); (no bates) (US 93100) (O).

1475. In need of funding, Cline looked back to the tobacco industry. Reynolds stepped into the breach. Reynolds provided Cline with annual contract funding for work (ranging from specific research to "consulting . . . in the area of toxicology") beginning in 1987 and running through 1992 and 1993. See 506567983-506568003 (US 93065) (O); 509541248-509541250 (US 93075) (O).

1476. Attempting to boost the legitimacy of the "independent" Eclipse review panel, Townsend testified that its report's conclusions were "published in Inhalation Toxicology, a peer reviewed scientific journal." Townsend WD, 150:20-23. What Townsend neglected to inform the Court is that this journal's editor-in-chief at the time, Donald Gardner, also simultaneously was a member of the "independent" Eclipse review panel. See (no bates at iv, 1) (JD-060235) (A).

1477. Moreover, two Reynolds scientists – one former (Christopher Coggins) and one current (James Swauger) were also on the journal's editorial board at the time. (no bates at iv, 1) (JD-060235) (A). Swauger also was on the Reynolds internal company team of investigators for Eclipse. (no bates at 44) (JD-060235) (A). And prior to its publication, the Eclipse manuscript was reviewed and commented upon by three individuals (Acosta, Griggs, Watts) who had served as "consultants" to the "independent" Eclipse review panel while it was doing its work. (no bates at 1) (JD-060235) (A). In short, Eclipse's "independent" review was conducted by numerous people who had significant, extended past and/or ongoing financial relationships with Reynolds,

who appear to have pre-judged Eclipse a success before the panel completed its review, and in some cases who were responsible for the very work that was supposed to be the subject of "independent" evaluation.

(ii) The Credibility of Reynolds's Scientific Witnesses Is Challenged by Evidence That Reynolds Frequently Remunerates or Promotes Scientists Because They Offered Helpful Testimony in Litigation or Litigation-Related Proceedings

1478. In evaluating the testimony of current and former Reynolds scientists related to less hazardous cigarettes and other issues, it is relevant that Reynolds scientists work in an environment filled with motivations and tangible rewards – cash awards, bonuses, promotions – to testify in a favorable manner for the company.

1479. This evidence influences the weight to be given to the testimony of Reynolds witnesses, including former Reynolds R&D Director David Townsend, who has testified in at least 22 trials and as many or more depositions for RJR since 1993, including testifying nine times in a ten month period in 1997. He also has received training in talking to the media about reduced risk product. Townsend TT, 3/7/05, 14425:5-14428:11. He testified that "any promotions or awards that are given to our scientists are based on merit and have nothing to do with the substance of what they say in litigation, or any other public forum" – and no one has ever ruled out that the benefits he himself has received are due to what he said in litigation. Townsend WD, 198:19-200:7. Rather, he claims that testifying for the company is "an extension of my job[,] . . . something that I volunteer . . . not part of my job description." Townsend TT, 3/7/05, 14442:19-25. And he insists his promotion to the highest "technical ladder" position in the company was, "very clearly . . . for the scientific contributions that I made." Id., 14448:23-25.

1480. On cross examination however, Townsend conceded that no one at Reynolds expressly ruled out the possibility that the benefits he has received are unrelated to his testimony. Moreover, on cross examination, Townsend was forced to concede that a job performance evaluation from his boss, Gary Burger, included discussion of his service as a witness for the company. Id., 14444:3-14446:4. Likewise, he was forced to admit that his promotion to senior principal scientist, the company's top level on the "technical ladder" (as opposed to the "managerial ladder") was supported by letters to the "technical review committee" from three separate scientists raving about his performance as a witness for the company, noting that he won a "Chairman's Award" for it, and referencing offers from company lawyers and outside counsel to write letters of support regarding the same. One such letter stated: "Paul Crist (Jones Day) reported to Wayne Juchatz that Dr. Townsend's performance in the Kueper case caused industry lawyers to proclaim that he was the best technical witness that they had ever seen and as such is a major reason RJR won the case." Id., 14446:5- 14466:4 (discussing 511689574-9578 (US 30024) (A), 511689588-9589 (US 30025) (A), 512011929-1930 (US 30028) (A), 511689579-9582 (US 93001) (A), 511689583-9584 (US 93002) (A)).

1481. Similar evidence concerns defense witness Michael Ogden, who has given at least 18 days of testimony in nine different cases. In response to a question from the Court in this case, Dr. Ogden incredibly denied it was fraudulent "when one person lists their name as the author of a document that was written by somebody else." Ogden TT, 3/17/05, 15918:9-15919:3. In 1997, Ogden's boss's letter of nomination for promotion to R&D Principal Scientist cited Ogden's role as witness in contested OSHA hearings and in "offer[ing] critiques and guidance to RJRT legal counsel in the cross-examination of OSHA's expert witnesses." 519274420-4426 at 4422 (US 30351) (A). And in June 1999, after the jury returned a verdict favorable to Reynolds

in Butler v. Reynolds, a case in which Ogden had testified, a series of e-mails circulated among Reynolds scientists congratulating Ogden on what they saw as his pivotal role in the defense victory. Ogden TT, 3/16/05, 15840:5-8; 519439554 (US 30353) (A). The very next day, Donald deBethizy, one of Ogden's superiors and the Company's Vice President for Product Evaluation, organized an effort to have Ogden receive **"a special cash award for his testimony**." 700497631-7633 at 7631 (US 61782) (A) (emphasis added). deBethizy warned his assistant, Jo Peay, "Do not discuss this with anyone!" 700497631-7633 at 7631 (US 61782) (A). He also instructed Ms. Peay to ask Reynolds's R&D counsel Mary Ward to provide a page describing Ogden's "effort[s] in Butler," but warned, "You don't have to tell her [Ward] we are seeking a cash award." 700497631-7633 at 7631 (US 61782) (A). Attached to deBethizy's instructions to Peay there was a one page "Commendation Award Recommendation" regarding Ogden's testimony in the Butler trial and the ensuing victory for the Company. 700497631-7633 at 7632-7633 (US 61782) (A). The author deemed Ogden's testimony "instrumental in the outcome of the verdict," and recommended Ogden for a $5,000 reward for his "performance on behalf of our Company." 700497631-7633 at 7632-7633 (US 61782) (A). This recommendation speaks **exclusively** to Ogden's litigation activities. 700497631-7633 at 7632-7633 (US 61782) (A). Subsequently, Ogden received the G.R. DiMarco Award for his "development, interpretation and presentation of . . . information . . . in a legal environment in 1999." 700471625-1626 at 1626 (US 61867) (A). Evidence suggests that knowledge of Ogden's award and payment would have been well known within Reynolds. Not only did this promotional effort begin in R&D, but company awards are formally given out at company luncheons. 513193665-3683 (US 30052) (A). Since receiving that award money, Ogden has testified in at least four more cases for Reynolds.

1482. Ogden's sponsor – Donald deBethizy – was no stranger to this environment at RJR. In 1994, deBethizy received a Reynolds Chairman's Award and $2,500 for being part of a team that "present[ed] . . . compelling testimony at the OSHA hearings." 513193665-3683 at 3674 (US 30052) (A).

1483. The evidence concerning defense witness and former Reynolds scientist Arnold T. Mosberg is similarly disturbing. Just like Townsend mischaracterized his credentials, causing the Court to question his credibility (Townsend TT, 3/7/05, 14495:11-14518:9, 14524:6-14545:7), Mosberg also has misrepresented his academic credentials. Defendants designated testimony and an exhibit stating that Mosberg has a master's degree in biomedical engineering and physiology and a Ph.D. in biomedical engineering and physiology from Ohio State University. Mosberg has himself testified to this elsewhere under oath. See Mosberg PD, United States v. Philip Morris, 4/23/02, 14:8-22; DXA0631752-1764 (US 77849) (O); 528207535-7572 (US 93233) (O); (no bates) (US 93234) (O); 527704826-5025 (US 93227) (O); 528425994-6037 (US 93232) (O); 526520229-0344 (US 22194) (O); 527301215-1263 (US 93231) (O). However, Brad Myers, the registrar for Ohio State University, stated that Mosberg's master of science degree is **not** in Biomedical Engineering and Physiology; rather, like his bachelor's degree, it is in Aeronautical and Astronautical Engineering. See (no bates) (US 93226) (O).

1484. Mosberg provides yet another example of Reynolds's practice of rewarding witnesses for winning at all costs in litigation. In 1997, RJR was considering Dr. Paul Nelson – a frequent company witness – for promotion to the position of Master Scientist. In support of Nelson's promotion as a **scientist**, Mosberg, at the time the Director of the Toxicology Division, described in detail Nelson's role as a litigation and policy **advocate** – a "Leader and Soldier in the EPA and OSHA Regulatory Rule Making Process," specifically noting Nelson's "three days of

testimony" at the OSHA hearing, and lauding the effect of his work: "This [OSHA proposed] rule has not progressed any further since that time, even though its approval was thought to be almost certain." 522101328-1340 at 1339 (US 30526) (O). Mosberg also noted that for this work Nelson received several company awards. 522101328-1340 at 1339 (US 30526) (O).

508303644 (US 29968) (A) (Confidential).

508303644 (US 29968) (A) (Confidential). Nelson received a Chairman's Award for his role as a witness in the OSHA hearings, 513193665-3683 at 3674-3675 (US 30052) (A), accompanied by a check in the amount of $2,500. 513193665-3683 at 3680 (US 30052) (A); see 512011929-1930 at 1929 (US 30028) (A). And in addition to writing his own letter for Nelson, Mosberg instructed **Public Affairs** Department director Robert Meyne to write a letter. Meyne in turn stated, "Paul both helped develop the strategy for our participation in these hearings and took part in them ... fac[ing] the most difficult and confrontational questions imaginable . . . . [Without his and others' work, t]he effect of these rules on our business would have been devastating." 522101348-1349 (US 30528) (O). Mosberg likewise asked ETS attorney Mary Ward to write a letter of support for Nelson for this technical promotion. In response, Ward described Nelson as "one of the stalwart few upon whom I most rely . . . [i]n the regulatory and legal arenas." 522101358-1360 at 1359 (US 30529) (O).

1485. Defense witness Scott Appleton, when he was at Reynolds, enjoyed similar rewards. In 1989, he received a $9,000 Commendation Award (14.7% of his annual salary) approved by the CEO. 508041278 (US 29946) (A). The basis for this award was, in part,

Appleton's "lucid and effective testimony" in the Shires case as an example of the "extraordinary devotion he has shown" to "defend[ing] the Company's position" in litigation. 508041278 (US 29946) (A).

1486. Townsend identified Reynolds scientist John Robinson as the company's voice and expert on smoking behavior and compensation issues. Townsend TT, 3/7/05, 14583:1-4. In Robinson's 1996 nomination for promotion to Principal R&D Scientist, his supervisor Donald deBethizy highlighted his litigation-related contributions. He credits Robinson with developing an

RJR0000000525026256 700557062-7070 at 7063 (US 89562) (O) (Confidential). Noting that Robinson was involved in two current and eight upcoming cases, deBethizy described him as a

RJR0000000525026256 700557062-7070 at 7063 (US 89562) (O) (Confidential).

1487. This promotion nomination letter was the culmination of a long running history of positive job evaluations for Robinson due to his involvement in litigation. In 1983 he was cited for assisting RJR counsel in FTC v. Brown & Williamson – "contributions instrumental in the ultimate upholding of the FTC's position vs. B&W by the courts." 512051633-1649 (US 89560) (O). In 1985, Robinson was noted for his "valuable assistance to Law Department in the

preparation for litigation vital to the Company's interests. For this he received a letter of commendation from the chief extramural counsel." 512051633-1649 (US 89560) (O). In 1986, he "continued to provide excellent and much sought-after support to the Law Department. 512051633-1649 (US 89560) (O). He has received numerous compliments and received letters of commendation for this work." 512051633-1649 (US 89560) (O). And in 1991, Robinson's performance evaluation noted, "A significant block of time (25%) during the 4th quarter was spent working in support of tobacco litigation. The objective of this work was accomplished satisfactorily." 512051633-1649 (US 89560) (O).

1488. Deborah Kay, another RJR scientist,

508303648 (US 29969) (A) (Confidential). The basis for the award was because of her as reflected in its success in smoking and health legislation and litigation. 508303648 (US 29969) (A) (Confidential). Her 1991 performance evaluation notes her EPA work and also speaks of her involvement in the OSHA ETS hearings, noting how she was trained by "outside lawyers" about "OSHA procedures" and how she worked on strategies to answering questions, evaluating them (with attorney Mary Ward) to determine whether they would "serve the Company" or not. 515530353-0366 at 0356, 0362-0363 (US 30102) (O).

1489. Defense witness Alan Rodgman was a Reynolds scientist from 1954 to 1987, rising to the level of R&D Director of Fundamental Research. Since his retirement from Reynolds in 1987, Rodgman has been retained as a paid smoking and health litigation consultant to Womble Carlyle ("Womble"), earning upwards of $600,000 for his work there. Rodgman PD, United States v. Philip Morris, 6/26/02, 23:20-32:8. At the same time that he was being paid as a

"consultant" to Womble, Rodgman also was serving as a fact witness for Reynolds in its defense of various smoking and health cases. Id., 27:12-35:17. Specifically, while a "consultant," he has testified as a fact witness for the Company in at least seven cases, giving at least eleven days of testimony. Rodgman admits that there is a virtually complete overlap between the "historical" information he has given Womble as a litigation consultant and the content of his testimony in these smoking and health proceedings. Id., 37:1-43:11. Not only has there been overlap between topics about which Rodgman consulted and topics about which he has testified, but there also was a blurring of the lines between when he was paid to consult and when he was paid to testify and/or prepare to testify. Rodgman acknowledged under oath that there were occasions when he billed Womble for some of the time he spent meeting with lawyers and preparing to be deposed as a fact witness. Id., 40:1-43:11. On at least one occasion, he considered requesting payment for his time testifying as a fact witness in a smoking and health deposition, and may have on one occasion or another actually been paid for such testimony. Id.

(4) Risk Perception

(a) Introduction

1490. Defendants claim that everybody understands the health risks associated with smoking and, therefore, makes informed decisions about whether or not to start or continue to smoke. In fact, Defendants claim that people overestimate smoking risks. To the contrary, research clearly shows that individuals do not appreciate the risks of smoking. Moreover, the tobacco companies have communicated messages to the public in an effort to minimize the perceived risk associated with smoking.

(b) People Underestimate The Risk Associated with Smoking

1491. Dr. Paul Slovic, a Ph.D. in psychology and president of Decision Research, a nonprofit research institute specializing in the study of human judgment, decision making, and risk perception, who is, in fact, a pioneer researcher in the study of people's perceptions of risk, doing research on decision making and risk-taking behavior since 1959, and specifically on risk perception associated with smoking since approximately 1990, found that most people have a deficient appreciation of the risks associated with smoking, certainly when they begin to smoke. See generally Slovic WD.

1492. Likewise, Dr. Neil Weinstein, a psychologist with expertise in the study of risk perceptions, risk communication, and health-protective behavior, who has been studying individual formation of risk perceptions since 1974 and who is an author of a chapter in the NCI's Monograph 13 on perceptions of light cigarettes, found that most people do not appreciate the risks associated with smoking in order to make informed decision about whether to commence or continue smoking. See generally Weinstein WD.

(i) People Do Not Understand the Nature of the Risk

1493. Research shows that most people do not possess adequate knowledge about the plethora of diseases caused by smoking. One survey showed that a great majority of smokers and nonsmokers realized that smoking can cause life-threatening illnesses but, except for lung cancer, no specific smoking-linked illness could be named by more than half of the respondents. About half mentioned emphysema, about a quarter mentioned any kind of cancer other than lung, and only about a quarter mentioned any kind of cardiovascular risk. About 10% did not mention cancer at all. In addition, those surveyed said they had little knowledge about the reality of what it is like to experience the pain and suffering associated with lung cancer, emphysema, congestive heart failure, or the other diseases associated with smoking. More than 70% of adults and 80% of adolescents overestimated the likelihood that lung cancer was curable. Slovic WD, 19:4-20:15 (citing Weinstein, N.D., Slovic, P., Waters, E., and Gibson, G., "Public Understanding of the Illnesses caused by Cigarette Smoking," *Nicotine and Tobacco Research* (April 2004)); Weinstein WD, 24:7-25:21 (citing Jamieson, P., Romer D., *A Profile of Smokers and Smoking*, In Slovic, P. (ed.), Smoking: Risk, Perception, and Policy, Thousand Oaks, CA:Sage (2001); Annenberg, 2000)). A smaller national survey conducted by Drs. Slovic and Weinstein ("Weinstein & Slovic, 2001") found very similar results. Weinstein WD, 25:19-20.

1494. Scientific research makes clear that, without being prompted, many people cannot identify even the most serious and frequent illnesses caused by smoking. The results of the Annenberg study, as well as the Weinstein & Slovic survey showed that about one person in eight still did not know that smoking causes lung cancer; only one in four named throat or mouth cancer; less than one in four cited heart disease as a factor related to smoking; and only a minimal number named any other life threatening illnesses caused by smoking, such as asthma,

chronic bronchitis, or stroke. Weinstein WD, 25:9 - 26:13 (citing Annenberg, 2001; Weinstein & Slovic 2001; Wewers M.E., Ahijevych K.L., Chen M.S., Dresbach S., Kihm K.E., Kuun P.A., "Tobacco use characteristics among rural Ohio Appalachians," *Journal of Community Health*, 25:377-288 (2000)).

1495. In fact, other surveys have shown that 35% of smokers think the harmful effects of cigarettes are exaggerated, and 40% do not accept the idea that smoking is "very dangerous." Weinstein WD, 26:14-27:1 (citing Annenberg, 2000 and McMillen R.C., Ritchie L.A., Frese W., Cosby A.G., *Smoking in America: 35 Years after the Surgeon General's Report* (Starkville, MS: Mississippi State University, Social Science Research Center, November, 2000)).

1496. Moreover, in distinguishing between superficial awareness, which entails a general recognition that smoking is dangerous, and a deeper, more meaningful knowledge, that encompasses a complete understanding of the many serious diseases caused by smoking, as well as the true nature of addiction, along with an understanding of what it would be like to experience those diseases or addiction, it is clear that most people do not possess meaningful knowledge of the diseases caused by smoking. Slovic WD, 20:16-21:5. Surveys have borne out that individuals have little knowledge about the reality of what it is like to experience the pain and suffering of lung cancer, emphysema, congestive heart failure, and other smoking related diseases. One survey showed that 53% of adolescent smokers and 49% of adult smokers know "a little" or "not much at all" about the pain and suffering associated with lung cancer. Likewise, 68% of adolescent smokers and 54% of adult smokers know "a little" or "not much at all" about the pain and suffering associated with emphysema. More than 70% of adults and 80% of adolescents overestimated the likelihood that lung cancer is curable. Slovic WD, 19:4-20:15 (citing Weinstein, N.D., Slovic, P., Waters, E., and Gibson, G., "Public Understanding of the

Illnesses caused by Cigarette Smoking," *Nicotine and Tobacco Research* (April 2004)).

1497. Similarly, 81% of teens and 66% of adults believe that lung cancer patients typically live for three years or more. Weinstein WD, 28:4-8 (citing Weinstein & Slovic, 2001). However, the typical lung cancer patient actually dies within a short ten months of diagnosis. Weinstein WD, 28:6-8 (citing SEER (Surveillance, Epidemiology, and End Results) Program Public_Use Data (1973-1998), National Cancer Institute, DCCPS, Surveillance Research Program, Cancer Statistics Branch, released April 2001, based on the August 2000 submission (Survival Matrix 1)).

(ii) People Do Not Understand the Likelihood of the Risk

1498. Just as people do not understand the nature of the risk associated with smoking, people similarly tend not to understand the likelihood of the risk associated with smoking. In a study conducted for the American Cancer Society, Americans were asked which of a number of hazards, including cigarette smoking, drug use, AIDS, alcohol abuse, and murder, was responsible for the greatest number of deaths each year. In reality, more deaths are due to cigarette smoking than to **all** of the other listed health problems **combined**. Nevertheless, the largest number of people in the survey, 28%, believed that car accidents kill more people than any other hazard on the list. Only 21% recognized that cigarette smoking is by far the biggest killer on the list. Weinstein WD, 30:17-32:2 (citing *Survey of U.S. voter attitudes toward cigarette smoking* (Sept. 9, 1993)); Borland R., "What do people's estimates of smoking related risk mean," *Psychology and Health*, 12:513-21 (1997); Eiser J.R., Sutton S.R., Wober M., "Smoking, Seat-belts, and Beliefs About Health," *Addictive Behaviors*, 4:33 1-338 (1979); Annenberg, 2000; Weinstein & Slovic, 2001. Another peer-reviewed published study found that relatively heavy smokers "greatly underestimate" the risks of smoking. Weinstein WD, 38:2-8

(citing Schoenbaum, M., "Do smokers understand the mortality effects of smoking?," *American Journal of Public Health*, 87:755-759 (1997)).

1499. As further evidence of the fact that individuals tend not to understand the likelihood of the risk associated with smoking, studies show that when individuals are asked to estimate the absolute risk of smoking, their answer will change when the question is changed slightly, indicating that they are uncertain about the answer. For example, when survey participants were asked how many smokers out of 100 would die of lung cancer, the average adult answer was 48 and the average youth answer was 60. However, when asked to think about several possible causes of death (lung cancer, auto accidents, heart disease, stroke, and all other causes) and to estimate how many smokers would die from each of them, the estimates for lung cancer dropped to 23 for adults and 28 for youth, despite the fact that the two questions ask for exactly the same numerical risk estimate of lung cancer. Weinstein WD, 32:19-37:2 (citing Slovic P., "Smokers: Rational Actors or Rational Fools?" In Slovic, P. (ed.), Smoking: Risk, Perception, and Policy, Thousand Oaks, CA:Sage (2001)); Slovic WD, 49:7-52:9.

1500. Research further shows that underestimation of the likelihood of risk associated with smoking has existed for many years. A 1970 Gallup poll showed that 30% of respondents did not agree that cigarette smoking is one of the causes of lung cancer and 40% of smokers did not agree that smoking is one of the causes of heart disease. According to the 1975 Adult Use of Tobacco Survey, 19% of current smokers did not believe that cigarette smoking is harmful to health. A 1981 Gallup Poll showed that 31% of current smokers did not believe that cigarette smoking causes lung cancer. Finally, according to the 1987 National Health Interview Survey, 31% of current cigarette smokers did not believe that cigarette smoking was related to emphysema. Weinstein WD, 44:23-47:9 (citing Giovino, G.A., Tomar, S.L., Reddy, M.N.,

Peddicord, J.P., Zhu, B., Escobedo, L.G., Eriksen, M.P., "Attitudes, knowledge, and beliefs about low-yield cigarettes among adolescents and adults," *The FTC Cigarette Test Method for Determining Tar, Nicotine, and Carbon Monoxide Yields of U.S. Cigarettes. Report of the NCI Expert Committee,* Smoking and Tobacco Control Monograph No. 7, U.S. Department of Health and Human Services, National Institutes of Health, National Cancer Institute, NIH Publication No. 96-4028, 1996)).

(iii) People Do Not Appreciate the Risk to Themselves (Optimism Bias)

1501. Complicating the fact that people misperceive the risks of smoking, a psychological phenomenon – referred to as optimism bias – exists whereby individuals have a strong tendency to believe that their own risk is less than the risk of their peers. Thus, whatever people may accept about the risks faced by the "average smoker" or by "smokers in general," they tend to believe that they have a lower risk. Research on optimism bias shows that people who are asked about themselves often conjure up rationalizations that lower the perceived risk. For example, smokers are likely to claim that the cigarettes they smoke are less harmful, that they will eventually stop, or that others smoke more often or inhale more. In fact, most smokers believe that their own smoking pattern is less risky than that of other smokers. Weinstein WD, 43:5-19; 49:14-50:1.

1502. A study of this phenomenon showed that 63% of teen smokers and 61% of adult smokers agreed with at least one of nine comforting beliefs about smoking (16% of smokers agreed that smoking is safe if you don't inhale; 20% said smoking is safe if you only smoke one or two cigarettes a day; 10% believed that there is not much risk in smoking in your teens because you have plenty of time to quit; 17% said smoking is safe if you only smoke during high school or college and then quit; 27% agreed that if you exercise regularly, you can undo most of

the negative effects of smoking; 23% believed that smoking light cigarettes lowers the risk of health problems; and a small number of smokers agreed that it is safe if you only smoke with friends; if no one in your family has had cancer, smoking cigarettes isn't likely to give you cancer; and if you smoke regularly for 10 years and still have no cough or shortness of breath, then you're not likely to have problems in the future. Weinstein WD, 50:2-51:6 (citing Weinstein & Slovic, 2001).

1503. Importantly, smokers view their own risk as being less than the risk of the "average smoker." Research shows that, on average, smokers claim that they smoke fewer cigarettes than the typical smoker, inhale less than the typical smoker, are less addicted than the typical smoker, are better able to quit than the typical smoker, have a healthier lifestyle than the typical smoker, are less influenced by cigarette advertising than the typical smoker, and smoke cigarettes that are lower in tar and nicotine than the typical smoker. Weinstein WD, 51:18-52:4 (citing Annenberg, 2000; Segerstrom, S.C., McCarthy W.J., Caskey N.H., "Optimistic Bias Among Cigarette Smokers," *Journal of Applied Social Psychology*, 23:1606-1618 (1993); Weinstein & Slovic, 2001; VXA2270001-0714 at 0200, 0223 (US 63621) (A)).

1504. A peer-reviewed published study based on a nationally representative1995 sample showed that only 29% of smokers believed their personal risk of heart attacks was higher than the average for people of their age and sex, and only 40% of smokers said that their personal cancer risk was higher than the average for people of their age and sex. Even among those smoking two or more packs of cigarettes a day, only 39% said that their heart disease risk was above average and only 49% said that their cancer risk was above average. Weinstein WD, 58:12-59:6 (citing Ayanian J.Z., Cleary P.D., "Perceived risks of heart disease and cancer among cigarette smokers," *Journal of the American Medical Association*, 218:1019-1021 (1999)). In reality,

smokers' risk of getting these diseases is significantly higher than nonsmokers. Weinstein WD, 59:7-19.

1505. Likewise, other studies show that smokers view their risk, as compared to the average person, as "average" to "a bit higher." In none of these studies did the average smoker acknowledge that his or her risk of lung cancer, heart disease, or emphysema was "moderately," "substantially," or "much" higher than that of the average person. Weinstein WD, 59:20-60:8 (citing Milam J.E., Sussman S., Ritt-Olsen A., Dent C.W., "Perceived invulnerability and cigarette smoking among adolescents," *Addictive Behaviors*, 25:71-80 (2000); Reppucci, J.D., Revenson, T.A., Aber, M., "Unrealistic optimism among adolescent smokers and nonsmokers," *The Journal of Primary Prevention*, 11:227-236 (1991); Strecher, C.J., Kreuter, M. W., Kobrin, S.C., "Do cigarette smokers have unrealistic perceptions of their heart attack, cancer, and stroke risks?," *Journal of Behavioral Medicine,* 18:45-54 (1995); Sutton, S.R., "Are Smokers Unealistically Optimistic About the Health Risks? Findings from two national surveys," Unpublished Manuscript, Health Behavior Unit, Institute of Psychiatry, University of London (1995); Hahn, A., Renner, B., Schwarzer, R., "Perception of health risks: how smoker status affects defensive optimism," *Anxiety, Stress, & Coping: An international Journal*, 11:93-112 (1998); Slovic, P., "Smokers: Rational Actors or Rational Fools?" In Slovic, P. (ed.), Smoking: Risk, Perception, and Policy, Thousand Oaks, CA:Sage (2001); Weinstein & Slovic, 2001)).

1506. In fact, many studies have demonstrated that smokers believe that they face lower risks than the typical or average smoker. Weinstein WD, 61:22-26 (citing, Boney-McCoy, S., Gibbons, F.X., Reis, T.J., Gerrard, M., Luus, C.A.E., Sufka, A.V.W., "Perceptions of smoking risk as a function of smoking status," *Journal of Behavioral Medicine*, 15:469-488 (1992); Hansen, W.B., Malotte, C.K., "Perceived Personal Immunity: the Development of Beliefs About

Susceptibility to the Consequences of Smoking," *Preventive Medicine*, 15:363-372 (1986); Lee, C., "Perceptions of immunity to disease in adult smokers," *Journal of Behavioral Medicine*, 12: 267-277(1989); McKenna, F.P., Warburton, D.M., Winwood, M., "Exploring the limits of optimism: the case of smokers' decision making," *British Journal of Psychology,* 84:389-394 (1993)).

1507. This is equally true among adolescents. One study reported the results of two surveys. The first involved a group of 359 high school sophomores (average age 15.2 years) who were asked "to rate the likelihood of their getting lung cancer . . . themselves in the future as compared to the likelihood of other students in their school of the same age and sex getting the disease." In the second survey, a different group of 322 students (average age 15.7 years) was asked not only about lung cancer but also about two other smoking-related illnesses, emphysema and heart attacks. The nonsmoking students rated their chances of developing lung cancer as being below average, yet the smoking students rated their chances of developing lung cancer as average. The second survey (regarding emphysema and heart disease) produced similar results. Weinstein WD, 61:5-21 (citing, Reppucci, J.D., Revenson, T.A., Aber, M., "Unrealistic optimism among adolescent smokers and nonsmokers," *The Journal of Primary Prevention*, 11:227-236 (1991)).

(iv) People Do Not Understand the Difficulty of Quitting (Addiction)

1508. Finally, just as people underestimate the nature and likelihood of the risks associated with smoking, as well as underestimate the risk to oneself, people also tend to underestimate the risk of becoming addicted. Data from the Annenberg, 2001 survey showed that about 65% of adult smokers and 84% of young smokers planned to quit. Of those who planned to quit, about 73% of the adults and 76% of the youth planned to make an attempt within

the next year. When asked whether the researchers would find that they had successfully quit smoking if they were called again in a year, 78% of the adults and 83% of the young people said yes. The actual success rate for attempts to quit smoking tends to be below 10%. Slovic WD, 21:17-23:5 (citing Annenberg, 2001). These unrealistically optimistic perceptions of their ability to quit smoking persists regardless of the number of past quit attempts or the length of time smoking. Slovic WD, 24:1-26:8 (citing Annenberg, 2001).

1509. Furthermore, 24% of youth smokers and 12% of adult smokers expected to smoke for less than a year, 10% of youth smokers and 5% of adult smokers expected to smoke for between one and five years, and only 5% of young smokers and 7% of adult smokers expected to smoke longer than five years. However, a much larger proportion, 61% of youth smokers and 76% of adult smokers said they had never thought about it. Weinstein WD, 67:10-23 (citing Annenberg, 2001).

1510. In another survey of smokers who were planning to quit in the next year, and who had tried and failed in the past, 88% of youths and 64% of adults believed they would be nonsmokers a year later. Even among those who acknowledged that quitting was very hard or almost impossible for others, 83% of youths and 57% of adults predicted their own success. Weinstein WD, 68:22-69:4 (citing Weinstein & Slovic, 2001).

1511. Likewise, a longitudinal survey conducted as part of the University of Michigan's Monitoring the Future Study found that 85% of high school seniors who smoked occasionally predicted that they probably or definitely would not be smoking in five years. However, in a follow-up study five to six years later, of those who had smoked one to five cigarettes per day as high school seniors, only 30% had quit, and 44% had actually increased their cigarette consumption. Slovic WD, 26:9-20 (citing Slovic, P. (ed.), Smoking: Risk, Perception, and

Policy, Thousand Oaks, CA:Sage (2001), Chapter 6, citing Johnston, L.D., O'Malley, P.M., and Bachman, J.G., "National Survey Results on Drug Use from the Monitoring the Future Study," NIH Publication No. 93-3598, Rockville, MD: National Institute on Drug Abuse (1993); U.S. Department of Health and Human Services, "Preventing Tobacco Use Among Young People: A Report of the Surgeon General," U.S. Department of Health and Human Services).

1512. Thus, the tendency of young smokers to be uninformed and to underestimate the difficulty in stopping smoking, especially in conjunction with their belief in the short-term safety of smoking, creates an insidious situation where they begin smoking without any meaningful appreciation of the actual risks that smoking presents to their health. Slovic WD, 26:21-27:4. Optimism bias, as discussed above, facilitates this misperception. Slovic WD, 27:5-28:13.

1513. Peer-reviewed research shows that young people optimistically underestimate their risk of becoming addicted. A study asked 376 teenagers (average age 15.2 years) about their risk of nineteen health problems and negative life events, one of which was "get[ting] hooked on cigarettes." The study found that teenagers believed they were less likely than their peers to get "hooked." This optimism was as great or greater than their optimism about avoiding any of the other eighteen hazards studied, with the single exception of "get[ting] hooked on drugs like marijuana." Weinstein WD, 64:17-65:15 (citing Cohn, L.D., Macfarlane, S., Yanez, C., Imai, W.K., "Risk-Perception: Differences Between Adolescents and Adults," *Health Psychology*, 14:217-222 (1996)).

1514. Similarly, research shows that adolescents agree that it is hard for other smokers to quit, but they believe that they will be able to quit more easily than other smokers. For example, in one study, 96% of teen respondents believed that it is "hard," "very hard," or "almost impossible" for a half-pack-a-day smoker to quit, and 96% agreed that the longer you smoke the

more difficult it is to quit. However, 43% of the teen smokers believed that they, personally, would find it easy to quit and never smoke again. A mere 16% thought it would be either "very hard" or "almost impossible" for them. Teenagers' reluctance to give up this reassuring illusion is demonstrated by the finding that, even among teens who had already made a serious quit attempt and failed, 32% still believed it would be easy for them to quit. Weinstein WD, 68:1-11 (citing Weinstein & Slovic, 2001).

1515. As evidence that beginning smokers are uninformed about smoking risks, research shows that as people become more experienced smokers, they overwhelmingly regret having started smoking. Smokers in the Annenberg survey were asked, "If you had it to do over again, would you start smoking?" More than 85% of adult smokers and about 80% of young smokers answered no. Slovic WD, 29:4-31:10 (citing Annenberg, 2001). A similar question had been asked in a poll reported in a 1984 study prepared for Philip Morris. Over 85% of smokers were found to agree strongly or very strongly with the statement "I wish I had never begun smoking." 2500002189 (US 21460) (A); Slovic WD, 31:11-16; 68:9-13. A British national survey of 893 smokers that asked "If you had your time again would you start smoking?," found that 83% of current smokers would not. Slovic WD, 31:17-34:4 (citing Jarvis, McIntyre, & Bates, "A Picture of Misery: The Truth About Smoking, In Smokers' Own Words," unpublished article (2002)). Similarly, another survey asked the "Would you do it again?" question, resulting in 86% of the respondent smokers answering "no." Slovic WD, 31:21-32:1 (citing Weinstein & Slovic, 2001).

1516. Most recently, a study surveying more than 8,000 smokers in Canada, the United States, the United Kingdom, and Australia, asked whether they agreed or disagreed with the statement, "If you had it to do over again, you would not have started smoking." The rate of agreement was high—about 90%—and nearly identical across the four countries. Slovic WD,

32:2-9 (citing Fong, G. T., Hammond, D., Laux, F. L., Zanna, M. P., Cummings, K. M., Borland, R., & Ross, H., "The near-universal experience of regret among smokers in four countries: Findings from the International Tobacco Control Policy Evaluation Survey," *Nicotine & Tobacco Research*, 6 (Supplement 3), S341-S351 (December 2004)).

(c) Why People Underestimate the Risk of Smoking

1517. Thus, overall, smokers underestimate the risk associated with smoking. There are many factors responsible for this fact. First, the risks associated with smoking are cumulative, which are difficult for humans to adequately appreciate. Second, smoking presents future risks, which are, again, difficult for people to appreciate. Finally, smoking initiation and continuation is guided by experiential rather than analytic thinking, and a psychological phenomenon called the affect heuristic serves to mitigate the perception of risk and enhance the perception of benefits related to smoking.

(i) Smoking Is A Cumulative Risk

1518. Cumulative risk refers to the concept that the likelihood of harm occurring increases as the activity is repeatedly engaged in. Thus, risk accumulates over time, with repeated exposure to the hazard. Smoking represents a cumulative risk because it is behavior that takes place one cigarette at a time. The risk associated with smoking one cigarette is very small. However, a person smoking one pack of cigarettes every day for 40 years consumes about 300,000 cigarettes and the risk accumulates with each one. As the risk accumulates, the hazard becomes more and more of a threat. Slovic WD, 16:4-14. Because the risk accumulates slowly and invisibly, there appear to be no adverse consequences and, therefore, the risk does not seem as imminent as it might seem when the same overall probability of harm threatens you at a single moment in time. Slovic WD, 16:15-17:12 (citing Diamond, W.D., "Effects of describing long-

term risks as cumulative or noncumulative," *Basic & Applied Social Psychology* 11(4), 405-419 (1990)).

1519. Thus, when young people begin to smoke they tend to believe that they can smoke for some amount of time before the risks associated with smoking have any impact on them. A survey of high school students who smoked more than six cigarettes per day showed that about one third believed that there is "really no risk at all" from smoking a pack of cigarettes daily for the first few years after starting to smoke, and about 40% saw no harm associated with the very next cigarette smoked. Slovic WD, 17:13-22 (citing Slovic, P., "What Does it Mean to Know a Cumulative Risk? Adolescents' Perceptions of Short-term and Long-term consequences of smoking," *Journal of Behavioral Decision Making,* 13, 273-276 (2000)). Likewise, the Annenberg survey showed that 65% of young smokers and 70% of adult smokers believed that it takes one year or longer "for smoking to harm the health of a new smoker." About 32% of youths and 45% of adults thought it would take five or more years of smoking to seriously harm health. Another study, surveying more than 1,000 college students, presented very similar results, finding that about 60% of nonsmokers believed smoking on a weekend or a couple of days a week was harmful, whereas only 32% of smokers held this view. Slovic WD, 18:1-9 (citing Annenberg, 2001; Murphy-Hoefer, R., Alder, S., & Higbee, C., "Perceptions about cigarette smoking and risks among college students," *Nicotine & Tobacco Research, 6* (Supplement 3), S371-S374 (December 2004)).

(ii) Smoking Is A Future Risk

1520. Moreover, the risks associated with smoking pose detrimental consequences realized in the future. Many – and certainly the most serious – adverse consequences associated with smoking are likely to occur some years after one starts to smoke. Therefore, the likelihood

that one will downplay any far off effects – especially combined with the misperception of a cumulative risk – puts beginning smokers in the position of seriously under-appreciating the risks.

1521. The Annenberg survey found that only 7.4% of adult smokers and 4.8% of young smokers expected to smoke longer than five years when they began, yet 87% of these adults and 76% of these youth reported that they had been smoking for more than five years. Slovic WD, 21:6-:21 (citing Annenberg, 2001).

1522. These concepts were recognized and utilized by the industry in developing marketing strategy. As a 1982 marketing study prepared for Imperial Tobacco Limited noted:

> One certainly cannot say that the social environment of the 80's lacks for warnings about smoking. Public service commercials, posters, anti-smoking groups, smoking restrictions, stop-smoking organizations and programs, media articles, school lectures (which are treated with a particular disdain), even packs and ads, all say loud and clear that smoking is a serious health hazard. They no longer equivocate and say 'might be' as was once the case. They say 'is.' Why, then would anyone wish to start smoking, in the face of such loud, consistent and clear warnings?
> Oddly enough, such hazards are literally ignored by starters. It's not that they don't believe them, but that the threat is so diffuse and long-term that it need not be worried about. The hazards of smoking aren't like the hazards of, say, riding a motorcycle on an icy road while blindfolded. That would be so obvious and palpably immediate a danger that not even the most foolish teen would try it. The smoking of a cigarette isn't like that at all. People do it all the time with no seeming problem or impairment.

566627751 (US 20938) (A).

(iii) The Affect Heuristic

1523. Beginning smokers are guided by what is known as the "experiential mode of thinking," relying on feelings rather than deliberate, analytic thinking. Slovic WD, 12:4-14 (citing Slovic, P., Finucane, M., Peters, E., & MacGregor, D.G., "The Affect Heuristic," In T.

Gilovich, D. Griffin, & D. Kahneman (Eds.), Intuitive Judgment: Heuristics and Biases, New York: Cambridge University Press (2002); Slovic, P. (Ed.), Smoking: Risk, Perception, and Policy, Thousand Oaks, CA: Sage (2001), Chapter 6, citing Epstein, S., "Integration of the Cognitive and Psychodynamic Unconscious," *American Psychology*, 49, 704-724 (1994)). Experiential or affective thinking is intuitive, automatic, rapid, natural, and reliant upon imagery and affect. Analytic thinking, on the other hand, is slow, methodical, and deliberative, dominated by the collection of data and consideration of calculations and probabilities.

1524. The tobacco companies have long recognized that people rely on something other than reasoned analysis of the risks in initiating and continuing to smoke. A November 26, 1969 report by Dr. Helmut Wakeham and presented to the Philip Morris Board of Directors, entitled, Smoker Psychology Research, describes a program of psychological research that aims "[t]o learn more about the psychology of smoking, and hopefully to discover ways to exploit the benefits of smoking to the advantage and profitability of our major company business." Among the questions that Philip Morris sought to answer through its smoker psychology work was:

> Why do 70 million Americans and countless millions outside of the United States smoke despite parental admonition, doctors' warnings, governmental taxes, and health agency propaganda?"
> "What benefits do smokers wittingly or unwittingly find in smoking that outweigh the real or imaginary risks that the same smokers feel?"
> "Why do some people not smoke, others smoke relatively few cigarettes, still others many, some merely puff superficially, while others inhale deeply?"
> "Why do some people start very young, while others wait until middle life to begin smoking?"

1000273741-3771 (JE 26080) (A); Slovic WD, 56:3-26. See also 501899346-9359 (US 20688) (A) (a 1974 RJR market research memo recognizing that, "[t]he more closely a brand meets the psychological "support" needs (advertising or otherwise communicated brand or user image) and

the physiological needs (product characteristics), the more likely it is that a given brand will be selected." Among others, it was noted that of the "specific causes" for selecting a first usual brand was, "[t]he user 'image' that has become associated with a particular brand. To some extent young smokers 'wear' their cigarette and it becomes an important part of the 'I' they wish to be, along with their clothing and the way they style their hair."); 503517461 (US 20716) (A) (a 1984 RJR marketing memo that discusses various 'rules of thumb' for developing effective younger adult smoker marketing programs, including, "use of a 'soft sell.' Use humor. **Stress emotion not reason**." (emphasis added)).

1525. Thus, affective cues emanating from the social environment are powerful influences on smoking behavior. Having a good time with friends and avoiding the risk of peer disapproval are examples of social factors in which affect (experiential thinking) appears to dominate any tendency for analytic or deliberative thinking. Slovic WD, 38:7-16. The tobacco companies have exploited this phenomenon in their advertising and marketing. An RJR Camel Advertising Development "White Paper" explicitly states that, "[s]ince CAMEL does not have a demonstrably different or unique product **(rational)** benefit to sell, this jolt needs to be based on an **emotional** response[.]" 506768775-8784 (US 20764) (A) (emphasis added). See also 507278143-8195 (US 21440) (A) (a 1988 RJR marketing report, noting that among four stated advertising objectives, one was to "elicit[] positive emotional response."); 85073124-3130 (US 67536) (A) (a 1978 marketing research report prepared for Lorillard, commenting that "Smoking doesn't seem to need all that great a rationale: youth immortal.").

1526. Research makes clear that far more beginning smokers think about "trying something new and exciting" than think about health consequences. In one study, when asked how long they thought they would continue to smoke when they first started, the majority of

young and older smokers said that they did not think about it. Slovic WD, 15:1-5 (citing Annenberg, 2001). More specifically, the study showed that individuals do not think about or consider smoking risks when starting to smoke. Almost 80% of the adult smokers surveyed answered "not at all" when asked how much they thought about how smoking might affect their health when they first began to smoke. The most frequent answer among young smokers was also "not at all" (47%). Slovic WD, 12:14-15:5 (citing Annenberg, 2001).

1527. Affect is a subtle form of emotion, defined by positive or negative evaluative feelings toward an external stimulus. As related to smoking, an example of such stimuli are cigarettes themselves, the act of smoking, or images of cigarettes and people smoking. Positive feelings toward cigarettes will tend to motivate smoking behavior and negative feelings will tend to deter it. Slovic WD, 35:7-36:11 (citing Zajonc, R. B., "Feeling and thinking: Preferences need no inferences," *American Psychologist, 35*, 151-175 (1980); Slovic, 2001, Chapter 6, citing Damasio, A.R., Descartes' error: Emotion, reason, and the human brain, New York: Avon (1994)).

1528. A decision making process known as the Affect Heuristic serves to explain why exposure to certain stimuli – which evoke positive affect and preference for those stimuli – depresses one's perception of risk associated therewith. The affect heuristic is a model for the way people react to stimuli based on experiential or affective reasoning. Slovic WD, 40:11-20. People base their judgments of an activity or a technology not only on what they **think** about it but also on what they **feel** about it. If they like an activity, they are moved to judge the risks as low and the benefits as high; if they dislike it, they tend to judge the opposite — high risk and low benefit. Slovic WD, 41:16-44:1 (citing Alhakami, A.S., Slovic, P., "A Psychological Study of the Inverse Relationship Between Perceived Risk and Perceived Benefit," *Risk Analysis*, 14(6),

1085-1096 (1994); Finucaine, M.L., Alhakami, A., Slovic, P., & Johnson, S.M., "The Affect heuristic in Judgments of Risks and Benefits," *Journal of Behavioral Decision Making,* 13, 1-17 (2000)).

1529. In this vein, cigarette advertising is designed to associate imagery that conveys positive affect with cigarettes and smoking. Other promotional efforts (e.g., attractive packaging, gifts to consumers, sponsorship of athletic and entertainment events) likewise are designed to increase the positive affect associated with smoking. As positive affect increases, the perceived risk of smoking decreases through the operation of the affect heuristic. By the same heuristic process, subsequent pleasurable experiences associated with smoking also reduce the perceived risk. As a result, as people are exposed to these various stimuli, their attraction to smoking is enhanced, while their perception of risk associated with smoking is depressed. Slovic WD, 44:2-45:17.

1530. The tobacco companies have long been aware of this concept and have used it in their marketing and advertising strategies. A B&W report entitled Viceroy Agency Orientation Outline, in discussing various campaigns in test market, notes that, "[g]iven consumer awareness of the smoking and health issue, full flavor smokers must deal with their illogical behavior. Therefore, we attempted to communicate VICEROY's flavor/satisfaction benefits by providing consumers a rationalization for smoking or a repression of the health concern." One of the campaigns tested was "Feels Good: 'If it feels good, do it. If it feels good, smoke it. VICEROY. It feels good.'" 680116947-6968 (US 21877) (A); Slovic WD, 59:7-15.

1531. Likewise, an RJR document outlined a program of research to guide new advertising campaigns for Winston and Camel – consistent with current academic research on the affect heuristic – presenting a new model in which feelings come first and consumers do not go

through a traditional rational process of choosing a brand. Abandoning the traditional rational consumer behavior model of "Think→Feel→Do," it adopts a more likely behavior model of "Feel→Do→Think." 504603440-3462 (US 68113) (A).

1532. A 1998 marketing memo prepared for Philip Morris recognizes that

It goes on to discuss a theoretical model to guide brand marketing as rational→experiential→emotional, noting that

Interestingly, in discussing rational behavior, it is admitted that 208040882-0912 (US 70718) (Confidential) (A). See also 2080490740-0774 (US 70717) (A) (follow up report prepared for Philip Morris, discussing same marketing model).

1533. Thus, it is clear that tobacco companies have, for many years, undertaken sophisticated market research and consumer studies to understand that, when beginning to smoke, individuals are influenced more by imagery, positive affect, emotion, and social relationships through their experiential thinking than by logic, reason, or analysis of risk. The companies have utilized this understanding in promoting and marketing their cigarettes. As a result, consumers and potential consumers experience positive feelings toward smoking and a reduced perception of risk. Because of these feelings and perceptions, it is more likely that non-smokers will start smoking and current smokers will not quit. Slovic WD, 53:4-1.

(d) Defendants did not Present Evidence Refuting Drs. Slovic and Weinstein

1534. Instead of calling a qualified psychologist or other competent expert to challenge the evidence presented by Drs. Slovic and Weinstein, Defendants called Dr. Kip Viscusi, a law professor with a Ph.D. in economics. Rather than relying on the plethora of scientific research that exists, in reaching his ultimate conclusion that smokers overestimate the level of risk

associated with smoking, Dr. Viscusi relied on the results of three questions asked in four surveys, three of which were funded by the tobacco industry and conducted for use in litigation and the other one of which was a small survey conducted by Dr. Viscusi after he began his long term consulting affiliation with Defendants and their lawyers. Viscusi TT, 17922:21-17931:3; 17936:7-17942:20; 17948:15-17958:17. In fact, Dr. Viscusi admitted on cross-examination that there are many scientists who have reached the same or similarly supporting conclusions to those of Drs. Slovic and Weinstein on this issue. Tellingly, Dr. Viscusi could cite to no other experts who agree with his ultimate conclusion that smokers overestimate the risk associated with smoking. Viscusi TT, 17972:20-17978:8; 17983:7-17991:5.

1535. Dr. Viscusi has testified as an expert witness for Defendants in at least thirty-four instances, including deposition and trial testimony, in numerous lawsuits since 1986, when he began his consulting affiliation with the Defendants. Dr. Viscusi was compensated for his work in this case at a rate of between $700 and $850 per hour. Defendants paid Dr. Viscusi $6800.00 for the testimony he gave in this trial. Viscusi TT, 17931:8-17934:10.

1536. Both Drs. Slovic and Weinstein are more credible witnesses than Dr. Viscusi. Drs. Slovic and Weinstein's opinions are, therefore, entitled to greater weight than are those of Dr. Viscusi.

B. The Myth of Independent Research

1537. In the 1954 Frank Statement, and repeatedly since then, Defendants have promised the American public that they would conduct and disclose the results of disinterested and independent research on the health risks of cigarette smoking, touting that they were concerned about the claims of the adverse health effects of smoking and that they would do whatever was necessary to get to the truth on behalf of their consumers. These promises were false when made and have never been fulfilled.

1538. For years, Defendants propounded a myth – that the Tobacco Industry Research Committee ("TIRC") and its successor, the Council for Tobacco Research ("CTR"), functioned as independent bodies pursuing independent research – as proof that they were meeting their promise to the American people. In reality: (a) TIRC/CTR was biased from its inception; (b) the Cigarette Company Defendants acted to influence TIRC/CTR's activities and its Scientific Advisory Board ("SAB"); (c) the Cigarette Company Defendants' lawyers, both in-house and outside counsel, controlled numerous TIRC/CTR Special Projects and then attempted to cloak this control with TIRC/CTR's alleged independence; and (d) TIRC/CTR's true purpose was to create positive public relations for the Cigarette Company Defendants.

1539. Despite their promises, the Cigarette Company Defendants did not routinely employ or support scientists to conduct research into smoking and health. Lawyers working for the Cigarette Company Defendants watched and internally policed and restricted company research – all based on liability concerns. In the rare instances when they did conduct internal research into smoking and health, the Cigarette Company Defendants did so in secret and suppressed any unwanted results, in some cases by destroying documents and in other cases by taking steps to shield documents and materials from discovery in litigation and from disclosure to

the American public.

(1) The Promise: "We, the Cigarette Company Defendants, Will Conduct Independent Research to Find the Truth About Smoking and Disease"

(a) The Frank Statement

1540. In December 1953, the Presidents of American Tobacco, RJR, Lorillard, B&W, and Philip Morris, among others, met in the Plaza Hotel in New York. Consistent with the agreements reached at the December 1953 meetings, on January 4, 1954, a full-page statement called "A Frank Statement to Cigarette Smokers" was disseminated by Defendants to the American public through publication in 448 newspapers in the United States. 11309817-9817 (US 20277) (A); TIMN0116378-6384 (US 21277) (O); CTRBYL000001-0014 (US 21138) (O); Brandt WD, 50:21-51:23, 54:20-55:10.

1541. The Frank Statement promised, in part, that the Defendants would conduct a search for the truth through independent outside and in-house research:

> Regardless of the record of the past, the fact that cigarette smoking today should even be suspected as a cause of serious disease is a matter of deep concern to us. Many people have asked us what we are doing to meet the public's concern aroused by the recent reports. Here is the answer: 1. **We are pledging aid and assistance to the research effort** into all phases of tobacco use and health. This joint financial aid will of course be **in addition to what is already being contributed by individual companies**. 2. For this purpose we are establishing a joint industry group consisting initially of the undersigned. This group will be known as TOBACCO INDUSTRY RESEARCH COMMITTEE. 3. In charge of the research activities of the Committee will be a scientist of unimpeachable integrity and national repute. In addition there will be an Advisory Board of scientists **disinterested in the cigarette industry**. A group of distinguished men from medicine, science, and education will be invited to serve on this Board. These scientists will advise the Committee on its research activities.

11309817-9817 (US 20277) (A) (emphasis added); Brandt WD, 55:11-21; Kessler WD,

65:6-16.

1542. However, as Dr. Allan Brandt explained,

> [D]ocuments illustrate that at the same time that the industry assured the public through its "Frank Statement" that "there is no proof that cigarette smoking is one of the causes [of cancer]" it documented a large number of known carcinogens in its product. At the same time that the industry announced "we accept an interest in people's health as a basic responsibility, paramount to every other consideration in our business" it established a sophisticated public relations apparatus – based on the "cover" of conducting research – to deny the harms of smoking and reassure the public. Medical and scientific knowledge concerning the harms of smoking – including cancer and premature death – continued to grow impressively, in spite of a barrage of critiques and distortions by industry spokespeople and the TIRC. But once the essential strategy was organized and implemented in 1953-54, the industry's approach was unwavering.

Brandt WD, 61:20-62:7.

1543. Defendants repeated the assurances made in the 1954 Frank Statement. In a December 1958 press release, Timothy Hartnett, TIRC Chairman, reaffirmed the promises made in the Frank Statement by assuring the public:

> At its formation in January 1954, the Tobacco Industry Research Committee stated its fundamental position: 'We believe the products we make are not injurious to health. We are pledging aid and assistance to the research effort into all phases of tobacco use and health.' That statement and pledge are reaffirmed today by the members of the Tobacco Industry Research Committee.

500518759-8761 at 8761 (US 20636) (A); Brandt WD, 88:6-14.

(b) Continuing Parallel False Promises from Members of the Enterprise, Including the Tobacco Institute

1544. Defendants claimed that they would, in part, fulfill their promise to research and publish their findings about smoking and health by funding independent research through the TIRC/CTR. In the January 1954 Frank Statement, and repeatedly over the years since then, the

Defendants told Congress, federal agencies, courts, and the public that TIRC/CTR's purpose was to fund and to perform independent scientific research on the issue of smoking and health. 11309817-9817 (US 20277) (A).

1545. A 1954 TIRC statement announcing the appointment of Timothy Hartnett as full-time Chairman of TIRC contained a statement from Hartnett that

> [t]he tobacco industry is determined to find answers to the public's questions about smoking and health. The appointment of a full-time chairman completes an organization dedicated to carrying on comprehensive and objective scientific and statistical research to establish the facts and report them to the public. . . . The millions of people who derive pleasure and satisfaction from smoking can be reassured that every scientific means will be used to get all the facts as soon as possible.

TLT0901831-1832 (US 88043) (A); Kessler WD, 51:18-52:14.

1546. A January 25, 1954 document entitled "Statement Concerning the Origin and Purpose of the Tobacco Industry Research Committee and Its Proposed Functions" stated that the Defendants formed TIRC "in the interest of the public as well as of the industry to meet the challenge raised by widely publicized reports in the press, purporting to link tobacco smoking with the cause of lung cancer." TIRC was created to address "the appearance of certain publications claiming an established relationship between cigarette smoking and lung cancer." The document further stated:

> In the light of the foregoing agitation and in the absence of authoritative findings, there is a responsibility on the part of the management of the tobacco manufacturers and others engaged in the tobacco industry to aid in the final determination of this controversy. It is the earnest wish of the industry to encourage competent scientific authority to find ultimate facts which will dispel the present confusion and to communicate authoritative factual information on the subject to the public.

