UNITED STATES OF AMERICA

UNITED STATES DISTRICT COURT  
FOR THE CENTRAL DISTRICT OF CALIFORNIA

IN THE MATTER OF THE SEARCH OF  
AN APPLE IPHONE SEIZED DURING  
THE EXECUTION OF A SEARCH  
WARRANT ON A BLACK LEXUS IS300,  
CALIFORNIA LICENSE PLATE  
35KGD203

ED No. 15-0451M

GOVERNMENT'S EX PARTE APPLICATION  
FOR ORDER COMPELLING APPLE INC. TO  
ASSIST AGENTS IN SEARCH;  
MEMORANDUM OF POINTS AND  
AUTHORITIES; DECLARATION OF  
CHRISTOPHER PLUHAR; EXHIBIT

The United States of America, by and through its counsel,  
Assistant United States Attorneys Tracy L. Wilkison and Allen W.  
Chiu, hereby applies to the Court ex parte pursuant to the All Writs  
Act, 28 U.S.C. § 1651, for an order that Apple Inc. ("Apple") provide  
assistance to agents of the Federal Bureau of Investigation ("FBI")  
in their search of a cellular telephone, Apple make: iPhone 5C,  
Model: A1532, P/N: MGFG2LL/A, S/N: FFMNQ3MTG2DJ, IMEI:  
358820052301412, on the Verizon Network (the "SUBJECT DEVICE"). The  
search and seizure of the SUBJECT DEVICE was authorized through a

1 search warrant which was obtained on December 3, 2015, Docket Number  
2 ED No. 15-0451M, and was executed on the same day.

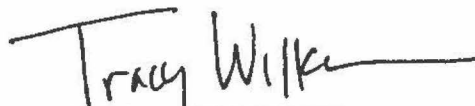

3 This application is based on the attached declaration of FBI  
4 Supervisory Special Agent Christopher Pluhar, and the files and  
5 records of this case, including the underlying search warrant, which  
6 is attached hereto as Exhibit 1.

7 Dated: February 16, 2016

Respectfully submitted,

8 EILEEN M. DECKER  
United States Attorney

1 MEMORANDUM OF POINTS AND AUTHORITIES

2 I. INTRODUCTION

3 In the hopes of gaining crucial evidence about the December 2,  
4 2015 massacre in San Bernardino, California, the government has  
5 sought to search a lawfully-seized Apple iPhone used by one of the  
6 mass murderers. Despite both a warrant authorizing the search and  
7 the phone owner's consent, the government has been unable to  
8 complete the search because it cannot access the iPhone's encrypted  
9 content. Apple has the exclusive technical means which would assist  
10 the government in completing its search, but has declined to provide  
11 that assistance voluntarily. Accordingly, the government  
12 respectfully requests that this Court issue an order compelling  
13 Apple to assist in enabling the search commanded by the warrant.

14 II. FACTUAL BACKGROUND

15 The Federal Bureau of Investigation ("FBI") is in possession of  
16 a cellular telephone that was used by Syed Rizwan Farook ("Farook"),  
17 one of the terrorists who caused the December 2, 2015 shooting death  
18 of 14 people, and the shooting and injuring of 22 others, at the  
19 Inland Regional Center ("IRC") in San Bernardino, California. The  
20 cellular telephone is of Apple make: iPhone 5C, Model: A1532, P/N:  
21 MGFG2LL/A, S/N: FFMNQ3MTG2DJ, IMEI: 358820052301412, on the Verizon  
22 Network ("the SUBJECT DEVICE"). The SUBJECT DEVICE was seized  
23 pursuant to a federal search warrant for a black Lexus IS300 in  
24 Docket Number ED 15-0451M, which was issued by the Honorable David  
25 T. Bristow, United States Magistrate Judge, on December 3, 2015.  
26 The underlying search warrant, which authorizes the search of the  
27 contents of the SUBJECT DEVICE, is attached hereto as Exhibit 1 and  
28 incorporated herein by reference.

1 As explained in the attached declaration of FBI Supervisory  
2 Special Agent ("SSA") Christopher Pluhar, the underlying search  
3 warrant for the SUBJECT DEVICE arose out of an investigation into  
4 the IRC shootings, and the participation by Farook and his wife,  
5 Tafsheen Malik ("Malik"), in that crime. Subsequent to execution of  
6 the search warrant at issue, the FBI obtained numerous search  
7 warrants to search the digital devices and online accounts of Farook  
8 and Malik. Through those searches, the FBI has discovered, for  
9 example, that on December 2, 2015, at approximately 11:14 a.m., a  
10 post on a Facebook page associated with Malik stated, "We pledge  
11 allegiance to Khalifa bu bkr al bhaghdadi al quraishi," referring to  
12 Abu Bakr Al Baghdadi, the leader of Islamic State of Iraq and the  
13 Levant ("ISIL"), also referred to as the Islamic State ("IS"), the  
14 Islamic State of Iraq and al-sham ("ISIS"), or Daesh. ISIL,  
15 formerly known as Al-Qai'da in Iraq ("AQI"), has been designated a  
16 foreign terrorist organization by the United States Department of  
17 State, and has been so designated since December 2004. Farook and  
18 Malik died later that same day in a shoot-out with law enforcement.  
19 The government requires Apple's assistance to access the SUBJECT  
20 DEVICE to determine, among other things, who Farook and Malik may  
21 have communicated with to plan and carry out the IRC shootings,  
22 where Farook and Malik may have traveled to and from before and  
23 after the incident, and other pertinent information that would  
24 provide more information about their and others' involvement in the  
25 deadly shooting.

26 The SUBJECT DEVICE is owned by Farook's employer, the San  
27 Bernardino County Department of Public Health ("SBDCDPH"), and was  
28 assigned to, and used by, Farook as part of his employment. The

1 SBCTDPH has given its consent to the search of the SUBJECT DEVICE and  
2 to Apple's assistance with that search.<sup>1</sup>

3       However, despite the search warrant and the owner's consent,  
4 the FBI has been unable to search the SUBJECT DEVICE because it is  
5 "locked" or secured with a user-determined, numeric passcode. More  
6 to the point, the FBI has been unable to make attempts to determine  
7 the passcode because Apple has written, or "coded," its operating  
8 systems with a user-enabled "auto-erase function" that would, if  
9 enabled, result in the permanent destruction of the required  
10 encryption key material after 10 erroneous attempts at the passcode  
11 (meaning that after 10 failed attempts at inputting the passcode,  
12 the information on the device becomes permanently inaccessible).  
13 When an Apple iPhone is locked, it is not apparent from the outside  
14 whether or not that auto-erase function is enabled; therefore,  
15 trying repeated passcodes risks permanently denying all access to  
16 the contents. Primarily because of this function and the delays  
17 that would be introduced by successive incorrect passcodes  
18 (discussed below), the government has not been able to attempt to  
19 determine the passcode and decrypt the files on the SUBJECT DEVICE  
20 pursuant to the search warrant, and the FBI cannot do so without  
21 Apple's assistance.

