Source: State statutes and regulations were collected from the Internet . Where data were not available, telephone interviews we held with state Licensing and Certification officials, who were asked to send copies of their statutes, regulations, and policies on staffing. Where responses were unclear, follow-up telephone calls were made to officials for clarification.

NURSING HOME STAFFING STANDARDS IN STATE STATUTES AND REGULATIONS

Definitions:

DON = Director of Nursing – states may their own requirements but the federal requirement is that a DON must be a licensed RN.

RN = Registered nurse -- has a two-year degree, three-year diploma, four-year degree or more education and is licensed in a state.

LPN/LVN = Licensed practical nurse or licensed vocational nurse – has a one-year degree and is licensed in a state.

LN = A licensed nurse can be either a RN or LVN/LPN.

NA = A nursing assistant or nurse's aide or orderly. If the NA has 75 hours of training and passes a competency exam, the NA can become a certified NA (CNA).

Hprd = Hours per resident day. D= Day shift. E= Evening shift. N = Night shift.

FT = Works fulltime. PT = Works part time.

SC = State code or statutes. SAL = State administrative law or regulations. SDP = State written policy. Eff. = Effective on. Ch.= Chapter.

Note: We included state staffing requirements for Medicaid if there were specific requirements. Since approximately 95 percent of facilities are certified for Medicare and/or Medicaid, the Medicaid staffing requirements apply to certified facilities. In calculating the estimated variance from the federal standard, the state requirements were converted to a number by estimating the hours per resident day for a 100 bed nursing facility, assuming that each 100 bed facility had at least 2 units. For simplicity purposes, each fulltime staff member was considered to work 8 hours per day (even though actual fulltime hours are generally considered to be 35 hours per week if vacations and sick days are taken into account). For example, a ratio of 1:10 nurse per resident was converted to 8 hours (for 1 nurse) and divided by the number of residents (10) to determine that the total was .8 hprd. These ratios were added for all three shifts during a day. Where we estimated the hprd, the numbers are shown in parenthesis. For one fulltime DON (40 hours per week), we assumed that the total hours were .06 hprd (40 hours divided by 7 days divided by 100 residents). For 24 hour per day licensed nurses (LNs), we assumed the equivalent was .24 hprd for 100 residents.