TIMN0116378-6384 at 6378, 6380 (US 21277) (O).

1547. The Cigarette Company Defendants went so far as to claim that they would stop selling tobacco if they determined that smoking was harmful or would change the product in order to make certain that it was no longer harmful. For example, George Weissman, Vice President of Philip Morris, in a statement to be delivered on March 30, 1954 before the NATD Convention in Chicago, claimed "[i]f we had any thought or knowledge that in any way we were selling a product harmful to consumers, we would **stop business tomorrow**." 2022239339-9343 at 9341 (US 21766) (A) (emphasis added).

1548. On June 15, 1954, at a TIRC press conference discussing the organization's goals, Dr. Clarence Cook Little, the first Scientific Director of TIRC, stated:

> We want to learn all that we can . . . We haven't any axe to grind. We respect differences of opinion. . . . This is not a partisan effort. We are not trying to prove anything. We are trying to find out the facts. . . . I don't have any personal preconceived notions at all. I am just anxious to find out everything we possibly can. . . . We would not pick any man to be supported in whom we didn't have confidence enough to let him be a scientist. He will be left free. He will not be bossed. He will not be directed.

CW0105 4843-4879 at 4845, 4846, 4858 (US 20278) (A).

1549. In a TIRC press release dated July 28, 1954, Dr. Little stated:

> In order to find conclusive facts concerning questions that have been raised about tobacco use and health . . . the Scientific Advisory Board of the Tobacco Industry Research Committee has adopted a three-fold policy which will direct funds into research on: 1) Study of the physical and chemical composition of tobacco and accompanying products. 2) Study of tissue changes in humans and animals under various conditions. 3) Study of smoking and other tobacco habits and of the emotional and physical make-up of smokers.

The press release concluded by stating that the purpose of the TIRC was "to finance objective research on tobacco and health." CTRPUBLICSTMT000093-0095 at 0093, 0095 (US 21163) (A).

1550. In addition to the false statements made by Defendants individually and in furtherance of their scheme to defraud, Defendants in 1958 created the Tobacco Institute, a public relations organization whose function was to make certain that Defendants' false and misleading positions on issues related to, among other things, the connection between smoking and disease, were kept constantly before the public, doctors, community leaders, the press, and the government. At all times, Defendants controlled the Tobacco Institute, including its public statements made on behalf of Defendants.

1551. Dr. Allan Brandt explained the reasons for the creation of the Tobacco Institute:

> By mid-1956 the industry found itself in yet another public relations dilemma. The utility of the TIRC was constituted in its stated commitment to "objective" science and its search for the "truth." At the same time, industry executives voiced a repeated desire for a more aggressive public relations campaign. . . .
>
> The legitimacy and influence of the TIRC rested upon the perception of restraint. As a result, Carl Thompson of Hill and Knowlton argued in one of the Hill papers, marked as U.S. Exhibit 88,409, that "A flamboyant campaign against the anti-smoking propagandists would unquestionably alienate much of the support of the moderates in both scientific and lay publics." Therefore, he urged that TIRC stay the course.
>
> The only way to protect the public relations "capital" invested in the TIRC was to create a separate entity for more aggressive public relations and political lobbying. In 1958, the industry announced the creation of the Tobacco Institute. With regulatory initiatives on the horizon, especially proposals to label cigarettes as hazardous, John Hill had advised the creation of a trade association that would not have the limitations associated with TIRC.

Brandt WD, 89:4-23. Dr. Brandt's testimony is persuasive and consistent with the underlying evidence.

1552. The Tobacco Institute, created by the Cigarette Company Defendants (except BATCo and Philip Morris Companies) and others as a joint trade association, made statements

on behalf of the Cigarette Company Defendants and in furtherance of the Enterprise. Such statements were released to convince the public that the tobacco industry was making efforts to conduct its own research as well as to fund independent scientists.

1553. On June 7, 1962, the Tobacco Institute issued a press release welcoming an "impartial study" by the Surgeon General on smoking and health. George Allen, President of the Tobacco Institute, stated: "No one has a greater interest than the tobacco industry in helping medical science find solutions to the health problems of our country." Allen went on to cite the "extensive scientific research program" of TIRC, established to "provide grants to independent scientists." TIMN0123772-3772 (US 85928) (O).

1554. In a December 27, 1962 press release, the Tobacco Institute publicly recognized the Defendants' "special responsibility to help science determine the facts" regarding smoking and health. The release went on to credit the Enterprise with taking the lead in "seeking the answers by setting up the T.I.R.C. and turning over full control of its research program to a group of outstanding, independent scientists." TIMN0123775-3779 at 3777-3778 (US 85930) (O).

1555. A November 3, 1963 Tobacco Institute press release stated that the industry was on a "crusade" to find answers to the "questions about smoking and health" and that it "should be a crusade neither for nor against tobacco. It is a crusade for research . . . ." TIMN0118245-8246 at 8245 (US 77055) (O).

1556. On February 1, 1964, the by-laws of TIRC were amended to provide that the name of the organization be changed to "The Council for Tobacco Research-U.S.A." The purposes and objectives remained the same as in the 1954 by-laws, namely, "to aid and assist research into tobacco and health, and particularly into the alleged relationship between the use of tobacco and lung cancer and to make available to the public factual information on this subject."

682631364-1368 at 1364 (US 21024) (O).

1557. On March 6, 1964, the Tobacco Institute sent a press release announcing the reorganization of TIRC and its new name, CTR. This press release represented that CTR's research policy would be set by doctors and scientists independent of the tobacco industry. 508775085-5088 at 5085 (US 20815) (O).

1558. On January 12, 1965, the Tobacco Institute issued a press release stating, "[t]he industry will continue forcefully its support of responsible research efforts to establish the true facts." The statement continued, "[t]his research, which is supported by contributions from members of the tobacco industry, is being conducted by numerous independent, competent doctors and scientists associated with many institutions throughout the country." TIOK0034195-4195 (US 85931) (O).

1559. On December 29, 1965, the Tobacco Institute stated in a press release that it was Defendants' belief that current research had not established whether smoking causes disease and that the matter is still an "open question." The press release stated: "If there is something in tobacco that is causally related to cancer or any other disease, the tobacco industry wants to find out what it is, and the sooner the better." TIMN0123848-3851 at 3848 (US 21332) (O).

1560. On June 7, 1966, in a speech regarding Philip Morris's efforts to sponsor independent research, Joseph F. Cullman III, President of Philip Morris, stated:

> [W]e feel a deep sense of responsibility to our cigarette smokers. All of us who work in this industry feel a deep concern over questions raised about cigarettes and health. We will not rest until we learn the scientific facts that will provide solutions to the medical problems in question. We intend to leave no research question unanswered in our quest for the truth. What have we done to help find the truth? This industry has allocated nearly twenty million dollars for the support of research projects by independent scientists, through The Council for Tobacco Research - U.S.A., and through the American Medical Association

> Education and Research Foundation. If more funds are needed for this research, I am sure the industry will provide them.

1000235218-5230 at 5227 (US 20083) (O).

1561. On December 24, 1968, Shook, Hardy & Bacon, a tobacco industry law firm, authored the following statement for Joseph Cullman, Chairman of the Board of Philip Morris: "The cigarette industry recognizes its responsibility to the American people. It is anxious to seek the answer to the question of whether cigarettes are in fact the cause of any human disease. It is unfortunate that emotional propaganda against cigarettes has been permitted to suppress scientific inquiry and proof." 1000313777-3779 at 3777 (US 20093) (O).

1562. A 1969 Tobacco Institute brochure stated that "[f]rom the beginning, the industry's policy has been to work – as dispassionately as possible – toward a conclusive, scientific understanding of the actual facts, *whatever these facts turn out to be*." 620047929-7972 at 7963 (US 20945) (O) (emphasis in original).

1563. In 1970, the Tobacco Institute issued a public statement, published as an advertisement in major American newspapers, publicizing the research efforts of the cigarette industry. The statement, titled "The question about smoking and health is still a question," read in pertinent part:

> [A] major portion of this scientific inquiry has been financed by the people who know the most about cigarettes and have a great desire to learn the truth . . . the tobacco industry. And the industry has committed itself to this task in the most objective and scientific way possible. . . . 1115 reports in all. Through this work much valuable data have been produced about lung cancer, heart disease, chronic respiratory ailments and other diseases. However, there's still a lot more to be learned. . . . There are eminent scientists who believe that the question of smoking and health is an open one and that research in this area must go forward. From the beginning, the tobacco industry has believed that the American people deserve objective, scientific answers. With this same credo in mind, the tobacco industry stands ready today to make new commitments for

> additional valid scientific research that offers to shed light on new facets of smoking and health.

TIMN0081352-1352 (US 21305) (A).

1564. The text from a March 17, 1970 television spot labeled "TI – approved Ad Hoc" stated:

> Today, we in this industry support more impartial research on the vital question of tobacco and health than any agency of the Federal Government, and more than all the voluntary agencies combined. We have great confidence that the findings of this research will lead the way in providing fair and accurate information regarding cigarette smoking.

2010008819-8822 at 8820 (US 20300) (O).

1565. On November 30, 1970, in a statement to the Executive Committee of CTR, Henry H. Ramm, General Counsel of RJR, stated that the purpose of the organization was:

> To aid and assist research into tobacco use and health, and particularly into the alleged relationship between the use of tobacco and lung cancer and to make available to the public factual information on this subject. . . . When the products of an industry are accused of causing harm to users, certainly it is the obligation of that industry to endeavor to determine whether such accusations are true or false. Money spent for such purpose should not be regarded as a charitable contribution but as a business expense--an expense necessary to keep that industry alive. In view of the billions of dollars of annual sales of our industry our expenditures for health research have been of a minimal order.

1003057214-7220 at 7214, 7218 (US 20147) (O).

1566. On December 1, 1970, Philip Morris, RJR, B&W, Lorillard, and American Tobacco placed an ad through the Tobacco Institute in *The Washington Post* entitled "The question about smoking and health is still a question." The ad stated that "[i]n the interest of absolute objectivity," Defendants have "supported totally independent research efforts with completely non-restrictive funding." The ad further created the false impression that all research

results had been published. TIMN0081352-1352 (US 21305) (A).

1567. On January 3, 1971, the Tobacco Institute issued a press release describing the "locked door" along the "statistical path" that linked smoking to ill health. In this press release, Tobacco Institute President Horace Kornegay noted that the tobacco companies would provide more than $4 million that year "for support of independent scientific research on smoking and health questions" and declared: "Any organization in a position to apply resources in the search for those keys – and which fails to do so – will continue to be guilty of cruel neglect of those whom it pretends to serve." TIMN0121003-1007 at 1004-1005, 1007 (US 21722) (O).

1568. In a February 1, 1972 Tobacco Institute press release, Kornegay stated that "[t]he cigarette industry is as vitally concerned or more so than any other group in determining whether cigarette smoking causes human disease . . . " and added that "despite this effort the answers to the critical questions about smoking and health are still unknown." TIMN0120596-0597 (US 21321) (O).

1569. The Tobacco Institute continued to report to the public on the Defendants' alleged efforts to conduct research, fund independent science, and search for answers to the questions about smoking and health; yet by 1975, every member of the Enterprise, in furtherance of its common objectives, would not admit that smoking could be the cause of some human illness. The Enterprise continued to communicate to the public its purported feeling of responsibility to consumers and its monetary contributions to scientific research. A January 14, 1975 Tobacco Institute press release reported that the Cigarette Company Defendants "have committed some $50 million to help support researchers who are seeking the truth." TIMN0120638-0639 at 0639 (US 21698) (O).

1570. On August 16, 1976, James C. Bowling, Vice President of Philip Morris,

explained in an interview in London that "it's up to us morally to find the answers. And that's why we're spending more on cigarette health research than the Federal government . . . ." He further stated: "They [CTR] decide where the research needs to be done. They allocate the money, we read the results when it's printed in the literature . . . We have no influence on them whatsoever." 1002410318-0351 at 0333, 0340 (US 20137) (O).

1571. A February 1977 RJR document stated:

> **Objective**: What we want to convey can almost be summarized in one sentence: **The smoking and health controversy is just that – it is a controversy**. . . . The smoking and health controversy is a very important question; our Industry has been - and is, of course, trying to provide the answer. If there ever should be any component or components, as found in smoke, that can be proven to be, or contribute to be, a cause of any disease in man, we will of course, take them out.

500021655-1710 at 1658 (US 20614) (A) (emphasis in original).

1572. In 1977, Addison Yeaman, B&W's General Counsel, stated in a speech:

> My assignment today is to inform you of the measures the tobacco industry has taken to discharge its obligation to investigate the question of whether the use of tobacco in cigarettes is causative of, or materially contributes to a number of diseases that constitute major health problems throughout the world. . . . The companies fully recognized that the industry has an absolute duty and a heavy obligation to seek to determine what if any part its products play in disease. . . . I am utterly secure in saying to you that the tobacco industry recognizes its responsibility and its duty and that it will continue its every effort and at whatever cost to finding the answer to the question "what part, if any, does tobacco play in human diseases."

CTRPUBLICSTMT001437-1445 at 1437, 1438, 1445 (US 21164) (O).

1573. In 1978, a Tobacco Institute publication addressed twenty-one questions under the title of "Facts About the Smoking Controversy." In response to the question "Do the tobacco companies control the research they sponsor[,]" it claimed, "Absolutely not! The commitment of

the tobacco manufacturers to resolve the smoking and health controversy has never been fully appreciated." TIMN0055129-5135 at 5134 (US 21298) (O).

1574. On December 31, 1981, the Tobacco Institute published "Tobacco Industry Research on Smoking and Health: A $104 Million Commitment," which noted:

> Since the first questions were raised about smoking as a possible health factor, the tobacco industry has believed that the American people deserve objective scientific answers. The industry has committed itself to this task. . . . In the interest of strict objectivity, the tobacco industry has supported independent research efforts with completely nonrestrictive funding, mainly through the Council for Tobacco Research. . . . However, there is still a lot more to be learned. . . . questions of smoking and health are unresolved . . . the tobacco industry stands ready today to make new commitments for additional scientific research that may shed light on the question of smoking and health.

2046754709-4710 at 4710 (US 20474) (O). The same promise was repeated the next year in the Tobacco Institute's publication "Tobacco Industry Research on Smoking and Health: A $111 Million Commitment;" and in 1984, the Tobacco Institute published its annual report entitled "Tobacco Industry Research on Smoking and Health; a $120 Million Commitment." 670500617-0620 (US 20968) (O); 2045377870-7876 (US 20460) (O).

1575. James F. Glenn, Chairman of the Board and Chief Executive Officer of CTR, wrote a February 15, 1995 letter responding to a previous letter from James Todd, Executive Vice President of the American Medical Association. In it, Glenn insisted:

> Your letter of November 8, 1994, addressed to the deans of a number of medical schools, has been brought to my attention. I feel that a response is required in view of the serious inaccuracies in your letter and, in particular, your misleading portrayal of the Council for Tobacco Research-U.S.A., Inc, as a public relations pawn of the tobacco industry. . . . Did you mean to imply that CTR is not "<u>really</u>" a research institute? . . . You state that "tobacco research institutions such as the . . . Center [sic] for Tobacco Research . . . all funded fully by tobacco companies are used by the tobacco industry as part of its overall public relations strategy . . . ."

> The tobacco industry, to the best of my knowledge, has not used CTR in this manner during my tenure. Indeed, the tobacco industry does not review the grant applications to CTR or select the research sponsored by CTR, nor does the industry seek to influence CTR grantees in any fashion. On the contrary, CTR encourages these independent investigators to publish their research findings, whatever they may be.

88024854-4857 at 4854-4855 (US 56357) (O) (emphasis in original).

1576. A January 22, 1997 BATCo document stated:

> [S]cience has yet to identify a genetic mechanism by which any substance in tobacco smoke causes lung cancer in humans. Enormous amounts of research continue in this area, including work funded by British-American Tobacco. . . . We continue to support academic research, particularly in the biological sciences, in the pursuit of an explanation of the relationship between smoking and lung cancer, and in the expectation that such an explanation could lead to changes in our product.

700805002-5048 at 5004, 5008 (US 21051*) (O).

1577. Defendants' representations concerning their public commitments continue to this day. Philip Morris's internet website, www.philipmorrisusa.com, states, in part, as follows: "Our goal is to be the most responsible, effective and respected developer, manufacturer and marketer of consumer products, especially products intended for adults." The same Philip Morris web site also states: "We will be successful in achieving our goal when we: . . . Communicate Health Effects of Our Products – Communicate openly, honestly and effectively about the health effects of our products." http://www.philipmorrisusa.com/DisplayPageWithTopicd59b.asp at 1 (US 80795) (O); ARU6411453-1455 (US 80795) (O).

1578. BATCo recently prepared a "Social Report" and published the report on the website of the BAT Group, www.bat.com. The "British American Tobacco Social Report 2001/2002" noted:

> The Scientific Research Group, comprising scientific experts from our Group companies' worldwide Research & Development facilities, meets regularly to review, with input from independent scientific experts, developments in the science of smoking and health and to consider external research proposals for funding in this field. External requests for Scientific Research Group funding are granted when the research proposed is relevant, of sufficiently high quality and where the area of investigation has not previously been comprehensively explored. We give independent researchers freedom to publish their findings with no editorial constraints.

British American Tobacco Social Report 2001/2002 at 35, www.bat.com; TLT0231830-1910 at 1848 (US 76316) (O).

(2) The Reality: CTR Was a Front That Failed to Deliver on the Industry's Promise to Conduct Independent Disinterested Research

(a) Throughout TIRC/CTR's Existence, It Did Not Seek to Fulfill the Defendants' Promise to Conduct and Disclose Independent Research

(i) Formation of TIRC/CTR – An Industry "Front"

1579. In an attempt to create a public relations plan to distract smokers from smoking and health related concerns, Hill & Knowlton, a public relations firm retained by TIRC, stated the following in an undated document: "There is only one problem – confidence, and how to establish it; public assurance, and how to create it – in a perhaps long interim when scientific doubts must remain. And, most important, how to free millions of Americans from the guilty fear that is going to arise deep in their biological depths – regardless of any pooh-poohing logic – every time they light a cigarette." The document also set forth various problems confronting the industry regarding public relations issues on smoking and health. "Problem 4" displayed a number of tactics to respond to the findings of noted scientists like Wynder, Rhoads, and Ochsner. According to this document,

> [w]e have a choice, as previously indicated, of: (a) Smearing and belittling them; (b) Trying to overwhelm them with mass publication of the opposed viewpoints of other specialists; (c)

> Debating them in the public arena; or (d) We can determine to raise the issue far above them, so that they are hardly even mentioned; and then we can make our real case.

JH000493-00501 at 0495, 0498 (US 21408) (A); Brandt WD, 53:16-54:10.

1580. In a December 14, 1953 memorandum, Timothy Hartnett, President of B&W, summarized the crisis of the industry in the following terms:

> But cancer research, while certainly getting our support, can be only half an answer. . . . The other side of the coin is public relations. . . . [which] is basically a selling tool and the most astute selling may well be needed to get the industry out of this hole. . . . It isn't exaggeration that no public relations expert has ever been handed so real and yet so delicate a multi-million dollar problem. . . . Finally, one of the roughest hurdles which must be anticipated is how to handle significantly negative research results, if, as, and when they develop.

1005039779-9783 at 9779-9780, 9783 (US 20190) (A); Brandt WD, 55:22-56:11.

1581. A December 15, 1953 Hill & Knowlton memorandum entitled "Background Material on the Cigarette Industry Client" described how Defendants' representatives "have agreed to go along with a public relations program on the health issue." In the section entitled "The Industry's Position," it stated: "They feel that they should sponsor a public relations campaign which is positive in nature and is entirely 'pro-cigarettes.' They are confident they can supply us with comprehensive and authoritative scientific material which completely refutes the health charges." JH000502-0506 at 0502, 0503 (US 21411) (A).

1582. On April 14, 1954, TIRC published "A Scientific Perspective on the Cigarette Controversy," which reaffirmed the Frank Statement and set forth a number of brief statements from various scientists in an attempt to show that there was no consensus on the link between smoking and cancer. 1005039987-40008 (US 20192) (O).

1583. Despite TIRC's claim that there was no consensus on the link between smoking

and cancer, there was overwhelming evidence by the mid-1950s that cigarette smoking caused lung cancer and death. Numerous peer reviewed studies from a variety of methodological approaches had all reached this conclusion. During the 1950s, there was not a single substantial study contradicting this finding. Brandt WD, 66:10-69:13.

1584. Hill & Knowlton's June 21, 1954 "Public Relations Report and Recommendations for Tobacco Industry Research Committee" stated that TIRC

> now has the basis needed for carrying on a long-range plan of public relations activities aimed at establishing the TIRC in the public mind as a constructive force in scientific research. These activities will endeavor to keep the following facts before the Public: 1. That there is no proof that smoking is a cause of lung cancer . . . .

514806129-6131 at 6130 (US 20860) (O).

1585. Internal documents show that CTR was intended to operate as a public relations "front" and a "shield" for the Defendants, despite the Defendants' contrary public statements. 680260940-0941 (US 20995) (A).

(ii) TIRC/CTR Was More Concerned About Public Relations Than Science

1586. CTR provided a mechanism for the Defendants to claim that they were conducting independent research. Yet it was used, instead, as a public relations tool to conduct self-serving research to support Defendants' litigation position and to provide witnesses in lawsuits, before Congress, and in other regulatory actions. TIRC used scientific research for public relations purposes. As Dr. Allan Brandt noted,

> The TIRC deftly exploited scientific research for the purposes of public relations. From the outset the dual functions of TIRC, public relations and scientific research, were intertwined. The scientific program of TIRC was always subservient to the goals of public relations. Rather than carefully and critically assessing the emerging scientific data concerning the harms of smoking, the

> TIRC took the lead in denying and distorting these harms. Instead of "getting all the facts" in a timely way, the TIRC focused its energies and resources in two areas. . . . it served as a public relations unit for the industry, especially in relation to growing public concerns about the risk of smoking. It repeatedly attacked scientific studies demonstrating the harms of cigarette smoke. It worked concertedly to reassure smokers about cigarettes.

Brandt WD, 57:8-18.

1587. Members of TIRC recognized the organization's public relations function.

Timothy Hoyt, Executive Secretary of TIRC, stated on April 28, 1955, that

> [e]ssentially, the major purposes of the TIRC are Research and Public Relations. Our job is to maintain a balance between the two, and to continue to build soundly so that at all times Research and Public Relations complement each other. In that way we intend to assume the mantle of leadership and, ultimately, to create a condition where the public will look to the TIRC for the answers rather than to others.

CTRMN003816-3835 at 3826 (US 21147) (O).

1588. Statements from TIRC meeting minutes and correspondence attest to Defendants' satisfaction at having successfully influenced the public to believe that there was a legitimate scientific controversy regarding smoking and health and that Defendants openly and honestly participated in that debate. An April 28, 1955 Confidential Hill & Knowlton Public Relations Report to TIRC stated that

> [a]n increasing number of scientists and researchists are anxious to report on their works involving cigarettes. Of late, most of these have been anticipated and, when necessary, steps are taken to deal with the findings. These reports include studies on the relation of tobacco and heart as well as tobacco and lung cancer.

CTRMN039137-9143 at 9138 (US 21158) (O).

1589. TIRC continually attacked the mounting evidence of the effect of smoking on disease. For instance, an undated TIRC press release denounced Alton Ochsner's book (Ochsner

was one of the first scientists to investigate the relationship between cigarette smoking and lung cancer) as "[j]ust another propaganda device in the anti-tobacco crusade which the author has been carrying on for years." CTRMN004949-4952 at 4952 (US 21153) (A).

1590. On June 7, 1955, Dr. Little appeared on Edward R. Murrow's "See It Now" television show and was asked: "[H]ave any cancer-causing agents been identified in cigarettes?" He replied: "No. None whatever, either in cigarettes or in any product of smoking, as such." CTRMN005534-5541 at 5534 (US 21156) (A).

1591. In a June 13, 1955 Tobacco Institute press release, TIRC Chairman Timothy Hartnett claimed that "[n]obody has produced evidence proving that cigarette smoking causes human lung cancer." CTRMN004981-4982 at 4981 (US 21154) (O).

1592. In a July 30, 1957 letter, Edward A. Darr, President of RJR, praised Paul Hahn, President of American Tobacco, for having the foresight to argue in favor of the creation of the TIRC in December 1953. The letter also stated:

> It now appears, however, that the tobacco industry should go on the offensive in bringing the truth about cigarette smoking to the public. . . . I am convinced that an organization of tobacco manufacturers formed for the narrow and well-defined specific purpose of presenting facts and information helpful to the industry can and should be formed and that such an organization be entirely separate from the TIRC, which would continue its activities in connection with the Scientific Advisory Board grants but would discontinue the major part of the public relations activity, leaving this to be handled by the new organization, whatever name might be given to it. Certainly, no one can question the necessity of our going on the offensive without delay.

BBAT030581-0582 (US 22058) (O).

1593. In a July 31, 1958 Tobacco Institute press release, Hartnett reemphasized this point, stating that "[t]he position of this country's cigarette industry is unchanged because the

facts have not changed. Scientific evidence simply does not support the theory that there is anything in cigarette smoke known to cause human lung cancer." CTRMN004985-4986 at 4985 (US 21155) (O).

1594. During the February 14-15, 1958 meeting of the CTR SAB, Timothy Hartnett informed the SAB that Hill & Knowlton "is acting as public relations counsel for both organizations [TIRC and the Tobacco Institute]. He pointed out the desirability of this from both organizations' standpoint." CTRMN004331-4335 at 4332 (US 21150) (A).

1595. Further, Bowman Gray, Chairman of the Tobacco Institute, announced "a tentative decision to let the matter of the respective functions of the two organizations [the Tobacco Institute and TIRC] be decided upon a case by case basis under the guidance of public relations counsel." 04209323-9326 at 9323 (US 47370) (O).

1596. Leonard S. Zahn, one of Hill & Knowlton's former employees, was appointed Public Relations Consultant to CTR at the SAB meeting in September 1969. CTRMN004539-4544 (US 21151) (O).

1597. In an April 4, 1978 letter from Ernest Pepples, Senior Vice President and General Counsel of B&W, to C. I. McCarty, Chief Operating Officer of B&W, I. W. Hughes, Chairman of B&W, and DeBaun Bryant, CTR Director, Pepples admitted:

> Originally, CTR was organized as a public relations effort. The industry told the world CTR would look at the diseases which were being associated with smoking. There was even a suggestion by our political spokesmen that if a harmful element turned up the industry would try to root it out. The research of CTR also discharged a legal responsibility. The manufacturer has a duty to know its product. The Scientific Advisory Board composed of highly reputable independent scientists constitute a place where the present state of the art is constantly being updated. Theoretically SAB is showing us the way in a highly complex field. There is

> another political need for research. Recently it has been suggested that CTR or industry research should enable us to give quick responses to new developments in the propaganda of the avid anti-smoking groups. For example, CTR or someone should be able to rebut the suggestion that smokers suffer from a peculiar disease, as widely alleged in the press some few months ago. A properly designed research effort should encompass the need for instant response on subjects of public interest in the smoking and health controversy. Finally the industry research effort has included special projects designed to find scientists and medical doctors who might serve as industry witnesses in lawsuits or in a legislative forum. All of these matters and more should be considered in asking what kind of research the industry should do.

680212421-2423 at 2422 (US 54024) (A).

1598. A November 6, 1978 memorandum marked "Confidential - For Counsel Only" from Donald Hoel regarding "Industry Research Committee Meeting, October 26, 1978, Lexington, Kentucky" stated:

> After some further discussion, Janet [Brown] and Arnie Henson expressed American Tobacco Company's view that CTR must be maintained but needed new people. It must be more politically oriented. They felt that CTR must look at what is happening and what others are doing to see what questions can be raised, etc. The approach must be steady, slow and conservative. They must find skeptical scientists.

01347203-7209 at 7203, 7208 (US 43667) (A).

1599. A memorandum written on November 17, 1978 by Robert Seligman, Vice President of Research and Development at Philip Morris, contained the following historical account: "Bill Shinn [attorney at Shook, Hardy & Bacon] described the history, particularly in relation to CTR. . . . It was set up as an industry 'shield' in 1954. . . . CTR has helped our legal counsel by giving advice and technical information, which was needed at court trials. CTR has supplied spokesmen for the industry at Congressional hearings. The monies spent at CTR

provides a base for introduction of witnesses." 2045752106-2110 at 2107 (US 20467) (A); Kessler WD, 52:25-53:14; Stevens WD, 33:8-34:2.

1600. In fact, certain recipients of CTR funds may have been "kept on the payroll," to maintain favorable relations, either for their testimony or the testimony of their colleagues. 01335922-5922 (US 20045) (A).

(iii) CTR's Research Did Not Conduct Research Designed to Investigate the Link Between Smoking and Health

1601. CTR did not conduct research designed to answer the central question of great interest to the public, namely, whether there was a link between smoking cigarettes and adverse health effects such as cancer and other diseases.

1602. In a document titled "Confidential Report – Scientific Advisory Board Meeting – November 9-10, 1957," the TIRC's Scientific Advisory Board acknowledged that the "French have done a number of statistical inquiries that show a correlation between tobacco consumption in definite relation to the increase of lung cancer, to an increase of cancer of all sites, and to other ailments. They see no alternative to giving these a causative interpretation." Despite the importance of these findings, TIRC did not make them public. CTRMN004324-4330 at 4329 (US 21149) (A).

1603. Moreover, despite the obvious importance such an answer carried, TIRC never developed an approach to carcinogenesis and tobacco that could resolve the question of whether harms were induced by cigarette smoking. Although some researchers explored alternative hypotheses, the TIRC did not pursue direct research on cigarettes and disease. Rather than directly addressing the constituents in tobacco smoke and their demonstrated effect on the human body, the TIRC directed most of its resources to either: (a) alternative theories of the origins of

cancer centering on genetic factors and environmental risks, or (b) the basic mechanisms of disease. As a result, most research projects funded through its SAB were irrelevant to the immediate questions of the harms of tobacco. At the same time, Little and the TIRC repeatedly used truisms such as the "need for more research" and "how much more there is to learn" to deflect attention away from what was known. Brandt WD, 85:12-86:3; 501773418-3466 (US 20686) (A).

1604. CTR's research was purposely focused away from the fundamental questions of smoking and health.

> [CTR] ultimately developed a research program that focused principally on basic science mechanisms in cancers. This program was distant if not completely irrelevant to evaluating the risks and harms associated with smoking. The TIRC research program was organized and devised to *not* address the immediate and fundamental questions of the health effects of smoking.
>
> In this way, both functions of TIRC (public relations and research) were integrally related; both were fully committed to the goals of denying and discrediting the substantial scientific evidence of smoking's harms and reassuring the public, especially smokers and potential smokers.

Brandt WD, 57:19-58:4 (emphasis in original).

1605. The industry research plans to address health and smoking were largely driven by legal practicalities, including the risk of "[d]oing smoking and health and being forced to admit in law suits that their experiments have caused cancer in animals and yet that they have made no changes in tobacco smoke to eliminate the tumours." 1003119099-9135 at 9113 (US 20152) (A).

1606. One section of a February 19, 1963 report described a meeting of industry representatives from TIRC, RJR, and Philip Morris at which a debate took place about the

accuracy and the legal and public relations implications of whether TIRC should disseminate the statement that "the causes of lung cancer are not known to science." XBW0010811-0826 (US 26458) (O).

1607. A 1968 CTR memorandum stated that:

> two points of view apply to all the work of [CTR]. . . . The problem therefore is to keep these two general factors – complexity of the diseases and importance of the Host Factor – continually in mind, and to conduct the various specific pieces of research which we support in such a way as to add to the increasing body of experimental evidence which justifies this attitude [i.e., that causes other than smoking are to blame].

HT70135161-5164 at 5164 (US 21629) (O).

1608. In a January 12, 1968 document, Addison Yeaman, B&W's General Counsel, wrote about the need to reorient CTR from more basic research to that with specific application to tobacco. He admitted: "Review of SAB's current grants indicates that a very sizable number of them are for projects in what might be called 'basic research' without specific orientation to the problem of the relationship of the use of tobacco to human health." 00552837-2839 at 2837 (US 22968) (A).

1609. Addison Yeaman, B&W's General Counsel, wrote a January 19, 1968 memorandum about whether to alter the "long established policy of CTR, carried out through SAB, to 'research the disease' as opposed to researching questions more directly related to tobacco." LG2023842-3843 at 3842 (US 61222) (A); Harris WD, 148:23-151:22.

1610. On June 1, 1970, a private conference was held in CTR's offices to discuss with several CTR grantees the "Effects of Nicotine and/or Smoking on the Central Nervous System." On June 17, 1970, Philip Morris researchers Helmut Wakeham and William Dunn called CTR

offices to suggest planning a scientific conference on the benefits of smoking. CTR Associate Scientific Director Robert Hockett and others at CTR "reacted quite favorably to this suggestion" since the private June 1st conference "had brought out several effects in this area that can be regarded as beneficial." On July 1, 1970, Hockett sent a letter to Henry H. Ramm, Vice President and General Counsel of RJR, suggesting and requesting financing for such a conference to be held in the West Indies. 503654893-4894 at 4893 (US 20719) (O).

1611. A June 1, 1970 letter to Henry Ramm, Vice President and General Counsel of RJR, acknowledged:

> We in Louisville recognize that over the years the CTR's grants have produced some "good science," but science which has not provided us with either much material useful on the offensive, nor much that was very meaningful on the defensive, in terms of effect on the public and ultimately Congress. We have long felt that we are less well served by the existing system of making grants upon unsolicited application over a very wide field than we would be were we to determine the specific areas relating to tobacco and health toward which meaningful research projects might be directed . . . it is the view in Brown & Williamson that CTR's past performance, in terms of its contribution to the industry's posture in the face of attack on the health issue, does not justify the current rate of cost but that properly re-organized and re-oriented it could serve the industry's needs.

01188151-8153 at 8151, 8153 (US 34493) (O).

1612. CTR's long-established policy of not directly researching questions of smoking and health was to keep the "open question" alive. As Dr. Jeffrey Harris explained,

> Defendant cigarette manufacturers had agreed jointly to deny that smoking caused any disease. As part of this joint strategy of denial, they repeatedly stated that the relationship between smoking and disease was “still a question,” an “open question,” and a “controversy.” Industry spokesmen repeatedly asserted that “no one knows” for certain whether smoking really causes any disease, that “more research” was needed to find out what really

> caused cancer and other diseases. The "long established policy of CTR" was to "constantly keep alive" this stance.

Harris WD, 151:23-152:2. Moreover, as Dr. Harris noted,

> The CTR - through its long-established policy of researching the disease rather than directly researching questions of smoking and health - helped to carry out manufacturers' collusive strategy of jointly denying that smoking caused any disease. Rather than serving as a cooperative arrangement that served the interests of the consuming public, the CTR was an instrument of collusion.

Harris WD, 152:3-13.

1613. Defendants' own documents illustrate this point – namely, that the joint industry research conducted through CTR was admittedly not intended to get to the truth about smoking and health. As explained by Alexander Spears, Research Director of Lorillard, in a 1974 memorandum to Curtis Judge, Chief Executive Officer of Lorillard:

> Historically, the joint industry funded smoking and health research programs have not been selected against specific scientific goals, but rather for various purposes such as public relations, political relations, position for litigation, etc. . . . In general, these programs have provided some buffer to public and political attack of the industry, as well as background for litigious strategy.

01421596-1600 at 1598 (US 20049) (A).

1614. In a June 13, 1974 letter, Janet Brown, industry counsel, responded to a request for comment on industry-funded scientific research from David Hardy of Shook, Hardy & Bacon. Brown expressly acknowledged that "[t]he industry has repeatedly reiterated its research commitments" to the public, dating back to the 1954 Frank Statement. Brown then cautioned that the "[f]ailure to meet this commitment - which must be viewed as a pledge not simply to the public but also to the SAB, CTR's scientific staff, and the entire scientific community - would

involve grave risks, as I hardly need emphasize." Brown concluded her letter with two candid observations on the lack of truly independent tobacco industry-funded research. First, she stated that "[w]here the industry is itself the arbiter of the amount and nature of research to be done, however, arguments that the research is self-serving . . . gain in force and acceptance." Second, Brown concluded her letter with the following:

> A juror, congressman, scientist, or anyone else may feel free to substitute his scientific judgment for that of manufacturers or of a manufacturer's scientific staff, since, whatever may be the capabilities and expertise of company employees, they <u>are</u> employees and arguably cannot command either the independence, depth nor breadth of the great research institutions and career research personnel concerned with the objective elucidation of the nature and causes of chronic disease.

03659023-9025 at 9024-9025 (US 87177) (A) (emphasis in original).

1615. In a November 8, 1994 letter to James F. Glenn, Chairman of the Board and Chief Executive Officer of CTR, James Todd, Executive Vice President of the American Medical Association, wrote,

> Between 1954 and 1991, the Council for Tobacco Research spent over $185 million for 1,246 original articles by more than 850 scientists. While this seems to be a considerable sum, it should be compared with the advertising budget of the tobacco industry, about $5.2 billion in 1993 alone. A survey of industry-funded scientists revealed that nearly 80% of them indicated that none of their research had ever examined the health effects of tobacco use. . . . US District Court Judge H. Lee Sarokin, after reviewing tobacco industry "research" data in two tobacco product liability cases in the early 1990's, wrote that ". . . the creation of [the tobacco industry research institutes] and the work performed was nothing but a hoax created for public relations purposes with no intention of seeking the truth or publishing it."

88024858-4859 at 4858 (US 56358) (A).

(b) CTR Used Its Scientific Advisory Board as a Smokescreen

1616. By directing attention to the SAB, Defendants gave the appearance of furthering independent research efforts. However, the true aim was to preserve and foster false doubt about the adverse health effects of smoking in order to dissuade existing smokers from quitting and encourage non-smokers to start. TIMN0077551-7554 (US 63585) (A); Brandt WD, 124:11-127:10.

1617. Members of the SAB were initially screened and selected by representatives of Hill & Knowlton, a public relations firm (retained by TIRC), Defendants' attorneys, and Cigarette Company Defendants' research directors. TLT090 2041-2064 (US 88360) (A); Kessler WD, 51:18-52:14.

1618. Defendants and their agents represented in public and in court that the SAB grant process functioned independently from industry influence and was the mechanism by which they were fulfilling the obligations they had undertaken in the Frank Statement and elsewhere. In fact, Defendants "deliberately isolated" the SAB from the activities ongoing in other parts of CTR so that the SAB could be held out as a group of independent scientists, while the rest of CTR operated under Defendants' control. 670307892-7894 at 7893 (US 20967) (O); 515772203-2211 at 2210-2211 (US 87024) (A).

1619. An October 19, 1954 document titled "Confidential Report – Tobacco Industry Research Committee Meeting," reported that Clarence Cook Little, TIRC's Scientific Director, advised TIRC's membership on the SAB's "viewpoint": "He declared that both he and the members of the Board were aware of the attacks which had been made on tobacco for over 200 years, and wished to build a foundation of research sufficiently strong to arrest continuing or future attacks." HT0145314-5316 at 5314 (US 21771) (A).

(c) In Reality, CTR Was Controlled by Industry Executives and Lawyers for Their Own Purposes

(i) General Control of CTR

1620. Cigarette Company Defendants, through their attorneys and other agents, took an active role in controlling TIRC/CTR's research and other priorities. 503655086-5088 (US 20720) (A). They used this control to frequently intervene in CTR's business decisions. 01346193-6196 (US 20046) (A).

1621. Despite all of their efforts to channel research away from anything that might be damaging to the industry, some of CTR's research efforts, however, did generate results showing that smoking causes disease. In those instances, the evidence shows that Defendants actively sought to restrict, and did restrict, the dissemination or publication of adverse research. 2048924986-5018 at 5001 (US 21694) (O).

1622. In a July 3, 1963 cable, Addison Yeaman, Vice President and General Counsel of B&W, indicated that William Hoyt, Executive Secretary of CTR, had:

> agreed to **withhold disclosure** [of] Battelle report to [CTR] members **or SAB until further notice from me**. Finch [CEO of Brown & Williamson] agrees submission Battelle or Griffith developments to Surgeon General undesirable and we agree continuance of Battelle work useful but disturbed at its implications re cardiovascular disorders. We believe combination Battelle work and Griffith's developments have implications which increase desirability [of] reevaluation [of CTR] and reassessment [of] fundamental policy re health.

689033422-3422 (US 22734) (A) (emphasis added).

1623. In a November 18, 1965 memorandum titled "Re: Council for Tobacco Research - U.S.A.," which discussed the proposed budget for 1966 for studies in "Whole smoke," "Oral

Cavity," and "Epidemiology, " Liggett counsel Frederick Haas noted:

> As a result of a conference held by the General Counsel, we broached another subject with the Council staff. In view of the present posture of the industry with the Congress, Federal Trade Commission, etc., it was suggested that the organization of the Council be further implemented by creating an Industry Projects Advisory Board, which could feed suggestions for research to the staff. [The Board] would consist of General Counsel with the aid and advice of the Ad Hoc Committee and . . . the staff of the Council . . . would evaluate whether the project would be likely to obtain SAB approval.

LG2002635-2638 at 2635-2637 (US 21201) (O).

1624. A 1966 B&W document attaching the minutes of a meeting of General Counsel from December 17, 1965, described how CTR research proposals were reviewed and approved by lawyers:

> The Ad Hoc Committee submitted its 'priorities' selected from the recommendations for specific research presented to General Counsel at an earlier meeting. . . . The Ad Hoc Committee divided the proposals referred to into three categories: Category A: Projects essentially of an 'adversary' value. These are considered to have a relatively high priority. Category B: Research having a generally defensive character. Category C: Basic research.

CTRMN041346-1350 at 1349 (US 21944) (O).

1625. During the 1970s, CTR's Industry Research Committee – comprised of the cigarette manufacturers' attorneys and public relations employees – considered what research CTR should conduct and developed research projects accordingly. In a November 4, 1978 memorandum, Janet C. Brown, an attorney for American Tobacco, explained that the industry had "moved closer to becoming the arbiter of the amount of CTR research done (by reason of its control of CTR's budget) and the type of research done (by reason of the changes in scope and

direction of research, as dictated by [Addison] Yeaman's letter)." BWX0007531-7548 at 7545 (US 36238) (O).

1626. In a March 23, 1973 handwritten note to Robert C. Hockett, CTR Scientific Director, Helmut Wakeham, Director of Research and Development for Philip Morris, rated forty-four scientists as to "which ones might have greatest benefit to the [tobacco] industry." The note ended, "[u]se [the ratings] for what you think they might be worth and throw the paper away." 87657627-7629 at 7627 (US 21097) (O).

1627. On August 23, 1973, Edwin J. Jacob, long-time tobacco industry counsel, wrote:

> CTR has determined that it does not wish to participate in Homburger's sub-committee effort at establishing smoking machine standards for biological research. . . . we might be in an unfortunate posture if CTR did not participate and the committee formulated standards at substantial variance with CTR's ultimate results. After some discussion of the details, it was agreed that Hockett would talk to Homburger with the objective of getting Homburger to postpone his effort.

680252584-2584 (US 20994) (O).

1628. In a November 3,1978 letter, Sheldon Sommers, Chairman of the CTR Scientific Advisory Board, complained to William Gardner, CTR Scientific Director, that he (Sommers) was unable to understand the legal counsel he was being given. The clear import of Sommers' letter was that the CTR lawyers were controlling tobacco research by CTR based upon legal considerations. Sommers also stated, "I think CTR should be renamed Council for Legally Permitted Tobacco Research, CLIPT for short." 11319256-9256 (US 20281) (A).

1629. On April 4, 1978, Ernest Pepples, Senior Vice President and General Counsel of B&W, wrote a letter to several high-ranking B&W officials regarding American Tobacco's

conclusion

> that part of the central nervous system/nicotine work poses a question with respect to the assurances which the companies gave to the Justice Department to the effect that none of the scientific work at CTR would have commercial application. Philip Morris and Lorillard concur in the view that some of the central nervous system (CNS) work has commercial overtones, specifically work which would lead to blocking agents or substitutes for nicotine. The Committee of Counsel worked out a compromise: the ongoing CNS work under contract would continue, but before CTR embarked on any new work, research applications in the CNS/nicotine area would be pre-screened before being submitted to the CTR SAB.

680212421-2423 at 2421 (US 54024) (A).

1630. At a special meeting on April 21, 1978, CTR's Board of Directors adopted the following resolution: "RESOLVED, that funds may be committed to any research project only when, in the opinion of the Corporation's legal counsel, that commitment is within the scope of the Corporation's legally permissible activities." CTRMINBD000130-0134 at 0132 (US 21463) (A); Third Amended Response of Defendant CTR to United States' Second Set of Individual Interrogatories, Interrogatory Nos. 3 and 4 (March 29, 2004) (US 86773) (A).

1631. Beginning in April 1978, W. Thomas Hoyt, CTR's Executive Vice President (and then President after October 1980) determined which grant applications should be reviewed by CTR's legal counsel, Jacob & Medinger. As a result, at least eight CNS research proposals were reviewed by CTR lawyers and not sent on to the CTR SAB. In addition, at least fifteen additional CNS research proposals were reviewed by lawyers without being sent to, or prior to copies being sent to, the full SAB for their review, or even after review of those same proposals by the SAB Executive Committee. Third Amended Response of Defendant CTR to United States' Second Set of Individual Interrogatories, Interrogatory Nos. 3 and 4 (March 29, 2004) (US

86773) (A).

1632. In an October 25, 1978 Philip Morris internal memorandum regarding the October 18-20, 1978 CTR meeting, Robert B. Seligman stated that:

> I discussed the recent CTR meeting with Preston Leake. As Chairman of the Industry Technical Committee, he was present at the grant approval meeting of CTR. As a matter of background, Preston indicated that at the mid-1978 meeting Ed Jacobs appeared to warn the SAB against approving work in the area of CNS stimulation. The SAB reacted vehemently claiming it was a legal problem and leave the science to them. They also indicated that they were not being paid adequately. At the most recent meeting, Ed Jacobs was not present but Ad Yeaman said that certain grants would be 'reviewed' by counsel after receiving SAB approval. The CNS study grant would certainly fall in that category.

2075573034-3034 (US 43681) (O).

1633. Numerous industry documents demonstrate correspondence among Defendants concerning what research CTR should and should not conduct. For example, a November 13, 1978 Philip Morris "confidential" interoffice correspondence recommended long term plans for CTR, stating that

> CTR should be controlled both legally and scientifically by representatives of the industry. . . . CTR should fund work largely by means of contracts, thus reserving the right to control publications which might be detrimental to the industry. . . . [t]he long-term scientific program should be carefully planned such that the results obtained should not be able to harm the industry.

The memorandum further specified "Subjects to be Avoided – 1. Developing new tests for carcinogenicity. 2. Attempt to relate human disease to smoking. 3. Conduct experiments which require large doses of carcinogen to show additive effect of smoking." 1000036500-6502 at 6500, 6502 (US 35094) (O).

1634. An undated slide presentation outlined five "Funding Sources of Tobacco Industry Research" and focused on the 1980 to In an April 23, 1990 letter, Charles Wall, a Shook, Hardy & Bacon lawyer, advised Arthur J. Stevens, Senior Vice President and General Counsel of Lorillard, on a possible name change for CTR, the appointment of non-tobacco industry scientific board members, and the use of a public relations firm so that CTR would have a more favorable perception in litigation. He hoped that as a result of these actions, "it will be more difficult for plaintiffs to mischaracterize the true independence and objectivity of the scientific research effort." TIMN0015297-5299 at 5298-5299 (US 21287) (A).

1635. In an October 15, 1991 letter, Shook, Hardy & Bacon attorney Bill Allinder provided the proposed CTR Defensive Statement "to be used in the event further inquiries are made about the articles appearing in the American Journal of Public Health . . . ." Allinder went on to comment about the draft and stated that he and Robert Northrip (a colleague at Shook, Hardy & Bacon) "do not object to [the] changes except for the sentence [] added to the second paragraph: 'CTR's grantees publish the results of their research in peer reviewed scientific journals.' Taken at face value, this statement is not entirely accurate." 86000272-0278 at 0272 (US 22205) (A).

(ii) Control of Research Through CTR Contract Work

1636. In a December 6, 1977 letter to Addison Yeaman, then-President of CTR, Robert Heimann, CEO of American Tobacco, expressed his discontent with the direction of CTR. He wrote:

> This we can no longer say since what is called "directed" or "contract" research has been brought into the picture. As I remarked at the September 1976 meeting, the original concept of T.I.R.C. did not embrace the idea of contract research but envisioned industry support of research on a pro bono publico,

> arm's-length basis. I believe the current movement toward contract research is a violation of our advertised pledges to the public and I also believe industry support of objective and independent scientific research is of cardinal importance in maintaining a statesmanlike stance. I do not think it would be an exaggeration to say that the current shift to contract research bastardizes a fine concept of objectivity which many good people in past years worked long and hard to establish.

1000255934-5936 at 5934-5935 (US 20084) (A) (emphasis in original).

1637. A December 12, 1977 "Confidential" B&W memorandum from Ernest Pepples to J.E. Edens and C.I. McCarty also described the nature of the growing concern. In it, Pepples advised that there were individuals who took "exception to the program of directed, contract work under which the staff of the CTR has laid out a plan of research" and explained that the concern stemmed from a request by a CTR staff member to conduct "certain short term tests on smoke fractions." Pepples explained that these tests were:

> **[R]ed light tests**. They have been developed for use by FDA and other agencies in possibly identifying harmful ingredients and substances in products which are available to the consuming public. **They show only a probability of trouble but are used as a signal in determining whether products should be yanked off the market**. . . . American evidently is concerned, and I share the concern to some extent, that a finding under a CTR contract of red lights in one of these tests as it applies to cigarette smoke fractions would be very difficult to explain away. . . . **the fact of the red light in our own hands would be a serious burden to the tobacco industry if it came out in legislative hearings or in litigation**.

680261196-1197 (US 28074) (A) (emphasis added).

1638. On March 16, 1978, Arthur J. Stevens, Vice President and General Counsel of Lorillard, prepared a conference summary of Defendants' concerns about whether CTR should be an independent organization. Stevens wrote:

> American and other companies dismayed at direction of CTR research. (Heimann letter) opposed to contract research. American (and apparently others) convinced that Gardner and Kreisher are committed to attempting to demonstrate how tobacco smoke causes disease, rather than whether it causes disease. (Yeaman disputes this impression). Question whether CTR can be said to be independent when it is conducting its own proposed research, through contracts, rather than through grants. . . . Does Industry still want/need independent, objective SAB and Staff.

80410972-0976 at 0972, 0974 (US 21058) (A) (emphasis in original); Stevens WD, 35:2-22.

1639. At that time, contract research was undertaken at the specific request of the CTR staff. An undated document with a handwritten notation at the top marked "CTR" discussed the CTR contract work. The document stated: "We made the assumption that work should be self-serving to the industry, therefore, it should be contract work so that the disposition of the results will be under complete control of the industry. Divided into three categories: 1) Knowledge would benefit the tobacco industry. 2) Knowledge would be more broadly beneficial. 3) Work which should be avoided." 1003718457-8457 (US 85934) (A) (emphasis in original).

1640. An April 4, 1978 internal B&W letter from Ernest Pepples, Senior Vice President and General Counsel of B&W, to J.E. Edens, C.I. McCarty, I.W. Hughes and DeBaun Bryant, dated April 4, 1978, also discussed CTR's contract research. In it, Pepples reported:

> American, RJR and PM continue to harbor doubts concerning the operation and direction of CTR. . . . [Heimann's] letter took strong exception to the program of directed, contract work under which the staff of CTR plans and directs the research. Heimann says CTR should be a grantor organization and nothing more. In Heimann's view, CTR should make grants to reputable scientists who are exploring areas of interest in the smoking and health controversy and the grantees, as opposed to CTR, should be responsible for the plan of research. It is a distinction without much difference but American embraces it warmly nonetheless.

680212421-2423 at 2421 (US 54024) (A).

(aa) Suppression of Dr. Homburger's Work

1641. Contract research at CTR had begun as early as the late 1960s. By 1970, there were signed contracts between CTR and Bio-Research Consultants, Inc. (researcher Fred Homburger's company) related to experiments concerning smoke inhalation in Syrian golden hamsters. 11225358-5365 (US 25876) (O); Lisanti PD, Engle v. R.J. Reynolds Tobacco Co., 8/13/97, 105:7-108:3, 121:1-122:12, 124:11-125:2.

1642. In 1973, CTR decided not to renew its contract with Bio-Research Consultants, Inc., which greatly upset Homburger. He then alleged that members of the tobacco industry attempted to censure his work, which he argued produced results of pre-invasive carcinoma in the larynx and two malignant tumors of the nasopharynx. MB000253-0253 (US 76114) (A); TEH15425-5425 (US 25888) (O); 11066169-6177 (US 25891) (O); CTRCONTRACTS006059-6059 (US 85936) (O); 11066189-6190 (US 25892) (O); MB000255-0255 (US 26031) (O); 11225380-5383 (US 25878) (O); 01195572-5573 (US 26443) (A); MB000256-0256 (US 26032) (O); MB000257-0257 (US 26033) (O); 1000283966-3967 (US 26081) (O); CTRCONTRACTS005507-5508 (JE-25877) (A); 503654905-4906 (US 85938) (O); ZN23135-3135 (US 66274) (O); 11225204-5204 (US 25875) (O); ZN6241-6244 (US 85939) (O); 2022886197-6198 (US 20367) (O); ZN23133-3133 (US 85940) (O); CTRCONTRACTS005740-5741 (JE-25882) (O); CTRMNZN475-477 at 477 (US 21160) (O); 1005075456-5456 (US 26188) (O); 2025498564-8597 (US 66671*) (O); HHS0681984-1986 (US 85941) (O).

1643. In April 1974, Leonard Zahn, CTR's public relations advisor, "[g]ot [Homburger's] press conference killed without his knowing why or how." In a confidential memorandum to CTR President Henry Ramm and CTR employee W. Thomas Hoyt, Zahn described how he found out that a press conference had been scheduled for Homburger during

the American Society of Experimental Pathology ("ASEP") meeting in Atlantic City at which Homburger was going "to tell the press that the tobacco industry was attempting to suppress important scientific information about the harmful effects of smoking" and "was going to point specifically at CTR." Zahn spoke unfavorably about Homburger with his "long-time friend" Judy Graves, the ASEP public information officer, and a few hours later, Graves called Zahn at his hotel; gave Zahn permission to arrange to cancel the press conference (which he did); and called Homburger and told him the press conference had been canceled because of "scheduling difficulties in the press room." Zahn also spoke with the head of the press room so that when Homburger came to the press room the day after presenting his paper at the meeting, he was given a cordial welcome and was "nicely 'hastened' out the door." Zahn ended his memo with the following post script: "P.S. I doubt if you or Tom will want to retain this note." CTRMNZN475-477 at 477 (US 21160) (O); 2022886197-6198 (US 20367) (O); Zahn PD, Cipollone v. Liggett, 12/16/86, 171:11-23; Zahn PD, Massachusetts v. Philip Morris, 5/28/99, 181:13-186:16, 187:24-188:14, 189:16-191:5; Zahn PD, Richardson v. Philip Morris, 12/1/98, 250:6-254:18.

(bb) Suppression of Work Done at Microbiological Associates, Inc.

1644. CTR continued, however, to perform contract research. For many years, CTR entered into long-term contracts with Microbiological Associates, Inc. ("MAI") to perform inhalation experiments on mice, expending "some 12 million dollars into the contracts with MA." The first proposal submitted by MA was in 1969. As a result of the contracts, CTR staff routinely went on site visits to monitor the contract work performed at MA, which was receiving millions of cigarettes from CTR to use in connection with the contract research it performed on

CTR's behalf. CTRCONTRACTS026326-6363 (US 32521) (O); CTRCONTRACTS001667-1667 (US 85943) (O); 11221371-1371 (US 86616) (O); 11223018-3018 (US 86617) (O); CTRCONTRACTS003211-3212 (US 85944) (O); SF0370024-0024 (US 65434) (O); 11223231-3231 (US 85947) (O); SF0370027-0027 (US 65435) (O); CTRCONTRACTS028836-8838 (US 85949) (O); HK1118020-8021 (US 85950) (O); 10006317-6319 (US 86618) (O); SF0826731-6731 (US 65441) (O); 10036226-6230 (US 86620) (O); CTRCONTRACTS026364-6364 (US 32559) (O).