22       Apple is the manufacturer of the SUBJECT DEVICE, and the  
23 creator and owner of its operating system and software. Apple has  
24 the ability with older operating systems to obtain the unencrypted  
25 file content from phones without the passcode, and has routinely  
26 done so for law enforcement with a search warrant and accompanying

---

27       <sup>1</sup> In addition, SBCTDPH has a written policy that all digital  
28 devices are subject to search at any time by the SBCTDPH, which  
policy Farook accepted via signature upon his employment.

1 All Writs Act order. While Apple has publicized that it has written  
2 the software differently with respect to iPhones such as the SUBJECT  
3 DEVICE with operating system ("iOS") 9, Apple yet retains the  
4 capacity to provide the assistance sought herein that may enable the  
5 government to access the SUBJECT DEVICE pursuant to the search  
6 warrant.

7 Specifically, and as detailed below, Apple has the ability to  
8 modify software that is created to only function within the SUBJECT  
9 DEVICE that would ensure that the added auto-erase function is  
10 turned off, allow for electronic submission of test passcodes, and  
11 ensure additional delays are not created. This would allow the  
12 government multiple investigative attempts to determine the passcode  
13 in a timely manner, without fear that the data subject to search  
14 under the warrant would be rendered permanently inaccessible. It is  
15 this assistance from Apple, which is required to execute the search  
16 warrant, that the government now asks the Court to order.

### 17 III. DISCUSSION

#### 18 A. Assistance Sought From Apple

19 In sum, the government seeks an order that Apple assist in  
20 enabling the search commanded by the warrant by removing, for the  
21 SUBJECT DEVICE only, some of the additional, non-encryption barriers  
22 that Apple has coded into its operating system, such as the auto-  
23 erase function, the requirement that passwords be entered manually,  
24 and any software-invoked delay-upon-failure functions. While the  
25 government proposes a specific means of accomplishing this, the  
26 government requests that the order allow Apple to achieve the goals  
27 of the order in an alternative technical manner if mutually  
28 preferable.

1 As an initial matter, the assistance sought can only be  
2 provided by Apple. As discussed in the attached declaration of SSA  
3 Pluhar, the SUBJECT DEVICE is an iPhone 5c that was designed,  
4 manufactured, and sold by Apple. Apple also wrote and owns the  
5 software operating system marketed under the name of "iOS," and thus  
6 is the owner of the operating system software for the phone at  
7 issue. Apple's software licensing agreement specifies that its  
8 software is "licensed, not sold," and otherwise prohibits users from  
9 transferring any ownership of the iOS software.

10 Further to this point, Apple strictly and exclusively controls  
11 the hardware and software that is used to turn on and run its  
12 phones. According to Apple's "white papers" and other publicly  
13 available information about the security of its iOS programs, Apple  
14 has designed its mobile device hardware, as well as its operating  
15 system software, to only permit and run software that has been  
16 "signed" cryptographically by Apple using its own proprietary  
17 encryption methods. These security features prevent other persons,  
18 including the government, from running any other software on the  
19 SUBJECT DEVICE to attempt to recover data or test passcodes.

20 Apple has designed the iOS 9 operating system for its phones to  
21 encrypt the data files by a combination of two components - one  
22 user-determined passcode, and one unique 256-bit Advanced Encryption  
23 Standard ("AES") key (referred to as a "UID") which is fused into  
24 the phone itself during manufacture. Both passcode components are  
25 required in combination for the operating system to decrypt the  
26 phone's data files. When a user inputs her passcode, the phone  
27 conducts a complex calculation as determined by Apple's software  
28

1 (and unknown to the government) which combines the UID with the user  
2 passcode. If the result is accurate, the data is decrypted.

3 If one does not know the user-determined passcode, it is  
4 possible, although time-consuming, to manually input passcodes one  
5 at a time until the passcode is determined. Apple, however, has  
6 also designed and written code for additional non-encryption-based  
7 features which the government cannot overcome on its own.

8 First, Apple has designed a non-encryption, auto-erase function  
9 as part of its iOS, which destroys the encryption key materials  
10 required for decryption and hence renders the contents of the device  
11 permanently incapable of being decrypted after ten consecutive  
12 incorrect passcode attempts. If this auto-erase function is  
13 enabled, the operating system will instantly, irrecoverably, and  
14 without warning erase the encryption keys necessary for accessing  
15 stored data. There is no way to know by examining the outside of  
16 the phone whether or not this function has been enabled, although,  
17 in this instance, the government suspects that it has, for the  
18 reasons explained in the attached declaration of SSA Pluhar -  
19 including because the SBCDPH has stated that the SUBJECT DEVICE was  
20 provided to Farook with that function turned on, and the most recent  
21 backup from the iCloud showed the function turned on. Accordingly,  
22 trying successive passcodes risks permanently losing the ability to  
23 access the data on the SUBJECT DEVICE. Because iOS software must be  
24 cryptographically signed by Apple, only Apple is able to modify the  
25 iOS software to change the setting or prevent execution of the  
26 function.

27 Relatedly, Apple has designed and written code for another non-  
28 encryption-based feature in that its iOS operating system is coded

1 to invoke time delays after repeated, unsuccessful passcode entries.  
2 This means that after each failed passcode entry, the user must wait  
3 a period of time before another attempt can be made, up to a 1-hour  
4 delay after the ninth failed attempt. Additional wait times can  
5 also be added into the software.

6 In order to overcome these hurdles, the government seeks an  
7 order requiring Apple to assist in the execution of a search warrant  
8 using the capabilities that Apple has retained along within its  
9 encryption software, such that the government can attempt to  
10 determine the passcode without these additional, non-encryption  
11 features that Apple has coded into its operating system, for the  
12 SUBJECT DEVICE only. Apple's assistance would permit the government  
13 to electronically test passcodes without unnecessary delay or fear  
14 that the data subject to search under the warrant would be rendered  
15 permanently inaccessible. Given that these features were designed  
16 and implemented by Apple, that Apple writes and cryptographically  
17 signs the iOS, and that Apple routinely patches or updates its iOS  
18 to address security features or other functionality, modifying these  
19 features is well within its technical capabilities.

20 Specifically, in order to perform the search ordered in the  
21 warrant, the government requests that Apple be ordered to provide  
22 the FBI with a custom signed iPhone Software ("IPSW") file, recovery  
23 bundle, or other Software Image File ("SIF")<sup>2</sup> that can be loaded onto  
24 the SUBJECT DEVICE. The SIF would load and run from Random Access  
25  
26  
27

---

28 <sup>2</sup> These are different terms for the essentially same thing: a  
software file that will start up/"boot" an iPhone device.

