

Law Enforcement Wireless Communication (LEWC)

FY 2011 Budget Request At A Glance

| | |
|-------------------------------|---------------------------------------------|
| FY 2010 Enacted: | \$206.1 million (35 positions) |
| Current Services Adjustments: | +\$1.6 million (0.8% above FY 2010 Enacted) |
| Program Changes: | +\$0.0 million |
| FY 2011 Budget Request: | \$207.7 million (35 positions) |
| Change from FY 2010 Enacted: | +\$1.6 million (+0.8%) (+0 positions) |

Mission:

The mission of the Law Enforcement Wireless Communication (LEWC) program is to achieve a secure, reliable and interoperable Integrated Wireless Network (IWN) that will directly support agents in the conduct of counterterrorism, counterintelligence, law enforcement and emergency response. The funding provides mission essential communications tools used daily by the Department's four law enforcement agencies: Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), the Drug Enforcement Administration (DEA), the Federal Bureau of Investigation (FBI), and the United States Marshals Service (USMS).

Resources:

The budget request for FY 2011 totals \$207.7 million, which is a 0.8 percent increase from the FY 2010 Enacted level.

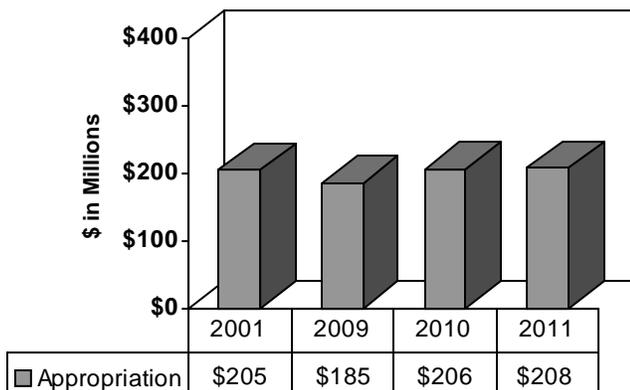

Organization:

Since the program's inception, the DOJ Wireless Management Office (WMO) has served as the primary program office to centrally manage and direct DOJ's consolidated approach to wireless communications. The LEWC account is headed by the Department's Chief Information Officer. The Department Investment Review Board provides oversight of WMO's investment recommendation and decisions.

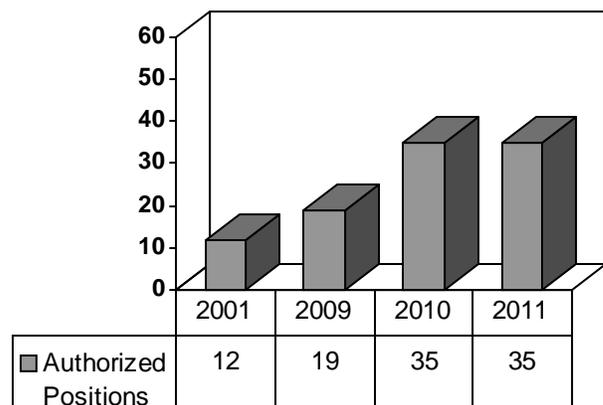

Personnel:

LEWC's direct authorized positions for FY 2011 total 35. LEWC's FY 2011 request maintains the FY 2010 enacted level of 35 positions.

Funding (FY 2001 - 2011)

Personnel (FY 2001 - 2011)

FY 2011 Strategy:

The LEWC account provides a funding vehicle to manage all DOJ tactical wireless communications through an established program management office. The account funds the Operations and Maintenance of DOJ legacy radios, communication infrastructure for special events such as the Super Bowl and the Olympics, and for the new Integrated Wireless Network (IWN) design and deployment.

IWN represents the Department's strategic initiative to provide a dramatically improved and cost effective wireless network that fixes security vulnerabilities, improves system reliability, and achieves interoperability with other law enforcement and emergency responder radio systems. The IWN deployment strategy is based upon consolidating and sharing radio system infrastructure and modernizing the disconnected legacy land mobile radio systems across ATF, DEA, FBI, and USMS. The sharing of network infrastructure is a new and important change in the Department's approach to IWN and is a result of a renewed partnership among DOJ's law enforcement components to implement the program in a cost-effective manner.

IWN implementation for the Mid-Atlantic and Midwest region (Region 1) is expected to continue in FY 2011. The WMO designated the Mid-Atlantic and Midwest region for the initial phase of IWN implementation. From an obsolescence standpoint, Region 1's legacy systems are the oldest in the Department's inventory. Further, agents and deputy marshals in the Mid-Atlantic and Midwest region are dealing with some of the highest law enforcement threats in the nation. In addition, the Department is continuing to examine IWN requirements around the Southwest border and will prioritize the IWN investments based on needs and other factors.

FY 2011 Program Changes:

The FY 2011 Budget does not request a program change for LEWC.

Financial Snapshot 2009