1645. By the late 1970s, the contract work performed for CTR at MA was causing growing concern. A November 30, 1976 memorandum from Janet Brown, an attorney at Chadbourne & Parke, to Arnold Henson, counsel for American Tobacco, detailed her concerns with the contract research being performed at MA. BWX0003940-3948 (US 36215) (O).

1646. Dr. Carol Henry was hired by Microbiological Associates in 1976 to be a project director for a contract already in existence with and funded by CTR, and ultimately ended up as the project director for the inhalation facility for the project (the inhalation facility was built to expose animals to cigarette smoke). As Dr. Henry noted, "Dr. Kouri and his colleagues at Micro had done some of the very early and important work to show that these enzyme systems could what's called activate these chemicals to be more closely aligned with those chemicals that might cause cancer. What I was very attracted to Micro about is that at the time much of the emphasis in obtaining enzymes was from liver systems, and Micro offered the opportunity to really look at lung systems and a variety of other tissues to really understand how this might work." Dr. Henry believed that the study (the long-term mouse inhalation study) was scientifically important, and that the results of the experiment supported the hypothesis that cigarette smoking causes lung cancer. Henry PD, State of Florida v. American Tobacco Co., 7/31/97, 15:11-23, 17:12-23, 18:9-

19:14, 21:25-22:3, 38:11-12, 42:3-24.

1647. Yet in a November 29, 1977 Philip Morris Inter-Office Correspondence to Robert Seligman, Vice President of Research and Development for Philip Morris, Thomas Osdene offered his comments on the CTR program review session Osdene had attended, observing:

> I was amazed at the trend that the CTR work is taking. For openers Dr. Donald H. Ford, a new staff member, makes the following quote[]: . . . "We accept the fact that nicotine is habituating." . . . It is my strong feeling that with the progress that has been claimed, we are in the process of digging our own grave. I believe that the program as set up has the potential of great damage to the industry and I strongly urge that the whole relationship of our Company to CTR be carefully reviewed. I am very much afraid that the direction of the work being taken by CTR is totally detrimental to our position and undermines the public posture we have taken to outsiders.

2022246952-6952 (US 36865) (O).

1648. In a January 10, 1978 memorandum, Thomas Osdene reported that "[a]t Mr. Goldsmith's request, Dr. Seligman, Mr. Holtzman, and I met with Dr. Gardner, Dr. Hockett and Mr. Hoyt at the CTR offices in New York. The objective was to review the contracts carried out by Microbiological Associates[.]" With respect to the contract involving human studies involving aryl hydrocarbon hydroxylase ("AHH"), Osdene stated: "I believe that even if a standardized test is perfected for the determination of AHH in humans, its use could well be manipulated to obtain simplistic deductions on cause and effect relationships. It is my recommendation that CTR cease work in this specific area of human studies." 1000041904-1905 at 1904 (US 35103) (A).

1649. The troubling issue of contract research at CTR was discussed at a Meeting of Counsel on February 1, 1978. In attendance at the meeting were: Addison Yeaman (Chairman

and President of CTR); Stevens (Lorillard); Ahrensfeld and Holtzman (Philip Morris); Shinn and Sirridge (Shook, Hardy & Bacon); Roemer, Crohn, and Jacob (RJR); Pepples (B&W); and Janet Brown (Chadbourne & Parke). At the meeting, Brown argued that CTR contract research was problematic because:

> Contract research results and their publication, by contrast, would be argued by the industry's opponents to be industry findings. Outright disavowal, particularly on the issue of "relevance," is going to be utterly unconvincing. On what basis would the industry underwrite contracts for "saccharin-type" (or any other) research if it did not believe the research to be material to problems of "smoking carcinogenicity"? Publication of contract research exacerbates the problem, since CTR's contracts give it control over publication.

Jacob noted that:

> CTR independence is arguably belied by several of its functions. CTR Special Projects, though perfectly sound research, are frankly designed to support industry arguments. The Information Storage and Retrieval System, a part of the CTR Library, is designed and maintained as a legal, rather than as a "scientific" literature research tool.

Shinn opined that:

> [T]he whole current force of the industry's [TI's] appeal to its supporters – as well as its answers to its critics – is assertion of industry dedication to research. The research effort is now the vital element in Kornegay's position with Congress, the Executive, HEW, NIH, and in TI's response on the "public smoking issues" and to the various governmental and voluntary agency anti-smoking drives.

It was also apparent that there were serious disagreements with John Kreisher's viewpoints at CTR. Brown reported that:

> Yeaman felt that much of the members' current dissatisfaction really reflected dissatisfaction with Kreisher and his attitudes.

> Kreisher is also a cause of internal staff dissatisfaction and Yeaman would have no difficulty in recommending to Gardner that Kreisher be separated. Gardner himself complains that Kreisher goes off on "junkets" without telling Gardner where or when he is going, and that Kreisher never files reports on time. Kreisher has been openly critical to outside scientists of Gardner – whom he has called incompetent – of Yeaman – whom he has called "absolutely controlled by the industry" – and of CTR, which he has said is run by the lawyers. Yeaman feels that this conduct constitutes ample reason to fire Kreisher for cause. . . . The real dispute was whether Kreisher should be given a "generous termination" [e.g., a years' salary] together with a consulting contract (for a year or more). . . . Roemer would want a clause providing that Kreisher would not do anything against the interests of CTR and the industry.

BWX0013406-3437 at 3409, 3410, 3425-3426 (US 36250) (A).

1650. In an April 4, 1978 B&W letter from Ernest Pepples to J.E. Edens, C.I. McCarty, I.W. Hughes, and DeBaun Bryant dated April 4, 1978, Ernest Pepples discussed his concern over CTR contract research, reporting that:

> Dr. Charlie Sommers believes that some of the contract work [at CTR] has gone too far afield – "It seems to have a life of its own." He recently found that the massive, expensive inhalation program being conducted at Microbiological Associates was not going forward in areas which he understood it would be by this time and that it was doing some things that surprised him. Dr. Sommers is the Chairman of the Scientific Advisory Board. He will lead the SAB later this month in a review of the contract work . . . .

680212421-2423 at 2422 (US 54024) (A).

1651. In a November 13, 1978 Philip Morris memorandum, Thomas Osdene recommended restructuring CTR because "CTR as originally structured may have outlived its usefulness, especially in the area of P.R." Osdene proposed that

> CTR should be controlled both legally and scientifically by representatives of the industry. . . . CTR should fund work largely by means of contracts, thus reserving the right to control publications which might be detrimental to the industry. . . . The

> long-term scientific program should be carefully planned such that the results obtained should not be able to harm the industry. . . . There should be a greater participation by industry scientists in contracts and/or grants given by CTR.

Osdene went on to include a list of "Potential Long-Term Scientific Studies" and under the heading, "Subjects To Be Avoided," Osdene listed: "1. Developing new tests for carcinogenicity. 2. Attempt to relate human disease to smoking. 3. Conduct experiments which require large doses of carcinogen to show additive effect of smoking." The list of potential long-term scientific studies and list of subjects to be avoided were then shared with Alexander Spears of Lorillard. 2021016008-6010 (US 85952) (A); 1003718406-8408 (US 35899) (A).

1652. In a January 8, 1979 Philip Morris internal memorandum, Osdene commented on the MA contract work: "I am forced of the opinion that the program seems to be misdirected since its main mission seems to be to prove that smoking causes cancer." 2075573037-3038 at 3038 (US 24708) (O).

1653. As a result of "the concerns about having a large contract where we were investigating a wide variety of elements and issues in carcinogenesis and its relationship to – and cigarette smoke in relationship to carcinogenesis . . . eventually the [MA inhalation] contract was then phased down, and we were told that the Council [for Tobacco Research] did not choose to have any further contracts. They wanted to have all of their work done under grants." Dr. Henry was told of this change by staff from CTR and CTR's attorneys. 31:16-21. As Dr. Henry noted, "as things progressed . . . the presence and interaction with attorneys increased dramatically." She observed that in all her years that she has had contracts, she never had this kind of involvement by lawyers. Henry PD, State of Florida v. American Tobacco Co., 7/31/97, 30:17-31:3, 32:6-8, 44:14-24.

1654. Dr. Henry characterized the decision to shut down the study as "scientifically ill-advised, for the reasons that this is a very large, important industry that had lots of customers, lots of clients, and to not be able to answer in a credible way fundamental questions about the potential of this material to be causing serious disease, not just cancer but other diseases, it seemed to me that this was not an advisable thing to do." She added, "I would conclude that the concerns that were raised about the way the research was going and what we might eventually develop given the kinds of results we had to date, that there must have been concerns that this would damage the industry." Henry PD, State of Florida v. American Tobacco Co., 7/31/97, 45:23-46:6, 48:4-9.

1655. Consequently, in a June 23, 1980 letter, Ernest Pepples, Vice President and General Counsel of B&W, stated that "Add Yeaman advises that the Executive Committee of the SAB has decided to terminate the massive inhalation program at Microbiological Associates." Completion of research begun under contract between CTR and MA continued through approximately 1982. 01347166-7166 (US 85953) (O); SF0220081-0082 (US 65431) (O); SF0280056-0109 (US 65432) (O); 11246158-6158 (US 86622) (O); CTRCONTRACTS026364-6364 (US 32559) (O); Lisanti PD, Arch v. American Tobacco Co., Inc., 7/18/97, 344:13-348:16.

1656. In 1983, CTR requested a final manuscript concerning the work performed at MA. After manipulating the text of the manuscript and adding an introduction drafted by Sheldon C. Sommers, CTR Scientific Director, CTR published the manuscript as a book entitled "Chronic Exposure of Mice to Cigarette Smoke." CTRCONTRACTS026364-6364 (US 32559) (O); SF0280114-0114 (US 65433) (O); CTRCONTRACTS025150-5150 (US 85956) (O); CTR98CONG00071-0071 (US 32519) (O); CTR98CONG00073-0073 (US 32520) (O); CTRMIN-BD 000147-0152 (US 32590) (A); TI05120118-0120 (US 85959) (O); TI05120131-

0149 (US 85960) (O); 60026806-6908 (JD-094474) (A).

1657. Dr. Henry had attempted to write up the results of the study but her work was monitored by Dr. Gardner at CTR and "there were definitely directives from the attorneys . . . [f]or the Council . . . [t]he person I remember most vividly was Mr. Finnegan [Tim Finnegan, from Jacobs, Medinger & Finnegan]. She noted, "Mr. Finnegan appeared to have very strong feelings and directions about what should and should not be in this report." As to the idea of having lawyers look over her shoulder and being involved in the writing of the report and placing limits on what could be said, "I objected to it and said that because the shape of the report, of the final report was altered, it – and I was told that the sponsor had the authority to dictate this." Henry PD, State of Florida v. American Tobacco Co., 7/31/97, 49:7-50:5, 50:19-51:2, 51:25-52:2, 52:5-22.

1658. Dr. Henry noted that when CTR ultimately published "Chronic Exposure of Mice to Cigarette Smoke," Dr. Henry was unaware it was being published and did not give her permission to publish in the form in which it was published. The book contained a forward by Dr. Sheldon Sommers of CTR., and though Dr. Henry believed that the results of her study "suggested definitely a carcinogenic response in this animal model after exposure to smoke," that conclusion is **not** in what CTR published. Henry PD, State of Florida v. American Tobacco Co., 7/31/97, 61:3-62:11, 65:3-8, 65:9-66:4, 70:7-14.

(cc) Suppression of Dr. Huber's Work

1659. Industry lawyers also controlled research conducted by allegedly "independent" scientists. In the 1970s, the tobacco manufacturers sponsored research at Harvard University. The funding of this research was controlled by the Committee of Counsel and executives of the companies. A June 7,1976 letter from senior industry counsel, David Hardy, stated:

> In Bill Shinn's letter to you of May 21, he solicited at my request, any observations or comments that you may have with regard to the renewal of the Harvard University project. This project has been handled in the past by the Committee of Counsel and the executives of the companies, but I wanted to find out if any member of the Research Liaison Committee had any observations.

03748208-8208 (US 20601) (O).

1660. Gary Huber was the principal investigator in charge of the research program at Harvard University relating to smoking and health. The program was funded in part by a five-year grant, and a three-year extension of that grant, from the Defendants. Huber has stated that, in approximately 1980, he met with Defendants' lawyers in a hotel in Boston who told him that his research was "getting too close to some things." Huber identified these attorneys as lawyers from Shook, Hardy & Bacon, as well as lawyers from Lorillard and B&W. Huber PD, State of Texas v. American Tobacco, 9/20/97, 46:6-9, 46:12-24; Stevens WD, 36:5-9.

1661. Confirming that industry lawyers controlled the funding for his research, Huber testified as follows:

> Q. Were the [Harvard] studies important information, in your opinion, when you reported those findings to scientists?
>
> A. Yes.
>
> Q. An did you stress their importance to industry officials?
>
> A. Very much so.
>
> Q. And did you want to go forward and do further studies with animals?
>
> A. Absolutely.
>
> Q. Why?
>
> A. Well, we found - - we found very important results and we felt that they should be pursued and they had impact on a number of very serious and important considerations that

deserved answers.

Q. Was money forthcoming from the cigarette company sponsors later for you to complete your animal studies after Harvard?

A. It was promised, but it never came.

Q. Were you, in fact, ever able to finish your experiments?

A. No.

. . .

Q. Did you ever have a meeting in a hotel in Boston with industry officials who expressed concern that your research was, quote, "getting too close to some things," end of quote?

A. Yes.

Q. And who was that, sir?

A. It was with the industry attorneys.

Huber PD, State of Texas v. American Tobacco, 9/20/97, 40:23-41:17, 46:6-9, 46:12-14.

1662. A "confidential" memorandum dated February 1, 1974 from Janet C. Brown to Cyril Hetsko regarding the "Harvard Project Report of Dr. Gary L. Huber at the Tobacco Institute Meeting of January 31, 1974, the Regency Hotel, New York City" summarized the status of Dr. Huber's industry-sponsored research. It stated: "I asked Shinn if it had not been one of the agreed conditions of the industry grant that Channing would consult only Hardy in the event Huber needed help from the industry, that Hardy would take the matter up with the counsel for the companies involved, and that counsel would then decide what assistance would be given and by whom. Shinn's reply was 'Fifth Amendment.'" 968003194-3198 at 3196 (US 58194) (O). Dr. Huber's work is also discussed at US FF § III.A(2), supra.

(iii) CTR Special Projects

1663. While Defendants promoted the SAB as an "independent" board, they funneled funds through TIRC/CTR to conduct non-SAB approved research projects that were not objective or independent as promised, but instead were designed to conclude that there was no link between smoking and disease and to develop favorable research and expert witnesses to defend the industry in court. These research projects, known as TIRC/CTR Special Projects, were initiated and developed by Defendants through their agents, including outside counsel, who used them to provide research funding for scientists and doctors who might be willing to provide testimony favorable to the cigarette companies on smoking and health matters. The funding of Special Projects was handled by Defendants' agents, including the law firms of Jacob, Medinger & Finnegan and Shook, Hardy & Bacon. 92456261-6268 at 6262 (US 75420) (A); 2045752086-2093 (US 20466) (A); Donald Hoel PD, United States v. Philip Morris, 6/27/02, 56:9-20; 57:13-18.

1664. CTR Special Projects came into being in the mid-1960s when

> it was decided to undertake various special projects in the form of contract research, pilot and exploratory studies, short-term research projects and other projects – such as preparation of bibliographic reviews and analytical monographs – whose character would render them narrower in scope than the broader objectives of the Advisory Board's grants-in-aid program.

CTRMN007485-7490 at 7486 (US 21157) (A).

1665. CTR Special Projects were funded by Defendants' attorneys when the SAB would not approve grant funding for a proposed research project or when the cigarette companies needed favorable research performed for litigation purposes, and wanted it done quickly. LG2002635-2638 at 2637 (US 21201) (O); 504480626-0629 at 0628 (US 20730) (O);

515772203-2211 at 2204, 2207 (US 87024) (A).

1666. In a February 22, 1980 letter to Timothy M. Finnegan, (a Jacob & Medinger attorney), Arthur J. Stevens, Senior Vice President and General Counsel of Lorillard, responded to an earlier memorandum from Finnegan seeking approval for a project to be funded from Special Account #4. Stevens agreed to participate in the funding of the project, and noted:

> I am mindful of the continuing mandate with which your office, Shook, Hardy and others have been charged by your respective clients on behalf of the Industry; that is, to find witnesses and researchers – and, if necessary in order to determine the feasibility of developing a relationship with them, engage them as consultants, or as researchers on initially modest projects. . . . There resides within the Company a good deal of tobacco chemistry expertise. Perhaps some effort should be made by us, as lawyers, to the extent consistent with our concerns about legal privilege and related protections, to more frequently tap that knowledge, by using our own scientists as consultants to our litigation counsel regarding the research methodologies and proposals suggested by those scientists we engage to conduct independent research.

TI17101942-1944 at 1943 (US 62476) (A).

1667. Defendants knew that CTR Special Projects work was not independent science. Notes from a "Meeting of Committee of General Counsel Held on September 10, 1981" expressed concern about the "degree to which we make advocacy primary and science becomes secondary" and that, to aid in litigation, the companies, through Special Projects, were funding science that was "not worth a damn." 2045752086-2093 at 2086, 2090 (US 20466) (A).

1668. On October 11, 1985, RJR attorneys received a memorandum regarding a meeting held August 8, 1985 to discuss the history of industry Research & Development, especially the history of CTR, and also the issue of CTR document production. The document made clear that CTR, the Tobacco Institute, Special Projects, and Special Account #4 Projects were initiated to

protect industry interests in litigation and public relations. 512678484-8499 (US 51653) (O).

1669. The General Counsel of Philip Morris, RJR, Lorillard, Liggett, B&W, and American Tobacco began using research funds to pay for large numbers of CTR Special Projects. From at least 1965 to 1993, hundreds of mail and wire communications occurred among the members of the Committee of Counsel, Jacob, Medinger & Finnegan, and Shook, Hardy & Bacon regarding information and funding approval for individual CTR Special Projects. 92456261-6268 (US 75420) (A); 01335358-5359 (US 26485) (A).

1670. CTR Special Projects were funded based on contributions received from interested CTR member tobacco companies and these company contributions were specifically earmarked for Special Projects. Shook, Hardy & Bacon attorney Donald Hoel found that the CTR Special Projects were much more useful in supporting tobacco liability positions than the projects funded through the SAB. Donald Hoel PD, United States v. Philip Morris, 6/27/02, 65:9-12; 65:14-19; 67:3-7.

1671. Attorneys approved Defendants' funding of CTR Special Projects and CTR President Thomas Hoyt assigned each project a number. 11330520-0520 (US 20282) (O).

1672. Starting in the mid-1960s, Shook, Hardy & Bacon, in order to assist in such projects, developed internal smoking and health literature databases to help the lawyers pick scientists friendly to the tobacco industry liability positions so that those scientists could receive industry funding through the CTR Special Projects method. Donald Hoel PD, United States v. Philip Morris, 6/27/02, 61:10-62:7; 62:11-13.

1673. In an April 14, 1967 memorandum, Addison Yeaman, General Counsel of B&W, revealed:

> We have deliberately isolated the SAB from those areas of research which they might consider were of a controversial or adversary nature and I see no reason why that isolation cannot and should not be maintained to the fullest preservation of the scientific integrity and dignity of the SAB, but with release of funds from the SAB portion of CTR's budget to both research directly related to tobacco and to the so-called Special Projects.

670307892-7894 at 7893 (US 20967) (O).

1674. In an October 3, 1968 letter to David Hardy of Shook, Hardy & Bacon, Alexander Holtzman, Assistant General Counsel of Philip Morris, proposed that CTR Special Projects funding be approved for a scientist, Richard Hickey, whose application to CTR for funding was previously turned down but who was likely to produce data useful to Defendants. The letter stated: "Dr. Hickey is willing to prepare a statement for Congress provided that he is put in a position to complete the analysis of data which he has in-hand and he would, in my opinion, make an excellent witness." 1005084784-4786 at 4784 (US 22988) (O).

1675. A November 17, 1978 memorandum written by Robert B. Seligman, Vice President of Research and Development for Philip Morris, noted that William Shinn, a Shook, Hardy & Bacon attorney, believed "that 'special projects' are the best way that monies are spent. On these projects, CTR has acted as a 'front'. . . ." 2045752106-2110 at 2107 (US 20467) (A); Stevens WD, 33:8-34:2.

1676. A September 10, 1981 memorandum from Arthur J. Stevens was titled "CTR and Non-CTR Special Projects - General Information." Under the topic of "Special Projects," Stevens stated: "We mean those projects which are initiated by lawyers, for advocacy purposes." He further noted: "CTR's Scientific Director reviews any project which the lawyers propose for funding through CTR to be certain it will not be a scientific embarrassment to CTR – but which,

for a variety of reasons, may not be suitable for grant by CTR." 03746184-6185 (US 20600) (A).

1677. As explained by one of Defendants' lawyers, Lee Stanford, in a July 13, 1984 memorandum to David Hardy, CTR Special Projects were:

> [I]nitiated and developed through outside counsel (SHB and J&M). A major purpose is to provide research funding for scientists who might be willing to act as consultants or provide testimony on smoking and health related areas. Sometimes the research subject is outside the scope of the CTR grants-in-aid program. Also, some scientists may have published findings not supportive of the causal theory or have views along these lines and may have problems of receiving support from NIH or other funding organizations. . . . In practice, outside counsel and the scientists develop the protocol and the budget proposal for the project. This is sent to the CTR Scientific Director (currently Dr. Sommers) for review. If he has no objection, the proposal is then sent to the Generals Counsel of the companies for their approval. Once the Generals Counsel have approved the project, the scientist is advised to submit application to CTR for funding. Other than providing the funding, CTR is not further involved in the project. Monitoring of the research and contact with the scientist is done through outside counsel. Funding ranges from $20,000 to as much as $400,000 for one year of Dr. Sterling's project.

92456261-6268 at 6262 (US 75420) (A); Stevens WD 20:8-22:9.

1678. When Special Projects came under scrutiny in the 1990s, many questions persisted. On April 28, 1992, counsel for Lorillard, David M. Murphy of Wachtell, Lipton, Rosen & Katz drafted an internal memorandum to partners requesting guidance on a question raised by Arthur Stevens of Lorillard and Bill Allinder of Shook, Hardy & Bacon regarding Lorillard's participation in CTR Special Project funding of Bennett Jensen despite legal advice to discontinue Special Project contributions. Murphy explained that Jensen "faces funding problems at Georgetown that . . . have something to do with his ties to the industry . . . and could use some funds to tide him over until he finds a new home." He added that "the Jensen issue raises a larger question -- whether 'CTR Special Projects' funds . . . were used to purchase

favorable judicial or legislative testimony, thereby perpetrating a fraud on the public." 87715635-5636 at 5636 (US 21101) (A).

1679. When CTR Special Projects became the focus of a grand jury investigation in the Eastern District of New York in the 1990s, an April 21, 1992 letter to Arthur Stevens from an outside lawyer for Lorillard disclosed that Special Projects were no longer administered under the auspices of the CTR pursuant to legal advice. 87715637-5638 (US 21102) (A).

1680. However, these projects did not lack funding. Defendants continued to fund such projects by placing them directly under the auspices of their agents and attorneys, who had long been involved in control of CTR Special Projects. In fact, Defendants continued to pay for the same projects through their outside law firms on a market share basis. 2015002730-2730 (US 20305) (A) (Bick funding request to be divided among five companies on market share basis); 2501190758-0759 (US 20562) (O) (1990/1991 research projects with budgets and funding amounts); 2015002794-2794 (US 20307) (A) (Philip Morris's approval of Dr. Bick's funding on market share basis in 1991); 521100040-0040 (US 20893) (O) (copy of B&W check to Dr. Sterling as requested by Shook, Hardy & Bacon, 1990); 521100027-0027 (US 22969) (O) (copy of B&W check to Dr. Sterling as requested by Shook, Hardy & Bacon, 1991); 86003336-3338 (US 85747) (A) (Shook, Hardy & Bacon forwarding Dr. Sterling's funding request to five counsel for tobacco companies, 1990).

1681. On May 11, 1993, Kendrick Wells (B&W attorney) sent a memorandum to S.P. Chalfen (an in house lawyer for B.A.T. Industries), Peter L. Clarke (General Counsel of BATCo), Andrew Foyle (Lovell White Durrant law firm), and Mick McGraw (B&W) providing a brief description of CTR Special Projects. In this memorandum, Wells stated that in the early 1960s, "the accounting work of collecting money from the companies and paying the researchers was

moved inside CTR, where it was called CTR Special Projects. The SP research projects continued to be directed by the litigators as before, only the grant money moved through CTR." The document stated that details of the "CTR story . . . should not be told to the public during the pendency of litigation in the U.S. involving assertions of fraud in connection with CTR's operations." 536300013-0014 (US 53132) (A).

1682. The amounts of funding were large. Harmon McAllister, former Vice President of Research at CTR, admitted that industry consultant Dr. Theodore Sterling received approximately $4,760,878 in CTR Special Project funds over 17 years (on a number of ETS-related matters), which was quite large in comparison to other CTR funding. According to McAllister, "for whatever reason, the industry felt that that was worth a special consideration over and above any other consideration that had been given." McCallister PD, United States v. Philip Morris, 5/24/02, 112:9-125:15; Ward TT, 11/3/04, 5002:5-5004:4.

1683. McAllister also admitted that CTR did not include information about CTR Special Project research in its Annual Reports, which were widely distributed and contained information about current and terminated grants-in-aid, grantees, and their institutions. McAllister TT, 3/17/05, 16129:14-18; 3/21/05, 16167:18-16168:12; McAllister WD 56:11-22; 112:17-112:25. He also testified that CTR administered Special Project funding and received direction and funding from the sponsor companies or their attorneys, specifically Shook, Hardy & Bacon and Jacob & Medinger. McAllister TT, 3/21/05, 16171:5-16172:22.

(iv) The Recognition: SAB Members, CTR Employees, and Defendants' Representatives All Recognized that CTR's True Purpose Was Public Relations, Not Science

1684. By as early as 1958, Defendants recognized that TIRC was performing research that would add little in the way of constructive conclusions regarding smoking and health issues.

In May 1958, a BATCo scientist (and others from the British tobacco industry) visited representatives of the United States tobacco industry and found that:

> Liggett & Myers stayed out of T.I.R.C. originally because they doubted the sincerity of T.I.R.C. motives and believed that the organization was too unwieldy to work efficiently. They remain convinced that their misgivings were justified. In their opinion T.I.R.C. has done little if anything constructive, the constantly re-iterated "not proven" statements in the face of mounting contrary evidence has thoroughly discredited T.I.R.C., and the S.A.B. of T.I.R.C. is supporting almost without exception projects which are not related directly to smoking and lung cancer.

105408490-8499 at 8495 (US 21135) (A).

1685. As early as 1962, TIRC employees were aware that TIRC had been created as a public relations tool to help preserve the tobacco industry. In an April 9, 1962 TIRC memorandum, Associate Scientific Director J.M. Brady indicated: "Historically, it would seem that the 1954 emergency was handled effectively. From this experience there arose a realization by the tobacco industry of a public relations problem that must be solved for the self-preservation of the industry." The memorandum suggested that in the future the industry would need to revise and expand the efforts of the TIRC. Brady also made a number of suggestions, including increasing the budget of the TIRC to $5 million per year and making an educational television film. HK0039151-9152 (US 21784) (A).

1686. By 1964, members of the worldwide tobacco industry recognized that CTR research was less scientifically valid than that of other research organizations. In a trip report written in October 1964 by British tobacco scientists entitled "Report on Policy Aspects of the Smoking and Health Situation in U.S.A." it was stated that "both L&M and Lorillard scientists told us quite bluntly that they considered TRC [the British trade group] research was on the correct basis and CTR's largely without value." The report explained that RJR, American, and

B&W criticized the TRC approach to bio-assay research on three grounds: (1) "It constituted an implied admission that tobacco contained health hazards . . . [which] could be damaging in law suits . . . (2) Mouse skin painting with smoke condensate, according to Dr. Little, was scientifically unsound and based on a fallacy (though C.T.R. had contracted with Bio-Research Inc. for research of this type) . . . (3) It could present the U.S. manufacturers in a bad light to the U.S. public since they could be represented by hostile writers as being negligent of public health in comparison with U.K. manufacturers." 1003119099-9135 at 9115 (US 20152) (A).

1687. In a November 9, 1967 memorandum to Senator E.C. Clements, W.W. Bates, Director of Research at Liggett, wrote that the smoking and health problem "is basically a scientific one." Bates further stated that "[so] far, however, the major efforts of the industry to cope with this problem have been other than scientific." He also stated that "[t]he CTR and AMA programs suffer from almost the same fault. Most of their projects have only a peripheral connection to tobacco use." LWDOJ 8020110-0114 at 0110, 0111 (US 34120) (O).

1688. Each year CTR issued a report summarizing the results of its research. From 1966 until 1989, these summaries were written by one CTR employee, Dorothea Cohen. When interviewed later by *The Wall Street Journal*, the Cohen stated that "[w]hen CTR researchers found out that cigarettes were bad and it was better not to smoke, we didn't publicize that . . . The CTR is just a lobbying thing. We were lobbying for cigarettes." TI16601796-1799 at 1796 (US 21238) (O).

1689. A March 11, 1970 industry document disclosed that Thomas Osdene, a Philip Morris scientist, questioned the worth of the CTR research: "Osdene's view (Philip Morris's view?) was that the C.T.R. did virtually no useful work and cost a vast amount of money." 110316203-6205 at 6204 (US 20274) (O).

1690. In a December 8, 1970 memorandum, Helmut Wakeham, Vice President of Research and Development for Philip Morris, admitted that the industry's interest in smoking and health research was to find evidence to deny allegations of a link between cigarettes and disease, and argued, "[i]t has been stated that CTR is a program to find out 'the truth about smoking and health.' What is truth to one is false to another. CTR and the Industry have publicly and frequently denied what others find as 'truth.' Let's face it. We are interested in evidence which we believe denies the allegation that cigaret smoking causes disease." 2022200161-0163 at 0161 (US 21705) (A).

1691. A letter written by a high-level CTR employee who had retired from B&W in 1972 stated, in part:

> It is my sober judgment that CTR, as it now operates, is the greatest public relations **asset** you have in the problem of tobacco and health. But the moment CTR becomes, or the attempt is made to use it, as a public relations instrumentality, your asset will lose its value because it will have lost its scientific integrity.

682631405-1408 at 1407 (US 21025) (O) (emphasis in original).

1692. In a September 29, 1978 memorandum to C. I. McCarty, Chief Operating Officer of B&W, Ernest Pepples, Senior Vice President and General Counsel of B&W, discussed a memorandum written by William Shinn, Shook, Hardy & Bacon attorney, concerning the value of CTR to the industry. According to Pepples, "CTR is our window on the world of smoking and health research. This avoids the research dilemma presented to a responsible manufacturer of cigarettes, which on the one hand needs to know the state of the art and on the other hand cannot afford the risk of having in-house work turn sour." Pepples further stated: "The point here is the value of having CTR doing work in a nondirected and independent fashion as contrasted with

work either in-house or under B&W contract which, if it goes wrong, can become the smoking pistol in a lawsuit." 680260940-0941 at 0940 (US 20995) (A).

1693. Undated handwritten notes stated that "CTR is [the] best & cheapest insurance the tobacco industry can buy and without it the Industry would have to invent CTR or would be dead." MNAT00770694-0695 (US 21395) (A).

(3) The Reality: The Cigarette Company Defendants Actively Concealed Adverse Scientific Findings, Entered into Agreements Not to Conduct Research, and Used Lawyers to Control Research so that it Would Serve the Purposes of Litigation and Public Relations

1694. Despite their promises to the contrary, and as they had foreseen and intended, Defendants failed to conduct independent research, sequestered adverse scientific findings, and, as a result, failed to warn the public about the true results of scientific research. Because of this, many Americans, including millions of children, became addicted to cigarettes, and many people who were already smoking continued to smoke or had difficulty quitting, which resulted in profits for the Cigarette Company Defendants and damage to the health of smokers, former smokers, their spouses and dependents.

1695. Defendants' promise to conduct independent research, when coupled with their suppression of truthful information about the adverse health effects of smoking and tobacco's addictiveness, had a natural result of influencing the decisions of people to begin or continue smoking.

1696. Defendants' in-house and outside counsel acted to control scientific research in order to further the interests of the Enterprise, including:

- creating the impression that an "open question" existed regarding whether smoking caused disease;

- preventing and hiding adverse scientific findings to avoid or limit the Cigarette Company Defendants' exposure in smoking and health related products liability lawsuits; and
- creating a positive public relations position for the Cigarette Company Defendants despite the harmful effects of smoking cigarettes.

1697. The pervasive and consistent involvement in and control of science by the Cigarette Company Defendants and their lawyers demonstrates that, contrary to their continuing promise to the American public, the Cigarette Company Defendants were not engaged in independent disinterested research into the health impact of smoking.

(a) Defendants Concealed Scientific Documents, Opinions, and Findings Adverse to Their Interest

1698. The biological research that the cigarette companies did perform was closely controlled to ensure that, if it resulted in additional evidence that smoking causes disease or that nicotine is addictive, it would not become public or subject to discovery in court proceedings. Methods included (a) performing research outside the United States in order to keep documents and witnesses hidden and out of the reach of state and federal courts, and (b) taking other steps to shield documents and materials from discovery, including attempts to cloak scientific documents in the attorney-client privilege.

1699. A February 19, 1969 letter to Helmut Wakeham from W.L. Dunn, Jr. noted, "[a]nother sign that the winds are shifting. R & D is coming into its own right in the industry, being finally differentiated from the public relations activities!" Dunn further stated,

> Our position should obviously be supportive of Jet's for the primitive reason of, "Who ain't for more money?" and the more impelling urgency of generating substantive research, the results of which can be increasingly valuable as the current hysteria subsides. I predict public recoil and a readiness for a more objective look at the issue before the mid-70's. We've got 3-5 years to put Philip

> Morris in the saddle with good data.
>
> I would be more cautious in using the pharmic-medical model – do we really want to tout cigarette smoke as a drug? It is, of course, but there are dangerous F.D.A. implications to having such conceptualization go beyond these walls.

The letter concluded, "[p]erhaps this is the key phrase: the reinforcing mechanism of cigarette smoking. If we understand it, we are potentially more able to upgrade our product." 83826859-6861 at 6860, 6861 (US 55889) (O).

1700. Philip Morris conducted in-house research in Europe in the 1970s and 1980s in order to avoid disclosure of unfavorable results to the public. 501543061-3096 at 3077 (US 21462) (A); 1000119925-9933 at 9933 (US 87226) (A).

1701. In 1970, Philip Morris purchased INBIFO, a research facility in Cologne, Germany, as it had determined that through INBIFO, it could control the research conducted there and that overseas experiments could be terminated at will. Philip Morris was careful to conceal this arrangement. Company scientists shipped documents from locations in the United States to Cologne for storage in order to remove unfavorable or embarrassing research results from Philip Morris's files in the United States during and in advance of litigation and thereby to avoid discovery of adverse documents. Discussing how to handle records relating to the INBIFO arrangement, Thomas Osdene, a senior Philip Morris scientist, characterized the arrangement as follows: "Ship all documents to Cologne . . . . Keep in Cologne . . . . If important letters have to be sent please send to home – I will act on them & destroy." 1000130803-0803 (US 34424) (A); Farone WD, 142:21-143:2, 146:12-18, 149:1-151 9; Parrish WD, 103:9-16, 105:1-10, 106:24-107:17.

1702. In a February 24, 1970 internal memorandum to Helmut Wakeham concerning

Philip Morris's research activities at INBIFO, a research facility in Cologne, Germany, Joseph Cullman III, Chairman and Chief Executive Officer of Philip Morris, noted that "[t]he possibility of getting answers to certain problems on a contractual basis in Europe appeals to me and I feel presents an opportunity that is relatively lacking in risk and unattractive repercussions in this country." 1000216742-6742 (US 20081) (A).

1703. In an April 7, 1970 memorandum to Clifford Goldsmith, President of Philip Morris, regarding the acquisition of INBIFO, Wakeham stated: "Since we have a major program at INBIFO, and since this is a locale where we might do some of the things which we are reluctant to do in this country, I recommend that we acquire INBIFO either in toto or to the extent of controlling interest." 2022244451-4453 at 4451 (US 20361) (O); 2012580900-0906 (US 89328) (A); Parrish WD, 105:11-106:10.

1704. In a March 31, 1977 letter to Max Hausermann, Vice President of Research and Development of Philip Morris International, concerning procedures for sending samples to INBIFO, Robert Seligman, Vice President of Research and Development of Philip Morris, specifically noted,

> you know that Helmut [Wakeham] was requesting that we send samples directly to INBIFO. This suggested procedure is in direct conflict with our communications from the New York Office. We have gone to great pains to eliminate any written contact with INBIFO, and I would like to maintain this structure . . . . perhaps we should consider a 'dummy' mailing address . . . for the receipt of samples.

2000512794-2795 at 2794 (US 20295) (A); Farone WD, 151:10-152:15.

1705. Examples of the types of scientific work that Philip Morris was funding and carrying out at INBIFO included research during the 1980s and 1990s on sidestream smoke and

the effects of smoke on non-smokers, and various nicotine research projects. Parrish WD, 103:17-104:6. INBIFO is also discussed at US FF § III.A(2)(f)(i), supra.

1706. A 1970 legal memorandum to B&W from David Hardy of Shook, Hardy & Bacon contained a thinly veiled instruction that employees be told that they could not make statements suggesting that smoking caused health problems, regardless of their personal beliefs. Hardy wrote that:

> It is our opinion that statements such as the above constitute a real threat to the continued success in the defense of smoking and health litigation. Of course we would make every effort to "explain" such statements if we were confronted with them during a trial . . . .
>
> As you know, with the testimony of independent and well-informed doctors and scientists, it has been repeatedly demonstrated in court to the satisfaction of impartial jurors that cigarette smoking has not been scientifically proved to cause disease . . . . We have been able to show this to be the case when such suspicion has been claimed by our known enemies to be established fact. Obviously our problem becomes entirely different and far more serious when agents and employees of the defendant cigarette company or its parent become the spokesmen against us.
>
> . . . .
>
> In conclusion, I would like to emphasize that, in our opinion, the effect of testimony by employees or documentary evidence from the files of either BAT or B&W which seems to acknowledge or tacitly admit that cigarettes cause cancer or other disease would likely be fatal to the defense of either or both companies in a smoking and health case. . . .
>
> We, of course, know that the position of BAT, as well as B&W, is that disease causation by smoking is still very much an open question. Cigarettes have not been proved to cause any human disease. Thus, any statement by responsible and informed employees subject to a contrary interpretation could only result from carelessness. Therefore, employees in both companies should be informed of the possible consequences of careless statements on this subject.

301097079-7085 at 7081, 7085 (US 46580) (A).

1707. In a February 25, 1974 letter to H.C. Roemer, Vice President and General Counsel of RJR, Edwin J. Jacob, outside RJR counsel, noted that he had modified a scientific research report previously provided to him by Roemer to make it suitable for publication, and set forth his thoughts on why three other scientific research reports should not be published. He explained:

> There are several reasons, however, why the other three reports should not be published. Each deals with a specific bioassay from which it is concluded, more or less explicitly, that cigarettes made with tobacco expanded by the G-13 process are in one way or another less hazardous to smokers than those made with conventional tobacco. The problem this presents appears clearly from the Introduction to report II. There, the purpose of all three experiments is said to be to compare results with and without residual fluorotrichloromethane. But the aim of the G-13 process is suggested to be development of a "safer" cigarette in that less tobacco per rod is used – and therefore less "tar" is delivered.
>
> The myriad problems raised by the concept of a "safer" cigarette do not require elaboration here. It is sufficient to observe that, since it has not been scientifically established that cigarette smoking is "unsafe", the suggestion that certain cigarettes are "safer" than others is unwarranted. And, moreover, even those who claim that cigarette smoking is "unsafe" have been unable to demonstrate either criteria or methodology by which the comparative "safety" of cigarettes can be determined. In these circumstances, claims for a "safer" cigarette are unsound.
>
> It would be possible, of course, to edit these reports of biological research so that no explicit reference to "safer" cigarettes is made. And, further, explicit disclaimers of any such implications could be made. Even then, I believe publication would be unwise. . . .

503652147-2150 at 2147-2148 (US 29706) (O).

1708. In 1975, David Hardy advised BATCo against admitting to the public what its scientists knew internally – namely, that smoking causes disease. At the time, BATCo was considering placing a warning on cigarette packages sold in England – with no government

attribution – that stated smoking "causes lung cancer, bronchitis, heart disease." In a letter addressed to BATCo, Hardy advised that this admission of fact would impede the defense of litigation in the United States. He wrote:

> The proposed new warning removes the attribution of the warning to "H.M. Government," and instead appears to be a voluntary and direct admission by the cigarette manufacturer that the cigarettes contained in the package cause "lung cancer, bronchitis, heart disease." A wholly owned subsidiary of the manufacturer would, in our opinion, be adversely and prejudicially effected by such a voluntary warning even though it is a separate corporate entity.
>
> . . . .
>
> Once the fact and content of the warning got before a jury in the United States in a case involving the subsidiary, the defense of "no proof of causation" would be lost for all practical purposes. Such a result would indeed be unfortunate in view of the fact that in every instance where the matter has been explored in our Courts through expert testimony and otherwise, the cigarette manufacturer has prevailed.

110318156-8157 (US 34974) (A).

1709. In a July 29, 1977 memorandum to C.I. Lewis, Supervisor of the Analytical Development Section of Lorillard's Research Department, Alexander Spears of Lorillard advised him that a scientist who was to deliver a research paper must delete data in the study related to human smoking habits:

> To follow up our telephone conversation of this date, I approve the request of Walter Thompson to present a paper at the ASQC meeting in Chicago. However, the data relating to human smoking habits should be deleted or remain unidentified with respect to human smoking behavior. In other words, I do not want Lorillard to report identifiable data on human smoking behavior.

01416267-6267 (US 20287) (O).

1710. In a November 3, 1977 Philip Morris inter-office correspondence stamped

"Personal & Confidential" to Thomas S. Osdene on the subject of a "Proposed Study by Levy," W.L. Dunn stated:

> I have given Carolyn [Levy] approval to proceed with this study. If she is able to demonstrate, as she anticipates, no withdrawal effects of nicotine, we will want to pursue this avenue with some vigor. If, however, the results with nicotine are similar to those gotten with morphine and caffein[e], we will want to **bury it.** Accordingly, there are only two copies of this memo, the one attached and the original which I have.

1000128680-8680 (US 22285) (A) (emphasis added).

1711. In a February 16, 1978 memorandum to Robert Seligman, Thomas Osdene stated: "The Roper Proposal to the Tobacco Institute sounds good and I believe the thesis is probably valid. However, there are several implications inherent in such a study which lead me to conclude that the study should not be done." He noted, "[a]n admission by the industry that excessive smoking is bad for you is tantamount to an admission of guilt with regard to the lung cancer problem." 1000764700-4701 at 4700 (US 21459) (O).

1712. In a November 9, 1979 B&W memorandum to Ernest Pepples at B&W, Kendrick Wells, an in-house B&W attorney, discussed "various alternatives for handling BAT scientific reports which come to B&W in a way that would afford some degree of protection against discovery." Wells recommended routing all scientific documents from BATCo through a B&W scientist designated as an agent of the General Counsel. The scientist would then "separate the reports which were relevant to smoking and health, or otherwise sensitive, for special handling" and the documents "designated as sensitive" would be "sequestered." 521016231-6232 (US 20886) (A); 680585389-5392 at 5389-5390 (US 21008) (A); Wells WD, 11:11-14:11.

1713. In the 1980s, BATCo lawyers rewrote research reports prepared by the British

equivalent of CTR, the Tobacco Advisory Council ("TAC"), to remove what they perceived were damaging statements. Attaching a heavily edited version of the TAC annual research review, BATCo attorney Anne Johnson wrote: "There are serious concerns in the USA with regard to this document as it stands at the moment for reasons I mentioned in my note, especially as all the tobacco manufacturers in the States are now involved in litigation on the primary issue of causation of disease." 107317952-7953 at 7953 (US 20249) (O).

1714. In an August 1984 letter to BATCo's Deputy Chairman, Ernest Pepples expressed concern about a BATCo scientific report on addiction and requested that BATCo lawyers work "more closely" with the BATCo scientists involved:

> [I]n developing and carrying forward the position that a "simple" addiction model cannot explain smoking behavior, the report seems to concede that many potential criteria for addiction identification are met by smoking behavior.
>
> . . . .
>
> Throughout the report, unfortunate concessions appear regarding "tolerance and withdrawal". The report frequently expresses the view that smoking has certain "therapeutic properties" and nicotine is compared to the action of tranquilizers, alcohol, etc. In addition, smoking is referred to as one form of "drug usage", "psychoactive substance usage", or "psychoactive drug usage".
>
> . . . .
>
> As you know in the current legislative and litigation environment in the U.S., claims of addiction have been and will be used against Brown & Williamson by our adversaries. Such claims have been vigorously opposed in order not to give a claimant an unjustified weapon to use against the company or the industry.
>
> In addition, the possibility for involvement by the U.S. Food and Drug Administration would be heightened by company or industry promotion of the theme of this report, as it will be generally perceived.
>
> If such matters as the "Functional Significance" document and the

> Conference binders, enclosed herewith, are not already routinely vetted with BATCo lawyers, you may want to consider involving them more closely in both the conceptual and the drafting stages of these projects. Thank you very much for your help in this area of great concern for us.

521016787-6788 (US 22129) (A).

1715. In a January 17, 1985 File Note, J. Kendrick Wells, B&W's Associate General Counsel, directed members of the B&W Research & Development Center to collect certain documents he had identified on an attached list relating to the behavioral and biological studies area for shipment to BATCo once all such documents had been gathered. The documents included the Janus studies, a secret program of biological research on the effects of smoking which showed tumor growth in animals. Wells directed Earl Kohnhorst, Vice President for Research, Development and Engineering at B&W, to tell the research personnel that the removal of the documents "was part of an effort to **remove deadwood from the files** and that neither he nor anyone else in the department should make notes, memos or lists." 680530888-0890 at 0888, 0889 (US 21772) (A) (emphasis added); Wells WD, 40:1-41:15.

1716. In a September 10, 1985 restricted memorandum to E.A.A. Bruell and D.G. Heywood, Executive Director of Finance for BATCo, Nick Cannar and Anne Johnson, BATCo in-house lawyers, advised that the United States litigation involving B&W would inevitably result in discovery of research documents held at BATCo's research and development facility "because of the past funding arrangements . . . and the financial contribution made by B&W over the years." They added their concern about the "recent minutes of [the] biological conference in Canada" and that "elements of the draft 1986 programme . . . cause us further concern e.g. research into biological activity and the selective filtration of certain constituents of cigarette smoke." 109878079-8080 (US 16073) (O).

1717. In a February 17, 1986 memorandum to Ernest Pepples on BATCo Science, J. Kendrick Wells, Associate General Counsel of B&W, discussed the policy on B&W's receipt of reports of ongoing research from certain projects being conducted at laboratories of affiliated companies, and balanced the benefits of information against the dangers posed in light of ongoing litigation. He noted: "While the brevity of the reports will reduce the potential for receipt by B&W of information useful to a plaintiff, disadvantageous information could be included and the reports could serve as road maps for a plaintiff's lawyer." 680582253-2257 at 2253 (US 21004) (A).

1718. A June 14, 1991 memorandum to BATCo scientist Sharon Boyse on the 8th World Conference on Smoking and Health indicated that Defendants hoped to generate "controversy" among the participants and then broadcast these disputes to the public to create controversy on issues where none existed. The industry planned to be careful not to appear to sponsor any of the participants by using "independent institutions" to fund them. 321651598-1599 at 1598 (US 20590) (O).

1719. In October 1991, Bob Pages, a Philip Morris scientist, forwarded a note to Chuck Wall, Vice President and Associate General Counsel of Philip Morris Companies, and Steven Parrish, Senior Vice President and General Counsel of Philip Morris. The note related to Philip Morris-sponsored research on nicotine's role in *in vivo* nitrosamine formation (and whether presence of nitrosamines in urine supports the theory), and the decision to disallow publication of the research results at a conference. After an initial agreement was made to allow publication of the results (because no smokers were found to have nitrosamine tracer in urine), the tracer for nitrosamine was found in one out of ten smokers. After Philip Morris confirmed that the scientist would not include data about the one smoker in the abstract, the sponsoring group of

cigarette companies (WPA) approved funds. Then, the nitrosamine tracer was found in three additional smokers. "As this [sic] sensitive results were generated within the industry and not available to others, WPA decided that poster presentation based on Abstract submitted should be given [without disclosure of the conflicting subsequent results] and **project work terminated**." 2023222878-2880 at 2879 (US 20382) (A) (emphasis added).

1720. In a September 21, 1994, note to L.C.F. Blackman, Director of Research at BATCo, regarding a conversation with Ernest Pepples about the procedure for communications between B&W and the BATCo research department, H.A. Morini, BATCo in-house counsel, instructed Blackman that "'[c]ontentious' items emanating from GR&DC [BAT Group Research & Development Centre], particularly in regard to biological activity should be given legal clearance before dissemination" and that "transmission to B&W should be through me to Pepples thus maintaining the legal privilege - 'attorney work product'." Morini also advised that "[n]on 'contentious' issues can be sent direct from GR&DC to B&W care of Gil Esterle." At that time, Esterle was a B&W scientist. 503114322-4322 (US 21695) (A).

1721. During the 1990s, Liggett scientists were directed to label their work as privileged and confidential in order to prevent its discovery in civil litigation. Dietz PD, United States v. Philip Morris, 7/1/02, 150:1-155:12; Dietz TT, 3/29/05, 17157:8-17163:22, 17172:9-24.

(b) Defendants Entered into Agreements That Limited Scientific Research and Actively Policed Those Agreements

1722. Cigarette Company Defendants have been part of a Gentlemen's Agreement: that no company would perform or commission in-house biomedical research on animals investigating the relationship between smoking and health. By its very terms, this agreement prevented the promised independent and disinterested research. Although they recognized that

research and testing were essential to evaluating the health risk posed by their products, Defendants, pursuant to the Gentlemen's Agreement, generally did not perform biological research on smoking and health.

1723. Defendants agreed (1) not to conduct in-house research, including basic biological research; (2) not to compete on health issues; and (3) to share any discoveries related to reducing the harmful effects of cigarettes, which, in many cases, precluded research; while in others, destroyed the incentive to conduct research. Defendants actively enforced the agreements. Farone WD, 134:3-13, 135:4-138:7.

1724. In a 1964 secret internal Evaluation Report, Helmut Wakeham acknowledged the legal jeopardy inherent in Defendants' joint agreement, when he (unsuccessfully) recommended that "[t]he industry should abandon its past reticence with respect to medical research. Indeed, failure to do such research could give rise to negligence charges." Despite Wakeham's warning, Defendants persisted in their agreement. 1000335612-5625 at 5622 (US 63579) (A); Farone WD, 134:3-13, 135:4-138:7.

1725. With respect to the purpose of the Gentlemen's Agreement, Dr. William Farone, former Director of Applied Research at Philip Morris, explained that "I was told it was to protect the industry from lawsuits. It supported their basic position that no cigarettes were scientifically proven to cause any disease. If they had competed on health issues, and told the public that this brand is safer or potentially delivers less carcinogens than other brands, it would have implicitly acknowledged that the other brands – the ones with higher delivery of carcinogens or more potent carcinogens – were less safe." Farone WD, 2:15-19, 135:12-17.

1726. In the 1960s, RJR established a facility in Winston-Salem, North Carolina, to research the health effects of smoking using mice. In the facility that RJR nicknamed the

"Mouse House," RJR scientists researched a number of specific areas, including studies of the actual mechanism whereby smoking causes emphysema. Internally, an RJR document transcribing conversation notes favorably described the Mouse House work as the most important of the smoking and health research efforts because it had come close to determining the underlying mechanism of emphysema. 515744448-4451 (US 23011*) (O).

1727. In an October 3, 1969 internal memorandum to Helmut Wakeham, Philip Morris scientist R.D. Carpenter described the RJR biological facilities, which were shown to him on October 1, 1969. Carpenter noted, "[i]n summary, R.J. Reynolds has animal experimentation facilities, a staff of 10 - 12 people doing animal experimentation work, and is doing smoke inhalation studies." 1000220888-0891 at 0889 (US 21435) (O).

1728. In 1970, R.J. Reynolds suppressed research by shutting down its biological research division, also known as the "mouse house." Joseph Cullman III, President of Philip Morris, complained to RJR about the work going on in the Mouse House. Despite the research progress made there, RJR responded to the complaint by closing the Mouse House – disbanding in one day, without notice to the staff and the entire research division, firing all twenty-six scientists working there, and destroying years of smoking and health research. 503950745-0750 (US 21672) (O). The closure of the "mouse house" was related to the tobacco industry's "tacit agreement between the heads of the US companies" not to conduct "in-house biological research." 110315968-5971 (US 26378) (A).

1729. Defendant American Tobacco long adhered to this shared policy not to conduct in-house biological research (since the 1930s, American had performed no biological research on animals in its own laboratories). In 1965, William Harlan, American's Director of Research and Development , and Edward Harlow, American's Assistant Director of Research and

Development, proposed initiation of a Biological Research Program for Defendant American Tobacco. MNATPRIV00026861-6916 (US 21478) (A).

1730. In response to Harlan and Harlow's proposal, an August 25, 1965 American memorandum written by Janet Brown, outside counsel for American Tobacco, explained the "fundamental problems a program of the nature indicated . . . would pose for the Company in its public, medical and legal positions in the health controversy." The author claimed that any undertaking by American Tobacco of a biological research program would be an assertion of competence to conduct such research and "[s]uch a position is fundamentally in conflict with the Company's past policy and position respecting its proper function in scientific research regarding tobacco products . . . the most serious consequences appear to [be] the degree to which the Company thereby undermines and perhaps even negates its legal position respecting the 'reasonableness' of its past conduct of scientific research (including not doing such 'biological' research)." MNATPRIV00026861-6916 at 6861, 6887 (US 21478) (A).

1731. Brown's memorandum stated that American's past position and policy was one of "supporting work by independent men in independent institutions while itself pursuing the study of smoke and tobacco, its own field of special competence," essentially the same "policy hitherto enunciated in the law suits by other members of the industry [and] no jury has yet found any member of the industry negligent in pursuing such a policy with respect to biological research." Brown noted that American's sponsorship of independent investigators and institutions who chose to conduct animal experiments "carries no necessary admission in and of itself that the Company considers such research significant in terms of human health." MNATPRIV00026861-6916 at 6899, 6913 (US 21478) (A).

1732. The memorandum also contended that "[w]hen the Company asserts competence

to conduct its own biological research into certain aspects of human health it opens for jury evaluation the question whether it acted reasonably in not instituting biological research long before." The memorandum added that if a

> reasonably prudent manufacturer capable of conducting biological research would not have instituted biological testing programs in the 1920's, or 1930's or 1940's . . . it should at least have been begun in 1950-1953, with publication of the four retrospective studies showing association with lung and other cancers; or in 1953, with publication of the Wynder mouse-painting experiments, or in 1954, with publication of the first Hammond-Horn report, or in 1957, with publication of the Study Group report on Smoking and Health . . . or in 1958, with publication of the final Hammond-Horn report, or in 1959, with the publication by the Surgeon General of an official statement pronouncing a causal link between smoking and certain diseases, or in 1962, with publication of the report of the Royal College of Physicians, or [in 1964], with publication of the Report of the Surgeon General's Advisory Committee.

MNATPRIV00026861-6916 at 6892-6894 (US 21478) (A).

1733. The memorandum concluded that in-house animal research could not be initiated by American because it "would make the Company's past and current position in the health field 'untenable'" and "while the program was important and [Harlow] wanted very much to do it, he would certainly not want to do anything that 'has an impact on the Company's position or if it makes that position any less sound than it now is.'" MNATPRIV00026861-6916 at 6862 (US 21478) (A).