1 Memory ("RAM")<sup>3</sup> and accordingly would not change the operating system  
2 on the actual SUBJECT DEVICE, the user data partition (i.e., where  
3 the contents of files created or modified by the user are stored),  
4 or system partition on the device's flash memory. Importantly, the  
5 SIF would be created with a unique identifier of the SUBJECT DEVICE  
6 so that the SIF would only load and execute on the SUBJECT DEVICE.<sup>4</sup>

7       Once active on the SUBJECT DEVICE, the SIF would have three  
8 primary functions: (1) the SIF would bypass or disable the auto-  
9 erase function whether or not it has been enabled; (2) the SIF would  
10 enable the FBI to submit passcodes to the SUBJECT DEVICE for testing  
11 electronically (meaning that the attempts at the passcode would not  
12 have to be manually typed on the iPhone's screen; and (3) the SIF  
13 would not introduce any additional delay between failed passcode  
14 attempts beyond what is incurred by the hardware on the SUBJECT  
15 DEVICE. The SIF would be installed on the SUBJECT DEVICE at either  
16 a government facility, or alternatively, at an Apple facility (as is  
17 done when Apple recovers data from earlier iOS versions), but  
18 passcode attempts would be electronically submitted to the device by  
19 the government. This would allow the government to conduct the  
20 passcode attempts while Apple retains the SIF. The government  
21 further requests that the order permit Apple to satisfy these three

---

22  
23  
24 <sup>3</sup> RAM is computer memory that is temporary and requires power to  
25 maintain the stored information; once the power is turned off, the  
26 memory is lost.

27 <sup>4</sup> Since Apple's software currently has the capability to query  
28 hardware for unique identifiers (serial numbers, ECID, IMEI, etc.),  
the SIF could be created to only function on the SUBJECT DEVICE,  
which would mitigate any perceived risk to Apple iOS software as to  
any other Apple device. As an alternative, the government would be  
willing to test the passcodes remotely while the SUBJECT DEVICE is  
in Apple's possession.

goals, and installation and operation within the SUBJECT DEVICE, in an alternative technical manner if mutually preferable.

**B. The All Writs Act Permits This Order**

The All Writs Act provides in relevant part that "all courts established by Act of Congress may issue all writs necessary or appropriate in aid of their respective jurisdictions and agreeable to the usages and principles of law." 28 U.S.C. § 1651(a). As the Supreme Court explained, "[t]he All Writs Act is a residual source of authority to issue writs that are not otherwise covered by statute." Pennsylvania Bureau of Correction v. United States Marshals Service, 474 U.S. 34, 43 (1985). The All Writs Act permits a court, in its "sound judgment," to issue orders necessary "to achieve the rational ends of law" and "the ends of justice entrusted to it." United States v. New York Telephone Co., 434 U.S. 159, 172-3 (1977) (citations and internal quotation marks omitted). Courts must apply the All Writs Act "flexibly in conformity with these principles." Id. at 173; accord United States v. Catoggio, 698 F.3d 64, 67 (2d Cir.2012) ("[C]ourts have significant flexibility in exercising their authority under the Act.") (citation omitted).

Pursuant to the All Writs Act, the Court has the power, "in aid of a valid warrant, to order a third party to provide nonburdensome technical assistance to law enforcement officers." Plum Creek Lumber Co. v. Hutton, 608 F.2d 1283, 1289 (9th Cir. 1979) (citing United States v. New York. Tel. Co., 434 U.S. 159 (1977)); see also In re U.S. for an Order Directing a Provider of Communication Services to Provide Technical Assistance to Agents of the U.S. Drug Enforcement Administration, 2015 WL 5233551 (D.P.R. August 27, 2015) (granting government's request pursuant to the All Writs Act for

1 technical assistance from provider of electronic communication  
2 services to provide information, facilities, and technical  
3 assistance to facilitate the consensual recording of all electronic  
4 communication to and from a particular mobile phone); United States  
5 v. Fricosu, 841 F.Supp.2d 1232, 1238 (D.Colo. 2012) (order issued  
6 under All Writs Act requiring defendant to provide password to  
7 encrypted computer seized pursuant to a search warrant). In New  
8 York Telephone Co., the Supreme Court held that courts have  
9 authority under the All Writs Act to issue supplemental orders to  
10 third parties to facilitate the execution of search warrants. The  
11 Court held that "[t]he power conferred by the Act extends, under  
12 appropriate circumstances, to persons who, though not parties to the  
13 original action or engaged in wrongdoing, are in a position to  
14 frustrate the implementation of a court order or the proper  
15 administration of justice, . . . and encompasses even those who have  
16 not taken any affirmative action to hinder justice." Id. at 174.  
17 In particular, the Court upheld an order directing a phone company  
18 to assist in executing a pen register search warrant issued under  
19 Rule 41. See id. at 171-76; see also Application of U.S. for an  
20 Order Authorizing an In-Progress Trace of Wire Commc'ns over Tel.  
21 Facilities (Mountain Bell), 616 F.2d 1122, 1132-33 (9th Cir. 1980)  
22 (affirming district court's order compelling Mountain Bell to trace  
23 telephone calls on grounds that "the obligations imposed . . . were  
24 reasonable ones." (citing New York Tel. Co., 434 U.S. at 172)).

25 New York Telephone Co. also held that "Rule 41 is not limited  
26 to tangible items but is sufficiently flexible to include within its  
27 scope electronic intrusions authorized by a finding of probable  
28 cause." 434 U.S. at 170. The Court relied upon the authority of a

1 search warrant pursuant to Rule 41 to predicate an All Writs Act  
2 order commanding a utility to implement a pen register and trap and  
3 trace device – before Congress had passed a law that specifically  
4 authorized pen registers by court order. Under New York Telephone  
5 Co. and Mountain Bell, the All Writs Act provides authority for this  
6 Court to order Apple to assist with steps necessary to perform the  
7 search ordered by the warrant for the SUBJECT DEVICE.