1734. In at least three memoranda to Clifford Goldsmith, President of Philip Morris, Helmut Wakeham stated that he believed that Defendants American, RJR, Liggett, Lorillard, and B&W were performing in-house biological research in violation of the "gentlemen's agreement." In a November 12, 1968 memorandum, Wakeham wrote that "in spite of previous arrangements

within the tobacco industry at least some of the major companies have been increasing biological studies within their own facilities." In a November 15, 1968 memorandum, Wakeham wrote that "[w]e have reason to believe that while this proposal to carry out biological research and testing may seem a radical departure from previous policy and practice, we are in fact only advocating that which our competitors are also doing." An undated Philip Morris memorandum stated: "We have reason to believe that in spite of gentlemen's agreement from the tobacco industry in previous years that at least some of the major companies have been increasing biological studies within their own facilities." Examples given were American, RJR, and B&W. 1000217064-7067 (US 86606) (O); 1002635062-5065 at 5063 (US 20139) (A); 1001607055-7061 at 7058 (US 76155) (A); 1001607055-7061 at 7058 (US 21617) (A); Farone WD, 135:20-136:13.

1735. In a September 1970 memorandum concerning a meeting between BATCo personnel and Wakeham, David G. Felton, a BATCo scientist, reported that:

> One result of the greater influence which Wakeham has with Mr. J[oseph] Cullman [President of Philip Morris] has been the agreement, albeit reluctant, to permit Philip Morris to do 'in-house' biological work. When this was first mooted, Wakeham was told that there was a tacit agreement between the heads of the US Companies that this would not be done. Wakeham had countered by saying he knew that Reynolds, Lorillard and American were all undertaking some and that Liggett and Myers had never been party to the agreement. Cullman had been incredulous and had phoned Galloway, the President of R.J. Reynolds who had denied Reynolds were doing any bioassay. When Cullman had told Wakeham this, Wakeham's response had been to quote the Reynold's work on the Senkus smoking machine and to claim that he had floor plans showing outline area allocations. This too had been relayed to Galloway by Cullman, incredible though it may seem, and Galloway had visited the Reynolds Research Dept. to find it was substantially true. There had been a sudden reorganization at Reynolds, resulting in the closure of the biological section, the severance of product development (which remained with the tobacco division) from the research department. . . .

110315968-5971 at 5969-5970 (US 26378) (A).

1736. A November 11, 1970 memorandum from Claude Teague to E.E. Vassallo made clear that RJR had engaged in research concerning smoking and health, including animal studies, but further stated that it would try to avoid any future research on smoking and health by farming such research out to industry fronts like CTR:

> Yes, we have from time to time in the past, in various circumstances, performed animal experiments in the smoking-health area, in our laboratories. These have been short term investigations made for various purposes such as: (1) monitoring of experiments published in the scientific literature, (2) evaluation of competitive products alleged to offer advantages to the consumer; and development, on behalf of the tobacco industry, of basic instrumentation for use by independent scientists engaged in basic research on the biological effects of smoking. . . . Currently, we have neither staff nor facilities for performing animal experiments, and no further experiments are planned unless special circumstances arise which may require them. This, of course, reflects our basic consistent conviction the massive, collaborative industry-wide support of long-term basic research by independent scientists and scientific organizations already expert in their fields is the most important and effective means for establishing fundamental scientific facts in the area of smoking and health. Thus, we continue our full support of the Council for Tobacco Research-USA, and the research programs of the American Medical Association.

500020977-0978 (US 20613) (O).

1737. In an August 13, 1971 note, RJR scientist Frank Colby informed H.C. Roemer, General Counsel of RJR, that Philip Morris was conducting in-house animal research. 503955904-5904 (US 20724) (O).

1738. A March 15, 1972 internal American memorandum confirmed the company's adherence to the Gentlemen's Agreement, stating: "Let me repeat. Biological and medical experimentation is outside the scope of the Department of Development and Research of the

American Tobacco Company. . . . No research project in this field may be undertaken, nor may any grant for this purpose be made, without the written permission of the Chairman or President." ATX100004728-4728 (US 58608) (A); Farone WD, 138:8-17.

1739. In a December 3, 1976 internal memorandum, Hugh Cullman, Executive Vice President of Philip Morris, reported a suggestion for a discreet meeting of the heads of certain tobacco companies, including BATCo, RJR, and Philip Morris International, "to develop a defensive smoking and health strategy." The initial objective of this group was to develop a smoking and health agreement which would include a voluntary agreement, that no concessions beyond a certain point would be voluntarily made by the members and if further concessions were required by respective governments, that these not be agreed to, and that governments be forced to legislate. These leaders met in 1977, and the meeting was called "Operation Berkshire." The group formed what was called the International Committee on Smoking Issues ("ICOSI"). 2025025286-5286 (US 20407) (A); 2501020298-0308 (US 21903) (O); 2025025288-5289 (US 20408) (O); 2025025347-5348 (US 20410) (O); 2025025369-5369 (US 20411) (O); 2501024571-4575 (US 21904) (A); 500269225-9228 (US 20622) (O); 2025024797-4803 (US 20406) (O).

1740. In a February 17, 1978 Report, Herschel H. Cudd, Jr., member of the Board of Directors of RJR, gave voice to the notion of the Gentleman's Agreement. He noted: "A wholly owned subsidiary in Cologne, Germany engages in carcinogenic biological research, such as mouse painting, in violation of the verbal agreement among domestic companies not to perform animal testing in-house." 503940653-0688 at 0669 (US 21436) (O).

1741. In a March 21, 1980 Philip Morris memorandum to Dr. Seligman on the nicotine receptor program, W.L. Dunn discussed Philip Morris's adherence to the Gentlemen's Agreement

– "the original carte blanche avoidance of all biological research" – because the legal strategy successfully employed by the tobacco industry over the years in defending deceased smoker lawsuits had been that "[w]e within the industry are ignorant of any relationship between smoking and disease. Within our laboratories no work is being conducted on biological systems." 1000127789-7790 (US 21794) (A).

1742. In an October 28, 1981 memorandum stamped "SECRET," RJR scientist Frank Colby wrote:

> There is a clear-cut agreement among all U.S. cigarette manufacturers that any scientific discovery made within the companies, or otherwise sponsored by a single company, which might have a positive impact on the smoking and health controversy, would have to be freely shared, without any costs to the other manufacturers. There would, therefore, be no incentive for RJR to sponsor the Cohen project . . . At this time, RJR does not fund directly in the U.S., any directly smoking and health related research. All such requests are answered by referring the applicants to CTR.

500534388-4389 (US 29467) (A).

1743. In a December 9, 1981 memorandum, Colby listed the research-related highlights of the week, flatly stating:

> Information was obtained that Philip-Morris-U.S.A. does not live up to the alleged 'gentlemen's agreement['] of not having animal laboratory facilities on their premises in this country. PM indeed has had such facilities for at least 3 - 4 years and continues to operate them. This information was communicated to all concerned.

501626469-6469 (US 21576) (A).

1744. On September 20, 1983, E.A.A. Bruell, Chairman of BATCo, wrote a "Letter to All No. 1s of Operating Companies" titled "Relations with INFOTAB, National Manufacturers

Associations ("NMA"s) and Competitors." Referring to a September 1983 ad placed by a Philip Morris affiliate in Holland regarding Barclay, Bruell noted that the ad "is the first occasion of which we are aware when a competitor has: 1. Raised the health issue to gain competitive advantage. 2. Quoted and thereby endorsed a report of an anti-smoking lobby . . . to attack another company in the industry." As a result and in protest of Philip Morris's violation of the Gentlemen's Agreement, BATCo pulled out of INFOTAB and affiliates were instructed to limit contacts with Philip Morris via National Manufacturing Associations in their countries of operation. 104576617-6620 at 6617 (US 78985) (A).

1745. On October 26, 1983, Bruell and Hugh Cullman, Chairman and CEO of Philip Morris, had a telephone conversation in which the participants agreed to continue the cigarette companies' internal agreement not to compete with one another on issues relating to smoking and health. 301030943-0944 (US 46577) (A).

1746. A February 18, 1987 memorandum from Charles Wall, then a Shook, Hardy & Bacon attorney, to Steven Parrish, then his colleague, and five others stated that, according to Bob McDermott, the Jones Day law firm had "uncovered some documents of Reynolds' that refer to an agreement among cigarette companies' scientists (and perhaps others) consisting of two points: (1) that the companies would not conduct any in-house animal research (sometimes this is described as no in-house smoking and health research) and (2) that the companies agreed to share any 'breakthroughs' in the smoking and health area (this is sometimes referred to as any breakthroughs on a 'safer' cigarette)." 682101328-1334 at 1331 (US 54120) (A); Parrish WD, 4:13-23.

1747. For many years, despite Defendants' promise that TIRC/CTR research would be "in addition to" in-house research, Defendants failed to perform in-house smoking and health

research relevant to the issue of the link between smoking and disease. Helmut Wakeham defined the type of research prohibited at the tobacco companies as "[s]tudying a relationship which might exist between smoking and diseases such as were tabulated in the Surgeon General's report." Wakeham PD, State of Minnesota v. Philip Morris, 5/29/97, 91:8-10.

1748. Dr. Farone explained that "Defendants' product research and development activities reflect an agreement not to perform certain biological research on commercially marketed products in their domestic facilities. I learned of the existence of such an agreement during my time at Philip Morris. As a result of this agreement, Defendants failed to perform meaningful tests on their as marketed products indicating biochemical differences in toxicity that have a bearing on the safety of their products." Farone WD, 3:23-4:5.

(c) To Prevent Adverse Scientific Findings and to Ensure That Research Focused on Litigation and Public Relations, Lawyers and Business Executives Controlled the Minimal Research Conducted by the Cigarette Company Defendants

1749. In many instances, Defendants' attorneys, not their scientists, directed the limited scientific research and other scientific matters of the Cigarette Company Defendants. Industry lawyers were the driving force behind both the direction and suppression of scientific research. Lawyer control was used in large part in an improper attempt to "create" attorney-client privilege or work product protection for scientific documents and information where none existed.

1750. For example, a 1964 trip report prepared by British scientists visiting the United States described how a powerful committee of United States lawyers were dominant in the smoking and health arena, including scientific research:

> [T]he Policy Committee of lawyers exercises close control over all aspects of the problems.

> This Committee is extremely powerful; it determines the high policy of the industry on all smoking and health matters – research and public relations matters, for example, as well as legal matters – and it reports directly to the Presidents.
>
> The lawyers are thus the most powerful group in the smoking and health situation.

1003119099-9135 at 9101, 9105, 9106 (US 20152) (A) (emphasis in original).

1751. A December 17, 1965 memo entitled "Meeting of General Counsel on 12/17/1965" made clear that the General Counsel were attempting to influence what research should be done with regard to smoking and health. 01124441-2444 (US 20034) (O).

(i) Lawyer Control of Science within the Cigarette Company Defendants

1752. **Philip Morris:** In a March 21, 1980 letter to Robert Seligman, Vice President for Research & Development at Philip Morris, William Dunn, a Philip Morris Principal Scientist, attempted to explain to Seligman why the lawyers had previously limited and would continue to limit the research that could be conducted by industry scientists. He stated that psychopharmacology of nicotine "is where our attorneys least want us to be, for two reasons." As Dunn warned, despite the fact that "[w]e are now being allowed to conduct research on the immediate effects of nicotine . . . we must not be visible about it." Dunn was quite blunt about the secret nature of research in this area when he stated: "Our attorneys, however, will likely continue to insist upon a clandestine effort in order to keep nicotine the drug in low profile." 1000127789-7790 at 7789, 7790 (US 21794) (A).

1753. In December 1989, Steven Parrish, former partner at Shook, Hardy & Bacon and Vice President of Philip Morris Corporate Scientific Affairs, received a letter about a funding

proposal for research which stated: "Dr. Syrjanen has deleted all references to cigarette smoking and no longer plans to pursue the possible role of smoking in the development of cervical cancer." The letter also stated that "[f]uture considerations suggest that we may wish to be in a position of being able to say that company scientists, not lawyers, reviewed and approved the proposal based on scientific content and merit" and raised the issue of whether Philip Morris should require access to "pre-publication manuscripts" and regular visits to be sure research was proceeding consistent with the proposal (as modified to exclude study of smoking's role in cervical cancer). 2024961742-1744 at 1742-1743 (US 22046) (A).

1754. In 1991, Covington & Burling wrote to Philip Morris about a possible recommendation that Philip Morris's Science & Technology research plan "should be developed with input from legal, corporate affairs, etc., to ensure that the program of sponsored research is consistent with product liability, regulatory and public relations considerations." 2023856321-6328 at 6322-6323 (US 22037) (A).

1755. In September 1992, when Steven Parrish was General Counsel for Philip Morris, he retained control (for a period of time) over "approval for all new S&T [Science & Technology] projects." Parrish included Philip Morris's Richard Carchman, Vice President of Research and Development and Engineering, and James L. Charles, Vice President of Research, in the review process to get scientific recommendations, but made the ultimate decisions himself. 2026227112-7112 (US 20422) (A); Parrish WD, 42:1-20.

1756. **RJR:** On December 31, 1985, industry counsel issued Volume III of "RJR Research and Development Activities Fact Team Memorandum," which included Section IX on "Monitoring Smoking and Health Literature," and Section X on "Management and Legal Supervision and Control of R&D Activities." Lawyers summarized all pertinent documents,

depositions, and attorney interviews with key RJR employees from 1950 through 1985. Section IX detailed "the function of the R&D library," the roles of RJR scientists Alan Rodgman and Frank Colby, and "the procedures by which management was kept aware" of health issues. Section X detailed management and attorney oversight of Research and Development and "publication controls imposed on . . . researchers." 515873805-3929 at 3807, 3841 (US 21922*) (O).

1757. **B&W/BATCo:** Lawyers exerted great influence over smoking and health research at B&W and BATCo. In an August 20, 1970 letter to the General Counsel of B&W, David Hardy, a Shook, Hardy & Bacon lawyer, instructed B&W on what should not be in the company's files or testified to by company scientists:

> Fundamental to my concern is the advantage which would accrue to a plaintiff able to offer damaging statements or admissions by persons employed by or whose work was done in whole or in part on behalf of the company defending the action. A plaintiff would be greatly benefitted by evidence which tended to establish actual knowledge on the part of the defendant that smoking is generally dangerous to health, that certain ingredients are dangerous and should be removed, or that smoking causes a particular disease. This would not only be evidence that would substantially prove a case against the defendant company for compensatory damages, but could be considered as evidence of willfulness or recklessness sufficient to support a claim for punitive damages.
>
> In conclusion, I would like to emphasize that, in our opinion, the effect of testimony by employees or documentary evidence from the files of either BAT or B&W which seems to acknowledge or tacitly admit that cigarettes cause cancer or other diseases would likely be fatal to the defense of either or both companies in a smoking and health case. I am afraid that any attempted explanation to a jury that

> such statements were made only in the context of a "working hypothesis" for the further development of our products would fall on deaf ears. . . . Certainly such evidence would make B&W the most vulnerable cigarette manufacturer in the United States to smoking and health suits.

301097079-7085 at 7081-7082, 7085 (US 46580) (A).

1758. A June 4, 1963 letter from BATCo consultant Charles Ellis to multiple attorney recipients stated that the results of research conducted at Battelle Memorial Institute in Geneva on the physiological effects of nicotine were being forwarded to the attorneys before any critical review by scientific experts. 110313093-3096 at 3093 (US 20272) (A).

1759. An October 27, 1976 internal memorandum from scientist S.J. Green, discussed the extent to which "legal considerations" dominated scientific research:

> The public position of tobacco companies with respect to causal explanations of the association of cigarette smoking and diseases is dominated by legal consideration . . . . By repudiation of a causal role for cigarette smoking in general they [the companies] hope to avoid liability in particular cases. This domination by legal consideration thus leads the industry into a public rejection in total of any causal relationship between smoking and disease and puts the industry in a peculiar position with respect to product safety discussions, safety evaluations, collaborative research etc.

109938433-8436 at 8433 (US 34938) (O).

1760. The BAT "Group Research and Development Centre" ("GR&DC") was a cooperative research effort of all operating tobacco companies within the BAT Group, and the companies controlling and funding GR&DC include BATCo and B&W. During a visit to B&W in 1979, GR&DC scientists were informed that GR&DC "will be supported positively in the future" by B&W only if "[w]e become more 'politically sensitive' in the areas of smoking and

health, e.g., reporting of 'nasties' and biological studies generally." To reinforce the point, the B&W hosts were directly quoted as having reminded the visiting scientists: "Remember what pays all our salaries." 107469003-9005 at 9003 (US 34849) (O).

1761. Despite repeated public statements and promises to conduct independent research on the health effects of smoking and to provide the results to the American public, BATCo acted to the contrary. In an August 5, 1980, memorandum, J. Kendrick Wells suggested revisions to a BAT position paper to avoid an invitation of "public scrutiny of all BAT research contributions" because "[t]he effect of statements against interest found in in-house research could be disastrous because it is difficult to escape them. Contrast this with the United States industry research through CTR, which was planned with the intention of publicity and designed for maximum positive public reaction[.]" 680050983-1001 at 0993-0994 (US 20981) (O).

1762. At a May 1984 meeting, B&W in-house counsel and outside litigation counsel convinced the BATCo Legal Department that lawyer involvement in Project Rio, a scientific project, was necessary to "control the risk of generating adverse evidence admissible in U.S. lawsuits." Indeed, Brown &Williamson lawyers suggested that "[d]irect lawyer involvement [was] needed in all BAT activities pertaining to smoking and health from conception through every step of activity." 521015673-5675 at 5674 (US 52687) (A).

1763. In an October 25, 1984 letter, to H.A. Morini, BATCo's corporate counsel, regarding an article proposed by BATCo scientist Lionel Blackman, J. Kendrick Wells instructed Morini that all references or citations to scientists who had concluded that smoking caused disease, including lung cancer and heart disease, or articles that referred to cigarettes as a drug be removed from the article. The references to be removed included references to a publication by Doll and Peto, who Wells admits were "two of the most highly respected and widely published

and widely regarded researchers on the cause of smoking and health[.]" 68052499-2507 (US 86881) (A); Wells WD, 26:18-30:10.

1764. In 1985, BATCo instituted a policy of having lawyers clear all scientific documents that were released outside the production group. 516003171-3171 (US 20872) (A); 516003172-3172 (US 21732) (O); 516003173-3174 (US 22076) (A).

1765. The handwritten notes of Richard Binns, the former Manager of BATCo's Group Research & Development Centre at Southampton, reveals the expansive role lawyers have taken in BATCo's science, writing that:

> I am being asked to make significant and sometimes swingeing [sic] changes in documents produced recently by R&D staff. It is suggested that this must be done by finding a 'managerial explanation' for the changes, without reference to the involvement of Legal Department. I will find this impossible to do. Senior R&D staff will not be so easily deceived. Personally, I am not prepared to lie to staff for very doubtful reasons. Therefore, the current lack of clarity about the relationship between R&D and Legal Dept. has raised questions which for me are ethically disturbing, particularly if extended beyond the present localized situation.

109878083-8089 at 8089 (US 21767) (A).

1766. In a February 26, 1986 memorandum, B&W – through its Chairman and CEO Ray Pritchard and General Counsel Ernest Pepples – requested that BATCo discontinue research on smoking and health because "discovery of such research could prejudice B&W's chances of defending litigation." Moreover, document distribution was to be kept "to a minimum to avoid documents becoming available to plaintiff in litigation." 109870594-0596 at 0594 (US 34873) (O).

1767. In 1990, the BAT Group announced a policy whereby to improve the quality of

scientific documents, they would be subject to "[r]egular lawyer reviews and audits." 202347085-7086 at 7086 (US 22032) (A); Wells WD, 45:5-46:10.

1768. A May 2, 1991 “file note” prepared by J. Kendrick Wells, B&W's Associate General Counsel, stated:

> I told Jeff [Wigand] that hiring a certified toxicologist (Scott) [Appleton] had implications for our management of him. Because of his credentials, any unfortunate statements he makes on key issues have the potential to be particularly troublesome in the hands of an adversary. This means that Scott should work especially closely with me for some time and that Jeff should be wary in how he manages Scott in terms of areas and types of assignments and authority given to Scott.

BWX0037432-7434 at 7432 (US 79219) (A); Appleton TT, 3/24/05, 16899:14-16901:8; Wigand WD, 34:11-35:10.

1769. In a November 23, 1993 letter, J. Kendrick Wells asked Robert E. Northrip, a Shook, Hardy & Bacon lawyer, and Gordon A. Smith, a King & Spalding lawyer, about the proper role for Scott Appleton:

> To further our conversation in Louisville on the subject, please put your two wise heads together and advise us on the following issues:
>
> Is Scott Appleton’s current practice regarding information about scientific developments adequate? Among other considerations, should he attend some of the scientific conferences normally attended by a toxicologist? Would it be helpful if he talked with scientists outside the companies?
>
> What answer do you recommend for Mr. Sandefur when asked how he knows causation has not been proven? Among other considerations, should the Vice President of R&d be included in Mr. Sandefur’s circle of advisors in addition to Dr. Appleton? Should Mr. Sandefur talk with some independent scientists on the

> question of causation? What routine communications should be occurring between Mr. Sandefur and his advisors?

293002121-2121 (US 28116) (A); BWX0017237-7237 (US 28116) (A).

1770. J. Kendrick Wells, B&W's Associate General Counsel, with the support of Thomas Sandefur, B&W's President, edited scientific documents to remove controversial information that would benefit an adversary in litigation. On one occasion, Mr. Sandefur directed Mr. Wells to edit the minutes of a September 1989 scientific meeting in Vancouver "to get rid of all the controversial stuff that Wigand got involved with." Wigand WD, 35:12-44:22.

1771. **Lorillard:** In 1977, Lorillard leadership advised a scientist who was to deliver a research paper that he must delete data from a study related to human smoking habits or he could not deliver the paper. 01416267-6267 (US 20287) (O).

1772. **Liggett:** In 1978, the Legal Department at Liggett took control of an important less hazardous cigarette research project known as Project XA. Joseph H. Greer, Liggett's General Counsel, sent a July 25, 1978 memorandum to several high ranking members of Liggett management, including Robert L. Kersey, Jr., the head of tobacco research at Liggett, advising them of the creation of a "Legal Project team" to take control of Project XA and that the "[t]he Legal Project team will report directly to the Law Department." LG2001538-1538 (US 21481) (O).

1773. In 1978, the creators of Liggett's experimental XA cigarette (A.D. Little, scientist, Dr. Charles Kensler, and James Mold, Director of Research) sought to present a paper relating to the XA at a public International Cancer Congress and to publish the paper in the scientific journal *Science*. Biological research on the XA had convinced Liggett that the cigarette was less carcinogenic than traditional cigarettes. While company management agreed to allow the

presentations, Liggett's attorneys did not give approval for the paper to be presented or published, and it was not allowed to go forward. LG2013608-3608 (US 21438) (O). Project XA is also discussed at US FF III.A.(3), supra.

(ii) "Independent" Scientists and Suppression of Nicotine Research

1774. Defendants' lawyers have attempted to prevent research on nicotine addiction and nicotine manipulation issues. Given that the issue of nicotine addiction was potentially explosive in smoking and health litigation, lawyers began their attempts to curtail or direct the research. As a 1980 Tobacco Institute document stated: "Shook, Hardy reminds us, I'm told, that the entire matter of addiction is the most potent weapon a prosecuting attorney can have in a lung cancer/cigarette case. We can't defend continued smoking as 'free choice' if a person was 'addicted.'" TIMN0107822-7823 at 7823 (US 21275) (O).

1775. Edwin Jacob, long-time tobacco industry counsel, "advised a total embargo on all work associated with the pharmacology of nicotine" in a meeting with the European tobacco industry. Jacob's advice was based in part on "[t]he pending California lawsuit which indicted nicotine as an addictive substance." 110083647-3650 at 3649-3650 (US 76174) (O).

1776. A March 21, 1980 Philip Morris memorandum conceded that Defendants' concerns about research into the pharmacological action of nicotine arose from fear of regulation, i.e., the "increasingly favorable prospects for the success of a legislative effort to transfer authority for the regulation of tobacco manufacture to a Federal agency (F.D.A.) known to have interests and powers antithetical to the interests of the industry." While this legislative effort was unfolding, any action on the part of the tobacco industry, such as "research on the psycho-pharmacology of nicotine, which implicitly or explicitly treats nicotine as a drug could well be

viewed as a tacit acknowledgment that nicotine is a drug." 1000127789-7790 at 7789 (US 21794) (A).

(iii) Admissions and Internal Complaints Regarding Lawyer Control and Manipulation of Science

1777. The tobacco industry's own characterization of a 1977 B&W document describes B&W's General Counsel as attempting to prevent or curtail CTR funded research which he believed was "putting the industry at risk." The danger he foresaw was that "if such tests are conducted, and the results were negative for the industry, it would be a major liability in legislative hearings or in litigation." 682764441-4461 at 4443 (US 21030) (A).

1778. Handwritten notes from an April 21, 1978 Lorillard document contained the heading "Scientific Research Liason [sic] Committee" and stated:

> Should re-convene because: 1) We have again "abdicated" scientific research directional management of the Industry to the "Lawyers" with virtually no involvement on the part of scientific or business management side of the business. 2) Lorillard's management is opposed to the total Industry future being in the hands of the Committee of Counsel - - it's reminiscent of late 1960's when Ramm's group ran the TI, CTR and everything else involved with Industry's public posture.

01346204-6205 at 6204 (US 34532) (A) (emphasis in original).

(iv) Decisions Regarding Research and Publication Were Based upon Litigation Concerns and Desires to Enhance Public Relations, Not Scientific Judgment

1779. A July 21, 1978 document contains the typewritten “confidential” notes of Charles L. Waite of the Tobacco Institute, in which he stated:

> Finally, Morgan reiterates the obvious fact that we must continue to rebutt (sic) every **major critical** study (government funded or

> otherwise) in a **timely manner** using the biggest 'scientific guns' available to us.
>
> To meet this requirement, the following conditions must prevail:
>
> a. Advanced copy of paper, speech, article, etc. must be available to comment on. This is basically an information gathering function, not scientific.
>
> b. Availability of quality credible scientific rebuttal. This requires a stable of consultants in various fields of scientific endeavor who are willing to provide such assistance. Additionally, the utmost in cooperation between all segments of the industry is required in developing and sharing such assets.

TI04280175-0176 at 0176 (US 62174) (O) (emphasis in original).

1780. On November 15, 1988, Defendants considered the dangers of issuing a new proposed Frank Statement with their law firms, including Arnold & Porter and Shook, Hardy & Bacon. It was noted that while the new Frank Statement made it appear that Defendants' position on smoking and health had changed over the years, this had not happened. Further, they argued the new statement could hurt the industry in its litigation strategies. David R. Kentoff, an Arnold & Porter attorney, noted

> the basic problem with the new Frank Statement is that it sets forth a revisionist and internally inconsistent view of history. . . . If it is still the industry's 'belief' that smoking is not injurious, how can it now contend that it is not a member of the Flat Earth Society? . . . [T]he client should be advised to share its plans for the new Frank Statement with National Coordinating Counsel. Certainly, the statement has potential litigation implications which are of legitimate interest to all members of the industry.

2021156932-6936 at 6932-6933, 6935-6936 (US 20341) (A).

1781. **Philip Morris:** Helmut Wakeham prepared a May 12, 1972, draft memorandum to Joseph Cullman III, Chairman of the Board of Philip Morris, on an "Industry-Sponsored

Smoke Inhalation Program" which was being considered for several different types of animals and would cost $1,500,000 per year for five years in order to provide the industry "with a defensive position in the field of smoke inhalation." 1005109006-9007 at 9006 (US 20210) (O).

1782. Patrick Sirridge, a Shook, Hardy & Bacon attorney, sent a July 27, 1983 memorandum to Fredric S. Newman, a Philip Morris International attorney, regarding several reports from the Philip Morris Research Center. In it, he noted:

> Research engaged in, as well as some possibly under consideration, by Philip Morris has undesirable and dangerous implications for litigation positions the industry takes in regard to smoking behavior. The pharmacological nature of the research implies strongly a view of the importance of nicotine. What is worse, research reports under Philip Morris's sponsorship contains claims of physiological tolerance to nicotine, as well as claims of unequivocal demonstrations of reinforcement by nicotine in animals. This kind of research is a major tool of our adversaries on the addiction issue; the irony is that industry-sponsored research is honing that tool. In the final analysis, the performing and publishing of nicotine related research clearly seems ill-advised from a litigation point of view.

2046754720-4731 at 4731 (US 20476) (A).

1783. **RJR:** Ralph Rowland, RJR scientist, sent an interoffice memorandum on April 20, 1971, to managers and section heads concerning rewards and recognition procedures discussed at a management meeting held March 22, 1971, and forbidding publication of certain types of papers due to the "intangible legal situation." 500910506-0507 at 0506 (US 20657) (O).

1784. In an October 17, 1973 interoffice memorandum regarding whether or not to give a grant for a proposed research program at the University of California, Frank Colby, RJR scientist, suggested to Murray Senkus, RJR's Director of Research, that "[a] decision whether or not to recommend a substantial Tobacco Industry grant for the above program should be based

more on public relations than on purely scientific grounds." 500529893-9893 (US 20637) (O).

1785. Charles W. Nystrom, assistant to Frank Colby, RJR scientist, prepared a May 1, 1978 job description for a "Research Section Head Scientific-Legal Information Section" which stated in part: "Primary areas of responsibility are to search, interpret, and evaluate information and ideas to protect the Company in the area of the smoking-health controversy." 500885570-5573 at 5571 (US 20655) (O).

1786. A September 28, 1978 document contained notes of an RJR representative's meeting with German industry representatives near London Heathrow Airport on September 11, 1978 for talks "devoted mainly to those aspects of the German nicotine research . . . [affecting] the legal position of RJR in the United States." The document noted that RJR "forcibly and deliberately . . . extracted from them an unequivocal promise that before any effort which was made to commence or in any other way start a specific research project RJR . . . would have a minimu[m] of three months to evaluate such proposals." 503240503-0514 at 0503, 0504 (US 20713) (O).

1787. A March 3, 1988 RJR document revealed the existence of the "Independent Scientists Program," which had the objective of identifying non-Reynolds scientists who would cooperate with its litigation and public relations strategies. 506254908-4921(US 87393) (A).

1788. **B&W/BATCo:** A May 2, 1963 letter from a White & Case attorney to Addison Yeaman of B&W acknowledges Yeaman's April 29, 1963 letter and its enclosure. The White & Case letter noted: "I have carefully considered the draft of a proposed report prepared by you in cooperation with Dr. Robert B. Griffith [Director of Research at Brown & Williamson], and I am of the opinion that, with the exception explained below, it contains no material which would prove detrimental to the defense of a lung cancer case." The White & Case attorney urged

Yeaman to avoid any "implied admission" because "with the passing of time, the defenses of assumption of risk and contributory negligence will loom increasingly important; yet the validity of these defenses is being whittled down by tobacco company utterances – to the effect that there is no risk, or that it is remote." 680249787-9788 at 9787 (US 23012) (O).

1789. Graham Read, BATCo's Global Head of R&D Strategy and a member of BATCo's board of directors, emphasized the volume of independent, external research that BATCo has funded over the years, resulting in "numerous publications . . . principally through peer-reviewed journals." Read WD, 65:3-12. Indeed, Mr. Read asserted that there were over 500 BATCo-sponsored research articles from 1956 to 1997. Id. at 65:9-22. However, on cross-examination, Mr. Read acknowledged that "BATCo funded quite a bit of research" where "the funding arrangement here was that any research results done by external researchers be published **without disclosing BATCo's role.**" Read TT, 3/22/05, 16413:4-10 (emphasis added).

1790. Moreover, when BATCo gave money to external researchers on condition that they not disclose BATCo's role in funding the research results, it did so precisely so that it could distance itself from the results if it didn't like them. In a February 18, 1986 memorandum to a BATCo scientific analyst, Mr. Read wrote:

> The only stipulation requested by BAT was that they publish independently of us and without acknowledgment. **This allowed BAT to distance itself from the findings and if necessary to defend this position by independent interpretation of "their" published findings.**

103368127-8127 at 8127 (US 93205) (A) (emphasis added).

1791. In addition to requiring "independent" researchers to avoid disclosing that they were being funded by BATCo, BATCo imposed a second condition when it funded external

research: It demanded that it receive pre-publication copies of the results of the "independent" research. 103368127-8127 at 8127 (US 93205) (A); Read TT, 3/22/05, 16414:25-16415:19.

1792. **Lorillard:** In a June 24, 1974 confidential memorandum, Alexander Spears, Research Director of Lorillard, acknowledged Defendants' joint industry effort to fund smoking and health research for public relations purposes:

> Historically, the joint industry funded smoking and health research programs have not been selected against specific scientific goals, but rather for various purposes such as public relations, political relations, position for litigation, etc. Thus, it seems obvious that reviews of such programs for scientific relevance and merit in the smoking and health field are not likely to produce high ratings. In general, these programs have provided some buffer to public and political attack of the industry, as well as background for litigious strategy.

01421596-1600 at 1598 (US 20049) (A).

1793. **Liggett:** Liability litigation concerns drove Liggett's research program throughout the 1990s and controlled whether or not research would be done and the type of research that would be done. Dennis Dietz, Manager of Scientific Issues for Liggett from 1991 to 1999, testified that "instead of doing independent research into the question of smoking and health, the Company focused on insuring its products were no less harmful than those of its competitors." Dietz had regular product liability meetings with Liggett's outside counsel. When Dietz began working for Liggett, he had an "orientation" meeting with outside counsel wherein they "open [ed] his eyes up to the fact that we were involved with research that wasn't just pure, really, academic, that we need to be focused on all these issues." Dietz explained that the issues he was referring to were "health related issues . . . that potentially could – could impact on – on product litigation." Dietz PD, United States v. Philip Morris, 7/1/02, 51:16-18, 169:21-177:10.

1794. Dr. Dietz testified about his meeting with Webster & Sheffield, knew they were the product liability litigation attorneys and stated: "It was probably within a very short time after I joined Liggett that we had some meetings and they – I think at the time Liggett was undergoing trial with the Cipollone case, and that the formulas were really the bread and butter of our company and **there are a lot of outstanding issues out there, and when we do science it's up to me or the Research Department to do good science, but that we should make sure that it's done in that context**." Dietz TT, 3/29/05, 17159:10-23 (emphasis added).

C. The Addictive Properties of Nicotine

(1) Nicotine and Addiction

1795. Cigarette smoking is an addictive behavior, a dependency characterized by drug craving, compulsive use, tolerance, withdrawal symptoms, and relapse after withdrawal. Underlying the smoking behavior and its remarkable intractability to cessation is the drug nicotine. Nicotine is the primary component of cigarettes that creates and sustains addiction to cigarettes. While Defendants now seek to hide behind self-serving interpretations of scientific definitions of addiction over time, the underlying known facts about the addictive quality of smoking and the importance of nicotine to the addiction have not changed.

1796. Defendants have long researched and recognized, decades before the scientific community, that nicotine is an addictive drug, that cigarette manufacturers are in the drug business, and that cigarettes are drug delivery devices. Nicotine largely explains why people use tobacco products. Moreover, Defendants have sought to exploit the addictive quality of smoking and nicotine for decades in order to develop new products and increase sales.

1797. Notwithstanding the understanding and acceptance of each Defendant that smoking and nicotine were addictive, Defendants have publicly denied and distorted the truth as to the addictive nature of their products. Defendants' public fraud has included externally relying on a self-serving definition of addiction, suppressing research showing the addictiveness of nicotine, and parroting misleading statistics as to the number of smokers who have quit.

1798. Defendants have intentionally maintained and coordinated their fraudulent position on addiction and nicotine as an important part of their overall efforts to influence public opinion and persuade people that smoking was not dangerous; in this way, the Cigarette Company Defendants (Defendants) could keep more smokers smoking, recruit more new

smokers, and maintain or increase their profits. Additionally, Defendants have sought to discredit proof of addiction in order to preserve their "smoking is a free choice" arguments in smoking and health litigation.

1799. Defendants continue to publicly deny and distort the truth as to the addictiveness of cigarette smoking and nicotine's role in the addiction. Defendants refuse to acknowledge their internal statements acknowledging and exploiting nicotine addiction. While nicotine shares many attributes of heroin, cocaine, and other drugs, Defendants continue to assert that smoking is only addictive to the same extent as coffee, chocolate, and the like, and (with the limited exception of Philip Morris) continue to deny that nicotine is addictive at all.

(a) Cigarette Smoking is Addictive and Nicotine is the Primary Component of the Addiction

1800. There is an overwhelming consensus in the scientific and medical community that cigarette smoking is an addictive behavior and that nicotine is the component in cigarettes that causes and sustains the addiction. Henningfield WD, 114:9-12; Burns WD, 13:16-14:19.

1801. The Surgeon General, the National Institute on Drug Abuse ("NIDA"), the World Health Organization ("WHO"), the American Psychiatric Association ("APA"), the Food and Drug Administration ("FDA"), the Harvard School of Public Health, and others have declared that tobacco use is a form of addiction that shares many similarities with the use of cocaine or heroin. Benowitz WD, 26:3-36:8.

1802. "Drug addiction" is a common language term for what many researchers clinically refer to as "drug dependence." The term "dependence" was never intended to imply a lesser or watered-down condition than "addiction." Henningfield WD, 110:9-22.

1803. In fact, organizations such as NIDA, the American Association of Addiction Medicine, and the College on Problems of Drug Dependence use the terms "drug addiction" and

"drug dependence" interchangeably. Id., 110:9-22.

1804. Scientific and medical literature support the conclusion that nicotine ingested via cigarette smoking has significant pharmacological effects on the structure and function of the human body - pharmacological effects that create dependence in the smoker. Industry documents show that these effects have been known to the industry since the early 1960s. Id., 136:14-22.

1805. In commonly understood terms of addiction, smokers become dependent on the significant pharmacological and psychoactive effects of the nicotine in cigarettes, resulting in craving, compulsive use, difficulty in quitting, and relapse after withdrawal.

1806. There is compelling evidence that smoking behavior is motivated by a need to maintain a preferred "fix" or level of nicotine intake, leading to the phenomenon of nicotine compensation, or titration, in response to the use of cigarettes with lower nicotine yields.

1807. Contrary to Defendants' view as expressed in numerous public statements, uncertainties concerning the addictiveness of tobacco products that existed in the 1960s and 1970s were not resolved by changing definitions of "addiction" to fit nicotine. Rather, the scientific and medical understanding of drug addiction and assembly of data has advanced considerably since the release of the 1964 Surgeon General's Report, which relied upon WHO criteria that emphasized intoxication and essentially construed drug addiction as a personality disorder. In fact, the prominence given to personality disorder and the intoxicating effects of the drug as essential determinants of addiction were abandoned by the WHO itself in 1964, but too late to serve the authors of the 1964 Surgeon General's Report. This concept and others were replaced by criteria and diagnostic techniques to measure addictive effects including physiological dependence, withdrawal, reinforcement, and psychoactive effects. Henningfield WD, 114:18-116:14.

1808. In the 1964 Report, the Surgeon General, using the criteria established for "addiction" and "habituation" by the WHO, concluded that smoking, nicotine, and cocaine were not "addictions." Smoking in particular was termed a "habituation" rather than an "addiction" because it did not induce a state of intoxication, there was no evidence of "overpowering" need to ingest nicotine, and there was no evidence of significant physical dependence. The 1964 report concluded, based on the WHO definition and the limited data available at the time, that smoking produced only a "psychiatric but not physical dependence." VXA1601844-2232 (US 64057) (A); Henningfield WD, 114:18-117:5.

1809. As described below, Defendants knew better. In-house tobacco industry research, research kept hidden from the writers of the Surgeon General's report, showed drug addiction-like effects, including tolerance, withdrawal, compulsive use, and craving. The actions of BATCo and B&W, described below, are particularly illuminating on the issue of the Cigarette Company Defendants' far superior knowledge of nicotine and its behavioral effects in 1964, as well as the uninformed conclusion of the advisory committee to the Surgeon General who acted without that research.

1810. The subsequent WHO expert committee published a report in 1964 abandoning its prior definitions of habituation and addiction, definitions that had been largely adopted in the 1964 Surgeon General's Report. Instead, the committee recommended the adoption of the term "dependence." Henningfield WD, 109:3,20; 110:8-22; 116:7-14; 122:20-123:16.

1811. Since 1964, notwithstanding Defendants' attempts to deny or distort the evidence, data has unequivocally demonstrated that nicotine in cigarettes is addictive by the same criteria that heroin and morphine were concluded to be addictive. More importantly, and regardless of the conclusion of the 1964 Report, Defendants have continued to generate internal research

results confirming their pre-1964 knowledge and acceptance that smoking and nicotine were in fact addictive. Id., 87:19-103:13.

1812. While Defendants well understood the primary role of nicotine in sustaining smoking addictiveness by the 1960s, and designed their products to deliver sufficient nicotine for this purpose, the understanding of the preeminence of nicotine developed more slowly outside the tobacco industry. For example, it was not until 1980 that clinical psychiatrists determined that there was sufficient evidence of dependence and withdrawal from smoking to include these in the APA's Diagnostic and Statistical Manual ("DSM-III"). Even then, the syndromes were called "tobacco dependence" and "tobacco withdrawal" rather than "nicotine dependence" and "nicotine withdrawal," because of psychiatrists' insufficient knowledge and understanding of the specific role of nicotine. It was clear to the developers of the DSM-III that nicotine played a role in making smoking addictive, but there were unresolved questions as to the importance of nicotine, as opposed to the numerous other constituents of tobacco smoke and behavioral components of smoking. It was not until 1982 that NIDA concluded that scientific evidence demonstrated that nicotine is addictive. Henningfield WD, 123:23-128:21, 132:10-13.

1813. Therefore, by the early to mid 1980s, leading scientists and organizations with expertise in tobacco and drug addiction had come to the conclusion that nicotine was an addictive drug and that cigarette smoking was maintained by nicotine addiction. Id., 123:23-128:21, 132:10-13.

1814. The 1988 Surgeon General's Report, entitled "The Health Consequences of Smoking - Nicotine Addiction," concluded that smokers smoke because they are addicted to nicotine. Upon an exhaustive review of the literature on nicotine and smoking behavior, the report found that cigarettes and other forms of tobacco are addicting, and that nicotine is the

substance in tobacco that causes the addiction. "The Health Consequences of Smoking: Nicotine Addiction: A Report of the Surgeon General" (1988), VXA0300208-0848 (US 64591) (A).

1815. The 1988 Surgeon General's Report set forth three primary criteria to determine whether a drug, in this case nicotine, is addicting: (1) use is highly controlled or compulsive; (2) the use of the drug produces mood altering (psychoactive) effects; and (3) the drug reinforces behavior, resulting in continued intake or drug-reinforced behavior. Henningfield WD, at 143:20-144:3; VXA0300208-0848(US 64591) (A); Benowitz WD, 27:6-13.

1816. The first criterion, highly controlled or compulsive use, refers to drug-seeking and drug-taking behavior that is driven by strong, often irresistible urges. Such use persists despite a desire to quit or even repeated attempts to do so. This type of behavior has also been described as "habitual." Benowitz WD, 27:21-28:2.

1817. Drug addiction, however, is distinguished from habitual behaviors not involving drugs -- such as habitual exercising or overeating -- by the second criterion, the presence in the blood stream of a drug with psychoactive or mood-altering effects on the brain. Food, for example, which is necessary to sustain life, is not a drug and does not satisfy the second criterion. Id., 28:3-16.

1818. Dr. Peter Rowell, one of Defendants' experts, testified that as an addiction, smoking cigarettes involves a drug and is not comparable to non-drug "habits" such as jogging, playing tennis or biting one's nails. Rowell TT, 3/23/05, 16685:5-16687:19.

1819. Finally, the mood-altering drug must be capable of functioning as a reinforcer that can directly strengthen behavior leading to further drug ingestion. Such reinforcement exists where, for instance, the drug produces pleasant or rewarding sensations like stimulation, relaxation, or euphoria, or mitigates unpleasant withdrawal sensations experienced when a

person stops using the drug. Benowitz WD, 28:17-29:7.

1820. Defendants claim that the Surgeon General discounted tolerance and withdrawal in concluding that nicotine was addictive; however, the 1988 Surgeon General report documented both tolerance and withdrawal and determined that nicotine met these additional criteria. However, neither tolerance nor withdrawal are the primary criteria of drug dependence/addiction as defined by the Surgeon General, WHO, APA, or FDA.

1821. Defendants also cling to the long outdated and abandoned idea that significant intoxication or impairment is required to sustain addiction. Intoxication was abandoned by the WHO, the APA, and the Surgeon General because many intoxicating substances are not addicting and because many addictive drugs are used and abused at doses that do not cause intoxication. Benowitz WD, 30:14-31:25; Henningfield WD, 145:20-146:5, 150:14-151:8.

1822. Defendants rely on the testimony of one of their experts, Dr. Peter Rowell, to support their arguments against calling nicotine addictive. However, as he readily admitted, Dr. Rowell, unlike the United States' experts, Drs. Henningfield and Benowitz, has never conducted or published peer-review research on human smoking behavior, addiction in humans, the role of nicotine in human smoking behavior, smoking cessation, clinical treatment of smokers, or cigarette design. Benowitz TT, 3/23/05, 16623:8-16624:22.

1823. Ironically, Dr. Rowell rejected the argument that intoxication was necessary for nicotine to be considered addicting:

> Q. And, sir, it is correct, is it not, that it's been your view since the early 1970s that to be addictive, a drug does not have to cause intoxication?
>
> A. Yes.
>
> Q. The suggestion, then, that a drug cannot be addictive because it is not intoxicating, you wouldn't agree with that statement, correct?

A. I would not.

Rowell TT, 3/23/05, 16632:4-7, 16632:23-16633:2.

1824. Dr. Rowell also rejected Defendants' argument that a drug is not addictive if it does not cause physical dependence:

Q. And similarly, sir, you agree, do you not, that it has long been recognized within the pharmacological community that the -- that there are drugs of addiction that don't induce physical dependence, so you can have addiction without physical dependence and physical dependence without addiction, correct?

A. Yes, I agree, you could do that. Actually, there is some mild physical dependence with really every substance, but it's really not a major effect and it's probably not required.

Id., 16633:3-10.

1825. In 1994, the APA published its Diagnostic And Statistical Manual of Mental Disorders-IV ("DSM-IV"). DSM IV defined "substance dependence" as "a pattern of repeated self-administration that usually results in tolerance, withdrawal, and compulsive drug-taking behavior." DSM IV continued to recognize the diagnoses of both "nicotine dependence" and "nicotine withdrawal." American Psychiatric Association, *Diagnostic and Statistical Manual of Mental Disorders IV* (1994) at 176-181 (JD-000460) (A).

1826. In the DSM IV section entitled "Nicotine-Related Disorders," the APA concluded that nicotine can produce dependence in people who use all forms of tobacco, including cigarettes, because the following criteria are present: tolerance, withdrawal, a desire to quit, a great deal of time spent using nicotine, and the continued use despite medical problems. APA, *DSM-IV* (1994), at 176-181, 242-247 (JD-000460) (A).

1827. Defendants long claimed publicly that nicotine and smoking were not addictive or dependence-producing because smoking did not result in tolerance. However, in describing the

diagnosis of "Nicotine Dependence," the DSM IV authors stated that, "Tolerance to nicotine is manifested by the absence of nausea, dizziness, and other characteristic symptoms despite using substantial amounts of nicotine or a diminished effect observed with continued use of the same amount of nicotine-containing products." APA, *DSM-IV* (1994) at 243; (JD-000460) (A).

1828. The DSM IV authors also met head on Defendants' oft-repeated public claim that smoking cigarettes does not produce withdrawal: "Cessation of nicotine use produces a well-defined withdrawal syndrome that is described below. Many individuals who use nicotine take nicotine to relieve or avoid withdrawal symptoms when they wake up in the morning or after being in a situation where use is restricted." In addition, withdrawal symptoms "are typically more intense among individuals who smoke cigarettes than among individuals who use other nicotine-containing products." APA, *DSM-IV* (1994) at 243-244; (JD-000460) (A).

1829. Further reflecting the consensus judgment that nicotine is addictive, the investigation by the FDA leading to its Final Tobacco Rule issued in August 1996 confirmed that even by the most stringent criteria employed by the FDA, nicotine in cigarettes is an addictive drug. Henningfield WD, 159:9-161:22.

1830. The FDA concluded in its August 1996 Final Rule that, "All major public health organizations in the United States and abroad with expertise in tobacco or drug addiction now recognize that the nicotine delivered by cigarettes and smokeless tobacco is addictive." 1996 FDA Jurisdictional Determination, 61 Fed. Reg. 44619 (August 1996) at xv, VXA1242326-3211 at 2572 (US 64323) (A).

1831. The scientific community further recognizes that nicotine is addictive under the outdated 1964 Surgeon General's Report / WHO definition as well as the 1988 Surgeon General's Report's definition. 1996 FDA Jurisdictional Determination, 61 Fed. Reg. 44619 (August 1996);

VXA1242326-3211 at 2645-2651 (US 64323) (A).

1832. Defendants' expert, Peter Rowell, not only agreed that nicotine plays an essential role in cigarette smoking, Rowell TT, 3/23/05, 16625:12-25, but that "there is clearly addiction for cigarette smoking." Rowell TT, 3/24/05, 16790:4-16.

1833. Dr. Rowell also testified that there many similarities between the properties that determined tobacco addiction and those that determined heroin and/or cocaine addiction:

> Q. And I want to direct your attention specifically to the third major conclusion expressed by the Surgeon General in 1988, which appears at page 9, and it reads, quote, the pharmacologic and behavioral processes that determine tobacco addiction are similar to those that determine addiction to drugs such as heroin and cocaine. Do you see that?
>
> A. Yes, I do.
>
> Q. Do you agree or disagree with what the Surgeon General said about similarities existing between the pharmacologic and behavioral properties that determine tobacco addiction and those that determine addiction to drugs such as heroin and cocaine?
>
> A. I agree there are similarities.
>
> Q. Have you prepared an animation that -- well, before we get to that, let me ask you a further question. When you say that there are these similarities, what is the basis for your saying that there are similarities from a pharmacological point of view? What are you focusing on?
>
> A. The dependence properties of nicotine and more dramatically cigarette smoking in regards to physical dependence, withdrawal symptoms, effects of neurochemistry in the brain on neurotransmitters, self-administration studies. Many of these things were done in the '80s just before the Surgeon General's report. So these were the similarities that led the Surgeon General to indicate that there were, in fact, these similarities between cigarette smoking and these other drugs.

Rowell TT, 3/22/05, 16549:23-16650:15.

1834. Today, most daily cigarette smokers satisfy the Surgeon General's primary criteria for addiction. The first criterion, highly controlled or compulsive use, is demonstrated by the fact

that addicted smokers smoke numerous cigarettes throughout the day. Second, the nicotine in the cigarette tobacco stimulates the nicotinic receptors in the smoker's brain, a psychoactive effect that affects the smoker's mood. Third, the smoking behavior is reinforced by the pleasurable effects of nicotine and/or by the mitigation of unpleasant withdrawal sensations triggered by the need for nicotine. Benowitz WD, 29:8-30:13.

1835. Published research indicates that 77 to 92% of smokers are addicted to nicotine in cigarettes. 1996 FDA Determination, VXA1242326-3211 at 2335, 2528 (US 64323) (A).

1836. In addition, persons who have smoked at least one cigarette are about twice as likely to develop dependence on nicotine as are persons who have ever tried cocaine or alcohol to develop a dependence on those drugs. 1996 FDA Determination, VXA1242326-3211 at 2335, 2596 (US 64323) (A).

1837. Many smokers and potential smokers are unaware of or do not fully appreciate the addictive nature of nicotine and the addictiveness of cigarette smoking, and the extent to which nicotine delivery and dosage is highly controlled and engineered. Weinstein WD, 61:5-74:2.

1838. Every year, an estimated 17 million people in the United States attempt to quit smoking, succeed in quitting. Benowitz TT, 11/1/04, 4505:2-4506:13.

1839. Most smokers smoke cigarettes regularly in order to experience nicotine's effects on the brain and the body, and therefore become addicted to nicotine. People who try to quit smoking often experience withdrawal symptoms that can be extremely disruptive. Accordingly, it is usually very difficult for the smoker to stop smoking cigarettes. Id., 4503:17-4506:13.

1840. Most smokers who desire to quit require several quit attempts before they are successfully able to give up cigarettes, and many smokers die of smoking-related diseases before they are able to quit. Id., 4505:2-4506:13.

1841. The fact that cigarette smoking is addictive is particularly troublesome in light of the fact that most smokers become addicted to smoking as teenagers. 88% of daily smokers tried their first cigarette before reaching age 18, and 70% of people who have ever smoked daily began smoking daily before they were 18 years old. Thus, because nicotine addiction develops in the first few years of cigarette smoking, most smokers become addicted to nicotine during adolescence or early adulthood. Benowitz WD, 38:15-39:2, 39:3-5, 9-10.

1842. Underage smokers and potential smokers are particularly vulnerable to nicotine addiction because they are not capable of making a fully informed decision whether to start or continue smoking for a variety of reasons, including the fact that they underestimate personal risks and lack judgment which is developed through experience. Youth also fail to appreciate the risks and consequences of addictions. "The Health Consequences of Smoking: Nicotine Addiction: A Report of the Surgeon General" (1988), VXA0300208-0848 (US 64591) (A); Benowitz WD, 47:3-48:10; Weinstein WD, 61:5-74:2.

1843. Studies demonstrate that adolescents not only underestimate the harm that results from smoking cigarettes, but are overly optimistic about their ability to quit smoking. In one peer-reviewed study of 10-18 year olds, the subjects were asked to estimate the probability of four smoking-related conditions, including heart trouble, cancer, breathlessness, and carbon monoxide in the blood. They found that adolescents rated the hypothetical risk that they would experience if they became a regular smoker to be lower than the risk for another smoker, even though the two were said to have the same amount and duration of smoking. Weinstein WD, 64:7-23.

1844. The Cohn study, which involved 376 teenagers, found that when they were asked about their risk of 19 health problems and negative risk events, one of which was becoming

addicted to cigarettes, the teenagers claimed that they were less likely than their peers to become addicted. Furthermore, when asked of their perceptions of the harmfulness of their activities including cigarette smoking, the teenagers rated these activities as significantly less harmful than did their parents. Weinstein WD, 64:7-23.

1845. Research shows that 81% of adult smokers said that if they tried to quit for just a day, they experienced strong cravings for cigarettes. Of these, 95% said that the cravings were stronger than what they had expected when they began to smoke. Fewer adolescent smokers – 46% – reported that they would experience strong cravings if they tried to quit. Among those adolescents who said they experienced such cravings, 85% said that the cravings were stronger than what they had expected when they began to smoke. Thus, people underestimate the addictive power of nicotine when they first become smokers. Weinstein WD, 66:3-69:19.

1846. As for quitting, most smokers give no thought to how long they will smoke when they first begin, apparently believing that quitting is something that can be decided later. By then, addiction can make it extremely difficult to quit. In a large national survey, 24% of youth smokers said they expected to smoke for less than a year, 10% said one to five years, and only 5% said they expected to smoke longer than five years. However, a much larger proportion, 61%, said they had never thought about it. The corresponding figures for adult smokers were: less than one year - 12%, one to five years - 5%, longer than five years - 7%, and never thought about it - 76%. Weinstein WD, 66:3-69:19.

1847. As for adolescents and quitting smoking, the data shows that they agree that it is hard for other smokers to quit, but they believe that they will be able to quit more easily than other smokers. In one study, 96% of the teen respondents believed that it is “hard,” “very hard,” or “almost impossible” for a half-pack-a-day smoker to quit, and 96% agreed that the longer you

smoke the more difficult it is to quit. However, 43% of the teen smokers in the survey reported that they, personally, would find it easy to quit and never smoke again, and a mere 16% said it would be either "very hard" or "almost impossible" for them. Teenagers' reluctance to give up this reassuring illusion is demonstrated by the finding that, even among teens who had already made a serious quit attempt and failed, 32% still said it would be easy for them to quit. Weinstein WD, 66:3-69:19.

1848. The Annenberg study asked smokers who said that they planned to try to quit in the next year, "If we called you again in a year, would you guess you would have successfully quit smoking?" A very high 83% of youths and 78% of adults said they expected to succeed in their quit attempt. The reality, however, is that only 28% of teenage quitters manage to quit smoking for a year, and only 7% of adults smokers who try to quit are able to remain cigarette free for a year. Weinstein WD, 66:3-69:19.

1849. In another study, smokers who were planning to quit in the next year, and who had tried and failed in the past, were asked about their next quit attempt. From this group, 88% of youths and 64% of adults said that they would be nonsmokers a year later. Even among those who stated that quitting was very hard or almost impossible for others, 83% of youths and 57% of adults predicted their own success. Weinstein WD, 66:3-69:19.

1850. Finally, in the University of Michigan's Monitoring the Future survey, high school seniors were asked, "Do you think you will be smoking cigarettes 5 years from now?" These same seniors were contacted 5 years later. The results showed that both light smokers and heavy smokers overestimated the likelihood that they would have quit. Of seniors who smoked less than one cigarette per day, approximately 85% stated that they probably or definitely would not still be smoking after 5 years. When the same group was polled five years later, 58% were still

smoking. Almost one third of seniors who smoked a pack a day thought that they, too, would quit within five years. But, only 13% actually quit. Weinstein WD, 66:3-69:19.

1851. As a general concept, smokers and nonsmokers agree that quitting is difficult. Nevertheless, teenage and adult smokers greatly overestimate the likelihood that their own quit attempts will succeed. In fact, nearly half of teenage smokers say that quitting will be easy for them. Furthermore, the evidence indicates that people fail to consider the difficulty of quitting when they start to smoke and do not recognize how strong the cravings produced by addiction can be. What this research demonstrates is that people have insufficient understanding of the difficulties of avoiding the harms of smoking to make an informed decision about beginning to smoke. Weinstein WD, 66:3-69:19.

(b) Within the Tobacco Industry and Among These Defendants, Internal Documents and Statements by Defendants Establish That Each Defendant Well Knew That Smoking and Nicotine Are Addictive

1852. The chronicle of documentary evidence in this section reveals that for decades Defendants knew and internally acknowledged that nicotine is an addictive drug, cigarettes are a nicotine delivery device, and that addiction can be enhanced and perpetuated through manipulating both nicotine and nicotine delivery. Much of Defendants' wealth of nicotine knowledge was procured via in-house and industry-funded research into the pharmacological effects of the drug. This knowledge rendered their public statements over this same period of time on the subjects of addiction and nicotine false, deceptive, and fraudulent when made.

1853. For example, internal documents reveal that Philip Morris researchers knew that nicotine was "a powerful pharmacological agent" and that the company operated on the "premise that the primary motivation for smoking is to obtain the pharmacological effect of nicotine." 1003033413-3417 at 3413 (US 20143) (O); 1003287836-7848 at 7837 (US 22848) (A). RJR's

lead nicotine researcher stated that nicotine is the "sine qua non of smoking" and that the industry was based on the sale of "attractive dosage forms of nicotine." 500915683-5691 at 5684-5685 (US 20659) (A). BATCo's sophisticated research from the early 1960s demonstrated that "smokers are nicotine addicts." 301083862-3865 at 3863 (US 20577) (A). B&W, BATCo's subsidiary, had the BATCo data, and marketed cigarettes with the understanding that they "must provide the appropriate levels of nicotine." 501011512-1515 at 1513 (US 85309) (O). Lorillard researchers accepted the scientific consensus in the 1970s that "the most probable reason for the addictive properties of the smoke is the nicotine." 82396938-6939 (US 22012) (A). Liggett, like its larger cigarette manufacturer counterparts, was actively seeking ways to manipulate the nicotine delivery to smokers. LG0262125-2126 (US 59994) (O).

1854. Defendants claim that they defrauded no one because the federal government never officially said nicotine was "addictive" until the 1988 Surgeon General's Report. This is not relevant. Defendants' own knowledge and acceptance is what made their public statements fraudulent. Moreover, had Defendants come forward and disclosed their physiological and behavioral research on nicotine, the Government and other medical authorities would likely have placed nicotine in the addiction/dependence category decades earlier. Henningfield WD, 87:19-103:13.

1855. Defendants have studied nicotine and its effects since the 1950s, and the documents describing their examination and knowledge of nicotine's pharmacological effects on smokers – whether they characterized that effect as "addictive," "dependence" producing or "habituating," –demonstrate unequivocally that Defendants understood the central role nicotine plays in keeping smokers smoking, and thus its critical importance to the success of their industry.

1856. Additional internal records demonstrate that Defendants knew that cigarette smoking and tobacco generally was the vehicle for delivering nicotine, which was the critical component in maintaining the addiction (sometimes referred to as "satisfaction") necessary to sustain and enhance their profits. Indeed, Defendants purposefully designed and sold products that delivered a pharmacologically effective dose of nicotine in order to create and sustain nicotine addiction in smokers. Henningfield WD, 87:19-103:13.

1857. Other documents demonstrate Defendants' understanding and acceptance of nicotine's role in maintaining cigarette smoking by showing their recognition that smokers adjust their smoking behavior in order to obtain their necessary nicotine intake. This behavioral adaptation of smokers is known as "compensation," or "titration," a concept Defendants have been well aware of for many years. Henningfield WD, 49:14-55:5.

1858. As evidenced by these documents, Defendants understood that their cigarettes did produce powerful pharmacological effects on the user, that nicotine was the principal agent responsible for these effects, and that to have a chance at success in the marketplace, a cigarette had to be able to deliver enough nicotine to trigger the desired physiological effects.

1859. These industry documents also support the conclusion that Defendants knew early on in their research that if a cigarette did not deliver a certain amount of nicotine, new smokers would not become addicted, and "confirmed" smokers would quit.

1860. Defendants recognized that while genuinely low-yield cigarettes could lead smokers away from smoking altogether because they would lack sufficient levels of nicotine to keep smokers addicted to cigarettes, smokers were nonetheless concerned about their exposure to tar and nicotine. Henningfield WD, 35:16-36:16.

1861. To address smokers' concerns and to avoid losing consumers from the

marketplace, Defendants took advantage of the Federal Trade Commission ("FTC") testing system by designing purportedly low-yielding cigarettes to register low FTC tar and nicotine yield values that would be acceptable to cigarette smokers while at the same time facilitating the efforts of smokers to get their desired levels of nicotine. That is, the cigarettes were designed to make it easy for consumers to obtain higher tar and nicotine yields than those obtained using the FTC testing method. Id., 47:11-68:4.

1862. Defendants also collectively concealed their knowledge and understanding of nicotine because they wished to avoid liability for diseases caused by their products and to avoid FDA regulation of their products.

1863. The following statements demonstrate Defendants' vast scope of knowledge regarding nicotine's addictive effects on smokers since the 1950s, their use of that information to maintain and increase the sale of cigarettes, and their decades-long efforts both to deny the truth and to conceal internal research.

(i) Philip Morris

1864. Internal documents show Philip Morris's extensive history of conducting nicotine research, acknowledging addiction, and exploiting nicotine for commercial advantage.

1865. In a September 22, 1959 memorandum, Philip Morris's Vice President for Research and Development, Hugh Wakeham, emphasized the importance of nicotine, stating: "One of the main reasons people smoke is to experience the physiological effects of nicotine on the human system." 10005039423-9424 (US 21657) (A).

1866. In a November 15, 1961 presentation, Mr. Wakeham addressed the company's ability to control the nicotine content of its cigarettes. He stated that "low nicotine does stimulate, but high doses depress functions," and "continued usage develops tolerance." Wakeham further

stated that: "Even though nicotine is believed essential to cigarette acceptability, a reduction in level may be desirable for medical reasons." 1000277423-7447 at 7438, 7441 (US 20088) (A).

1867. On March 5, 1964, William L. Dunn, a Philip Morris scientist/psychologist who later became the Principal Scientist for the company, commented at length on the possibility of developing a "surrogate" for cigarettes based on the importance of nicotine. He wrote:

> The pharmacological need [for cigarettes] is readily definable. The smoker seeks the subjective state that results from the introduction of nicotine into the bloodstream. There are some specifiable, some not specifiable changes in the physiological state accruing from the presence of nicotine. . . . There are undoubtedly other physiological reactions which are responsible for the sense of euphoria, or well-being, that the novice smoker experiences in the exaggerated form of dizziness. Without belaboring a most complex and little understood set of phenomena, suffice it to say that it is this subjective state which is sought by the smoker as he lights up.

1003700128-0133 at 0129 (US 20177) (A).

1868. In the same document, Dunn also stated that any less hazardous cigarette product developed by Philip Morris "must induce the psychopharmacological state now induced by nicotine absorption into the bloodstream." 1003700128-0133 at 0132 (US 20177) (A).

1869. A handwritten summary by Philip Morris researcher Ronald Tamol of a February 1, 1965 brand development meeting/presentation recorded the conclusion that the cigarette manufacturer who could come up with a "flavorful" low tar cigarette with "enough nicotine to keep smokers hooked . . . will reap huge benefits." 0002862-2867 at 2867 (US 88761) (O).

1870. In a June 1966 report entitled "Market Potential of a Health Cigarette," Philip Morris researchers Dunn and Myron Johnston stated that without nicotine, a health cigarette would not sell: "[A]ny health cigarette must compromise between health implications on the one hand and flavor and nicotine on the other. . . . Flavor and nicotine are both necessary to sell a

cigarette. A cigarette that does not deliver nicotine cannot satisfy the habituated smoker and cannot lead to habituation, and therefore would almost certainly fail." 1001913853-3878 at 3860 (US 20123) (A).

1871. With this understanding in the mid-1960s and armed with the knowledge of nicotine's addictiveness, Philip Morris was already manipulating the pH of tobacco to enhance the psychoactive effects of nicotine on the brain. In fact, RJR was able to verify that Philip Morris had been increasing the nicotine "strength" of its Marlboro brand by increasing its pH since 1964. 500606138-6153 (US 48334) (O); 509314122-4154 (US 51456) (O).

1872. In a May 7, 1968 Philip Morris memorandum entitled "TPN Intake by Smokers," Dunn wrote that "since there is evidence that the smoker adapts his puff, it is reasonable to anticipate that he adapts to maintain a fairly constant daily dosage." This document demonstrates that Philip Morris has known for over 35 years that smokers would "compensate" in order to maintain a constant intake, or dosage, of nicotine. 1003293548-3555 (US 35743) (O).

1873. Philip Morris was well aware that nicotine shared many attributes of an addictive drug. In a February 19, 1969 memorandum from Dunn to Wakeham, Dunn cautioned that nicotine was a drug with FDA implications. He also discussed the "dual action" of nicotine as a drug with pharmacological "stimulant-tranquilizer" effects that caused a "pleasant state of dizziness so clearly experienced by the beginning smoker and by the habituated smoker following abstention." 1003289921-9922 at 9921 (US 20167) (A).

1874. In a Fall 1969 draft of the annual report entitled "Why One Smokes," and presented to the Philip Morris Board, Wakeham emphasized the role of nicotine in smoking. He flatly stated:

> We share the conviction with others that it is the pharmacological effect of inhaled smoke which mediates the smoking habit. . . .

> We have then as our first premise, that **the primary motivation for smoking is to obtain the pharmacological effect of nicotine.**
>
> In the past we at R & D have said that we're not in the cigarette business, we're in the smoke business. It might be more pointed to observe that the cigarette is the vehicle of smoke, smoke is the vehicle of nicotine, and nicotine is the agent of a pleasurable body response.
>
> This primary incentive to smoking gets obscured by the overlay secondary incentives, which have been superimposed upon the habit. Psychoanalysts have speculated about the importance of the sucking behavior, describing it as oral regression. Psychologists have proposed that the smoker is projecting and ego-image with puffing and his halo of smoke. One frequently hears "I have to have something to do with my hands" as a reason. **All are perhaps operative motives, but we hold that none are adequate to sustain the habit in the absence of nicotine.**
>
> We are not suggesting that the effect of nicotine is responsible for the initiation of the habit. To the contrary. The first cigarette is a noxious experience to the noviate. To account for the fact that the beginning smoker will tolerate the unpleasantness, we must invoke a psychosocial motive. Smoking for the beginner is a symbolic act. The smoker is telling the world, "This is the kind of person I am. . . . "
>
> As the force from the psychosocial symbolism subsides, the pharmacological effect takes over to sustain the habit . . . .

1003287836-7848 at 7837-7839 (US 22848) (A) (emphasis added).

1875. Wakeham stated further in the same report that the purpose of Philip Morris smoking psychology research was to "discover ways to exploit the benefits of smoking to the advantage and profitability of our major company business." 1003287836-7848 (US 22848) (A).

1876. In the final version of Wakeham's presentation, dated November 26, 1969, he largely restated material from the draft quoted above. In summarizing nicotine's dual effect as stimulant and depressant, Wakeham stated that smoking maintenance depended solely on the pharmacological effects on smokers:

> We are of the conviction, in view of the foregoing, that the ultimate explanation for the perpetuated cigaret habit resides in the pharmacological effect of smoke upon the body of the smoker, the effect being most rewarding to the individual under stress.

1000273741-3771 at 3752 (US 26080) (A).

1877. Philip Morris also produced a February 16, 1970 Research and Development report entitled "Some Methods Notes on the Past Research on Cigarette Smoker Motivation" in which the author acknowledged that the smoking "pattern is strongly resistant to extinction." Later in the report, the author referred to the "puffing act" as an "injection of nicotine." 1003287849-7856 at 7849, 7853-7854 (US 85246) (O).

1878. Philip Morris's awareness of nicotine as the crucial ingredient in cigarettes was also made plain in a November 1, 1971 research report authored by Thomas Schori and approved by Dunn. The report accepted a 1943 scientific study's results which suggested that a habitual smoker continues to smoke because of the pharmacological effects of nicotine in the cigarettes. 1000350158-0188 (US 20176) (A).

1879. Notwithstanding its longtime public denials that smoking cessation induces withdrawal – one of the classic hallmarks of addiction – Philip Morris knew the extreme difficulty of quitting and the physical and mental effects of cessation attempts on the smoker. Scientists Dunn and Frank Ryan described some of the withdrawal effects of nicotine in a 1971 study on cessation in the following colorful terms:

> Even after eight months quitters were apt to report having neurotic symptoms, such as feeling depressed, being restless and tense, being ill-tempered, having a loss of energy, being apt to doze off. They were further troubled by constipation and weight gains which averaged about five pounds per quitter . . . This is not the happy picture painted by the Cancer Society's anti-smoking commercial which shows an exuberant couple leaping into the air and kicking their heels with joy because they have kicked the habit. A more appropriate commercial would show a restless, nervous,

> constipated husband bickering viciously with his bitchy wife who is nagging him about his slothful behavior and growing waistline.

1000348671-8751 at 8676, 8708 (US 20097) (O).

1880. With respect to the phenomenon of nicotine "compensation," Schori and Dunn wrote in a January 1972 Report entitled "Tar, Nicotine, and Cigarette Consumption" that their research:

> supports the notion that smokers develop a daily nicotine intake quota and that when smoking cigarettes differing in nicotine delivery from that to which they are accustomed they tend to modify their consumption rate in order to maintain their normal quota. No support was found for the analogous notion of a daily tar intake quota, however.

1003285403-5416 at 5403 (US 20159) (A).

1881. In a 1972 "Confidential" research report entitled "Motives and Incentives in Cigarette Smoking," Dunn asserted that people smoke in order "to obtain nicotine," and that nicotine "is the industry's product," adding that "without nicotine, the argument goes, there would be no smoking." In the "Confidential" report, Dunn summarized a 1972 CTR-sponsored conference held on the Caribbean island of St. Martin. He wrote:

> The majority of the conferees would go even further and accept the proposition that nicotine is the active constituent of cigarette smoke.
> Without nicotine, the argument goes, there would be no smoking.
> Some strong evidence marshaled to support this argument:
>
> 1) No one has ever become a cigarette smoker by smoking cigarettes without nicotine.
>
> 2) Most of the physiological responses to inhaled smoke have been shown to be nicotine-related.

2023193286-3304 at 3289 (US 22967) (A); 503654881-4885 (US 88413) (A); 105394371-4388 (US 88414) (O).

1882. Most graphically, Dunn urged the industry to view the cigarette pack as the "storage container for a day's supply of nicotine," the cigarette as the "dispenser for a dose unit of nicotine," and the puff of smoke as the "vehicle of nicotine":

> The cigarette should be conceived not as a product but as a package. The product is nicotine. The cigarette is but one of many package layers. There is the carton, which contains the pack, which contains the cigarette, which contains the smoke. The smoker must strip off all these package layers to get to that which he seeks. . . .
>
> Think of the cigarette pack as a storage container for a day's supply of nicotine. . .
>
> Think of the cigarette as a dispenser for a dose unit of nicotine: it is readily prepped for dispensing nicotine. . . .
>
> Think of a puff of smoke as the vehicle of nicotine . . . .
>
> Smoke is beyond question the most optimized vehicle of nicotine and the cigarette the most optimized dispenser of smoke.

2023193286-3304 at 3290-3291 (US 22967) (A).

1883. During a presentation of his paper delivered at St. Martin and at the 1972 CORESTA/TCRC Joint Conference, Dunn summarized his conclusions from current research on why people smoke. Dunn wrote that, "It is contended in this paper that nicotine, specially packed, is the cigarette industry's product." Dunn added that, "The smoker takes nicotine into his system in order to obtain the salutory effects of nicotine upon body function." 1001820498-0500 at 0498 (US 26121) (A); 2021423403-3497 at 3484 (US 36743) (A); 89285181-5188 at 5181 (US 23583) (O).

1884. In another version of his paper, Dunn replaces "nicotine" with "cigarette smoke" when describing the "salutory effects" sought by smokers. 2024273959-3975 at 3961 (US 21461) (O).

1885. A March 1973 Philip Morris Research Report entitled "Smoking Behavior: Real World Observations," written by Philip Morris scientists Dunn, Thomas Schori and Janet Duggins, reported that a Philip Morris in-house study had shown that, "the smokers in this study are now smoking cigarettes delivering less tar and nicotine than those they smoked in 1968 and that they are smoking both more rod per cigarette and more cigarettes." This demonstrates that Philip Morris's research continues to confirm the existence of nicotine compensation in the early 1970s. 1000353355-3410 at 3361 (US 35242) (O).

1886. In a presentation to Philip Morris USA President Clifford Goldsmith dated May 8, 1974, Dunn explained how in-house research suggested that smokers titrate or regulate their smoke intake to get what they want out of the smoke. In recommending additional research, Dunn also attributed titration and the hold of cigarettes to more than a mere habit:

> I'm sure you are aware of our belief that people smoke for rewards they get from smoke at the pharmacological level. . . . It's simply not an adequate explanation to say that smoking is a habit, or that it is social behavior. A smoker is introducing something into his system that he wants. Certain components of smoke, most likely nicotine, act upon his system in some undetermined way to give him some undetermined pleasure. If this is true, then we expect the smoker to seek to take in that amount of smoke that does the job best for him. He is going to regulate his intake to suit his need. . . We are hypothesizing that the smoker titrates (regulates) his smoke intake to suit his dosage needs.

100324972-4976 at 4972-4973 (US 85248) (O).

1887. Research conducted at the Philip Morris Research Laboratory in June 1974 using high nicotine and low nicotine cigarettes "showed the existence of a definite compensation mechanism" among smokers. According to the report, entitled "Human Smoking Habits," these findings were consistent with:

> evidence in literature that the nicotine of cigarette smoke exerts a distinct pharmacological effect on the smoker which reinforces the

> smoking behavior. **The smoker doses himself with nicotine according to his personal needs** which depend on the level of arousal, external stress, his personality and, possibly, a number of other factors.

1001812883-2903 (US 85249) (O) (emphasis added).

1888. In an undated handwritten memo, likely penned in the 1970s, Dunn voices his surprise that the industry could not fully separate nicotine from tar, given what the company knew of nicotine at that time:

> It is also remarkable that nicotine delivery has not been liberated from tar delivery, particularly in view of the importance of nicotine as the significant, if not the primary gratification component of the smoke. This is not to say that the task is simple: it is not simple. Consider the ways currently available for altering the nicotine delivery level, with accompanying reasons why these ways do not readily permit independent nicotine variation.

1003285420-5424 at 5420 (US 85250) (O); 2021423403-3497 at 3464 (US 36743) (A).

1889. Dunn then listed the methods at Philip Morris's disposal to manipulate nicotine delivery in its products, including air dilution, filtration, nicotine extraction/addition, leaf selection, and base additives to increase pH. 1003285420-5424 at 5421-5422 (US 85250) (O).

1890. RJR studied Philip Morris's efforts to deliver nicotine to smokers and concluded that "Philip Morris has been closely controlling the pH level of its products for several years, and appears to place emphasis on maintaining a high level of 'free nicotine,' the nicotine actually available to the smoker." 503940669-0672 at 0669 (US 50541) (O).

1891. In March 1975, Helmut Wakeham proposed an industry scientific conference on "The Regulatory Influence of Smoking Upon Human Behavior" to discuss research ideas into the effects of stimulant and calming effects of smoking on the smoker. LWODJ9056332-6332 (US 87072*) (O); LWODJ9056318-6323 (US 87071) (O).

1892. Philip Morris knew that nicotine delivery translated not only into addiction among

"seasoned" smokers, but into bottom line sales. In a May 14, 1975 report evaluating the relationship between a steep short-term decline in sales of Marlboro to a concurrent decline in nicotine, Dunn wrote:

> Nicotine has been singled out for attention because many investigators of smoking behavior, including some P.M. R&D people, have contended that the seasoned cigarette smoker smokes for the nicotine in the smoke. In view of that contention, the question has been raised as to whether the declining nicotine delivery values reported for Marlboro Red could be responsible for the declining sales increment.

0000024914-4920 (US 26072) (A).

1893. In a September 8, 1975 letter to Philip Morris-funded researcher Stanley Schachter, a psychology professor at Columbia University, Dunn discussed a reduction in nicotine in Marlboro cigarettes and acknowledged the existence of smoker's compensation to obtain more nicotine, which he referred to as "the goodies":

> Thus to accommodate to the 15% reduction in available Marlboro nicotine, the smoker who was getting 50% of the available nicotine into his blood from the Marlboro delivering 1.3 mg of nicotine into a smoking machine and now must get 59% of what the current Marlboro offers him. He can take bigger puffs, or inhale more from the supply drawn into the mouth (we have varying quantities of residual smoke in the mouth at the end of an inhalation) or for more efficient extraction of the goodies, he can draw it in deeper or hold it in longer.

1000738509-8510 at 8510 (US 85251) (O).

1894. Schachter was a Philip Morris-funded researcher for many years. However, his studies of nicotine and human behavior led him to conclude eventually that smoking was indeed addictive. He reported to Philip Morris in 1977 that, "We propose instead that virtually all long-time smokers, heavy or light, are addicted and suggest that many, perhaps all, exceptions to the addiction model can be understood in terms of such notions as self-control, concern with health,

restraints, etc." 1003291155-1191 at 1189 (US 87074) (O); 1003291151-1153 (US 87075) (O).

1895. An October 1, 1975 Philip Morris research memorandum entitled "Smoke Impact, Part I: Cigarette Smoking and Heart Rate" stated that: "Nicotine is the main determinant for sustaining the smoking habit" and "there is an optimal dose of nicotine, too little or too much is rejected by tobacco smokers." 1003294245-4261 at 4246 (US 20170) (A).

1896. In approximately 1976, Philip Morris researcher Frank Ryan explained why people smoke in terms of habit versus need. In Ryan's view, the habit of smoking was very distinct from a smoker's need for nicotine. In a November 11, 1977 memorandum entitled "Smoker Psychology," Ryan described nicotine intake as the "critical mainstay of tobacco consumption," and provided the following background for research to be carried out at Virginia Commonwealth University:

> Many of [a smoker's] cigarettes will be smoked out of habit (i.e., will be conditioned responses triggered by external cues) rather than out of any nicotine need (i.e., will be conditioned responses triggered by internal cues). All these cigarettes contribute to the total nicotine in the system, so that **a cigarette smoked out of habit will delay the time until a cigarette is smoked out of need**.

1003287995-7995 (US 35702) (O) (emphasis added).

1897. In a March 1, 1977 memorandum, Philip Morris-funded researcher Stanley Schachter described a smoker as an "addict" who smokes to maintain his nicotine levels:

> To the extent that [he is] an addict, he is probably smoking to keep nicotine or one of its active metabolites at some optimal level. If, then, the heavy smoker does switch to low nicotine brands, he may very well end up smoking more cigarettes and taking more puffs of each.

1003724353-4387 at 4353 (US 21887) (O).

1898. In a November 29, 1977 memorandum, Philip Morris Director of Science and

Technology, Thomas Osdene, discussed his concerns about statements made by a CTR staff member who had acknowledged that "Opiates and nicotine may be similar in action," "We accept the fact that nicotine is habituating," and "There is a relationship between nicotine and the opiates." 1005045000-5000 (US 20194) (O).

1899. In a December 19, 1977 interoffice memorandum sent to Osdene and entitled "Behavioral Research Accomplishments - 1977," Dunn acknowledged the importance of nicotine for the smoker, when he listed as one of Philip Morris's 1977 successes the fact that the company had "shown that [it] can distinguish between regulator and nonregulator smokers and that after being deprived, the regulators do indeed try to make up for lost intake." "Regulators" were defined as smokers who "smoke for nicotine." 1003293322-3330 at 3322, 3324-3325 (US 35741) (O).

1900. From approximately 1977 to 1981, Philip Morris carried out internal nicotine behavioral research establishing that nicotine functioned as a positive reinforcer of smoking. This research, conducted by Dr. Victor DeNoble and others, demonstrated that both nicotine and acetaldehyde in cigarette smoke were positive reinforcers and that animals self-administered nicotine to obtain its effects. 1003293284-3293 (US 85252) (O); 1002973585-3614 (US 35632*) (A).

1901. Aware of nicotine's importance to the company and the industry, Osdene voiced concerns at a meeting with the scientific director of CTR in New York on January 5, 1978. Philip Morris had sent Osdene and Seligman to CTR to discuss several contract research programs, one of which concerned nicotine antagonists (as opposed to nicotine analogs). Seligman's comments revealed the importance of nicotine to the future of cigarette manufacturing. According to Osdene's memorandum of the meeting:

> Dr. Seligman brought up the grant by Dr. Abood in which one of the stated aims was to make a clinically acceptable antagonist to nicotine. This goal would have the potential of putting the tobacco manufacturers out of business.

1000286213-6214 at 6213 (US 35204) (O).

1902. A December 1, 1978 Philip Morris report by researcher James L. Charles entitled "The Nicotine Program" stated that "[n]icotine, a powerful pharmacological agent with multiple sites of action, is the most important component of cigarette smoke" and that "[n]icotine and an understanding of its properties are important to the continued well-being of our cigarette business." 1003033413-3417 at 3413 (US 20143) (O); 2022954924-4929 at 4925 (US 85253*) (O).

1903. The ongoing "Nicotine Program" described in the 1978 report was carried out by Philip Morris well into the 1980s. This major research initiative studied nicotine's effects on the central and peripheral nervous systems, nicotine analogs, and "behavioral effects" of nicotine. 1003033413-3417 (US 20143) (O); 1003289974-9975 (US 21553) (A); 1000125871-5872 (US 34273) (A); 1000127789-7790 (US 34422) (A); 2022150943-0951 (US 85254) (A).

1904. A January 10, 1978 memorandum authored by Thomas Osdene summarized a meeting held at CTR offices in New York and was sent to a number of Philip Morris executives and employees, including President Clifford Goldsmith. Osdene mentioned a grant that had been awarded, apparently to an outside scientist, to create an antagonist to nicotine, i.e., a compound that would block nicotine's effects. Osdene responded to this area of study by stating, "This goal would have the potential of putting the tobacco manufacturers out of business." 1000041904-1905 (US 35103) (A).

1905. In a March 1978 report entitled "Exit-Brand Cigarettes: A Study of Ex-Smokers," scientist Frank J. Ryan of the Philip Morris Research Center in Richmond again flatly admitted

Philip Morris's substantial understanding of the role of nicotine in tobacco use at that time: "We think that most smokers can be considered nicotine seekers, for the pharmacological effect of nicotine is one of the rewards that come from smoking. When the smoker quits, he foregoes his accustomed nicotine. The change is very noticeable, he misses the reward, and so he returns to smoking." 1000368057-8080 at 8060 (US 20098*) (A).

1906. In the same March 1978 report, Ryan stated that, "If the industry's introduction of acceptable low-nicotine products does make it easier for dedicated smokers to quit, then the wisdom of the introduction is open to debate." 1000368057-8080 at 8060 (US 20098*) (A) (emphasis in original).

1907. Wakeham, having apparently read a review of the Philip Morris Nicotine Program by Dunn, wrote a memorandum of concern to Seligman dated February 22, 1979. While Wakeham disagreed with the primary focus of the program on nicotine, he admitted that, "I do not deny that many smokers maintain the habit for psychopharmacological reasons." 1003293238-3239 at 3238 (US 26150) (O).

1908. In a February 3, 1979 letter to Philip Morris President and CEO Hugh Cullman entitled "The Slow Motion Self-Suicide of the Tobacco Industry," D. Todorovic, a retired Philip Morris International researcher, stressed the negative impact of "cigarette substitutes" on conventional cigarette sales and recommended against their development:

> It is obvious that such a tremendous sales gain of 'cigarette substitutes' is done at the expense of normal, conventional cigarettes, and there lies all the danger in the near future for the very survival of [the] Tobacco Industry, because these 'cigarette substitutes' are unable to make smokers addicts to tobacco. The present smokers of 'cigarette substitutes' are the future smoker quitters.

2010064696-4699 at 4697 (US 20303) (O).

1909. Given the company's understanding of the importance of nicotine in maintaining smoking addiction, and thus its profits from cigarette sales, this anti-"cigarette substitute" sentiment was prevalent at Philip Morris. Ian Uydess, a Philip Morris scientist from 1977 until 1989, commented that Philip Morris knew that a cause and effect relationship existed between market performance and nicotine delivery levels. The document also makes clear that nicotine was distinct from taste:

> This belief . . . was reflected in many of the comments made at a number of internal meetings at which zero and "ultra low" delivery products were being discussed. Some scientists even predicted that products made with "no" or "too low" a level of nicotine would probably fail in test markets, "no matter what they tasted like."

521102262-2286 (US 30497) (O).

1910. Clearly nicotine was not a necessary component of cigarettes for its taste. Indeed, Philip Morris scientists understood very well that as far as "taste" was concerned, nicotine had an "acrid burning taste" standing alone. 2060537042-7045 (US 87077) (O).

1911. In a March 21, 1980 memorandum to Seligman, Dunn described in detail the Philip Morris-directed "Nicotine Receptor Program," a research initiative whose aim was the "understanding [of] the specific action of nicotine which causes the smoker to repeatedly introduce nicotine into his body." However, Dunn stated cautiously that, "Any action on our part, such as research on the psychopharmacology of nicotine, which implicitly or explicitly treats nicotine as a drug, could well be viewed as a tacit acknowledgment that nicotine is a drug." 0000127789-7790 at 7789 (US 21794) (A); 2022249518-9518 at 9518 (US 35152) (O); 1000127789-7790 (US 34422) (A).

1912. Dr. Dunn also revealed the concerns of the industry's attorneys regarding the issue of nicotine:

> The psychopharmacology of nicotine is a highly vexatious topic. It is where the action is for those doing fundamental research on smoking, and from where most likely will come significant scientific developments profoundly influencing the industry. Yet it is where our attorneys least want us to be, for two reasons. It is important to have these two reasons expressed and distinguished from one another. The first reason is the oldest and most implicit in the legal strategy employed over the years in defending corporations within the industry from the claims of heirs and estates of deceased smokers: "We within the industry are ignorant of any relationships between smoking and disease. Within our laboratories no work is being conducted on biological systems." That posture has moderated considerably as our attorneys have come to acknowledge that the original carte blanche avoidance of all biological research is not required in order to plead ignorance about any pathological relationship between smoke and smoker.

1000127789-7790 (US 34422) (A).

1913. These excerpts support the opinions of United States expert Dr. Jeffrey Harris that Defendants denied that cigarette smoking and nicotine were addictive because they feared FDA regulation and/or smokers' lawsuits against the manufacturers. Harris WD, 217-15-23.

1914. Dunn pointed out to Seligman that "the acute, transient, short-lived effects of nicotine upon a physiological system" were the "effect sought by the smoker." In the attachment to his memo, Dunn summed up the relationship between his company and nicotine as follows: "PM sells cigarettes. Cigarettes deliver nicotine." 0000127789-7790 at 7789 (US 21794) (A); 1000127791-7792 (US 34422) (A); 2022249518-9518 at 9518 (US 35152) (O).

1915. Dunn's memorandum to Seligman was preceded by that of another Philip Morris scientist, James L. Charles, who also provided Seligman an assessment of the "Nicotine Receptor Program" on March 18, 1980. Charles opened his memorandum with the following observations:

> Nicotine is a powerful pharmacological agent with multiple sites of action and may be the most important component of cigarette smoke. Nicotine and an understanding of its properties are

> important to the continued well-being of our cigarette business since this alkaloid has been cited often as "the reason for smoking" and theories have been advanced for "nicotine titration" by the smoker.

100328974-8975 at 8974 (US 87078) (O).

1916. Charles had made similar observations about nicotine in an earlier memorandum outlining the Philip Morris Nicotine Program dated December 1, 1978. He stated that his views had not changed in the intervening years. 1003033413-3417 (US 20143) (O).

1917. Dunn wrote another memorandum dated March 24, 1980 to Seligman relating to a parallel effort at Philip Morris to create cigarettes with even higher nicotine to tar ratios, given his belief that smokers smoked only for nicotine. He wrote:

> If even only some smokers smoke for the nicotine effect (I personally believe most regular smokers do) then in today's climate we would do well to have a low TPM [total particulate matter, or tar] and CO [carbon monoxide] delivering cigarette than can supply adequate nicotine.

1003285586-5586 (US 22029) (A).

1918. Dunn wrote a memorandum to Osdene dated June 2, 1980, in which he stated that the Behavioral Research Lab was conducting "particularly exciting and promising" tests demonstrating "self-administration of nicotine by rats." 1000017375-7375 (US 85258) (O).

1919. In an August 12, 1980 memorandum to the Vice President of Research and company directors, Thomas Osdene ranked nicotine research - and specifically the Philip Morris Nicotine Program - as one of the company's top Research and Development priorities because "the thing we sell most is nicotine":

> Nicotine Program. This program includes both behavioral effects as well as chemical investigation. My reason for this high priority is that I believe the thing we sell most is nicotine.

1003030124-0125 at 0124 (US 26132) (O).

1920. Philip Morris's nicotine research included studies beginning before 1980 and continuing until 1984 to develop nicotine analogs as part of a purposeful effort to find a nicotine-equivalent drug that would retain nicotine's effects on the brain without nicotine's known adverse cardiovascular effects. DeNoble WD, 5:7-11; 7:8-13; 1003033413-3417 (US 20143) (O); 1003289974-9975 (US 21553) (A); 1000127789-7790 (US 34422) (A); 2022150943-0951 (US 85254) (A); 2020154437-4437 (US 85266) (A). This was the same goal of nicotine analog research by BATCo that began in the early 1960s, described infra.

1921. The premise of the research was that "people smoke primarily because of nicotine's rewarding effects on the brain." This research could then, in theory, assist Philip Morris in removing nicotine from tobacco, substituting the analog that lacked nicotine's cardiovascular effects, and thus produce a "safer" cigarette that still possessed nicotine's reinforcing effects on the smoker. DeNoble WD, 8:10-13; 9:13-16. As Dr. Farone testified, this was the second part of a "two-step process" of internal research, neither of which was pursued by Philip Morris to commercialization for reasons unrelated to the merits of the research. See, Farone TT, 10/7/04, 2023:10-17.

1922. As Paul Mele, a Philip Morris scientist who performed nicotine-related rat research in Philip Morris's behavioral pharmacology lab from 1981-1984, stated in unchallenged testimony in this case, the work he personally conducted demonstrated "tolerance" to nicotine, or diminished effects of nicotine after repeated exposure to the drug. A quarterly report by Dunn and a progress report by DeNoble, both from 1980, illustrate tolerance in rats given intraventricular injections of nicotine in the Philip Morris labs. Mele WD, 11:6-15:4; See also, DeNoble WD, 27:1-28:13; 1003293104-3106 (US 85259) (O).

1923. In fact, Dr. DeNoble's research was able to demonstrate that rats would self-

administer nicotine intravenously in an effort to obtain their necessary levels of nicotine. DeNoble WD, 16:7-20:2; Mele WD 6:21-7:10. Intravenous self-administration by animals is a hallmark of drugs of abuse. Henningfield WD, 133:18-134:5; DeNoble WD, 17:1-4, 19:22-20:2.

1924. Philip Morris shared its extensive nicotine and smoking behavior knowledge with BATCo. According to an October 12, 1979 "RESTRICTED" report from BATCo scientist L.C.F. Blackman, he accepted Philip Morris's invitation to visit the Philip Morris Research Center, and was briefed by scientists Osdene, Seligman, and Levy on the company's work, including the development of nicotine alternatives, nicotine discrimination studies, and EEG research. 109877492-7499 (US 87079*) (O).

1925. With respect to tolerance, a March 16, 1983 memorandum from Dr. Charles to Dr. Osdene stated that, "We can successfully defend the absence of withdrawal under controlled experiments, but we cannot defend tolerance. Tolerance to nicotine is a well-established fact." 1005061346-1346 (US 20199) (A); 2022252680-2680 (US 36873) (A).

1926. Philip Morris's sales director in the United Kingdom, George Mackin, wrote an article for a British tobacconist magazine dated December 4, 1981, in which he admitted that cigarettes were addictive and that smokers developed tolerance. Mackin wrote that cigarettes were important to overall sales British convenience stores because:

> **Cigarettes are not just habit forming - the body builds up a requirement for them.** Twenty million smokers cannot do without their weed. Take the example of a man going to work in the morning. It's pouring with rain. There are six cars already parked outside the shop. So, there are at least 90 yards to walk back. Would he stop for a newspaper? Would he get out for a Kit Kat?
>
> The answer is probably No, but he would stop for his fags, **because he is addicted to cigarettes.** And while he is buying a pack, he takes a morning paper and a Kit Kat.

2501013567-3568 (US 27920) (O) (emphasis added); 504336658-6658 (US 85261) (O).

1927. The Mackin article caused a stir among several cigarette manufacturers, as well as Shook, Hardy & Bacon, when news of his statements became known. However, none of the lawyers who commented on the article disagreed with it. For example, one Philip Morris attorney in Switzerland noted that the Mackin's admissions were only "very unfortunate" and "could cause a lot of problems for US." Another attorney wrote more to the point that "**in the product liability context these concepts are important, particularly as regards issues of risk assumption.**" 024950721-0721 (US 20404) (O) (emphasis added); 2501013567-3568 (US 27920) (O); 2024950723-0723 (US 37175) (O); 501626662-6662 (US 85264) (O).

1928. In 1982 and 1983, Philip Morris conducted a study on high school students that not only showed an "encouraging upward trend in smoking" but also a link between cigarette smoking and the use of amphetamines. In his report dated February 18, 1983, Philip Morris's Byron Johnston tied cigarette smoking to drug use :

> The third chart shows the percent who used stimulants (amphetamines) or smoked marijuana or cigarettes during the past month. What I find intriguing is that marijuana and stimulant use increased as cigarette smoking declined, and that as marijuana use began to decline, the rate of decline in cigarette smoking slowed, and that stimulant use is virtually a mirror image of cigarette usage. **It almost looks as though stimulants and cigarettes are interchangeable to these kids (a notion that has some intuitive validity).** If so, and if stimulant use continues to decline, we should be able to expect smoking prevalence to continue to increase.

1003285174-5178 at 5174 (US 20157) (O) (emphasis added).

1929. Philip Morris knew a significant portion of its customers wanted to quit but could not do so. A March 29, 1985 presentation at a "meeting of top management" was entitled "The Perspective of PM International on Smoking and Health Issues." In this presentation,

management was told that only 5% of smokers would likely vote to assist the industry. This was because: "There are some 50 million smokers today in the U.S. I realize that research tells us that **the majority of smokers wished they did not smoke** and are, therefore, unlikely to be of much help to the industry." 2023268329-8337 at 8331 (US 26784) (A) (emphasis added).

1930. Dr. William Farone, a scientist for Philip Morris from 1976 to 1984 and a United States expert in this case, testified that "Defendants have long understood that cigarettes are addictive and that nicotine is the agent in cigarette smoke primarily responsible for addiction...." Farone WD, 72:10-11; Farone TT, 10/07/04, 1984:19-24.

1931. Farone further testified that "when I was at Philip Morris, there was widespread acceptance internally throughout the company – among executives, scientists, and marketing people – that nicotine was the primary component of tobacco and cigarette smoke responsible for smoker's addiction to smoking." Farone WD, 72:21-73:1.

1932. According to Dr. Farone, he had discussions with other Philip Morris scientists about whether smoking was addictive, and there "was widespread agreement among scientists in R&D that smoking is addictive." Id., 74:10-23.

1933. Not only was there widespread agreement among Philip Morris scientists that smoking was addictive, but among such scientists "there was a widespread conviction that nicotine is the chemical agent delivered by cigarettes that is primarily responsible for addiction to smoking." Farone WD, 75:1-6. This widespread agreement on the addictiveness of smoking came from "both internal and external research, about nicotine and its primary role in keeping people smoking." Id., 75:17-23.

1934. The understanding of the addictiveness of smoking and nicotine's role in addiction was not limited to the Philip Morris scientists. Dr. Farone also participated in discussions with

Philip Morris executives where they "candidly acknowledged smoking's addictiveness." Id., 80:15-81:14.

1935. Philip Morris's intensive internal research on nicotine continued into the 1990s. For example, a May 22, 1990 report stamped "PERSONAL AND CONFIDENTIAL" to scientific director Richard Carchman from company chemists/scientists Frank Gullotta, C.S. Hayes, and B.R. Martin reported on the "Stereospecific Effects of Nicotine and Electrophysiological and Subjective Responses." This research contrasted the physiological effects of two forms of nicotine, "d-nicotine" and "l-nicotine" using human smokers. 2025986606-6612 (US 20421) (O).

1936. Many other Philip Morris documents reveal the company's in-depth knowledge of nicotine and a desire to exploit nicotine's effects on the human body. 2025986350-6401 (US 87080) (A); 1000385483-5522 (US 87311) (O); 1000221722-1726 (US 87081) (O); 1003290519-0531 (US 87082) (O); 1003287880-7890 (US 20163) (O); 2023069596-9604 (US 87083) (O); 1003294165-4180 (US 87084) (O); 2062951465-1477 (US 87312) (O); 1003292806-2811 (US 87086) (O); 1003295309-5310 (US 87087) (A); 1000128672-8672 (US 87088) (O); 2022163557-3560 (US 87089) (O).

1937. A November 8, 1990 Philip Morris memorandum to Research and Development Vice President Cathy Ellis from Frank Gullotta entitled "Raison d'etre" stated: "We have shown that **there are optimal cigarette nicotine deliveries for producing the most favorable physiological and behavioral responses.** Our laboratory has demonstrated that all forms of nicotine are not behaviorally or physiologically equal. This observation is important for evaluating research cigarettes where the addition of nicotine is necessary." 2028813366-3368 at 3366 (US 20430) (A) (emphasis added).

1938. The Philip Morris Nicotine Program was described in detail in a lengthy 1992 review prepared by outside counsel Shook, Hardy & Bacon entitled "Philip Morris Behavioral Research Program." In this review, counsel summarized many aspects of the company program, directed by Dunn, and cited specific documents showing a major internal research initiative that began in 1969 only to end abruptly in 1984. The Shook, Hardy & Bacon report provided the following chronology:

Date	Event
1969	Hutchinson funded
1972	Berntson funded
	Hutchinson funding ceased
1974	Waldbillig funded
1975	Levy hired
1977	Berntson hired as consultant
	Gullotta hired
	Electrophysiology and comparative psychology programs initiated
	Waldbillig funding terminated
1979	Abood funded
1980	DeNoble hired
1981	Egle funded
	Berntson research terminated
1984	Egle funding terminated
	Berntson consultancy lapses
	Abood funding terminated

2021423403-3461 at 3408-3409 (US 36743) (A).

1939. The Shook, Hardy & Bacon document described how Philip Morris Nicotine Program scientists demonstrated tolerance to nicotine, behavioral effects, nervous system effects, and other results consistent with dependence and addiction. 2021423403-3461 at 3440-3443 (US 36743) (A).

1940. The 1992 report also made clear that the program generated results and was still generating data in 1984 related to nicotine receptors, analogs, peripheral nervous system effects, central nervous system effects, effects on animal behavior, and differences between high nicotine

delivery and low nicotine delivery cigarettes. With respect to the reasons why the Nicotine Program was ended in 1984, the report states ominously the following: "For reasons never stated in any internal documents, Philip Morris cancelled the Nicotine Program in spring 1984. The decision to cancel the program may have been the result of outside counsel's legal advice." 2021423403-3461 at 3408 (US 36743) (A).

1941. A similar 1994 Shook, Hardy & Bacon report entitled "Philip Morris Research on Nicotine Pharmacology and Human Smoking Behavior" also reviewed and detailed much of the same Philip Morris nicotine research described above. The report, while at times attempting to place favorable "spin" on company actions, acknowledged many Philip Morris documents and statements consistent with the company's awareness of nicotine addiction. 2046819241-9265 (US 85265*) (O).

1942. For example, the 1994 report summarized DeNoble's research showing that nicotine and acetaldehyde were synergistically reinforcing: "It was DeNoble's experience with acetaldehyde that it condensed in the brain to form Dopamine-like compounds and made the animal somewhat 'euphoric.'" Philip Morris was able to link this noted "euphoric" effect to cigarette sales. In fact, DeNoble and fellow researcher Frank Ryan generated research indicating "that acetaldehyde and nicotine data could be used to predict cigarette sales at a 96% accuracy." 2046819241-9265 at 9249 (US 85265*) (O).

1943. The 1994 report also described how DeNoble was able to demonstrate both "behavioral tolerance" and "metabolic tolerance" to nicotine, other important aspects of addiction. 2046819241-9265 at 9250-9251 (US 85265*) (O).

1944. The report later noted that "additional research on nicotine/acetaldehyde synergism may have shown that cigarettes were in fact addictive." Unfortunately, Philip Morris

terminated DeNoble and ended his research, effectively ending the likelihood of such "additional research." The Shook, Hardy & Bacon lawyers who prepared this report after reviewing their client's documents wrote: "Laboratory Shutdown [CAVEAT: Significance is self-evident.]" 2046819241-9265 at 9254, 9256-9258 (US 85265*) (O).

1945. Dr. DeNoble and Dr. Mele gave unchallenged fact testimony describing the research objectives and projects undertaken by the Philip Morris Behavioral Research Program in the 1970s and 1980s. DeNoble WD; Mele WD. In addition, the planning, findings, and significance of Dr. DeNoble's research in particular are described in numerous Philip Morris documents. 1002973585-3615 (US 35632*) (A); 2056145924-5927 (US 87090) (O); 1003293284-3293 (US 85252) (O); 1003060443-0503 (US 87091) (A); 1003582081-2082 (US 35826) (A); 1002973179-3180 (US 87092) (O); 1001894698-4705 (US 87093) (O); 1000052405-2413 (US 87094) (A); 1000017985-8021 (US 87095) (O); 1003293138-3144 (US 87096) (O); 1000017375 (US 85258) (O); 1003060638-0643 (US 87099) (O); 1003186849-6854 (US 87101) (O); 1000128665-8667 (US 87102) (O); 1000128662-8663 (US 87103) (O); 1000128664-8664 (US 87104) (O); 1000128668-8671 (US 87105) (O); 1003293241-3243 (US 87106) (O); 1003293216-3217 (US 87107) (O); 1000413881-3964 (US 20100) (A); 1003198459-8461 (US 20156) (A); 1003720350-0352 (US 87108) (O); 2047340075-0079 (US 87109) (O); 2022955358-5361 (US 87110) (O); 2022955501-5502 (US 87111) (A); 2057069742-9769 (US 88762) (O).

1946. Philip Morris was conducting secret nicotine and smoking behavior research in Europe during this time frame as well. 1000012310-2346 (US 35065) (O); 1000301691-1720 (US 87112) (O).

1947. Philip Morris Planning Director Barbara Reuter prepared an analysis of the

company's plans to market an alternative nicotine delivery product under the code name "TABLE" in 1993. The 20-page plan, dated October 1992 and stamped "CONFIDENTIAL," stated the following in the "Background" section:

> Different people smoke cigarettes for different reasons. But, **the primary reason is to deliver nicotine into their bodies.** Nicotine is an alkaloid derived from the tobacco plant. It is a physiologically active nitrogen containing substance. **Similar organic chemicals include nicotine, quinine, cocaine, atropine, and morphine**. While each of these substances can be used to affect human physiology, nicotine has a particularly broad range of influence.
>
> During the smoking act, nicotine is inhaled into the lungs in smoke, enters the bloodstream and travels to the brain in about eight to ten seconds. The nicotine alters the state of the smoker by becoming a neurotransmitter and a stimulant. Nicotine mimics the body's most important neurotransmitter, acetylcholine (ACH), which controls heart rate and message sending within the brain. The nicotine is used to change psychological states leading to enhanced mental performance and relaxation. A little nicotine seems to stimulate, while a lot sedates a person. A smoker learns to control the delivery of nicotine through the smoking technique to create the desired mood state. In general, the smoker uses nicotine's control to moderate a mood, arousing attention in boring situations and calming anxiety in tense situations. Smoking enhances the smoker's mental performance and reduces anxiety in a sensorially pleasurable form.

2020154466-4486 at 4467 (US 26722) (A); 2020154437-4437 (US 85266) (A) (emphasis added).

1948. Altria General Counsel Murray Bring acknowledged the addictiveness of smoking in a July 31, 1992 internal memo on PMC letterhead to William Campbell and Bill Murray which discussed recent research on cocaine, and posed these questions from then-PM CEO Michael Miles: "First, how do we stay up to date on the state of smoking cessation technology; second, what effect would a reliable, readily available "habit breaker" have on our business; and third, what – if any – contingency plans should we be making now?" 2074091232-1232 (US

27480) (O).

1949. An October 2, 1992 memorandum from Carolyn Levy to William Campbell reviewed the efficacy of nicotine patches coupled with behavioral therapy to achieve smoking cessation success. Levy stated that the company was almost ready with an alternative nicotine delivery device. She concluded that, "This suggests that at the very least we should have contingency plans for a change in the predominant form of nicotine usage. . . . If these circuits do mediate nicotine intake and they could be blocked, then it is possible that cigarettes' appeal would decline." 2023012974-2975 (US 36943) (A).

1950. Other documents show that during the 1970s and 1980s, researchers at Philip Morris attempted to find an analogue of nicotine, i.e. a substance of similar chemical structure, that had the same effect on the brain but no side effects on the cardiovascular or cerebral systems. 1000403178–3604 at 3237–3238 (US 20099) (O); 2020154437-4437 (US 85266) (A).

1951. Philip Morris filed its first nicotine-analogue patent application in June 1976, stating only that the patented compounds had "utility as intermediates for the production of ultimate compounds of known utility." 2026403670-3673 (US 20426) (O).

1952. In June 1977, the company applied for a second patent on the synthesis of 2-alkyl nicotinoids, stating only that ". . . the synthesis of ortho-alkylated nicotinoids and their evaluation as insecticides is of considerable interest." There followed a number of additional patents on the synthesis of other nicotine analogues. 2060489246-9255 (US 21918) (O).

1953. Some of these later patents, including the last two patents filed in 1989 (No. 5,015,741) and 1990 (No. 5,138,062), noted the pharmacologic effects of nicotine in experimental animals, specifically the tranquilizing and sedating effects of the drug when it was instilled directly into the rat brain. 89283587-3614 at 3598 (US 85267) (O).

1954. During the late 1970s, Philip Morris International established a clandestine screening program to determine whether particular chemical variants of nicotine affected the brain differently than the rest of the body. 0000127789-7790 (US 21794) (A).

1955. Among the screening tests used were tests that could also be used to evaluate a drug's potential as a reinforcer: torpedo fish membrane binding (a test developed in the 1960s); the guinea pig ileum model (developed in the 1950s); prostration test (developed in 1977-1978, in which nicotine was directly injected into a test animal's brain); discrimination testing (in which a test animal already trained to press a lever after receiving nicotine was then given an intramuscular injection of a test compound); and finally self-administration, in which rats were observed to see if they would repeatedly give themselves intravenous injections of the test drug. DeNoble WD, 13:7-20:2.

1956. Many of the above Philip Morris documents are acknowledged by Philip Morris attorneys in several Bliley documents recently disclosed during the State of Minnesota litigation. 2021423403-3497 (US 36743) (A).

1957. Even lawyers for Philip Morris recognized that the scientific consensus was that nicotine and smoking were addictive. One Philip Morris document apparently prepared by a law firm is entitled "REJECTED WITNESSES (ADDICTION)." This table lists approximately 120 addiction experts recommended by industry lawyers and scientists, then probed by industry lawyers as possible witnesses. The vast majority of the witnesses were "rejected" on the basis of their conclusions that nicotine and smoking were addictive or dependence-producing, or on the basis of other "anti-industry" views. The remainder were rejected on the basis of lack of experience. 2025005260-5275 (US 88763) (O).

(ii) R.J. Reynolds

1958. In a November 16, 1967 response to an inquiry on a nicotine inhibitor patent, RJR scientist Eldon D. Nielson wrote that the tobacco companies would not want such an item, as they were "selling a nicotine effect, not fighting it." 502001177-1177 (US 29547) (O).

1959. Because it understood the importance of retaining sufficient nicotine to maintain dependence on its so-called "low tar/low nicotine" cigarettes, RJR scientist Anders H. Laurene internally proposed in 1971 that the company undertake research into determining more exactly the "habituating level of nicotine." Laurene asked the question, "How low can we go?" 504210018-0018 (US 50577) (O); 522598277-8277 (US 80744) (O).

1960. In a March 28, 1972 memorandum regarding the development of new products, RJR scientist Claude Teague stated that for the typical smoker, "nicotine satisfaction is the dominant desire" and that "[i]n designing any cigarette product, the dominant specification should be nicotine delivery." 5002504536-4544 at 4538 (US 21747) (O), Langenfeld TT, 3/14/05, 15309:20-15310:4.

1961. Claude Teague was the RJR equivalent/counterpart to William Dunn at Philip Morris. In an April 14, 1972 report entitled "Research Planning Memorandum on the Nature of the Tobacco Business and the Crucial Role of Nicotine Therein," Teague stated:

> In a sense, **the tobacco industry may be thought of as being a specialized, highly ritualized and stylized segment of the pharmaceutical industry**. Tobacco products, uniquely, contain and deliver nicotine, a potent drug with a variety of physiological effects. . . . Nicotine is known to be a habit-forming alkaloid, hence the confirmed user of tobacco products is primarily seeking the physiological "satisfaction" derived from nicotine - and perhaps other active compounds. His choice of product and pattern of usage are primarily determined by his individual nicotine dosage requirements and secondarily by a variety of other considerations including flavor and irritancy of the product, social patterns and needs, physical and manipulative gratifications, convenience, cost,

> health considerations and the like. **Thus a tobacco product is, in essence, a vehicle for delivery of nicotine, designed to deliver the nicotine in a generally acceptable and attractive form. Our industry is then based upon design, manufacture and sale of attractive dosage forms of nicotine**, and our Company's position in our Industry is determined by our ability to produce dosage forms of nicotine which have more overall value, tangible or intangible, to the consumer than those of our competitors.

500915683-5691 at 5684-5685 (US 20659) (A) (emphasis added).

1962. Teague later stated in his report that:

> If nicotine is the sine qua non of tobacco products and tobacco products are recognized as being attractive dosage forms of nicotine, then it is logical to design our products – and where possible, our advertising – around nicotine delivery rather than 'tar' delivery or flavor. To do this we need to develop new data on such things as the physiological effects of nicotine, the rate of absorption and elimination of nicotine delivered in different doses at different frequencies and by different routes, and ways of enhancing or diminishing nicotine effects and "satisfactions."

500915683-5691 at 5685-5686 (US 20659) (A) (emphasis in original).

1963. Teague also refuted the industry's often-heard "nicotine is for taste" argument by stating that, "I believe that for the typical smoker nicotine satisfaction is the dominant desire, as opposed to flavor and other satisfactions." 500915683-5691 (US 20659) (A).