8 Further, based on the authority given to the courts under the  
9 All Writs Act, courts have issued orders, similar to the one the  
10 government is seeking here, that require a manufacturer to assist in  
11 accessing a cell phone's files so that a warrant may be executed as  
12 originally contemplated. See, e.g., In re Order Requiring [XXX],  
13 Inc. to Assist in the Execution of a Search Warrant Issued by This  
14 Court by Unlocking a Cellphone, 2014 WL 5510865, at \*2 (S.D.N.Y.  
15 Oct. 31, 2014); see also United States v. Navarro, No. 13-CR-5525,  
16 ECF No. 39 (W.D. Wa. Nov. 13, 2013). Courts have also issued All  
17 Writs Act orders in furtherance of warrants in a wide variety of  
18 contexts, including: ordering a defendant to produce a copy of the  
19 unencrypted contents of a computer seized pursuant to a federal  
20 search warrant (Fricosu, 841 F.Supp. 2d at 1238); ordering a phone  
21 company to assist with a trap and trace device (Mountain Bell, 616  
22 F.2d 1122, 1129 (9th Cir. 1980)); ordering a credit card company to  
23 produce customer records (United States v. Hall, 583 F. Supp. 717,  
24 722 (E.D. Va. 1984)); ordering a landlord to provide access to  
25 security camera videotapes (In re Application of United States for  
26 an Order Directing X to Provide Access to Videotapes, No. 03-89,  
27 2003 WL 22053105, at \*3 (D. Md. Aug. 22, 2003) (unpublished order));  
28 and ordering a phone company to assist with consensual monitoring of

1 a customer's calls (In re U.S., No. 15-1242 (M), 2015 WL 5233551, at  
2 \*4-5 (D.P.R. Aug. 27, 2015) (unpublished order)). Because the  
3 orders are typically, as here, sought in the midst of a criminal  
4 investigation, they are usually obtained by way of ex parte  
5 application and not noticed motion. See, e.g., New York Telephone  
6 Co., 434 U.S. at 162; In re U.S., 2015 WL 5233551, at \*1; In re  
7 [XXX], 2014 WL 5510865, at \*1; Application of U.S., 616 F.2d at  
8 1122; In re Application of United States, 2003 WL 22053105, at \*1.  
9 The government is not aware of any case in which the government  
10 obtained a Rule 41 search warrant but was denied an All Writs Act  
11 Order when necessary to facilitate the execution of the warrant.<sup>5</sup>

12 In New York Telephone Co., the Supreme Court considered three  
13 factors in concluding that the issuance of the All Writs Act order  
14 to the phone company was appropriate. First, it found that the  
15 phone company was not "so far removed from the underlying  
16 controversy that its assistance could not be permissibly compelled."  
17 Id. at 174. Second, it concluded that the order did not place an  
18 undue burden on the phone company. See id. at 175. Third, it  
19 determined that the assistance of the company was necessary to  
20

21 <sup>5</sup> The government is also aware of multiple other unpublished  
22 orders in this district and across the country (obtained by ex parte  
23 application) compelling Apple to assist in the execution of a search  
24 warrant by accessing the data on devices running earlier versions of  
25 iOS, orders with which Apple complied. The only exception known to  
26 the government is litigation pending before a Magistrate Judge in  
27 the Eastern District of New York, where that court sua sponte raised  
28 the issue of whether it had authority under the All Writs Act to  
issue a similar order. That out-of-district litigation remains  
pending without any issued orders, nor would any such order be  
binding on this court. In any event, those proceedings represent a  
change in Apple's willingness to access iPhones operating prior iOS  
versions, not a change in Apple's technical ability. However, based  
on that litigation and communications with Apple, the government  
anticipates that Apple will avail itself of its ability to apply for  
relief pursuant to the proposed order.

1 achieve the purpose of the warrant. See id. Each of these factors  
2 supports issuance of the order directed to Apple in this case.

3 1. Apple is not "far removed" from this matter

4 First, Apple is not "so far removed from the underlying  
5 controversy that its assistance could not be permissibly compelled."  
6 Apple designed, manufactured and sold the SUBJECT DEVICE, and wrote  
7 and owns the software that runs the phone -- which software is  
8 preventing the execution of the warrant. Indeed, Apple has  
9 positioned itself to be essential to gaining access to the SUBJECT  
10 DEVICE or any other Apple device, and has marketed its products on  
11 this basis. Apple designed and restricts access to the code for the  
12 auto-erase function -- the function that makes the data on the phone  
13 permanently inaccessible after multiple failed passcode attempts and  
14 thus effectively prevents the government from attempting to execute  
15 the search warrant without Apple's assistance. The same software  
16 Apple is uniquely able to modify also controls the delays Apple  
17 implemented between failed passcode attempts -- which makes the  
18 process take too long to enable the access ordered by the court.  
19 Especially but not only because iPhones will only run software  
20 cryptographically signed by Apple, and because Apple restricts  
21 access to the code of the software that creates these obstacles,  
22 there is no other party that has the ability to assist the  
23 government in preventing these features from obstructing the search  
24 ordered by the court pursuant to the warrant.

25 Apple is also not made "far removed" by the fact that it is a  
26 non-government third party. While New York Telephone Co. involved a  
27 public utility, that was not the source of the holding that the All  
28 Writs Act order was appropriate. New York Telephone Co. emphasized

1 that "the Company's facilities were being employed to facilitate a  
2 criminal enterprise on a continuing basis," and the company's  
3 noncompliance "threatened obstruction of an investigation which  
4 would determine whether the Company's facilities were being lawfully  
5 used." New York Telephone Co., 434 U.S. at 174. By analogy, where  
6 Apple manufactured and sold a phone used by a person at the center  
7 of a terrorism investigation, where it owns and licensed the  
8 software used to "facilitate the criminal enterprise," where that  
9 very software now must be used to enable the search ordered by the  
10 warrant, compulsion of Apple is permissible under New York Telephone  
11 Co. Moreover, other courts have directed All Writs Act orders based  
12 on warrants to entities that are not public utilities. For example,  
13 neither the credit card company in Hall nor the landlord in Access  
14 to Videotapes was a public utility. See Hall, 583 F. Supp. at 722;  
15 Access to Videotapes, 2003 WL 22053105, at \*3. Apple's close  
16 relationship to the iPhone and its software - which are by Apple's  
17 design - makes compelling assistance from Apple permissible and the  
18 only means of executing the warrant.

19 2. The order does not place an unreasonable burden on  
20 Apple

21 Second, the order is not likely to place any unreasonable  
22 burden on Apple. Where, as here, compliance with the order would  
23 not require inordinate effort, and reasonable reimbursement for that  
24 effort is available, no unreasonable burden can be found. New York  
25 Telephone, 434 U.S. at 175 (holding that All Writs Act order was not  
26 burdensome because it required minimal effort by the company,  
27 provided for reimbursement for the company's efforts, and did not  
28 disrupt its business operations); Mountain Bell, 616 F.2d at 1132

1 (rejecting telephone company's argument that unreasonable burden  
2 would be imposed because of a drain on resources and possibility of  
3 system malfunctions because the "Order was extremely narrow in  
4 scope, restricting the operation to [electronic switching system]  
5 facilities, excluding the use of manual tracing, prohibiting any  
6 tracing technique which required active monitoring by company  
7 personnel, and requiring that operations be conducted 'with a  
8 minimum of interference to the telephone service'").