1964. Later in the same report, Teague noted the vital role of nicotine to the fundamental existence of the cigarette industry:

> If, as proposed above, nicotine is the sine qua non of smoking, and if we meekly accept the allegations of our critics and move toward reduction or elimination of nicotine from our products, then we shall eventually liquidate our business. If we intend to remain in business and our business is the manufacture and sale of dosage forms of nicotine, then at some point we must make a stand.

500915683-5691 at 5688 (US 20659) (A) (emphasis in original).

1965. At the close of his April 14, 1972 memorandum on nicotine, Teague

recommended the following courses of action for RJR:

> 1. Recognize the key role of nicotine in consumer satisfaction, and design and promote our products with this in mind.
>
> 2. More precisely define the minimum amount of nicotine required for 'satisfaction' in terms of dose levels, dose frequency, dosage form, and the like. This would involve biological and other experiments.
>
> 3. Sponsor in-depth studies of the physiological, psychological and other effects of nicotine, aimed at demonstrating the beneficial effects of nicotine and at disproving allegations that nicotine produces major adverse effects.
>
> 4. Study, design and evaluate new or improved systems for delivery of nicotine which will provide the minimum satisfying amount of nicotine in attractive form, free of allegedly harmful combustion products.
>
> 5. Study means for enhancing nicotine satisfaction via synergists, alteration of pH, or other means, to minimize dose level and maximize desired effects.
>
> 6. Monitor developments in materials and products which may compete with nicotine products or which might be combined with nicotine products to provide added advantages or satisfactions.
>
> 7. Monitor work by others which might be aimed at improved nicotine delivery systems of the type proposed here.
>
> 8. Search for and evaluate other physiologically active components of tobacco or its smoke which may provide desired effects to the smoker.

500915683-5691 at 5690-5691 (US 20659) (A).

1966. In a 1973 "SECRET" report entitled "Implications and Activities Arising From Correlation of Smoke pH with Nicotine Impact, Other Smoke Qualities, and Cigarette Sales," Teague reiterated to company executives RJR's knowledge of the importance of effective nicotine delivery in its competition with Marlboro and Kool:

> In essence, a cigarette is a system for delivery of nicotine to the

> smoker in attractive, useful form. At "normal" smoke pH, or at below about 6.0, essentially all of the smoke nicotine is chemically combined with acidic substances, hence is non-volatile and relatively slowly absorbed by the smoker. As the smoke pH increases above about 6.0, an increasing proportion of the total smoke nicotine occurs in "free" form, which is volatile, rapidly absorbed by the smoker, and believed to be instantly perceived as nicotine "kick". . . .
>
> As a result of its higher smoke pH, the current Marlboro, despite a two-thirds reduction in smoke "tar" and nicotine over the years, calculates to have essentially the same amount of "free" nicotine in its smoke as did the early WINSTON. . . .
>
> In addition to enhancing nicotine "kick," increasing the pH (increasing alkalinity) of smoke above about 6.0 causes other changes, particularly when the increase in smoke pH is achieved by adding ammonia to the blend.

509314122-4148 at 4125 (US 20828*) (O).

1967. Teague also described the different "current and planned" methods RJR was utilizing to increase the nicotine delivery and nicotine "kick" to smokers. His description revealed that the nicotine work was directed by and reported to company management:

> As its part in this collaborative effort, Research has: (1) collected, correlated, interpreted, and described to Management data on smoke pH of various brands, (2) developed and put into routine use improved methods for measurements of smoke pH . . . . [and] (4) evaluat[ed] various methods whereby smoke pH may be increased, with emphasis on ammonia treatments of stem materials.
>
> Methods which may be used to increase smoke pH and/or nicotine "kick" include: (1) increasing the amount of (strong) burley in the blend, (2) reduction of casing sugar used on the burley and/or blend, (3) use of alkaline additives, usually ammonia compounds, to the blend, (4) addition of nicotine to the blend, (5) removal of acids from the blend, (6) special filter systems . . . and (7) use of high air dilution systems.

509314122-4154 at 4127 (US 20828*) (O); 511223463-3484 at 3468 (US 20840) (A).

1968. Teague's nicotine research was important to the long-term success of the

company. In fact, his 1973 secret report was written at the request of RJR President William D. Hobbs. Teague provided Hobbs the report under cover memo dated October 2, 1973, stating, "I hope the attached report is about what you had in mind." 501136993-6993 (US 85269) (O).

1969. Other RJR memoranda, dated July 3 and December 26, 1973, reported the results of an internal "Correlation Study" confirming the "correlation between free nicotine to sales previously reported by Research." 501011401-1401 (US 20668) (O); 501327013-7013 (US 21434) (O).

1970. Teague's observations and conclusions were accepted at RJR thereafter. Some ten years later, Teague sent the very same report to company Vice President of Research and Development Bob DiMarco with a short note: "Bob - This is where we were in '73. You may want to skim/scan the first 4 pages. Claude." DiMarco returned the report to Teague with the following response printed under Teague's words: "Thank you Claude. **Looks like we're still there in 1983**. Bob" 511223460- 3462 at 3461 (US 85270) (O) (emphasis added); 511223463-3484 (US 20840) (A).

1971. Teague turned his 1973 paper on smoke pH and nicotine into a presentation he apparently delivered to the company. In a 14-page document entitled "Outline for Smoke pH Presentation," Teague covered many of the same points in his paper. Teague, whose own handwriting is on several of the outline pages, stated that his work was directed by company president William Hobbs. While much of the content of Teague's presentation is described above, he also explained in more detail his conclusion that RJR needed to create a nicotine-enhanced cigarette to compete in the beginning smoker market:

> What has emerged then, or may still be emerging, is a new and distinguishably different type of cigarette -- **perhaps a type with 1955 nicotine impact and 1973 tar and nicotine numbers.** . . . We need to worry about the many beginning smokers, learning to

> like a different type of cigarette. . . . Therefore, if indeed a new and relatively distinct type of cigarette is emerging and selling well --particularly to large numbers of beginning smokers – I would think that we would want to develop new brands or brand variants of our own to compete in that market.

500917535-7548 at 7544-7545 (US 48662) (A) (emphasis added) .

1972. A "CONFIDENTIAL" May 10, 1973 report from RJR chemists John Woods and Gloria Harllee studied pH of tobacco and the success of competitor brands Kool and Marlboro. The report, consistent with other RJR documents, showed the critical importance of "free" or "unbound" nicotine actually delivered to and absorbed by the smoker to both the "physiological strength" and growing market share of the brands. The researchers concluded the following:

> 1. A historical review of smoke pH of competitive brand cigarettes has shown that the Marlboro and Kool cigarettes have had higher smoke pH than the other competitive brands since 1964.
>
> 2. The smoke pH for Kool has been high due to the use of relatively low levels of sugar in the casing. The Marlboro has maintained a high pH by using a relatively low sugar and ammonium phosphate additive on the reconstituted tobacco.
>
> 3. Over the years studied there was a very strong positive correlation between smoke pH and sales. An even better correlation was observed between free nicotine in the smoke and sales.
>
> 4. The physiological strength of a cigarette, which may be controlled to some degree with smoke pH, is extremely important.

500606138-6153 at 6142 (US 48334) (O).

1973. With respect to RJR's success with ammoniation, one document disclosed that ammonia produced a "cleaner taste with more free nicotine" and a "stronger physiological impact." As for the widespread utilization and success of adding ammonia at RJR, the document stated:

> RJR introduced ammoniated sheet material in the CAMEL filter

> product in 1974. Better market performance was indicated in the subsequent years. Low "tar" products at RJR were designed with ammoniated sheet material beginning in 1974. RSM studies showed that ammoniation was one of the major consumer recognized product attributes tested. Ammoniated sheet was introduced into the WINSTON KS product in 1979. Market tests indicated significant product improvement.

500990999-1004 (US 20666) (O); 509018864-8865A (US 20820) (A).

1974. Defendants have claimed that nicotine is only necessary for taste or flavor. However, RJR has distinguished between nicotine and flavor in its internal documents for decades. One example is a December 4, 1973 memorandum from Frank Colby to marketing director R.A. Blevins entitled "Cigarette Concept to Assure RJR a Larger Segment of the Youth Market." Colby recommended in his memorandum that RJR begin manufacturing a new cigarette with "more flavor (tar)" and "more 'enjoyment' or 'kicks'" to appeal to youth. Colby also added that "any desired additional nicotine 'kick' could be easily obtained through pH regulation" in the manufacturing of these new "youth-appeal cigarettes." 501166152-6153 (US 23051) (A).

1975. Defendants have stated or implied that they did not employ any methods to increase nicotine delivery or "kick." However, these methods (some described above by Teague) were not only studied and summarized by the companies, they were employed. For example, an April 12, 1994 list of "Ingredients Added to Tobacco in the Manufacture of Cigarettes" by the six largest United States manufacturers (including RJR) disclosed that the companies added ammonia and other ammonium compounds to their cigarettes during the manufacturing process. 606000841-0889 at 0842 (US 53325) (O).

1976. Teague wrote another "Confidential" memorandum, dated February 2, 1973, entitled "Some Thoughts About New Brands of Cigarettes for the Youth Market." In this memorandum, Teague contrasted novice smokers with "confirmed" or addicted smokers. He

stated that while "pre-smokers" and "learners" start smoking for psychological reasons (fitting in with the crowd, self-image, boredom relief), "once the 'learning' period is over, the physical effects become of overriding importance and desirability to the confirmed smoker, and the psychological effects, except the tension-relieving effect, largely wane in importance or disappear." 502987357-7368 at 7359 (US 21475) (A).

1977. In an August 4, 1976 speech to RJR's international division, Director of Research, Murray Senkus, affirmed the indispensable role of nicotine, stating, "In smoking the effect produced on the human body is ascribable to nicotine" and "Without any question, the desire to smoke is based on the effect of nicotine on the body." Many of Teague's prior documents on nicotine had been sent to Senkus. 501525355-5366 at 5356, 5358 (US 29531) (O).

1978. In a RJR August 1976 "Three-Year Action Plan for New Products," nicotine was described as a "traditional need," and "very basic to the cigarette industry's existence." 500672011-2172 at 2078-2105, 2107 (US 20645) (A).

1979. In a September 21, 1976 internal memorandum from John L. McKenzie to A.P. Ritchy entitled "Product Characterization Definitions and Implications," nicotine was defined as "the psychopharmacological agent in tobacco which is one of the key factors in satisfaction . . . ." 500380562-0564 at 0563 (US 20630) (O).

1980. A November 9, 1976 memorandum on nicotine circulated among RJR scientists reviewed the known physiological effects of nicotine on the body and admitted the company's ongoing desire to increase or hold steady the nicotine content of its cigarettes while reducing tar. The memo, entitled "Nicotine Research," also acknowledged tolerance to nicotine: "Habituated smokers, both male and female, metabolize nicotine more rapidly that non-smokers, indicating the bodily metabolic acclimation to nicotine." Finally, the memo contradicted industry claims

that smokers seek nicotine only as a matter of "taste": in-house studies concluded that detectable nicotine produced the taste described as "foul, rotten rubber" and that "Nicotine is definitely an irritant in smoke and its taste must be blended out or modified by other constituents in the TPM to make smoke acceptable." 509078812-8820 at 8814-8815 (US 85271) (A).

1981. RJR's detailed knowledge of the physiological and pharmacological effects of nicotine is contained in an undated document that appears to be a scientific presentation on nicotine. 502824762-4800 (US 50257) (O).

1982. In a February 7, 1978 memorandum entitled "Nicotine Satisfaction – Consumer Test," RJR researchers C.L. Neumann and J.P. Dickerson stated that the focus of the consumer satisfaction program would be on nicotine, as it was "probably the most important satisfaction variable," and because nicotine had "known physiological activity." 504479948-9954 at 9549 (US 20729) (O).

1983. In another example, a February 5, 1980 interoffice memorandum from H.E. Guess stated the concern that the reduced level of nicotine in RJR's Winston B Cigarettes would make them less attractive to Winston smokers. 504675307-5307 (US 21549) (O).

1984. RJR scientist D.H. Piehl reviewed the scientific literature on nicotine and maintenance of the smoking habit in a "Confidential" internal paper for the company entitled "Smoking Behavior - A Review." In his paper, Piehl summarized with approval many studies finding the preeminent importance of nicotine to smokers, the various "need" levels of nicotine, nicotine dependence, and addiction. At the close of the paper, he sarcastically wrote:

> It continues to be reported in the popular press that 4 out of 5 smokers have tried to quit smoking and failed. Perhaps they should listen to Mark Twain who said, "It's the easiest thing in the world to stop smoking. I should know because I've stopped over 1000 times.

504972347-2362 at 2362 (US 50710) (A).

1985. In fact, scientists at RJR had known for years that most smokers get "hooked" and are unable to quit. Teague wrote a memorandum dated December 1, 1982 to Research and Development Vice President Robert DiMarco where he stated that RJR needed to tailor its marketing to the reality that "most of those who have smoked for any significant time would like to stop," and most smokers "would stop using **if they could**." Teague also stated that RJR needed to contemplate the future scenario where smokers who want to stop can stop; if this happened, RJR would "go out of business." Therefore, RJR "cannot be comfortable marketing a product which most of our consumers would do without **if they could.**" 500898255-8257 at 8256 (US 48652) (O) (emphasis added).

1986. An April 15, 1983 RJR draft document entitled "Smoker Compensation Review" reiterated the company's knowledge that smokers of low tar/nicotine products compensated to obtain more nicotine, and that the FTC method of measuring nicotine was flawed. The document included the following in a section entitled "Impact of Known Compensatory Behavior On Cigarette Rankings":

> Based on the results of studies similar to those summarized above, it has been stated that low –'tar' smokers use their cigarettes differently than smokers of higher – 'tar' products. Different 'usage' includes propensity to block vents or otherwise manipulate the cigarette, increasing the number of puffs and the number of cigarettes smoked, puffing more frequently or with larger volumes and inhaling more deeply or holding smoke in the lungs longer. These usage patterns are consistent with the theory that low – 'tar' smokers seek to maintain a given nicotine level in the body, regardless of the cigarette. The patterns cited are instances which would tend to increase the 'dosage' of nicotine to the smoker.

This statement revealed RJR's continuing view of smokers as "nicotine seekers," in this case, seekers who alter their smoking method to obtain the necessary "dosage" of nicotine. 501524500-

4514 at 4506 (US 85272) (O).

1987. An undated RJR document entitled "R&D Outline" listed "Nicotine as a drug" as a topic for departmental discussion. The outline provided for a "discussion of a string of industry memos and reports, dating back to at least the early 1970's, in which industry scientists and execs seem to admit to nicotine's qualities as a drug." The document described several examples, including a 1971 B&W letter, a 1972 RJR report and a 1972 Philip Morris summary of a meeting of industry scientists. This document demonstrated that despite its public denials, the industry had in fact internally admitted nicotine's addictiveness and its importance for cigarette smoking. 522606315-6317 at 6316 (US 85273) (O).

1988. Another undated RJR document is a Biobehavioral Department presentation entitled "Biobehavioral Aspects of Smoking." In this presentation, the speaker discussed how "maintenance" of the smoking habit for 80% of smokers was related to the "tranquilizing effects" of nicotine. The speaker emphasized at various points that "nicotine is the substance people desire in their use of tobacco," "animals will self-administer nicotine in a laboratory setting," evidence that "smokers smoke to maintain a constant level of nicotine in the body," and that "the fact remains that smokers do not continue to smoke unless their cigarettes contain nicotine." 517214547-4557 (US 87113*) (O).

1989. After Benowitz published his 1983 paper on compensation by smokers of low nicotine yield products, RJR scientist John Robinson wrote a critique of the paper to Dr. Alan Rodgman in which he stated:

> The paper itself expresses what we in Biobehavioral have felt for quite some time. That is, smokers smoke differently than the FTC machine and may very well smoke to obtain a certain level of nicotine in their bloodstream. If a given level of nicotine in the blood is the final goal of a smoker, one would predict that he would smoke an FFT [full flavor tar] and ULT [ultra low tar]

cigarette differently.

510994429-4429 (US 85274) (O).

1990. Robinson wrote that the Benowitz paper brought to mind a past industry study comparing German Camel cigarettes with Marlboro cigarettes, where "smokers apparently obtained almost exactly the same amount of nicotine no matter which of the four cigarettes they smoked." Robinson recalled that the study "was one of the first indications that smokers may in fact smoke to obtain a certain level of nicotine in their bloodstream." 510994429-4429 (US 85274) (O).

1991. In preparation for a RJR "brainstorming session" at the company's Flavor and Biobehavior Divisions, Donald L. Roberts told employees in an October 13, 1983 memorandum that, "The functions a cigarette serves are many fold involving social, psychological and physiological. A short definition is that a cigarette supplies nicotine to the consumer in a palatable and convenient form." Roberts clearly distinguished nicotine from taste, stating that, "The cigarette's taste is a relatively unimportant benefit of smoking. Its taste is primarily a delivery vehicle[.]" 503602711-2714 at 2712 (US 85275) (O).

1992. A June 3, 1985 RJR document was entitled "Report on Medical and Scientific Issues - Addiction." In this review, the scientist authors attempted to examine current scientific literature to assist the industry with respect to the scientific consensus on nicotine addiction. As part of their review, the scientists reviewed literature compiled by the tobacco law firms of Jacob, Medinger & Finnegan, Shook, Hardy & Bacon and Jones Day. The scientists wrote in their report that, "Both Mr. Wrobleski [Jacob, Medinger & Finnegan] and Mr. Sirridge [Shook, Hardy & Bacon] warned, however, that there is very little literature favorable to the industry's position on addiction." 515878492-8522 at 8494. (US 30251) (O).

1993. RJR's R&D department embarked on a large-scale nicotine research program in 1988, as described in a lengthy October 7, 1988 project report entitled "An Integrated Research Program for the Study of Nicotine and Its Analogs," to continue looking into the "pharmacological potency," "biological activity," and central nervous system effects of nicotine and nicotine analogs. The researchers posited that:

> What is known about nicotine is that it elicits the typical consequences of sympathoadrenal activation when administered in doses that produce plasma concentrations similar to those achieved during smoking. Among these are tachycardia, increases in blood pressure, cardiac output, and stroke volume . . . . In addition, there is a fair amount of tolerance induced with regard to sympathetic activation by smoking or chronic nicotine administration.

514894567-4676 at 4586-4587 (US 20862) (A)**.**

1994. Summing up RJR's knowledge of the importance and addictive quality of nicotine was one line from a May 3, 1991 RJR Research and Development report on a tobacco modification and nicotine manipulation project code-named the "REST Program." One key objective of the program was to "Independently control nicotine delivery, from very low to elevated levels, to address consumer wants and as a research tool." The basis for the Controlled Nicotine Process component of "REST" was that

> **We are basically in the nicotine business**. It is in the best long term interest for RJR to be able to control and effectively utilize every pound of nicotine we purchase. Effective control of nicotine in our products should equate to a significant product performance and cost advantage.

509479574-9587 at 9577, 9584 (US 20829) (A) (emphasis added).

1995. According to the Wall Street Journal, former RJR Nabisco CEO F. Ross Johnson stated during a 1994 interview that, "Of course it's addictive. That's why you smoke the stuff." *Wall Street Journal*, "Big Spender Finds a New Place to Spend," October 6, 1994.

WAS0491982-1985 (US 61440) (O).

1996. In a 1998 memorandum entitled "ECLIPSE Taste and Satisfaction Improvements," D.E. Townsend stated with regard to the Eclipse product that R&D staffs were "encouraged to pursue diligently Eclipse designs with increased nicotine yield in an effort, in part, to increase consumer acceptance of the product." He later added: "If increased nicotine yield helps give improved consumer acceptance in the market, then possible benefits of this potentially reduced risk product would be greater." 526013569-3569 (US 85276) (O); 700245849-5849 (US 85277) (O).

1997. In a June 4, 1999 email communication (Subject: Tobacco Beer) to Mickey Smith, Don deBethizy discussed the creation of nicotine-laden beer. This communication demonstrated RJR's continuing understanding that nicotine is (in Claude Teague's words) the "sine qua non" of any tobacco product:

> Crazy idea: Researchers at Duke University have found that nicotine added to beer provided nicotine in a palatable form which was enjoyable to subjects. I wonder if tobacco could be added to beer in a palatable way? Since beer is only used in adult venues, it might be a way for people to use tobacco and beer together. The toxicity of nicotine may be a problem, but these researchers thought that it was worth exploring nicotine in beverages.

700007868-7868 (US 54412) (O).

1998. RJR's lawyers at Jones Day knew that addiction was the Achilles heel of smoking and health litigation, and that their client has long since acknowledged the addictiveness of nicotine and smoking. The lawyers' concern that addiction would undermine their and their client's attempts to portray smoking as a free choice, and therefore a smoker's smoking-caused injuries were the result of voluntary assumption of a known risk, were reflected in several "trial strategy" documents produced by Defendants. For example, in an August 10, 1985 Jones Day

memorandum entitled "Smoking and Health Litigation, Tactical Proposals," the authors wrote that, "If a jury were likely to conclude that addiction overcame the plaintiff's ability to make a free choice, it would obviously be necessary to address this point directly." 680712261-2337 at 2308 (US 87114) (O).

1999. The lawyers were aware, however, that RJR and the industry knew that "free choice" took a back seat to the driving force of nicotine addiction. In another illuminating Jones Day litigation memorandum, the authors described the threat of addiction to the core trial strategy of "trying the plaintiff," and conceded the following:

> "Addiction" has received little industry research attention. Nevertheless, many industry documents support the contention that there are types of persons whose psychological profile and smoking behavior is such that they have great difficulty in quitting. For example, documents describe a British American Tobacco Company sponsored conference in 1978, attended by PM and B&W representatives. One of the findings of the conference was: "Serious smokers smoke to prevent withdrawal symptoms. Another study which Dr. Piehl (RJRT) cites recognizes "addictive" smokers: "People who find it unbearable to run out of cigarettes are described as using addictive-type smoking." The industry has also recognized that some smokers, especially smokers of high nicotine cigarettes "compensate" or regulate nicotine intake if it is lowered in individual cigarettes.

681879254-9715 at 9302-9303 (US 21020) (A).

2000. Later in the same Jones Day memorandum, the authors provide examples from Defendants' files where the companies (with emphasis on RJR) and their employees admit the primacy of nicotine to cigarettes and the addictiveness or dependence-producing quality of their products. Additionally, the authors conclude that "internal documents describing the effects of nicotine are also problematic" and "the Industry may be faulted for not monitoring the addiction literature, for not conducting addiction research, and for not warning of addiction." 681879254-9715 at 9601-9643 (US 21020) (A).

(iii) BATCo

2001. Many documents disclose that BATCo had an intimate understanding of nicotine's role in smoking and its effects on smokers long before the outside medical community. Moreover, many BATCo documents disclose how BATCo and the United States cigarette industry, in particular B&W, used BATCo's knowledge of and secret code-named research into nicotine for commercial gain.

2002. BATCo knew nicotine was an essential component of cigarettes as early as the 1950s. A June 1959 BATCo internal document pointed out that the company must consider "the question of nicotine and its effect on the smoker." The author stated that the company had to choose between maintaining current nicotine content "in order to maintain the firmly entrenched nicotine habit developed by the majority of smokers," or reducing the nicotine content to meet consumer demand for lower nicotine products. However, the writer cautioned that, "[T]o lower nicotine too much might end up destroying the nicotine habit in a large number of consumers and prevent it from ever being acquired by new smokers." 100099115-9117 at 9117 (US 20112) (A); Henningfield WD, 88:21-89:10. Thus, BATCo recognized very early that smoking was not simply a “habitual” behavior, but rather one caused by nicotine, and that reduction of nicotine to a point that could not sustain or induce addition would threaten the industry’s viability. Henningfield WD, 89:7-10.

2003. In a November 15, 1961 memorandum reviewing secret nicotine research and development projects under code names "MAD HATTER" and "HIPPO," Sir Charles Ellis, scientific advisor to the BAT Board of Directors, acknowledged BATCo's understanding that nicotine is addictive:

> Experiments of Hippo have led to a great increase in our knowledge of the effects of nicotine. . . . Smoking demonstrably is

> a habit based on a combination of psychological and physiological pleasure, and it also has strong indications of being an addiction. It differs in important features from addiction to other alkaloid drugs, but yet **there are sufficient similarities to justify stating that smokers are nicotine addicts**.

301083862-3865 at 3863 (US 20577) (A) (emphasis added).

2004. In the same 1961 internal document reviewing BATCo's secret nicotine research, Ellis emphasized the company's need to determine what made smoking and nicotine addictive:

> If the competition is to be met successfully, it must be important to know how the tranquilizing and stimulating effects of nicotine are produced and the relation of addiction to the daily nicotine intake. These are the reasons for proposing that Project Hippo be continued with the particular object of finding the causes of the pleasurable physiological effects and the causes of addiction.

301083862-3865 at 3863 (US 20577) (A).

2005. The comprehensive research conducted by and funded by BATCo in the early 1960s placed the company at the forefront of nicotine knowledge and exploitation, long before nicotine was well understood in the medical community. In perhaps the most telling document on the question of the industry's early knowledge and acceptance of addiction, Sir Charles Ellis provided an overview of the company's massive nicotine research program in a February 13, 1962 "Private and Confidential" memorandum entitled "The Effects of Smoking." Ellis recited in his memorandum that BATCo research into the "physiological and psychological effects of smoking" via Batelle actually began in 1959, and was carried out in the intervening years under various project "code names" including "MAD HATTER I," "MAD HATTER II," "MAD HATTER III," "HIPPO I," "HIPPO II," and "ARIEL." 301083820-3835 at 3820-3824 (JE-46579) (A).

2006. In the February 13, 1962 memorandum, Ellis devoted a lengthy section to the commercial importance of the company's nicotine research objectives. He explained that the

reason BATCo commissioned the "MAD HATTER" and "HIPPO" research projects was "to understand addiction . . . [and to] appreciate the strength and vulnerability of our position." Ellis wrote further in detail:

> However, the force of the habit or the strength of addiction is not such as to give any grounds for complacency in the face of alternative methods of stimulating the body to meet stress, and that is just where the danger lies since alternatives are becoming available. In the last few years there has been a quite remarkable increase in the production of tranquilliser drugs, and while most of these need a doctor's prescription there is already one on free sale in Switzerland (Librium made by Hoffman LaRoche). If such drugs become more freely available they will compete with nicotine, which is a natural tranquilliser, and will leave smoking primarily dependent on its psychological effects for the maintenance of the habit.
>
> **What we need to know above all things is what constitutes the hold of smoking, that is, to understand addiction**. . . .
>
> These are the reasons for the study of the physiological effects of nicotine carried out under the MAD HATTER and HIPPO contracts, and they have sufficient force alone to justify this expenditure . . .

301083820-3835 at 3826-3827 (JE-46579) (A) (emphasis added).

2007. Ellis described in another section of his memorandum the outcome of BATCo's drive to learn about nicotine and its role in smoking. He further delineated some of the concrete conclusions of the BATCo research to date, reiterating unequivocally that BATCo believed nicotine was addictive and explaining graphically the relationship of the research to addiction:

> As a result of these various researches **we now possess a knowledge of the effects of nicotine far more extensive than exists in published scientific literature. It is indeed so extensive and represents so much new thought that it is not easy to condense the material** of these several reports and working papers without over-simplification.
>
> Nicotine, however administered, rapidly gets into the blood stream and the lymph system, and once there has a number of varied

> effects. . . . By far the most important effect is that of mobilising the resources of the body to resist stress. That this occurs has been known from the earliest days of smoking but no explanation exists in the published literature. Battelle have now carried out experiments which are beginning to show how nicotine enters into the mechanism of this vital reaction. . . .
>
> The stimulation to resist stress occurs almost immediately on absorption of nicotine, and the effect - that is, the extra supply of cortico steroids in the blood - falls off markedly within a matter of thirty minutes. Addiction is something quite different from this since it is well known that the craving for nicotine in a confirmed smoker who stops smoking persists for ten, twenty or thirty days.
>
> We believe that we have found possible reasons for addiction in two other phenomena that accompany steady absorption of nicotine.

301083820-3835 at 3828-3829 (JE-46579) (A) (emphasis added).

2008. The two additional "phenomena" that Ellis stated in his February 1962 memorandum were responsible for nicotine addiction were tolerance and withdrawal:

> Experiments have so far only been carried out with rats, but with these it is found that certain rats become tolerant to repeated doses and after a while show the usual nicotine reactions but only on a very diminished scale. The interesting point is that these tolerant or nicotine-conditioned rats are found to have a greatly enhanced power of detoxification of nicotine in their liver. Crudely put, they can stand up to high continuous doses of nicotine just because their liver has developed the ability to dispose of it more rapidly and efficiently. . . . As long as the smoker keeps to his normal regime and the nicotine level in his blood remains high there is a steady job for these [liver] enzymes, and the whole situation is normal and under control. But if now the smoker stops smoking and there is no longer nicotine in his blood then in the liver there is this supply of enzymes with nothing to work on. In fact, they proceed to work on other material passing through the liver, with consequent disturbance of the body's working and with all sorts of alarm signals sent back to the brain. The effects of unbalanced enzymes is not unlike unbalanced nicotine, and the abstaining smoker experiences physiological reactions as acute as a novice who starts smoking. When to this one adds the longing for that immediate stimulation to resist stress that comes from smoking a cigarette **it would appear that we are making progress towards**

> **understanding addiction.** . . . .
>
> Thus we have already greatly increased our knowledge of the manifold ways in which nicotine affects the body and, in particular, have identified and studied separately the stress resisting mechanism and the other effect on the liver which we believe is responsible for addiction.

301083820-3835 at 3829-3830 (JE-46579) (A) (emphasis added).

2009. In the final section of his paper, Ellis discussed some particulars of the nicotine projects code named "PROJECT HIPPO II" and "PROJECT ARIEL." He stated that the secret "physiological and biochemical" PROJECT HIPPO research "should lead to an understanding of the mechanism which creates addiction" and confirm that "addiction depended on the enzymes involved in the metabolism of nicotine in the liver." 301083820-3835 at 3832 (JE-46579) (A).

2010. "PROJECT ARIEL," on the other hand, was a secret project to develop an alternative nicotine delivery device to compete with work that Ellis claimed was being carried out at the American Tobacco Company and RJR. Ellis also justified the project with his concern that the "drug industry" could "at any time attempt to invade the cigarette smoke field by alternative drugs." He stated that the final product "must have within it the ultimate possibilities of meeting the psychological demands of smokers as well as the physiological ones." 301083820-3835 at 3833-3835 (JE-46579) (A).

2011. The concluding section of Ellis' memorandum revealed the high level of secrecy accorded the company's nicotine research:

> FUTURE POLICY.
> For good reasons the results of Battelle's work have been kept at a high level of secrecy, but they are now building up to such a comprehensive picture of the action of nicotine that I suggest they should soon be made available in detail to a few of our top scientists.

301083820-3835 at 3835 (JE-46579) (A).

2012. Therefore, as early as 1962, BAT had established its internal corporate position of smoking as a straight "addiction" produced by nicotine, a drug addiction in terms of cravings, compulsive use, physiological effects on the body, tolerance, and withdrawal. Sir Charles Ellis stated further in a paper presented to a 1962 BAT conference in Southampton, England, attended by B&W representatives that "smoking is a habit of addiction." Ellis's presentation was preceded by an introduction from the chairman of BAT himself, A.D. McCormick. The substance of the conference was included in a BAT conference report entitled, "Smoking and Health - Policy on Research." The conference report has been produced in this litigation with a stamp indicating that it was found in the B&W Research Department. 650344433-4493 (US 53468) (A).

2013. McCormick told attendees at the 1962 conference that the "best way to deal with the [smoking and health] matter was on an industry rather than an individual company level." He then introduced Ellis. In his presentation, Ellis stated:

> **Smoking is a habit of addiction that is pleasurable**; many people, therefore, find themselves sub-consciously prepared to believe it must be wrong.

650344433-4493 at 4439 (US 53468) (A) (emphasis added).

2014. Ellis later added:

> One result of the recent public discussions on smoking and health must have been to make each of us examine whether smoking is just a habit of addiction or has any positive benefits. It is my conviction that nicotine is a very remarkable beneficent drug that both helps the body to resist external stress and also can as a result show a pronounced tranquillising effect. . . . Nicotine is not only a very fine drug, but the techniques of administration by smoking has considerable psychological advantages and a built-in control against excessive absorption.

110070785-0842 (US 20270) (A); 650344433-4493 at 4450-51 (US 53468) (A).

2015. Ellis later added in a May 1962 note to S.J. Green that "a problem that is therefore

worth considering is how to provide the smoker with his customary amount of nicotine." 100159216-9217 at 9216 (US 88764) (O).

2016. BATCo's early interest in understanding why and how nicotine affected smokers' bodies was immense. In January 1962, Batelle scientists working for BATCo submitted their "Final Report on Project HIPPO I." The purposes of the project were to study: (1) the action of nicotine in the diuresis mechanism; (2) the possible interference of nicotine in the "stress" mechanism; (3) the inhibiting effect of nicotine on body weight; and (4) the possible activity of nicotine on other hypothalamic functions. The report stated in the introduction the working question: "It is an everyday experience to each smoker that smoking a cigarette helps mastering the numerous stressful stimuli of modern life. This effect is probably one of the most powerful reasons which make one smoke. How does nicotine exert this action?" 105620620-0683 at 0622-0625 (US 20247) (A).

2017. The "HIPPO I" researchers concluded that:

> From all our data it seems that the effect of nicotine in the "stress reaction" is a very prominent and very complicated one. The understanding and thorough investigation of this effect seems of the greatest importance: it is by this very effect that nicotine acts as a "tranquilliser."

105620620-0683 at 0683 (US 20247) (A).

2018. Near this same time, Battelle drafted a January 3, 1962 research proposal regarding "Project Ariel" for BATCo in London. According to the proposal, the proposed new smoking device would administer nicotine while "avoiding the well-known disadvantages inherent in actual cigarette smoking," but it needed to resemble a tobacco smoking product "to avoid interference with the legislation in force about drugs," and "it should also create addiction in the same relative amounts." 100335808-5816 at 5811, 5814 (US 20173) (O).

2019. Throughout the 1960s, BATCo continued to discuss and research the "ARIEL" product that was known simply as a nicotine delivery device that would allow the smoker to "obtain a satisfying dose of nicotine" without any of the harmful effects from smoke. 100335894-5918 at 5897 (US 20174) (O).

2020. By 1964, BATCo had developed the prototype of "ARIEL" which allowed for "a reasonably even release of nicotine" for the smoker. 100175613-5617 at 5616 (US 20115) (O).

2021. BATCo continued its Project HIPPO for several years. In a March 1963 study entitled "Final Report on Project HIPPO II," scientists C.H. Kaselbach and O. Libert reported the results of their sophisticated comparison of nicotine to tranquilizers, a comparison that built on the earlier findings of HIPPO I. Their report to BATCo stated at the outset that:

> The aim of the whole research "HIPPO" was to understand some of the activities of nicotine - those activities that could explain why cigarette smokers are so fond of their habit. It was also our purpose to compare these effects with those of the new drugs called "tranquillizers," which might supercede tobacco in the near future. . . . The reasons for the "pleasure of smoking" must be found partly in the relief of anxiety that cigarette smoking brings so constantly, and in such a very short time.

105620569-0605 at 0572 (US 20246) (A).

2022. Later in the "Final Report on Project HIPPO II," the researchers revealed their conclusion that while nicotine differs in some respects from tranquilizers, nicotine causes both tolerance and addiction, and is in fact addictive:

> A quantitative investigation of the relationship with time of nicotine - and of some possible brain mediators - on adreno-corticotropic activity could give us the key to the explanation of both phenomena of tolerance and of addiction, in showing the symptoms of withdrawal.

105620569-0605 at 0575 (US 20246) (A).

2023. Nicotine addiction was thus known and accepted; therefore, BATCo research

targeted and sought to understand the mechanism of addiction. In a May 30, 1963 report entitled "A Tentative Hypothesis on Nicotine Addiction," Dr. G. Haselbach and Dr. O. Libert, scientists performing work for BATCo, discussed nicotine's ability to produce tolerance and postulated a sophisticated explanation for nicotine addiction:

> The hypothalamo-pituitary stimulation of nicotine is the beneficial mechanism which makes people smoke; in other words, nicotine helps people cope with stress. In the beginning of nicotine consumption, relatively small doses can perform the desired action. Chronic intake of nicotine tends to restore the normal physiological functioning of the endocrine system, so that ever-increasing dose levels of nicotine are necessary to maintain the desired action. Unlike other dopings, such as morphine, the demand for increasing levels is relatively slow for nicotine.
>
> In a chronic smoker the normal equilibrium in the corticotropin releasing system can be maintained only by continuous nicotine intake. . . . If nicotine intake, however, is prohibited to the chronic smokers, the corticotropin-releasing ability of the hypothalamus is greatly reduced, so that these individuals are left with an unbalanced endocrine system. **A body left in this unbalanced status craves for renewed drug intake in order to restore the physiological equilibrium. This unconscious desire explains the addiction of the individual to nicotine. . . .**
>
> In conclusion, a tentative hypothesis for the explanation of nicotine addiction would be that of an unconscious desire to restore the normal physiological equilibrium of the corticotropin-releasing system in a body in which the normal functioning of the system has been weakened by chronic intake of nicotine.

536480912-0914 at 0912, 0914 (US 20928) (A) (emphasis added).

2024. In a 1963 research report entitled "The Fate of Nicotine in the Body," BATCo researchers reported their conclusions as to nicotine pharmacology and mechanisms of tolerance and addiction. The scientists emphasized that nicotine was a key part of "tobacco habituation and/or addiction" and that the tobacco industry should focus its future research on the effects of nicotine in the bodies of smokers:

> There is increasing evidence that nicotine is the key factor in controlling, through the central nervous system, a number of beneficial effects of tobacco smoke, including its action in the presence of stress situations. In addition, the alkaloid appears to be intimately connected with the phenomenon of tobacco habituation (tolerance) and/or addiction. Detailed knowledge of these effects of nicotine in the body of smokers is therefore of vital importance to the tobacco industry, not only in connection with their present standard products, but also with regard to future potential uses of tobacco alkaloids.

501012199-2255 at 2202 (US 21562) (A).

2025. On the specific issue of nicotine tolerance, the researchers stated, "We believe that both tolerance and addiction are intimately connected, and that it would be most useful to investigate the two phenomena with regard to cellular adaptation, especially in target organs of the central nervous system." 501012199-2255 at 2228 (US 21562) (A).

2026. BATCo also played a part in the nicotine research carried out at the Huntington Research Centre in Huntington, England. An undated BATCo or Imperial-commissioned scientific study from Huntington is described in an undated report from the late 1960s entitled "Effects of Nicotine on Electrocortical Activity and Acetylcholine Release from the Cerebral Cortex of the Squirrel Monkey." In this report, researchers stated at the outset that, "The habitual use of tobacco may be related to numerous factors amongst which the pharmacological effects of nicotine on the central nervous system figure dominantly." The report then went on to describe the complex and significant effects of nicotine on acetylcholine release in animal brains. Importantly, the scientists stated that "The doses of nicotine used in these experiments are based on the reported smoking dose.'" 680050472-0485 (US 53985) (O).

2027. Another "Confidential" Huntington in-depth study focusing on nicotine's drug-like effects on the primate brain was entitled "Effects of Nicotine on the Central Nervous System." Although this study was addressed to Imperial Tobacco, a copy of the report was forwarded to

BATCo. The authors of this study explained the tests they planned to conduct to understand how nicotine affects "physiological processes and behavioural functions of the central nervous system of the primate" and described some preliminary results 680050504-0521 (US 53986) (O).

2028. BATCo was also provided nicotine research funded by its Australian affiliate, BATAS. For example, BATCo had knowledge of a 1970 University of Melbourne study entitled "The Absorption and Effects of Nicotine from Inhaled Tobacco Smoke." The Australian study program assessed nicotine blood levels and physiological effects, the transfer of nicotine to the blood, and the absorption of nicotine in the mouth. 680050575-0589 (US 53987) (O).

2029. The addictive impact and potential of any drug, in this case nicotine, is enhanced by the speed at which and form in which it reaches the brain. BATCo scientists understood and appreciated this concept. An August 7, 1964 memorandum from H.D. Anderson, Vice President of Research and Development, to BATCo President, Sir Richard P. Dobson, discussed the enhancement of nicotine "kick" through the addition of potassium carbonate to tobacco:

> There seems no doubt that the "kick" of a cigarette is due to the concentration of nicotine in the blood-stream which it achieves and this is a product of the quantity of nicotine in the smoke and the speed of transfer of that nicotine from the smoke to the blood-stream.
>
> Nicotine is in the smoke in two forms as free nicotine base (think of ammonia) and as a nicotine salt (think of ammonium chloride) and it is almost certain that the free nicotine base is absorbed faster into the blood-stream. Thus the effect of this potassium carbonate treatment, even though it does reduce the total quantity of nicotine in the smoke, may be to enhance the effect of what is left until it is equal or maybe greater in physiological effect than in the original smoke.

100059066-9067 at 9067 (US 20102) (O).

2030. A 1966 internal tobacco industry report issued by BATCo scientist I.W. Hughes also emphasized that the effects of nicotine on the human body were a function of speed in

reaching the brain and the form of the nicotine itself:

> It would appear that increased smoker response is associated with nicotine reaching the brain more quickly . . . . On this basis, it appears reasonable to assume that the increased response of a smoker to the smoke with a higher amount of extractable nicotine may be either because the nicotine reaches the brain in a different chemical form or because it reaches the brain more quickly.

00039304-9490 at 9306, 9310 (US 34187) (O).

2031. BATCo understood that it was in essence a drug company for its customers who depended on nicotine. In a March 2, 1967 memorandum from BATCo Chief Scientist S.J. Green to Deputy Chairman Desmond Hobson, Green broadly evaluated BATCo scientific research. With respect to nicotine, he bluntly reported the following:

> Work on the psychopharmacology and pharmacology of nicotine is accelerating. There is now no doubt that nicotine plays a large part in the action of smoking for many smokers. It may be useful, therefore, to look at the tobacco industry as if for a large part of its business is the administration of nicotine (in the clinical sense). . . . The main objective of our research is to make the administration of nicotine better by . . . making the administration pleasanter or more convenient.

WAS0433494-3500 at 3497 (US 86690) (O).

2032. In a March 20, 1967 document entitled "First Meeting with U.S. Company Lawyers," R.M. Macrae, Tobacco Research Council assistant director and BATCo employee, recalled that at the March 8, 1967 meeting, representatives from the United Kingdom made the point that "the major section in the U.K. industry believes that nicotine content of cigarettes should not be greatly lowered if consumer acceptance is to be maintained." This once again illustrates that the importance of nicotine for cigarette sales has been known by BATCo for decades. 301080659-0662 at 0661 (US 22896) (O).

2033. In fact, "consumer acceptance" was tied to addiction, a word that company

executives and directors continued to use internally to describe the necessity of nicotine to smokers. According to the report of the October 1967 BATCo (Group) Research and Development Conference in Montreal, one of the company's research "assumptions" was that, "[t]here is a minimum necessary level of nicotine. Smoking is a habit attributable to nicotine. The form of nicotine affects the rate of absorption by the smoker." And later in the conference report, the BATCo R&D department stated the following as research objectives, revealing the company's intent and ability to manipulate nicotine:

> The development of low T.P.M. [total particulate matter, or tar], normal nicotine cigarettes should continue. In this connection, the use of filter additives . . . might be helpful since it might render the nicotine more available to the smoker.
>
> The development of a low T.P.M., low nicotine cigarette should be expanded. This raises the question of the level of nicotine required . . . .

100051950-1963 at 1952, 1957 (US 85279) (A).

2034. An earlier version of the BATCo Montreal Research and Development Conference report even stated that, "There is a minimum level of nicotine. **Smoking is an addictive habit attributable to nicotine** and the form of nicotine affects the rate of absorption by the smoker." 500014079-4085 at 4080 (US 47776) (A) (emphasis added).

2035. The BATCo R&D conference acknowledged that the department's general objectives included "insur[ing] the continuation of the industry and the prosperity of the company within the industry," and "sustaining and increasing the profits of the company." Thus, even the scientists realized and accepted the link between nicotine and the future of both the industry and the company. 100051950-1963 at 1955 (US 85279) (A).

2036. The minutes of a BAT Group Research Conference held at Hilton Head, South Carolina, from September 24-30, 1968, recorded similar statements. The conference group,

which included representatives of B&W as well, noted that:

> In view of its pre-eminent importance, the pharmacology of nicotine should continue to be kept under review and attention should be paid to the possible discovery of other substances possessing the desired features of brain stimulation and stress-relief without direct effects on the circulatory system. The possibility that nicotine and other substances together may exert effects larger than either separately (synergism) should be studied and if necessary the attention of the Marketing Departments should be drawn to these possibilities.

682633150-3156 at 3152 (US 54206) (A).

2037. Thus, the critical role in addiction played by nicotine was never in doubt at BATCo. The recognition of nicotine's singular importance in smoking was the basis for an October 1969 BATCo report entitled "Future Work on Nicotine and Compounds With Related Pharmacology," in which J.G. Underwood detailed company efforts to search for compounds that would mimic the pharmacological effects sought by smokers with fewer toxic properties. The introduction states:

> At the physiological level the major part of the satisfaction of smoking is derived from nicotine and the first section of this note is concerned with optimising nicotine usage, increasing the delivery of smoking mixtures deficient in nicotine, and attempting to anticipate some "health" problems that may arise with changes in current practices.
>
> At present the cigarette industry depends on nicotine as the principal pharmacological agent in confirming the smoking habit. This could be dangerous commercially, since it may well be that legal restrictions are imposed on the nicotine delivery of cigarettes if the medical evidence shows beyond reasonable doubt that the long-term effects of nicotine are harmful. The industry is far more vulnerable to restrictions on the use of nicotine, than attempts at restricting, say, carcinogens or "tar." Consequently, the second sections considers some possibilities of finding alternatives to nicotine that could supplement or replace nicotine in a cigarette.

680050592-0608 at 0593 (US 85280) (O).

2038. BATCo's recognition of nicotine's psychoactive effects is reflected in Underwood's report as well, where the following "work area" was emphasized: "Elucidation and exploitation of the desirable pharmacological response, i.e., the biphasic action of brain stimulation and relief of stress (tranquillisation) and its relation to the subjective response (acetylcholine excitation of sympathetic ganglia cells)." 680050592-0608 at 0601 (US 85280) (O).

2039. In 1969, BATCo researcher D.J. Wood gave a presentation for company executives in which he detailed the company's pursuits in pharmacological research focusing on nicotine. He stated that BATCo researchers believed nicotine was responsible for the "satisfaction of smoking," and that future research was aimed at finding out more about how the human body absorbed nicotine. 322043204-3207 at 3207 (US 20592) (A).

2040. BATCo's acknowledgment of nicotine and addiction continued into the 1970s. In a June 30, 1971 memorandum entitled "Comments on Nicotine," BATCo scientist R.R. Johnson reported on a Research & Development meeting held to discuss the results of nicotine research code named "Project MAD HATTER" and "Project HIPPO." BATCo director Sir Charles Ellis led the meeting; and according to Johnson:

> The purpose of the meeting was to discuss the results from Projects MAD HATTER and HIPPO, and to stimulate further discussion of the importance of nicotine to the industry. Sir Charles started the meeting by saying that he had first brought out the concept that **we are in a nicotine rather than a tobacco industry** and then set up the above projects to sell this concept to management.

2065128907-8909 at 8908 (US 85281) (A) (emphasis added) .

2041. BATCo's research into nicotine substitutes is telling as well. In a November 9, 1972 report entitled "Preparation and Properties of Nicotine Analogues," BAT Group scientists K.D. Kilburn and J.G. Underwood recommended for commercial reasons that work continue into

finding nicotine analogs, or substitutes. The basis for this recommendation, the researchers stated, was that, "Should nicotine become less attractive to smokers, the future of the tobacco industry would become less secure." Specifically:

> It has been suggested that a considerable proportion of smokers depend on the pharmacological action of nicotine for their motivation to continue smoking. If this view is correct, the present scale of the tobacco industry is largely dependent on the intensity and nature of the pharmacological action of nicotine. A commercial threat would arise if either an alternative product became acceptable or the effect of nicotine was changed.

750009046-9098 at 9049 (US 88066) (A).

2042. An undated BATCo document most likely from the 1970s from scientist D.G. Felton entitled "Smoking and Health Research in the U.S.A." summarized some internal industry positions on scientific research and nicotine. The report recalled that American Tobacco Company's Scientific Director, Dr. Hanmer, stated that it was "important to keep up the nicotine content of the smoke, while reducing anything that ought to be reduced," that RJR's scientific director Dr. Galloway stated that "a reasonable amount of nicotine was necessary in a cigarette," and that Liggett's representative's (Mr. Blount) position was that "people smoked because of the nicotine." 105407187-7190 (US 34738) (O).

2043. In an undated document, S.J. Green, one of BATCo's top scientists in its Research & Development Department, provided advice to the corporate leadership as to the future direction the company should take with respect to smoking and disease, research, and even addiction. The presentation was delivered at the October 1972 BAT Group R&D Conference where B&W representatives were also in attendance. 680048899-8903 at 8903 (US 85284) (O).

2044. In his presentation, Dr. Green stated that BATCo was aware that smokers compensated for lower nicotine products "by increasing the number of cigarettes smoked" and by

"changing the way they smoked." He then discussed the "health conscious smokers who chose the low delivery cigarettes," frankly telling the BAT Group executives (including B&W) that:

> A suggestion is made both for the health conscious smoker and the smoker whose prime smoking requirement is physiological satisfaction. Surely many nicotine-dependent smokers are health conscious . . . .
>
> Smoking is fairly irrational like other drug dependencies. If there is a positive side to smoking, and I think there is, it is not easy for the smoker to articulate. He "votes with his feet" and continues with this irrational act.

110069983-9987 at 9985 (US 20269) (O).

2045. In an earlier version of Dr. Green's paper, dated July 26, 1972, he included as one of his assumptions: "The tobacco smoking habit is reinforced or dependent upon the psycho-pharmacological effects mainly of nicotine." 401024232-4236 at 4234 (US 47530) (A).

2046. In 1974-1975 the Research and Development Division at BATCo embarked on a project code-named "Project WHEAT" to classify smokers in terms of their "Inner Need" for nicotine and to study smokers' needs for varying levels of nicotine. The "Project WHEAT" researchers sought to determine if a relationship existed between a smoker's "Inner Need" and his "preferred nicotine delivery." To test this hypothesis, smokers were classified in Part I of "Project WHEAT" into low, medium, and high "Inner Need" categories. Researchers concluded in their July 10, 1975 Part I report that the greater a smoker's "Inner Need," the greater the smoker's "cigarette consumption, depth of inhalation, and the anticipated difficulty in giving up smoking." 757001395-1487 at 1396, 1432 (US 85285) (O).

2047. The "Inner Need" concept was based on BATCo's understanding that smokers smoked for pharmacological and psychological reasons. A November 6, 1974 report from BATCo scientists based "Inner Need" on many factors, including ones under the heading

"Automatic/Addictive." The report stated that some smokers smoke because they find it "almost unbearable" to run out of cigarettes, and because of a "gnawing hunger" to smoke. 670593721-3739 (US 53864) (O).

2048. In Part II of the BATCo research code-named "Project WHEAT," smokers were again grouped according to their "Inner Need." According to their January 30, 1976 "Restricted" Part II report, researchers demonstrated that smokers in the higher "Inner Need" categories required cigarettes with higher nicotine levels: "[A]s predicted by the hypothesis, High Need clusters tend to prefer relatively high nicotine cigarettes, their optimum nicotine delivery being higher than that of Low Need clusters." Through their research, the authors postulated a "model of the market . . . in which the two major determinants of the type of cigarette which best suits a smoker's requirements are Inner Need and concern for health." 650016374-6466 at 6376-6377 (US 85286) (O).

2049. BAT scientists published the results of a study entitled "The Effect of Smoking Deprivation on Smoking Behaviour" in a report dated September 11, 1975, and written by D.E. Creighton. The report was produced in this litigation both from BATCo and B&W, the latter copy bearing the stamp of the B&W Research Library. In assessing the behavior of the subjects, the research assumed that smokers need nicotine, that smokers experience withdrawal symptoms without it, and that smokers compensate to obtain the nicotine they need:

> It is probable that interference with an established behavioural pattern would cause different effects on different subjects according to their need for the stimulation of nicotine or suppression of the withdrawal symptoms that accompany a lack of nicotine. . . . If the subject is smoking for the pharmacological effects of nicotine he would be expected to take more smoke in a shorter time. He may do this by taking larger puffs, taking more puffs, reducing the interval between them or smoking more of the butt where the nicotine delivery is higher. He might also draw harder on the cigarette or for longer.

650014873-4901 at 4881 (US 53405) (O).

In the discussion section of the report, the authors stated:

> These results may be interpreted on the basis that some subjects have a greater demand for nicotine than others. It is also clear that the dose of nicotine required per unit of time is very variable. Some subjects require a small intake of nicotine taken frequently. . . . others require a large amount but infrequently . . . . These differences in nicotine demand and the pattern of nicotine intake may reflect metabolic differences between smokers.

650014873-4901 at 4885-86 (US 53405) (O).

2050. BATCo, like the other Cigarette Company Defendants in the 1970s and 1980s, undertook research to manipulate or maintain nicotine delivery while reducing the tar in its cigarettes. This research was based on the corporate knowledge that nicotine delivery above some minimum level was an essential part of cigarette smoking for smokers. For example, the basis for studies carried out in 1973 to assess the use of additives to reduce tar but actually increase nicotine to smokers was stated as follows: "The increased importance being placed on the lowering of TPM [total particulate matter, or tar] and the controlling of nicotine delivery has made it necessary to investigate the different methods available for producing these changes in smoke." 402390265-0282 at 0268 (US 85288) (O).

2051. The 1973 study also utilized "ADDITIVES FOR NICOTINE CONTROL," including nicotine tartrate, sodium bicarbonate, and diammonium hydrogen phosphate to increase the "extractable nicotine" in the smoke. The researchers found that certain combinations of additives successfully reduced tar while "maintaining the impact and physiological strength levels" of nicotine. 402390265-0282 at 0280 (US 85288) (O).

2052. As another example, BATCo's W.B. Fordyce circulated a report called "The Addition of Nicotine to Tobacco Products" written by company scientist Terry Mitchell to

BATCo directors under cover memo dated May 2, 1980. In his paper, Mitchell discusses three means of intentionally increasing the nicotine content of cigarettes, including the use of specialized high nicotine tobaccos (such as N. rustica), direct addition of nicotine and nicotine extracts, and the chemical "augmentation of smoke nicotine." Mitchell noted that smoke nicotine could be augmented via improving the nicotine transfer to smoke and by increasing the alkalinity/pH of smoke. 110088143-8155 (US 34965) (O).

2053. In 1975, BATCo scientist A. Kay Comer acknowledged that only those within the industry disputed the label addiction as applied to smoking and nicotine, and that the evidence showed the industry's denials were wrong. Comer stated that:

> In summary, it appears that most workers who are not directly concerned with the tobacco industry use the terms addiction or dependence rather than habituation and can be considered quite correct in doing so. If cigarette smoking is as addictive as the evidence suggests, it is not surprising that antismoking campaigns are so ineffective. . . ."

105392361-2368 at 2366 (US 22038) (O).

2054. BATCo's D.E. Creighton performed a "Restricted" written review of BAT's own "Group" research in January 1976, in order to evaluate the concept of compensation. The review found that compensation occurred - for example, via taking larger puffs or inhaling the smoke deeper into the lungs - when smokers of high-nicotine cigarettes smoked low-nicotine products and vice versa. Creighton found that, "On balance, it is concluded that many established smokers do compensate for changed delivery in an attempt to equalise nicotine delivery, when this is possible." 650008449-8480 at 8451 (US 76192) (O).