9 While the order in this case requires Apple to provide modified  
10 software, modifying an operating system - writing software code - is  
11 not an unreasonable burden for a company that writes software code  
12 as part of its regular business. In fact, providers of electronic  
13 communications services and remote computing services are sometimes  
14 required to write code in order to gather information in response to  
15 subpoenas or other process. In addition, the order is tailored for  
16 this particular phone, and because it involves preparing a single  
17 SIF, it presents no danger of system malfunctions or disrupting  
18 business operations. As noted above, Apple designs and implements  
19 all of the features discussed, writes and cryptographically signs  
20 the iOS, and routinely patches security or functionality issues in  
21 its operating system and releases new versions of its operating  
22 system to address issues. By comparison, writing a program that  
23 turns off non-encryption features that Apple was responsible for  
24 writing to begin with would not be unduly burdensome.<sup>6</sup>

---

25  
26  
27 <sup>6</sup> It is worth noting as well that the user of the phone is now  
28 dead, the user was made aware of his lack of privacy in the work  
phone while alive, and the owner of the phone consents to both the  
search of the phone and to Apple's assistance in this matter.

1        However, to the extent that Apple believes that compliance with  
2 the order would be unreasonably burdensome, it can make an  
3 application to the Court for relief prior to being compelled to  
4 provide the assistance. See In re XXX, 2014 WL 5510865, at \*2  
5 (including in the issued All Writs Act Order a provision that states  
6 that "to the extent [the manufacturer] believes that compliance with  
7 this Order would be unreasonably burdensome, it may delay compliance  
8 provided it makes an application to the Court for relief within five  
9 business days of receipt of the Order."). The proposed order in  
10 this case includes a similar directive.

11            3. Apple's assistance is necessary to effectuate the  
12            warrant

13        Third, Apple's assistance is necessary to effectuate the  
14 warrant. In New York Telephone Co., the Court held that the order  
15 met that standard because "[t]he provision of a leased line by the  
16 Company was essential to the fulfillment of the purpose – to learn  
17 the identities of those connected with the gambling operation – for  
18 which the pen register order had been issued." 434 U.S. at 175.  
19 Here, the proposed All Writs Act order in this matter also meets  
20 this standard, as it is essential to ensuring that the government is  
21 able to perform the search ordered by the warrant.

22        In this case, the ability to perform the search ordered by the  
23 warrant on the SUBJECT DEVICE is of particular importance. The user  
24 of the phone, Farook, is believed to have caused the mass murder of  
25 a large number of his coworkers and the shooting of many others, and  
26 to have built bombs and hoarded weapons for this purpose. The  
27 government has been able to obtain several iCloud backups for the  
28 SUBJECT DEVICE, and executed a warrant to obtain all saved iCloud

1 data associated with the SUBJECT DEVICE. Evidence in the iCloud  
2 account indicates that Farook was in communication with victims who  
3 were later killed during the shootings perpetrated by Farook on  
4 December 2, 2015, and toll records show that Farook communicated  
5 with Malik using the SUBJECT DEVICE. Importantly, however, the most  
6 recent backup of the iCloud data obtained by the government was  
7 dated October 19, 2015, approximately one-and-a-half months before  
8 the shooting. This indicates to the FBI that Farook may have  
9 disabled the automatic iCloud backup function to hide evidence, and  
10 demonstrates that there may be relevant, critical communications and  
11 data around the time of the shooting that has thus far not been  
12 accessed, may reside solely on the SUBJECT DEVICE, and cannot be  
13 accessed by any other means known to either the government or Apple.

14 As noted above, assistance under the All Writs Act has been  
15 compelled to provide decrypted contents of devices seized pursuant  
16 to a search warrant. In Fricosu, a defendant's computer - whose  
17 contents were encrypted - was seized, and defendant was ordered  
18 pursuant to the All Writs Act to assist the government in producing  
19 a copy of the unencrypted contents of the computer. 841 F.Supp. 2d  
20 at 1237 ("There is little question here but that the government  
21 knows of the existence and location of the computer's files. The  
22 fact that it does not know the specific content of any specific  
23 documents is not a barrier to production."). Here, the type of  
24 assistance does not even require Apple to assist in producing the  
25 unencrypted contents, the assistance is rather to facilitate the  
26 FBI's attempts to test passcodes.

1 IV. CONCLUSION

2 For the foregoing reasons, the government respectfully requests  
3 that the Court order Apple to assist the FBI in the search of the  
4 SUBJECT DEVICE as detailed in the proposed order.

5  
6 Dated: February 16, 2016

DECLARATION OF CHRISTOPHER PLUHAR

I, Christopher Pluhar, being duly sworn, declare and state as follows:

**I. INTRODUCTION**

1. I am a Supervisory Special Agent ("SSA") with the Federal Bureau of Investigation ("FBI"), and Director of the Orange County Regional Computer Forensics Laboratory, Orange, California ("OCRCFL"). The OCRCFL is a state of the art computer forensics laboratory comprised of task force officers from 15 agencies in Orange, Los Angeles, San Bernardino, and Riverside Counties. The laboratory specializes in the archival, preservation, and analysis of items of digital evidence, including computers, mobile devices, removable media (thumb drives, CDs etc) and Audio/Video equipment.

2. I have been a computer forensic examiner for the FBI since 2001, have attended 700+ hours of specialized training in computer/device forensics, and have certifications to conduct forensic analysis on Windows, Macintosh, and Linux/Unix systems, as well as mobile devices and cell phones. I have been the Director of the OCRCFL since November of 2013.

3. I have consulted extensively with the FBI's Cryptographic and Electronic Analysis Unit ("CEAU") in this matter, and bring their experience to bear in this declaration.

**II. PURPOSE OF DECLARATION**

4. This declaration is made in support of an application for an order by the Court compelling Apple Inc. ("Apple") to assist the FBI in its effort to search of a cellular telephone, Apple make: iPhone 5C, Model: A1532, P/N:MGFG2LL/A, S/N:FFMNQ3MTG2DJ, IMEI:358820052301412, on the Verizon Network ("SUBJECT DEVICE").

1    **III. SEIZURE AND EXAMINATION OF SUBJECT DEVICE**

2            5.    The SUBJECT DEVICE was seized pursuant to the search  
3    warrant in Case No. ED 15-0451M, issued by the Honorable David T.  
4    Bristow, United States Magistrate Judge, on December 3, 2015. The  
5    SUBJECT DEVICE was found inside of the SUBJECT VEHICLE identified in  
6    the warrant. The underlying search warrant is attached hereto as  
7    Exhibit 1 and incorporated by reference.

8            6.    I know based on my participation in this investigation and  
9    conversations with other involved agents and San Bernardino County  
10   Information Technology personnel, that the search warrant arose out  
11   of an investigation into the December 2, 2015 shooting death of 14  
12   people, and the shooting and injuring of 22 others, at the Inland  
13   Regional Center ("IRC") in San Bernardino, California, and the  
14   participation by Syed Rizwan Farook ("Farook") and his wife Tafsheen  
15   Malik ("Malik") in that crime. Subsequent to the search warrant at  
16   issue, the FBI has obtained numerous warrants to search the digital  
17   devices and online accounts of Farook and Malik. Through those  
18   searches the FBI has discovered, for example, that on December 2,  
19   2015, at approximately 11:14 a.m., a post on a Facebook page  
20   associated with Malik stated, "We pledge allegiance to Khalifa bu  
21   bkr al bhaghdadi al quraishi," referring to Abu Bakr Al Baghdadi,  
22   the leader of Islamic State of Iraq and the Levant ("ISIL"), also  
23   referred to as the Islamic State ("IS"), or the Islamic State of  
24   Iraq and al-sham ("ISIS"), or Daesh. ISIL, formerly known as Al-  
25   Qa'ida in Iraq ("AQI"), has been designated a foreign terrorist  
26   organization by the United States Department of State and has been  
27   so designated since December 2004. Farook and Malik died later that  
28   same day in a shoot-out with law enforcement.

1        7.     The SUBJECT DEVICE is owned by Farook's employer at the  
2 San Bernardino County Department of Public Health ("SBCDPH"), and  
3 was assigned to, and used by, Farook as part of his employment.  
4 While the SBCDPH does not have access to the passcode to the phone,  
5 it has given its consent to the search of it and to Apple's  
6 assistance with that search.

7        8.     The SUBJECT DEVICE is "locked" or secured with a numeric  
8 passcode. I have been very involved in the attempts to gain access  
9 to the locked phone and comply with the search warrant. With the  
10 consent of the SBCDPH, I and other agents have been able to obtain  
11 several iCloud backups for the SUBJECT DEVICE, and I am aware that a  
12 warrant was executed to obtain from Apple all saved iCloud data  
13 associated with the SUBJECT DEVICE. I know from speaking with other  
14 FBI agents that evidence in the iCloud account indicates that Farook  
15 was in communication with victims who were later killed during the  
16 shootings perpetrated by Farook on December 2, 2015. In addition,  
17 toll records show that Farook communicated with Malik using the  
18 SUBJECT DEVICE between July and November 2015, but this information  
19 is not found in the backup iCloud data. Importantly, the most  
20 recent backup is dated October 19, 2015, which indicates to me that  
21 Farook may have disabled the automatic iCloud backup feature  
22 associated with the SUBJECT DEVICE. I believe this because I have  
23 been told by SBCDPH that it was turned on when it was given to him,  
24 and the backups prior to October 19, 2015 were with almost weekly  
25 regularity. I further believe that there may be relevant, critical  
26 communications and data on the SUBJECT DEVICE around the time of the  
27 shooting which has thus far not been accessed, may reside solely on  
28 the SUBJECT DEVICE, and cannot be accessed by any other means known

1 to either the government or Apple. In addition, I have personally  
2 examined two other mobile devices belonging to Farook that were  
3 physically destroyed and discarded in a dumpster behind the Farook  
4 residence.

5 9. I have explored other means of obtaining this information  
6 with employees of Apple and with technical experts at the FBI, and  
7 we have been unable to identify any other methods feasible for  
8 gaining access to the currently inaccessible data stored within the  
9 SUBJECT DEVICE.

#### 10 IV. REQUESTED ASSISTANCE

11 10. I know based on my training and experience, knowledge of  
12 this case and review of Apple's publicly available information that  
13 the SUBJECT DEVICE is an iPhone 5c that was designed, manufactured,  
14 and sold by Apple. Apple also wrote and owns the software operating  
15 system marketed under the name of "iOS," and thus is the owner of  
16 the operating system for the phone at issue. Apple's software  
17 licensing agreement specifies that its software is "licensed, not  
18 sold," and otherwise prohibits users from transferring any ownership  
19 of the iOS software.

20 11. Apple strictly controls the hardware and software that is  
21 used to turn on and run its phones. According to Apple's "white  
22 papers" and other publicly available information about the security  
23 of its iOS programs, Apple has designed its mobile device hardware  
24 as well as its operating system software to only permit and run  
25 software that has been "signed" cryptographically by Apple using its  
26 own proprietary encryption methods. Apple has also added hardware-  
27 enforced features to the A6 processor found in the iPhone 5C which  
28 verifies software using Apple's cryptographic signature, ensuring

1 that Apple devices can only run verified/signed software during the  
2 booting process (when the phone is being turned on). These features  
3 prevent the government from running any other software on the  
4 SUBJECT DEVICE to attempt to recover data.

5 12. In addition, an iPhone 5c is encrypted by a combination of  
6 two components - one user-determined passcode, and one unique 256-  
7 bit Advanced Encryption Standard ("AES") key (referred to as a  
8 "UID") fused into the phone itself during manufacture. Both  
9 passcode components are required in combination for the phone to  
10 decrypt its contents. When a user inputs the user-determined  
11 passcode, the phone conducts a complex calculation as determined by  
12 Apple's software (and unknown to the government) which combines the  
13 UID with the user passcode. If the result is accurate, the data is  
14 decrypted.

15 13. If one does not know the user-determined passcode, it is  
16 possible, although time-consuming, to manually input passcodes one  
17 at a time until the passcode is determined. Apple, however, has  
18 also designed and written code for additional non-encryption-based  
19 features which the government cannot overcome on its own. First,  
20 Apple has designed a non-encryption, auto-erase function as part of  
21 its iOS, which destroys encryption key material required for  
22 decryption, and hence renders the contents of the device incapable  
23 of being decrypted after ten consecutive incorrect passcode  
24 attempts. If this erase function is enabled, iOS will instantly,  
25 irrecoverably, and without warning erase the encryption keys  
26 necessary for accessing stored data. Because iOS software must be  
27 cryptographically signed by Apple, only Apple is able to modify the  
28 iOS software to change the setting or prevent execution of the

1 function. There is no way to know by examining the outside of the  
2 phone whether or not this function has been turned on in the SUBJECT  
3 DEVICE, although, in this instance, I suspect that it has because I  
4 am told by an employee of SBCDPH that the SUBJECT DEVICE was  
5 provided to Farook with the auto-erase function turned on, and I  
6 know from my review of the most recent backup from the iCloud that  
7 it showed the function turned on.