2055. Creighton stated that compensation for reduced nicotine delivery was evidence that smokers smoked for nicotine, and evidence that regular smokers are "nicotine dependent":

> [T]he majority of smokers who actually buy cigarettes and smoke

> them regularly are directly or indirectly seeking the effects of the nicotine content of the smoke . . . . The majority of smokers who are smoking for the nicotine content of smoke may still be smoking for different effects of nicotine. They may seek the pharmacological stimulation of nicotine which has both peripheral and central stimulating effects or to allay the uncomfortable effects of not having nicotine in the system, which Russell describes as relief from or avoidance of withdrawal effects. Most smokers when deprived of nicotine for a period of time during the day feel and increase in stress, tension, restlessness and irritability. A cigarette quickly restores the equilibrium.
>
> A subject who does not suffer the mild withdrawal symptoms, when unable to smoke and only seeks the occasional stimulation of nicotine, or some other attribute of smoking, is less likely to compensate for changed nicotine delivery than a subject who is more nicotine dependent.

650008449-8480 at 8462-8464 (US 76192) (O).

2056. Other sections of Creighton's 1976 report discussed an "estimation of self dosing with nicotine" and various factors that influence "the daily dose of nicotine taken by a nicotine dependent smoker." 650008449-8480 at 8465, 8468 (US 76192) (O).

2057. In a memorandum dated March 29, 1976, BATCo scientist S.J. Green detailed his forecast for "The Product in the Early 1980s." In this document, Green addressed "the main threats to the smoking habit." One major threat to smoking was that lower nicotine products would lead to more smokers being able to quit: "Taking a long-term view, there is a danger in the current trend of lower and lower cigarette deliveries - i.e. the smoker will be weaned away from the habit. . . . [W]e should be aware of the long-term dangers of following the crowd into ultra-low nicotine deliveries." 110069974-9982 at 9975 (US 20268) (A).

2058. Green then evaluated "potential rivals," that is, "cigarettes in which nicotine has been replaced by an alternative pharmacological agent." In this context, he referred to smokers as "members of the nicotine-dependent majority." 110069974-9982 at 9975, 9977 (US 20268)

(A).

2059. In 1976, BATCo held a conference on smoking behavior whose central theme was the pharmacological importance of nicotine on the central nervous system as the basis for smoking. In a conference report, Kay Comer wrote that tobacco is only used in ways that delivered unmetabolized nicotine to the brain:

> [C]igarette smokers who are forbidden to smoke, for instance in a lumber mill or down in a mine, will resort to chewing tobacco instead of smoking.
>
> The common factor in all the types of tobacco usage mentioned is nicotine, either absorbed through the lungs or the lining of the nose or mouth. Taken in these ways nicotine will quickly enter a direct route, in the blood, to the brain. Tobacco has never been used as a substance of ingestion. The probable reason for this is that when it is absorbed in the stomach or intestines, nicotine travels in the blood to the liver, where it is metabolised to cotinine before passing to the brain. It would therefore be surprising if nicotine, which is known to be pharmacologically active in the brain (unlike cotinine), and which is obtained in the ways most likely to enable it to reach the brain unchanged, were not involved in the reasons why people smoke.

650376684-6703 at 6694 (US 85289) (O); 100430004-0005 (US 87115) (O).

2060. A cover letter from BATCo dated December 31, 1976, showed that the conference report containing the Comer presentation was sent to B&W. 650376684-6684 (US 85289) (O).

2061. In another BATCo document entitled "Smoking Enjoyment," scientist Dr. J.A. Jagger wrote to B. Fordyce that smokers were persons who "carry out a practice which they are unable to stop (by and large) and which they would basically prefer to stop (if they could)." 105657941-7944 (US 34812) (O).

2062. BATCo also produced a November 24, 1977 report entitled "A Note on Smoker Motivation and Dependency." In the introductory section of the report, the author stated that smoking can be characterized by "a dependency factor which is, in a restricted sense,

independent of other motivational influences" that would keep a smoker smoking who desires to quit. The motivation to smoke even when one desires to quit "more closely resembles an urge or drive and **might be described as an addictive behaviour beyond cognitive control and likely to be associated with pharmacological dependency.**" 102698343-8361 at 8343 (US 85290) (O) (emphasis added) .

2063. BATCo held an "International Smoking Behaviour Conference" from November 27-30, 1977 at Chelwood, England. The company invited its own scientists and executives, along with representatives of its affiliate companies (B&W, Imperial Tobacco, Gallaher Limited, Souza Cruz, Rothmans, BAT-Germany and others), industry trade groups, and industry-funded researchers to exchange information. BATCo's own Dr. Green delivered the introduction, followed by presentations to the conference over the next several days into the central nervous system effects of nicotine, nicotine impact on human attention span, the role of nicotine in maintaining smoking, and many other topics directly related to the central importance of nicotine to the smoking behavior. 103505372-5399 (US 87116) (O); 103505453-5513 (US 87117) (O); 103518290-8401 (US 87118) (O).

2064. B&W produced from its company research library a BAT scientific report entitled "Dependence on Cigarette Smoking" dated December 15, 1977. The report was written by A. Kay Comer and distributed to BAT executives. In the introductory section of the paper, the author summarized, "It is concluded that the majority of smokers are to some extent dependent on smoking but that behavioural, social and psychological factors may be as important as those of a pharmacological nature." 650015112-5304 at 5114 (US 53406) (A).

2065. A document by BATCo's P.L. Short dated February 22, 1978 and entitled "Product and Process Innovation" recognized that "the problem of addiction via nicotine [is]

increasing." Two days later, his meeting notes recorded that, "Those seeking nicotine gratification where smoking is banned and the subsequent risk of purchasing tobacco by prescription or registration of addicts in the future, will lead to greater use of smokeless tobaccos . . . " He also wrote that there was a segment of smokers "wanting to quit but unable to, hooked onto cigarettes at present but seeking a cigarette/nicotine substitute." 100566925-6926 at 6926 (US 88765) (O); 100566919-6924 (US 88766) (O).

2066. In a June 27, 1978 document entitled "Compensation for Changed Delivery," BATCo scientist D.E. Creighton stated that:

> Numerous experiments have been carried out in Hamburg, Montreal, and Southampton within the company as well as many other experiments by research workers in independent organizations, that show that generally smokers do change their smoking patterns in response to changes in the machine smoked deliveries of cigarettes. . . . In general, a majority of habitual smokers compensate for changed delivery, if they change to a lower delivery brand than their usual brand. If they choose lower delivery brand which has a higher tar to nicotine ratio than their usual brand (which is often the case with lower delivery products) the smokers will in fact increase the amounts of tar and gas phase that they take in, in order to take in the same amount of nicotine.

10553905-3915 at 3906, 3913 (US 76170) (O).

2067. The connection between addiction and profitability continued to guide BATCo research and marketing. In an August 28, 1979 memorandum entitled "Key Areas – Product Innovation Over Next 10 Years for Long-term Development," BATCo scientific director L.C.F. Blackman stated that nicotine dependence was the key to the company's future viability and profitability. In coming to this conclusion, Dr. Blackman charted the stages of smoking from "starting the habit" (Stage 1) to "acknowledgment of pleasure"(Stage 2) to "dependence on the smoking habit" (Stage 3). He flatly stated that nicotine "initiates a dependence in the confirmed smoker" and that "**the high profits additionally associated with the tobacco industry are**

directly related to the fact that the customer is dependent upon the product." 109872505-2508 at 2508 (US 21530) (A) (emphasis added).

2068. BATCo continued its search for nicotine substitutes into the 1970s. A November 30, 1978 BATCo report entitled "Alkaloids That Have a Pharmacology Like Nicotine" reviewed all relevant research in depth and concluded that, "For smoking products, nicotine is the alkaloid of choice." The BATCo scientists reached this conclusion by comparing the known physiological qualities of nicotine to other alkaloids, including nicotine's effect on the central nervous system, respiration, blood pressure, and heart rate. 680009683-9700 at 9684 (US 53979) (O).

2069. The Appendix to the 1978 BATCo report was entitled "The Effects of Nicotine" and described nicotine as "the most abundant and potent of the several alkaloids present in tobacco." The Appendix also contained the following section:

> The Pharmacological Mechanisms of Nicotine
>
> The mode of action through which nicotine achieves its effects on the body is very complex. The complexity arises from nicotine's simultaneous and varying degree of activity on the different nerve centers, organs and muscles of the body. Nicotine causes its effects not only by central and peripheral stimulation (i.e., at the brain and spinal cord, and nerve organ or nerve muscle junctions, respectively), but also by the stimulation of intermediate nerve ganglia. . . .
>
> While smokers describe the effects of nicotine as calming and relaxing, all the accumulated evidence indicates that it cause physiological excitation and stimulation. One theory that attempts to explain this paradox suggests that the smoker becomes accustomed to the stimulated condition that nicotine produces; he then uses this condition as the norm from which to judge his well being. If the condition is not maintained, discomfort and anxiety are felt.

680009683-9700 at 9697-9698 (US 53979) (O).

2070. In light of the addictiveness of nicotine and noted differences between smoking and other habits such as alcohol, coffee, and candy, BATCo's long-term goals and interests included the following: "We are searching explicitly for a socially acceptable addictive product involving . . . the essential constituent most likely to be nicotine or a 'direct' substitute for it." 109872505-2508 at 2507 (US 21530) (A).

2071. In an undated BATCo document most likely created in the 1970s, an executive summarized the "usable data" on smoking and nicotine addiction, and related addiction to BATCo's and the industry's marketing plans. The memorandum did not disagree with any of the studies cited, and concluded that smokers are dependent on the pharmacological effects of nicotine, smokers develop tolerance to and dependency on nicotine, and that smokers deprived of nicotine experience withdrawal symptoms:

> SUMMARY and IMPLICATIONS to the INDUSTRY
>
> The rush of nicotine into the blood stream and nervous system is short-lived; therefore, reducing consumption would cause withdrawal and all of its unpleasant side effects so long as the smoker is restricted from smoking. Nicotine vacates the system in 30 minutes or so and at that time withdrawal starts. . . .
>
> The sensorimotor manipulation aspect of smoking is important to people but perhaps not as important as nicotine. . . . Cigarettes allow people to self-administer nicotine at a self-determined rate.

680096095-6110 at 6096 (US 53993) (O).

Later in the paper, when describing children and adults who were "regular smokers," the author wrote:

> Only an exceptional 2% smoke occasionally and intermittently. **Nearly all regular smokers are nicotine dependent.** . . . As the novice acquires tolerance to the irritation of the smoke over a period of two or three years, he becomes conditioned to a high and regular intake of nicotine.

680096095-6110 at 6099, 6101 (US 53993) (O) (emphasis added).

2072. One section of the BATCo memorandum was subtitled "Physical Dependence," in which the author detailed the process by which a smoker becomes addicted:

> Physical dependence involves changes which are physiological. Firstly, this is shown by the smoker's tolerance to the effects of nicotine. This is due to changes at the synapses. The smoker also has an increased capacity to metabolise and excrete the drug, mainly in the liver. . .
>
> Secondly, when the intake of nicotine is reduced or discontinued, the smoker may experience withdrawal symptoms, resulting from the lessening of overactivity at the synapses. . . Thus, withdrawal of cigarettes from heavy smokers may reduce them to a subjectively distressed state, with symptoms of anxiety, depression, irritability, restlessness, intense craving as well as difficulty in concentration. More will be discussed about the addictive quality of nicotine in the following section. . . .
>
> Research has shown that stimulation of the medial forebrain bundle of the hypothalamus can pleasurably occupy an animal to the exclusion of all other basic activities, e.g., eating, drinking, sexual activities. It seems likely that nicotine and other dependence-producing drugs owe part of their effectiveness to influencing this centre.
>
> The blood-brain barrier is no barrier to nicotine which reaches the brain within a minute of a person lighting up. Its effect is short lived. In twenty to thirty minutes after the smoker has finished his cigarette, most of the nicotine has left his brain for other organs - stomach, liver and kidneys - and this is just about the time that the heavily dependent smoker needs his next cigarette.

680096095-6110 at 6103-6104 (US 53993) (O).

2073. The BATCo memorandum once again documented the company's knowledge and acceptance of "compensation," that is, the means employed by smokers of lower nicotine cigarettes to obtain higher doses of nicotine:

> If the nicotine level of cigarettes fails to completely achieve the desired mood change, that cigarette will be drawn on deeper, the smoke held longer, and consumption will rise. . . . Reductions in nicotine are therefore compensated for by consumers but the limit to which they can compensate for the diminished nicotine /

> diminished therapeutic efficacy is unknown. R&D is studying this subject at the present time.

680096095-6110 at 6095 (US 53993) (O).

2074. BATCo knew from scientific studies using its own employees that smokers smoked for nicotine and compensated, or changed their smoking behavior, when smoking lower nicotine cigarettes. Compensation was again demonstrated by two such studies carried out by BATCo in 1974 and 1978 using reduced nicotine cigarettes. D.E. Creighton's report of these studies stated that smokers compensated for reductions in nicotine yield by smoking more intensely:

> Comparison of the two data sets shows that the lower delivery cigarette has been smoked more intensively . . . . It can be reasonably inferred that the smokers in this panel received similar amounts of nicotine from both cigarettes . . . .
>
> The fact that smokers have changed their smoking patterns to take more smoke from a cigarette with lower nicotine delivery but similar TPM [total particulate matter, or tar] delivery adds support to the contention that nicotine is a major determinant of smoking behaviour . . . .

650008946-8960 at 8948, 8954 (US 85318) (O).

2075. A March 1, 1979 "Restricted" BAT report written by Creighton summarized a collaborative scientific study between BATCo and British scientist M.A.H. Russell at the "Addiction Research Unit." The research project studied smoker compensation to obtain more nicotine, and utilized a standard low tar/low nicotine cigarette and a modified low tar/high nicotine cigarette. BATCo and Russell determined that smokers compensate less when given low tar/high nicotine cigarettes, and compensate more when given low tar/low nicotine cigarettes. According to the report, while Dr. Russell's interest in the study was "from the health point of view," BATCo participated in the work "from a commercial point of view." 650010157-

0193 at 0174, 0183 (US 85292) (O).

2076. The BATCo/Russell study also reported that the high nicotine cigarettes produced "giddiness," a reflection of the intoxicating properties of nicotine:

> Some smokers, in fact, felt giddy while smoking the [low tar, high nicotine] cigarette, presumably because they used the mouth sensations as cues to estimate their smoke intake. As a result of taking sufficient smoke to cause acceptable mouth sensations, they would receive nearly twice as much nicotine as usual, resulting in the feeling of giddiness.

650010157-0193 at 0179 (US 85292) (O).

2077. BATCo also produced a January 1980 document in this litigation entitled "B.A.T. Board Strategies," a document that, at the Board of Directors level, reviewed future influences and possible innovations for the industry. One of the "Assumptions" behind the "Strategies" was that, "Throughout the next 10 years smoking will continue to produce a dependency on the habit and hence there will still be a significant, albeit reducing, number of smokers who choose to smoke 'full-flavour' non-health reassurance products." 109883023-3026 at 3024 (US 85293) (O).

2078. In an April 11, 1980 BATCo document entitled "What Three Radical Changes Might, Through the Agency of R & D, Take Place in this Industry by the End of the Century," a team of BATCo scientists (Crellin, Ferris, Greig, and Milner) provided a forecast of what the industry would have to cope with in the near future. The scientists stated that:

> **B.A.T. should learn to look at itself as a drug company rather than as a tobacco company.** The mood affecting drug requirements of the population will in the future increase but the range of requirements will encompass tranquillisers e.g. valium, endorphin/enkephalin (brain opiates), marijuana, nicotine analogues, etc. At present, the taking of many of these drugs is either medically prescribed or regarded as deviant behaviour, but could be "socialized" like alcoholic drinking and tobacco smoking.

109884190-4191 at 4190 (US 21557) (A) (emphasis added).

2079. In a January 3, 1980 report by Creighton entitled "TN 80-01-008 Project Gypsy," the company acknowledged Dr. Russell's observation that: "Smokers smoke for nicotine and die for tar." 1022166881-6893 at 6882 (US 88767) (O); 536501866-1867 at 1866 (US 75986) (O).

2080. According to the April 1980 typed notes of BATCo scientist Dr. Lionel Blackman, the company needed to address the anticipated issue that, "Although nicotine will be considered by some doctors to be less harmful than tar, there will be increasing recognition by some medical authorities that smoking is a nicotine dependent activity." 301140125-0128 at 0126 (US 85294) (O).

2081. In a "Strictly Private and Confidential" document authored by T.W. Kidd, whom BATCo identifies on its privilege log glossaries as "BATCo - Employee, Public Affairs" from 1948-1983, Kidd provided the following information to assist the company in formulating a new company position on smoking and health:

> Addiction/Habituation
>
> This is another aspect of the smoking and health issue which cannot be overlooked. Unlike dangerous sports and other high risk activities (except the drinking of alcohol) smoking is addictive/habituative in addition to being an additional risk and many smokers would like to give up the habit if they could. This does not mean that we must contribute to health education or to "quitting clinics" but it does mean we have to act even more responsibly than if the consumption of our products were purely involving a minority of consumers in an additional risk.

109881332-1335 at 1335 (US 34929) (O). Despite Mr. Kidd's recommendations for a corporate position that reflected the addictiveness of cigarettes, no new company position was ever announced.

2082. A March 31, 1981 "Restricted" research report entitled "Nicotine Studies: A Second Report, Estimation of Whole Body Nicotine Dose by Urinary Nicotine and Cotinine

Measurement" documented BATCo's research into accurately measuring nicotine intake by rats forced to inhale cigarette smoke. The authors, BATCo scientists G. Read, I.G.M. Anderson, and R.E. Chapman, wrote that the studies were "particularly relevant to the development of an understanding of an individual smoker's daily nicotine requirement and the relationship between nicotine dose and smoking behaviour under conditions of brand switching/delivery modification." 650030769-0802 at 0779-0780 (US 53428) (O).

2083. The March 31, 1981 report built on an earlier BATCo scientific study into "nicotine dose" dated May 21, 1980, and entitled "Method for Nicotine and Cotinine in Blood and Urine" and written by the same scientists. In this earlier study into methods to measure nicotine in humans, the authors accepted that "the pharmacological response of smokers to nicotine is believed to be responsible for an individual's smoking behaviour, providing the motivation for and the degree of satisfaction required by the smoker." 650032386-2428 at 2389 (US 87119) (O).

2084. A 1981 BATCo document stamped "SECRET" and entitled "BAT Board Strategies" made clear the company's internal acceptance of nicotine addiction, as well as the drug-like effects of nicotine, at the highest levels of the company. Under the "Nicotine" subsection of the document, BATCo conceded that "Nicotine is a major active element in smoking. Because of its effects, smoking can stimulate and provide relief from stress as well as giving great pleasure to many people." Then in a later subsection, BATCo stated: "**It must be admitted that heavy and 'chain smokers' have demonstrated addiction symptoms.** In this respect we are totally opposed to smoking in excess and do not encourage it in any way. We believe that moderation in smoking, as in other pleasures, is in the best interest of the smoker." 503092365-2428 at 2399, 2404 (US 85296) (O) (emphasis added).

2085. Under cover letter dated April 7, 1982, BATCo's G. O. Brooks forwarded an internal nicotine study by Creighton entitled "Human Smoking Behaviour" to researchers at B&W. In Creighton's report, he restated the "sine qua non" role of nicotine in smoking and discussed withdrawal and compensation:

> Nicotine is the most pharmacologically active constituent in tobacco smoke and is probably the most usual factor responsible for maintaining the smoking habit. . . .
>
> Nicotine has pharmacological effects both in the brain and other parts of the body. Some of these effects are due to nicotine itself whereas others are due to nicotine causing a release of other substances within the body such as adrenaline. . . .
>
> The smoker . . . who smokes to maintain a constant blood level of nicotine is most likely trying to avoid the unpleasant sensations that he feels when he is not smoking. Without a cigarette he will become nervous, irritable and likely to make mistakes in his work. Such a smoker is likely to compensate for changed delivery if given a cigarette with different standard machine smoked deliveries to his usual brand so that as far as possible he maintains a constant blood level of nicotine. . .
> It is possible to consider nicotine as the component of cigarette smoke that controls the amount of smoke that a smoker takes from a cigarette.

660913609-3633 at 3616-3618 (US 22763) (O).

2086. Brooks' April 7, 1982 memorandum and the attached report also provided insight into the companies' (both BATCo's and B&W's) intimate knowledge of compensation and their goal to maintain the addiction through maintaining a minimum "dose" of nicotine delivered in their products:

> The simple answer would seem to be to offer the smoker a product with comparatively high nicotine deliveries so that with a minimum of effort he could take the dose of nicotine suitable to his immediate needs. . . . If delivery levels are reduced too quickly or eventually to a level which is so low that the nicotine is below the threshold of pharmacological activity then it is possible that the smoking habit would be rejected by a large number of smokers.

660913609-3633 at 3619-3620 (US 22763) (O).

2087. The paper attached to Brooks' 1982 letter resembled and borrowed from the 1978 paper by Dr. Creighton entitled "Compensation for Changed Delivery." (see above) In this earlier paper, Dr. Creighton stated that the company's knowledge of compensation by smokers of low nicotine yield cigarettes came from research "carried out in Hamburg, Montreal, and Southampton within the company," research showing that "smokers do change their smoking patterns in response to changes in the machine smoked deliveries of cigarettes." 105553905-3915 at 3906 (US 34799) (A).

2088. In 1997, B&W's corporate designee on addiction and cigarette design under Minnesota's equivalent of Fed. R. Civ. P. 30(b)(6), M. Lance Reynolds, who was also the company's former Director of Research and Director of Product Development, agreed in sworn testimony with Dr. Creighton's opening statement that "Nicotine is the most pharmacologically active constituent in cigarette smoke and is most probably the usual factor responsible for the maintenance of the smoking habit." Reynolds PD, State of Minnesota and BCBS v. Philip Morris et al., 9/30/97, 64:6-20.

2089. A May 7, 1982 marketing study report prepared for BAT Group member (and B&W sister company) Imperial Tobacco Limited contained the results of an extensive study into smoking behavior. The study, code-named "Project Sixteen," described how and why teens begin smoking cigarettes, and then progress on to becoming addicted. The study found specifically that, "Once addiction does take place, it becomes necessary for the smoker to make peace with the accepted hazards [of smoking]. This is done by a wide range of rationalizations." 566627751-7824 at 7753 (US 20938) (A).

2090. The Imperial smoking behavior study described how adolescents start smoking

based partly on the naive belief that they will not become addicted:

> Thus we have a pattern that shows how and why the health hazards do not really enter into the decision to start. It's no longer because they [the health hazards] are sincerely disbelieved (shows of rebellious bravado aside) but because they are assumed as not applicable to the person who won't become addicted. But addicted they do indeed become . . . what then? . . .
>
> [C]onfronted by an addiction that's difficult to break and also by the hazard of not breaking it, the young smoker (and probably the not-so-young too) has no choice but to play down this conflict by whatever convenient ploy that works.

566627751-7824 at 7780, 7783 (US 20938) (A).

2091. In a March 25, 1983 memorandum entitled "Project Recommendations," which described the relationship of nicotine level to switching behavior, BATCo researcher Andrew J. Bellman stated that "nicotine is the addictive agent in cigarettes." 514110006-0009 at 0007 (US 21745) (A).

2092. In a January 26, 1984 research paper, BATCo researcher Colin C. Greig stated that because nicotine "is the major or sole pharmacologically active agent in smoke, it must be presumed that this is the preferred method of absorption and thus why people inhale smoke." 650547777-7787 at 7786 (US 20950) (A).

2093. In 1984, the BATCo Research and Development Centre in Southampton prepared a report evaluating a proposed "non-combustible cigarette" to be manufactured by a company called Advanced Tobacco Products. The cigarette, called "Favor," was designed to deliver nicotine as an inhaled vapor. BATCo's recognition of the central role of nicotine to the tobacco industry is revealed in this evaluation, which focused in large part on the pharmacological characteristics of the proposed product. The primary advantage of the "Favor" product to consumers was that it was "capable of delivering nicotine"; the primary advantage to the industry

was that it would "help satisfy the needs of the smoker during periods of enforced smoking abstinence." 505005425-5442 at 5427-5428 (US 85297) (O).

2094. A noted disadvantage of "Favor" was that the product produced "no central nervous system response: implying that the pharmacological potential of the product is small." Moreover, the product would "highlight perceived dependence of smokers on the drug nicotine" and was "open to possible abuse" similar to "glue sniffing." 505005425-5442 at 5428-5429 (US 85297) (O).

2095. A March 22, 1984 report entitled "Receptors for Nicotine in the Central Nervous System" and authored by BATCo scientist W. W. Templeton, documented the company's research into the psychoactive effects of nicotine and specific sites (receptors) in the brain where nicotine binds within the central nervous system. The study "confirm[ed] the existence of specific binding sites for nicotine in the CNS" and speculated that the results "may help to explain the development of tolerance to nicotine." The Executive Summary described the research and its link to the design and manufacture of cigarettes:

> This report is the first in a series of studies designed to identify and characterize how nicotine derived from cigarette smoke can interact with the body, and in particular the active centres of the brain. This specific interaction is believed to form an essential element of a smoker's satisfaction.
>
> The report describes in detail the development and application of techniques to identify and characterise regions within brain tissue where nicotine can bind and elicit a pharmacological response. . . .
>
> The findings will be used as appropriate in the process of developing lower delivery products with full smoking characteristics.

650000996-1034 at 0998, 1011, 1014 (US 53388) (O).

2096. Later in the 1984 report, the author reviewed the evidence on smoking

"motivation" and concluded:

> Taken together, the evidence suggests that **self-administration of nicotine may be the primary motivation for smoking.** While this may not be true for every smoker, each smoker (who inhales the smoke) absorbs a quantity of nicotine during each puff sufficient to have extensive physiological and pharmacological effects, regardless of the motivation for smoking. . . .
>
> Primarily, nicotine is taken for its effects on the CNS, the peripheral consequences of nicotine administration, such as increased heart rate and blood pressure, being unwanted side effects.

650000996-1034 at 1001-1002 (US 53388) (O) (emphasis added).

2097. In June 1984, BATCo held a three-day "Nicotine Conference" attended by representatives of BATCo and B&W. According to the conference agenda, one topic for discussion was "A Smoker's Requirement for Nicotine - A Smoking Behaviour and Marketplace View." The agenda later stated that "Considerable indirect evidence has been accumulated that suggests inhaling cigarette smokers smoke for nicotine and presumably the pharmacological effects of nicotine." 512106427-6437 at 6428, 6433 (US 20846) (O).

2098. Another topic at the BATCo "Nicotine Conference" was called "Product Modification for Maximal Nicotine Effects." Under this heading, the authors stated that in order to "maximise nicotine effects," the company must understand "what constitutes an adequate and suitably 'packaged' dose of nicotine to satisfy a smoker's 'requirements.'" 512106427-6437 at 6435 (US 20846) (O).

2099. A final report of the Nicotine Conference was also prepared by BATCo. The report contained summaries of many of the presentations made by BATCo researchers and executives to conference attendees. These summaries revealed BATCo's intimate knowledge of smoker regulation of nicotine (compensation), smokers' "threshold requirement" of nicotine,

"product elacticity," "nicotine dose" measurements, "pharmacokinetics of nicotine," "the sensory and psychological effects of nicotine," central nervous system effects of nicotine, and "smoke manipulation involving pH modification" and other product design modifications. 101234971-5018 (US 21645) (O).

2100. One month after its landmark "Nicotine Conference," BATCo held a conference on smoking behavior and marketing. In Session III of the July 1984 conference, again attended by B&W representatives, C. I. Ayres summarized information from the earlier nicotine conference, including the following:

> Many smokers appear to smoke to a constant intake of nicotine. As yet, however, we do not know whether most smokers are aiming to achieve a "satisfactory" average level of nicotine circulating in the body, or whether they are seeking an optimum peak nicotine level after each cigarette. . . .
>
> The presentation was concerned with summarising and outlining the central role of nicotine in the smoking process and our business generally . . . . The extent to which smokers smoke for nicotine was discussed and it was agreed that it is unlikely that all smokers smoke for nicotine. However, only products containing nicotine have widespread use . . . .

536000308-0507 at 0330-0332 (US 85298) (O); 109869361-9369 (US 87120) (O).

2101. Presentations and statements from the July 1984 BATCo "Smoking Behaviour-Marketing Conference are discussed in other documents as well. Of note was a comforting report to attendees in Session IV of the conference that, "Although intentions and attempts to quit are relatively high (30-40% of smokers) the actual success rate is relatively low and stable." 402426650-6677 at 6676 (US 87121) (O).

2102. A review of the conference agenda, reports and other documents makes clear that nicotine was the focal point of nearly every presentation and discussion. For example, BATCo Group Leader Graham Read delivered a presentation entitled "Current Status and Future

Direction of Smoking Behaviour Research." In his presentation, Read observed the "strong indirect evidence of smokers smoking for nicotine" as representing a "cause and effect" relationship. Read stated that the significance of his observation was that "smoking maintenance" is accomplished through nicotine, and that "in its simplest sense puffing behaviour is the means of providing nicotine in a metered fashion." 536000000-0090 at 0045-0063 (US 22338) (A).

2103. A BATCo report of the company's Research and Development conference in September 1984, prepared by BATCo Scientist/Director Dr. Lionel Blackman, emphasized the need for further research related to smoker behavior and nicotine. The report advised that BATCo needed to research whether smokers smoked for the "transient peak effects" of nicotine or instead sought "threshold base-line levels throughout the day." The report also recommended research into means of "influencing nicotine transfer from the product to the smoker - and the commercial viability of such means." According to the R&D conference report, "Nicotine remains a top priority." 109872430-2447 at 2439, 2443 (US 23340) (A).

2104. In an October 8, 1984 letter to David Schechter, Vice President and General Counsel for BATUS, Inc. (B&W's immediate parent company in Louisville), Roy Reardon, an attorney with Simpson, Thacher & Bartlett (counsel for B&W), discussed the effect upon future product liability lawsuits against B&W of RJR's recently launched "Open Debate" ad campaign. The handwritten comments on the letter made by BATCo in-house counsel showed BATCo's understanding that addiction was the key to whether the industry could prevail in raising the assumption of risk defense, a defense that Simpson, Thacher advised was the strongest available to the industry. Handwritten notations throughout the 44 page letter indicate BATCo's concern that such a defense could be ineffective in light of the addiction issue. For example, concerning

the statement, "in our view, assumption of risk is realistically the strongest defense presently available to the industry," the words "Jesus" and "ADDICTION" appear. These handwritten notations demonstrate BATCo's knowledge of the addictiveness of its cigarette products and the impact of the addiction issue on the industry's litigation strategy. 3010609994-1037 at 9997, 1005, 1015, 1021, 1035 (US 28153) (O).

2105. A September 1984 BATCo document entitled "Research Conference, GR&DC Research Programme" stated some objectives of BATCo's in-house behavioral/nicotine research. For example, the memorandum summarized planned nicotine/pH modification experiments, research focusing on the "mechanisms of nicotine interaction with the central nervous system," and human studies to better determine "the minimum dose of smoke nicotine that can provide pharmacological satisfaction for the smoker." 109869520-9522 at 9521 (US 87122) (A).

2106. BATCo Group research was premised on the position that nicotine was the critical component of cigarettes that kept smokers smoking. In an October 15, 1985 memorandum from German BAT scientist E. Kausch to B&W's Vice President of Research and Development, Kausch followed up on a recent "Oxford Conference" with the statement: "There is no daupt [sic] that nicotin is the compound which makes tobacco use to such a widespread habit. This means that nicotin research should be a central part of BAT's research efforts.[sic]" 510000642-0644 at 0643 (US 85300) (O).

2107. In December 1985, BATCo scientist K. Battig visited a number of laboratories in the United States, engaged in nicotine research, both within and without the industry. In his December 9, 1985 synopsis memorandum, Dr. Battig described "acute tolerance" to nicotine as the need of a regular to intensify his smoking to make up for a nicotine "deficit." Dr. Battig concluded his paper with the following observation on nicotine withdrawal:

> Psychological effects of nicotine. There is still no definitive answer to the question whether favourable psychological effects of nicotine or the fear of withdrawal effects are the reasons why smokers do not change their smoking behaviour. . . . In the time to come, it might be particularly important to clarify this question in connection with the dosage of nicotine (problem of acute tolerance).

102206198-6210 at 6210 (US 85301) (O).

2108. A June 1988 internal BATCo report entitled "The Significance of pH in Tobacco and Tobacco Smoke" summarized BATCo's in-depth knowledge with respect to manipulating smoke pH and increasing "free base" nicotine in order to increase the nicotine delivery to smokers in the mouth and lungs. 500104402-4424 (US 21492) (O).

2109. A 1988 BATCo document entitled "A Meeting of Scientific Research Group, Montreal, August 6th-8th 1988" reported on the results of a U.S. smoking behavioral study that "strongly point[ed] to nicotine as the basis of the smoking habit." The document also demonstrated the existence of compensation, reporting that "plasma nicotine levels were almost constant, regardless of measured nicotine delivery levels, as were the number of cigarettes smoked per day". 100993169-3173 at 3169 (US 34677) (A).

2110. BATCo described a 1990s project code named "PROJECT GREENDOT" in a BATCo report stamped "SECRET" and "CONFIDENTIAL." The report recalled that the company collaborated with Battelle some 25 years before with Project "ARIEL" to develop a modified smoke delivery project that would give the smoker "sufficient nicotine" without the unwanted products of combustion. According to this document, Project "ARIEL" was discontinued in 1967. In the 1990s, "PROJECT GREENDOT" was planned, similar to the impetus for "ARIEL," to give smokers the nicotine they need without unwanted tar and sidestream smoke, via an "alternative" device with certain specifications:

> Work has shown that smokers obtain nicotine equivalent to 0.8 mg per cigarette, independent of design and tar yield. It is therefore realistic to assume that a product targeted at a nicotine delivery of 0.8 mg will satisfy the consumers' pharmacological requirements for nicotine.

400452855-2865 at 2856 (US 47504) (O).

2111. At an August 22-24, 1990 BAT Group conference entitled "Product Development Conference," representatives of Group members (including BATCo and B&W) discussed ongoing Group research projects and priorities. The "SECRET" conference report recited that the companies were in the process of several high priority projects designed to maximize nicotine in low tar products (such as Project "GREENDOT") and maintain nicotine "satisfaction." 400459297-9343 (US 87123) (O).

2112. A January 15, 1991 BATCo document entitled "BATCo Operating Group Five Year Plan 1991-1995" contained a section entitled "The Fundamental Research Centre." In this section, when discussing key research projects regarding "tar/nicotine ratio reduction," the plan stated that:

> Basic research will continue into products delivering adequate levels of nicotine with minimum levels of other components, focusing on: tobacco treatments leading to reduced tar formation; novel sheet materials capable of controlled release of nicotine/flavourants; and enhancement of the transfer of nicotine/flavourants of smoke.

201752783-2899 at 2838 (US 85452) (O). This document demonstrates BATCo's knowledge of the importance of nicotine for its products' sales as well as its continued efforts to maintain smokers' addictions through manipulation of the amount of nicotine received by smokers of its products.

2113. In an undated 1992 marketing document entitled "Structured Creativity Group," BATCo's Colin Greig described cigarettes as a "'drug' administration system for public use" with

"very very significant advantages over other drugs." Because "nicotine is the lowest dose 'common' drug available," it compared favorably to other "slower" drugs such as marijuana, amphetamines, and alcohol." Greig wrote that, "Within 10 seconds of starting to smoke, nicotine is available in the brain." The memorandum also admits BATCo's acceptance that smokers of low tar products "compensate," or modify their smoking behavior, in order to obtain more nicotine. 100503495-3506 at 3496, 3499 (US 76168) (emphasis in original) (O).

2114. Greig described tobacco as "a fast, highly pharmacologically effective and cheap 'drug'" contained within a "relatively cheap and efficient delivery system." At the close of his memorandum, Greig observed that because cigarettes leave smokers unsatisfied and always craving more, "all we [BATCo] would want then is a larger bag to carry the money to the bank." 100503495-3506 at 3497, 3505 (US 76168) (O).

2115. In 1997, B&W's corporate designee on addiction and cigarette design under Minnesota's equivalent of Fed. R. Civ. P. 30(b)(6), M. Lance Reynolds, who was also B&W's former Director of Research and Director of Product Development, agreed in sworn testimony with the Colin Greig statement in the 1992 document that "the cigarette is a good way of delivering this pharmacologically active substance [nicotine] to the brain." Reynolds PD, Minnesota, 9/30/97, 55:3-6.

2116. BATCo understood that it, like the other Cigarette Company Defendants, had to mask that it was truly in the nicotine business. A meeting was held at BATCo's parent BAT Industries on February 10, 1992, to discuss proposed research into the beneficial effects of smoking on Alzheimer's Disease patients. BATCo scientists Dr. Thornton and Dr. Rudge attended the meeting. Dr. Thornton's written summary of the meeting stated that while Alzheimer's research had potential benefits for the company, he cautioned that: "If there was a

satisfactory outcome to this research this would further activate research into options for delivering nicotine to people and again would require decisions as to which business we are in." 300555800-5803 (US 87124) (O).

2117. An undated BATCo memorandum written by D.E. Creighton, entitled "Structured Creativity Group Presentation," listed the following as one of smoking consumers' needs:

> High on the list of consumer needs is nicotine, which I believe to be the main motivator and sustainer of smoking behaviour. Without nicotine in sufficient quantity to satisfy the needs of the smoker, the smoker can (a) give up altogether, (b) cut back to a low purchase level, (c) keep switching brands.

102690336-0350 at 0340 (US 21681) (A).

2118. In his memorandum, Creighton was careful to distinguish the need for nicotine from the importance of flavor and quality to cigarette consumers. At the close, he noted that BATCo had "tried the low [nicotine] delivery product route with limited success. This might be because the nicotine in such products is below the pharmacological threshold of effectiveness." 102690336-0350 at 0345, 0350 (US 21681) (A).

2119. BATCo carried out and/or funded voluminous internal studies on nicotine and its effect on the human body, studies that are too numerous to discuss each in detail in this section. However, the clear import of these studies, taken as a whole, was that BATCo knew that nicotine was essential to cigarettes, essential to addiction, and essential to its business of selling cigarettes. Many of these reports bear stamps indicating they were shipped to B&W. Additional BATCo research reports include: "Nicotine in Smoke and Human Physiological Response," dated March 26, 1970, 682638843-8864 (US 25454) (O); "Relative Contributions of Nicotine and Carbon Monoxide to Human Physiological Response," dated November 15, 1971, 682638479-8516 (US 25451) (O); "The Transfer of Nicotine From Smoke Into Blood Using a

Perfused Canine Lung," dated February 28, 1967, 750003524-3551 (US 87125) (A); "Subjective Evaluation of Select Flue-Cured Tip Grades," dated August 20, 1968, 750067063-7084 (US 87126) (O); "The Absorption of Nicotine Via the Mouth: Studies Using Model Systems," dated May 9, 1965, 750004644-4702 (US 87127) (O); "The Effect of Puff Volume on 'Extractable Nicotine' and the Retention of Nicotine in the Mouth," dated August 21, 1969, 750040142-0159 (US 87128) (O); "Further Studies on the Effect of Nicotine on Human Physiological Response," dated June 5, 1973, 750009778-9808 (US 87129) (O); "Acute Effect of Cigarette Smoke on Brain-Wave Alpha Rhythm - First Report," dated October 31, 1974, 750055087-5106 (US 87130) (O); "Interaction of Smoke and the Smoker Part 3: The Effect of Cigarette Smoking on the Contingent Negative Variation," dated December 12, 1974, 750012293-2319 (US 87131) (O); "Some 'Benefits' of Smoking," dated January 26, 1977, 750016323-6339 (US 87132) (O); "Further Work on 'Extractable' Nicotine," dated September 30, 1966, 83916527-6596 (US 55968) (A); 650010113-0156 (US 53397) (O); 566632813-3254 (US 87134) (O); 110083654-3673 (US 87135) (O).

(iv) Brown & Williamson

2120. Like the other Defendants, B&W was also well aware of the addictive quality of smoking and nicotine. Despite the company's public denials, it has consistently exploited and admitted internally that smoking is an addiction, smokers need nicotine, and smokers suffer withdrawal when deprived of nicotine.

2121. Much of B&W's knowledge of nicotine and its addictive qualities originated at its parent company, BATCo, who regularly communicated its research results to B&W and other BAT Group affiliates. As one of the earliest examples of the trans-Atlantic exchange of knowledge, Sir Charles Ellis forwarded both BATCo's "Project HIPPO" results and the BATCo

report entitled "The Fate of Nicotine in the Body" to B&W's chief executives Bill Cutchins and Ed Finch under cover letter stamped "Received" on July 1, 1963. 689033419-3419 (US 87136) (O). [Project HIPPO I and II, as well as the report entitled "The Fate of Nicotine in the Body" are discussed in detail above under the BATCo heading.]

2122. Shortly thereafter in 1963, B&W Executive Vice President and General Counsel Addison Yeaman commented in writing on the BATCo nicotine research carried out in England under the code names HIPPO I and HIPPO II. In a July 17, 1963 memorandum marked "Strictly Private and Confidential," Yeaman was persuaded by the findings of the research, in particular the researchers' conclusions on the "tranquillising" effects of nicotine. Yeaman concluded simply that, "Moreover, nicotine is addictive." He further wrote: "We are, then, in the business of selling nicotine, an addictive drug effective in the release of stress mechanisms." 689033412-3416 at 3415 (US 22034) (A).

2123. Yeaman's conclusions and the sophisticated nicotine research in BATCo's and B&W's possession were intentionally concealed from the Surgeon General's Advisory Committee then in the process of writing what would be the 1964 Surgeon General's Report. See U.S. FF § III.(C)(1), infra.

2124. B&W scientist Robert B. Griffith authored a September 13, 1963 letter to BATCo's John Kirwan in response to questions as to the importance of nicotine. Dr. Griffith wrote: "[N]icotine is by far the most characteristic single constituent in tobacco and the known physiological effects are positively correlated with smoker response. . . . [W]e have a research program in progress to obtain, by genetic means, any level of nicotine desired. 102630333-0336 (US 23000) (O).

2125. B&W participated in a Tobacco Chemists Conference in October 1964.

According to the "CONFIDENTIAL" report of the conference, tobacco company scientists delivered a number of papers to conference attendees. One paper called "Do We Know What We Are Talking About?" was presented by W. S. Paige of the Imperial Tobacco Company. In his presentation, Paige described the "Physiological Strength or Potency" of tobacco suggesting very early knowledge among tobacco industry scientists of nicotine's psychoactive effects, if not intoxication, and the connection to subconscious smoker compensation:

> S. Physiological Strength or Potency
>
> This is the property of tobacco which makes your head swim, and makes you feel 'weak at the knees' after rapid smoking. It is a direct effect on the metabolism which does not come through the sense organs. It affects muscular co-ordination, pulse rate and peripheral circulation . . . . It is very difficult to assess S by these reactions because a subconscious mechanism usually controls the rate of smoking to keep these effects small.
>
> [Physiological Strength or Potency] is usually assessed by considering whether the cigarette was "satisfying." "The cigarette satisfied my need for a cigarette (even though it may have tasted horrible), I did not want to light another cigarette immediately afterwards.

650378968-9132 at 9036 (US 85303) (O).

2126. Representatives of Philip Morris, RJR, B&W, BATCo, Lorillard, and Liggett attended and presented papers at the same October 1964 conference. 2012614167-4279 at 4176-4182 (US 85304) (O).

2127. In August 1967, B&W commissioned a report on addiction entitled "A Psychological Map of the Cigarette World." The stated purpose of the report was "to provide a resource of information regarding those consumer needs, habits, and attitudes which shape the current cigarette market" and to "serve as a platform for the development of responsive marketing and advertising strategies." Thus, B&W recognized the important link between the

addictiveness of its products and sustaining the cigarette market. 680282619-2668 at 2620 (US 85305) (O).

2128. This 1967 report commissioned by B&W summarized the responses of some 1,400 smokers and included the following:

> Most smokers see themselves as addicts. . . . Many fear they'd "fall apart" if they quit. . . . Interpretively, the typical smoker feels guilty and anxious about smoking but impotent to control it. Psychologically, most smokers feel trapped.
>
> Speculatively, the decision to smoke is psychologically motivated. Once that decision is made, smoking frequency is physiologically determined, with the addiction becoming more severe as smokers grow older.
>
> People who smoke plain cigarettes are strongly addicted but deny anxiety about smoking. . . . [They] hate to run out of cigarettes. . . . [They] admit they'd be a nervous wreck if they ran out of cigarettes."

680282619-2668 at 2625, 2632, 2635 (US 85305) (O).

2129. The 1967 report focused in part on smokers of B&W's Viceroy and Kool brands. With respect to the Viceroy market, the report found that "attractions to Viceroy are strong, but its appeals represent a threat to the addicted mass." With respect to Kool, the report concluded that "The Kool smoker feels he smokes too much - but does not want to stop . . . is 'hooked' and more openly anxious than menthol smokers generally." 680282619-2668 at 2656, 2660 (US 85305) (O).

2130. B&W has long known that nicotine is the most important component of cigarettes, that nicotine is the most important component of addiction, and that without nicotine, people would not smoke. For example, B&W's Director of Research and Development, I.W. Hughes, responded with the following in his March 13, 1970 comments on an article raising questions as to a link between nicotine and coronary heart disease:

> This section of the paper is of some interest in that (a) there is the lead to take pressure off nicotine. This is very important to us; we can cope with reducing carbon monoxide, however difficult, but **reduction or deletion of nicotine could be death to us.**

680252107-2109 at 2108 (US 85306) (O) (emphasis added).

2131. A February 22, 1972 "Private and Confidential" report by B&W researcher J.E. Kennedy and distributed to executives, including General Counsel Yeaman, was entitled "Beneficial Aspects of Smoking." Kennedy's paper reviewed a number of studies, including studies focusing on nicotine's effects on animal behavior. Kennedy described studies showing that monkeys developed a "strong preference for tobacco smoke" over air, and would "spend time smoking in preference to other available activities," and even learned to self-inject nicotine. 690008455-8462 (US 54320) (O).

2132. B&W was also privy to internal nicotine reports from other cigarette manufacturers. In a 1973 "Confidential" marketing long-term planning memorandum, the company summarized BATCo and Philip Morris research, as well as some secondary studies. The memorandum acknowledged the drug-like effects of nicotine, and that "cigarettes allow people to self-administer nicotine and at a self-determined rate." The memorandum flatly stated that "Nearly all regular smokers are nicotine dependent" and described the smoking behavior of addicted smokers. 680096095-6110 at 6096, 6099, 6106 (US 53993) (O).

2133. The 1973 "Confidential" memorandum accepted and described tolerance to nicotine:

> As the novice [smoker] acquires tolerance to the irritation of the smoke over a period of two or three years, he becomes conditioned to a high and regular intake of nicotine . . . .
>
> Physical dependence involves changes which are physiological. Firstly, this is shown by the smoker's tolerance to the effects of nicotine. This is due to changes at the synapses. The smoker also

> has an increased capacity to metabolise and excrete the drug, mainly in the liver.

680096095-6110 at 6095, 6101, 6103 (US 53993) (O).

2134. The memorandum also accepted and described the adverse withdrawal symptoms experienced by smokers who abstain:

> The rush of nicotine into the blood stream and nervous system is short-lived; therefore, reducing consumption would cause withdrawal and all of its unpleasant side effects so long as the smoker is restricted from smoking. Nicotine vacates the system in 30 minutes or so and at that time withdrawal starts.

680096095-6110 at 6096 (US 53993) (O).

2135. The memorandum further accepted and described the concept of nicotine "compensation" by smokers to obtain the desired amount of nicotine:

> If the nicotine level of cigarettes fails to completely achieve the desired mood change, that cigarette will be drawn on deeper, the smoke held longer, and consumption will rise. . . . Reductions in nicotine are therefore compensated for by consumers but the limit to which they can compensate for the diminished nicotine / diminished therapeutic efficacy is unknown. R&D is studying this subject at the present time.

680096095-6110 at 6095 (US 53993) (O).

2136. Finally, the memorandum summarized and accepted disturbing outside research that suggested drug addiction among smokers:

> [M]onkeys can be trained to inject themselves with nicotine for its own sake, just as they will inject other dependence-producing drugs, e.g., opiates, caffeine, amphetamine, cocaine. . . . **This effect in the case of nicotine is rapid but passing. The absorption of nicotine through the lungs is as quick as a junkie's "fix."** In twenty to thirty minutes after the smoker has finished his cigarette, most of the nicotine has left his brain for other organs - stomach, liver, and kidneys - and this is just about the time that the heavily dependent smoker needs his next cigarette.

680096095-6110 at 6104 (US 53993) (O) (emphasis added).

2137. Minutes from a 1974 B&W/BATCo conference included the conclusion: "Whatever the characteristics of cigarettes as determined by smoking machines, the smoker adjusts his pattern to deliver his own nicotine requirements." 2502272091-2096 at 2092 (US 45990) (O).

2138. In January 1974, B&W hired an advertising agency to study the market for its new cigarette Raleigh Extra Milds. The specific goal of the study was to "aid in the development of future marketing and creative planning for the new Raleigh cigarettes." The advertising strategy presented to B&W included the following broad observations:

> Obviously the negative aspects of smoking outweigh the positives, so much so that many of the men and women interviewed had attempted to quit or at least considered quitting smoking. Apparently the Surgeon General's warnings have had a considerable impact upon smokers' attitudes toward their habit if not their behavior.
>
> However, as additional evidence of the addictive qualities of smoking, those who tried to quit, both male and female, admitted great difficulties in overcoming the psychological and/or the physiological urge or craving to smoke. Their presence in these discussions attests to their lack of success.
>
> The inability to quit or even attempt to quit often results in some degree of guilt and the admission to one's self of a "dependency" on cigarettes or a lack of willpower.

680289650-9743 at 9665 (US 85307) (O).

2139. In August 1975, B&W commissioned a marketing report entitled "New Product Ideas Developed for B&W." One exhibit to the study created an "Addiction Profile" to describe the relative intensity of smoking motivation. The study then divided smokers into three groups, "Mainstream" smokers, "Compromisers," and "Justifiers." "Compromisers" were defined as those "heavily addicted" smokers who have made "many attempts to quit" and were "searching

for a solution to their problem." "Justifiers," in contrast, referred to those who were "less addicted" and who were "quick to rationalize." 680287748-7895 at 7770, 7773 (US 85308) (O).

2140. In a section of the report entitled "Background Information on Cigarette Smoking Habits," the report emphasized a smoker's "need" for cigarettes:

> At times, a person smokes because it is something he depends on to keep going, in order to be able to function and to face the problems in daily life. This is when a cigarette is needed. . . . Let's take first the situations where a cigarette is needed. This is usually characterized by its being smoked quickly, where the smoker is hardly aware that he is smoking. It serves to relieve tension, frustration, irritation, or insecurity. It has a calming effect. Here the relaxation is of the type of a quick, crucial shot in the arm.

680287748-7895 at 7835 (US 85308) (O).

2141. The report also found that: "There are obviously strong motivations which drive people to smoke in the face of the overwhelming evidence that it is, at best, hazardous to their health." 680287748-7895 at 7834 (US 85308) (O).

2142. In an October 31, 1974 internal study by the B&W Research and Development Department entitled "Acute Effect of Cigarette Smoke on Brain Wave Alpha Rhythm," company scientists assessed the immediate physiological responses of smokers to cigarettes with varying deliveries of nicotine. The report documented the "striking, fundamental human response to cigarette smoke" and recommended follow-on studies using more sophisticated equipment. 650379764-9786 at 9772 (US 53525) (O).

2143. Less than two years later, a B&W advertising conference was held at the company headquarters in Louisville to review company research and discuss the company's advertising for a "Low Tar High Nicotine Cigarette." The conference report included the following under the heading "Goals/Wishes":

- MULTIPLY NICOTINE RUSH

- get across to consumer that what he likes (NICOTINE) is not what hurts (TAR)
- have FREE NICOTINE as opposed to BOUND
- show VALUE OF NICOTINE (lift, A.M. Starter)
- market an ADDICTIVE PRODUCT in an ETHICAL MANNER

777125397-5403 at 5398 (US 54625) (O) (emphasis in original).

2144. In the years that followed, according to September 30, 1997 testimony by B&W's corporate designee on cigarette design and addiction, the company "did a lot of work on trying to develop a quote, low-tar, normal nicotine, closed quote, cigarette." Indeed, the same witness, Lance Reynolds, former Director of Product Development and Director of Research, testified that from the beginning of his career at B&W in 1968 onwards, the company and other BAT Group member companies had "projects to try and increase nicotine delivery with respect to tar, for many years." Reynolds attended the 1977 advertising meeting on the "Low Tar High Nicotine Cigarette," and testified that he "can't debate or dispute" the advertising agency conference report which stated that one of B&W's wishes was to "market an ADDICTIVE PRODUCT in an ETHICAL MANNER." Reynolds PD, Minnesota, 9/30/97, 137:10-137:15; Reynolds PD, United States v. Philip Morris et al., 9/12/02, 301:1-301:23; 777125397-5403 at 5398 (US 54625) (O).

2145. The importance of nicotine was also emphasized in the Research and Development department. In a November 28, 1977 memorandum by researcher G. E. Stungis entitled "Long-Term Product Development Strategy," one of the overarching stated objectives was that "products must provide the appropriate levels of nicotine . . . ." 501011512-1515 at 1513 (US 85309) (O) (emphasis in original). Moreover, a significant part of the overall B&W strategy was the ability to: "Recognize that nicotine is a vital component to overall smoker satisfaction. Methods to optimize the mainstream smoke nicotine delivery with respect to pharmacological effects will be explored/developed." 501011512-1515 at 1513 (US 85309) (O).

2146. An August 24, 1978 B&W memorandum to M. J. McQue from Assistant Brand Manager H. David Steele entitled "Future Consumer Reaction to Nicotine" stated: "Very few consumers are aware of the effects of nicotine, i.e., its addictive nature and that nicotine is a poison." 665043966-3966 (US 21485) (A); 776078962-8962 (US 87137) (O).

2147. B&W knew that the difference between "free" and "bound" nicotine was integral to the delivery of enough nicotine to insure "physiological satisfaction." In a January 4, 1980 B&W Process Department "file note" entitled "Observation of Free Nicotine Changes in Tobacco Smoke," C.F. Gregory discussed pH and nicotine delivery in Philip Morris's competing brands Merit and Marlboro. Gregory's data revealed that Merit and Marlboro delivered equal amounts of "free" nicotine, although Marlboro's total nicotine content was almost double that of Merit. 654005805-5807 (US 85447) (O); 689201723-1770 at 1751 (US 31049) (O).

2148. Gregory commented on this data that, "In theory, a person smoking these [Merit and Marlboro] cigarettes would not find an appreciable difference in physiological satisfaction from either based on the amount of free nicotine delivered." He then gave other examples where cigarette manufacturers could maintain "free" nicotine despite reducing machine-measured nicotine yield. Gregory suggested this information could be used to gain B&W a competitive advantage in marketing "Light" cigarettes:

> Is there not some way open now to use the knowledge we have gained in this area of tobacco and smoke research to give B&W a competitive advantage over its competition? It appears that we have sufficient expertise available to "build" a lowered mg tar cigarette which will deliver as much "free nicotine" as a Marlboro, Winston, or Kent without increasing the total nicotine delivery above that of a "Light" product.

654005805-5807 at 5806 (US 85447) (O).

2149. B&W scientist Tilford Riehl, who later became Vice President of Research and

Development, received Gregory's "file note" and commented on an alternative to Gregory's proposal to increase "free" nicotine to boost "physiological satisfaction." Riehl's suggestion, while accepting Gregory's data and concept, proposed maximizing the effects of nicotine on smokers in a different way. Riehl wrote in the margin:

> Several of us have proposed an alternative (almost opposite) approach – design a low tar cig with high <u>total</u> nicotine / low to moderate <u>% free</u> nic. Theory: provide cig with "appropriate" level of sensory satisfaction/higher than usual "pharmacological" satisfaction. (emphasis in original)

510000667-0670 (US 51496) (A).

2150. B&W produced an attorney-prepared (Shook, Hardy & Bacon) November 1995 document compiling and quoting from company materials that admitted nicotine manipulation via increasing "free" or "bioavailable" nicotine delivered by cigarettes. The report commented on the two 1980 documents written by Gregory and Riehl, documents that supported accusations by the FDA that B&W (and the other cigarette manufacturers) intentionally made and marketed cigarettes with nicotine effects greater than the FTC machine-measured yields:

> Gregory appears to be urging that B&W engage in a manufacturing and marketing practice of which the FDA accuses the company – that accusation being that the company designs, manufactures and markets cigarettes with a pharmacological impact which is greater than FTC yields imply. Thus, Gregory's comments are of interest in the regulatory and litigation context.