8 14. Relatedly, Apple has designed and written code for another  
9 non-encryption based feature in that its iOS operating system is  
10 coded to invoke time delays which escalate after repeated,  
11 unsuccessful passcode entries. This means that after each failed  
12 passcode entry, the user must wait a period of time before another  
13 attempt can be made. From Apple documentation and testing, the time  
14 delays for the iPhone 5C are invoked by Apple software upon failed  
15 login attempts. Apple documentation states that the software  
16 invokes no delay for the first four attempts; a 1-minute delay after  
17 the fifth attempt; a 5-minute delay after the sixth attempt; a  
18 fifteen minute delays after the seventh and eight attempt; and a 1-  
19 hour delay after the ninth attempt. Additional wait times can also  
20 be added into the software.

21 15. In order to allow the government to perform the search  
22 ordered in the warrant, and the ability to test passcodes to decrypt  
23 the SUBJECT DEVICE without unnecessary delay or fear that the data  
24 subject to search under the warrant would be rendered permanently  
25 inaccessible, the government requests that Apple be ordered to  
26 provide the FBI with a signed iPhone Software file, recovery bundle,  
27 or other Software Image File ("SIF") that can be loaded onto the  
28 SUBJECT DEVICE. The SIF would load and run from Random Access

1 Memory ("RAM") and would not modify the iOS on the actual phone, the  
2 user data partition or system partition on the device's flash  
3 memory. The SIF would be coded by Apple with a unique identifier of  
4 the phone so that the SIF would only load and execute on the SUBJECT  
5 DEVICE. Since Apple's software currently has the capability to  
6 query hardware for unique identifiers (serial numbers, ECID, IMEI,  
7 etc.), the SIF could be created to only function on the SUBJECT  
8 DEVICE, which would mitigate any perceived security risk to Apple  
9 iOS software. The SIF would be loaded via Device Firmware Upgrade  
10 ("DFU") mode, recovery mode, or other applicable mode available to  
11 the FBI. In addition, Apple could run the SIF from within its  
12 facility, allowing passcodes to be tested electronically via remote  
13 network connection.

14 16. Once active on the SUBJECT DEVICE, the SIF would have  
15 three important functions: (1) the SIF would bypass or disable the  
16 auto-erase function whether or not it has been enabled on the  
17 SUBJECT DEVICE, meaning that multiple attempts at the passcode could  
18 be made without fear that the data subject to search under the  
19 warrant would be rendered permanently inaccessible; (2) the SIF  
20 would enable the FBI to submit passcodes to the SUBJECT DEVICE for  
21 testing electronically via the physical device port, Bluetooth, Wi-  
22 Fi, or other protocol available on the SUBJECT DEVICE (meaning that  
23 the attempts at the passcode would not have to be manually typed on  
24 the phone's screen), or alternately, Apple could be given the phone  
25 as is done when Apple recovers data from earlier iOS versions, but  
26 provide the government remote access to the SUBJECT DEVICE through a  
27 computer allowing the government to conduct passcode recovery  
28 analysis. This would allow the government to conduct the analysis

1 without Apple actually providing the government with the SIF; and  
2 (3) the SIF would not introduce any additional delay between  
3 passcode attempts beyond what is incurred by the Apple hardware.

4 17. Based on my (and the CEAU's) review of available  
5 information about Apple's programs, Apple has the technological  
6 capability of providing this software without it being an undue  
7 burden. Apple routinely patches security or functionality issues in  
8 its iOS operating system and releases new versions of its operating  
9 system to address issues. I know from my training and experience,  
10 and that of my fellow agents, that providers of electronic  
11 communications services and remote computing services sometimes must  
12 write code in order to gather the information necessary to respond  
13 to subpoenas and other process, and that this is not a large burden.

14 18. However, in an abundance of caution, the government also  
15 requests that the order permit Apple to satisfy the three goals of  
16 the SIF and the loading of the SIF onto the SUBJECT DEVICE in an  
17 alternative technical manner if mutually preferable.

18 I declare under penalty of perjury that the foregoing is true  
19 and correct to the best of my knowledge and belief.

20 Executed on February 16, 2016, Riverside, California.

21

)  
)

SEARCH AND SEIZURE WARRANT

To: Any authorized law enforcement officer

An application by a federal law enforcement officer or an attorney for the government requests the search  
of the following person or property located in the Central District of California  
(identify the person or describe the property to be searched and give its location):

See Attachment A-2

The person or property to be searched, described above, is believed to conceal (identify the person or describe the  
property to be seized):

See Attachment B

I find that the affidavit(s), or any recorded testimony, establish probable cause to search and seize the person or  
property.

YOU ARE COMMANDED to execute this warrant on or before 14 days from the date of its issuance  
(not to exceed 14 days)

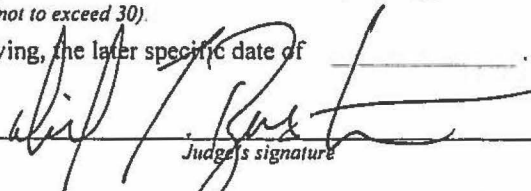

☐ in the daytime 6:00 a.m. to 10 p.m. ☒ at any time in the day or night as I find reasonable cause has been  
established.

Unless delayed notice is authorized below, you must give a copy of the warrant and a receipt for the property  
taken to the person from whom, or from whose premises, the property was taken, or leave the copy and receipt at the  
place where the property was taken.

The officer executing this warrant, or an officer present during the execution of the warrant, must prepare an  
inventory as required by law and promptly return this warrant and inventory to United States Magistrate Judge  
on duty at the time of the return through a filing with the Clerk's Office.  
(name)

☐ I find that immediate notification may have an adverse result listed in 18 U.S.C. § 2705 (except for delay  
of trial), and authorize the officer executing this warrant to delay notice to the person who, or whose property, will be  
searched or seized (check the appropriate box) ☐ for \_\_\_\_\_ days (not to exceed 30).  
☐ until, the facts justifying, the later specific date of \_\_\_\_\_

Date and time issued: 12/3/15, 2:27 A.M.