689201723-1770 at 1753-1754 (US 31049) (O).

2151. With respect to Riehl's written comments on Gregory's memorandum urging a low tar product with high total nicotine with moderate "free" nicotine, the Shook, Hardy & Bacon report stated that: "[T]his marginalia comment, of course, raises an issue of the motivations of the company in designing cigarettes to provide 'pharmacological satisfaction' to smokers." 689201723-1770 at 1754 (US 31049) (O).

2152. A January 19, 1978 internal B&W product development memorandum from E.F. Litzinger to E.T. Parrack and copied to R.A. Sanford and M. L. Reynolds stated that, "Some people trying to give up smoking attempt to appease their craving for a cigarette by eating candy." 650510607-0607 (US 85029) (O).

2153. In February 1980, BATUS, Inc. (B&W's immediate holding company co-located in Louisville) commissioned a detailed marketing plan for a "less hazardous cigarette" tentatively named "Limits." The proposal reflected the company's belief that smoking was both hazardous and addictive. The new cigarette would address the problem of addiction by offering "higher nicotine content to satisfy smokers' needs with fewer cigarettes . . . thus less potential harm." The report proposed advertising to physicians that, "Recent studies show that even under optimal conditions, it is unlikely you will persuade more than 5% of smokers to quit. So for the other 95%, do the next best thing. Switch them to new LIMIT." 501025519-5609 at 5564-65 (US 85310) (O).

2154. The background research relied on in the 1980 BATUS marketing proposal found that physicians had a "little or no success in getting patients to stop smoking cigarettes" and even suggested that providing the smoker with a less harmful cigarette product is equivalent to providing a heroin addict methadone. The less harmful cigarette, like methadone, was referred to as the "lesser evil," a "compromise" for the smoker who cannot quit the addiction. The writers asked rhetorically, "Why won't we help a cigarette addict get his 'fix' in the least damaging way possible?" Not surprisingly, the "Limits" product would be made available only through pharmacies and would be introduced via physicians "in the same way that a new drug is presented." 501025519-5609 at 5544-45, 5573 (US 85310) (O).

2155. The 1980 BATUS proposal specifically emphasized the smoker's "physical need,"

"withdrawal" effects, and the high rates of recidivism. A model promotion letter to physicians even instructed that, "Low nicotine cigarettes are not a viable compromise. Studies have shown . . . that when patients switch to low nicotine brands, they usually increase the number of cigarettes they smoke daily. . . . Finally there is an alternative . . . for those patients whose sincere and dedicated efforts to stop have ended, again and again, in frustration, self-deprecation, and recidivism[.]" 501025519-5609 at 5560-5561 (US 85310) (O).

2156. A January 1982 B&W market analysis of smokers of its Belair brand reported in the section entitled "Smoking Behavior and Attitudes" that: "Overall, the evidence shows that Belair smokers are extremely addicted to smoking and they know it." Belair also scored very high in factors indicative of dependency and "[a]ddiction." In fact, 94% of Belair smokers surveyed agreed with the statement, "I get a real urge for a cigarette when I haven't smoked for a while." (emphasis in original) 514107196-7249 at 7225, 7228 (US 85311) (O).

2157. In a similar January 1982 B&W market analysis for its Viceroy brand of cigarettes, the company was told that, "Smokers of brands in Viceroy's competitive set are more addicted to smoking than smokers in general." 514107251-7302 at 7281 (US 85312) (O).

2158. B&W Group Product Director A.J. Mellman wrote a project memorandum on March 25, 1983, to other industry executives, including Senior Vice President for Marketing R.A. Blott, stating explicitly that nicotine is "addicting." The memorandum proposed several project ideas for the company, including a low tar cigarette with free nicotine added to the filter, based on the underlying premise that:

> Nicotine is the addicting agent in cigarettes. It, therefore, seems reasonable that when people switch brands, if they have a certain smoking pattern (i.e. number of sticks/day), they will switch to a brand at the same nicotine level.
>
> I am currently examining all brands by nicotine level and by

> nicotine/tar ratio levels, comparing those correlations to switching patterns.

514110006-0009 at 0007 (US 21745) (A) .

2159. In 1982, B&W carried out a "Smoker Personality Study" that segmented the cigarette market in terms of the level of addiction of the smokers. The stated purpose of the study was to provide the company "new insights helpful in the development and positioning of new and/or established brands." With respect to the market segments, smokers who fit into Segment IV were described as "somewhat addicted" and smokers in Segment VI were described as "addicted to smoking and often wish they had never started." Smokers in Segment VIII, however, were described as "heavily addicted to smoking. To run out of cigarettes would be a real problem for them . . . from the moment they wake up they smoke." 514107303-7417 at 7336, 7350, 7364 (US 85313) (O).

2160. A 1987 B&W patent application for a "Non-Combustible Simulated Cigarette Device" again revealed the company's recognition that smoking depended on nicotine alone, and that nicotine delivery could be enhanced through pH manipulation. The patent description was reviewed and modified by BATCo. The description of the "Device" stated that it would "provide nicotine delivery to the user without the combustion of tobacco." In fact, the "Device" used purified nicotine, not tobacco leaf; the description stated that it was "a non-combustible simulated inhaler device wherein volatilisable nicotine is present in the inhaler as a free base," and would, after contact with an acid, supply "volatilised nicotine to the user's mouth in the form of a salt having a pH in the range of approximately 5 to 7." 400230781-0790 at 0781 (US 85314) (O); 400230802-0813 (US 85315) (O).

2161. According to the record of a January 4 and 5, 1988 meeting in New York, B&W scientists Tilford Riehl and Lance Reynolds met with scientists from BATCo's other affiliates to

discuss the progress of internal company nicotine research code-named "Project GREENDOT" and "Project AIRBUS," and to chart the course of the research for the 1990s. This meeting again revealed the company's obsession with nicotine exploitation. "Project AIRBUS" sought to develop a device similar to a non-combustible nicotine delivery product manufactured by RJR. "Project GREENDOT" sought "to produce a highly modified cigarette which maintains the delivery of nicotine to the smoker whilst reducing the delivery of tar." The goal of "GREENDOT" was to modify a 10mg tar / 0.8 mg nicotine cigarette to deliver 1mg tar / 0.8 mg nicotine. 620208779-8784 at 8782-8783 (US 85317) (O).

2162. BATCo regularly forwarded its nicotine research reports to the B&W Research and Development Department and the company library for use by the company. Knowledge of the information and conclusions contained in these nicotine reports (discussed above under BATCo) therefore can be charged to B&W as well. The critical importance of nicotine to the companies is evident in the titles and content of the many reports. See, e.g., "Preparation and Properties of Nicotine Analogues - Part II," October 11, 1973, 657006301-6327 (US 53532) (O); "Alpha Waves and Smoking: The Effect of Cigarette Smoking on the Alpha Density of Subjects," December 6, 1974, 657007342-7416 (US 53535) (O); "The Effect of Smoking Deprivation on Smoking Behaviour," September 11, 1975, 650014873-4901 (US 53405) (O); "Compensation for Changed Delivery," January 30, 1976, 650008449-8480 (US 76192) (O) ; Dr. M.A.H. Russell's "Safer Cigarette" Study Report No. RD. 1652 (Restricted), March 1, 1979, 650010157-0193 (US 85292) (O); "Preparation and Properties of Nicotine Analogues - Part III," June 20, 1979, 657006435-6487 (US 53534) (O); "A Comparison of Smoking Surveys Separated by Four Years," June 28, 1979, 650008946-8960 (US 85318) (O); "Method for Nicotine and Cotinine in Blood and Urine," May 21, 1980, 6650032386-2428 (US 53430) (A); "Nicotine

Studies: A Second Report, Estimation of Whole Body Nicotine Dose by Urinary Nicotine and Cotinine Measurements," March 31, 1981, 650030769-0802 (US 53428) (O) ; "Receptors for Nicotine in the Central Nervous System," March 22, 1984, 650000996-1034 (US 53388) (O); "The Functional Significance of Smoking in Everyday Life," April 24, 1984, 650000563-0740 (US 85393) (A).

2163. B&W also produced in this litigation a document entitled "B&W - Addiction Notebook" prepared for the company by the law firm of Shook, Hardy & Bacon. The Addiction Notebook identifies numerous company documents (both B&W documents and documents sent to B&W by BATCo) that admit that (1) smoking is addictive, (2) nicotine is the primary addictive drug responsible for making smoking addictive, and (3) BATCo and B&W conducted and funded research over decades into the physiological and pharmacological properties of nicotine as a drug, as an essential element of smoking, and as a commercial element necessary to the cigarette industry . 689103834-4108 at 3980-4078 (US 75988) (O).

2164. B&W also produced an attorney-prepared November 1995 document compiling and quoting from company materials that admit nicotine manipulation via increasing "free" or "bioavailable" nicotine delivered by cigarettes. 689201723-1770 at 1753-1754 (US 31049) (O).

2165. B&W also produced a lengthy compilation document database prepared by outside counsel for Scientific Director Scott Appleton, under cover letter dated November 27, 1995, analyzing many BATCo and B&W documents cited by the FDA when it proposed asserting jurisdiction over cigarettes. While some of the explanations for documents in the database attempt to minimize or rationalize what BATCo and B&W have done, numerous other entries acknowledge that the FDA correctly cited the documents for its propositions, and that the documents mean exactly what they say. 566632813-3254 (US 87134) (O).

2166. Indeed, "it was most definitely understood, throughout the entire BAT organization, that nicotine was addictive." Wigand WD, 84:14-15.

2167. These B&W documents, taken as a whole, show that B&W and their attorneys appreciated the fact that the company and the sale of its products depended on nicotine and addicting smokers.

(v) Lorillard

2168. Many internal documents show that Lorillard also has also been aware for decades of nicotine's addictive properties and the importance of nicotine to cigarette smokers.

2169. In an August 1964 national survey entitled "A Market Target - Buying Incentive Study of Cigarette Market," Lorillard found that 66% of qualified respondents gave habit/addiction as a reason for continuing to smoke. 03492841-3067 at 2884 (US 21432) (O).

2170. In an August 7, 1964 memorandum regarding "Potassium Carbonate," H.D. Anderson told Lorillard's legal counsel that "[t]here seems no doubt that the 'kick' of a cigarette is due to the concentration of nicotine in the blood-stream which . . . is a product of the quantity of nicotine in the smoke and the speed of transfer of that nicotine from the smoke to the blood-stream." 100059066-9067 at 9067 (US 20102) (O).

2171. Like the other cigarette manufacturer defendants in the 1970s and 1980s, Lorillard knew that the issue was not only nicotine, but "free" nicotine actually delivered to smokers. In a February 8, 1973 report to the research department executives, Lorillard scientist A. M. Ihrig concluded that nicotine in alkaline smoke (high pH) is absorbed in the mouth and lungs far more rapidly than nicotine in low pH smoke, and that this phenomenon was due to the fact that the "free," or readily absorbable, nicotine increased dramatically with pH. According to Ihrig, "a change in pH from 5.7 to 8.0 results in an increase of free nicotine from 0.69% to 58.3%."

00776238-6250 at 6239 (US 21477) (O).

2172. Ihrig also noted the importance of "free" nicotine to the company bottom line: "Furthermore, the cigarette brands which are enjoying the largest sales increase generally have smoke pH's in the 6.5-7.0 range." He later adds that, "The smoke pH for Kool and Marlboro are 7.12 and 6.98, respectively, confirming the relationship between high smoke pH and cigarette sales increase." 00776238-6250 at 6239, 6245 (US 21477) (O).

2173. Alexander Spears, Lorillard's Vice President of Research and later Lorillard Chairman and CEO, wrote a paper on the "elements of product acceptance" dated November 13, 1973. In his paper, Dr. Spears stated that one of the main elements of cigarette acceptance was "Physiological, being comprised largely of the nicotine-induced stimulation and thought coordination effects." Dr. Spears then continued on the importance of nicotine, stating that "it would be useful to have a wider range of control over nicotine than now exists," and that "[i]t is our present intent to develop low nicotine brands, with the maximum physiological impact, within the next year." 80634635-4642 (US 21063) (O).

2174. Dr. Spears took part in the Tobacco Smoke Inhalation Workshop held at the National Cancer Institute in June 1974. Spears and other participating scientists made presentations during the workshop. In one summary from the workshop, one scientist concluded:

> Thus we are more concerned with the adverse effects of cigarette smoking than we are with the beneficial effects. Nevertheless, pharmacologists and psychologists ought to be interested in both aspects of what is essentially a drug-taking type of behavior. . . .
>
> There is a sad story of a company based in Texas, which made a cigarette called Bravos. There was also an offshoot of this company which made another cigarette called Triumphs. Both of these companies went bankrupt this past year. . . . My theory is, and a lot of people will agree with me, that they lacked the one central ingredient: nicotine. . . .

> As far as nicotine is concerned, there exists quite a large body of data concerning its toxicity and its pharmacological effects. Its investigation goes back to the late 19th century and the studies of Langley. It is generally agreed that nicotine is the most important pharmacological component of cigarette smoke. There are few other chemical components which are present in sufficient quantities or which have the potency to compete with it for effectiveness.

501620069-0085 at 0077, 0079 (US 85320) (O).

2175. Lorillard knew that nicotine was distinct from and not essential to the taste of a cigarette. In a March 2, 1976 presentation, the Will Graham Company advised Lorillard that "the taste of tobacco may be one of the least significant reasons why a person smokes," adding that, "it certainly ranks well below the impact of nicotine" for smokers. 01771073-1207 at 1079 (US 20052) (O).

2176. A 1976 Lorillard internal review of nicotine scientific literature by H.S. Tong reported the following with respect to smoker compensation:

> A review has been made of the literature on the pharmacology of smoke-dose nicotine with the goal of discovering some indications of threshold dose and optimum doses of nicotine in the average cigarette smokers. . . . It seems that, within limits, smokers can and do control their nicotine intake from smoke by varying their smoking techniques. Nicotine has numerous sites of action and the response is an algebraic sum of its actions. . . . It seems that smokers smoke for both calming and stimulant effects. In a subjective study, test subjects reported that the found cigarettes of 0.8 mg to be acceptable.
>
> Despite the lack of definitive knowledge, it seems probable that smokers choose cigarette smoking for sensual, psychological, social, cultural, and pharmacological effects. The pharmacological effects are most likely due to the action of nicotine since the presence of a variety of other chemical components in the smoke in all probability is below their threshold level. . . . It is well known that the pharmacologic effects of nicotine at various sites are dependent on the dose, the dose schedule, and duration of exposure. Smoke dose nicotine has a stimulant action. It stimulates ganglia, and, therefore, it activates both the sympathetic

> and parasympathetic nervous systems simultaneously, the ultimate effects are the algebraic sum of its actions. Research in drug addiction indicates that the CNS [central nervous system] is the prime site of drug action. In order to understand the precise action of nicotine in the smoke habit, the CNS should be the logical site for study. . . .
>
> The purpose of this review is to determine if there were data which would indicate a threshold dose and an optimum satisfaction dose of nicotine for the majority of smokers.

83250863-0873 at 0863-0865 (US 55673) (O).

2177. A July 16, 1976 Lorillard research proposal memorandum to H.J. Minnemeyer from M. S. Ireland, entitled "Research Proposal -- Development of Assay for Free Nicotine," again acknowledged the scientific consensus that nicotine was the source of the addiction to smoking:

> Cigarette sales are made for one reason. The customer is satisfied with the product either from the taste or the physiological satisfaction derived from the smoke. The consensus of opinion derived from a review of the literature on the subjects indicates that the most probable reason for the addictive properties of the smoke is the nicotine. Indications are that the smoker adjusts his smoking habits to satisfy the desire of nicotine either by frequent or large puffs on the cigarette, or smoking a large number of cigarettes. . . . [I]t is generally agreed at this time that a 'small' amount of free nicotine is more desirable than a 'large' amount of bound nicotine.

82396938-6939 at 6938 (US 22012) (A) (emphasis added).

2178. In a June 16, 1976 Lorillard memorandum entitled "Progress Report on Nicotine Augmentation Project," H. J. Minnemeyer, the lead researcher on the company's nicotine augmentation programs, updated Spears on the progress of efforts to solve "the problem of delivering more nicotine in the smoke of low tar cigarettes." The memorandum described the various research projects being conducted by Defendants as well as the medical and science research articles that had been published on the subject. This document demonstrates that

contrary to their public claims, Defendants had indeed been actively attempting to manipulate the nicotine content of their cigarette products for many years. 95539652-9655 (US 56825) (A).

2179. In the mid-1970s, Lorillard had embarked on another project called the "Lowered Nicotine Project." According to a November 9, 1976 memorandum from company Vice President for Marketing R.E. Smith to the research department, the project was abandoned. However, the memorandum disclosed that, despite Lorillard's contrary public declarations, the company was well aware of the importance of nicotine in sustaining smoking:

> After discussing the 50% Lower Nicotine Project with Dr. Spears, I agree that we should discontinue work. We all understand that this concept has considerable consumer trial appeal; as quantified by the NPSS concept study. However, it is our judgment that a cigarette with substantially lowered nicotine could not deliver the smoking satisfaction to sustain consumer purchase.

01244504-4504 (US 20042) (O).

2180. According to the same document and many others, Lorillard then reversed course, moving instead toward a goal of fortifying its cigarettes with nicotine, under project names such as the "RL Enrichment Project." 00050509-0509 (US 85321) (O).

2181. The idea of packaging nicotine in an alternate form occurred to Lorillard representatives as it had with the other Defendants. Lorillard marketing manager Benito Vila wrote a letter on November 3, 1977, to marketing vice president Richard Smith in response to a request for new product ideas. In the letter, he listed certain marketing themes and their rationales:

> 1. <u>To quit smoking</u>. I don't know of any smoker who at some point hasn't wished he didn't smoke. If we could offer an acceptable alternative for providing nicotine, I am 100% sure we would have a gigantic brand. The only trick is to price/size/formulate the product to produce the same margin per user as we get from the average smoker.

01244294-4300 at 4294 (US 21419) (A) (emphasis in original).

2182. Lorillard knew that nicotine shared attributes of opiates, and sought to use this knowledge to its advantage. A March 16, 1978 memorandum by Lorillard scientist R.S. Marmor summarized a lecture given at Lorillard by industry-funded scientist Leo Abood entitled "In Search of a Site and Mechanism for Nicotine's Action on the Brain." Marmor reported that:

> Prof. Abood's lecture here on "In Search of a Site and Mechanism for Nicotine's Action on the Brain" was well attended and well received. . . . Theorizing that nicotine's activity is due to an accidental mimicry of some normally present but as yet unknown brain peptide (analogous entirely to the recent opiate-enkephalin research findings), it might be possible to determine the structure of this peptide from information about the receptor site. In any case, information we gain on the mechanism of nicotine activity may be useful in determining how to adjust physiological impact in our cigarettes. We intend to support Prof. Abood by supplying samples and performing some synthetic and computer work.

00110371-0371 (US 34404) (A).

2183. In a February 13, 1980 Lorillard memorandum stamped "SECRET," marketing vice president Smith described the goal of the ongoing Lorillard nicotine research project called the "RT Information Task Force." The memorandum provided Lorillard executives, including Dr. Spears, details of the secret project:

> Goal – determine the minimum level of nicotine that will allow continued smoking.
>
> We hypothesize that below some very low nicotine level, diminished physiological satisfaction cannot be compensated for by psychological satisfaction. At this point smokers will quit, or return to higher T&N [tar and nicotine] brands.

01394380-4381 at 4380 (US 21543) (O).

2184. Senior Lorillard researcher S. T. (Tom) Jones prepared a lengthy "confidential" report dated July 30, 1980, for the research leadership in Greensboro entitled "Five-Year Plan

Preparation," in which he reviewed current literature on the "psychology of smoking." Jones wrote in a section entitled "A Review of Behavioral and Psychopharmacological Factors in Smoking" that, "Undoubtedly, nicotine serves a primary role in cigarette smoking." He also noted that, "A real problem in this whole area is the diversity of terms employed to say essentially the same thing." He later stated that:

> Considerable research in both the relative importance and mechanistic pathway of nicotine have been conducted. Although the role of nicotine is not completely understood, it is obviously one of the major factors associated with tobacco usage. Consumption of nicotine, administered either orally, intravenously, or via smoking elicits numerous responses including increased pulse rate, variations in skin temperature, and changes in brain wave patterns. Hutchinson and Emely take the position that nicotine is a powerful chemical reinforcer which reduces stressful and unpleasant stimulation.

01105000-5021 at 5001, 5002, 5009 (US 20030) (O).

2185. Lorillard scientists also knew and accepted the phenomenon of nicotine compensation. Jones concluded in his memorandum that smokers of low tar products compensated ("titrated") to achieve a greater "nicotine dose":

> The evidence to date clearly indicates that smokers titrate or regulate their intake of nicotine, e.g. smokers of cigarettes which deliver large amounts of nicotine will adjust - when given low nicotine cigarettes - their smoking to get a larger nicotine dose than the machine determined values indicate. Also, smokers regulate their nicotine intake over time when smoking their regular brand.

01105000-5021 at 5010 (US 20030) (O).

2186. Finally, Jones summarized research findings that "withdrawal is an identifiable syndrome" characterized by "anxiety and irritability," "an inability to concentrate and an intense craving for tobacco." 01105000-5021 at 5013 (US 20030) (O).

2187. Long-time Lorillard general counsel Arthur Stevens acknowledged the 1980

Diagnostic and Statistical Manual - III (DSM-III) inclusion of "tobacco dependency" in the chapter on drug addiction. DSM-III was published by the American Psychiatric Association. Stevens recommended "getting some publication" to defend against DSM-III, which also classified tobacco use as a "dependence disorder." 03746884-6884 (US 29324) (A).

(vi) American Tobacco Company

2188. The corporate understanding of American that nicotine was essential to its products and was responsible for the characteristics of addiction stretches back to at least 1940. An April 1940 document written by H. R. Hanmer, American's Director of Research, was entitled "Memorandum on the Nicotine Content of Lucky Strike and Other Leading Brands of Cigarettes." The document contained a section called "Importance of Nicotine in Tobacco and Tobacco Products." Hanmer observed that the following "facts" were "long common knowledge" at the company:

> The presence of nicotine as a universal constituent of tobacco leaf differentiates it from other plant material. Nicotine contributes to the gratification of smoking. Tobacco substitutes, devoid of nicotine, have not been accepted. . . .
>
> That any physiological response to the constituents of smoke is due to nicotine is generally accepted and has recently been confirmed. **The malaise after over-smoking is due to an excess of nicotine beyond one's individual tolerance. The pleasure, euphoria, or pacification from smoking are due to the sedative action of nicotine.**
>
> With such facts long common knowledge to the Research Staff, the incorporation of nicotine control into the selection of tobaccos was a logical development.

ATX300006425-6468V at 6428 (US 85324) (O) (emphasis added).

2189. These "facts" and the company's ability to control nicotine were important to the development and maintenance of American's most popular brand at the time. Indeed, Hanmer

later wrote in the same memorandum, with respect to American's Lucky Strike brand, that its success was the result of the company's "nicotine control policy":

> A recognition of the facts presented above led to the institution of a method of scientific control of tobacco purchased by the Company . . . .
>
> That the favorable position of LUCKY STRIKE in comparison with other leading brands is not fortuitous but the result of a comprehensive nicotine control policy is demonstrated by the material exhibited in this memorandum.

ATX300006425-6468V at 6440 (US 85324) (O).

2190. Between 1940 and 1970, the American Tobacco Company sponsored 111 studies on the biological effects of cigarettes, with 93, or over 80%, related to the effects of nicotine on the body. The FDA proposed rule and jurisdiction determination annex, i.e., "Regulations Restricting the Sale and Distribution of Cigarettes and Smokeless Tobacco to Protect Children and Adolescents," 1996 FDA Jurisdictional Determination, HHA 0680950-1649 (US 33031) (A); VXA1242326-3211 (US 64323) (A).

2191. For example, American funded a study in 1945 entitled "The Role of Nicotine in the Cigarette Habit." In this study, smokers were given extremely low-nicotine cigarettes. The study found that half of the subjects "definitely missed the nicotine." 1996 FDA Jurisdictional Determination, HHA 0680950-1649 (US 33031) (A); VXA1242326-3211 (US 64323) (A).

2192. Well aware of the addictive effects of nicotine on smokers, American focused its efforts on increasing the amount of nicotine in its tobacco products. While extensively detailed in Section III. (C) of these findings, See U.S. FF § III.(C)(2), infra, some examples of these efforts are detailed here.

2193. In 1963, American experimented by adding commercial nicotine to reconstituted tobacco. MNAT00316688-6693 (US 21219) (O).

2194. Later, in 1967, American investigated the production of nicotine from tobacco plants (N rustica) with almost double the concentration of nicotine. MNAT00881318-1323 (US 21221) (O).

2195. In 1969, American researchers, along with researchers from Philip Morris, RJR, and Liggett, conducted experiments to determine if genetically different tobacco varieties differed "in their ratio of nicotine to FTC 'tar.'" Also in that same year, American test-marketed modified Lucky Strike cigarettes in which nicotine malate was added to increase their nicotine levels. MNAT 00533294-3295 (US 21665) (O); Staff Report prepared by the Majority Staff Subcommittee on Health and the Environment of the Committee on Energy and Commerce House of Representatives entitled "Evidence of Nicotine Manipulation by the American Tobacco Company" (December 20, 1994), HHA1261348-1354 at 1349-1350 (US 76044) (O).

2196. In a June 19, 1963 letter, American's Assistant to the President (and later company president) Robert K. Heimann labeled nicotine as "the characteristic and essential element in tobacco and tobacco smoke." Heimann asserted that the "reduction of nicotine to very low levels results in an unsatisfactory smoke." MNAT00787182-7182 (US 85325) (O); ATC2471666-1666 (US 86691) (O).

2197. In a February 14, 1967 letter, Gallaher, Ltd. notified Virgil Hager, Executive Vice President of the American Tobacco Company, that the United Kingdom's Tobacco Research Council would send a delegation of scientists to the United States the following month to discuss nicotine issues with scientists designated by CTR, as well as with "the lawyers from the major American tobacco manufacturers." The main reason for the visit was "to discuss the commercial implications of tar and nicotine, and methods of measurement – particular stress will be laid on the importance of nicotine." This letter is yet another example of Defendants' long held

knowledge of the critical role of nicotine in cigarettes. 0060293378-3378 (US 85326) (O).

(vii) Liggett

2198. Like the other Cigarette Company Defendants, Liggett was well aware of the importance of nicotine, and in particular "free base" nicotine, in the manufacture of its products and the effects on smokers. The company, like other Defendants in the 1970s and 1980s, studied methods to increase the delivery of nicotine to smokers via manipulation of smoke pH. In a December 16, 1971 project summary by scientist Robert K. Williams, it was reported that:

> Increasing the pH of a medium in which nicotine is delivered increases the physiological effect of the nicotine by increasing the ratio of free base to acid salt form, the free base being more readily transported across physiological membranes. We are pursuing this project with the eventual goal of lowering the total nicotine present in smoke while increasing the physiological effect of the nicotine which is present, so that no physiological effect is lost on nicotine reduction.

LG0262125-2126 at 2126 (US 59994) (O).

2199. In a July 13, 1972 letter, Philip Morris's Tom Osdene summarized conversations with other company research directors, including Liggett's William Bates, related to the "addition of nicotine to the low nicotine blend." Osdene recorded that Bates "felt that it would be reasonable to use a combination of nicotine oxalate, citrate, and malate on the blend." 2060532173-2174 (US 85327) (O).

2200. Bennett LeBow testified that the United States tobacco industry took a "party line" in smoking and health litigations denying that smoking cigarettes is addictive. LeBow WD, 17:12-17. He testified that is was "absurd and ridiculous" for United States tobacco companies and their high level officials to take the public position in the mid-1990's that smoking was not addictive. LeBow WD, 58:18-59:6.

(viii) CTR

2201. Similar to the nicotine research conducted by the Cigarette Company Defendants, nicotine research funded by CTR also shows "that the cigarette manufacturers have acted like traditional pharmaceutical companies," studying the pharmacokinetics (absorption, metabolism, and excretion) of nicotine, the pharmacodynamics (effects on body chemistry) of nicotine, and the clinical effectiveness (whether drug is effective in producing the desired effects) of nicotine. VX1242326-3211 at 2806-2087 (US 64323) (A).

2202. CTR sponsored a 1972 Caribbean conference on nicotine and the reasons why smokers smoke. It was at this conference that William Dunn of Philip Morris presented a paper entitled "Motives and Incentives in Cigarette Smoking." In this paper (also discussed above), Dunn reported that most conferees agreed that "nicotine is the active constituent of cigarette smoke," without which "there would be no smoking." Dunn also presented his concept of the cigarette as a "package" for nicotine, and the "cigarette pack as a storage container for a day's supply of nicotine." 2023193286-3304 at 3290-3291 (US 22967) (A).

2203. The 1972 conference results were passed on to ICOSI members, including BATCo and RJR scientists, at a September 1977 meeting. The record of this joint industry meeting also showed that the companies were already working in the area of smoker "compensation" to obtain increased nicotine punch from low yield cigarettes. 503656218-6222 (US 85328) (O).

2204. On November 22, 1977, CTR Associate Research Director Donald H. Ford stated the following with respect to nicotine in a proposal for further CTR-funded nicotine research:

> [I]t now seems evident that nicotine, like narcotics, influences the CNS in multiple ways involving effects related to most known neurotransmitters. Further, the dependence which develops to tobacco in humans (and withdrawal symptoms during the cessation

> of smoking) and the degree of tolerance to nicotine which occurs in certain animal paradigms strongly suggest that nicotine is a habituating agent.

1000041912-1918 at 1912 (US 20073) (O).

2205. Ford presented his nicotine observations and proposed research at the November 1977 CTR meeting. His proposed avenues of research related to "Receptors and sites of nicotine action," neurochemical studies, the effects of nicotine on fetal development, neuroendocrinology, and behavioral responses to nicotine. 1000036584-6590 (US 21417) (O); 01113272-3272 (US 85329) (O); 01113280-3284 (US 85330) (O).

2206. As recited in the May 10, 1978 notes of the CTR Industry Technical Committee, Chairman Preston Leake (also Scientific Director for of American Tobacco), to American Tobacco general counsel Arnold Henson, the proposed nicotine work was "ruled out" by outside counsel Ed Jacob. Jacob claimed that the nicotine work had antitrust implications because it might be subject to "misinterpretation as product development." 955017148-7154 at 7149-7150 (US 87142) (A).

2207. The November 1977 CTR meeting was attended by lawyers and executives from all the member cigarette manufacturers, along with several outside counsel (Don Hoel, Janet Brown, Ed Jacob). According to notes of the meeting taken by Philip Morris's Tom Osdene, Dr. Ford explained his nicotine research in detail. This presentation was introduced by CTR scientific director Dr. Gardner, who told the attendees that, "Opiates and nicotine may be similar in actions," and that there was a "relationship between nicotine and opiates." The notes of attendees indicate that no one questioned Dr. Ford's premise or Dr. Gardner's introductory remarks. 1000036584-6590 at 6584 (US 21417) (O); 01113280-3284 at 3280 (US 85330) (O).

2208. However, the November 1977 presentations of the intensive CTR nicotine

research presentations drew the concern of Philip Morris's Tom Osdene, who later wrote to Bob Seligman that the nicotine "work being taken by CTR is totally detrimental to our position and undermines the public posture we have taken to outsiders." 2022246952-6952 (US 36865) (O).

2209. At a November 2, 1978 meeting of the Tobacco Advisory Council (the Tobacco Institute's European equivalent) research committee, representatives of the cigarette manufacturers discussed past, present, and future research. Among the specific topic areas was the importance of nicotine as a subject for intensive future research: "It was important for the industry to continue work on the role of nicotine because this was the most fundamental constituent of their product." 1000038108-8117 at 8111 (US 20072) (O). For more discussion on the Tobacco Advisory Council, see Section I. supra.

2210. A June 20, 1984 memorandum, written by Shook, Hardy & Bacon attorney Wendell L. Stone, summarizes CTR-funded nicotine research for industry clients. In his memorandum, Stone conceded that:

> Of the three areas pertinent to Cipollone (lung cancer, emphysema, and addiction) the abstracts and CTR commentary regarding addiction are the most consistently adverse. Through the years, CTR has funded psychopharmacological and neuropharmacological studies which emphasize and leave clear the points that CTR views nicotine as a "psychoactive" or "psychotropic" drug (terms which CTR has used), and that the research approach most appropriate to studying smoking behavior involves the pharmacology of nicotine. Among the undesirable research claims which appear in abstracts which acknowledge CTR support: the identification of specific central nervous system structures (nicotine receptors) at which nicotine acts; effects of nicotine on a variety of different purported neurotransmitters involved in learning, memory, etc.; various behavioral effects of nicotine from which can be inferred central nervous system effects, some of which might be used to support assertions regarding "tolerance" and "withdrawal."

515709297-9340 at 9298 (US 20866) (O).

2211. The Shook, Hardy & Bacon memorandum further discussed how contract researcher Dr. Leo Abood's nicotine receptor research could be held up as an example of how CTR would terminate "incriminating" smoking and health research. 515709297-9340 at 9299 (US 20866) (O).

(ix) Tobacco Institute

2212. The Tobacco Institute was sensitive to the importance of addiction to its member companies' litigation positions. A September 9, 1980 memorandum from Tobacco Institute editor Paul Knopick to Senior Vice President William Kloepfer commented on the desire by the National Institute of Drug Abuse ("NIDA") to add the word "addictive" to the cigarette warning. Knopick briefly summarizes some of the history of NIDA's previous statements on declaring smoking addictive and comparing smoking to heroin use, and questions how the Tobacco Institute was apparently caught "off guard." He concluded the memo with the following observation:

> But I don't think the questions I now raise are academic. Shook, Hardy reminds us, I'm told, that the entire matter of addiction is the most potent weapon a prosecuting attorney can have in a lung cancer/cigarette case. We can't defend continued smoking as a "free choice" if the person was addicted.

TIMN0107822-7823 at 7823 (US 21275) (O).

(c) Defendants Publicly Disseminated False, Deceptive and Fraudulent Statements Denying Nicotine Dependence and Addiction

2213. Despite their knowledge, acceptance, and exploitation of the addictive qualities of nicotine and smoking, for decades, Defendants have publicly engaged in a pattern of making false, fraudulent, and misleading statements, including half-truths, as well as suppressing information regarding the addictiveness of smoking and nicotine's role in causing that addiction. The decades of denial were carried out on a concerted and united front.

2214. As stated by industry counsel Covington & Burling, in a once-confidential May 1988 summary of industry statements, "Tobacco industry statements deal only sparsely with the issue of addiction. To the extent such statements exist they generally deny outright any addictive effect." BWX0007189-7297 at 7200 (US 36237) (O).

2215. Defendants' statements denying addiction described in the May 1988 Covington & Burling memorandum, along with many other examples of Defendants' making similar denials of smoking and nicotine addiction, were used to convey to the public four different positions regarding the addiction issue:

1. Smoking cigarettes is not addictive because some smokers can, and have, quit smoking on their own;
2. Smoking cigarettes is not addictive because it does not lead to physical "dependence;"
3. Smoking cigarettes is not addictive because it does not lead to "intoxication;"
4. Smoking cigarettes is not addictive because cigarettes are not like other addictive drugs, but rather smoking cigarettes is merely a "habit" like playing tennis, jogging, eating candy or listening to rock music, etc..

These statements are detailed below.

(i) Philip Morris

2216. Philip Morris Chairman James C. Bowling denied that cigarette smoking was an addiction in a July 18, 1973 "60 Minutes" interview. Instead, Bowling compared the choice to stop smoking to the choice to eat eggs or not. 503665743-5757 at 5752 (US 50417) (A).

2217. In a 1992 pamphlet, Philip Morris stated that "those who term smoking an

addiction do so for ideological, not scientific, reasons." 2023916742-6776 at 6745 (US 20396) (A).

2218. In 1994, counsel for Philip Morris prepared a document entitled "Smoking and Health Questions and Answers," in which an attachment entitled "Smoking and Addiction" deceptively defined "addiction" and cited the ineffectiveness of nicotine gum and patches as evidence that nicotine was not addictive. 682639225-9281 at 9277 (US 21028) (O).

2219. In a 1994 published statement in the *New York Times*, Philip Morris asserted that it "does not believe cigarette smoking is addictive." 2023011263-1263 (US 20371) (A).

2220. On April 14, 1994, the President and Chief Executive Officer of Philip Morris, William I. Campbell, testified under penalty of perjury in a nationally televised hearing before the House Subcommittee on Health and the Environment. During this hearing, Campbell affirmatively denied that nicotine is addictive:

Rep. Ron Wyden:	Let me ask you . . . . Do you believe that nicotine is not addictive?
Mr. Campbell:	I believe nicotine is not addictive, yes.

Regulation of Tobacco Products (Part I) Hearings before the Subcommittee on Health and the Environment of the Committee on Energy and Commerce, House of Representatives, 103rd Congress April 14, 1994, 2023195738-5892 (US 21990) (A).

2221. Campbell's prepared written statement made the same claim that "cigarette smoking is not addictive" and that "Philip Morris has not hidden research which says that it is." In response to accusations of addiction by Dr. David Kessler, head of the Food and Drug Administration ("FDA") and others, Campbell wrote: "The presence of nicotine, . . . does not make cigarettes a drug or smoking an addiction" and "Smokers are not drug addicts." Campbell's

statements made clear that he was speaking on behalf of both the industry and Philip Morris USA: "I would like to take this opportunity to set the record straight on charges that have recently been leveled against the industry and Philip Morris." ATC2746877-6887 (US 59009) (A), Keane TT, 1/18/05, 10442:9-10442:24.

2222. On May 9, 1994, a telefax letter from Cathy Ellis, Director of Research at Philip Morris, was sent to The Honorable Henry Waxman, Chairman, Subcommittee on Health and the Environment, Committee on Energy and Commerce, denying nicotine's addictiveness under an outdated definition of addiction that the scientific and medical community had abandoned by 1964. She claimed that nicotine could be described as addictive only if it caused smokers to experience "intoxication, pharmacological tolerance, and physical dependence in a manner that would impair the smokers' ability to exercise a free choice to continue or to quit smoking." 2029200293-0294 at 0294 (US 21537) (O).

2223. After the 1994 hearing before the Congressional subcommittee, Philip Morris placed an advertisement in magazines using an open letter to "smokers and nonsmokers" entitled "FACTS YOU SHOULD KNOW." One of the "facts" was that "Philip Morris does not believe cigarette smoking is addictive. People can and do quit all the time." 2023011263-1263 (US 20371) (A).

2224. In a lengthy August 2, 1994 submission to the Drug Abuse Advisory Committee, Philip Morris (along with the American Tobacco Company) once again asserted that "neither cigarette smoking nor the nicotine delivered in cigarettes is addictive" and denied that smoking was a "form of 'drug-seeking' behavior." 92486960-7040 (US 88560) (O).

2225. Altria and ACS employees Geoffrey Bible, Steve Parrish, Murray Bring, Marc Firestone, Victor Han, David Nicoli, and Charles Wall were all involved in crafting PM’s 1994

submission to the FDA Drug Abuse Advisory Committee. 2047096727-6727 (US 26974) (O).

2226. Then-Altria Vice President and Associate General Counsel Marc Firestone oversaw research in 1995 into "the possibility that the industry may have made representations about addiction through ads or statements appearing in the news media." 2074836020-6021 (US 27524) (O).

2227. In Philip Morris's January 2, 1996 written submission in opposition to FDA jurisdiction over tobacco products, the company denied it knew nicotine was addictive, disputed that its documents showed that nicotine was addictive, and denied that smokers smoke to obtain nicotine. HHA0660489-0538 (US 87145) (O).

2228. PMC Corporate Affairs Senior Vice President Steven Parrish issued the January 2, 1996 "Industry Statement" accompanying the Cigarette Manufacturer Defendants' comments on the FDA rule; this statement also disputed the addictiveness of cigarettes. 2041220158-0163 (US 26936) (A).

2229. In the May 12, 1997 issue of *Time* magazine, then President and CEO of Philip Morris, James Morgan, was quoted from his deposition testimony as stating, "If [cigarettes] are behaviorally addictive or habit forming, they are much more like . . . Gummi Bears, and I eat Gummi Bears, and I don't like it when I don't eat my Gummi Bears, but I'm certainly not addicted to them." Myron Levin, "Jury Views CEO's 'Gummy Bear' Tobacco Deposition: Philip Morris Executive Testifies Cigarettes Aren't Any More Addictive Than Coffee or the Candy," *Los Angeles Times*, July 18, 1997, at D3; Morgan, PD, Broin v. Phillip Morris, et al., 4/17/97, 77:20-78:23.

2230. The October 2, 1997 so-called "Hatch Statement" (actually entitled "Philip Morris' Statement of Position) in which Philip Morris agreed to stop debating the addictiveness

of nicotine was issued on PMC letterhead. In this statement, Philip Morris once again disputed addiction and claimed that cigarettes were addictive only under definitional changes that can be used to "describe many different kinds of behavior." Philip Morris also stated that it nonetheless agreed to cease all public debate on the issue. 2063123083-3084 (US 39734) (A).

2231. In January 1998, Geoffrey Bible, CEO of Philip Morris Companies, submitted testimony that stated in part:

> We recognize that nicotine, as found in cigarette smoke, has mild pharmacological effects, and that, under some definitions, cigarette smoking is "addictive." The word "addiction" has been and is currently used differently by different people in different contexts, and the definition of the term has undergone significant changes over the past several decades. In 1964, for example, the Advisory Committee to the Surgeon General of the United States concluded that smoking, although "habit forming," did not fit within its definition of "addiction." However, in 1988, the Surgeon General redefined the term, and concluded that smoking is "addictive." We have not embraced those definitions of "addiction" which do not include such as historically accepted and objective criterion, such as intoxication and physical withdrawal, as important markers.

Bible acknowledged that Philip Morris Companies' position was "at odds . . . with the public health community," and said that for the sake of a consistent public health message, Philip Morris Companies would not debate the addictiveness of nicotine except insofar as it was "necessary to defend ourselves and our opinions in the courts." 83623323-3347 at 3343-3344 (US 21820) (O).

2232. Even now, Philip Morris representatives do not believe that smoking meets the "physiological definition of addictiveness," and only accept that smoking is addictive when "addiction" is broadly defined to include anything that is habit-forming. Merlo PD, United States v. Philip Morris, et al., 6/12/02, 500:24-503:22.

(ii) R.J. Reynolds

2233. At hearings before a Congressional subcommittee from March 5 through March 12, 1982, RJR Chairman and CEO Edward Horrigan stated under oath that "with regard to addiction, there is absolutely no proof that cigarettes are addictive." At the time of this statement, he was also chairman of the Tobacco Institute executive committee. 521056398-6557 at 6411 (US 85334) (O); 201830983-0993 (US 36327) (O).

2234. In a May 8, 1990 revised draft response to a letter from Elaine Moss, a cigarette smoker, Jo Spach, a Manager of Public Information for the RJR Public Relations Department, stated that: "The fact is that there is nothing about smoking, or about the nicotine in cigarettes, that would prevent smokers from quitting. Unlike heroin, cocaine or even alcohol, cigarettes do not impair a smoker's ability to think clearly – about smoking or about quitting. If a smoker wants to quit, it may take will power, but that is all it takes." 507707454-7455 at 7455 (US 22069) (O).

2235. In January 1992, two RJR employees, John Robinson and Walter Pritchard, published an article entitled "The Role of Nicotine in Tobacco Use." The article compared nicotine to caffeine and wholly disputed that nicotine was addictive. The Robinson and Pritchard paper was cited in industry submissions to Congress in 1994 and to the FDA in 1996, led to several letters in response, and created a false perception that the issue of nicotine addiction was in serious dispute. 190211472-1482 (US 88561) (O); 190211719-1724 (US 88562) (O); 2505597781-7998G at 7804 (US 23028*) (A).

2236. The Cologne office of RJR International faxed a December 14, 1992 draft statement entitled "Arguments Against The E. C. Cigarette Warning Label 'Smoking Causes Addiction'," which stated that "on an 'addiction scale,' nicotine is less addictive than food" and

that "nicotine improves performance, renders the user more alert and increases the efficiency of performance and reduces anxiety." 400729374-9380 at 9376 (US 29354) (O).

2237. Counsel for RJR prepared an anticipated "Q & A" for company Chairman and CEO James Johnston dated April 6, 1994, which said that nicotine was "not addictive," and that the term "addiction" was misused in the context of cigarette smoking. 512688562-8571 at 8564 (US 20849) (O).

2238. On April 14, 1994, Johnston testified under penalty of perjury in a nationally-televised hearing before the House Subcommittee on Health and the Environment. During this hearing, Johnston affirmatively denied that nicotine is addictive:

Rep. Ron Wyden:	Let me ask you . . . . Do you believe that nicotine is not addictive?
Mr. Johnston:	Congressman, cigarettes and nicotine clearly do not meet the classic definitions of addiction. There is no intoxication.

Regulation of Tobacco Products (Part I) Hearings before the Subcommittee on Health and the Environment of the Committee on Energy and Commerce, House of Representatives, 103rd Congress April 14, 1994, 2023195738-5892 at 5780-5781 (US 36975) (O).

2239. An article in the August 2, 1994 *New York Times* reported that RJR scientist John Robinson "contests the consensus view of nicotine as addictive." Robinson stated that he could not differentiate "crack smoking from coffee drinking, glue sniffing from jogging, heroin from carrots, and cocaine from colas." 970260581-0581 (US 85337) (A).

2240. A November 1994 RJR document entitled "Media Tips" denied that smoking was addictive using factors that are not relevant to any accepted scientific definition. The "Media Tips" binder was intended to be used by RJR employees to answer press inquiries. With respect to addiction, the document stated that:

> Regardless of how you define addiction, cigarettes are clearly not in the same class as addictive, mind-altering drugs like heroin and cocaine. The physiologic, pharmacologic and behavioral effects of nicotine, like caffeine, are fundamentally different from drugs like alcohol, heroin and cocaine. . . .
>
> Smokers do not become intoxicated. Their smoking does not cause them to hallucinate, have blackouts, commit immoral or criminal acts, abuse their families, or cause trauma and psychological damage to their loved ones.

525412344-2488 at 2374 (US 88563) (O).

2241. This "Media Tips" document also claimed that "[l]abeling tobacco products 'addictive' was a political public-health decision, not a scientifically driven determination." 525412344-2488 at 2374 (US 88563) (O).

2242. The company prepared and distributed a similar document, called "Issues Guide," for use by company representatives worldwide in responding to media, public, and government inquiries. In this document, employees were instructed to deny addiction as well. 510345185-5358 at 5232-5235 (US 88046) (O).

2243. In a proxy statement filed with the Securities and Exchange Commission ("SEC") on April 12, 1995, the Board of Directors of RJR Nabisco Holdings Corporation publicly made a false and misleading statement to its shareholders and to the SEC. A group of shareholders filed a proposal to the Board that the company issue a public report regarding "whether nicotine content in and absorption from its tobacco products are deliberately controlled by the [c]ompany and if the reasons for any such control include the delivery of a reliable dose of nicotine to and/or the promotion of nicotine absorption by the customer." In recommending a vote against the proposal, the Board argued, "In RJRT's opinion, cigarette smoking does not meet the classic definitions of 'addiction,' and the forty-five million Americans who smoke are not 'addicts.' To call nicotine 'addictive' is to ignore significant differences between cigarettes and truly addictive

drugs." The Board repeated these averments in a proxy statement filed with the SEC in 1996, adding, "there is no accurate evidence establishing that any specific yield of nicotine causes 'addiction.'" Schedule 14A of RJR Nabisco Holdings Corp., - Proxy Statement, Dated 4/12/95, Disclosure, 525735695-5730 at 5710 (US 88004) (O); Schedule 14A of RJR Nabisco Holdings Corp., - Proxy Statement, Dated 4/17/96, Disclosure; 2048767992-8041 at 8027 (87747*) (O).

2244. An undated RJR magazine advertisement used industry-funded, Special Account 4 recipient psychologist Dr. Theodore Blau to dispute that smoking is addictive. In the advertisement, RJR not only denied any addictive aspects of smoking, but also blamed smokers for not being able to quit: "It's not that they can't stop; it's because they don't want to." 501926233-6233 (US 87148) (O); 517214542-4557 (US 87149) (O).

2245. In a March 1995 article in the periodical *World Tobacco*, despite the Surgeon General's Report and the overwhelming scientific consensus that cigarette smoking and nicotine were addictive and that physical intoxication was not necessary for a substance to be declared addictive, Robinson stated that nicotine was not addictive because it did not cause any physical intoxication. 519274569-4573 at 4572 (US 85339) (O).

2246. Along with Philip Morris, B&W, Lorillard, and the Tobacco Institute, RJR filed a joint submission opposing FDA jurisdiction over cigarettes. In its public statement on the FDA submission, RJR stated that, "Under scientifically verifiable criteria, nicotine and cigarette smoking are not addictive." 522626648-6651 (US 87150) (O).

2247. RJR has more recently joined the concerted industry effort to dilute the definition of "addiction" and distort the truth as to the addictive quality of smoking and nicotine. For example, in a September 9, 1997 draft document, the company stated that "if you broadly define 'addiction' as engaging in an activity that is hard to quit once you start, then certainly, smoking

can be considered addictive. The simple fact is many people find that once they have started smoking cigarettes, it can be difficult to quit. And some people find it extremely difficult." However, the document went on to distort the addictiveness of smoking, adding that "despite this difficulty, the number of Americans who have quit smoking is as large as the number who currently smoke. The 1990 Surgeon General's Report stated that nearly 45 million Americans had quit smoking, most of them on their own without any outside help. Based on this fact, we believe that any smoker with a sincere desire to quit smoking can - and should- quit." RJR's position on addiction failed to mention nicotine at all. This failure to acknowledge nicotine as the drug underlying the addiction continues to the present day. 522879046-9047 at 9046 (US 85340) (O).

2248. A May 4, 1999 draft RJR document denied the addictiveness of smoking, stating that "the word addiction means different things to different people and to some people it is a very emotive word. It's true that some smokers may find it very difficult to stop smoking and there are some smokers who believe that they are addicted to cigarettes. But the fact is that cigarettes do not have the addictive qualities of hard drugs such as heroin." 321309118-9133 at 9118 (US 85341) (O).

2249. RJR CEO Andrew Schindler testified in 1997 and 2000 that smoking is not an addiction like heroin or cocaine. Schindler WD, 31:22-32:18. RJR made the same statement in responding to discovery requests in this litigation. Schindler WD, 34:24-35:7.

2250. In a May 2002 RJR document entitled "Guiding Principles," the company stated its position regarding addiction in a section entitled "Quitting and Addiction." In this section, the company again demonstrated the cigarette industry's refusal to unqualifiedly admit that cigarette smoking is addictive: "Many people believe that smoking is addictive, and as that term is

commonly used today, it is. Many smokers find it difficult to quit and some find it extremely difficult." RJR later added that "[h]owever, we disagree with characterizing smoking as being addictive in the same sense as heroin, cocaine or similar substances." This attempted admission was misleading in that it discounted the term "addiction." In addition, there was no mention of RJR's knowledge of the central, "sine qua non" (to borrow from Reynolds researcher Claude Teague) importance of nicotine in maintaining addiction to smoking. 524946045-6088 at 6049 (US 52966) (O).

(iii) BATCo

2251. In comments published in the *Wall Street Journal* on October 31, 1996, the CEO of BAT Industries and Director of BATCo, Martin Broughton, denied any concealment of research linking smoking and addiction, saying that, "We have no internal research which proves that . . . smoking is addictive." State of Minnesota v. Philip Morris, Inc., et al., C1-94-8565, Exhibit No. 2909. 700428854-8856 at 8854 (US 85342) (O). This statement, made to analysts, investors, and journalists, was confirmed in a BATCo "Company Notice" to employees dated October 31, 1996.

2252. The statement by Broughton had been earlier promulgated by BATCo as a Press Announcement. 800113810-3812 at 3810 (US 85343) (O).

2253. Along with several other major international tobacco concerns (including Defendants Philip Morris and RJR), BATCo was a member of INFOTAB (International Tobacco Information Center), a Europe-based pro-industry association with goals similar to the Tobacco Institute and the CTR. In April 1990, INFOTAB published a pamphlet called "Children and Smoking: The Balanced View," which contained the following on the subject of addiction:

> Cigarette smoking is not addictive and cannot be equated to hard drug use. Many millions of smokers have been able to quit

> smoking.
>
> The smoker decides if, when and how much he wishes to smoke and is not motivated as is the hard drug user to get a "fix" by whatever means possible, including criminal acts. Most smokers are able to quit without assistance.

2070052572-2578 at 2577 (US 87151) (A).

2254. Dr. Jeffrey Harris, an expert for the United States, testified that this document supported his opinion that Defendants denied cigarette smoking and nicotine were addictive because they did not want the general public to associate smoking with heroin, cocaine, alcohol and other drugs of abuse. Harris WD, 26:4-217:23.

2255. Also in 1990, there existed a "Spokesperson's Guide" for tobacco industry use. The introduction stated that the manual is for the use of the recipient and that no copies were to be made. The manual addressed each and every claim against the industry and provided the standard script that all users were to use to respond to such claims. The manual stated that cigarette smoking was not addictive. 2023479861-0048 (US 37015) (A).

2256. BATCo promulgated a company notice on January 4, 1997, in response to Liggett's settlement with a group of state attorneys general. The notice contained the following: "As to addiction, of course you can construct a broad subjective definition of addiction that includes cigarette smoking. Equally, under a meaningful objective definition, cigarette smoking is not an addiction. Regardless of the definition, smokers who want to quit do." 321007259-7260 (US 85344) (O).

2257. In a December 3, 1990 document, BATCo prepared "Q&As" to respond to public inquiries. The answer to expected questions denied evidence of the addictiveness of cigarettes: "Whilst the US Surgeon General has claimed that nicotine is addictive, he has also claimed that video games are addictive. This is a prime example of the misuse of the term 'addiction' . . . .

[C]igarette smokers bear no resemblance to addicts . . . . Smokers smoke because they enjoy smoking." 536502262-2266 at 2262 (US 20930) (O).

2258. In a similar document entitled "Smoking Issues; Claims and Response," BATCo denied that smoking was addictive and asserted that, "Smokers do not experience most of the symptoms of addiction." This booklet also referenced industry-paid consultants who testified – at the industry's behest – in front of Congress and in the media. 601037850-7862 at 7853 (US 85345*) (O).

2259. Throughout the 1990s and beyond, BATCo has stubbornly clung to a stance that smoking and nicotine are not addictive. In a June 29, 1994 letter to the editor of *The Daily Telegraph*, in response to an earlier article published by the paper concerning the addictiveness of smoking, BATCo scientist Dr. Sharon Boyse-Blackie, provided the company's position on addiction:

> As to the claim that smoking is addictive: this has been widely challenged by scientists working in the field. Those working with drug addicts in the USA, for example, complained that the US Surgeon General's claim that smoking was as addictive as heroin and cocaine back in 1988 trivialized the whole problem of drug addiction. It is easy to see why. Tobacco is not intoxicating, in direct contrast to any other substance that has been claimed to be addictive, from heroin and cocaine through to alcohol. Smokers are perfectly capable of continuing a normal social and family life and holding down a job – there is little evidence of this with users of drugs of dependence. Nicotine does not induce physical dependence or tolerance (a fact recognised by the US Surgeon General when he attempted to redefine addiction to incorporate nicotine and decided to relegate these two previously crucial criteria to the bottom of the list!) and as even the Surgeon General acknowledged, millions of smokers all around the world have given up without any professional help.

500810940-0941 at 0940 (US 23036) (A).

2260. In this same document, Ms. Boyse wrote that "It has been suggested that smoking

must be addictive because it contains nicotine. So do many common vegetables, including tomatoes, aubergines and potato skins. Are vegetable eaters also drug users -- physically dependent on their ratatouille, perhaps, in the same way that heroin addicts are dependent on their heroin?" 500810940-0941 at 0941 (US 23036) (A).