  
Judge's signature

City and state: Riverside, California

David T. Bristow, U.S. Magistrate Judge

## ATTACHMENT B

### I. ITEMS TO BE SEIZED

1. The items to be seized are evidence, contraband, fruits, or instrumentalities of violations of (1) 18 U.S.C. § 844(d) (Transportation or Receipt of Explosive Devices with the Intent to Injure or Kill); (2) 18 U.S.C. § 844(i) (Attempted Destruction by Explosives of Any Building, Person, or Property); and (3) 18 U.S.C. § 844(n) (Conspiracy):

- a. Explosives, smokeless powder, black powder, gunpowder, or any other item that can be pipes, and wires;
- b. Pipes and any items that may cause fragmentation;
- c. Initiating devices to include burning fuse, hobby fuse, blasting caps, manual or electrical timers, dry cell batteries, electrical wire, alligator clips, electrical tape of assorted colors commonly used to secure exposed electrical wiring;
- d. Books related to the construction of explosives;
- e. Tools used in the construction of explosives such as include hand held vise grips, table mounted vise grips, pipe cutters, electrical; and non-electrical drills and drill bits.
- f. Address and/or telephone books, telephones, pagers, answering machines, customer lists, and any papers reflecting names, addresses, telephone numbers, pager numbers,

fax numbers and/or identification numbers of sources of supply of explosives;

g. No more than 5 documents and records, including electronic mail and electronic messages, reflecting the ownership, occupancy, possession, or control of the SUBJECT LOCATION, including lease/rental agreements, rent receipts, registration documents, bank records, utility bills, telephone bills, other addressed envelopes, and correspondence;

h. Any digital device used to facilitate the above-listed violations and forensic copies thereof.

i. With respect to any digital device used to facilitate the above-listed violations or containing evidence falling within the scope of the foregoing categories of items to be seized:

i. evidence of who used, owned, or controlled the device at the time the things described in this warrant were created, edited, or deleted, such as logs, registry entries, configuration files, saved usernames and passwords, documents, browsing history, user profiles, e-mail, e-mail contacts, chat and instant messaging logs, photographs, and correspondence;

ii. evidence of the presence or absence of software that would allow others to control the device, such as viruses, Trojan horses, and other forms of malicious software,

as well as evidence of the presence or absence of security software designed to detect malicious software;

iii. evidence of the attachment of other devices;

iv. evidence of counter-forensic programs (and associated data) that are designed to eliminate data from the device;

v. evidence of the times the device was used;

vi. passwords, encryption keys, and other access devices that may be necessary to access the device;

vii. applications, utility programs, compilers, interpreters, or other software, as well as documentation and manuals, that may be necessary to access the device or to conduct a forensic examination of it;

viii. records of or information about Internet Protocol addresses used by the device;

ix. records of or information about the device's Internet activity, including firewall logs, caches, browser history and cookies, "bookmarked" or "favorite" web pages, search terms that the user entered into any Internet search engine, and records of user-typed web addresses.

2. As used herein, the terms "records," "documents," "programs," "applications," and "materials" include records, documents, programs, applications, and materials created,

modified, or stored in any form, including in digital form on any digital device and any forensic copies thereof.

3. As used herein, the term "digital device" includes any electronic system or device capable of storing or processing data in digital form, including central processing units; desktop, laptop, notebook, and tablet computers; personal digital assistants; wireless communication devices, such as telephone paging devices, beepers, mobile telephones, and smart phones; digital cameras; peripheral input/output devices, such as keyboards, printers, scanners, plotters, monitors, and drives intended for removable media; related communications devices, such as modems, routers, cables, and connections; storage media, such as hard disk drives, floppy disks, memory cards, optical disks, and magnetic tapes used to store digital data (excluding analog tapes such as VHS); and security devices.

## **II. SEARCH PROCEDURE FOR DIGITAL DEVICES**

4. In searching digital devices or forensic copies thereof, law enforcement personnel executing this search warrant will employ the following procedure:

a. Law enforcement personnel or other individuals assisting law enforcement personnel (the "search team") will, in their discretion, either search the digital device(s) on-site or seize and transport the device(s) to an appropriate law enforcement laboratory or similar facility to be searched at

that location. The search team shall complete the search as soon as is practicable but not to exceed 60 days from the date of execution of the warrant. If additional time is needed, the government may seek an extension of this time period from the Court on or before the date by which the search was to have been completed.

b. The search team will conduct the search only by using search protocols specifically chosen to identify only the specific items to be seized under this warrant.

i. The search team may subject all of the data contained in each digital device capable of containing any of the items to be seized to the search protocols to determine whether the device and any data thereon falls within the list of items to be seized. The search team may also search for and attempt to recover deleted, "hidden," or encrypted data to determine, pursuant to the search protocols, whether the data falls within the list of items to be seized.

ii. The search team may use tools to exclude normal operating system files and standard third-party software that do not need to be searched.

c. When searching a digital device pursuant to the specific search protocols selected, the search team shall make and retain notes regarding how the search was conducted pursuant to the selected protocols.

d. If the search team, while searching a digital device, encounters immediately apparent contraband or other evidence of a crime outside the scope of the items to be seized, the team shall immediately discontinue its search of that device pending further order of the Court and shall make and retain notes detailing how the contraband or other evidence of a crime was encountered, including how it was immediately apparent contraband or evidence of a crime.

e. If the search determines that a digital device does not contain any data falling within the list of items to be seized, the government will, as soon as is practicable, return the device and delete or destroy all forensic copies thereof.

f. If the search determines that a digital device does contain data falling within the list of items to be seized, the government may make and retain copies of such data, and may access such data at any time.

g. If the search determines that a digital device is (1) itself an item to be seized and/or (2) contains data falling within the list of items to be seized, the government may retain forensic copies of the digital device but may not access them (after the time for searching the device has expired) absent further court order.

h. The government may retain a digital device itself until further order of the Court or one year after the

conclusion of the criminal investigation or case (whichever is latest), only if the device is determined to be an instrumentality of an offense under investigation or the government, within 14 days following the time period authorized by the Court for completing the search, obtains an order from the Court authorizing retention of the device (or while an application for such an order is pending). Otherwise, the government must return the device.

i. Notwithstanding the above, after the completion of the search of the digital devices, the government shall not access digital data falling outside the scope of the items to be seized absent further order of the Court.

5. In order to search for data capable of being read or interpreted by a digital device, law enforcement personnel are authorized to seize the following items:

a. Any digital device capable of being used to commit, further or store evidence of the offense(s) listed above;

b. Any equipment used to facilitate the transmission, creation, display, encoding, or storage of digital data;

c. Any magnetic, electronic, or optical storage device capable of storing digital data;

d. Any documentation, operating logs, or reference manuals regarding the operation of the digital device or software used in the digital device;

e. Any applications, utility programs, compilers, interpreters, or other software used to facilitate direct or indirect communication with the digital device;

f. Any physical keys, encryption devices, dongles, or similar physical items that are necessary to gain access to the digital device or data stored on the digital device; and

g. Any passwords, password files, test keys, encryption codes, or other information necessary to access the digital device or data stored on the digital device.

6. The special procedures relating to digital devices found in this warrant govern only the search of digital devices pursuant to the authority conferred by this warrant and do not apply to any search of digital devices pursuant to any other court order.

7. The government is allowed to share the information obtained from this search (to include copies of digital media) with any government agency investigating, or aiding in the investigation of, this case or related matters.
